

Specifications for Project 3964

The Pennsylvania Emergency Management Agency is procuring eight (8) automatic license plate readers to be installed in vehicles to be used by multiple police agencies. The data retrieved from these tag readers will be retained in a mission critical regional server. The information exchange begins at the local responder level, whereupon the local emergency responder vehicle obtains the information, sends the information to the shared server and then the information can be redistributed back to the local emergency responder vehicle level. This will provide a collaborative effort of automatically gaining, retaining and processing information on a regional scale.

Installation will be done onsite, coordinated by the Project Manager. Equipment should not be shipped until installation date is agreed upon. Units are to be installed into the following vehicles:

- 2018 Ford F150 Pick Up Truck
- 2016 Ford Explorer
- 2019 Ford Interceptor SUV
- Dodge Charger 2019 or 2018
- 2016 Ford Explorer
- 2019 Ford Taurus
- 2017 Chevrolet Tahoe
- Ford F150 (includes washers for rail install)

Please provide estimated shipping charges to zip code 18974. This zip code is being provided for estimation only. Once award is made, exact locations will be provided. If estimated shipping costs are not provided in your quote response, they will not be added to the purchase order at time of award or billing.

Equipment proposed must be compatible with equipment listed in quote request as there are pre-existing equipment in the region already in use. The equipment must be able to exchange with the pre-existing server.

Units should come with one (1) year standard warranty. And additional two (2) years per unit is requested in the itemized list.
