Contract 4400014635 is a statewide contract that will replace the existing agency contract #4400012832 for Pennsylvania Compute Services (PACS). The original contract was established as an Office of Administration agency contract which restricted the creation of purchase orders to OA only.

The replacement contract is strictly an administrative change required by SRM to provide all agencies with the ability to create purchase orders referencing the contract. No changes have been made to the contract documents.

Upon final approval of contract #4400014635, the existing agency contract #4400012832 will be deactivated.

Amendment No. 1

to Contract No. 4400012832

Between

COMMONWEALTH OF PENNSYLVANIA
GOVERNOR'S OFFICE OF ADMINISTRATION

and

UNISYS CORPORATION

for

Data Center Computing Services

THIS AMENDMENT ("Amendment No. 1") is entered into by and between the Commonwealth of Pennsylvania ("Commonwealth"), acting through its Governor's Office of Administration ("OA"), and Unisys Corporation, a Delaware corporation headquartered in Blue Bell, Pennsylvania ("Contractor"), collectively referred to as the "Parties".

WITNESSETH:

WHEREAS, OA issued a Request for Proposals, RFP No. 6100022698, for data center computing services ("Services); and,

WHEREAS, on December 9, 2013, the contract resulting from the RFP (known as the Pennsylvania Compute Services Contract, hereinafter the "PACS Contract") was awarded to Contractor; and

WHEREAS, prior to the full execution of the PACS Contract, a bid protest was filed by a competing offeror; and

WHEREAS, on June 4, 2014, OA and Contractor entered into the PACS Contract, Contract No. 4400012832, with an Effective Date of June 6, 2014; and

WHEREAS, resolution of the bid protest delayed execution of the PACS Contract, thus delaying and adversely affecting the Parties' anticipated transition schedule; and

WHEREAS, the Parties now wish to amend the PACS Contract to extend the due dates for certain Transition Milestones and to extend the term by one (1) year; and

WHEREAS, Contractor will continue to provide services to the Commonwealth under its Contract #ME-98136, known as the Data Power House Contract ("DPH Contract"), during calendar year 2015 while Contractor transitions the Services to the PACS contract; and

WHEREAS, Contractor has agreed not to charge the Commonwealth under the PACS Contract for Services transitioned from the DPH Contract during calendar year 2015.

NOW THEREFORE, the Parties, intending to be legally bound, hereby agree to amend the PACS Contract as follows:

1. The above Recitals are incorporated herein by reference as a material part of the PACS Contract and this Amendment No. 1.

2. Through this Amendment No. 1, OA has exercised its option set forth in Section 1(b) of the PACS Contract to renew the PACS Contract for one (1) year. The term of the PACS Contract shall now expire on June 6, 2022 ("the Expiration Date"). Per Section 1(b) of the PACS Contract, two (2) optional renewal years remain.

3. Schedule D (Transition Milestones) of the PACS Contract is hereby deleted and replaced in its entirety with Schedule D (Transition Milestones v 2.0), attached hereto and made a part hereof as though fully set forth herein. Transition Milestone M-4.1 (Detailed Transition Plan Update) has been added and the due dates for the following Transition Milestone have been modified in the attached Schedule D (Transition Milestones v. 2.0):

   - Milestone Number M-5 (Commonwealth Compute Services Manual)
   - Milestone Number M-8 (ITSM System Integration)
   - Milestone Number M-14 (EDC Operational Transition Completed)

4. Section 20 (Fees), Subsection g., of the PACS Contract is hereby deleted and replaced in its entirety by the following:

   g. Contractor presently provides the Commonwealth services under Contract Number ME-981363 (the "DPH Contract") which, through its Amendment No. 4, has been amended to extend the termination date to December 31, 2015 at a price of $91,816,512.00. The price may be adjusted via change order. Any Time and Material Services will be billed separately. The services provided under the DPH Contract are similar to the Services to be provided under this [PACS] Contract. Commencing on the Effective Date of Amendment No. 4 of the DPH Contract and ending on December 31, 2015, Contractor shall not charge the Commonwealth under this [PACS] Contract for any Services transitioned from the DPH Contract to this [PACS] Contract.

   Contractor may charge the Commonwealth for new Services ordered by the Commonwealth under the terms of the [PACS] Contract which are unique from those provided by Contractor under the DPH Contract, commencing on the date such new Services are delivered to and accepted by the Commonwealth.

5. This Amendment No.1 to the PACS Contract is contingent on the full execution of Amendment No. 4 of the DPH Contract. This Amendment shall not become effective until Amendment No. 4 of the DPH Contract has been fully executed by the Parties.

6. All other terms and conditions of the PACS Contract not modified by this Amendment No. 1 shall remain in full force and effect.

[THE REMAINDER OF THIS PAGE IS INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the Parties hereto execute this Amendment No. 1 through their respective duly authorized officials on the dates indicated below.

Schedule D

Transition Milestones (v 2.0)

Milestones include the completion of all tasks, deliverables and interim milestones associated with such Milestone as set forth in the Transition Plan. The Earn Back period is thirty (30) calendar days from the Transition Milestone Due Date and applies to those Milestones indicated with "Y" in the Earn Back column. The Acceptance Criteria for each Milestone includes criteria described in Schedule F and Schedule K of the contract.

Note: If a Milestone is dependent on another Milestone and the first Milestone is missed, the subsequent Milestones remain in effect. An example is: if M-3 is missed, M-5 is still enforced.

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
M-1	Key Staffing	30 calendar days from Contract Effective Date	• Key Personnel team completed per Schedule G • staffing plan approved • detailed project organizational chart approved • resumes for each key personnel listed on the team submitted • staff contingency plan approved	$50,000 One-time	N	• Commonwealth review and approval
M-2	Contract Management Plan	60 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-11.01 o D-11.02	$50,000 One-time	Y	• Commonwealth review and approval
M-3	Datacenter Architecture Plan and Roadmap	90 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-01.01 o D-01.02 (Initial Deliverable Approval) o D-01.03 (Initial Deliverable Approval) o D-01.04 (Initial Deliverable Approval) o D-01.05 (Initial Deliverable	$150,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			Approval) o D-01.07 o D-03.01 o D-03.04 o D-03.08 o D-04.01 o D-04.05			
M-4	Detailed Transition Plan	180 calendar days from Contract Effective Date	• Completion of Data Gathering o All data gathering checklists completed, validated, reviewed and approved • Completion, submittal and acceptance of data gathering report on B2B interface to Commonwealth's ITSM system that includes interfaces for the following: o Incident Management o Change Management o Problem Management o Known Errors o Request Management o Invoicing Process • Completion and acceptance of the Detailed Transition Plan using Schedule M – Detailed Transition Plan • Delivery and acceptance of the following Deliverables from Schedule K: o D-05.01 o D-05.04 o D-05.10	$250,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ D-10.01 • The Detailed Transition plan must contain: ○ An **overall (master) plan** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Datacenter** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Agency** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Application** which includes but is not limited to:

Amendment No. 2

to Contract No. 4400012832

Between

COMMONWEALTH OF PENNSYLVANIA
GOVERNOR'S OFFICE OF ADMINISTRATION

and

UNISYS CORPORATION

for

DATA CENTER COMPUTING SERVICES

THIS AMENDMENT ("Amendment No. 2") to Contract No. **4400012832** is entered into by and between the Commonwealth of Pennsylvania ("Commonwealth"), acting through its Governor's Office of Administration ("OA"), and Unisys Corporation, a Delaware corporation headquartered in Blue Bell, Pennsylvania ("Contractor"), collectively referred to as the "Parties."

WITNESSETH:

WHEREAS, OA issued a Request for Proposals, RFP No. 6100022698, for data center computing services ("Services); and,

WHEREAS, on December 9, 2013, the contract resulting from the RFP (known as the Pennsylvania Compute Services Contract, hereinafter the "PACS Contract") was awarded to Contractor; and

WHEREAS, on June 4, 2014, OA and Contractor entered into the PACS Contract, Contract No. 4400012832, with an Effective Date of June 6, 2014; and

WHEREAS, on December 12, 2014, the Parties amended the PACS Contract through Amendment No. 1 to extend the term, revise certain Transition Milestones, and state that the Commonwealth will not pay for services transitioned from the Data Power House Contract (Number ME-981363) for calendar year 2015; and

WHEREAS, the Parties now wish to further amend the PACS Contract to require Contractor to submit invoices directly to each Commonwealth agency for Services rendered rather than submitting a single invoice to OA and to revise a Transition Milestone due date; and

WHEREAS, OA must recreate the PACS Contract in its electronic contract processing system in order for individual Commonwealth agencies to issue purchase orders and make payments to Contractor; and

WHEREAS, as a result of this strictly administrative change to the PACS Contract, a new contract number has been assigned to the PACS Contract;

WHEREAS, the new PACS Contract Number is **4400014635**; and

WHEREAS, other than as set forth in this Amendment No. 2, no terms or conditions of the PACS Contract were modified when the new PACS Contract number was created.

NOW THEREFORE, the Parties, intending to be legally bound, hereby agree to amend the PACS Contract as follows:

1. The above Recitals are incorporated herein by reference as a material part of the PACS Contract and this Amendment No. 2.

2. Section 2 (PURCHASE ORDERS) of the PACS Contract is hereby deleted and replaced in its entirety by the following:

    a. The Commonwealth Agencies will issue Purchase Orders against the Contract. These orders constitute the Contractor's authority to make delivery. All Purchase Orders received by the Contractor up to and including the Expiration Date of the Contract are acceptable and must be performed in accordance with the Contract. Contractors are not permitted to accept Purchase Orders which require performance in excess of those performance time periods specified in the Contract. Each Purchase Order will be deemed to incorporate the terms and conditions set forth in the Contract.

    b. Purchase Orders will not include an ink signature by the Commonwealth Agencies. The electronically-printed name of the purchaser represents the signature of the individual who has the authority, on behalf of the Commonwealth Agency, to authorize the Contractor to proceed.

    c. Purchase Orders may be issued electronically. The electronic transmission of a Purchase Order shall require acknowledgement of receipt of the transmission by the Contractor.

    d. Contractor's acknowledgment of receipt of the electronic transmission of the Purchase Order shall constitute receipt of an order.

    e. Purchase Orders received by the Contractor after 4:00 p.m. will be considered received the following business day.

f. The Commonwealth and the Contractor specifically agree as follows:

(1) No handwritten signature shall be required in order for the Contract or Purchase Order to be legally enforceable.

(2) Upon receipt of a Purchase Order, the Contractor shall promptly and properly transmit an acknowledgement in return. Any order which is issued electronically shall not give rise to any obligation to deliver on the part of the Contractor, or any obligation to receive and pay for delivered products on the part of the Commonwealth Agency, unless and until the Commonwealth Agency transmitting the order has properly received an acknowledgement.

(3) The parties agree that no writing shall be required in order to make the Purchase Order legally binding. The parties hereby agree not to contest the validity or enforceability of the Contract or a genuine Purchase Order or acknowledgement that has been issued electronically under the provisions of a statute of frauds or any other applicable law relating to whether certain agreements shall be in writing and signed by the party bound thereby. The Contract and any genuine Purchase Order or acknowledgement issued electronically, if introduced as evidence on paper in any judicial, arbitration, mediation, or administrative proceedings, will be admissible as between the parties to the same extent and under the same conditions as other business records originated and maintained in documentary form. Neither party shall contest the admissibility of copies of the Contract or any genuine Purchase Order or acknowledgements under either the business records exception to the hearsay rule or the best evidence rule on the basis that the Contract or Purchase Order or acknowledgement were not in writing or signed by the parties. A Purchase Order or acknowledgment shall be deemed to be genuine for all purposes if it is transmitted to the location designated for such documents.

(4) Each party will immediately take steps to verify any document that appears to be obviously garbled in transmission or improperly formatted to include re-transmission of any such document if necessary.

3. Section 21 (PAYMENT SCHEDULE AND INVOICES) of the PACS Contract is hereby deleted and replaced in its entirety by the following:

a. **Service Fees**. On or before the 15th day of each calendar month of the Term, Contractor shall provide each Commonwealth Agency with an invoice, or multiple invoices as required, for applicable Service Fees based on the associated approved Purchase Order(s). Each such invoice shall include the Fees for the

prior month. Service Level Credits then payable by Contractor to the Commonwealth Agency or refundable by the Commonwealth Agency to the Contractor will be issued on a separate invoice via a .pdf document.

b. **Detailed Invoices.** Contractor shall provide on the monthly invoices varying degrees of detail (e.g., per Agency, end-user, department, project, site) as specified in *Schedule H* (Commonwealth Computing Procedures Manual). The detailed invoices must be delivered in an electronic format compatible with the Commonwealth's Invoice Processing System. An Invoice Summary that includes all charges detailed on the monthly invoices sent to Commonwealth Agencies, and any additional detail as specified in *Schedule H* (Commonwealth Computing Procedures Manual) must be delivered to OA each month for management, budgeting, and SLA calculation purposes.

c. **Time of Payment**. Any sum due Contractor pursuant to any such invoice shall be due and payable on the last business day of the calendar month following the calendar month during which such invoice was delivered to Commonwealth Agency. (e.g., an invoice delivered to Commonwealth on July 15, 2015 will be due and payable on August 31, 2015, the last business day of August, 2015.). In the event any invoices remain unpaid after such due date, the Commonwealth may pay interest as determined by the Secretary of Budget in accordance with Act No. 266 of 1982 and regulations promulgated pursuant thereto. Contractor shall, subject to Section 32(f) of this Contract, continue to provide the Services even in the event payment is delayed or is not made in timely fashion.

d. **Fee Dispute**. During the pendency of a dispute between a Commonwealth Agency and Contractor pursuant to which a Commonwealth Agency, in good faith, believes it is entitled to withhold, and does withhold, payment, Contractor shall continue to fully provide the Services and otherwise fully perform its obligations under this Contract. Notwithstanding the foregoing, the Commonwealth will not withhold more than twenty-five percent (25%) of the total of any monthly Invoice Summary.

4. The following definitions in *Schedule A (Definitions)* are hereby deleted and replaced in their entirety:

At-Risk Amount - The amount that the Contractor will have at risk for all Service Level Credits in each month. The "At-Risk Amount" is 15% of the sum of all monthly invoices submitted to Commonwealth Agencies, as detailed in the Invoice Summary.

Contract Year – Contract Year 1 is June 6, 2014 – June 30, 2015. Each subsequent year aligns with Commonwealth fiscal year except for last year of contract which will end June 5 of the applicable year.

5. The following definition has been added to *Schedule A (Definitions)*:

Invoice Summary - A monthly report submitted by Contractor to the Commonwealth Office of Administration that includes all charges detailed on the monthly invoices sent to Commonwealth Agencies, and any additional detail as specified in *Schedule H* (Commonwealth Computing Procedures Manual).

6. Schedule D (Transition Milestones 2.0) of the PACS Contract is hereby deleted and replaced in its entirety with Schedule D (Transition Milestones v 3.0), attached hereto and made a part hereof as though fully set forth herein. The Due Date for Transition Milestone M-12 (DPH Transition Completed (1)) has been changed in the attached Schedule D (Transition Milestones v. 3.0) to December 31, 2015.

7. This Amendment No.2 to the PACS Contract is contingent on the full execution of a Contract Change Request for the SAP Implementation of the Project. This Amendment shall not become effective until the Contract Change Request for the SAP Implementation of the Project has been fully executed by the Parties.

8. All other terms and conditions of the PACS Contract not modified by this Amendment No. 2 shall remain in full force and effect.

[THE REMAINDER OF THIS PAGE IS INTENTIONALLY LEFT BLANK]

IN WITNESS WHEREOF, the Parties hereto execute this Amendment No. 2 through their respective duly authorized officials on the dates indicated below.

Schedule D

Transition Milestones (v 3.0)

Milestones include the completion of all tasks, deliverables and interim milestones associated with such Milestone as set forth in the Transition Plan. The Earn Back period is thirty (30) calendar days from the Transition Milestone Due Date and applies to those Milestones indicated with "Y" in the Earn Back column. The Acceptance Criteria for each Milestone includes criteria described in Schedule F and Schedule K of the contract.

Note: If a Milestone is dependent on another Milestone and the first Milestone is missed, the subsequent Milestones remain in effect. An example is: if M-3 is missed, M-5 is still enforced.

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
M-1	Key Staffing	30 calendar days from Contract Effective Date	• Key Personnel team completed per Schedule G • staffing plan approved • detailed project organizational chart approved • resumes for each key personnel listed on the team submitted • staff contingency plan approved	$50,000 One-time	N	• Commonwealth review and approval
M-2	Contract Management Plan	60 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-11.01 o D-11.02	$50,000 One-time	Y	• Commonwealth review and approval
M-3	Datacenter Architecture Plan and Roadmap	90 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-01.01 o D-01.02 (Initial Deliverable Approval) o D-01.03 (Initial Deliverable Approval) o D-01.04 (Initial Deliverable Approval) o D-01.05 (Initial Deliverable	$150,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			Approval) o D-01.07 o D-03.01 o D-03.04 o D-03.08 o D-04.01 o D-04.05			
M-4	Detailed Transition Plan	180 calendar days from Contract Effective Date	• Completion of Data Gathering o All data gathering checklists completed, validated, reviewed and approved • Completion, submittal and acceptance of data gathering report on B2B interface to Commonwealth's ITSM system that includes interfaces for the following: o Incident Management o Change Management o Problem Management o Known Errors o Request Management o Invoicing Process • Completion and acceptance of the Detailed Transition Plan using Schedule M – Detailed Transition Plan • Delivery and acceptance of the following Deliverables from Schedule K: o D-05.01 o D-05.04 o D-05.10	$250,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ D-10.01 • The Detailed Transition plan must contain: ○ An **overall (master) plan** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Datacenter** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Agency** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Application** which includes but is not limited to:			

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness			
M-4.1	Detailed Transition Plan Update	May 1, 2015	• Completion of updates to the Detailed Transition Plan that account for the transition of services in the EDC to fully-managed. o All acceptance criteria of Transition Milestone M-4 apply. • Updates to the Detailed Transition Plan are required by Amendment No. 1 to the Contract which extended the Transition Milestone Due Date for M-14 (EDC Operational Transition Completed).	$10,000 One-time	N	• Commonwealth review and approval
M-5	Commonwealth Compute Process Manual (CCPM)	270 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-02.01 o D-02.04 o D-02.09 o D-02.15 o D-02.17 o D-02.18 o D-02.23 o D-02.26 o D-02.29	$75,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ D-02.32 ○ D-02.37 ○ D-02.42 ○ D-02.47 ○ D-02.52 ○ D-02.57 ○ D-02.62 ○ D-02.67 ○ D-02.70 ○ D-02.75 ○ D-02.81 • Completion and Acceptance of final CCPM as listed within Schedule L of this contract. This includes but is not limited to: ○ Incident (including Security) ○ Problem ○ Change ○ Order/Request ○ Billing ○ Service Level			
M-6	Network Connectivity	120 calendar days from Contract Effective Date	• Completion and Acceptance of the Network Connectivity to the Commonwealth	$250,000 One-time	N	• Commonwealth review, testing and approval
M-7	Security	180 calendar days from Contract Effective	• Completion and acceptance of security architecture, solution, policies and procedures which included but is not limited to:	$250,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
		Date	○ Delivery and acceptance of the following Deliverables from Schedule K: ▪ D-07.01 ▪ D-07.06 ▪ D-01.03 (Initial Deliverable Approval) ▪ D-09.01 ▪ D-09.02 ○ Implement security management plan ○ Implement security and firewall plan ○ Policies and procedures are in place for physical security ○ Policies and procedures are in place for data and network security ○ Policies and procedures are in place for personnel security, such as annual background checks ○ Security assessment is conducted to ensure data safety and confidentiality			
M-8	ITSM System Integration	270 calendar days from Contract Effective Date	• Completion and Acceptance of Integration between Commonwealth's ITSM system and Offeror's ITSM System including but is not limited to: ○ Incident connectivity has been tested and incidents created and updated on either side flow back and forth between systems ○ Problem connectivity has been tested and problems created and	$100,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			updated on either side flow back and forth between systems o Change requests connectivity has been tested and requests created and updated on either side flow back and forth between systems o Configuration items in both system CMDBs are reconciled o Test Invoices have been processed through the ITSM system to the Commonwealth's AP system o Reporting from Offeror's ITSM system is available to Commonwealth			
M-9	Financial Management	180 calendar days from Contract Effective Date	• Completion and acceptance of billing process and form of invoice approved • Schedule K Deliverable D-02.01 completed • Process implemented, tested and accepted providing an enterprise bill providing the details required by the Commonwealth	$75,000 One-time	Y	• Commonwealth review and approval
M-10	Operational Readiness	240 calendar days from Contract Effective Date	• Completion and acceptance of an Operational Readiness Report indicating Offeror is "Ready" to transition the Commonwealth's Applications and Services to other Datacenters. This report must include but is not limited to the following: o Delivery and acceptance of the following Deliverables from	$150,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			Schedule K: ▪ D-01.01 ▪ D-01.02 ▪ D-01.03 ▪ D-01.04 ▪ D-01.05 ▪ D-01.06 ▪ D-01.07 o Transition Project Office established and fully staffed o Program plan and architecture developed and approved by the Commonwealth o Processes and Tools implemented to support the transition change control, schedule, quality, communications, risk and issue management o Datacenter environment configured , tested and acceptance			
M-11	SSAE 16 Audits of EDC	On the July 31st following the Commonwealth's acceptance of Milestone M-14	• Completion and Issuance of a SSAE-16 Audit Reports as detailed with the Appendix A (Terms and Conditions) on the Commonwealth's EDC Datacenter • Schedule K Deliverable D-08.02	$100,000 One-time	Y	• Commonwealth review and approval
M-12	DPH Transition Completed (1)	December 31, 2015	• Completion and acceptance of ALL applications transitioned from the DPH	$2,500,000 per month or	N	• Commonwealth review and approval of work product

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			to new Datacenters which includes but is not limited to the following for each application: o High availability, backup and DR are operational for identified systems. o CCPM specific details for application are available in KMP. o Operations dashboards to report immediately on status and alerts for transitioned applications. o Service Level agreements are identified and supporting metrics in place. o System operational for scheduling and tracking of ticket-based tasks and incidents. o System is available to begin data collection to produce configuration, monitoring and management status reports. o Systems with DR plans have an updated DR plan and test scheduled. o Operational support assumed and workloads migrated. • High-Speed direct link to current DPH location is disconnected. • Signoff that all Services provided by DPH have been successfully transitioned	partial month for six (6) months		plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications
M-13	DPH Transition Completed (2)	24 months from Contract Effective Date	• Completion and acceptance of ALL applications transitioned from the DPH to new Datacenters which includes but is not limited to: o High availability, backup and DR are operational for identified systems.	$5,000,000 per month or partial month	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing,

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ CCPM contains specific details for apps transitioned are available in KMP. ○ Operations dashboards are in place to report immediately on status and alerts for transitioned apps. ○ Service Level agreements have been identified and supporting metrics in place. ○ System is operational for scheduling and tracking of ticket-based tasks and incidents. ○ System available to begin data collection in order to produce configuration, monitoring and management status reports. ○ Systems with DR plans have a replacement plan and test scheduled. ○ Operational support has been assumed and workloads migrated. ○ High-Speed direct link to current DPH location is disconnected. ○ Signoff that all Services provided by DPH have been successfully transitioned			testing and accepting the transition of the applications
M-14	EDC Operational Transition Completed	07/1/2016	• Completion and acceptance of operational control and support of the EDC which includes but is not limited to the following: ○ Schedule K deliverable D-01 ○ Schedule K deliverable D-08.01 ○ Schedule K deliverable D-08.06 ○ Verification CMDB of record with Offeror's configuration info includes EDC assets and CI's	$100,000 per month or partial month	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ Service catalogs, processes, and procedures are transitioned ○ Multi environments/instances are available for identified systems ○ High availability, backup and DR are operational for identified system ○ CCPM specific details for applications are available in KMP. ○ Operations dashboards are in place to report immediately on status and alerts for apps ○ Service Level agreements have been identified and supporting metrics in place ○ System is operational for scheduling and tracking of ticket-based tasks and incidents ○ System is available to begin data collection in order to produce configuration, monitoring and management status reports ○ Transition orders completed and accepted by the Commonwealth			
M-15	Department of Labor and Industry Datacenter Transition Completed	30 months from Contract Effective Date	• Completion and acceptance of ALL applications transitioned from the DLI Datacenter to new Datacenters which includes but is not limited to the following: ○ Service catalogs, processes and procedures fully established, documented and approved ○ Multi environments and instances are fully functional for transitioned systems ○ High availability, backup and DR are	$1,000 000 One-time	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

CERTIFIED COPY OF RESOLUTIONS
of the
BOARD OF DIRECTORS
of
UNISYS CORPORATION

I, Susan B. Asch, Assistant Secretary of Unisys Corporation, a Delaware corporation, do hereby certify that the following is a true and correct copy of resolutions duly adopted at a regular meeting of the Board of Directors of said Corporation held on September 27, 1990, which on the date hereof remain in full force and effect:

Bids, Proposals, and Contracts:

RESOLVED, that the officers of the Corporation at the level of elected Vice President or above be, and each of them hereby is, authorized and empowered, in the name and on behalf of the Corporation, to make, execute, enter into and deliver bids, proposals and contracts for the selling, leasing, licensing, supplying, performing, and delivering of computer products (including, without limitation, hardware and system software incorporated therein, application software, parts and supplies), systems and other services, other products and goods of the Corporation (whether or not manufactured or developed by the Corporation or others) to any customer, governmental or otherwise; and further

RESOLVED, that the officers of the Corporation above the level of elected Vice President be, and each of them hereby is, authorized and empowered, in the name and on behalf of the Corporation, to delegate the authority granted by the foregoing resolution to additional officers and/or employees of the Corporation, or to revoke any such delegation previously granted, which delegation, or revocation thereof, shall become effective when it is filed in writing with the Secretary of the Corporation; and further

RESOLVED, that the Secretary or any Assistant Secretary of the Corporation be, and each of them hereby is, authorized and empowered to certify, to any entity or person, the authority granted to any officer or employee of the Corporation pursuant to the foregoing resolutions, with such certification constituting conclusive evidence, binding upon the Corporation, of the authority of such officer or employee to make, execute, enter into or deliver the bids, proposals or contracts referred to in the foregoing resolutions.

I further certify that, on the date hereof, J. Edward Coleman is the duly elected Chairman and Chief Executive Officer of Unisys Corporation.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Corporation this 25th day of November 2013.

SCHEDULE O – COMMONWEALTH DATA CENTERS TO BE TRANSITIONED

THIS CONTRACT ("Contract") is entered into by and between the Commonwealth of Pennsylvania ("Commonwealth"), acting through its Governor's Office of Administration ("OA"), and Unisys Corporation, a Delaware corporation headquartered in Blue Bell, Pennsylvania ("Contractor").

WITNESSETH:

WHEREAS, the Office of Administration issued a Request for Proposals, RFP No. 6100022698 (the "RFP"), for data center computing services; and,

WHEREAS, the Contractor submitted a proposal in response to the RFP (the "Proposal"); and,

WHEREAS, after taking into consideration all of the evaluation factors set forth in the RFP, the Commonwealth determined that the Proposal was the most advantageous to the Commonwealth; and,

WHEREAS, the Contractor was selected for contract negotiations; and,

WHEREAS, the Commonwealth and the Contractor negotiated this Contract as their final and entire agreement with respect to the Services.

NOW THEREFORE, intending to be legally bound hereby, the Commonwealth and the Contractor agree as follows:

1. CONTRACT TERM

a. The term of the Contract shall commence on the Effective Date and shall end in seven (7) years ("the Expiration Date"), subject to the other provisions of the Contract. The Effective Date shall be: a) the date the Contract has been fully executed by the Contractor and by the Commonwealth and all approvals required by Commonwealth contracting procedures have been obtained or b) the date referenced in the Contract, whichever is later. The Contract shall not be a legally binding contract until after the fully-executed Contract has been sent to the Contractor.

b. The Commonwealth may, in its sole discretion, renew the Contract for three (3) one (1) year periods, or any combination thereof on the terms and conditions in force at the date of the renewal and utilizing pricing to be negotiated but consistent with and no less favorable than the pricing in force at the date of the renewal. Further, the Commonwealth reserves the right to extend this Contract or any part of this Contract up to three (3) months, or as necessary to prevent a lapse in Contract coverage.

c. The Commonwealth reserves the right to execute the Contract, Purchase Orders or any follow-up Contract documents in ink or electronically. The Contractor understands and agrees that the receipt of an electronically-printed Contract with the printed name of the Commonwealth purchasing agent constitutes a valid, binding contract with the Commonwealth. The printed name of the purchasing agent on the Contract represents the signature of that individual who is authorized to bind the Commonwealth to the obligations contained in the Contract. The printed name also indicates that all approvals required by Commonwealth contracting procedures have been obtained.

d. The Contractor shall not start performance, and the Commonwealth shall not be liable to pay the Contractor for any supply furnished or work performed or expenses incurred, until all of the following have occurred:

(1) The Effective Date has arrived;

(2) The Contractor has received a copy of the fully executed Contract (or written notice from the Commonwealth that the Contract has been fully executed); and

(3) The Contractor has received a Purchase Order or other written notice to proceed signed by the Commonwealth Contracting Officer.

No Commonwealth employee has the authority to verbally direct the commencement of any work or delivery of any supply under this Contract prior to the Effective Date.

2. PURCHASE ORDERS

a. The Commonwealth may issue Purchase Orders against the Contract. These orders constitute the Contractor's authority to make delivery. All Purchase Orders received by the Contractor up to and including the Expiration Date of the Contract are acceptable and must be performed in accordance with the Contract. Contractors are not permitted to accept Purchase Orders which require performance in excess of those performance time periods specified in the Contract. Each Purchase Order will be deemed to incorporate the terms and conditions set forth in the Contract.

b. Purchase Orders will not include an ink signature by the Commonwealth. The electronically-printed name of the purchaser represents the signature of the individual who has the authority, on behalf of the Commonwealth, to authorize the Contractor to proceed.

c. Purchase Orders may be issued electronically or through facsimile equipment. The electronic transmission of a Purchase Order shall require acknowledgement of receipt of the transmission by the Contractor.

d. Contractor's acknowledgment of receipt of the electronic or facsimile transmission of the Purchase Order shall constitute receipt of an order.

e. Purchase Orders received by the Contractor after 4:00 p.m. will be considered received the following business day.

f. The Commonwealth and the Contractor specifically agree as follows:

(1) No handwritten signature shall be required in order for the Contract or Purchase Order to be legally enforceable.

(2) Upon receipt of a Purchase Order, the Contractor shall promptly and properly transmit an acknowledgement in return. Any order which is issued electronically shall not give rise to any obligation to deliver on the part of the Contractor, or any obligation to receive and pay for delivered products on the part of the Commonwealth, unless and until the Commonwealth Agency transmitting the order has properly received an acknowledgement.

(3) The parties agree that no writing shall be required in order to make the Purchase Order legally binding. The parties hereby agree not to contest the validity or enforceability of the Contract or a genuine Purchase Order or acknowledgement that has been issued electronically under the provisions of a statute of frauds or any other applicable law relating to whether certain agreements shall be in writing and signed by the party bound thereby. The Contract and any genuine Purchase Order or acknowledgement issued electronically, if introduced as evidence on paper in any judicial, arbitration, mediation, or administrative proceedings, will be admissible as between the parties to the same extent and under the same conditions as other business records originated and maintained in documentary form. Neither party shall contest the admissibility of copies of the Contract or any genuine Purchase Order or acknowledgements under either the business records exception to the hearsay rule or the best evidence rule on the basis that the Contract or Purchase Order or acknowledgement were not in writing or signed by the parties. A Purchase Order or acknowledgment shall be deemed to be genuine for all purposes if it is transmitted to the location designated for such documents.

(4) Each party will immediately take steps to verify any document that appears to be obviously garbled in transmission or improperly

formatted to include re-transmission of any such document if necessary.

g. Purchase Orders under ten thousand dollars ($10,000) in total amount may also be made using a Commonwealth Procurement VISA Card in person or by telephone. When an order is placed by telephone, the Commonwealth Agency shall provide the Agency name, employee name, credit card number, and expiration date of the card. The Contractor agrees to accept payment through the use of the Commonwealth Procurement VISA card.

3. IDENTIFICATION NUMBER

The Contractor must have a SAP Vendor Number.

4. ORDER OF PRECEDENCE, DEFINITIONS AND CONSTRUCTION

a. If any conflicts or discrepancies should arise in the terms and conditions of this Contract, or the interpretation thereof, the order of precedence shall be:

(1) This Contract (first, the Contract, including the terms and conditions, second the Schedules, RFP Exhibits, which have been incorporated herein and Appendix A); then
(2) The Contractor's Proposal (including the clarifications and the Best and Final Offer), as accepted by the Commonwealth; and then
(3) The RFP.

b. Except as otherwise expressly provided in the Contract, all capitalized terms used in the Contract shall have the meanings set forth in *Schedule A* (Defined Terms).

c. Interpretation:

(1) The terms defined in the Contract include the plural as well as the singular and the derivatives of such terms. Unless otherwise expressly stated, the words "herein," "hereof," and "hereunder" and other words of similar import refer to the Contract as a whole and not to any particular Paragraph, Section, subsection or other subdivision. The words "include" and "including" shall not be construed as terms of limitation.

(2) Headings preceding the text of Paragraphs or Sections, and headings to Schedules and Appendices, the table of contents and the table of Schedules and Appendices included in or attached to the Contract are used for convenience only and are not to be considered in construing or interpreting the Contract.

(3) References to any law refer to such law in changed or supplemented form, or to a newly adopted law replacing a previous law.

(4) Except as may be expressly set forth herein, all references to time herein refer to Eastern Standard Time or Eastern Daylight Time, as applicable.

(5) The Contract includes each Schedule, Exhibit and Appendix referenced herein, all of which are incorporated into the Contract by this reference

5. CONTRACT INTEGRATION

a. This Contract, including the Contract signature pages, together with the Schedules and Appendices, Contractor's Proposal, the Contractor's clarifications and the Contractor's Best and Final Offer, and the RFP and addenda thereto that are incorporated herein by reference, constitutes the final, complete, and exclusive Contract between the parties containing all the terms and conditions agreed to by the parties.

b. All representations, understandings, promises, and agreements pertaining to the subject matter of this Contract made prior to or at the time this Contract is executed are superseded by this Contract.

c. There are no conditions precedent to the performance of this Contract except as expressly set forth herein.

d. No contract terms or conditions are applicable to this Contract except as they are expressly set forth herein.

6. SERVICES

a. The Contractor agrees to provide the Services to the Commonwealth as such services are defined in this Contract, the RFP and the Contractor's Proposal, and in accordance with the terms of this Contract.

b. The Contractor shall provide to Commonwealth the following Services pursuant to the terms of the Contract:

(1) Commencing as of the Effective Date, the Transition Services set forth in *Section 14* (Transition) and *Schedule D* (Transition Milestones);

(2) Commencing as of the Effective Date and continuing until the Expiration Date:

(i) The services, function and responsibilities described in the Contract, including the Services set forth in Schedule C (Services Catalog) and *Schedule F* (Data Center Statement of Work);

(ii) Any incidental services, functions or responsibilities not specifically described in the Contract, but which are inherent or required for the proper performance and delivery of the Services; and

(3) Commencing upon written notice by Commonwealth to Contractor in accordance with *Section 33* (Termination Assistance).

c. The services set forth in (1) through (3) above shall be collectively referenced as the "Services," as they may evolve during the Term of the Contract or be supplemented, enhanced, modified or replaced pursuant to the terms hereof. The Services provided under this Contract are not exclusive to Contractor. The Commonwealth may in-source or re-procure any or all of the Services,

d. The Commonwealth may request a change to the Services through a Request for Services to increase or decrease the amount of the Services provided under this Contract, according to Commonwealth's demand for the Services. The parties shall use the Change Control Procedures to implement the changes required by the Request for Services and revise the Fees as applicable.

e. Except as may be necessary on an emergency basis to maintain the continuity of the Services or in the event of a declared disaster, Contractor shall not, without Commonwealth's written consent, modify (1) the composition of the Services, (2) the manner in which the Services are to be provided or delivered if such modification would have an adverse effect on the operations of Commonwealth, or (3) the applicable Services Levels.

f. Except as otherwise expressly provided in this Contract, Contractor is responsible for providing, and is financially and operationally responsible for, the facilities, Personnel, Equipment, materials, technical knowledge, expertise and other resources necessary to provide the Services (including all upgrades, improvements, replacements and additions to such resources).

g. Contractor acknowledges that Commonwealth encourages Contractor to provide the Services in a shared data processing environment, if such environment will materially reduce Commonwealth's costs under this Contract and can be accomplished within the confidentiality and physical security constraints imposed upon Contractor elsewhere in this Contract. Accordingly, upon the migration of any of Commonwealth's data processing to a Contractor Services Location, Contractor may provide the related Services from such Contractor Services Location in a shared data processing environment if Contractor reasonably believes such environment will materially reduce Commonwealth's costs under

this Contract and if such shared environment and Contractor's use thereof to provide the Services otherwise comports with the terms of this Contract. Commonwealth reserves to itself the right of prior approval of any Third Party proposed by Contractor to share such data processing environment, such approval not to be unreasonably withheld. Contractor acknowledges that Commonwealth will be entitled to withhold its approval of any such Third Party if, among other things, there is no or insufficient economic benefit to Commonwealth from the proposed sharing arrangement or if any federal or state confidentiality issues are not resolved to the satisfaction of the applicable federal or state governmental entity.

h. **Technical Architecture and Product Standards**. As part of the Services, Contractor shall suggest to Commonwealth information management technical architecture and product standards to be in effect at the Contractor Services Locations during the Term and the parties shall work together in good faith to develop information management technical architecture and product standards that are mutually acceptable to the parties and consistent with the Services Levels then in effect.

i. **Remote Access Capabilities**. As part of the Services, Contractor shall provide remote access capabilities for use by authorized personnel of the Commonwealth. All such remote access capabilities shall meet or exceed all Commonwealth technology and security standards as set forth in *Section 12* (Service Locations).

j. **Contractor Licenses and Permits**. As part of the Services, Contractor is responsible for obtaining, and has financial responsibility for, all necessary licenses, consents, approvals, permits and authorizations that are legally required to be obtained in order for Contractor to perform the Services. Commonwealth shall reasonably cooperate with and assist Contractor in obtaining any such licenses, consents, approvals, permits and authorizations. Notwithstanding the foregoing, Commonwealth will retain responsibility for obtaining, and the financial responsibility for, all necessary licenses, consents, approvals, permits and authorizations necessary to enable Contractor and its Subcontractors to use the Commonwealth Software to the extent necessary for Contractor's performance of the Services and with Contractor's cooperation as further described in *Section 8* (Commonwealth Third Party Software), and Contractor will cooperate, and will cause the Contractor Subcontractors to cooperate, in good faith and at no additional cost to Commonwealth, in obtaining such licenses, consents, approvals, permits and authorizations.

k. **Changes in Law and Regulations**. Each party shall identify, and notify the other party of, any changes in applicable statutes, regulations, or policies that may directly or indirectly relate to Contractor's performance of the Services. Contractor and Commonwealth shall work together to identify any impact of such changes upon Commonwealth's use, or Contractor's delivery, of the Services. Contractor shall be responsible for any fines and penalties arising from its

noncompliance with any such identified statutes, regulations, or policies relating to the business of providing the Services and shall not be responsible for any fines and penalties assessed against Commonwealth by federal governmental entities from Commonwealth's noncompliance with any federal legislative enactments or federal regulatory requirements relating to Commonwealth's operations that does not result from Contractor's actions or inactions under this Contract. As part of the Services, Contractor shall, if possible, perform the Services regardless of changes in legislative enactments or regulatory requirements. If such changes prevent Contractor from performing any of its obligations under this Contract or increase Contractor's costs in connection therewith, Contractor shall provide written notice thereof to Commonwealth within five (5) days of learning of the change and, if possible, will develop and implement a suitable workaround until such time as Contractor can fully perform its obligations under this Contract without such workaround. Contractor shall bear any costs relating to any legislative enactments and regulatory requirements relating to its business, and Commonwealth shall bear all reasonable out of pocket expenses, excluding attorney's fees, incurred by Contractor relating to legislative enactments and regulatory requirements that require modification of the Services by Contractor. If the parties are unable to agree as to the allocation of such costs, the changes and costs that are the subject of this *Section 6(k)* shall be subject to the Change Control Procedures.

l. **Access**. Upon Contractor's receipt of appropriate, advance notice (which except in an emergency situation shall not be less than three (3) business days) and subject to Contractor's reasonable security requirements, authorized representatives of Commonwealth, Commonwealth agents and agents of the Federal government shall be permitted access to any Contractor Services Location.

7. Equipment

Contractor shall provide the Services using the Equipment. Commonwealth shall provide Contractor with the required access and authorization to use the Commonwealth Equipment.

a. **Replacement and Upgrades of the Equipment**.

Contractor shall maintain and upgrade the Commonwealth Equipment and shall replace each Commonwealth Equipment at its respective end of life or as otherwise required to provide the Services. All upgrades shall be addressed through the CCPM.

b. **Equipment Maintenance**.

As part of the Services, Contractor shall provide to Commonwealth maintenance and support Services in respect of the Equipment and shall, at its own cost and

expense, maintain and support the Contractor Equipment as necessary for Contractor to perform the Services in accordance with the Services Levels. All costs and expenses incurred in connection with the provision of maintenance and support Services in respect of the Equipment (including Third Party maintenance fees) shall be the responsibility of Contractor.

8. THIRD PARTY SOFTWARE

a. As part of the Services, Contractor shall have operational responsibility for the Commonwealth Third Party Software for which Commonwealth has a valid license and current maintenance agreement ("Commonwealth Third Party Software") and shall be responsible for applying upgrades, enhancements and fixes as provided and directed by the applicable Agency. The Commonwealth shall have financial responsibility for any Commonwealth Third Party Software license, upgrade, maintenance and support fees, except that Contractor shall be responsible for any Third Party consulting fees in connection with the installation or implementation of any Software upgrade, revision or replacement required by Contractor.

b. As part of the Services, Contractor shall have financial, administration, operational and maintenance responsibility for all Contractor Software provided by the Contractor and Third Party Software provided by the Contractor as part of the Services, including but not limited to the Third Party Software listed in *Exhibit B.4* to the RFP.

c. As part of the Services, except for the cost of the license, Contractor shall have financial, administration, operational and maintenance responsibility for the Third Party Software listed in *Exhibit B.10* to the RFP, for which the Commonwealth has a valid license ("Hybrid Third Party Software").

d. The Contractor shall not require the Commonwealth to sign a software license agreement for any Contractor Software or Third Party Software, including but not limited to any click through agreement or other terms purported to apply to the Software.

e. The Commonwealth will continue to support and maintain the Software owned or licensed by the Commonwealth ("Commonwealth Software") as necessary for Contractor's performance of the Services.

9. DATA SECURITY

a. Commonwealth will retain administration of logical and Data access security, and Contractor will host Commonwealth security applications Software utilized by the Commonwealth in managing logical and Data access security, and will not implement configurations that would prevent Commonwealth from managing logical and Data access security. As part of the Services, Contractor shall implement and maintain the Commonwealth's safeguards against the disclosure,

destruction, loss or alteration of the Commonwealth Data in the possession of Contractor in accordance with the terms of this Contract and with Commonwealth's other security policies and procedures provided, in writing, to Contractor. In any event, Contractor, as part of the Services, is required to meet or exceed the most stringent of any applicable federal or state law, statute, rule or regulation applicable to Contractor's and/or Contractor's Subcontractor's possession of, or access to, any Commonwealth Data (which includes *Section 12(d)*, herein). All changes or additions to any such Commonwealth security policies or procedure or any changes to any applicable federal or state law, statute, rule or regulation shall be implemented by Contractor. Any changes or additions which result in a material additional cost to Contractor shall be subject to the Change Control Procedures. To the degree such change applies to other Contractor customers, Contractor will mitigate the Commonwealth's economic exposure to additional cost by equitably spreading the additional cost of compliance to its multiple customers.

b. The Contractor shall not store the Commonwealth Data outside of the continental United States of America.

c. All of Contractor's activities relating to the safeguarding of Commonwealth Data shall be subject to periodic review and monitoring by Commonwealth and related federal agencies, and Contractor shall cooperate fully with all such reviews and monitoring. In addition to, and not in limitation of, any restrictions set forth elsewhere in this Contract, Contractor shall have operational access to the Commonwealth Data only on an as-needed basis.

d. At no cost to the Commonwealth, and as part of the Services, Contractor shall, upon request at any time during the term of this Contract, or upon termination, cancellation, cessation of Termination Assistance, expiration or other conclusion of the Contract, Contractor shall (1) promptly return to the Commonwealth, in a form that is freely accessible to the Commonwealth and not in a Contractor proprietary format, all or the requested portion of the Commonwealth Data then in Contractor's possession or under its control, or (2) erase or destroy such Commonwealth Data. If the Commonwealth requests Contractor to destroy the Data, the Commonwealth shall have the right to conduct an audit to ensure the Data has been destroyed. This provision shall also apply to all Commonwealth Data that is in the possession of Subcontractors of Contractor. Contractor shall complete such return or destruction within ten (10) days of the request or after the conclusion of this Contract. Within such ten (10) day period, Contractor shall certify in writing to Commonwealth that such return or destruction has been completed. Contractor shall make available to the Commonwealth for a complete and secure (i.e. encrypted and appropriately authenticated) download file of the Commonwealth Data in XML format, or such other format as specified by the Commonwealth, including all schema and transformation definitions and/or delimited text files with documented, detailed schema definitions along with

attachments in their native format. Contractor shall be available to answer questions about data schema, transformations, and other elements required to fully understand and utilize the Commonwealth's Data file. Unless the Commonwealth agrees or specifies otherwise, the Contractor shall also deliver to the Commonwealth any copies, duplicates, summaries, abstracts or other representations of any such Commonwealth Data or any part thereof, in whatever form, then in the Contractor's possession or control in accordance with the "NIST Guidelines for Media Sanitization" (SP 800-88).

e. Contractor shall comply with all state and federal data breach laws as they relate to the delivery of Services, including but not limited to the Commonwealth Breach of Personal Information Notification Act (73 P.S. § §2301 *et seq*.). In the event Contractor or any of Contractor's Subcontractors discover or are notified of a data breach or potential breach of security involving any of the Commonwealth Data, Contractor shall immediately notify the Commonwealth Project Manager and the Commonwealth's Chief Information Security Officer of the same and describe the nature of the breach, the Data compromised, the involved parties, mitigation efforts, and corrective actions to be taken by the Contractor. In addition, at Commonwealth's request and at Contractor's sole cost and expense, Contractor shall:

(1) Promptly provide Commonwealth data security reports to Commonwealth in a form to be agreed upon by Commonwealth and Contractor; and

(2) Cooperate with any efforts by Commonwealth to investigate or prosecute any breach of security of the Commonwealth Data; and

(3) Provide credit monitoring services to all individuals or organizations that may be impacted by the security breach.

f. Contractor shall be solely responsible for any costs, losses or damages actually incurred by the Commonwealth due to Personal Information being accessed, used, released, disclosed and/or acquired in an unauthorized manner to the extent caused by Contractor or its Personnel, and/or Subcontractors. In the event of any data breach by Contractor or any of the Contractor Subcontractors involving any of the Commonwealth Data, Contractor shall be assessed a credit against Fees due for Service provided during the period of breach of security.

g. Credit Card Information

(1) By providing the Services under this Contract, the Contractor may create, receive, or have access to credit card records or record systems containing cardholder data including credit card numbers (collectively the "Cardholder Data"). Contractor shall comply with the Payment Card Industry Data Security Standard ("PCI DSS") requirements for Cardholder Data that are prescribed by the

payment brands (including but not limited to Visa, MasterCard, American Express, and Discover), as they may be amended from time to time. Contractor acknowledges and agrees that Card Holder Data may only be used for assisting in completing a card transaction, for fraud control services, for loyalty programs, or as specifically agreed to by the payment brands, for purposes of this Contract or as required by applicable law. If the Contractor incurs additional costs as a result of amended PCI DSS, it may follow the process set out in *Section 27* (Change Control) of this Contract.

(2) Contractor shall conform to and comply with the PCI DSS standards as defined by The PCI Security Standards Council at: https://www.pcisecuritystandards.org/security_standards/index.php. Contractor shall monitor these PCI DSS standards and will promptly notify the Commonwealth if its practices should not conform to such standards. Contractor shall provide a letter of certification to attest to meeting this requirement within one week of Contractor's receipt of the annual PCI DSS compliance report.

10. CONDUCT OF SERVICES

a. Following execution of the Contract, Contractor shall proceed diligently with all Services and shall perform such Services with qualified personnel, in accordance with the completion criteria set forth in the Contract.

b. The Contractor's Services hereunder shall be monitored by the Commonwealth and the Commonwealth's designated representatives. If the Commonwealth reasonably determines that the Contractor has not performed to the requirements in the Contract or has otherwise exposed the Commonwealth to material risk, the Commonwealth and the Contractor will attempt to reach agreement with respect to such matter. Failure of the Commonwealth or the Contractor to arrive at such mutual determinations shall be a dispute concerning a question of fact within the meaning of *Section 34* (Contract Controversies) of this Contract.

c. As part of the Services, Contractor shall conduct enterprise-wide Commonwealth satisfaction surveys, which surveys shall be conducted annually until completion of the Transition. Upon completion of the Transition, Contractor shall conduct the Commonwealth satisfaction surveys semi-annually for two years and annually thereafter.

11. QUALITY ASSURANCE AND INTERNAL CONTROLS

a. Contractor will develop and implement quality assurance and internal controls, including implementing tools and methodologies, to ensure that the Services are performed in an accurate and timely manner, in accordance with the Contract. Without limiting the foregoing, Contractor will:

(1) Maintain a strong control environment in day-to-day operations;

(2) Develop and execute a process to ensure regular internal control self-assessments are performed with respect to all Services and report the outcome of such self-assessments to the Commonwealth;

(3) Maintain an internal audit function sufficient to monitor the processes and systems used to provide the Services (i.e., perform audits, track control measures, communicate status to management, drive corrective action, etc.); and

(4) Provide to Commonwealth a summary of audit activity performed, associated significant findings, status of follow-up activity, summary of control incidents (i.e., frauds, conflict of interest situations, etc.) and related corrective action, every six (6) months.

b. As part of the Services and included in the Fees, Contractor shall:

(1) Implement and maintain independently audited quality certification (ISO 27001, ISO 9001 and ISO/IEC 20000 accreditation) and provide copies of its certification under such program and also any relevant audit or report documentation whenever so requested by the Commonwealth.

(2) Maintain valid security certifications including CISSP (Certified Information Systems Security Professional) or Comp TIA-Security+ or CASP and provide copies of its certification under such program and also any relevant documentation whenever so requested by the Commonwealth.

(3) Maintain compliance with Federal and State mandated policies including CJIS (Criminal Justice Information Services) and CHRIA (Criminal History Record Information Act) and provide copies of any relevant documentation whenever so requested by the Commonwealth.

(4) Undertake at least annually, and shall cause to be undertaken by Contractor's material Subcontractors, a SSAE 16 Type II audit that covers the existing controls as defined in the then current SSAE16 Type II audit for any Contractor sites where Contractor performs work for the Commonwealth; provide the reports from such audits to the Commonwealth; and perform these SSAE 16 Type II audits at such time(s) that shall mean the audit report is recent enough for Commonwealth to rely upon it in meeting its reporting obligations.

12. SERVICE LOCATIONS

a. **Services Locations**. The Services shall be provided from and to the Service Locations as detailed in *Schedule E* (Data Center Locations). Contractor shall not (1) provide the Services from a location other than a Service Location or (2) use the Commonwealth Enterprise Data Center to provide services to a Third Party without Commonwealth's consent. Authorized representatives of Commonwealth, Commonwealth agents and agents of the Federal government shall be permitted access to any Services Location, subject to the terms of *Section 12(d)*.

b. **Location of Performance.** Except where Contractor obtains the Commonwealth's prior written approval, Contractor shall perform all of the Services only from or at locations within the geographic boundaries of the continental United States. Any Commonwealth approval for the performance of Services outside of the continental United States shall be limited to the specific instance and scope of such written approval, including the types of Services and locations involved.

c. Right to Audit and Inspect:

(1) The Contractor shall permit the Commonwealth (or a Third Party provider selected by the Commonwealth) to perform an onsite inspection of the Contractor's Service Locations, infrastructure and security practices as reasonably requested by the Commonwealth.

(2) The Commonwealth shall have the right to request Third Party audits and/or certifications related to each Serve Location's infrastructure and security, including penetration testing and vulnerability assessments. Any reports produced from these audits and certifications will be provided to the Commonwealth for review at no cost.

(3) The Contractor shall provide the Commonwealth infrastructure and security specifications in written format for each Service Location as requested and at no cost to the Commonwealth.

(4) The Contractor shall provide the Commonwealth access to the performance records of the Contractor, as well as access to daily and weekly service quality statistics as requested and at no cost to the Commonwealth.

d. Security Procedures

(1) As part of the Services, Contractor shall maintain and enforce environmental and physical security standards and procedures at each of the Contractor Services Locations and shall comply with

environmental and physical security procedures as described in *Schedule F* (Data Center Statement of Work) and pursuant to the physical security and environmental chapters of the Commonwealth Computing Procedures Manual, which compliance will be confirmed by Contractor's SSAE 16 Type II audit report which will be delivered to the Commonwealth. If the Commonwealth requests any changes to environmental and security standards after the Effective Date and such changes would subject Contractor to material additional costs, those changes will be addressed through the Change Control Procedures. In addition, each Contractor Services Location must meet a minimum of Class C2 controlled access protection as defined in the Federal Department of Defense Trusted Computer System Evaluation (DOD 5200.28-STD).

(2) Each Commonwealth Agency's specific security requirements must be satisfied prior to the migration of its Data or processing activities to any Contractor Services Location, including any facilities to be used to support Disaster Recovery. Contractor shall maintain a log recording all entry to any Contractor Services Location, which log shall at all times be subject to Commonwealth review and audit. All of Contractor's security procedures required under this Contract shall be subject to periodic review by Commonwealth, any Commonwealth Agency or any agency of the United States federal government directly or indirectly having any dealings with any Commonwealth Agency.

(3) Contractor, as part of the Services, shall address any concerns any such reviewing entity may have regarding those security procedures and, if Commonwealth is not the reviewing entity, shall promptly inform Commonwealth of the expressed concerns and its plans to address the same. Contractor acknowledges that, because Commonwealth is a governmental entity, Commonwealth is subject to various federal and state statutory and regulatory confidentiality and security requirements, all of which will be binding upon Contractor during the Term. This Contract and the business relationship between Commonwealth and Contractor will be subject to review and approval by impacted Commonwealth Agencies and impacted federal agencies and other entities. At a minimum, Contractor will be required to comply with the Privacy Act of 1974, as amended (42 U.S.C.A. § 2000aa *et seq.*), the Drivers Privacy Protection Act, as amended (18 U.S.C.A. § 2721 *et seq.*), the Tax Information Security Guidelines promulgated by the Internal Revenue Service; and various confidentiality regulations promulgated by the U.S. Department of Health and Human Services, all as though Contractor were a governmental entity. Contractor will also be required to comply with the Health Insurance Portability and

Accountability Act of 1996, Pub.L. 104-191 (HIPAA) and the regulations promulgated related thereto (45 C.F.R. 160.101, *et seq.*) as a Business Associate as that term is defined by HIPAA according to the Business Associate Contract included as Appendix A (which Contract shall apply to covered portions of the Commonwealth as a hybrid entity as agencies direct, and which Contract shall govern only insofar as no other more stringent law otherwise applies to that Data, and only insofar as the Contract does not conflict with more stringent provisions of the Business Associate Contract, where "more stringent" is defined as in 45 C.F.R. 160.202). If and only to the extent specifically required in writing by a federal agency, in order for Contractor to be granted operational access to Commonwealth Data in connection with its performance of the Services, Contractor may be appointed as an agent of Commonwealth for the limited purpose of having operational access to certain Commonwealth Data not as a contractor of Commonwealth, but as an agent of Commonwealth having an agent's fiduciary obligations to Commonwealth as its principal. Contractor shall deliver to Commonwealth written notice of any breach of such security standards and procedures of which Contractor then has knowledge, which notice shall be delivered as promptly as is reasonable under the circumstances. Any breach by Contractor of such security standards or procedures under this *Section 12(d)* shall be subject to the provisions of *Section 30* (Default). As more fully set forth in *Section 59* (Independent Capacity of Contractor), parties to this Contract agree that the Services performed by the Contractor under the terms of this Contract are performed as an independent contractor.

13. CONDITIONS OF CONTRACTOR'S OCCUPANCY OF COMMONWEALTH-PROVIDED REAL PROPERTY

a. General

(1) The Contractor shall use and occupy the property provided by the Commonwealth (the "Enterprise Data Center") continuously as a data processing center and for related administrative uses. No other use shall be permitted. A summary of the Enterprise Data Center is attached to the RFP as *Exhibit D.7* (EDC Summary and Requirements) and incorporated herein.

(2) The Contractor shall have the sole responsibility to comply with all federal, state, and municipal laws, ordinances and regulations in its use and occupancy of the property.

(3) The Contractor agrees to accept the property in an "as-is" condition. The Contractor agrees that the Commonwealth extends no warranty

of any kind, express or implied, in regard to the property provided to the Contractor for its use.

(4) The Commonwealth is immune from the payment of real estate taxes. If any relevant taxing authority deems the use of the property by the Contractor to cause the property to become taxable, the Contractor shall have sole responsibility for the timely payment of any tax levied. Payment of such taxes may be temporarily withheld if Contractor is, in good faith, contesting the assessment or tax in a court of competent jurisdiction.

(5) The Contractor agrees that this Contract does not grant or otherwise convey any legal interest in the real property to the Contractor.

b. Upkeep and Improvements

(1) The Contractor, at its sole cost and expense, is responsible for all maintenance, security and upkeep of the real property under its control. The Contractor agrees to keep the real property in substantially the same condition as it was upon the Effective Date of the Contract, ordinary wear and tear excepted.

(2) Except for minor, non-structural alterations costing less than $10,000, any and all Contractor alterations and additions to the property shall be performed in accordance with plans and specifications prepared by a Pennsylvania-licensed architect and/or engineer. The Contractor shall submit plans and specifications to OA and the Department of General Services concurrently for approval prior to initiation of construction. Any and all alterations to the property shall be performed in a good and workmanlike manner, in conformity with all laws, rules, ordinances and other requirements of all governmental entities having jurisdiction. The Department of General Services and the OA reserve the right to specify standards that must be maintained for any alterations and additions to the property.

(3) The Contractor is solely responsible for all costs and expenses associated with any Contractor alterations or additions.

(4) The Contractor shall fully comply with Pennsylvania law governing contracting for construction, alteration or repair of a public building, including but not limited to the Prevailing Wage Act, Steel Products Procurement Act, and the Uniform Construction Code.

(5) To the fullest extent permitted by law, all Contractor contracts for alterations and additions must include a "No-Lien" clause requiring that the property be kept free from mechanics' or materialmens' liens and that the parties must file the necessary documentation in the appropriate public offices to effectuate waivers of contractors', mechanics' and materialmens' liens.

(6) Any and all alterations and additions made to the property by either the Contractor or the Commonwealth shall become part of the real estate and become the property of the Commonwealth.

c. Utilities

Contractor shall have installed, at its sole cost, separate electric meters and distribution panels to support the raised floor compute space. The Contractor will be responsible to timely reimburse the Commonwealth for electricity consumed in the raised floor compute space.

d. Reserve Account

Contractor shall establish a capital improvement fund ("Reserve Account") into which Contractor shall deposit monthly ($84,000) dollars. The amount deposited into the Reserve Account may be changed via *Section 27* (Change Control). The Reserve Account shall be cumulative, intended for capital improvements or major repairs to the Enterprise Data Center and disbursements from which shall be made only upon mutual agreement of the Commonwealth and the Contractor. Any remaining sums in the Reserve Account at termination of this Agreement shall be paid or credited to the Commonwealth. In the event that at any time during the Term of this Contract sums in the Reserve Account are insufficient to cover the cost of an agreed-to capital improvement or major repair, Contractor shall be reimbursed by the Commonwealth in an amount equal to such insufficiency. Contractor shall provide the Commonwealth at least semi-annually a report of all activity in the Reserve Account.

e. Termination Assistance

Contractor shall vacate the Enterprise Data Center and return to the Commonwealth, if not previously returned, any resources that are implicated by the relevant Assistance Event, as described in *Section 33* (Termination Assistance), and that are owned, leased or licensed by the Commonwealth or any Commonwealth contractor, including the Commonwealth owned or leased Equipment, the Commonwealth owned materials and the Commonwealth licensed materials, in condition at least as good as the condition of such facilities and resources when they were made available to Contractor, ordinary wear and tear excepted. Such

facilities and resources shall be vacated and/or returned as of the later of the effective date of the relevant Assistance Event and the completion of the Termination Assistance requiring such facilities or resources.

14. TRANSITION

a. **Transition.** Contractor shall perform the Transition Services, including provision of the Deliverables described in the Detailed Transition Plan. Contractor shall accomplish the Transition in a transparent, seamless, orderly, and uninterrupted manner. Contractor's responsibilities with respect to the transition include:

(1) Transfer of the Services to Contractor and subsequent transition of the Services to realize any planned cost reductions and Service performance improvements in accordance with the Transition Plans agreed to by Commonwealth and including a number of Transition Milestones;

(2) Performing the transition without disruption to Commonwealth's operations;

(3) Assuming responsibility for all costs associated with the transition; and

(4) Otherwise performing such transition and migration tasks as are necessary to enable Contractor to provide the Services in accordance with the terms of the Contract, including the applicable Service Levels.

b. **Transition Plan.** The preliminary Transition Plan is attached to this Contract as part of Contractor's Proposal. Contractor shall complete, and submit to Commonwealth for review a final Detailed Transition Plan on or before the date set forth in *Schedule D* (Transition Milestones). If a Detailed Transition Plan submitted by Contractor is not acceptable to Commonwealth, Contractor will address and resolve any questions or concerns Commonwealth may have and will promptly incorporate any modifications, additions or deletions requested by Commonwealth. Contractor will revise and resubmit the Detailed Transition Plan until accepted by Commonwealth. Upon Commonwealth's acceptance, the Detailed Transition Plan shall automatically be incorporated into this Contract as *Schedule M* (Detailed Transition Plan) and shall supersede and replace all prior Transition Plans. The Detailed Transition Plan shall detail the specific activities to be performed by each party, and, unless otherwise requested by Contractor and agreed to by Commonwealth in its sole discretion, shall be consistent in all material respects with any preliminary Transition Plan, including with respect to the activities, Deliverables, Transition Milestones, and Transition Milestone Credits described therein. The Detailed Transition Plan may thereafter be amended as mutually agreed by the parties.

The parties recognize and agree that timeliness is important for a successful Transition and have designated certain actions and projects in the Detailed Transition Plan as Transition Milestones (“Transition Milestones”). Contractor shall achieve all such Transition Milestone by the date corresponding thereto in *Schedule D* (Transition Milestones). Without limiting the foregoing, the Detailed Transition Plan shall specify, among other things:

(1) the Deliverables to be completed by Contractor,

(2) the date(s) by which each such activity or Deliverable is to be completed (the "Transition Milestones"),

(3) a process and set of standards to which Contractor shall adhere in the performance of the Transition Services and that shall enable Commonwealth to determine whether Contractor has successfully completed the transition and the activities and Deliverables associated with each Transition Milestone,

(4) any transition responsibilities to be performed or transition resources to be provided by Commonwealth and/or Commonwealth Customers,

(5) any transition responsibilities to be performed or transition resources to be provided by another Commonwealth contractor, and

(6) a detailed description of the processes and procedures that Contractor will implement (and associated implementation schedules) to effect the seamless integration and coordination of the Services with related services to be provided by other Commonwealth contractors.

The Detailed Transition Plan shall identify any related documents contemplated by this Contract and/or required to effectuate the transition that shall be executed by either of the parties.

c. **Performance**. Contractor shall perform the Transition Services in accordance with the timetable and the Transition Milestones set forth in the Detailed Transition Plan. Contractor shall assist Commonwealth in connection with Commonwealth's evaluation or testing of the Deliverables set forth in the Detailed Transition Plan. Except as otherwise expressly stipulated in the Detailed Transition Plan, Contractor shall perform the Transition Services in a manner that shall not (i) disrupt or have an unnecessary adverse impact on the activities or operations of Commonwealth or the Commonwealth Customers, (ii) materially, as reasonably determined by the Commonwealth, degrade the Services then being received by Commonwealth or the Commonwealth

Customers or (iii) materially, as reasonably determined by the Commonwealth, disrupt or interfere with the ability of Commonwealth or the Commonwealth Customers to obtain the full benefit of the Services. In Contractor's performance and completion of Transition Services, no functionality of Commonwealth's then current business operations or environment will be discontinued until Contractor demonstrates to Commonwealth's reasonable satisfaction that the affected processes and operations have been successfully migrated to Contractor's target environment and are functioning properly in that environment.

Without limiting its obligations or responsibilities, prior to undertaking any transition activity, Contractor shall discuss with Commonwealth and the relevant Commonwealth Customers all known Commonwealth and Commonwealth Customer-specific material risks and shall not proceed with such activity until Commonwealth is reasonably satisfied with the plans with regard to such risks (provided that, neither Contractor's disclosure of any such risks to Commonwealth, nor Commonwealth's acquiescence in Contractor's plans, shall operate or be construed as limiting Contractor's responsibility under this Contract). Contractor will, at Commonwealth's request, participate in transition meetings with other Commonwealth contractors. Commonwealth reserves the right to monitor, test and otherwise observe and participate in transition. Contractor will notify Commonwealth without delay if any Commonwealth monitoring, testing or participation has caused (or Contractor expects it to cause) a problem or delay in transition and work with Commonwealth to prevent or circumvent the problem or delay.

d. **Reports**. Beginning on the Effective Date, Contractor shall meet at least weekly with the Commonwealth to report on Contractor's progress in performing its responsibilities and meeting the timetable and Transition Milestones set forth in the Detailed Transition Plan. Contractor also shall provide written reports to Commonwealth at least weekly regarding such matters, and shall provide oral reports more frequently if requested by Commonwealth. Promptly upon receiving any information indicating that Contractor may not perform its responsibilities or meet the timetable or Transition Milestones set forth in the Detailed Transition Plan, Contractor shall notify Commonwealth of such delays and shall identify for Commonwealth's consideration and approval specific measures to address such delays and mitigate the risks associated therewith.

e. **Notification of Problems**. Contractor shall provide to Commonwealth written notice of any acts or omissions (whether by Commonwealth, a Commonwealth contractor, Subcontractor or any Third Party), any failure to perform any of each such party's obligations under the Contract and any other events that may affect Contractor's performance of the Transition Services. Contractor shall provide such written notice within thirty (30) days after Contractor first knew or should have known of such acts, omissions, or failures or other events. Such

written notice shall describe in reasonable detail such acts, omissions, failures or other events and the manner in which the foregoing may affect Contractor's performance.

f. **Corrective Action Plan**. In the event that either (1) the Commonwealth determines that Contractor has failed or is reasonably likely to fail to deliver the Transition Services, or (2) Contractor has determined that it has failed or is reasonably likely to fail to deliver the Transition Services, then Commonwealth or Contractor, as applicable, will notify the other party of such failure (a "Transition CAP Notice"). Concurrently with such notice, Contractor will:

(1) immediately take steps to mitigate any harmful effects of such failure, and

(2) promptly (and in any event as soon as reasonably practical) perform a Root Cause Analysis and prepare a corrective action plan with respect to such failure, and

(3) take all actions necessary to prevent its recurrence, including, without limitation, providing all additional resources necessary to resolve such failure.

If Commonwealth determines that any such corrective action plan is not adequately addressing the failure, Contractor shall revise the corrective action plan until it is accepted by the Commonwealth. In the event that Contractor is unable to complete the Transition Services on or before the dates specified in the Detailed Transition Plan (a "Transition Failure Event"), then Contractor will meet with Commonwealth to develop a workaround plan to address the Transition Failure Event, which plan, unless such Transition Failure Event was caused by Commonwealth, may include, at Commonwealth's option, obtaining the services to work around the Transition Failure Event from another Commonwealth contractor.

g. **Failure to Meet Transition Milestones**. Neither the Transition Services nor the activities and Deliverables associated with individual Transition Milestones shall be deemed complete until Commonwealth's acceptance of such activities and Deliverables. If Contractor fails to meet a Transition Milestone, Contractor shall pay Commonwealth the applicable Milestone Credits specified in *Schedule D* (Transition Milestones) or in the Detailed Transition Plan that are associated with such Transition Services.

h. **Additional Remedies**. In the event that Contractor fails to identify and resolve any problems that may impede or delay the timely completion of each task in the Detailed Transition Plan, without prejudice to Commonwealth's other rights and remedies under the Contract or at law or equity, (i) Contractor will provide, at its sole cost and expense, all such additional resources as are

necessary to identify and resolve any problems that may impede or delay the timely completion of each task in the Detailed Transition Plan, and (ii) Commonwealth may equitably reduce the Fees set forth in *Schedule C* (Services Catalog) in an amount reasonably estimated by Commonwealth to account for the Services that Commonwealth is not receiving or did not receive.

i. **Suspension or Delay of Transition Services.** Commonwealth reserves the right, in its sole discretion, to suspend or delay the performance of the Transition Services and/or the transition of all or any part of the Services. If Commonwealth elects to exercise this right and Commonwealth's decision is based in material part on concerns about Contractor's ability to perform material aspects of the Transition Services or Contractor's failure to perform its obligations under this Contract, the Commonwealth shall not incur any additional Fees or reimbursable expenses in connection with such decision, provided that Commonwealth shall work in good faith with Contractor to minimize the period of any such suspension or delay.

15. DISASTER RECOVERY AND BUSINESS CONTINUITY

a. Disaster Recovery Plan.

(1) Jointly with the Commonwealth, Contractor shall at least annually review and update the Disaster Recovery Plan, it being understood and agreed that the parties will work together and cooperate in good faith on any such review or updated of the Disaster Recovery Plan.

(2) With the Commonwealth's support as specified in the Disaster Recovery Plan, Contractor shall every six (6) months test the operability of the Disaster Recovery Plan then in effect.

(3) Within fifteen (15) business days of completion of a Disaster Recovery test, Contractor will certify to Commonwealth that the Disaster Recovery Plan was fully, timely and successfully implemented, or, if the Disaster Recovery Plan was not fully, timely and successfully implemented, report all deficiencies (including root cause analysis) and corrective actions, and certify that such corrective actions addressed all deficiencies; and

(4) Annually and at additional times at the request of Commonwealth, Contractor will certify to Commonwealth that that any applicable Third Party business recovery center agreement remains in full force and effect without any default, including payment, thereunder by any party thereto, and that Commonwealth is entitled, pursuant to the terms of the business recovery center agreement, to assume that agreement upon the expiration or termination of this Contract.

b. Disaster Recovery Event.

(1) As part of the Services, Contractor shall have responsibility for executing the Disaster Recovery Plan relating to the Services as described in *Schedule F* (Data Center Statement of Work). Contractor shall immediately provide Commonwealth with notice of the occurrence of any disaster affecting the provision or receipt of all or any material portion of the Services and implement the Disaster Recovery Plan then in effect. Contractor agrees to utilize the disaster recovery planning methodology software then utilized by Commonwealth in connection with activities contemplated under this *Section 15* (Disaster Recovery and Business Continuity).

(2) Contractor shall reinstitute the Services as promptly as possible but in any event within subscribed restitution hours, as set forth in the Disaster Recovery Plan then in effect, after the occurrence of a disaster. If the Services are not fully reinstituted within the subscribed restitution hours the Commonwealth shall have the right to terminate this Contract for critical failure pursuant to the provisions of *Section 32(c)*, except to the extent that the critical failure was caused by the Commonwealth, and Contractor shall, prior to or at the expiration of the applicable restitution period, deliver to Commonwealth a written report detailing the cause of the disaster, Contractor's plans to reinstitute the Services and its anticipated schedule to do so. Thereafter, Contractor and Commonwealth shall develop a plan to reinstitute the Services as promptly as is possible under the circumstances. Contractor shall prepare and deliver to Commonwealth updated reports such that Commonwealth shall at all times be fully informed as to the status of Contractor's efforts and anticipated schedule to reinstitute the Services. In the event that any Contractor Equipment is required to be replaced as a result of the disaster, Contractor shall replace such Contractor Equipment with Equipment to the extent then available and compatible with the associated application(s) which is capable of performing such that Contractor can meet applicable Service Levels under this Contract. Any Contractor obligations to implement a Disaster Recovery Plan set forth in this paragraph can be triggered by a notice of disaster provided to Contractor by Commonwealth.

16. PRIME CONTRACTOR RESPONSIBILITIES

The Contractor will be responsible for all Services in this Contract whether or not Contractor provides them directly. Further, the Contractor is the sole point of contact with regard to all contractual matters, including payment of any and all charges resulting from the Contract.

17. KEY POSITIONS/CONTRACTOR PERSONNEL

a. Contractor Project Manager and Transition Project Manager.

(1) Upon the Effective Date, the Contractor shall appoint the Contractor Project Manager identified in its proposal, who on a full-time basis shall be in charge of implementing the Services. Contractor shall replace the Contractor Project Manager only when required or permitted pursuant to *Section 17(c)*. The Contractor Project Manager shall at all times be subject to Commonwealth's continuing approval.

(2) Upon the Effective Date the Contractor shall appoint the Transition Project Manager identified in its proposal, who will have the responsibilities set forth in *Schedule F* (Data Center Statement of Work). Contractor shall replace the Transition Project Manager only when required or permitted pursuant to *Section 17(c)*. The Contractor Transition Manager shall at all times be subject to Commonwealth's continuing approval.

b. Key Positions. The positions identified in *Schedule G* (Staffing Plan and Key Positions), are designated by Commonwealth and Contractor as Key Positions within the Contractor's Personnel. All of the Key Personnel shall be dedicated to the Commonwealth account on a full-time basis. The Commonwealth Project Manager and the Contractor Project Manager shall meet once every year beginning with the first anniversary of the Effective Date or upon the request of either the Commonwealth Project Manager or the Contractor Project Manager to update the list of the Key Personnel. Each Key Personnel shall at all times be subject to Commonwealth's continuing approval. Except for a replacement or reassignment of Key Personnel pursuant to *Section 17(c)*, Contractor shall not reassign or replace any Key Personnel. As more fully set forth in *Section 59* (Independent Capacity of Contractor), parties to this Contract agree that the Services performed by the Contractor under the terms of this Contract are performed as an independent contractor.

c. Reassignment Waivers. Contractor shall not reassign or replace the Contractor Project Manager or any Contractor Services Location Manager during the first eighteen (18) months of his or her assignment as the Contractor Project Manager or a Contractor Services Location Manager unless Commonwealth consents to such reassignment or replacement or unless the individual (1) voluntarily resigns from Contractor, (2) is dismissed by Contractor for cause or replaced as a result of unsatisfactory performance in respect of his or her duties and responsibilities to Contractor or Commonwealth pursuant to this Contract, or (3) is unable to work due to his or her death or disability. In addition, Contractor shall, in connection with its assignment of other Key Personnel, use commercially reasonable efforts to assure the greatest degree of continuity possible among such Key Personnel. If, in any instance, Commonwealth withholds or withdraws its approval of any

Personnel or representative of Contractor for the performance of the Services, including without limitation, the Contractor Project Manager, any Contractor Services Location Manager or any other Key Employee, Contractor promptly shall reassign and replace such Personnel or representative.

d. **Subcontractors**. The Contractor may subcontract any portion of the Services described in this Contract to Third Parties selected by Contractor and approved in writing by the Commonwealth, which approval will not be unreasonably withheld. Approved Subcontractors will be listed on *Schedule L* (Approved Subcontractors). Notwithstanding the above, if Contractor has disclosed the identity of Subcontractor(s) together with the scope of work to be subcontracted in the Contractor's Proposal, award of the Contract is deemed approval of all named Subcontractors for the specified scope of work and a separate approval is not required. The existence of any subcontract shall not change the obligations of Contractor to the Commonwealth under this Contract. Upon written request of the Commonwealth, the Contractor shall promptly provide the Commonwealth with a copy of any specified subcontract agreement between the Contractor and the Subcontractor. If Commonwealth reasonably determines that a Subcontractor should no longer be retained by Contractor due to material performance deficiencies arising from the Subcontractor's performance, the Commonwealth reserves the right, for good cause, to require that the Contractor remove a Subcontractor from the project. As more fully set forth in *Section 59* (Independent Capacity of Contractor), parties to this Contract agree that the Services performed by the Contractor under the terms of this Contract are performed as an independent contractor.

e. **Managerial Control**. Subject to the other provisions of this Contract, including without limitation, provisions regarding security procedures and government security clearance and the other provisions of this *Section 17* (Key Positions/Contractor Personnel) Contractor shall have complete managerial control over its Personnel, and Contractor may dismiss, promote, replace or reassign a member of the Contractor Personnel; provided, however, that unless otherwise agreed to by Commonwealth, Contractor shall deliver a notice to Commonwealth before or immediately after dismissing any member of the Contractor's Personnel. In addition, Contractor shall deliver to Commonwealth written notice of any criminal activities undertaken by, or alleged to have been undertaken by, any member of the Contractor Personnel and of which Contractor then has knowledge, which notice shall be delivered as promptly as is reasonable under the circumstances, and Contractor will cooperate with any investigation undertaken by or through Commonwealth in respect of such actual or alleged criminal activities.

f. **Conduct of Contractor Personnel**. While at the Commonwealth Services Locations and the Contractor Services locations, Contractor's Personnel and Subcontractors (1) shall comply with all lawful requests, rules and regulations of Commonwealth regarding personal and professional conduct (including the

wearing of a particular uniform, identification badge or personal protective equipment and adhering to security regulations and general safety practices or procedures) and (2) otherwise shall conduct themselves in a businesslike manner.

g. **Unsatisfactory Conduct**. If the Commonwealth determines in its sole discretion that a particular Contractor Personnel or Subcontractor is not conducting himself or herself in an appropriate manner, Commonwealth may provide Contractor with notice of such conduct. Upon receipt of such notice, Contractor shall promptly investigate the matter and take appropriate action, which may include (1) removing the offending individual from the project and replacing him or her with a similarly qualified individual or (2) taking other appropriate disciplinary action to prevent a reoccurrence. In the event there are repeat violations of this *Section 17(g)* by a particular Contractor Personnel, contractor or Subcontractor, Contractor shall promptly remove him or her from the project as set forth above.

h. **Confidentiality.** Contractor shall:

(1) Cause each Contractor Personnel to maintain and enforce the confidentiality provisions of the Contract both during and after their assignment to the Commonwealth account; and

(2) Enter into, or shall have entered into, an agreement with each Contractor Personnel member which assigns, transfers and conveys to Contractor all of such Personnel's right, title and interest in and to any materials created pursuant to the Contract, including all rights of patent, copyright, trade secret or other proprietary rights in and to such materials.

18. THIRD PARTY SERVICES

a. Commonwealth shall have the right, in its sole discretion, to contract with any number of Third Parties to perform Services which would otherwise fall within the terms of this Contract. In the event Commonwealth contracts with a Third Party to perform any service on behalf of or for Commonwealth, Contractor, as part of the Services, shall cooperate with Commonwealth and such Third Party to the extent reasonably required by Commonwealth, including provision of (i) existing written requirements, standards and policies for systems operations so that the enhancements or developments of such Third Party may be operated by, and will be compatible with the operations of, Contractor, (ii) assistance and support services to such Third Party, and (iii) such access to the Systems as may be reasonably required by such Third Party (subject to all security standards, licenses, confidentiality restrictions and other standards and procedures then in effect at each of the Services Locations) to develop, test and deploy the service contracted for by Commonwealth. In addition thereto, Contractor shall not commit or permit any act which will unduly interfere with the performance of work by Commonwealth employees or any such Third Party, and Commonwealth

will not commit or permit any act which will interfere with Contractor's performance of the Services. All additional out-of-scope support costs, excluding attorney fees, incurred by Contractor as a result of a Commonwealth contract with a Third Party will be handled in accordance with the Change Control Procedures.

b. Throughout the Term, but not more than once every six months, Commonwealth may request that Contractor work together with Commonwealth and/or Third Parties to identify ways to achieve reductions in the cost of Service delivery and corresponding reductions in the price(s) quoted in the Contract. If so requested by Commonwealth, Contractor will, at its own expense, promptly prepare a detailed proposal identifying all viable means of achieving the desired reductions without (to the extent practically possible) adversely impacting business objectives or requirements identified by Commonwealth. Commonwealth shall not be obligated to accept or implement any such proposal.

19. COMPENSATION

In consideration of Contractor providing the Services, subject to the terms of this Contract, Commonwealth shall pay to Contractor the Fees as set out at *Schedule C* (Services Catalog). All items shall be performed within the time period(s) specified in the Contract. The Contractor shall be compensated only for items supplied and performed consistent with the terms of this Contract.

20. FEES

a. **Service Fees**. In consideration of Contractor providing the Services, subject to the terms of this Contract, Commonwealth shall pay to Contractor the Fees pursuant to *Schedule C* (Services Catalog).

b. **Cost of Living Adjustment.** The Fees shall not be subject to any cost of living or inflationary adjustment or any other adjustment based on Contractor's costs to provide the Services.

c. **Expenses**. Except as expressly provided otherwise in this Contract, expenses of Contractor relating to the Services are included in the Fees, and no such expenses or other costs or fees shall be reimbursed by Commonwealth unless agreed to by Commonwealth in writing. The Contractor shall not be allowed or paid travel or per diem expenses unless agreed to by Commonwealth in writing.

d. **Pro-ration**. All periodic Fees or charges under this Contract are to be computed on a calendar month basis and shall be prorated on a per diem basis for any partial month.

e. **Unused Credits**. Any unused credits against future payments owed to either party by the other pursuant to this Contract shall be paid to the applicable party within forty-five (45) days after the expiration or termination for any reason of Contractor's obligation to provide the Services or of this Contract. This *Section 20(e)* shall survive the expiration or any termination of this Contract.

f. **Pricing Protection**. Notwithstanding anything to the contrary elsewhere in this Contract, the Fees relating to time and materials Services shall in no event and at no time during the Term exceed Contractor's then lowest charges for such services to Contractor's state governmental customers generally receiving comparable goods and services at comparable volumes and upon material terms and conditions comparable to those contained in this Contract and pursuant to an outsourcing agreement dated after the Effective Date. Upon Commonwealth's request from time to time, and in any event on each anniversary of the Effective Date, Contractor shall advise Commonwealth in writing that this *Section 20(f)*has not been contradicted by any transaction entered into by Contractor on or after the Effective Date. If Contractor is unable to provide such written notice because of a transaction entered into by Contractor contradicting this *Section 20(f),* Contractor shall offer to Commonwealth an adjustment to the Fees to correct such contradiction.

g. Contractor presently provides the Commonwealth services under Contract Number ME-981363 (the "DPH Agreement") at the Fees set forth in Exhibit 21.01A (the "2014 DPH Fees") of the DPH Agreement. The services provided under the DPH Agreement are similar to the Services to be provided under this Contract. Commencing on the Effective Date of this Contract and ending on December 31, 2014, Unisys will deduct any amounts paid for Services transitioned to this Contract from the DPH Agreement from the 2014 DPH Fees invoiced to the Commonwealth under the DPH Agreement. The deduction will be by Agency transitioned and will exclude any Services not transitioned from the DPH Agreement. If the amount paid under this Contract in 2014 is greater than the sum of the 2014 DPH Fees, the amount invoiced under the DPH Agreement will be zero ($0).

On or before October 31, 2014, Unisys and the Commonwealth will negotiate what potential changes or reductions, if any, will be made related to Services which have not been transitioned from the DPH Agreement.

21. PAYMENT SCHEDULE AND INVOICES

a. **Service Fees**. On or before the 15th day of each calendar month of the Term, Contractor shall provide Commonwealth with a single invoice for the Service Fees. Each such invoice shall include the Fees, if applicable, for the then current month, as well as any Service Level Credits then payable by Contractor or refundable by Commonwealth, or other reimbursable charges to Commonwealth for Services actually rendered prior to the date of such invoice.

b. **Detailed Invoices.** Contractor shall provide on the monthly invoices varying degrees of detail (e.g., per Agency, end-user, department, project, site) as specified in *Schedule H* (Commonwealth Computing Procedures Manual). The detailed invoice will be delivered both in an electronic format compatible with the Commonwealth's Invoice Processing System and a summary Invoice will be delivered for management and budgeting purposes.

c. **Time of Payment**. Any sum due Contractor pursuant to any such invoice shall be due and payable on the last business day of the calendar month following the calendar month during which such invoice was delivered to Commonwealth. (e.g., an invoice delivered to Commonwealth on July 15, 2015 will be due and payable on August 31, 2015, the last business day of August, 2015.). In the event any invoices remain unpaid after such due date, the Commonwealth may pay interest as determined by the Secretary of Budget in accordance with Act No. 266 of 1982 and regulations promulgated pursuant thereto. Contractor shall, subject to Section 32(f) of this Contract, continue to provide the Services even in the event payment is delayed or is not made in timely fashion.

d. **Fee Dispute**. During the pendency of a dispute between Commonwealth and Contractor pursuant to which Commonwealth, in good faith, believes it is entitled to withhold, and does withhold, payment, Contractor shall continue to fully provide the Services and otherwise fully perform its obligations under this Contract. Notwithstanding the foregoing, Commonwealth will not withhold more than twenty-five percent (25%) of any monthly invoice.

22. INSPECTION AND ACCEPTANCE OF DELIVERABLES AND MILESTONES

a. Acceptance of Deliverables related to transition will occur in accordance with the Acceptance Criteria set out in *Schedule D* (Transition Milestones) and *Schedule K* (Key Program Deliverables) as it relates to Transition, and the Detailed Transition Plan.

b. Acceptance of Deliverables other than those related to transition will occur in accordance with the Commonwealth Computing Procedures Manual.

c. If the Deliverables are in compliance with the specifications, then the Commonwealth shall provide the Contractor with Commonwealth's written conditional acceptance of the Deliverables. If the Deliverables are not in compliance with the specifications, then the Commonwealth shall provide the Contractor with Commonwealth's written rejection of the Deliverable. Payment will only be made if the Commonwealth has accepted the Deliverable through written acceptance.

d. If the Deliverables do not meet an accessibility standard as set out in ITB-ACC001, the Contractor must provide written justification for its failure to meet the standard. The justification must provide specific details as to why the

standard has not been met. The Commonwealth may either waive the requirement as not applicable to the Commonwealth's business requirements or require that the Contractor provide an acceptable alternative. Any Commonwealth waiver of the requirement must be in writing.

e. Unless otherwise set forth in *Schedule H* (Commonwealth Computing Procedures Manual), upon the Contractor's receipt of the Commonwealth's written notice of rejection, which must identify the reasons for the failure of the Deliverables to comply with the Contract, the Contractor shall have fifteen (15) business days, or such other time as the Commonwealth and Contractor may agree is reasonable, within which to correct all such failures, and resubmit the corrected Deliverables, certifying to the Commonwealth, in writing, that the failures have been corrected, and that the Deliverables have been brought into compliance with the Contract. Upon receipt of such corrected and resubmitted Deliverable and certification, the Commonwealth shall have thirty (30) business days to test the corrected Deliverable to confirm that it is in compliance with the Contract. If the corrected Deliverable is in compliance with the Contract, then the Commonwealth shall provide the Contractor with Commonwealth's acceptance of the Deliverable.

f. If, in the opinion of the Commonwealth, the corrected Deliverable still contains material failures, the Commonwealth may either:

(1) Repeat the procedure set forth above; or

(2) Terminate the Contract in accordance with *Section 32* (Termination).

23. SERVICE LEVELS

a. The Contractor shall comply with the procedures and requirements of *Schedule J.1* (Data Center Service Level Management), *Schedule J.2* (Data Center Service Level Matrix), and *Schedule J.3* (Data Center SLA Definitions) during the term of the Contract.

b. All Services without expressly defined Service Levels must be performed at least to the same degree of accuracy, completeness, efficiency, quality and timeliness as is provided by well-managed suppliers providing services similar to the Services, so long as such performance is operationally reasonable. For where there are expressly defined Service Levels, Contractor will measure and report its performance against these standards on at least a monthly basis, except as may otherwise be agreed between the parties in respect of Services performed less frequently than monthly.

c. The Commonwealth's acceptance of any Service Level Credit shall not bar or impair Commonwealth's rights and remedies in respect of the failure or root cause as set

forth elsewhere in this Contract, including without limitation claims for liquidated damages, injunctive relief and termination rights, provided however, Service Level Credits paid would be credited against any such claim for damages.

24. LIQUIDATED DAMAGES

a. By accepting this Contract, the Contractor agrees to the delivery requirements of this Contract. If a Contract schedule is not met, including Transition Milestones set out in Transition Plan, the delay will interfere with the Commonwealth's program. In the event of any such delay, it would be impractical and extremely difficult to establish the actual damage for which the Contractor is the material cause. The Commonwealth and the Contractor therefore agree that, in the event of any such delay the amount of damage shall be the amount set forth in this *Section 24* and agree that the Contractor shall pay such amount as liquidated damages, not as a penalty.

b. The amount of liquidated damages for failure to meet Transition Milestones is set forth in *Schedule D* (Transition Milestones).

c. If, *Schedule D* (Transition Milestones) indicates that Contractor may earn back liquidated damages, then Contractor shall have the time specified in *Schedule D* (Transition Milestones), as indicated, to meet the Acceptance Criteria for the Transition Milestone and earn back the Milestone Credit. If Contractor fails to meet the Acceptance Criteria within 30 days following the Milestone Due Date or, if an Earn-Back period is specified, then 30 days following the end of the specified Earn-Back period, the Commonwealth, at no additional expense and at its option, may either:

(1) Immediately terminate the Contract and all Software, documentation, reports, Developed Materials and any other materials provided for or created for the Commonwealth as a result of this Contract shall be given to the Commonwealth, and the Commonwealth shall be entitled to its remedies under Subsection 24(c); or

(2) Order the Contractor to continue with no decrease in effort until the work is completed in a manner acceptable to the Commonwealth or until the Commonwealth terminates the Contract. If the Contract is continued, the liquidated damages will also continue until the work is completed.

d. Liquidated damages shall be paid by the Contractor and collected by the Commonwealth by deducting them from the invoices submitted under this Contract or any other contract Contractor has with the Commonwealth, by collecting them through the performance security, if any, or by billing the Contractor as a separate item.

e. To the extent that the delay or failure is caused by the Commonwealth, as described in *Schedule D* (Transition Milestones), no liquidated damages will be applied.

f. Contractor shall not be liable for liquidated damages if the delay to the Contract arises out of causes beyond the control of and without the fault or negligence of the Contractor and/or its Subcontractors. Such causes may include, but are not limited to, acts of God or of the public enemy, fires, floods, epidemics, quarantine restrictions, strikes, work stoppages, freight embargoes, acts of terrorism, and unusually severe weather; but in every case, the delay must be beyond the control of, and without the fault or negligence of, the Contractor and/or its Subcontractors. The Contractor shall notify the Commonwealth immediately in writing of its inability to perform because of a cause beyond the control of the Contractor.

g. If the delays are caused by the default of a Subcontractor, and if such default arises out of causes beyond the control of both the Contractor and Subcontractor, and without their fault or negligence, the Contractor shall not be liable for liquidated damages for delays, unless the supplies or services to be furnished by the Subcontractor were obtainable from other sources in sufficient time to permit the Contractor to meet the required performance schedule.

25. CONTINUOUS IMPROVEMENT AND BENCHMARKING

a. **Benchmark Overview**. Prior to the expiration of the second anniversary of the Effective Date, Commonwealth and Contractor shall establish the details of the Benchmarking process intended to ensure that Contractor provides Commonwealth with technology and Services Levels equal to or greater than other organizations receiving similar services. The parties acknowledge and agree that the benchmarking process is intended to assist Commonwealth in making decisions necessary to balance the desire for then current technology against the cost and uncertain performance of newly evolving technology.

b. **Benchmarker**. The Benchmark shall be conducted by a Benchmarker selected by the Commonwealth, subject to Contractor's approval thereof, in writing, such approval not to be unreasonably withheld, delayed or conditioned. The fees and expenses charged by the Benchmarker shall be paid by Commonwealth. Contractor shall at its expense cooperate with and assist the Benchmarker and any other third parties involved in the Benchmarking process, including meeting with Commonwealth and the Benchmarker before and throughout the benchmarking process and providing data relating to the provision of the Services, as requested by Commonwealth or the Benchmarker.

c. **Benchmark**. If Commonwealth undertakes the Benchmarking, Commonwealth and Contractor, in good faith, shall attempt to agree upon the period during which

the Benchmarking shall be conducted. If the parties are unable to so agree, Commonwealth shall specify the relevant period, subject to Contractor's approval thereof, in writing, such approval not to be unreasonably withheld, delayed or conditioned.

d. **Benchmark information**. Commonwealth and Contractor shall jointly determine the Benchmark information with appropriate input from the Benchmarker. Commonwealth and Contractor shall (1) review the Benchmark information, and (2) schedule a meeting to address any issues either party may have with the Benchmark information. Contractor shall provide the Benchmark information at no additional cost to Commonwealth; provided, however, that if Commonwealth wishes the Benchmarker to use information which Contractor does not otherwise have access to in the course of its business, Commonwealth shall provide such information at its own cost and Contractor may use such information but, unless Commonwealth expressly agrees otherwise in writing, only in connection with providing the Services.

e. **Benchmarking Results**. Within thirty (30) days after the completion of Benchmarking, the Benchmarker shall deliver the Benchmark Results to the Commonwealth Project Manager and the Contractor Project Manager for distribution to the members of the Management Committee.

f. **Benchmark Results Review Period and Adjustments**. The members of the Management Committee shall utilize the Benchmark Review Period to review such Benchmark Results, and the Management Committee shall meet during the Benchmark Review Period to collectively assess the Benchmark Results.

g. **Disputes of Benchmark Results**. Either Commonwealth or Contractor may in good faith dispute the Benchmark Results, in writing, prior to the expiration of the Benchmark Review Period. Any such notice of dispute issued by either party shall include a description of the nature of such dispute in sufficient detail so as to enable the Benchmarker and the other party to assess the motive and merit of the dispute. Within ten (10) days after receipt of such notice, the parties shall cause the Benchmarker to issue a written response addressing the dispute, and if such dispute requires a change to any of the Benchmark Results, the Benchmarker shall be directed to issue revised Benchmark Results. Upon issuing such revised Benchmark Results, Commonwealth and Contractor, as applicable, shall have another Benchmark Review Period to review the revised Benchmark Results in accordance with *Section 25(f)*. In the event either party disputes the revised Benchmark Results within the second Benchmark Review Period or if the parties are unable to agree as to the need for revised Benchmark Results, original Benchmark Results or the revised Benchmark Results, as the case may be, shall be subject to the contract controversy procedures set forth in *Section 34* (Contract Controversies).

h. **Benchmarking: Price Protection**. In addition to the Benchmarking provided for in this *Section 25* (Continuous Improvement and Benchmarking), no earlier than sixty (60) days after the end of Year 2 of this Contract, and no more frequently than annually thereafter, the Commonwealth may engage a Benchmarker, in accordance with the provisions of this *Section 25* (Continuous Improvement and Benchmarking) for the purpose of assessing the extent to which the prices paid for the Services hereunder are comparable to prices of a comparable reference group of clients for Services. This Benchmarking Price Protection process shall be an objective measurement and comparison process utilizing baseline methods and industry standards. The parties acknowledge and agree that this Benchmarking Price Protection process is intended to assure the Commonwealth that pricing and pricing models employed in this engagement are consistent with the reference group throughout the later years of the Contract, as it may be extended or renewed.

i. **Benchmark: Pricing Adjustments**. If the results of a Benchmarking Price Protection analysis, as reflected in written Benchmarking Results delivered to Contractor, reveal that amounts to be paid under the terms of the Contract for Services exceed by a factor of ten percent (10%) or more than the average of amounts paid by the reference group for comparable services (the "Market Rate"), the Commonwealth may elect to renegotiate those prices. When notified of the Commonwealth's intent to renegotiate the prices, the Contractor shall, as soon as practical following notification of the Commonwealth's intent, negotiate in good faith with Commonwealth for the adjustment and reduction of fees for the Services. If an agreement is reached for a pricing adjustment such agreement will be effective as of the date of delivery of the Benchmarking Price Protection Results. If the parties are unable to agree to a pricing adjustment within sixty (60) days after delivery of the Benchmarking Price Protection Results, the matter shall be submitted to the various dispute resolution procedures contained in *Section 34* (Contract Controversies) of the Contract. If the dispute resolution procedure results in a pricing adjustment, that adjustment will be effective as of the date of delivery of the Benchmarking Price Protection Results. In no event will Contractor increase the Fees as a result of any review pursuant to this *Section 25* (Continuous Improvement and Benchmarking).

j. **Annual Best Practices Reviews.** Within thirty (30) days of each anniversary of the Effective Date, Contractor shall, in accordance with procedures agreed upon by the Commonwealth Project Manager and the Contractor Project Manager, identify for Commonwealth any best practices that have emerged (within Contractor’s organization or, to the knowledge of Contractor, within the processing services outsourcing market generally), that, if implemented by the Contractor would materially benefit the Commonwealth in terms of price reductions or performance improvement. If requested by Commonwealth, within sixty (60) days Contractor shall provide Commonwealth with proposals for the implementation of such best practices in a manner consistent with the

Change Control Procedures of the Contract. If approved by Commonwealth, Contractor shall implement such best practices on behalf of Commonwealth as expeditiously as possible.

26. GOVERNANCE

Provisions for the governance of this Contract and the Services delivered pursuant hereto are set forth in *Schedule B* (Governance) to this Contract.

27. CHANGE CONTROL

a. Change Control Procedures. The following Change Control Procedures will apply if either party wishes to implement or have Contractor implement a Change. The requesting party will forward to the other party a Change Order which will include the following:

(1) Project identification
(2) Originator's name and title
(3) The date of the Change Order
(4) A description of the proposed Change
(5) The reason for the proposed Change

For Contractor, all Change Orders must be directed to or originate from Contractor's Project Manager. For Commonwealth, all Change Orders must be directed to or originate from the Commonwealth Project Manager.

(6) For any Contractor-initiated Change Order, Commonwealth shall have the option of accepting or rejecting that Change Order.

(7) Contractor will assign a number to and log each Change Order.

(8) All Change Orders will be categorized by Commonwealth as Priority 1 (urgent), Priority 2 (ordinary) or Priority 3 (low).

(9) Contractor will make reasonable efforts to investigate the impact of the Change Order on the Fees, timetable, specifications, Services, Service Levels, terms and conditions and, the relative obligations of the parties under this Contract and the (the "Impact Study") in accordance with a schedule that reflects the applicable priority category.

(10) Contractor will inform Commonwealth if there will be any charges for Contractor Services in conducting the Impact Study and Commonwealth will decide whether Contractor should conduct the Impact Study. Contractor shall be entitled hereunder to charge Commonwealth only for those expenses incurred by Contractor in connection with the conduct of the Impact Study that are (i)

Contractor's out-of-pocket expenses paid by Contractor to Third Parties (other than Contractor's or any Contractor's Subcontractor's employees) for expertise not otherwise possessed by or available to Contractor or (ii) for Personnel of Contractor or any Contractor Subcontractor not theretofore engaged in the provision of the Services. In order for any of the foregoing expenses to be reimbursable to Contractor, Contractor must first provide an estimate thereof to Commonwealth and obtain from Commonwealth its prior written approval thereof. If Contractor provides any such estimate and Commonwealth does not approve the estimated expenses, Contractor shall not be obligated to proceed with the Impact Study. In all cases, Contractor shall make a good faith effort to maximize its use of Contractor Personnel and the employees of Contractors Subcontractors then engaged in the provision of the Services to the extent Contractor can do so without adversely affecting its ability to provide the Services in accordance with the Services Levels. Any disputes between the parties regarding the validity, estimated amount or actual amount of any reimbursable expenses shall be subject to the dispute resolution provisions of *Section 34* (Contract Controversies).

(11) If both parties agree on the Impact Study and any necessary Changes to the Services, the relative obligations of the parties under this Contract, and the Fees, a Change Order will be issued to reflect the agreed to Changes.

(12) If the parties cannot agree upon the Impact Study or the resultant Changes to this Contract, any Commonwealth-initiated Change Order will nevertheless be implemented at Commonwealth's option and Contractor shall perform the Services, and either party may elect to have all outstanding related matters treated as a dispute between the parties under *Section 34* (Contract Controversies). During the pendency of any such dispute, Commonwealth shall pay to Contractor any undisputed amounts. Any changes to Service Levels which are required by the implementation of the Changes will be reflected in the Change Order that is issued.

b. All Changes shall be made pursuant to the Change Control Procedures. Contractor shall:

(1) schedule all Changes so as not to interrupt or unduly interfere with Commonwealth's operations,

(2) prepare and deliver to Commonwealth each month a ninety-day rolling schedule for ongoing proposed and approved and planned Changes,

(3) review and determine the cause of any failed Changes and deviations from scheduled Changes, and

(4) document and provide to the Management Committee and to the Commonwealth Project Manager, individually, same-day notification (which may be given orally provided that such oral notice is confirmed in writing to such persons within three (3) Commonwealth business days) of all changes performed on an emergency basis to maintain the continuity of the Services.

c. Without limiting any other provision of this Contract, the following Schedules may be modified through the Change Control Procedures set forth in this *Section 27* (Change Control):

(1) Schedule C – Services Catalog
(2) Schedule E – Data Center Locations
(3) Schedule G – Staffing Plan and Key Positions
(4) Schedule J.1 – Data Center Service Level Management
(5) Schedule J.2 – Data Center Service Level Matrix
(6) Schedule J.3 – Data Center SLA Definitions
(7) Schedule H – Commonwealth Computing Procedures Manual
(8) Schedule O – Commonwealth Data Centers to be Transitioned

28. NOTICE OF DELAYS

Whenever the Contractor encounters any difficulty that delays or threatens to delay the timely performance of this Contract (including actual or potential labor disputes), the Contractor shall immediately give notice thereof in writing to the Commonwealth stating all relevant information with respect thereto. Such notice shall not in any way constitute a basis for an extension of the delivery schedule or be construed as a waiver by the Commonwealth of any rights or remedies to which it is entitled by law or pursuant to provisions of this Contract. Failure to give such notice, however, may be grounds for denial of any request for an extension of the delivery schedule because of such delay. If an extension of the delivery schedule is granted, it will be done consistent with *Section 27*(Change Control).

29. NOTICE

Any written notice to any party under this Contract shall be deemed sufficient if delivered personally, or by facsimile, telecopy, electronic or digital transmission (provided such delivery is confirmed), or by a recognized overnight courier service (e.g., DHL, Federal Express, etc.), with confirmed receipt, or by certified or registered United States mail, postage prepaid, return receipt requested, sent to the address such party may designate by notice given pursuant to this section.

30. DEFAULT

a. The Commonwealth may, subject to the provisions of *Section 28* (Notice of Delays), and in addition to its other rights under the Contract, declare the Contractor in default by written notice thereof to the Contractor, and terminate for cause (as provided in *Section 32* (Termination)) the whole or any part of this Contract and shall further have the right to seek damages from Contractor for any of the following reasons:

(1) Failure to begin work within the time specified in the Contract or as otherwise specified;

(2) Failure to successfully complete a Major Milestone in accordance with the agreed Transition or Transition Plans or to complete specified work in accordance with the Contract terms;

(3) Multiple failures over time of a single Service Level or a pattern of failure over time across multiple Service Levels (a Service Level Termination Event) as set out in *Schedule J.1*(Data Center Service Level Management), *Schedule J.2* (Data Center Service Level Matrix), *and Schedule J.3* (Data Center SLA Definitions) to this Contract; this will include failures of Service Levels and key Service Levels;

(4) Failure to make agreed-upon adjustments to the fees or Service Levels in accordance with the outcome of Benchmarking Procedures;

(5) Failure or refusal to remove material, or remove and replace any work rejected as defective or unsatisfactory;

(6) Abandonment or willful refusal to provide the Services or any part of the Services;

(7) Failure to perform its responsibilities under any Business Continuity Plans or Disaster Recovery Plans, including such Business Continuity Plans or Disaster Recovery Plans that apply to Contractor's own locations used for the delivery of the Services;

(8) Any breach by Contractor of security standards or procedures under *Section 12(d)* of this Contract;

(9) Failure or refusal within 30 days after written notice by the Contracting Officer, of the Contractor to make payment or show cause why payment should not be made, of any amounts due for materials furnished, labor supplied or performed, for equipment rentals, or for utility services rendered;

(10) Failure to protect, to repair, or to make good any damage or injury to property as required under the terms of this Contract;

(11) Breaches of covenants, agreements, obligations, representations or warranties in the Contract occurring simultaneously or over time, whether or not each such breach is a material breach, and whether or not each such breach was cured, that taken together constitute a material breach of the Contract after Contractor has been made aware of such breaches, on an individual basis. Regardless of any other provision in this Contract to the contrary no cure period is available to Contractor should the Commonwealth terminate under this *Section 30(a)(11)*;

(12) An act or omission of Contractor in the performance of this Contract, which is not otherwise explicitly required or permitted under this Contract, and which results in any Regulatory Entity notifying Commonwealth that it is subjecting the Commonwealth to a hearing or tribunal or withdrawing any license granted to Commonwealth or Contractor and such hearing, tribunal or withdrawal would have a material and adverse effect on Commonwealth's operations or business or the Services. Regardless of any other provision in this Contract the contrary no cure period is available to Contractor should the Commonwealth terminate under this *Section 30(a)(12)*;

b. In the event that the Commonwealth terminates this Contract in whole or in part as provided in Subparagraph (a) above, the Commonwealth may procure, upon such terms and in such manner as it determines, services similar or identical to those so terminated, and the Contractor shall be liable to the Commonwealth for any reasonable excess costs for such similar or identical services included within the terminated part of the Contract.

c. If the Contract is terminated as provided in Subparagraph (a) above, the Commonwealth, in addition to any other rights provided in this *Section 30* (Default), may require the Contractor to transfer title and deliver immediately to the Commonwealth in the manner and to the extent directed by the Commonwealth, such partially completed work, including, where applicable, reports, working papers and other documentation, as the Contractor has specifically produced or specifically acquired for the performance of such part of the Contract as has been terminated. Except as provided below, payment for completed work accepted by the Commonwealth shall be at the Contract price. Except as provided below, payment for partially completed work including, where applicable, reports and working papers, delivered to and accepted by the Commonwealth shall be in an amount agreed upon by the Contractor and the Commonwealth. The Commonwealth may withhold from amounts otherwise due the Contractor for such completed or partially completed work, such sum

as the Commonwealth determines to be necessary to protect the Commonwealth against loss.

d. The rights and remedies of the Commonwealth provided in this *Section 30* (Default) shall not be exclusive and are in addition to any other rights and remedies provided by law or under this Contract.

e. The Commonwealth's failure to exercise any rights or remedies provided in this *Section 30* (Default) shall not be construed to be a waiver by the Commonwealth of its rights and remedies in regard to the event of default or any succeeding event of default.

f. Following exhaustion of the Contractor's administrative remedies as set forth in *Section 34* (Contract Controversies), the Contractor's exclusive remedy shall be to seek damages in the Board of Claims.

31. STEP-IN RIGHTS

a. In the event that Contractor is failing to deliver all or part of the Services, the Commonwealth shall give the Contractor notice of the failure. The Contractor shall have fifteen (15) days to provide the Commonwealth with a correction plan. If the correction plan is not received within fifteen (15) days or the failure is not corrected within thirty (30) days of the notice provided under this paragraph, Commonwealth may assign Commonwealth staff or Third Parties to step-in and perform failing elements of the Services, to the extent those Services are listed below, until such time as Contractor can demonstrate the ability to resume provision of such Services. The correction plan will describe the criteria which the Contractor must meet for the Commonwealth to transfer control of the Services back to Contractor. Provided, however, that if in the Commonwealth's sole discretion the failure creates an emergency, no notice is required for the Commonwealth to exercise its rights under this paragraph.

(1) Management of Commonwealth owned Equipment located within the Enterprise Data Center;
(2) Network Connectivity between the Commonwealth and the Contractor's datacenter(s).

b. All costs associated with the exercise of such step-in rights shall be borne by Contractor.

c. Commonwealth's exercise of its step-in rights shall not constitute a waiver by Commonwealth of any termination rights or rights to pursue a claim for damages arising out of the failure that led to the step-in rights being exercised.

d. Upon successful implementation of the correction plan, the Commonwealth will transfer control over the Services back to the Contractor.

32. TERMINATION

a. For Convenience

The Commonwealth may terminate this Contract without cause by giving Contractor thirty (30) calendar days prior written notice (Notice of Termination) whenever the Commonwealth shall determine that such termination is in the best interest of the Commonwealth (Termination for Convenience). Any such termination shall be effected by delivery to the Contractor of a Notice of Termination specifying the extent to which performance under this Contract is terminated either in whole or in part and the date on which such termination becomes effective.

In the event of Termination for Convenience, Contractor shall receive a Termination for Convenience fee ("Termination for Convenience Fee"):

The Termination for Convenience Fee shall equal the applicable amount set out in *Schedule C* (Services Catalog) minus the value of all Services performed by the Contractor consistent with the terms of the Contract prior to the effective date of termination.

In no event shall the Contractor be paid for any loss of anticipated profit (by the Contractor or any Subcontractor), loss of use of money, or administrative or overhead costs.

Failure to agree on any termination costs shall be a dispute handled in accordance with *Section 34* (Contract Controversies) of this Contract.

The Contractor shall cease Services as of the date set forth in the Notice of Termination, and shall be paid only for such Services as have already been satisfactorily rendered up to and including the termination date set forth in said notice, or as may be otherwise provided for in said Notice of Termination, and for such services performed during the thirty (30) calendar day notice period, if such services are requested by the Commonwealth, for the collection, assembling, and transmitting to the Commonwealth of at least all materials, manuals, magnetic media, studies, drawings, computations, maps, supplies, and survey notes including field books, which were obtained, prepared, or developed as part of the Services required under this Contract.

The above shall not be deemed to limit the Commonwealth's right to terminate this Contract for any reason as permitted by the other provisions of this Contract, or under applicable law.

b. Non-Appropriation

Any payment obligation or portion thereof of the Commonwealth created by this Contract is conditioned upon the availability and appropriation of funds. When funds (state or federal) are not appropriated or otherwise made available to support continuation of performance in a subsequent fiscal year period, the Commonwealth shall have the right to terminate the Contract. The Contractor shall be reimbursed in the same manner as that described in this section related to Termination for Convenience to the extent that appropriated funds are available.

c. Default

The Commonwealth may, in addition to its other rights under this Contract, terminate this Contract in whole or in part by providing written notice of default to the Contractor if the Contractor materially fails to perform its obligations under the Contract and does not cure such failure within forty-five (45) days or, if a cure within such period is not practical, commence a good faith effort to cure such failure to perform within the specified period or such longer period as the Commonwealth may specify in the written notice specifying such failure, and diligently and continuously proceed to complete the cure. The Contracting Officer shall provide any notice of default or written cure notice for Contract terminations.

(1) Subject to *Section 36* (Limitation of Liability) of this Contract, in the event the Commonwealth terminates this Contract in whole or in part as provided in this Subsection 32(c), the Commonwealth may procure services similar to those so terminated, and the Contractor, in addition to liability for any liquidated damages, shall be liable to the Commonwealth for the difference between the Contract price for the terminated portion of the Services and the actual and reasonable cost (but in no event greater than the fair market value) of producing substitute equivalent services for the terminated Services, provided that the Contractor shall continue the performance of this Contract to the extent not terminated under the provisions of this section.

(2) Except with respect to defaults of Subcontractors, the Contractor shall not be liable for any excess costs if the failure to perform the Contract arises out of causes beyond the control of the Contractor. Such causes may include, but are not limited to, acts of God or of the public enemy, fires, floods, epidemics, quarantine restrictions, strikes, work stoppages, freight embargoes, acts of terrorism, and unusually severe weather. The Contractor shall notify the Commonwealth Contracting Officer promptly in writing of its inability to perform because of a cause beyond the control of the Contractor.

(3) Nothing in this *Subsection 32(c)* shall abridge the Commonwealth's right to suspend, debar, or take other administrative action against the Contractor.

(4) If it is later determined that the Commonwealth erred in terminating the Contract for default, then the Contract shall be deemed to have been terminated for convenience under Subsection (a).

(5) If this Contract is terminated as provided by this Subsection 32(c), the Commonwealth may, in addition to any other rights provided in this Subsection, and subject to *Section 40* (Proprietary Rights) of this Contract, require the Contractor to deliver to the Commonwealth in the manner and to the extent directed by the Contracting Officer, such reports and other documentation as the Contractor has specifically produced or specifically acquired for the performance of such part of the Contract as has been terminated. Payment for such reports and documentation will be made consistent with the Contract.

d. In the event that Contractor becomes insolvent for any reason whatsoever, or makes an assignment for the benefit of creditors, or has a receiver appointed, or if it is declared as bankrupt under the laws of the United States, or if a petition of reorganization or rearrangement is filed against it under the bankruptcy laws, Commonwealth shall have the exclusive option of continuing with Contractor or its successors or assigns or trustee in bankruptcy under the terms and conditions of this Contract for the full remaining term of this Contract, or continuing with Contractor or its successors or assigns or trustee in bankruptcy under the terms and conditions of this Contract for such period of time as is necessary or desirable to terminate this Contract.

e. In the event of the sale by Contractor of all or substantially all of its assets (in a single transaction or a series of related transactions) or the sale of a controlling interest in Contractor's outstanding stock, Contractor shall be entitled to assign this Contract to its successor upon written notice thereof to Commonwealth. Commonwealth shall be entitled to receive from Contractor, upon Commonwealth's request, such information as is reasonably requested by Commonwealth to enable Commonwealth to assess the financial, technical and management capabilities of such successor to assume Contractor's obligations under this Contract. If Commonwealth determines, in the exercise of its reasonable discretion, that such successor does not or may not have such requisite financial, technical or management capabilities, and if Commonwealth informs Contractor thereof in writing and describing in reasonable detail its basis therefore, then, and only then, such assignment by Contractor shall be subject to Commonwealth's prior written consent, which consent may be withheld, delayed or conditioned in Commonwealth's sole discretion. If Commonwealth withholds such consent, then Commonwealth shall have the exclusive option of continuing

under the terms and conditions of this Contract with Contractor or its successors or assigns for the full remaining term of this Contract, or continuing under the terms and conditions of this Contract with Contractor or its successors or assigns for such period of time as is necessary or desirable to terminate this Contract. Any termination by Commonwealth will be consistent with the provisions of *Section 32* (Termination) of this Contract.

f. In the event Commonwealth fails to pay undisputed Fees for twelve (12) consecutive months, Contractor may terminate this Contract for its convenience. In such event, notwithstanding any other provision of this Contract to the contrary, Contractor shall be released from any obligation to provide further Services pursuant to this Contract.

g. The rights and remedies of the Commonwealth provided in this Section shall not be exclusive and are in addition to any other rights and remedies provided by law or under this Contract.

h. The Commonwealth's failure to exercise any rights or remedies provided in this Section shall not be construed to be a waiver by the Commonwealth of its rights and remedies in regard to the event of default or any succeeding event of default.

i. In no event shall the Contractor be paid for any loss of anticipated profit (by the Contractor or any Subcontractor), loss of use of money, or administrative or overhead costs. Any dispute regarding termination costs shall be a dispute handled in accordance with *Section 34* (Contract Controversies) of this Contract.

j. Following exhaustion of the Contractor's administrative remedies as set forth in *Section 34* (Contract Controversies), the Contractor's exclusive remedy shall be to seek damages in the Board of Claims.

33. TERMINATION ASSISTANCE

a. **General.** Upon the Commonwealth's request, Contractor shall provide Termination Assistance Services directly to the Commonwealth, or to any replacement provider designated by the Commonwealth, any successors or assigns of such entities or any of their designee(s). Contractor shall take all necessary and appropriate actions to accomplish a complete, timely, and seamless transition of any terminated Services from Contractor to the Commonwealth, or to any replacement provider designated by the Commonwealth, without material interruption of or material adverse impact on the terminated Services or any other services provided by Third Party or Services that Contractor shall continue to provide (each transition, an "Assistance Event"). Contractor shall cooperate with the Commonwealth and any new contractor and otherwise promptly take all steps required or reasonably requested to assist the Commonwealth in effecting a complete and

timely Termination Assistance Services of any terminated Services. Contractor shall provide all information regarding the terminated Services or as otherwise needed for Termination Assistance Services, including Data conversion, interface specifications, and related professional services. Contractor shall provide for the prompt and orderly conclusion of all terminated Services, as the Commonwealth may direct, including completion or partial completion of projects, documentation of work in process, and other measures to assure an orderly transition to the Commonwealth or the Commonwealth's designee. Contractor's obligation to provide the Termination Assistance Services shall not cease until an Assistance Event satisfactory to the Commonwealth, including the performance by Contractor of all asset-transfers and other obligations of Contractor provided in this *Section 33* (Termination Assistance), has been completed in accordance with mutually agreed to completion or acceptance criteria or if no agreed acceptance criteria exist, then to the Commonwealth's reasonable satisfaction.

(1) **Period of Provision**. Contractor shall provide Termination Assistance Services commencing on the date a determination is made by the Commonwealth that there shall be an Assistance Event**.**

(2) **Notice of an Assistance Event.** The Commonwealth will provide Contractor with written notice of an Assistance Event. Such notice will include a description of the Services that are to be terminated or discontinued, the affected Commonwealth Agencies, and the anticipated effective date of the Assistance Event. The Commonwealth may modify or update any of the information provided in the initial notice of an Assistance Event from time to time by a supplemental notice from the Commonwealth to Contractor.

(3) **Extension of Services**. The Commonwealth may elect, upon thirty (30) days prior notice to Contractor, to extend the period for performance of Termination Assistance Services (in whole or in part), in its sole discretion, provided that the total of all such extensions shall not result in Termination Assistance Services being performed beyond twenty-four (24) months following the effective date of the applicable Assistance Event without Contractor's consent. In each case, if the Commonwealth provides less than thirty (30) days prior notice of an extension, Contractor shall nonetheless use reasonable efforts to comply with the Commonwealth's request and provide the requested Services.

(4) **Firm Commitment**. Contractor shall provide Termination Assistance Services regardless of the reason for the Assistance Event.

(5) **Performance**. Contractor shall provide all Termination Assistance Services subject to and in accordance with the terms and conditions of this Contract. Contractor shall perform Termination Assistance Services with at least the same degree of accuracy, quality, completeness, timeliness, responsiveness and resource efficiency as it is or was required to provide the same or similar Services in accordance with this Contract. The quality and level of performance of Termination Assistance Services provided by Contractor shall continue to meet or exceed the Service Levels and shall not be degraded or deficient in any respect. Service Level Credits shall be assessed for any failure to meet Service Levels during any period in which Termination Assistance Services are provided. If any period for performing any Termination Assistance Services extends beyond the expiration or the effective date of any termination of this Contract, the provisions of this Contract shall remain in full effect for the duration of such period.

b. **Scope.** As part of the Termination Assistance Services, Contractor shall timely transfer the control and responsibility for Services previously performed by or for Contractor to the Commonwealth and/or its designee(s), and upon Commonwealth request, shall execute any documents reasonably necessary to effect such transfers. Contractor shall also provide any and all information and assistance requested by the Commonwealth required for:

(1) the systems and processes associated with the Services to operate and be maintained and enhanced efficiently;

(2) the Services to continue without interruption or adverse effect; and

(3) the orderly transfer of the Services (or replacement or supplemental services) to the Commonwealth and/or its designee(s).

c. **General Support**. Contractor shall:

(1) assist the Commonwealth and/or its designee(s) in developing a written plan for the migration of the Services to the Commonwealth and/or its designee(s), which plan shall include (as requested by the Commonwealth) capacity planning, process planning, facilities planning, human resources planning, technology planning, telecommunications planning and other planning necessary to effect the transition,

(2) perform programming and consulting services as requested to assist in implementing the transition plan,

(3) train personnel designated by the Commonwealth and/or its designee(s) in the use of any processes or associated Equipment, materials, systems or tools used in connection with the provision of the Services as needed for such personnel to assume responsibility for performance of the Services,

(4) provide a catalog of all processes, materials, the Commonwealth Data, Equipment, Software, Third Party Contracts and tools used to provide the Services,

(5) provide machine readable and printed listings and associated documentation for source code for Software owned by the Commonwealth and source code to which the Commonwealth is entitled under this Contract and assist in its re-configuration,

(6) provide technical documentation for Software used by Contractor to provide the Services as needed for continuing performance of the Services,

(7) analyze and report on the space required for the Commonwealth Data and the Software needed to provide the Services,

(8) assist in the execution of a parallel operation, data migration and testing process until the successful completion of the transition to the Commonwealth and/or its designee(s),

(9) create and provide copies of the Commonwealth Data in the format and on the media requested by the Commonwealth and/or its designee(s),

(10) If requested by the Commonwealth, provide a complete and up-to-date, electronic copy of the Commonwealth Computing Procedures Manual, and

(11) provide other technical and process assistance, documentation and information as requested by the Commonwealth and/or its designee(s).

d. Personnel.

(1) **List of Contractor Personnel**. Contractor shall promptly provide to the Commonwealth a list, organized by location, and of the Contractor Personnel dedicated (fifty percent (50%) or more to the performance of the Services that are implicated by each Assistance Event. Such list shall, specify each such Contractor Personnel's job title and job responsibilities. The Commonwealth agrees not to

disseminate any personally identifiable information contained in such list without Contractor's consent. Contractor shall not terminate, reassign or otherwise remove from the performance of the Services any such dedicated Contractor Personnel until after the end of the applicable Termination Assistance Services period unless such Contractor Personnel (1) voluntarily resigns from Contractor, (2) is dismissed by Contractor for cause or replaced as a result of unsatisfactory performance in respect of his or her duties and responsibilities to Contractor or Commonwealth pursuant to this Contract, 3) is unable to work due to his or her death or disability or 4) is not required by Contractor to provide the Termination Assistance Services.

(2) **Right to Hire**. The Commonwealth shall be permitted, without interference (including through counter-offers) from Contractor (subject to this *Section 33*), to meet with, solicit and hire, effective after the later of (i) the date of the Commonwealth's notice of an Assistance Event and (ii) the completion of the Termination Assistance Services requiring such Contractor Personnel, any Contractor Personnel dedicated to the performance of the Services during the twelve (12) month period prior to the date of the Commonwealth's notice of an Assistance Event who are implicated by that Assistance Event. Contractor hereby waives its rights, if any, under contracts with such Contractor Personnel restricting the ability of such Contractor Personnel to be recruited or hired by the Commonwealth (including waiving any right to restrict such personnel via non-compete agreements or other contractual means). Contractor shall provide the Commonwealth with reasonable assistance in their efforts to meet with, solicit and hire such Contractor Personnel, and shall give the Commonwealth and/or its designee(s) reasonable access to such Contractor Personnel for interviews, evaluations and recruitment. The Commonwealth shall endeavorto conduct the above-described activities in a manner that is not unnecessarily disruptive of Contractor's performance of its obligations under this Contract.

e. **Software and Developed Documentation**. The Contractor shall provide the Commonwealth with all Software and Developed Documentation as set forth in *Section 40* (Proprietary Rights).

f. **Equipment**.

(1) **List of Equipment**. Contractor shall promptly provide to the Commonwealth a list, organized by location, of the Equipment that is implicated by each Assistance Event. Such list shall specify information reasonably requested by the Commonwealth, including

all fields tracked by Contractor in any asset management system used by Contractor for tracking and managing Equipment, such Equipment's function, manufacturer, model number, age, and other pertinent information.

(2) **Right to Acquire**. The Commonwealth and/or its designee(s) shall have the right (but not the obligation) to purchase or assume the lease for any or all Equipment that is owned or leased by Contractor which is solely dedicated to the provision of the Services and that is implicated by the relevant Assistance Event. Such Equipment shall be transferred in good working condition, reasonable wear and tear excepted, as of the later of the effective date of the relevant Assistance Event and the completion of the Termination Assistance Services requiring such Equipment. Contractor shall maintain such Equipment through the date of transfer so as to be eligible for the applicable manufacturer's maintenance program. In the case of Contractor-owned Equipment (including Equipment owned by Contractor affiliates and Subcontractors and further including any such Equipment leased to Contractor), Contractor (or such Affiliate or Subcontractor) shall grant to the Commonwealth, and/or its designee(s) a warranty of title and a warranty that such Equipment is free and clear of all liens, security interests and other encumbrances. Such conveyance by Contractor (or Affiliate or Subcontractor) to the Commonwealth and/or its designee(s) shall be at fair market value (as shall be determined by an agreed-upon appraisal). At the Commonwealth's request, the parties shall negotiate in good faith and agree upon the form and structure of the purchase. In the case of leased Equipment, Contractor shall (1) represent and warrant that the lease is not in default, (2) represent and warrant that all payments thereunder have been made through the date of transfer and (3) notify the Commonwealth and/or its designee(s) of any lessor defaults of which it is aware at the time.

g. **Third Party Contracts.** Contractor shall promptly, but no less than thirty (30) days from the Commonwealth's issuance of notice of an Assistance Event provide to the Commonwealth a list of the Third Party contracts that are implicated by the relevant Assistance Event. Contractor shall, at the Commonwealth's request, cause the parties to such Third Party contracts to permit the Commonwealth and/or its designee(s) to assume prospectively any or all such Third Party contracts or to enter into new contracts with the Commonwealth and/or its designees on substantially the same terms and conditions, including price. Contractor shall transfer or assign those Third Party contracts that the Commonwealth elects to assume prospectively to the Commonwealth and/or its designee(s) as of the later of the effective date of the relevant Assistance Event and the completion of the Termination Assistance requiring such Third Party contracts. Such transfers or assignments shall be on

terms and conditions acceptable to all applicable parties, provided that (A) there shall be no fee, charge or other amount imposed on the Commonwealth and/or its designee(s) by Contractor or the counter-parties to such Third Party contracts for such transfer or assignment and (B) Contractor shall: (1) promptly cure and, in accordance with *Section 32(c)*, indemnify the Commonwealth against any default under such Third Party Contracts relating to the period prior to such transfer or assignment; (2) represent and warrant that all payments thereunder through the date of transfer or assignment are current; and (3) notify the Commonwealth and/or its designee(s) of any counter-party's default with respect to such Third Party contracts of which it is aware at the time of such transfer or assignment.

Contractor will request, with respect to any contracts applicable to Contractor Third Party Software being provided to Commonwealth and being used by Contractor to perform the Services, that the Third Party agree in writing that it will permit the assignment or transfer of the applicable agreement with Contractor to Commonwealth at the termination or expiration of this Contract. If any such Third Party refuses to provide such a written agreement, then Contractor will notify Commonwealth of this fact. Upon any such notification by Contractor, Commonwealth shall notify Contractor in writing whether Contractor may use such Third Party in connection with Contractor's performance of the Services. If Contractor is notified by Commonwealth that it must not use such Third Party services, then Contractor will make commercially reasonable efforts to locate an alternate Third Party provider, but Contractor is not responsible for any additional Third Party costs that may result from using an alternate provider. If no alternate provider can be located by Contractor, Contractor will so notify Commonwealth and the parties, both acting in good faith and through their respective project managers, will attempt to resolve the issue. The Contractor will not be responsible for any fees associated with the assignment or transfer of the license to the Commonwealth or for any breach by such Third Party of its agreement regarding the assignment or transfer.

h. **Rates and Charges**. Except as provided in this Subsection and *Section 33(j)*, Contractor shall provide all Termination Assistance Services at no additional charge. The parties anticipate that Termination Assistance Services requested by the Commonwealth shall be provided by Contractor using Contractor Personnel already assigned to the performance of the Services and without adversely affecting Contractor's ability to meet its performance obligations. If such Termination Assistance Services cannot be provided using the dedicated resources without adversely affecting Contractor’s ability to meet the Service Levels, charges for such Termination Assistance Services the Contractor may request a change via *Section 27* (Change Control).

i. **Proprietary Communications Network**. If Contractor uses a proprietary communications network to provide the Services, then for a period of up to two (2) years following the effective date of the relevant Assistance Event,

Contractor shall, if requested by the Commonwealth, continue to provide such proprietary communications network and other network Services to the Commonwealth, the Commonwealth and/or its designee at the rates, and subject to the terms and conditions, set forth in this Contract.

j. **Resources.** Contractor shall maintain capability on at least thirty (30) days' notice at all times during the Term to deploy all necessary resources to perform any Termination Assistance Services.

k. **Information.** At the Commonwealth's request, Contractor shall provide to and/or make available for the Commonwealth review, at Contractor's sole cost and expense, any and all reports, data and information that the Commonwealth deems necessary in order to evaluate all options related to an Assistance Event. Contractor shall provide all such reports, data and information regardless of whether the Commonwealth has provided notice of or otherwise declared an Assistance Event.

l. **Breach**. Contractor acknowledges and agrees that, upon any breach or threatened breach by Contractor of its obligations under this *Section 33* (Termination Assistance), Commonwealth shall be entitled to seek injunctive relief, including an order of specific performance. The provisions of this *Section 33* (Termination Assistance) will survive any expiration of the Term and any termination of this Contract.

34. CONTRACT CONTROVERSIES

a. All disputes between the parties arising under or relating to this Contract shall initially be referred in writing by either party to the Contractor Project Manager and the Commonwealth Project Manager. If the Contractor Project Manager and the Commonwealth Project Manager are unable to resolve the dispute within ten (10) Commonwealth business day(s) after referral of the matter to them or upon the earlier request by either the Contractor Project Manager or the Commonwealth Project Manager, the parties shall submit the dispute to the Management Committee for immediate review.

b. Within ten (10) Commonwealth business days after any dispute between the parties is submitted to the Management Committee pursuant to Subparagraph 34(a), the Management Committee shall meet for the purpose of attempting to resolve such dispute. At any meeting of the Management Committee at which more than one (1) dispute will be considered, Commonwealth may establish the order in which such disputes shall be addressed. If the Management Committee is unable to resolve a dispute within fifteen (15) Commonwealth business days after the date of the initial meeting of the Management Committee during which such dispute was considered, the Management Committee shall immediately notify Commonwealth and Contractor pursuant to Subparagraph 34(c).

c. In the event of a controversy or claim arising from the Contract that has not been resolved by the above process, the Contractor must, within six (6) months, file a written claim with the contracting officer for a determination. The claim shall state all grounds upon which the Contractor asserts a controversy exists

(1) The Commonwealth shall review timely-filed claims and issue a final determination, in writing, regarding the claim. The final determination shall be issued within 120 days of the receipt of the claim, unless extended by consent of the contracting officer and the Contractor. The Commonwealth shall send its written determination to the Contractor. If the Commonwealth fails to issue a final determination within the 120 days (unless extended by consent of the parties), the claim shall be deemed denied. The Commonwealth's determination shall be the final order of the purchasing Agency.

(2) Within fifteen (15) days of the mailing date of the determination denying a claim or within one hundred thirty five (135) days of filing a claim if no extension is agreed to by the parties, whichever occurs first, the Contractor may file a statement of claim with the Commonwealth Board of Claims.

d. Each of Commonwealth and Contractor acknowledge that the provision of the Services is critical to the operations of Commonwealth. Accordingly, in the event of a dispute between Commonwealth and Contractor arising under or relating to this Contract, Contractor shall continue to provide the Services in accordance with the terms of this Contract during the pendency of the resolution of such dispute, including the final judicial resolution thereof by Commonwealth's Board of Claims or any appeal thereof, and Commonwealth shall compensate the Contractor pursuant to the terms of the Contract.

35. COMMONWEALTH HELD HARMLESS

a. The Contractor shall hold the Commonwealth harmless from and indemnify the Commonwealth against any and all Third Party claims, demands and actions based upon or arising out of any activities performed by the Contractor and its Personnel and Subcontractors under this Contract, provided the Commonwealth gives Contractor prompt notice of any such claim of which it learns. Pursuant to the Commonwealth Attorneys Act (71 P.S. § 732-101, et seq.), the Office of Attorney General (OAG) has the sole authority to represent the Commonwealth in actions brought against the Commonwealth. The OAG may, however, in its sole discretion and under such terms as it deems appropriate, delegate its right of defense. If OAG delegates the defense to the Contractor, the Commonwealth will cooperate with all reasonable requests of Contractor made in the defense of such suits.

b. Notwithstanding the above, neither party shall enter into any settlement without the other party's written consent, which shall not be unreasonably withheld. The Commonwealth may, in its sole discretion, allow the Contractor to control the defense and any related settlement negotiations.

36. LIMITATION OF LIABILITY

a. The Contractor's liability to the Commonwealth under this Contract shall be limited to two hundred fifty million dollars ($250,000,000). This limitation will apply, except as otherwise stated in this *Section 36* (Limitation of Liability), regardless of the form of action, whether in contract or in tort, including negligence and whether related to direct, consequential, exemplary or punitive damages.

b. This limitation does not apply to damages for:

(1) Bodily injury

(2) Death;

(3) Intentional injury;

(4) Damage to real property or tangible personal property for which the Contractor is legally liable; or

(5) The Contractor's indemnity of the Commonwealth for patent, copyright, trade secret or trademark protection;

(6) Third Party claims related to confidential or proprietary data misuse of confidential information or data;

(7) Milestone Credits, provided, however that payment will accrue against the cap;

(8) Commonwealth's losses resulting from Contractor's gross negligence, willful misconduct; or

(9) Contractor's costs incurred for notification, mitigation, and credit monitoring services required due to a security breach; or

(10) The Commonwealth costs, losses or damages incurred due to Personal Information being accessed, used, released, disclosed and/or acquired in an unauthorized manner while in the control of the Contractor; or

(11) Contractor's abandonment of any Services, wrongful termination of the Contract or willful refusal to provide Termination Assistance Services.

c. Except as provided for in *Section 36(c)(1) through (4)*, neither party will be liable for indirect, incidental, special, consequential, exemplary or punitive damages arising out of or relating to the Contract:

(1) Additional costs to maintain the Services arising from a default by Contractor including the cost of work-arounds;

(2) Loss of or corruption to Commonwealth Data including, without limitation, the cost and expense of rectification of the Data arising out of a default (including for recovering, reconstructing, reformatting or reloading Data), but only to the extent such damages arise out of the failure of Contractor to comply with its obligations under *Section 52* (Virus and Malicious Code)

(3) Expenditure or charges incurred by Commonwealth and rendered necessary as a result of a default by Contractor; and

(4) Any regulatory losses, fines, expenses or other losses suffered by Commonwealth as a result of Contractor's failure to comply with any law or regulation.

37. CONFIDENTIALITY

a. For purposes of this Contract, Confidential Information of a party shall mean (1) with respect to Commonwealth, all Commonwealth Data and other information of Commonwealth or any Commonwealth Agency or any private individual, organization or public agency, in each case to the extent such information and documentation is not permitted to be disclosed to third parties under local, Commonwealth or Federal laws and regulations or pursuant to any policy adopted by Commonwealth or pursuant to the terms of any Third Party agreement to which Commonwealth is a party and (2) with respect to Contractor, all information identified in writing by Contractor as confidential or proprietary to Contractor, its Subcontractors or licensors.

b. All Confidential Information relating to a party shall be held in confidence by the other party to the same extent and in at least the same manner as such party protects its own confidential or proprietary information. Neither party shall disclose, publish, release, transfer or otherwise make available any Confidential Information of the other party in any form to, or for the use or benefit of, any person or entity without the other party's consent. Subject to the other provisions of this Contract, each party shall, however, be permitted to disclose relevant aspects of the other party's Confidential Information to its officers, agents,

Subcontractors and personnel and to the officers, agents, Subcontractors and personnel of its corporate affiliates or subsidiaries to the extent that such disclosure is reasonably necessary for the performance of its duties and obligations under this Contract; provided, however, that such party shall take all reasonable measures to ensure that Confidential Information of the other party is not disclosed or duplicated in contravention of the provisions of this Contract by such officers, agents, Subcontractors and personnel and that such party shall be responsible for any unauthorized disclosure of the Confidential Information of the other party by such officers, agents, Subcontractors or personnel; and further provided, that if the disclosure is by the Commonwealth to another contractor or sub-contractor, such disclosure is subject to a suitable non-disclosure agreement. The obligations in this Paragraph shall not restrict any disclosure by either party pursuant to any applicable law, or in accordance with the order of any court or government agency of competent jurisdiction (provided that the disclosing party shall give prompt notice to the non-disclosing party of such order) and, except to the extent provided otherwise by any applicable law, shall not apply with respect to information which:

(1) is developed by the other party without violating the disclosing party's proprietary rights,

(2) is or becomes publicly known (other than through unauthorized disclosure),

(3) is disclosed by the owner of such information to a Third Party free of any obligation of confidentiality,

(4) is already known by such party without an obligation of confidentiality other than pursuant to this Contract or any confidentiality contract entered into before the Effective Date between Commonwealth and Contractor, or

(5) is rightfully received by the disclosing party free of any obligation of confidentiality.

The confidentiality period for Confidential Information which is related to Equipment, Software, technical specifications, and methods and processes related to data processing and/or computing shall continue from the date of disclosure until two years following expiration or termination of this Contract. The immediately preceding sentence shall not release or relax, in whole or in part, Contractor's confidentiality obligations with respect to information pertaining to any private individual or, with respect to any Commonwealth Agency, information or documentation which is not permitted to be disclosed to third parties under local, Commonwealth or Federal laws and regulations or pursuant to the terms of any Third Party Contract to which Commonwealth is a party.

Nothing in this *Section 37(b)* shall supersede or limit, or be deemed to supersede or limit, any other provision of this Contract pertaining to confidentiality or disclosure of any Commonwealth Data or to any security procedures required to be followed by Contractor or its Personnel and other representatives. In addition to the confidentiality and non-disclosure and other restrictive provisions of this *Section 37(b)* and elsewhere in this Contract, Contractor shall be subject to, and shall be required to abide by, the provisions set forth in the *Exhibits* to the RFP, all of which are required to be incorporated into this Contract to satisfy the requirements of a particular Commonwealth Agency, a particular agency of the Federal government with whom Commonwealth interacts or other Third Party.

c. Each party shall:

(1) Notify the other party promptly of any known unauthorized possession, use or knowledge of the other party's Confidential Information by any person or entity.

(2) Promptly furnish to the other party full details known by such party relating to the unauthorized possession, use or knowledge thereof and shall use reasonable efforts to assist the other party in investigating or preventing the recurrence of any unauthorized possession, use or knowledge of the other party's Confidential Information.

(3) Use reasonable efforts to cooperate with the other party in any litigation and investigation against Third Parties deemed necessary by the other party to protect its proprietary rights.

(4) Promptly use all reasonable efforts to prevent a recurrence of any such unauthorized possession, use or knowledge of the other party's Confidential Information.

d. Each party shall bear the cost it incurs as a result of compliance with this Paragraph. The obligations in this Paragraph shall not restrict any disclosure by either party pursuant to any applicable law or pursuant to the order of any court or other legal process or government agency of competent jurisdiction (provided that the disclosing party shall give prompt notice to the non-disclosing party of such order).

e. There shall be no restriction with respect to the use or disclosure of any ideas, concepts, know-how or data processing techniques developed alone or jointly with Commonwealth in connection with Services provided to Commonwealth under this Contractor.

f. The Contractor shall use the following process when submitting information to the Commonwealth it believes to be confidential and/or proprietary information or trade secrets:

(1) Prepare an un-redacted version of the appropriate document, and

(2) Prepare a redacted version of the document that redacts the information that is asserted to be confidential or proprietary information or a trade secret, and

(3) Prepare a signed written statement that states:

(i) the attached document contains confidential or proprietary information or trade secrets;

(ii) the Contractor is submitting the document in both redacted and un-redacted format in accordance with 65 P.S. § 67.707(b); and

(iii) the Contractor is requesting that the document be considered exempt under 65 P.S. § 67.708(b)(11) from public records requests.

(iv) Submit the two documents with the signed written statement to the Commonwealth.

g. When the Contract expires or terminates, and at any other time at the written request of a party, the other party must promptly return to such party all of such party's Confidential Information and Data (and all copies of this information) that is in the other party's possession or control, in whatever form. With regard to Commonwealth's Confidential Information and/or Data, Contractor will comply with the requirements of Section 9(d).

38. SENSITIVE INFORMATION

a. The Contractor shall not publish or otherwise disclose, except to the Commonwealth or the Contractor's Subcontractors, any information or data obtained hereunder from private individuals, organizations, or public agencies, in a way that allows the information or data furnished by or about any particular person or establishment to be identified.

b. The parties shall not use or disclose any information about a recipient receiving services from, or otherwise enrolled in, a Commonwealth program affected by or benefiting from services under this Contract for any purpose not connected with the parties' Contract responsibilities.

c. Contractor, as directed, shall comply with all federal or state laws and regulations related to the use of information that constitutes protected health information (PHI) as defined by the regulations promulgated pursuant to the

Health Insurance Portability and Accountability Act (HIPAA). By signing this Contract, the Contractor agrees to the terms of the Business Associates Contract, which is incorporated into this Contract as Appendix A. If Agency, or relevant portion thereof, is a Covered Entity as defined in HIPAA, and the Contractor is performing the work of a Business Associate, the Agency will fill in the blanks in the attached Appendix and will present the complete Business Associate Contract to the Contractor through agreed-upon communication channels. It is understood that Appendix A is only applicable if the Agency follows the above-mentioned procedures. If not applicable to the entire Agency, Appendix A is only applicable with respect to the internal entities indicated by the Agency and agreed to by the Contractor.

d. Contractor will comply with all obligations applicable to it under all applicable data protection legislation in relation to all personal data that is processed by it in the course of performing its obligations under this Contract including by:

(1) Maintaining a valid and up to date registration or notification under the data protection legislation; and

(2) Complying with all data protection legislation applicable to cross border data flows of personal data and required security measures for personal data.

39. PATENT, COPYRIGHT, TRADEMARK, AND TRADE SECRET PROTECTION

a. The Contractor shall hold the Commonwealth harmless from any suit or proceeding which may be brought by a Third Party against the Commonwealth, its departments, officers or employees for the alleged infringement of any United States or foreign patents, copyrights, or trademarks, or for a misappropriation of trade secrets arising out of performance of this Contract, including all work, services, materials, reports, studies, and computer programs provided by the Contractor, and in any such suit or proceeding will satisfy any final award for such infringement, including costs. The Commonwealth agrees to give Contractor prompt notice of any such claim of which it learns. Pursuant to the Commonwealth Attorneys Act 71 P.S. § 732-101, *et seq*., the Office of Attorney General (OAG) has the sole authority to represent the Commonwealth in actions brought against the Commonwealth. The OAG may, however, in its sole discretion and under the terms it deems appropriate, delegate its right of defense. If OAG delegates the defense to the Contractor, the Commonwealth will cooperate with all reasonable requests of Contractor made in the defense of such suits. No settlement which prevents the Commonwealth from continuing to use the Developed Materials as provided herein shall be made without the Commonwealth's prior written consent. In all events, the Commonwealth shall have the right, to participate in the defense of any such suit or proceeding through counsel of its own choosing. It is expressly agreed by the Contractor that, in the event it requests

that the Commonwealth to provide support to the Contractor in defending any such claim, the Contractor shall reimburse the Commonwealth for all reasonable expenses (including attorneys' fees, if such are made necessary by the Contractor's request) incurred by the Commonwealth for such support. If OAG does not delegate the defense of the matter, the Contractor's obligation to indemnify ceases. The Contractor will, at its expense, provide whatever cooperation OAG requests in the defense of the suit.

b. If the defense of the suit is delegated to the Contractor, the Contractor shall pay all damages and costs finally awarded therein against the Commonwealth, when such damages and costs are required to be paid. If information and assistance are furnished by the Commonwealth at the Contractor's written request, it shall be at the Contractor's expense, but the responsibility for such expense shall be only that within the Contractor's written authorization.

c. If the products, materials, reports, studies, or computer programs furnished hereunder become subject to a claim of infringement of a United States patent, copyright, or trademark, or for a misappropriation of trade secret, or if any of the products, materials, reports, studies or computer programs provided by the Contractor are in such suit or proceeding held to constitute infringement and the use or publication thereof is enjoined, then without diminishing the Contractor's obligation to satisfy any final award, the Contractor may, at its option and expense, substitute functional equivalents for the alleged infringing products, materials, reports, studies, or computer programs or, at the Contractor's option and expense, obtain the rights for the Commonwealth to continue the use of such products, materials, reports, studies, or computer programs or modify them so that they are no longer infringing.

d. If the Contractor is unable to do any of the preceding, the Contractor agrees to pay the Commonwealth:

(1) Any amounts paid by the Commonwealth less a reasonable amount based on the acceptance and use of the Deliverable;

(2) Any license fee less an amount for the period of usage of any Software; and

(3) The prorated portion of any Fees representing the time remaining in any period of service for which payment was made.

e. The obligations of the Contractor under this *Section* 39 (Patent, Copyright, Trademark, and Trade Secret Protection) continue without time limit and survive the termination of this Contract.

f. Notwithstanding the above, the Contractor shall have no obligation for:

(1) Modification of any product, service, or deliverable provided by the Commonwealth or any Third Party, except for the Contractor or any of its Subcontractors;

(2) Any material provided by the Commonwealth to the Contractor and incorporated into, or used to prepare, a product, Service, or Deliverable;

(3) Use of the product, Service, or Deliverable in other than its specified operating environment;

(4) The combination, operation, or use of the product, Service, or Deliverable with other products, services, or deliverables not provided by the Contractor as a system or the combination, operation, or use of the product, Service, or Deliverable, with any products, data, or apparatus that the Contractor did not provide;

(5) Infringement of a non-Contractor product alone;

(6) The Commonwealth's distribution, marketing or use beyond the scope contemplated by the Contract;

(7) The Commonwealth's failure to use corrections or enhancements made available to the Commonwealth by the Contractor at no charge;

(8) Any infringement or claim thereof against the Commonwealth brought prior to the execution of this Contract, unless the infringement or claim relates to services provided by Contractor under another contract with the Commonwealth; or

(9) Infringement related to content provided by or on behalf of the Commonwealth, except as provided by the Contractor or any of its Subcontractors or suppliers.

g. The obligation to defend and indemnify the Commonwealth, under the terms of this *Section 39* (Patent, Copyright, Trademark, and Trade Secret Protection), shall be the Contractor's sole and exclusive obligation and the Commonwealth's sole and exclusive remedy against the Contractor for the infringement or misappropriation of intellectual property.

40. PROPRIETARY RIGHTS

a. **Commonwealth Software**. As between Commonwealth and Contractor, all Commonwealth Software shall be and shall remain the exclusive property of Commonwealth or its licensors, and Contractor shall have no rights or interests in

the Commonwealth Software by virtue of this Contract except as described in this *Section 40* (Proprietary Rights) or elsewhere in this Contract. Commonwealth hereby grants to Contractor, at no cost to Contractor, for the limited purpose of providing the Services, a nonexclusive, nontransferable, royalty-free right (subject to the terms of any Third Party agreement to which Commonwealth is a party and which theretofore is disclosed to Contractor) to (1) have access to the Commonwealth Software, (2) copy the Commonwealth Software for archival purposes or as may otherwise be required by this Contract, (3) modify the Commonwealth Software as required by this Contract, if permitted by the Software licensing terms and pursuant to the terms of Commonwealth Third Party Software license agreement, if applicable, and (4) sublicense Contractor's Subcontractors approved by Commonwealth to do any of the foregoing; provided, however, that neither Contractor nor any of its Subcontractors may decompile or reverse engineer, or attempt to decompile or reverse engineer, any of the Commonwealth Software.

As of the Effective Date and subject to the terms of any Third Party agreement to which Commonwealth is a party, (1) Commonwealth shall, at no cost to Contractor, provide Contractor with access to the Commonwealth Software in the form in use by Commonwealth as of the Effective Date and (2) Contractor, as part of the Services, shall compile and, as changes are made, update a list of all of the Commonwealth Software then in use by Contractor or any of its Subcontractors in connection with Contractor's performance of the Services. Upon the expiration or termination for any reason of Contractor's obligation to provide the Services or of this Contract, the rights granted to Contractor in this *Section 40(a)* shall immediately revert to Commonwealth or Commonwealth's designee, and Contractor forthwith shall, at no cost to Commonwealth, deliver to Commonwealth all of the Commonwealth Software (including any related source code and object code in Contractor's possession or under its control) in the form in use as of the effective date of such expiration or termination, together with a current copy of the list of Commonwealth Software in use as of the date of such expiration or termination. Concurrently therewith, Contractor shall destroy or erase all other copies of any of the Commonwealth Software then in Contractor's possession or under its control unless otherwise instructed by Commonwealth; provided, however, pursuant to and if permitted by the Commonwealth's license agreement for Commonwealth Third Party Software, if applicable, that Contractor may retain one archival copy of such Commonwealth Software, including the Developed Software, until the later of six (6) years after such expiration or termination of this Contract and the final resolution of any actively asserted pending disputes between the parties, such retention being for the sole purpose of establishing Contractor's performance under this Contract.

b. **Contractor Software and Contractor Tools**. As between Commonwealth and Contractor, all Contractor Software and Contractor Tools shall be and shall remain the exclusive property of Contractor, and Commonwealth shall have no rights or interests in the Contractor Software or the Contractor Tools by virtue of

this Contract except as described in this *Section 40(b)*. As part of the Services, Contractor shall during the Term (1) use the Contractor Software and the Contractor Tools to provide the Services, (2) make available the commercially available Contractor Software and the commercially available Contractor Tools to Commonwealth for use by Commonwealth solely in connection with the Services, and (3) maintain on Commonwealth's premises and make available to Commonwealth upon Commonwealth's request from time to time, for archival purposes only, a copy of the Contractor Software and the Contractor Tools owned by Contractor or its Subcontractors and then being used by Contractor to provide the Services.

Upon the expiration or termination for any reason of Contractor's obligation to provide the Services under this Contract and at the request of Commonwealth, Contractor shall, subject to mutually agreed terms and conditions, (1) grant, or cause its Subcontractors to grant, to Commonwealth a nonexclusive, nontransferable license to use and, if permitted by the terms of mutually agreed terms and conditions relating thereto, modify and make derivative works of, and unless Commonwealth terminates this Contract pursuant to the terms of *Section 32(a),(b), or (f)* to grant to third parties engaged by Commonwealth the right to use and, if permitted by mutually agreed terms and conditions relating thereto, modify and make derivative works of, all or any portion of the commercially available Contractor Software and the commercially available Contractor Tools owned by Contractor or its Subcontractors theretofore being used by Contractor in connection with the Services, the foregoing rights being granted to the extent reasonably necessary to facilitate Commonwealth's or such Third Party's performance of the activities or services substantially equivalent to the Services to be provided by Contractor under this Contract immediately prior to such expiration or termination and (2) deliver to Commonwealth the object code version of such commercially available Contractor Software and such commercially available Contractor Tools in the form being used by Contractor in connection with the Services immediately prior to such expiration or termination.

It is understood and agreed by Contractor that the rights granted to Commonwealth hereunder in respect of the commercially available Contractor Software and the commercially available Contractor Tools shall not restrict Commonwealth from using such Contractor Software and such Contractor Tools in the manner in which such items were used by Contractor and its Subcontractors to provide the Services immediately prior to the expiration or termination of this Contract. The foregoing obligations of Contractor shall be subject to mutually agreed terms and conditions. In consideration of the grant to Commonwealth of the foregoing license, Commonwealth shall be assessed license fees hereunder not in excess of any license fees therefor being offered, as of the date of termination, by Contractor or its Subcontractors, to their respective state governmental customers generally, unless Commonwealth terminates this Contract pursuant to the terms of *Section 32(a),(b) or (f)*, in which case the then-prevailing license fees of Contractor and its Subcontractors, as applicable, shall

apply. The foregoing shall not limit or otherwise affect Commonwealth's obligations to pay Third Party assignment or transfer fees as contemplated in *Section 33* (Termination Assistance); provided, however, that Commonwealth shall not be assessed any additional fees in respect thereof by Contractor.

c. **Developed Documentation.** Documentation developed by Contractor specifically for the Commonwealth in connection with its performance under this Contract is the sole and exclusive property of the Commonwealth and shall be considered "works made for hire" under the United States Copyright Act of 1976, as amended, 17 United States Code. In the event that the documentation does not fall within the specifically enumerated works that constitute works made for hire under the United States copyright laws, Contractor agrees to assign and, upon their authorship or creation, expressly and automatically assigns all copyright interests, proprietary rights, trade secrets, and other right, title, and interest in and to such documentation to Commonwealth. Commonwealth shall have all rights accorded an owner of copyright under the United States copyright laws including, but not limited to, the exclusive right to reproduce the documentation in multiple copies, the right to distribute, copies by sales or other transfers, the right to register all copyrights in its own name as author in the United States and in foreign countries, the right to prepare derivative works based upon the Creative Works and the right to display the documentation. Upon completion or termination of this Contract, all working papers, files and other documents related to the documentation shall immediately be delivered by Contractor to the Commonwealth. Contractor warrants that the documentation is original and does not infringe any copyright, patent, trademark, or other intellectual property right of any Third Party and are in conformance with the intellectual property laws of the United States. Provided however that Commonwealth's sole remedy for breach of this warranty is the indemnity contained in *Section 39* (Patent, Copyright, Trademark, and Trade Secret Protection).

d. All literary works, or other works of authorship (such as application programs, listings, programming tools, documentation, reports, drawings, procedure manuals and similar works) ("Developed Materials") developed hereunder shall be treated in accordance with the following general principles:

(1) If and to the extent Developed Materials modify, improve or enhance software programs generally licensed by Contractor to end-users, then such Developed Materials shall be the property of Contractor and Contractor hereby grants to Commonwealth a perpetual, non-exclusive, nontransferable, royalty-free license to use such Developed Materials in Commonwealth's receipt and use of the Services;

(2) If and to the extent Developed Materials modify, improve or enhance software or other materials owned by Commonwealth or licensed to Commonwealth by a Third Party (i.e., a licensor other than Contractor

or any Contractor Subcontractor), then such modification, improvement or enhancement and all related intellectual property rights therein shall, as between Commonwealth and Contractor, be the property of Commonwealth;

(3) If and to the extent Developed Materials constitute a newly created software program or module, and if Commonwealth funds the development cost thereof to any extent, then such software program or module and all related intellectual property rights therein shall be the property of Commonwealth; and

(4) If and to the extent Developed Materials constitute documentation, reports, drawings, procedure manuals and similar works, such Developed Materials shall be the property of Commonwealth. Contractor will not place trademarks or copyright notices on any such Developed Materials.

(5) Any Data related to the use of the Services by the Commonwealth shall be the property of the Commonwealth. For this purpose, Data includes ordering information, inventories, etc. At the end of the Contract, regardless of how it is ended, or at any time requested by the Commonwealth, the Contractor will provide the Commonwealth with such Data consistent with section 9(d).

e. **Residual Knowledge**. Either party, in the course of conducting business, may use any ideas, concepts, and know-how, relating to the Services which Contractor or Commonwealth (alone or jointly with the Commonwealth) develops or learns in connection with Contractor's provision of Services to Commonwealth under this Contract.

41. PUBLICATION RIGHTS AND/OR COPYRIGHTS

a. The Contractor shall not publish any of the results of the work, which identify the Commonwealth, without the written permission of the Commonwealth. The publication shall include the following statement: "The opinions, findings, and conclusions expressed in this publication are those of the author and not necessarily those of the Commonwealth of Pennsylvania." The Contractor shall not include in the documentation any copyrighted matter, unless the Contractor provides the Commonwealth with written permission of the copyright owner.

b. Except as otherwise provided in *Section 40* (Proprietary Rights) and the confidentiality provisions of *Section 37* (Confidentiality), the Commonwealth shall have unrestricted authority to reproduce, distribute, and use any submitted report or data designed or developed and delivered to the Commonwealth as part of the performance of the Contract.

c. Rights and obligations of the parties under this *Section 41* (Publication Rights and/or Copyrights) survive the termination of this Contract.

42. REPORTS AND DATA

a. Data. Commonwealth shall supply to Contractor the Commonwealth Data in the form maintained by the Commonwealth on such time schedules as may be agreed to by Commonwealth and Contractor from time to time. All Commonwealth Data is and shall remain the property of Commonwealth. Subject to *Section 40* (Proprietary Rights), the Commonwealth Data shall not be (1) used by Contractor or Contractor Subcontractors other than in connection with providing the Services, and then only in accordance with the terms of this Contract, (2) disclosed, sold, assigned, leased or otherwise provided to third parties by Contractor or Contractor Subcontractors without Commonwealth's consent and any applicable consent required by any federal governmental entity, or (3) commercially exploited by or on behalf of Contractor or Contractor Subcontractors.

b. Reports. As part of the Services, Contractor shall provide the reports, in electronic form, to Commonwealth. The reports shall be prepared by Contractor and provided to the Commonwealth in a manner readable by a normal Windows based personal computer. Acceptable formats include but are not limited to: Adobe Acrobat (PDF), Microsoft Word, Microsoft Excel, Microsoft PowerPoint, Text, Comma Separated Values (CSV).

c. Correction of Errors. In the event of any errors or inaccuracies in any of the Commonwealth Data or the reports, or any other data processing errors or unexpected interruptions (e.g., "abends" or “freeze”), Contractor and Commonwealth shall work together in good faith, using all reasonable efforts and commencing immediately upon the discovery of the situation, to correct such error, inaccuracy or interruption. The foregoing obligations of Contractor under this *Section 42(c)* shall be subject to any limitations placed upon Contractor's access to the Commonwealth Data by Commonwealth or pursuant to this Contract. Promptly upon the completion of the correction of such error, inaccuracy or interruption, the Commonwealth Project Manager and the Contractor Project Manager shall meet to determine and document the cause thereof. If the error, inaccuracy or interruption is determined to be caused by the error, negligence or omission of Contractor to perform an obligation under this Contract, there shall be no charge to Commonwealth for Contractor's participation in such correction. If the error, inaccuracy or interruption is determined to be caused by the error, negligence or omission of Commonwealth to perform an obligation under this Contract, Commonwealth shall reimburse Contractor for Contractor's out-of-pocket expenses paid by Contractor to third parties (other than Contractor's or any Contractor's Subcontractor's employees) for expertise not otherwise possessed by or

available to Contractor and Contractor's expenses for its Personnel or the Personnel of any Contractor Subcontractor not theretofore engaged in the provision of the Services.

d. Return of Data. At no cost to Commonwealth and as part of the Services, Contractor shall, upon Commonwealth's request at any time and at the cessation of the Termination Assistance return Commonwealth's Data consistent with *section 9(d).*

43. SECURITY AND PROTECTION OF INFORMATION

a. At all times during the Term, Contractor shall provide all Services, and use all resources related thereto, in accordance with the Commonwealth's security requirements, including the prevention and detection of fraud, abuse, or other inappropriate use or access of systems and networks by all appropriate means, including network management and maintenance applications and tools, and the use of appropriate encryption technologies. If the Contractor incurs additional costs as a result of changes to Commonwealth's security requirements, it may follow the process set out in *Section 27* (Change Control) of this Agreement. In addition, all Contractor Personnel (including personnel of any Subcontractors) shall be subject to and shall at all times conform to the Commonwealth's laws, rules, and requirements for the protection of premises, materials, equipment, and personnel, as they have been previously disclosed to Contractor in writing, including those set forth in the *Exhibits* to the RFP. Any violations or disregard of these rules shall be cause for denial of access by such personnel to the Commonwealth's property. Contractor shall exercise due care and diligence to prevent any injury to person or damage to property while on the Commonwealth's premises. The operation of Contractor vehicles or private vehicles of Contractor personnel on the Commonwealth's property shall conform to posted and other regulations and safe driving practices. Vehicular accidents on the Commonwealth's property and involving Contractor personnel shall be reported promptly to the appropriate Commonwealth's security personnel.

b. The Pennsylvania State Police's Criminal Justice Information Services Policy ("CJIS Policy"), is set forth in *Exhibits G.6 and G.7* to the RFP, and is hereby incorporated by this reference into this Contract. Contractor acknowledges and agrees that it is bound by all applicable provisions of the CJIS Policy. Contractor and the Commonwealth further agree that, in accordance with the CJIS Policy, the Commonwealth does not anticipate and will not authorize any requests to Contractor for the criminal history record information covered by the CJIS Policy, because Contractor is performing an IT support function. The Commonwealth's Office of Attorney General's CHRIA Handbook, attached as *Exhibit G.12* to the RFP, is also incorporated by reference into this Contract. Contractor acknowledges and agrees that it is bound by all applicable provisions of the CHRIA Handbook.

.

44. BACKGROUND CHECKS

a. The Contractor must, at its expense, arrange for a background check for each of its employees, as well as for the employees of its Subcontractors, who will have access to Commonwealth Services Locations, either through on site or remote access. Background checks will not be conducted by the Commonwealth but rather will be conducted by Contractor or its Subcontractors according to Contractor policy and practice and consistent with ITB-SEC009. The background check must be conducted prior to initial access by a Contractor employee and every two (2) years thereafter or at a longer interval if required by applicable law.

b. Before the Commonwealth will permit Contractor Personnel access to Commonwealth facilities, the Contractor must provide written confirmation to the office designated by the Agency that the background check has been conducted. If, at any time, it is discovered that a Contractor employee has a criminal record that includes a felony or misdemeanor involving terroristic threats, violence, use of a lethal weapon, or breach of trust/fiduciary responsibility; or which raises concerns about building, system, or personal security, or is otherwise job-related, the Contractor shall notify the Commonwealth Contracting Officer immediately, shall not assign that employee to any Commonwealth facilities, shall remove any access privileges already given to the employee, and shall not permit that employee remote access to Commonwealth facilities or systems, unless the Agency consents, in writing, prior to the access being provided. The Agency may withhold its consent at its sole discretion. Failure of the Contractor to comply with the terms of this Paragraph may result in default of the Contractor under its Contract with the Commonwealth.

c. The Commonwealth specifically reserves the right of the Commonwealth to conduct background checks over and above that described herein.

45. INSURANCE

a. Contractor Insurance Requirements. During the Contract Term, Contractor shall maintain at its own expense, insurance of the type and in the amounts specified below and issued by companies authorized to conduct such business under the laws of Pennsylvania:

(1) Statutory workers' compensation in accordance with all applicable Federal, state and local requirements, and employer liability in an amount not less than $2,000,000 per occurrence;

(2) Comprehensive general public liability (including contractual liability insurance) in an amount not less than $5,000,000 per occurrence;

(3) Comprehensive automobile liability covering all vehicles that Contractor owns, hires, or leases in an amount not less than $5,000,000 per occurrence (combined single limit for bodily injury and property damages).

(4) Personal property insurance, on a replacement basis, covering all of Contractor's and Contractor's Subcontractors' personal property located at any Contractor Services Location.

(5) Professional liability/error & omission in the aggregate amount of not less than $15,000,000.

(6) Comprehensive crime insurance in an amount of not less than $15,000,000 per claim.

(7) Network/Cyber Liability Insurance (including coverage for Technology Professional Liability if not covered under Contractor's Professional Liability/Errors and Omissions Insurance referenced above) in the amount of $20,000,000, per occurrence.

(8) Umbrella/excess in an aggregate amount of not less than $30,000,000.

b. Insurance Requirements for Subcontractors. During the Contract Term, Contractor shall require each of its Subcontractors listed in *Schedule L* (Approved Subcontractors) and any other Subcontractors performing any Services on-site at any of the Contractor Services Locations, to maintain at their own expense or Contractor's expense, insurance of the type and in the amounts specified below:

(1) Statutory workers' compensation in accordance with all applicable Federal, state and local requirements, and employer liability in an amount not less than $1,000,000 per occurrence;

(2) Comprehensive general public liability (including contractual liability insurance) in an amount not less than $2,000,000 per occurrence;

(3) If any of the Subcontractor personnel will be on-site at any of the Commonwealth's or Contractor's facilities, comprehensive automobile liability covering all vehicles owned, hired or leased by that Subcontractor and in an amount not less than $2,000,000 per occurrence (combined single limit for bodily injury and property damages);

(4) If the Subcontractor personnel will be on-site at any of Commonwealth's or Contractor's facilities, personal property

(5) insurance, on a replacement basis, covering all of that Subcontractor's personal property located at any such facilities; and

(6) Network/Cyber Liability Insurance (including coverage for Technology Professional Liability if not covered under Contractor's Professional Liability/Errors and Omissions Insurance referenced above) in the amount of $10,000,000, per occurrence; and

(7) Errors & Omissions liability in the amount of $2,000,000 each claim and aggregate (if applicable).

c. Prior to the expiration of any then effective insurance policy, Contractor shall furnish to Commonwealth certificates of insurance or other appropriate documentation (including evidence of renewal of insurance) evidencing all coverage referenced in this *Section 45* (Insurance), as applicable, and naming Commonwealth as an additional insured to the extent of Contractor's indemnities contained in this Contract. Contractor shall have included in all policies of insurance required hereunder a waiver by the insurer of all right of subrogation against Commonwealth in connection with any loss or damage thereby insured against. Such certificates or other documentation will include a provision whereby thirty (30) days' notice must be received by Commonwealth prior to coverage cancellation or alteration of the coverage by either Contractor or its Subcontractors or the applicable insurer. Such cancellation or alteration shall not relieve Contractor of its continuing obligation to maintain insurance coverage in accordance with this *Section 45* (Insurance).

d. For purposes hereof, Contractor and its Subcontractors may maintain "umbrella" insurance policies to fulfill the foregoing insurance requirements, as appropriate.

46. WARRANTIES AND AGREEMENTS

a. Contractor represents and warrants that as of the Contract's Effective Date:

(1) It is a corporation duly incorporated, validly existing, and in good standing under the laws of Delaware

(2) It has all requisite corporate power and authority to execute, deliver, and perform its obligations under this Contract.

(3) Contractor is duly licensed, authorized and qualified to do business and is in good standing in Pennsylvania and in every other jurisdiction where Services will be performed by Contractor pursuant to this Contract in which a license, authorization or qualification is required for the ownership or leasing of its assets or the transaction of business of the character transacted by it except where the failure to be so licensed, authorized or qualified would not have a material adverse

effect on Contractor's ability to fulfill its obligations under this Contract.

(4) The execution, delivery and performance of this Contract by Contractor has been duly authorized by Contractor.

b. Contractor agrees that:

(1) Contractor has not disclosed any Confidential Information of Commonwealth.

(2) The Contractor Software does not and will not, and the Developed Software and the Services will not, infringe upon the proprietary rights of any Third Party, provided that Contractor will have no obligation with respect to any losses to the extent the same arise out of or in connection with Commonwealth's modification or misuse of Equipment, systems, programs, or products or Commonwealth's combination, operation or use with devices, data, equipment, systems, programs or products not furnished by Contractor under this Contract.

(3) Contractor Personnel and Subcontractors that Contractor will use to provide and perform the Services have and during the Term will have, the suitable knowledge, skills, experience, qualifications and resources to provide and perform the Services:

(i) In accordance with the Contract.

(ii) In a diligent, workmanlike manner with due care and skill, consistent with the required level of quality and performance and in accordance with the Service Levels.

(4) Contractor shall cooperate fully with Commonwealth and with any Third Party appointed by Commonwealth to the extent that such cooperation may be necessary to permit Commonwealth or such Third Parties to complete any work related to or impacted by the Services provided to Commonwealth by Contractor under the Contract.

(5) Contractor shall collaborate fully with Commonwealth or with any Third Party appointed by Commonwealth to the extent that such cooperation may be necessary to permit Commonwealth or such Third Parties to in-source or transfer to a Third Party any aspect of the Services then provided by Contractor under the Contract.

c. Commonwealth represents, warrants and covenants that as of the Contract’s Effective Date:

(1) It is a sovereign entity and has all requisite power and authority to execute, deliver, and perform its obligations under this Contract.

(2) It has, or at any time of provision to Contractor, will have the right to use and to disclose to Contractor and Contractor Subcontractors and to allow Contractor and Contractor Subcontractors to use in accordance with the terms of this Contract any Commonwealth Software so disclosed to Contractor.

47. CONTRACTOR RESPONSIBILITY PROGRAM

a. The Contractor certifies, for itself and all its Subcontractors, that as of the date of its execution of this Contract, that neither the Contractor, nor any Subcontractors, nor any suppliers are under suspension or debarment by the Commonwealth or any governmental entity, instrumentality, or authority and, if the Contractor cannot so certify, then it agrees to submit, along with its bid, a written explanation of why such certification cannot be made.

b. The Contractor must also certify, in writing, that as of the date of its execution of this Contract, it has no tax liabilities or other Commonwealth obligations.

c. The Contractor's obligations pursuant to these provisions are ongoing from and after the effective date of the Contract through the termination date thereof. Accordingly, the Contractor shall have an obligation to inform the Commonwealth if, at any time during the term of the Contract, it becomes delinquent in the payment of taxes, or other Commonwealth obligations, or if it or any of its Subcontractors are suspended or debarred by the Commonwealth, the federal government, or any other state or governmental entity. Such notification shall be made within 15 days of the date of suspension or debarment.

d. The failure of the Contractor to notify the Commonwealth of its suspension or debarment by the Commonwealth, any other state, or the federal government shall constitute an event of default of the Contract with the Commonwealth.

e. The Contractor agrees to reimburse the Commonwealth for the reasonable costs of investigation incurred by the Office of State Inspector General for investigations of the Contractor's compliance with the terms of this or any other agreement between the Contractor and the Commonwealth, which results in the suspension or debarment of the Contractor. Such costs shall include, but shall not be limited to, salaries of investigators, including overtime; travel and lodging expenses; and expert witness and documentary fees. The Contractor shall not be responsible for investigative costs for investigations that do not result in the Contractor's suspension or debarment.

f. The Contractor may obtain a current list of suspended and debarred Commonwealth contractors by either searching the internet at *http://www.dgs.state.pa.us* or contacting the:

Department of General Services
Office of Chief Counsel
603 North Office Building
Harrisburg, PA 17125
Telephone No. (717) 783-6472
FAX No. (717) 787-9138

48. OFFSET PROVISION FOR COMMONWEALTH CONTRACTS

The Contractor agrees that the Commonwealth may set off the amount of any state tax liability or other obligation of the Contractor or its subsidiaries to the Commonwealth against any payments due the Contractor under any contract with the Commonwealth.

49. TAXES-FEDERAL, STATE, AND LOCAL

a. **Commonwealth Exemption**. No taxes from which the Commonwealth is exempt shall be included in the Fee. The Commonwealth is exempt from all excise taxes imposed by the Internal Revenue Service and has accordingly registered with the Internal Revenue Service to make tax-free purchases under registration No. 23-23740001-K. With the exception of purchases of the following items, no exemption certificates are required and none will be issued: undyed diesel fuel, tires, trucks, gas-guzzler emergency vehicles, and sports fishing equipment. The Commonwealth is also exempt from Pennsylvania sales tax, local sales tax, public transportation assistance taxes, and fees and vehicle rental tax. The Department of Revenue regulations provide that exemption certificates are not required for sales made to governmental entities and none will be issued.

b. **Contractor Taxes**. Fees are inclusive of any applicable sales, use, personal property and other taxes attributable to periods on or after the Effective Date and based upon or measured by Contractor's cost in acquiring or providing equipment, materials, supplies or services furnished or used by Contractor in performing or furnishing the Services, including without limitation, all personal property and use taxes, if any, due on Contractor Equipment.

c. **Segregation of Fees**. Commonwealth and Contractor shall cooperate to segregate the Fees into the following separate payment streams: (1) those for Services, and (2) those for which Contractor functions merely as a paying agent for Commonwealth in receiving goods, supplies, or services (including leasing and licensing arrangements).

50. POLICIES AND PROCEDURES

Contractor shall comply with
Commonwealth standards set out in IT Bulletins, standards and procedures related to the Services, including but not limited to those governing security, treatment of personal information, quality, change, and problem management, safety, data privacy and data security, and pervasive and transaction controls; provided, however that the Contractor may submit a request under *Section 27* (Change Control), if it believes that it has incurred costs or delay in complying with this Section due to changes in the IT Bulletins, standards and procedures related to the Services.

51. AUDIT OBLIGATIONS

a. SINGLE AUDIT ACT OF 1984

In compliance with the *Single Audit Act of 1984*, the Contractor agrees to the following:

(1) This Contract is subject to audit by federal and state agencies or their authorized representative in accordance with the auditing standards promulgated by the Comptroller General of the United States and specified in *Government Auditing Standards,* 1994 Revisions (Yellow Book).

(2) The audit requirement of this Contract will be satisfied if a single audit is performed under the provisions of the *Single Audit Act of 1984, 31 U.S.C.* § *7501, et seq*., and all rules and regulations promulgated pursuant to the Act.

(3) The Commonwealth reserves the right for federal and state agencies or their authorized representatives to perform additional audits of a financial/compliance, economy/efficiency, or program results nature, if deemed necessary.

(4) The Contractor further agrees to comply with requirements that may be issued by the state Agency upon receipt of additional guidance received from the federal government regarding the *Single Audit Act of 1984.*

b. Access by Commonwealth

(1) **Processing**. Upon reasonable written notice from Commonwealth, Contractor and Contractor Subcontractors shall provide such auditors and inspectors with access to the Services Locations and the Software and the Equipment for the purpose of performing audits or inspections of the Services and the operations of Commonwealth and Contractor,

subject always to Contractor's reasonable security requirements. Contractor shall provide, and shall cause Contractor Subcontractors to provide, to such auditors and inspectors any reasonable assistance that they may require. If any such audit results in Contractor being notified that it or any Contractor Subcontractor is not in compliance with any law, regulation, audit requirement or generally accepted accounting principle relating to the Services, Contractor shall, and shall cause such Contractor Subcontractor to, promptly take actions to comply with such law, regulation, audit requirement or generally accepted accounting principle. Commonwealth shall bear the expense of any such compliance that is (1) required by a law, regulation or other audit requirement relating to Commonwealth's operations to the extent the same was first enacted on or after the Effective Date or (2) necessary due to Commonwealth's noncompliance with any law, regulation or audit requirement imposed on Commonwealth. Contractor shall bear the expense of any such response that is (1) required by a law, regulation or other audit requirement relating to Contractor's business or enacted prior to the Effective Date, (2) to be performed by Contractor as part of the Services, or (3) necessary due to Contractor's noncompliance with any law, regulation or audit requirement imposed on Contractor. As part of the Services, Contractor shall provide to Commonwealth summary data of those portions of Contractor's and Contractor Subcontractors' internal audit reports relating solely to the Services.

(2) **Fees**. Upon reasonable written notice from Commonwealth, Contractor shall provide such auditors and inspectors with access to such financial records and supporting documentation as may reasonably be requested by Commonwealth, and such auditors and inspectors may audit the Fees charged to Commonwealth to determine that such Fees are accurate and in accordance with this Contract.

(3) **Overcharges**. If, as a result of such audit, Commonwealth determines that Contractor has overcharged Commonwealth, Commonwealth shall notify Contractor of the amount of such overcharge and Contractor shall promptly pay to Commonwealth the amount of the overcharge, plus interest at the rate of six percent (6%) per annum, calculated from the date of receipt by Contractor of the overcharged amount until the date of repayment to Commonwealth. In the event any such audit reveals an overcharge to Commonwealth during any calendar month during the Term exceeding fifteen percent (15%) of all Fees in the aggregate paid by Commonwealth in respect of such calendar month, Contractor shall reimburse Commonwealth for the cost of such audit. If as a result of such audit, Commonwealth or Contractor determines that Contractor has undercharged Commonwealth, Commonwealth shall promptly pay to Contractor the

amount of such undercharge, without interest. Any disagreement between the parties with regard to the results of any such audit shall be treated as a dispute between the parties subject to the provisions of *Section 34* (Contract Controversies).

(4) **Record Retention**. As part of the Services, Contractor shall (1) retain records and supporting documentation sufficient to document the Services and the Fees paid or payable by Commonwealth under this Contract for at least three (3) years after the expiration or termination of this Contract or until all questioned items relating to such records and documentation are resolved by the parties, whichever is later, and (2) upon notice from Commonwealth, provide such auditors and inspectors as are designated by Commonwealth with reasonable access to such records and documentation for inspection, audit and reproduction. Such records and documentation shall be in such detail as will properly reflect, in accordance with generally accepted accounting principles, all charges claimed under the provisions of this Contract. Any such records which relate to litigation or the settlement of claims arising out of the performance of this Contract, or any Fees as to which exception has been taken by the auditors, shall be retained by Contractor until such litigation, claims, or exceptions have been finally resolved. Such audit shall not require Contractor to disclose cost, profit and overhead data, including direct and indirect rates, markups, profit margins or confidential employee records or other trade secret information.

(5) **Inclusion in Subcontracts**. The provisions of this *Section 51* (Audit Obligations), except for *Section 51(b)3*, shall be applicable to and included in each subcontract under this Contract.

52. VIRUS AND MALICIOUS CODE

a. The Contractor shall be liable for any damage to any Data and/or Software owned or licensed by the Commonwealth if the Contractor or any of its employees, Subcontractors or consultants introduces a virus or malicious, mischievous or destructive programming into the Commonwealth's Software or computer networks and has failed to comply with the Commonwealth software security standards. The Commonwealth must demonstrate that the Contractor or any of its employees, Subcontractors or consultants introduced the virus or malicious, mischievous or destructive programming. The Contractor's liability shall cease if the Commonwealth has not fully complied with its own software security standards.

b. The Contractor shall be liable for any damages incurred by the Commonwealth including, but not limited to, the expenditure of Commonwealth funds to eliminate or remove a computer virus or malicious, mischievous or destructive

programming that result from the Contractor's failure to take proactive measures to keep virus or malicious, mischievous or destructive programming from originating from the Contractor or any of its employees, Subcontractors or consultants through appropriate firewalls and maintenance of anti-virus software and software security updates (such as operating systems security patches, etc.).

c. In the event of destruction or modification of Software, the Contractor shall eliminate the virus, malicious, mischievous or destructive programming, restore the Commonwealth's Software, and be liable to the Commonwealth for any resulting damages.

d. The Contractor shall be responsible for reviewing Commonwealth software security standards and complying with those standards.

e. The Commonwealth may, at any time, audit, by a means deemed appropriate by the Commonwealth, any computing devices being used by representatives of the Contractor to provide Services to the Commonwealth for the sole purpose of determining whether those devices have anti-virus software with current virus signature files and the current minimum operating system patches or workarounds have been installed. Devices found to be out of compliance will immediately be disconnected and will not be permitted to connect or reconnect to the Commonwealth network until the proper installations have been made.

f. The Contractor may use the anti-virus software used by the Commonwealth to protect Contractor's computing devices used in the course of providing services to the Commonwealth. It is understood that the Contractor may not install the software on any computing device not being used to provide services to the Commonwealth, and that all copies of the software will be removed from all devices upon termination of this Contract.

g. The Commonwealth will not be responsible for any damages to the Contractor's computers, data, software, etc. caused as a result of the installation of the Commonwealth's anti-virus software or monitoring software on the Contractor's computers.

53. THE AMERICANS WITH DISABILITIES ACT

During the term of this Contract, the Contractor agrees as follows:

(1) Pursuant to federal regulations promulgated under the authority of *The Americans With Disabilities Act*, 28 C.F.R.§ 35.101, *et seq.*, the Contractor understands and agrees that no individual with a disability shall, on the basis of the disability, be excluded from participation in this Contract or from activities provided for under this Contract. As a condition of accepting and executing this

Contract, the Contractor agrees to comply with the *General Prohibitions Against Discrimination*, 28 C.F.R. § 35.130, and all other regulations promulgated under Title II of *The Americans With Disabilities Act* which are applicable to the benefits, services, programs, and activities provided by the Commonwealth of Pennsylvania through contracts with outside contractors.

(2) The Contractor shall be responsible for and agrees to indemnify and hold harmless the Commonwealth of Pennsylvania from losses, damages, expenses claims, demands, suits, and actions brought by any party against the Commonwealth of Pennsylvania as a result of the Contractor's failure to comply with the provisions of subsection (a) above.

54. NONDISCRIMINATION CLAUSE/SEXUAL HARASSMENT CLAUSE

The Contractor agrees:

(1) In the hiring of any employee(s) for the manufacture of supplies, performance of work, or any other activity required under the Contract or any Subcontract, the Contractor, each Subcontractor, or any person acting on behalf of the Contractor or Subcontractor shall not, by reason of gender, race, creed, or color, discriminate against any citizen of this Commonwealth who is qualified and available to perform the work to which the employment relates.

(2) Neither the Contractor nor any Subcontractor nor any person on their behalf shall in any manner discriminate against or intimidate any employee involved in the manufacture of supplies, the performance of work, or any other activity required under the contract on account of gender, race, creed, or color.

(3) The Contractor and each Subcontractor shall establish and maintain a written sexual harassment policy and shall inform their employees of the policy. The policy must contain a notice that sexual harassment will not be tolerated and employees who practice it will be disciplined.

(4) The Contractor and each Subcontractor shall not discriminate by reason of gender, race, creed, or color against any Subcontractor or supplier who is qualified to perform the work to which the contracts relates.

(5) The Contractor and each Subcontractor shall, within the time periods requested by the Commonwealth, furnish all necessary employment documents and records and permit access to their

books, records, and accounts by the contracting Agency and the Bureau of Small Business Opportunities (BSBO), for purpose of ascertaining compliance with provisions of this Nondiscrimination/Sexual Harassment Clause. Within fifteen (15) days after award of any contract, the Contractor shall be required to complete, sign and submit Form STD-21, the "Initial Contract Compliance Data" form. If the contract is a construction contract, then the Contractor shall be required to complete, sign and submit Form STD-28, the "Monthly Contract Compliance Report for Construction Contractors", each month no later than the 15th of the month following the reporting period beginning with the initial job conference and continuing through the completion of the project. Those contractors who have fewer than five employees or whose employees are all from the same family or who have completed the Form STD-21 within the past 12 months may, within the 15 days, request an exemption from the Form STD-21 submission requirement from the contracting Agency.

(6) The Contractor shall include the provisions of this Nondiscrimination/Sexual Harassment Clause in every subcontract so that those provisions applicable to Subcontractors will be binding upon each Subcontractor.

(7) The Commonwealth may cancel or terminate the Contract and all money due or to become due under the Contract may be forfeited for a violation of the terms and conditions of this Nondiscrimination/Sexual Harassment Clause. In addition, the Agency may proceed with debarment or suspension and may place the Contractor in the Contractor Responsibility File.

55. CONTRACTOR INTEGRITY PROVISIONS

It is essential that those who seek to contract with the Commonwealth of Pennsylvania ("Commonwealth") observe high standards of honesty and integrity. They must conduct themselves in a manner that fosters public confidence in the integrity of the Commonwealth procurement process.

In furtherance of this policy, Contractor agrees to the following:

a. Contractor shall maintain the highest standards of honesty and integrity during the performance of this contract and shall take no action in violation of state or federal laws or regulations or any other applicable laws or regulations, or other requirements applicable to Contractor or that govern contracting with the Commonwealth.

b. Contractor shall establish and implement a written business integrity policy, which includes, at a minimum, the requirements of these provisions as they relate to Contractor employee activity with the Commonwealth and Commonwealth employees, and which is distributed and made known to all Contractor employees.

c. Contractor, its affiliates, agents and employees shall not influence, or attempt to influence, any Commonwealth employee to breach the standards of ethical conduct for Commonwealth employees set forth in *the Public Official and Employee Ethics Act, 65 Pa. C.S. §§1101 et seq.;* the *State Adverse Interest Act, 71 P. S. §776.1 et seq.;* and the *Governor's Code of Conduct, Executive Order 1980-18, 4 Pa. Code §7.151 et seq.*, or to breach any other state or federal law or regulation.

d. Contractor, its affiliates, agents and employees shall not offer, give, or agree or promise to give any gratuity to a Commonwealth official or employee or to any other person, at the direction or request of any Commonwealth official or employee.

e. Contractor, its affiliates, agents and employees shall not offer, give or agree or promise to give any gratuity to a Commonwealth official or employee or to any other person, the acceptance of which would violate the *Governor's Code of Conduct, Executive Order 1980-18, 4 Pa. Code §7.151 et seq.* or any statute, regulation, statement of policy, management directive or any other published standard of the Commonwealth.

f. Contractor, its affiliates, agents and employees shall not, directly or indirectly, offer, confer, or agree to confer any pecuniary benefit on anyone as consideration for the decision, opinion, recommendation, vote, other exercise of discretion, or violation of a known legal duty by any Commonwealth official or employee.

g. Contractor, its affiliates, agents, employees, or anyone in privity with him or her shall not accept or agree to accept from any person, any gratuity in connection with the performance of work under the contract, except as provided in the contract.

h. Contractor shall not have a financial interest in any other contractor, subcontractor, or supplier providing services, labor, or material on this project, unless the financial interest is disclosed to the Commonwealth in writing and the Commonwealth consents to Contractor's financial interest prior to the Commonwealth execution of the contract. Contractor shall disclose the financial interest to the Commonwealth at the time of bid or proposal submission, or if no bids or proposals are solicited, no later than Contractor's submission of the contract signed by Contractor.

i. Contractor, its affiliates, agents and employees shall not disclose to others any information, documents, reports, data or records provided to, or prepared by, Contractor under this contract without the prior written approval of the Commonwealth, except as required *by the Pennsylvania Right to Know Law, 65 P. S. §§ 67.101-3104,* or other applicable law or as otherwise provided in this contract. Any information, documents, reports, date, or records secured by Contractor from the Commonwealth or a third party in connection with the performance of this contract shall be kept confidential unless disclosure of such information is:

(1) Approved in writing by the Commonwealth prior to its disclosure; or

(2) Direction by a court or other tribunal of competent jurisdiction unless the contract required prior Commonwealth approval; or

(3) Required for compliance with federal or state securities laws or the requirements of national securities exchanges; or

(4) Necessary for purposes of Contractor's internal assessment and review; or

(5) Deemed necessary by Contractor in any action to enforce the provisions of this contract or to defend or prosecute claims by or against parties other than the Commonwealth; or

(6) Permitted by the valid authorization of a third party to whom the information, documents, reports, data, or records pertain; or

(7) Otherwise required by law.

j. Contractor certifies, to the best of its knowledge, that neither it nor any of its executive officers, directors, affiliates, or owners of 15% or more beneficial interest, has been officially notified of, charged with, or convicted of any of the following within the last two (2) years and agrees to immediately notify the Commonwealth agency contracting officer in writing if and when it is or it becomes aware that any officer or director has been officially notified of, charged with, convicted of, or officially notified of a government determination of any of the following (except as expressly provided above, as a publicly traded company, Contractor cannot verify if an owner would be subject to any of the following):

(1) Commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements or receiving stolen property;

(2) Commission of fraud or a criminal offense or other improper conduct associated with:

(i) obtaining;

(ii) attempting to obtain; or

(iii) performing a public contract or subcontract.

(3) Contractor's acceptance of the benefits known to have been derived from the conduct shall be deemed evidence of such knowledge, approval or acquiescence.

(4) Violation of federal or state antitrust statutes.

(5) Violation of any federal or state law regulating campaign contributions.

(6) Violation of any federal or state environmental law.

(7) Violation of any federal or state law regulating hours of labor, minimum wage standards or prevailing wage standards; discrimination in wages; or child labor violations.

(8) Violation of the *Act of June 2, 1915 (P. L. 736, No. 338)*, known as the *Workers' Compensation Act*, 77 P. S. 1 *et seq*.

(9) Debarment by any agency or department of the federal government or by any other state.

(10) Any other crime involving moral turpitude or business honesty or integrity.

(11) Contractor acknowledges that the Commonwealth may, in its sole discretion, terminate the contract for cause when the Commonwealth learns that Contractor has been officially notified of its debarment or convicted of a violation described above which derived from Contractor's activity to acquire or in furtherance of this Contract.

k. If this contract was awarded to Contractor on a non-bid basis, Contractor must, (as required by *Section 1641* of the *Pennsylvania Election Code*) file a report of political contributions with the Secretary of the Commonwealth on or before February 15 of the next calendar year. The report must include an itemized list of all political contributions known to Contractor by virtue of the knowledge

possessed by every officer, director, associate, partner, limited partner, or individual owner that has been made by:

(1) Any officer, director, associate, partner, limited partner, individual owner or members of the immediate family when the contributions exceed an aggregate of one thousand dollars ($1,000) by any individual during the preceding year; or

(2) Any employee or members of his immediate family whose political contribution exceeded one thousand dollars ($1,000) during the preceding year.

l. To obtain a copy of the reporting form, Contractor shall contact the Bureau of Commissions, Elections and Legislation, Division of Campaign Finance and Lobbying Disclosure, Room 210 North Office Building, Harrisburg, PA 17120.

m. Contractor shall comply with requirements of the *Lobbying Disclosure Act, 65 Pa. C. S. §13AO1 et seq.,* and the regulations promulgated pursuant to that law. Contractor employee activities prior to or outside of formal Commonwealth procurement communication protocol are considered lobbying and subjects the Contractor employees to the registration and reporting requirements of the law. Actions by outside lobbyists on Contractor's behalf, no matter the procurement stage, are not exempt and must be reported.

n. When Contractor has reason to believe that any breaks of ethical standards as set forth in the law, The Governor's Code of Conduct, or in these provisions has occurred or may occur, including but not limited to contact by a Commonwealth officer or employee which, if acted upon, would violate such ethical standards, Contractor shall immediately notify the Commonwealth contracting officer or Commonwealth Inspector General in writing.

o. Contractor, by submission of its bid or proposal and/or execution of this contract and by the submission of any bills, invoices or requests for payment pursuant to the contract, certifies and represents that it has not violated any of these contractor integrity provisions in connection with the submission of the bid or proposal, during any contract negotiations or during the term of the contract.

p. Contractor shall cooperate with the Office of Inspector General in its investigation of any alleged Commonwealth employee breach of ethical standards and alleged Contractor non-compliance with these provisions. Contractor agrees to make identified Contractor employees available for interviews at reasonable times and places. Contractor, upon inquiry or request of the Office of Inspector General, shall provide, or if appropriate, make promptly available for inspection or copying, any information of any type or form deemed relevant by the Inspector General to Contractor's integrity and

compliance with these provisions. Such information may include, but shall not be limited to, Contractor's business or financial records, documents or files of any type or form that refers to or concerns this contract.

q. For violation of any of these Contractor Integrity Provisions, the Commonwealth may terminate this and any other contract with Contractor, claim liquidated damages in an amount equal to the value of anything received in breach of these provisions, claim damages for all additional costs and expenses incurred in obtaining another contractor to complete performance under this contract, and debar and suspend Contractor from doing business with the Commonwealth. These rights and remedies are cumulative, and the use or non-use of any one shall not preclude the use of all or any other. These rights and remedies are in addition to those the Commonwealth may have under law, statue, regulations, or otherwise.

r. For purposes of these Contractor Integrity Provisions, the following terms shall have the means found in this Paragraph 17.

(1) "Confidential information" means information that a) is not already in the public domain; b) is not available to the public upon request; c) is not or does not become generally known to Contractor from a third party without an obligation to maintain its confidentiality; d) has not become generally known to the public through an act or omission of Contractor; or e) has not been independently developed by Contractor without the use of confidential information of the Commonwealth.

(2) "Consent" means written permission signed by a duly authorized officer or employee of the Commonwealth, provided that where the material facts have been disclosed, in writing, by pre-qualification, bid, proposal, or contractual terms, the Commonwealth shall be deemed to have consented by virtue of execution of this contract.

(3) "Contractor" means the Individual or entity that has entered into this contract with the Commonwealth, including those directors, officers, partners, managers, and owners having more than a five percent interest in Contractor.

(4) "Financial interest" means:

(i) Ownership of more than a five percent interest in any business; or

(ii) Holding a position as an officer, director, trustee, partner, employee, or holding any position of management**.**

(5) "Gratuity" means tendering, giving or providing anything of more than nominal monetary value including, but not limited to, cash travel, entertainment, gifts, meals, lodging, loans, subscriptions, advances, deposits of money, services, employment, or contracts of any kind. The exceptions set forth in the *Governor's Code of Conduct, Executive Order 1980-18*, the *4 Pa. Code §7.153(b)*, shall apply.

(6) "Immediate family" means a spouse and any unemancipated child.

(7) "Non-bid basis" means a contract awarded or executed by the Commonwealth with Contractor without seeking bids or proposals from any other potential bidder or offeror.

(8) "Political contributions" means any payment, gift, subscription, assessment, contract, payment of services, dues, loan, forbearance, advance or deposit of money or any valuable thing, to a candidate for public office or to a political committee, including but not limited to a political action committee, made for the purposes of influencing any election in the Commonwealth of Pennsylvania or for paying its debts incurred by or for a candidate or committee before or after any election.

56. RIGHT-TO-KNOW LAW

a. The Pennsylvania Right-to-Know Law, 65 P.S. §§ 67.101-3104, ("RTKL") applies to this Contract.

b. If the Commonwealth requires the Contractor's assistance in any matter arising out of the RTKL related to this Contract, it shall notify the Contractor using the legal contact information provided in this Contract. The Contractor, at any time, may designate a different contact for such purpose upon reasonable prior written notice to the Commonwealth.

c. Upon written notification from the Commonwealth that it requires the Contractor's assistance in responding to a request under the RTKL for information related to this Contract that may be in the Contractor's possession, constituting, or alleged to constitute, a public record in accordance with the RTKL ("Requested Information"), the Contractor shall:

(1) Provide the Commonwealth, within ten (10) calendar days after receipt of written notification, access to, and copies of, any document or information in the Contractor's possession arising out of this Contract that the Commonwealth reasonably believes is Requested Information and may be a public record under the RTKL; and

(2) Provide such other assistance as the Commonwealth may reasonably request, in order to comply with the RTKL with respect to this Contract.

d. If the Contractor considers the Requested Information to include a request for a Trade Secret or Confidential Proprietary Information, as those terms are defined by the RTKL, or other information that the Contractor considers exempt from production under the RTKL, the Contractor must notify the Commonwealth and provide, within seven (7) calendar days of receiving the written notification, a written statement signed by a representative of the Contractor explaining why the requested material is exempt from public disclosure under the RTKL.

e. The Commonwealth will rely upon the written statement from the Contractor in denying a RTKL request for the Requested Information unless the Commonwealth determines that the Requested Information is clearly not protected from disclosure under the RTKL. Should the Commonwealth determine that the Requested Information is clearly not exempt from disclosure, the Contractor shall provide the Requested Information within five (5) business days of receipt of written notification of the Commonwealth's determination.

f. If the Contractor fails to provide the Requested Information within the time period required by these provisions, the Contractor shall indemnify and hold the Commonwealth harmless for any damages, penalties, costs, detriment or harm that the Commonwealth may incur as a result of the Contractor's failure, including any statutory damages assessed against the Commonwealth.

g. The Commonwealth will reimburse the Contractor for any costs associated with complying with these provisions only to the extent allowed under the fee schedule established by the Office of Open Records or as otherwise provided by the RTKL if the fee schedule is inapplicable.

h. The Contractor's duties relating to the RTKL are continuing duties that survive the expiration of this Contract and shall continue as long as the Contractor has Requested Information in its possession.

57. ENVIRONMENTAL PROTECTION

In carrying out this Contract, the Contractor shall minimize pollution and shall strictly comply with all applicable environmental laws and regulations, including the *Clean Streams Law,* Act of June 22, 1937, as amended; the *Pennsylvania Solid Waste Management Act,* Act of July 7, 1980 (P.L. 380, No. 97), as amended; and the *Dam Safety and Encroachment Act,* Act of November 26, 1978 (P.L. 1375, No. 325), as amended.

58. ASSIGNABILITY

a. This Contract may not be assigned by Contractor, either in whole or in part without the prior written consent of the Commonwealth, which consent shall not be unreasonably withheld, conditioned, or delayed. Transfer of the majority of the stock or the majority of the assets of a corporation, or other change of ownership will be deemed an assignment. In the event that Contractor requests the right to assign this Contract, including an assignment to an affiliate or subsidiary, Contractor will provide the Commonwealth with copies of the following documents (to the extent they exist): most recent audited financial statements and such other documents as Commonwealth reasonably deems necessary. Within thirty (30) days of such notice, the Commonwealth shall provide its written decision regarding the requested assignment.

b. Subject to the terms and conditions of this *Section 58* (Assignability), the Contract is binding upon the parties and their respective successors and assigns.

c. Any assignment consented to by the Commonwealth shall be evidenced by a written assignment agreement executed by the Contractor and its assignee in which the assignee agrees to be legally bound by all of the terms and conditions of the Contract and to assume the duties, obligations, and responsibilities being assigned. In addition, the assignee must execute a contract with the Commonwealth in the same form as this Contract.

d. Notwithstanding the foregoing, the Contractor may, without the consent of the Commonwealth, assign its rights to payment to be received under the Contract, provided that the Contractor provides written notice of such assignment to the Commonwealth together with a written acknowledgement from the assignee that any such payments are subject to all of the terms and conditions of the Contract.

e. A change of name by the Contractor, following which the Contractor's federal identification number remains unchanged, is not considered to be an assignment. The Contractor shall give the Commonwealth written notice of any such change of name.

59. INDEPENDENT CAPACITY OF CONTRACTOR

a. The parties to this Contract agree that the Services performed by the Contractor under the terms of this Contract are performed as an independent contractor and nothing contained in this Contract shall be construed to make either Contractor or Commonwealth partners, joint venturers, principals, agents or employees of the other, except only to the extent that Contractor is expressly appointed under the Contract to act as the agent of Commonwealth and, in

those cases, only to the limited extent of such express appointment. No officer, director, employee, agent, affiliate or contractor retained by Contractor to perform work on Commonwealth's behalf hereunder shall be deemed to be an employee, agent or contractor of Commonwealth. Neither party shall have any right, power or authority, express or implied, to bind the other. As between Contractor and Commonwealth, Contractor is solely responsible for payment of all income, disability, withholding and other employment taxes, and all medical benefit premiums, vacation pay, sick pay and other fringe benefits resulting from Contractor's retention of any such officers, directors, employees, agents or contractors.

b. Except as otherwise provided by the terms of this Contract, the Commonwealth shall have no control over the manner in which the contractual Services are performed by the Contractor, or any Subcontractor. Any job specifications or standards of work attached to or incorporated into this Contract or any subcontracting restrictions contained in this Contract shall not be construed as the Commonwealth's direction or control over the manner of the performance of Services provided by the Contractor.

60. THIRD PARTY BENEFICIARIES

Each party intends that this Contract shall not benefit, or create any right or cause of action in or on behalf of, any person or entity other than Commonwealth and Contractor.

61. CERTIFICATION REGARDING SUSPENSION

Contractor certifies that it is not currently under suspension or debarment by Commonwealth, any other state, or the federal government.

62. SUSPENSION OF SUBCONTRACTORS

If Contractor enters into any subcontracts or employs under this Contract any Subcontractor's individuals who are currently suspended or debarred by Commonwealth or the federal government or who become suspended or debarred by Commonwealth or the federal government during the term of this Contract or any extensions or renewals thereof, Commonwealth shall have the right to require Contractor to terminate such subcontracts or employment.

63. ASSIGNMENT OF RIGHTS UNDER THE ANTITRUST LAWS

It is recognized that in actual economic practice, overcharges by Contractor's suppliers resulting from violations of state and federal antitrust laws are in fact borne by the Commonwealth. As part of the consideration for the award of this Contract, and intending to be legally bound, the Contractor assigns to the Commonwealth all rights, title, and interest in and to any claims Contractor now has or may hereafter acquire under state and federal antitrust laws relating to the goods and services which are provided by the Contractor under this Contract.

64. SIGNIFICANT EVENTS

Commonwealth requires the right to adjust the scope or volume of Services to be provided in response to an event, or series of events taken together, that have or will have a significant and sustained impact on Commonwealth's demand for the Services, and requires Contractor to equitably adjust the price for the Services to reflect any such changes to the scope or volume of the Services.

65. FORCE MAJEURE

No failure or delay by Contractor in the performance of its obligations pursuant to this Contract shall be deemed a default of this Contract or a ground for termination hereunder (except as provided in this Section 65 (Force Majeure) to the extent such failure or delay is due to a Force Majeure Event and such Force Majeure Event could not have been prevented by Contractor's reasonable precautions or efforts to mitigate damage. The occurrence of a Force Majeure Event does not limit or otherwise affect Contractor's obligation to provide normal recovery procedures and any Disaster Recovery Services described in Section 15 (Disaster Recovery and Business Continuity) to the extent such obligations are not directly precluded by the occurrence of that Force Majeure Event. The occurrence of a Force Majeure Event in respect of another customer of Contractor does not constitute a Force Majeure Event under this Contract, except to the extent such customer and Commonwealth experience the same Force Majeure Event at a site shared by Commonwealth and such other customer. The party delayed by a Force Majeure Event shall immediately orally notify the other party (to be confirmed in a written notice within three (3) business days after the inception of such delay) of the occurrence of a Force Majeure Event and describe in reasonable detail the nature of the Force Majeure Event. From and after becoming aware of a Force Majeure Event, the party delayed thereby shall undertake all commercially reasonable measures (including the use of alternative sources for products and services and workaround plans) to mitigate the impact and duration of the Force Majeure Event, and such party shall consistently and diligently prosecute such measures until the Force Majeure Event is relieved. If Contractor does not fulfill its obligations under the immediately preceding sentence and, as a result thereof, such Force Majeure Event precludes Contractor from delivering the Services for more than forty five (45) days, Commonwealth may terminate this Contract for cause under Section 32(c), but without regard to any additional cure periods provided for therein. In any other case in which a Force Majeure Event precludes Contractor from delivering the Services for more than forty-five (45) days (without consideration of any such Services performed from a business recovery center under Section 15 (Disaster Recovery and Business Continuity)), Commonwealth may terminate this Contract for convenience under Section 32(a), but without regard to any notice period or additional cure periods provided for therein. In the event of a Force Majeure Event, Contractor shall not increase the Fees under this Contract or charge Commonwealth usage fees in addition to the Fees except for applicable Disaster Recovery declaration and usage fees in accordance with the provisions of Section 15 (Disaster Recovery and Business Continuity).

66. CONFLICT OF INTEREST

Contractor, by signing this Contract, covenants that it has no undisclosed public or private interest, direct or indirect, and shall not acquire directly or indirectly any such interest, and that Contractor has no association, direct or indirect, which interest or association does or may conflict in any manner with the performance of the Services or any other obligations of Contractor under this Contract. Any such conflicts shall be disclosed to Commonwealth, and Commonwealth shall determine whether such conflict is cause for termination of this Contract. Contractor further covenants that, in the performance of this Contract, no person having such interest shall be employed by or associated with Contractor.

67. OFFICIALS NOT TO BENEFIT

No official or employee of the Commonwealth and no member of its General Assembly who exercises any functions or responsibilities under this Contract shall participate in any decision relating to this Contract which affects their personal interest or the interest of any corporation, partnership, or association in which they are, directly or indirectly, interested; nor shall any such official or employee of the Commonwealth or member of its General Assembly have any interest, direct or indirect, in this Contract or the proceeds thereof.

68. CONSENTS, APPROVALS, NOTICES AND REQUESTS

Unless otherwise specified in this Contract, all consents, approvals, notices and requests, acceptances or similar actions to be given by either party under this Contract shall not be unreasonably withheld, delayed or conditioned and each party shall make only reasonable requests under this Contract.

69. REQUIRED CONSENTS

The Commonwealth, with reasonable assistance at no additional cost by Contractor and its Subcontractors shall obtain all consents, approvals, authorizations, notices, requests and acknowledgements necessary to allow Contractor to use the Commonwealth Software, the Commonwealth Equipment and the services under Commonwealth's Third Party service contracts, all to the extent necessary to enable Contractor to provide the Services to Commonwealth. Commonwealth shall be responsible for all costs and expenses imposed by Third Parties in connection with obtaining any such consents. Contractor shall obtain all consents, approvals, authorizations, notices, requests and acknowledgements necessary to allow (1) Contractor to use the Contractor Software, the Developed Software and the Contractor Equipment to provide the Services to Commonwealth, and (2) Commonwealth to use the Contractor Software in accordance with the terms of this Contract upon the expiration or termination for any reason of Contractor's obligation to provide the Services or of this Contract. Contractor shall be responsible for all costs and expenses imposed by a Third Party in connection with any such consents described in the foregoing clause (1). Commonwealth's costs and expenses under the foregoing clause (2) shall be governed by the

terms of *Section 40(b).02*. Each party shall cooperate with and assist the other party in obtaining the consents contemplated in this *Section 69* (Required Consents).

70. REQUIREMENTS FOR INFORMATION IN LEGAL PROCEEDINGS

a. If the Commonwealth notifies Contractor, or Contractor is otherwise aware, that particular Commonwealth Confidential Information may be within attorney-client or work-product privileges of the Commonwealth, then regardless of any applicable exclusions, Contractor (i) shall not disclose such Confidential Information or take any other action that would result in waiver of such privileges and (ii) shall instruct all Contractor Personnel who may have access to such communications to maintain privileged material as strictly confidential and otherwise protect the Commonwealth privileges.

b. To the extent requested by the Commonwealth, Contractor shall comply with the Commonwealth's litigation response plan, including policies and procedures to prepare for and respond to discovery requests, subpoenas, investigatory demands, and other requirements for information related to legal and regulatory proceedings, as such plan may be revised from time to time, including preparing for and complying with requirements for preservation and production of data in connection with legal and regulatory proceedings and government investigations. Upon receipt of any request, demand, notice, subpoena, order or other legal information request relating to legal proceedings or investigations by third parties relating to any materials, the Confidential Information or related systems in Contractor possession, Contractor shall immediately notify the Commonwealth and provide the Commonwealth with a copy of all documentation of such legal information request, to the extent Contractor legally may do so and shall cooperate with the Commonwealth in responding to such request, demand, notice, subpoena, order or other legal information request.

c. Contractor 's cost of complying with this section shall be at no additional charge to the Commonwealth to the extent that compliance can be accomplished with Contractor's then existing resources. If additional resources are required for compliance, they will be agreed upon by the parties in accordance with the Change Control Procedures, provided, however, that Contractor will not be entitled for payment under this *Section 70* (Requirements for Information in Legal Proceedings) with regard to items for which the Contractor is required to indemnify the Commonwealth.

71. EXAMINATION OF RECORDS

The Commonwealth may, at reasonable times and places, audit the books and records of Contractor or its Subcontractors to the extent that the books and records relate to the performance of the Contract. Contractor shall maintain books and records related to the Contract for a period of three years from the date of final payment under the Contract.

Contractor shall include a requirement in agreements with Subcontractors that requires the Subcontractor to maintain its records for the same length of time.

72. SURVIVAL

Sections 4, 33, 35, 36, 37, 38, 38, 40, 41, 47, 48, 49, 52, 53, 72 shall survive the expiration or termination of the Contract.

73. SEVERABILITY

If any provision of this Contract is held by a court of competent jurisdiction to be contrary to law, then the remaining provisions of this Contract or the application of such provision to persons or circumstances other than those as to which it is invalid or unenforceable shall not be affected thereby, and each such provision of this Contract shall be valid and enforceable to the extent permitted by law.

74. WAIVER

No delay or omission by either party to exercise any right or power it has under this Contract shall impair or be construed as a waiver of such right or power. A waiver by any party of any breach or covenant shall not be construed to be a waiver of any succeeding breach or any other covenant. All waivers must be in writing and signed by the party waiving its rights.

75. PERIOD OF PERFORMANCE

The Contractor, for the life of this Contract, shall complete all Services as specified under the terms of this Contract. In no event shall the Commonwealth be responsible or liable to pay for any Services provided by the Contractor prior to the Effective Date, and the Contractor hereby waives any claim or cause of action for any such Services.

76. SPECIAL REQUIREMENTS

The Commonwealth reserves the right to purchase Services covered under this Contract through other procurement methods whenever the Commonwealth deems it to be in its best interest.

77. GOVERNING LAW

This Contract shall be interpreted in accordance with and governed by the laws of the Commonwealth of Pennsylvania, without giving effect to its conflicts of law provisions. Except as set forth in *Section 34* (Contract Controversies), Commonwealth and Contractor agree that the courts of the Commonwealth of Pennsylvania and the federal courts of the Middle District of Pennsylvania shall have exclusive jurisdiction over disputes under this Contract and the resolution thereof. Any legal action relating to this

Contract must be brought in Dauphin County, Pennsylvania, and the parties agree that jurisdiction and venue in such courts is appropriate.

78. COMPLIANCE WITH LAWS

a. The Contractor shall comply with all federal, state, and local laws in all material respects applicable to the operation of its business, including, but not limited to, all statutes, regulations and rules that are in effect as of the Effective Date of the Contract and shall procure at its expense all licenses and all permits necessary for the fulfillment of its obligations hereunder.

b. If any existing law, regulation or policy is changed or if any new law, regulation or policy is enacted that affects the Services provided under this Contract, the parties to the Contract shall modify this Contract, via *Section 27* (Change Control), to the extent reasonably necessary to:

(1) Ensure that such Services will be in full compliance with such laws, regulations and/or policies; and

(2) Modify the rates applicable to such Services; and

(3) Address any schedule impacts.

79. SMALL DIVERSE BUSINESS COMMITMENT

Contractor shall meet and maintain the commitments to small diverse businesses in the Small Diverse Business ("SDB") portion of its Proposal. Any proposed change to a SDB commitment must be submitted to the DGS Bureau of Small Business Opportunities ("BSBO"), which will make a recommendation as to a course of action to the Commonwealth Contracting Officer. Contractor shall complete the Prime Contractor's Quarterly Utilization Report and submit it to the Commonwealth Contracting Officer and BSBO within ten (10) workdays at the end of each calendar quarter that the Contract is in effect.

80. ACKNOWLEDGEMENT

Commonwealth and Contractor each acknowledge that the limitations and exclusions contained in this Contract have been the subject of active and complete negotiation between the parties and represent the parties' Contract based upon the level of risk to Commonwealth and Contractor associated with their respective obligations under this Contract and the payments to be made to Contractor and credits to be issued to, and Services to be provided to, Commonwealth pursuant to this Contract. The parties agree that the terms and conditions of this Contract shall not be construed in favor of or against any party by reason of the extent to which any party or its professional advisors participated in the preparation of this Contract.

81. COVENANT OF FURTHER ASSURANCES

Commonwealth and Contractor covenant and agree that, subsequent to the execution and delivery of this Contract and without any additional consideration, each of Commonwealth and Contractor will execute and deliver any further legal instruments and perform any commercially reasonable acts which are or may become necessary to effectuate the purposes of this Contract.

82. COVENANT OF GOOD FAITH

Each party agrees that, in its respective dealings with the other party under or in connection with this Contract, it shall act in good faith.

83. AMENDMENTS

No amendment to, or change, waiver, or discharge of, any provision of this Contract shall be valid unless in writing and signed by an authorized representative of the party against which such amendment, change, waiver or discharge is sought to be enforced.

84. ENTIRE CONTRACT

This Contract is the entire Contract between the parties with respect to its subject matter, and there are no other representations, understandings or Contracts between the parties relative to such subject matter

IN WITNESS WHEREOF, the parties hereto have signed this Contract on the dates indicated below.

of the
BOARD OF DIRECTORS
of
UNISYS CORPORATION

I, Susan B. Asch, Assistant Secretary of Unisys Corporation, a Delaware corporation, do hereby certify that the following is a true and correct copy of resolutions duly adopted at a regular meeting of the Board of Directors of said Corporation held on September 27, 1990, which on the date hereof remain in full force and effect:

Bids, Proposals, and Contracts:

RESOLVED, that the officers of the Corporation at the level of elected Vice President or above be, and each of them hereby is, authorized and empowered, in the name and on behalf of the Corporation, to make, execute, enter into and deliver bids, proposals and contracts for the selling, leasing, licensing, supplying, performing, and delivering of computer products (including, without limitation, hardware and system software incorporated therein, application software, parts and supplies), systems and other services, other products and goods of the Corporation (whether or not manufactured or developed by the Corporation or others) to any customer, governmental or otherwise; and further

RESOLVED, that the officers of the Corporation above the level of elected Vice President be, and each of them hereby is, authorized and empowered, in the name and on behalf of the Corporation, to delegate the authority granted by the foregoing resolution to additional officers and/or employees of the Corporation, or to revoke any such delegation previously granted, which delegation, or revocation thereof, shall become effective when it is filed in writing with the Secretary of the Corporation; and further

RESOLVED, that the Secretary or any Assistant Secretary of the Corporation be, and each of them hereby is, authorized and empowered to certify, to any entity or person, the authority granted to any officer or employee of the Corporation pursuant to the foregoing resolutions, with such certification constituting conclusive evidence, binding upon the Corporation, of the authority of such officer or employee to make, execute, enter into or deliver the bids, proposals or contracts referred to in the foregoing resolutions.

I further certify that, on the date hereof, J. Edward Coleman is the duly elected Chairman and Chief Executive Officer of Unisys Corporation.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the seal of said Corporation this 25th day of November 2013.

APPENDIX A - BUSINESS ASSOCIATE APPENDIX LANGUAGE

APPENDIX A - BUSINESS ASSOCIATE APPENDIX LANGUAGE

COMMONWEALTH OF PENNSYLVANIA
BUSINESS ASSOCIATE CONTRACT

WHEREAS, the ***[name of program and/or Department]*** (Covered Entity) and Contractor (Business Associate) intend to protect the privacy and security of certain Protected Health Information (PHI) to which Business Associate may have access in order to provide goods or services to or on behalf of Covered Entity, in accordance with the Health Insurance Portability and Accountability Act of 1996, Public Law 104-191 (HIPAA), the Health Information Technology for Economic and Clinical Health (HITECH) Act, Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (ARRA), Pub. L. No. 111-5 (Feb. 17, 2009), the HIPAA Privacy Rule (Privacy Rule), 45 C.F.R. Parts 160 and 164, and the HIPAA Security Rule (Security Rule), 45 C.F.R. Parts 160, 162 and 164, and all other applicable laws; and

WHEREAS, Business Associate may receive PHI from Covered Entity, or may create or obtain PHI from other parties for use on behalf of Covered Entity, which PHI can be used or disclosed only in accordance with this Agreement and the standards established by applicable laws; and

WHEREAS, Business Associate may receive PHI from Covered Entity, or may create or obtain PHI from other parties for use on behalf of Covered Entity that is in electronic form, which PHI must be handled in accordance with this Agreement and the standards established by HIPAA and the Security Rule and other applicable laws; and

NOW, THEREFORE, the parties to this Agreement set forth the following as the terms and conditions of their understanding.

1. Definitions.

a) "Breach" shall have the meaning assigned to such term at 42 USCS § 17921 and HIPAA regulations at 45 C.F.R. § 164.402.

b) "Business Associate" shall have the meaning given to such term under the Privacy and Security Rules, including but not limited to, 45 C.F.R. §160.103.

c) "Covered Entity" shall have the meaning given to such term under the Privacy and Security Rules, including, but not limited to, 45 C.F.R. §160.103.

d) "HIPAA" shall mean the Health Insurance Portability and Accountability Act of 1996, Public Law 104-191.

e) "Privacy Rule" shall mean the standards for privacy of individually identifiable health information in 45 C.F.R. Parts 160 and 164.

f) "Protected Health Information" or "PHI" shall have the meaning given to such term under HIPAA and the HIPAA Regulations in 45 C.F.R. Parts 160, 162 and 164, including, but not limited to 45 C.F.R. §160.103.

g) "Security Rule" shall mean the security standards in 45 C.F.R. Parts 160, 162 and 164.

h) Terms used, but not otherwise defined, in this Agreement shall have the same meaning as those terms in the Health Insurance Portability and Accountability Act of 1996, Public Law 104-191 (HIPAA), the Health Information Technology for Economic and Clinical Health (HITECH) Act, Title XIII of Division A and Title IV of Division B of the American Recovery and Reinvestment Act of 2009 (ARRA), Pub. L. No. 111-5 (Feb. 17, 2009), the HIPAA Privacy Rule (Privacy Rule),

45 C.F.R. Parts 160 and 164, and the HIPAA Security Rule (Security Rule), 45 C.F.R. Parts 160, 162 and 164.

2. Stated Purposes For Which Business Associate May Use Or Disclose PHI. The Parties hereby agree that Business Associate shall be permitted to use and/or disclose PHI provided by or obtained on behalf of Covered Entity for purposes stated in Attachment 1, except as otherwise stated in this Agreement or required by law.

NO OTHER USES OR DISCLOSURES OF PHI ARE PERMITTED.

3. BUSINESS ASSOCIATE OBLIGATIONS:

a) Security and Privacy Provisions Applicable to Business Associate. Business Associate shall abide by the security and privacy provisions applicable to Covered Entities which are made applicable to the Business Associate by 42 USCS § 17931 and 17934.

b) Limits On Use And Further Disclosure Established By Agreement And Law. Business Associate hereby agrees that the PHI provided by, or created or obtained on behalf of Covered Entity shall not be further used or disclosed other than as permitted or required by this Agreement or as Required by Law.

c) Appropriate Safeguards. Business Associate shall establish and maintain appropriate safeguards to prevent any use or disclosure of PHI other than as provided for by this Agreement. Appropriate safeguards shall include implementing administrative, physical, and technical safeguards that reasonably and appropriately protect the confidentiality, integrity, and availability of the electronic PHI that is created, received, maintained, or transmitted on behalf of the Covered Entity.

d) Reports Of Improper Use Or Disclosure. Business Associate hereby agrees that it shall report to _____at _____**,** within five (5) business days of discovery of any use or disclosure of PHI not provided for or allowed by this Agreement.

e) Reports Of Security Incidents. In addition to following the breach notification requirements in section 13402 of the Health Information Technology for Economic and Clinical Health Act of 2009 ("HITECH Act") and related regulations, agency guidance and other applicable federal and state laws, Business Associate shall report to _____at _____**,** within five (5) business days of discovery of any security incident. If the Security Incident is caused by Business Associate or its agents, Business Associate shall cover costs associated with any such incident, including costs stemming from compliance with all federal and state breach notification requirements applicable to Business Associate and Covered Entity. Business Associate shall cover costs associated with any incident involving the acquisition, access, use or disclosure of Unsecured PHI in a manner not permitted under federal or state law and agency guidance if the incident is caused by Business Associate or its agents.

f) Subcontractors and Agents. Business Associate hereby agrees that any time PHI is provided or made available to any subcontractors or agents, Business Associate shall provide only the minimum necessary PHI for the purpose of the covered transaction and shall first enter into a subcontract or contract with the subcontractor or agent that contains the same terms, conditions and restrictions on the use and disclosure of PHI as contained in this Agreement.

g) Right Of Access To PHI. Business Associate hereby agrees to allow an individual who is the subject of PHI maintained in a designated record set, to have access to and copy that individual's PHI within fifteen (15) business days of receiving a written request from the Covered Entity or individual Business Associate shall provide PHI in the format requested, unless it cannot readily be produced in such format, in which case it shall be provided in standard hard copy or such other form and format as agreed to by Business Associate and the individual. Notwithstanding this

general rule, if the request is for information maintained electronically in one or more designated record sets and if the individual requests an electronic copy of such information, Business Associate must provide the individual with access to the PHI in the electronic form and format requested by the individual, if it is readily producible in such form and format; or, if not, in a readable electronic form and format as agreed to by the Business Associate and the individual. If any individual requests from Business Associate or its agents or subcontractors access to PHI, Business Associate shall notify Covered Entity of same within five (5) business days. Business associate shall further conform with and meet all of the requirements of 45 C.F.R. §164.524, 42 USCS § 17936(e), and other applicable laws.

h) Amendment and Incorporation Of Amendments. Within fifteen (15) business days of receiving a request from Covered Entity for an amendment of PHI maintained in a designated record set, Business Associate shall make the PHI available and incorporate the amendment to enable Covered Entity to comply with 45 C.F.R. §164.526 and other applicable laws. If any individual requests an amendment from Business Associate or its agents or subcontractors, Business Associate shall notify Covered Entity within five (5) business days.

i) Provide Accounting Of Disclosures. Business Associate agrees to maintain a record of all disclosures of PHI by Business Associate in accordance with 45 C.F.R. §164.528, 42 USCS § 17935(c), and other applicable laws. Such records shall include, for each disclosure, the date of the disclosure, the name and address of the recipient of the PHI, a description of the PHI disclosed, the name of the individual who is the subject of the PHI disclosed, the purpose of the disclosure, and shall include disclosures made on or after the date that is six (6) years prior to the request or April 14, 2003, whichever is later. Business Associate shall make such record available to the individual or the Covered Entity within fifteen (15) business days of a request for an accounting of disclosures, or within such other time as may be dictated by applicable law.

j) Requests for Restriction. If Business Associate has the ability to perform such a request within the scope of the work performed under the underlying Contract, Business Associate shall comply with requests for restrictions on disclosures of PHI about an individual if the disclosure is to a health plan for purposes of carrying out payment or health care operations (and is not for treatment purposes), and the PHI pertains solely to a health care item or service for which the service involved was paid in full out-of-pocket. For other requests for restriction, Business associate shall otherwise comply with the Privacy Rule, as amended, and other applicable statutory and regulatory requirements

k) Access To Books And Records. Business Associate hereby agrees to make its internal practices, books, and records relating to the use or disclosure of PHI received from, or created or received by Business Associate on behalf of the Covered Entity, available to the Secretary of Health and Human Services or designee for purposes of determining compliance with the HIPAA Privacy Regulations.

l) Return Or Destruction Of PHI. At termination of this Agreement, Business Associate hereby agrees to return or destroy all PHI provided by or obtained on behalf of Covered Entity unless otherwise provided for in this Agreement or directed by Covered Entity. Business Associate agrees not to retain any copies of the PHI after termination of this Agreement. If return or destruction of the PHI is not feasible, Business Associate agrees to extend the protections of this Agreement to limit any further use or disclosure until such time as the PHI may be returned or destroyed. If Business Associate elects to destroy the PHI, it shall certify to Covered Entity that the PHI has been destroyed.

m) Maintenance of PHI. Notwithstanding any other provision of this Agreement, Business Associate shall retain only that PHI that is necessary for Business Associate to continue its proper management and administration or to carry out its legal responsibilities. Business Associate shall return to Covered Entity [or, if agreed to by Covered Entity, destroy] the remaining PHI that Business Associate still maintains in any form. Business Associate shall continue to use

appropriate safeguards and comply with Subpart C of 45 CFR Part 164 with respect to electronic PHI to prevent use or disclosure of the PHI other than as provided for in this Section, for as long as Business Associate retains the PHI. Business Associate shall not use or disclose the PHI retained by Business Associate other than for the purposes for which such PHI was retained and subject to the same conditions set forth in this Agreement. Business Associate shall return to Covered Entity (or, if agreed to by Covered Entity, destroy) the PHI retained by Business Associate when it is no longer needed by Business Associate for its proper management and administration or to carry out its legal responsibilities.

Business Associate shall continue to maintain the information required under §5(h) of this Agreement for a period of six (6) years after termination of the Agreement, unless Covered Entity and Business Associate agree otherwise.

n) Mitigation Procedures. Business Associate agrees to establish and to provide to Covered Entity upon request, procedures for mitigating, any harmful effect from the use or disclosure of PHI by Business Associate in a manner contrary to this Agreement or applicable laws. In the event of a Security Incident, Business Associate further agrees to mitigate any harmful effect that is known to Business Associate of a use or disclosure of PHI by Business Associate in violation of this Agreement or applicable law.

o) Training. Business Associate will train all members of its workforce involved in the performance of the Services who may have access to PHI on its policies and procedures with respect to PHI as necessary and appropriate for the workforce members to carry out the functions required by this contract.

p) Sanction Procedures. Business Associate has a code of conduct policy requiring all employees and subcontractors to adhere to applicable laws and code of conduct and a human resources process for sanctioning employees that do not comply. Business Associate agrees that it shall abide by this process during the term of this Agreement

q) Grounds For Breach by Covered Entity. Upon Business Associate's knowledge of a material breach by Commonwealth of this Business Associate Agreement, Business Associate shall notify Commonwealth of such breach and Commonwealth shall have at least (30) days to cure such breach. In the event Commonwealth does not cure the breach, Business Associate shall have the right to report the violation to the Secretary. Notwithstanding any other language in this Agreement, the parties agree that termination by the Business Associate is infeasible.

r) Grounds For Breach. Any non-compliance by Business Associate with this Agreement or the Privacy or Security Rules will automatically be considered to be a breach of the Agreement, if Business Associate knew or reasonably should have known of such non-compliance and failed to immediately take reasonable steps to cure the non-compliance. Business Associate shall have forty-five (45) days to cure such breach from the date of notice to cure by the Commonwealth. In the event Business Associate does not cure the breach, the Commonwealth shall have the right to immediately terminate this Agreement and the underlying agreement. If termination is infeasible, the Commonwealth shall report the violation to the Secretary.

s) Failure to Perform Obligations. In the event Business Associate fails to perform its obligations under this Agreement, Covered Entity may immediately discontinue providing PHI to Business Associate. Covered Entity may also, at its option, require Business Associate to submit to a plan of compliance, including monitoring by Covered Entity and reporting by Business Associate, as Covered Entity in its sole discretion determines to be necessary to maintain compliance with this Agreement and applicable law.

t) Privacy Practices. The Covered Entity will provide and Business Associate shall immediately begin using in its performance of the Services involving PHI for that Covered Entity any applicable form, including but not limited to, any form used for Notice of Privacy Practices, Accounting for Disclosures, or Authorization, upon the effective date designated by the Covered Entity. The Covered Entity retains the right to change the applicable privacy practices, documents and forms for its PHI. The Business Associate shall implement changes as soon as practicable, but not later than 45 days from the date of notice of the change.

4. OBLIGATIONS OF COVERED ENTITY:

a) Provision of Notice of Privacy Practices. Covered Entity shall provide Business Associate with the notice of privacy practices that the Covered Entity produces in accordance with applicable laws, as well as changes to such notice.

b) Permissions. Covered Entity shall provide Business Associate with any changes in, or revocation of, permission by individual to use or disclose PHI of which Covered Entity is aware, if such changes affect Business Associate's permitted or required uses and disclosures.

c) Restrictions. Covered Entity shall notify Business Associate of any restriction to the use or disclosure of PHI that the Covered Entity has agreed to in accordance with 45 C.F.R. §164.522 and other applicable laws, to the extent that such restriction may affect Business Associate's use or disclosure of PHI.

d) Use or Disclosure of PHI. Covered Entity shall not request Business Associate to use or disclose PHI in any manner that would not be permissible under the Privacy Rule if done by the Covered Entity.

5. MISCELLANEOUS:

a) Regulatory References. A reference in this Appendix to a section in the Privacy or Security Rules means the section as in effect or as amended as reasonably determined by the Covered Entity.

b) Amendment. The Parties agree to take such action as is necessary to amend this Appendix from time to time as is necessary for the Covered Entity to comply with the requirements of the Privacy and Security Rules and the Health Insurance Portability and Accountability Act of 1996, Pub. L. No. 104-191.

c) Survival. The respective rights and obligations of the Covered Entity and Business Associate under this Appendix shall survive the termination of the underlying Contract.

d) Interpretation. Any ambiguity in this Appendix shall be resolved to permit Covered Entity to comply with the Privacy and Security Rules as reasonably determined by the Covered Entity.

e) Changes in Law. Business Associate shall comply with all applicable privacy and security rules and regulations, including but not limited to HIPAA regulations and the HITECH Act and HITECH regulations which are now in effect or which take effect during the term of this contract.

Appendix A to Commonwealth of Pennsylvania Business Associate Agreement

Permitted Uses and Disclosures of Protected Health Information

1. Purpose of Disclosure of PHI to Business Associate: To allow _____ to meet the requirements of Contract # _____.

2. Information to be Disclosed to Business Associate shall include but may not be limited to: _____.

3. Use to Effectuate Purpose of Agreement: _____ may use and disclose PHI to the extent contemplated by Contract #_____ , and as permitted by law with Commonwealth approval and guidance.

UPS	Uninterruptable Power Supply
VRF	Virtual Routing and Forwarding

Defined Terms

Term	Definition
24 x 7 x 365	A continuous, non-stop period of time.
Abandoned Telephone Calls	A telephone call that is initiated by a caller but disconnected prior to answer.
Acceptance Criteria	The list of predetermined objectives that define the minimum capabilities or work results those are acceptable to the Commonwealth.
Acceptance Testing Plan	A mutually agreed plan that includes the testing of application infrastructure performance characteristics prior to migrating each of the current application workloads to the Contractor's infrastructure.
Accurate	Means all Inventory Attributes are correctly and completely populated in the CMDB Inventory of Record.
Agency Agencies	One or more administrative division(s) of the Commonwealth of Pennsylvania.
Application Development and Maintenance (ADM)	The work needed to create, update and maintain software applications.
Application Infrastructure Availability	The time all or a portion the application infrastructure is Available and not in a Degraded Condition.
Assistance Event	As described in section 33 of the Contract.
At-Risk Amount	The amount that the Contractor will have at risk for all Service Level Credits in each month. The "At-Risk Amount" is 15% of the total monthly enterprise invoice submitted to the Commonwealth by the contractor each month.
Availability	The time a Service or application is fully functional (available) to perform the functions it is designed to produce.
Available Time	The time a Service or application is fully functional (available) to perform the functions it is designed to produce.
Backups	A copy of a program or file that is stored separately from the original.

Term	Definition
Baseline Data	The actual data measured during a Measurement Period or applicable historical data of the Commonwealth.
Batch	A common IT industry term representing an execution of a series of programs ("jobs") on a computer without manual intervention.
Benchmark Results	The details of the Benchmarking process intended to determine whether Contractor provides Commonwealth with technology and Services at Service Levels equal to or greater than other organizations receiving similar services.
Benchmark Review Period	The period to review Benchmark Reports to assess the Benchmark Results.
Benchmarker	An independent third-party that undertakes Benchmarking.
Benchmarking	The objective measurement and comparison process (utilizing resource baselines and industry standards) utilized by a Benchmarker to benchmark the quality of the Services and the Fees by Statement of Work or Statement of Works.
Benchmarking Price Protection	The process of an objective measurement and comparison process utilizing baseline methods and industry standards to determine pricing as more fully set forth within Section 25 of the Contract.
Best and Final Offer	As used in the RFP
Bronze	A level of service that has a specific Availability value or Response time interval requirement.
Bureau of Small Business Opportunities (BSBO)	A Bureau within the Commonwealth's Department of General Services responsible for certifying a small diverse businesses as a DGS-certified minority-owned business, woman-owned business, service-disabled veteran-owned business or veteran-owned business, or United States Small Business Administration-certified 8(a) small disadvantaged business concern, that qualifies as a small business.
Business Associate	As defined in the Health Insurance Portability and Accountability Act of 1996, Pub. L. 104-191 (HIPAA).
Business Continuity Plan	The plan set out to continue business operations of the Commonwealth in the event of a declared disaster.

Term	Definition
Business Partner	A third party entity that does business with the Commonwealth.
Capacity On Demand	A type of Service for which the capacity can be modified in an automated process with a short implementation time.
Card Holder Data	Credit card records or record systems containing cardholder information including credit card numbers.
Change	An alteration in specifications, services, delivery point, rate of delivery, period of performance, price, or other provisions of the Contract.
Change Advisory Board	A group of individuals authorized to approve or reject individual service and infrastructure changes and to set and guide the Change process.
Change Control Procedures	The procedures used to modify sections of the Contract or modify the configuration of an infrastructure component of a Service.
Change Management	The process responsible for controlling the lifecycle of all Changes, enabling beneficial Changes to be made with minimum interruption to the Services.
Change Order	The documentation used to request, validate, negotiate and approve a change to the Services provided under the Contract.
Change Proposal	The document presented to the Commonwealth by the Contractor to start the Change Control Procedures.
Change Request (CRQ)	The type of request created and processed within the Commonwealth's ITSM system to request authorization to modify an infrastructure component of a Service.

Term	Definition
Chronic Problem	A problem which meets any of the following criteria: 1. The existence two or more Incidents with the same root cause for the same Software, Service, process, or Equipment for which Contractor, the Commonwealth, or the Commonwealth Customer, have designated as a problem requiring a Root Cause Analysis with a corrective action plan. 2. The existence of three or more Service Delivery Failures or outages for the same Software, Service, process, or Equipment within the same month for any two (2) months within any rolling six (6) months. **3.** The existence of three (3) or more Service Delivery Failures or outages for the same Software, Service, process, or Equipment within any rolling six (6) month period for which no root cause has been determined.
CMDB Inventory of Record	The inventory of CIs, including all Equipment and Software, to be created and maintained by Contractor in accordance with the CCPM**.**
Co-location	The ability to provide space, power, and cooling to an asset that is not owned by the Contractor.
Comma Separated Values (CSV)	A type of Text file where the values are delineated with a comma.
Commencement Date	The date a Service is accepted by the Commonwealth.
Commonwealth	The Commonwealth of Pennsylvania.
Commonwealth Computing Procedures Manual (CCPM)	A detailed description of all processes and procedures used to support the computing needs of the Commonwealth via the Contractor's Knowledge/Service Portal. The CCPM contains specific sections dedicated to the operational procedures for each Commonwealth datacenter customer.
Commonwealth Computing Services	The centralized computing capabilities of the Commonwealth that includes Mainframe, Midrange and x86 based servers and the supporting infrastructure.
Commonwealth Contracting Officer	The person authorized to administer this Contract for the Commonwealth and to make written determinations with respect to the Contract.

Term	Definition
Commonwealth Customers	The end users deriving benefits from the Services provided from this Contract.
Commonwealth Enterprise Data Center	See Commonwealth Technology Center
Commonwealth Project Manager	The individual within the Commonwealth who is responsible for managing the Contract**.**
Commonwealth Proprietary Software	The Software owned by the Commonwealth.
Commonwealth Software	The software owned or licensed by the Commonwealth .
Commonwealth Technology Center (CTC)	The Commonwealth's datacenter and adjacent offices located at 1 Technology Park Drive, Harrisburg, PA 17110. Also known as "1 Tech Park" or the EDC.
Commonwealth Third Party Software	Third Party Software for which the Commonwealth has a valid license and current maintenance agreement.
Confidential Information	With regard to the Commonwealth, the data and other information of the Commonwealth or any private individual, organization or public agency, in each case to the extent such information and documentation is not permitted to be disclosed to third parties under local, Commonwealth or Federal laws and regulations or pursuant to any policy adopted by the Commonwealth or pursuant to the terms of any third-party agreement to which Commonwealth is a party. With regard to the Contractor, all Contractor Software and all Contractor documentation and manuals not made available in the ordinary course of business (except those items developed by Contractor specifically to deliver Services to the Commonwealth pursuant to this Contract), and any other information identified in writing by Contractor as confidential or proprietary to Contractor, its Subcontractors or licensors.
Confidential Proprietary Information	All Contractor Software and all Contractor documentation and manuals not made available in the ordinary course of business (except those items developed by Contractor specifically to deliver Services to the Commonwealth pursuant to this Contract), and any other information identified in writing by Contractor as confidential or proprietary to Contractor, its Subcontractors or licensors.

Term	Definition
Configuration Items (CI)	The database record(s) indicating the interrelationships and configuration of a Service, Equipment component, application, and Software
Configuration Management Database (CMDB)	The repository of configuration information related to all the components of the Contractor's datacenter services solution. It contains the details of each of the configuration items (CI) in the IT infrastructure. The CMDB helps provide the relationships between these components (e.g. Application Infrastructure) and track their configuration. The CMDB is a fundamental component of the ITIL framework's Configuration Management process.
Contract	The agreement for provision of Services between Contractor and Commonwealth of which this document is a part.
Contract Year	Change to "year" in contract. May need to specify anniversary date or something like that.
Contractor	Unisys Corporation
Contractor Personnel	People employed by the Contractor who provide or are involved in the provision of the Services.
Contractor Project Manager	The individual within the Contractor that who is responsible for managing the Contract.
Contractor Services Location Manager	Individual who manages a Contractor Service Location
Contractor Software	The software owned or licensed by the Contractor.
Contractor Tools	Any tools, either in object code or source code form, which Contractor has previously developed, or which Contractor independently develops or licenses from a Third Party, excluding any tools that Contractor creates pursuant to this Contract. Contractor Tools includes but is not limited to, methodologies, information, concepts, toolbars for maneuvering between pages, search engines, JAVA applets, and ActiveX controls.
Contractor's Proposal	Proposal submitted by Contractor in Response to the RFP
COPANET	The Commonwealth's private Fiber network.
Covered Entity	As defined in the Health Insurance Portability and Accountability Act of 1996, Pub. L. 104-191 (HIPAA).

Term	Definition
Criminal History Record Information Act (CHRIA)	Chapter 91 of the Crimes Code of Pennsylvania and Pennsylvania Consolidated Statues Annotated, 18 Pa. C.S.A. 9101 et. seq.
Criminal Justice Information Services (CJIS)	The policy that provides Criminal Justice Agencies and Noncriminal Justice Agencies with a minimum set of security requirements for the access to Federal Bureau of Investigation Criminal Justice Information Services (CJIS) Division systems and information and to protect and safeguard Criminal Justice Information.
Critical Application	Those applications designated as "Critical Applications" in the Commonwealth Compute Process Manual (CCPM)
Critical Inventory Attributes	Those database fields in an Inventory Record that are essential for Contractor's successful delivery of Service and necessary for the Commonwealth's successful performance of retained responsibilities, including architecture, IT planning, and reconciliation of invoices. Critical Inventory Attributes that must be audited are set out in the CCPM and may be modified over time in accordance with the CCPM.
Critical Measurements (CMs)	Performance measurements defined for the most important service areas
Critical Monthly Reports	A report identified by the Commonwealth as critical and which is required to be delivered monthly.
Critical Services	Those Services designated as "Critical Services" in the Commonwealth Compute Process Manual (CCPM)
Customer Request Date	The customer requested due date (CRDD) in the Contractor's service management platform (SMP).
Customer Time	See Hold Time
Data	Information in a form that can be input to, be created by, be processed by, be stored in, and/or be output by a computer. Data may be in the form of characters such as letters, numbers, punctuation marks, mathematical operators, control characters, or photographic display elements, e.g. pixels.
Data Gathering	The work effort of collecting information to discover and document a process, a procedure, or the configuration of a Service.

Term	Definition
Data Power House (DPH)	The Commonwealth accepted term encompassing the current managed datacenter contract, Services, and location.
Database Administration (DBA)	The function of implementing, configuring, monitoring, and troubleshooting structured data in a common platform/application.
Datacenter Architecture	The resulting equipment and associated network infrastructure viewed as an entire collection of services.
Day	For purposes of the Service Level Matrix, a "day" means a 24 hour period from the trigger for the measurement. For example, if a ticket is logged at 9:15am on Tuesday the 14th, a "day" ends at 9:15am on Wednesday day the 15th.
Days	Calendar days, unless specifically indicated otherwise.
Degraded Condition	A Service that tests as fully operational but is degraded below user expectations across a significant segment of the user population as determined by the Commonwealth.
Deliverable	A Milestone or Service that is subject to acceptance testing in the Acceptance Testing Plan.
Detailed Transition Plan	The plan developed by both the Contractor and the Commonwealth that describes the tasks necessary to complete the transition of the Service into this Contract.
Developed Documentation	Documentation developed by Contractor specifically for the Commonwealth in connection with its performance under this Contract as more fully set forth in Section 40(c) of the Contract.
Developed Materials	All literary works, or other works of authorship (such as application programs, listings, programming tools, documentation, reports, drawings, procedure manuals and similar works) developed under the Contract, as more fully set forth in Section 40(d) of the Contract
Disaster Recovery Plan	The plan created to restore Services to the Commonwealth in the event of a declared disaster.
Disaster Recovery (DR)	A series of events to restore a Service or Equipment in the advent of a major system or network failure, or a natural or man-made event that denies service for an extended period of time.

Term	Definition
Documentation	All written materials, work papers, configurations and manuals (including the CCPM) prepared by or on behalf of the Contractor or any of the Contractor's Subcontractors pursuant to the Contract as more fully set forth in Section 40 of the Contract.
Downtime	The duration a Service or Equipment is not fully functional based on the requirements of the Service or Equipment.
Earn-Back	The Offeror's opportunity to earn back Service Level Credits on Required Service Level Defaults, in accordance with Schedule J.1 (Datacenter Service Level Management).
Effective Date	a) The date the Contract has been fully executed by the Contractor and by the Commonwealth and all approvals required by Commonwealth contracting procedures have been obtained or b) the date referenced in the Contract, whichever is later. The Contract shall not be a legally binding contract until after the fully-executed Contract has been sent to the Contractor.the Contract
Emergency Downtime	Means downtime agreed by the Parties to enable maintenance and break fix i. necessary to address Service issues stemming from Force Majeure causes or **ii.** Otherwise agreed by the Commonwealth pursuant to the Emergency provisions of the Change Control Procedures.
Enterprise Data Center (EDC)	The Commonwealth's datacenter and adjacent offices located at 1 Technology Park Drive, Harrisburg, PA 17110.

Term	Definition
Equipment	All computing, networking, telecommunications and other equipment (hardware and firmware) procured, provided, operated, supported, or used by Contractor in connection with the Services, including but not limited to: a) mainframe, midrange, server and distributed computing equipment and associated attachments, features, accessories, peripheral devices and cabling, b) personal computers, laptop computers, workstations and personal data devices and associated attachments, features, accessories, printers, multi-functional printers, peripheral or network devices and cabling, and c) voice, data, video and wireless telecommunications and network and monitoring equipment and associated attachments, features, accessories, cell phones, peripheral devices and cabling.
ERP systems	Systems that integrate internal and external management information across an entire organization, typically including finance, accounting, sales, service, and customer relationship management, etc.
Expiration Date	The end of the Contract Term, as more fully set forth in Section 1 of the Contract.
Federal Information Processing Standards (FIPS)	Standards and guidelines that are developed by the National Institute of Standards and Technology (NIST) for Federal computer systems. Under the Information Technology Management Reform Act (Public Law 104-106), the Secretary of Commerce approves standards and guidelines that are developed by the National Institute of Standards and Technology (NIST) for Federal computer systems. These standards and guidelines are issued by NIST as Federal Information Processing Standards (FIPS) for use government-wide. NIST develops FIPS when there are compelling Federal government requirements such as for security and interoperability and there are no acceptable industry standards or solutions.
Fees	Any amounts payable by Commonwealth to Contractor.
Force Majeure Event	An event or effect that cannot be reasonably anticipated or controlled, as more fully set forth in Section 65 of the Contract.

Term	Definition
Fulfillment Time	The period of time set out in Schedule C.2 Services Catalog - Descriptions, within which the Contractor must deliver the Services.
Gold	A level of service that has a specific Availability value or Response time interval requirement
High Level Estimate (HLE)	Used when the Commonwealth has a clear technical direction and needs rough estimates on the cost of implementing the Service. HLEs may be used to attach a cost estimate to a prior conceptualization or technical opinion produced by the Offeror.
Hold Time	A period of time when Contractor is prevented from progressing the investigation or repair of an Incident (outage or degradation) due to Commonwealth required decisions or actions. Examples of this include, but are not limited to: i. Not providing physical access to a facility pursuant to the Contract so that Equipment can be tested or replaced ii. Not releasing a application or server for testing iii. Not providing accurate or complete information when opening an Incident resulting in a Contractor inability to progress the resolution of the logged Incident iv. Not responding with necessary additional information upon request to enable the effective investigation or repair of a logged Service ID v. related Incident vi. Commonwealth requested delays in the installation of required patches and/or upgrades vii. Failure of user authentication services, unique end-user VPN client software issues, or other components managed by the Commonwealth. In every case in which Contractor intends to place an Incident or ticket on Hold Time, Contractor will make the appropriate prior notification to the Commonwealth. Valid Hold Time is excluded as outage time in calculations of Service Level Availability and Resolution Time.

Term	Definition
Hybrid Third Party Software	Third Party Software for which the Commonwealth has a valid license, and except for the cost of the license, the contractor shall have financial, administration, operational and maintenance responsibility.
Identity Management	The identification of individuals in a system together with the control of such individual's access to resources within the system by associating rights and restrictions to the established identity.
Impact Study	Study conducted by Contractor related to a proposed Change.
Improved Technology	Any new commercially available information processing technology developments, including new software and hardware developments, that could reasonably be expected to have a positive impact on the Services in terms of increased efficiency or reduced cost.
Improvement Plan	A written plan for improving the Contractor's performance to satisfy Key Measurements.
Incident There are many places that "Incident" is not capitalized. Need to check to see if all that fit this definition are capitalized.	An ITIL term use to describe a failure or loss of capabilities of a Service where a temporary work around is not available or not in place.
Incident Management	ITIL term used to describe the business process related to how an organization is to process and resolve Incidents.
Information Technology Infrastructure Library (ITIL)	A cohesive set of best practices, drawn from the public and private sectors internationally.
Information Technology Service Management (ITSM)	A best practice approach driven both by technology and organizational environments on managing IT services as a whole.

Term	Definition
Inventory Attributes	Those database fields in an Inventory Record that are essential for Contractor's successful delivery of Service and necessary for The Commonwealth's successful performance of retained responsibilities, including architecture, IT planning, and reconciliation of invoices. Inventory Attributes that shall be audited are set out in Commonwealth Computing Procedures Manual and may be modified over time in accordance with the Commonwealth Computing Procedures Manual.
Inventory Record	The record for a single item of Equipment or Software in the CMDB, including all of the Inventory Attributes for that item.
IT Bulletins	Information Technology (IT) bulletins which are issued by the Governor's Office of Administration to set IT policy.
Key Measurements (KMs)	Performance target measurements for non-critical service areas.
Key Personnel	The Contractor's named staff that the Commonwealth determined to be critical to the success of the Project and required the Contractor to provide as defined and governed in Schedule G – Staffing Plan and Key Positions.
Key Positions	The positions that the Commonwealth determined to be critical to the success of the Project and required the Contractor to provide as defined and governed in Schedule G – Staffing Plan and Key Positions
Knowledge/Service Management Portal (KMP)	A software recording tool the Offeror uses to record all incidents, problems, service requests, change requests, and configuration information. All updates to the records, contacts with clients or vendors, and resolutions will be recorded in a real-time and consistent manner.
Management Committee	A committee comprised of ten members, five of whom shall be appointed by Commonwealth and five of whom shall be appointed by Contractor from Contractor's executive management staff.
Market Rate	The average of amounts paid by the reference group for comparable services.
Mean-Time-to-Resolve (MTTR)	The average of the Resolution Time(s) for Incidents that are Resolved within the Measurement Window.

Term	Definition
Measurement Period	The nine (9) consecutive months of measurements during which Baseline Data will be measured, which may be used by the Commonwealth and Contractor to determine Service Level Target and/or Minimum Service Levels. The Contractor will measure, collect and report to the Commonwealth the relevant measurements during such period.
Measurement Window	Shall mean the periodic evaluation and reporting frequency for each individual Service Level as specified in Schedule J.2 (Datacenter Service Level Matrix) (*e.g.*, monthly, quarterly, semi-annually, annually).
Milestone	A Transition Milestone or Critical Milestone.
Milestone Credit	The invoice credits due the Commonwealth if the Contractor fails to attain a Milestone defined in Schedule D - Transition Milestones.
Milestone Due Date	The date by which the Contractor must have completed a Milestone.
Monitoring System	The Equipment and Software used to monitor the performance, capacity, and other events occurring around or within a service provided to the Commonwealth.
Non-Excluded Outage Minutes	Minutes that are not considered Customer Time, Hold Time, or Scheduled Downtime.
Notice of Termination	Written notice provided from the Commonwealth to the Contractor to notify the Contractor that the Commonwealth is terminating the Contract.
OA Service Desk	The entity responsible for Tier I troubleshooting support to the end users by taking requests from end-users, performing triage on the request and escalating as necessary
Offeror	See Contractor.
Office of Administration	An organization within the Commonwealth that provides information technology, human resource, records management, and continuity of government services
Office of Attorney General (OAG)	The office of Pennsylvania's top law enforcement official, which has a wide range of responsibility to protect and serve the citizens and agencies of the Commonwealth.

Term	Definition
Office of Inspector General	An organization within the Commonwealth that works to prevent or find fraud, waste, and abuse in the Commonwealth's programs, operations, and contracts.
Outage	Any service interruption that is or may be experienced by the end-users of the service, application, or equipment.
P Series Servers	A general reference to the IBM collection of servers that typically operate on the AIX operating system.
Payment Card Industry Data Security Standard (PCI DSS)	An actionable framework for developing a robust payment card data security process -- including prevention, detection and appropriate reaction to security incidents.
Pennsylvania	The Commonwealth of Pennsylvania.
Pennsylvania Election Code	The act of June 3, 1937 (P.L.1333, No.320), known as the Pennsylvania Election Code.
Pennsylvania Right-to-Know Law ("RTKL")	The Pennsylvania Right-to-Know Law, 65 P.S. §§ 67.101-3104.
Power Usage Effectiveness ratio (PUE)	A ratio that represents the amount of power consumption of compute versus the total power consumption of a facility as defined by the Green Grid consortium.
Prevailing Wage Act	The Pennsylvania Prevailing Wage Act (43 P.S. §§ 165-1 through 165-17).
Problem	An ITIL term use to describe a failure or loss of capabilities of a Service where a temporary work around is in place.
Problem Management	The business process of managing Problems.
Program Management Office (PMO)	The organization with governance, implementation, and management of the overall engagement.
Protected Health Information (PHI)	The meaning given to such term under HIPAA and the HIPAA Regulations in 45 C.F.R. Parts 160, 162 and 164, including, but not limited to 45 C.F.R. §160.103
Purchase Order	Orders made in accordance with the ordering process set forth in Section 2 of the Contract.

Term	Definition
Regulatory Entity	Any supervisory or governmental agency, body or authority having regulatory or supervisory authority over the Commonwealth, its agencies, the Contractor's and Subcontractors' assets, resources or business and over the Services, including any organization reporting to such bodies.
Remote Hands Support	Shall mean the time and material effort by the Contractor to provide technical support to the Commonwealth in the support of the equipment in co-location.
Request for Criminal Record Check	The form and procedure for looking up and compiling criminal records, commercial records and financial records of an individual, a more fully set forth at Section 44 of the Contract.
Request for Service	The process used by the Commonwealth to order an addition, modification, or removal of a Service component or configuration using the Service Catalog.
Requested Information	Information related to this Contract that is the subject of a request under the Pennsylvania Right-to-Know Law that may be in the Contractor's possession, constituting, or alleged to constitute, a public record in accordance with the RTKL.
Requests	Replace with "project or solution request."
Required Service Level	The expected level of performance for a CM or a KM, as applicable, as set forth in Schedule J.1 (Service Level Methodology).
Reserve Account	A capital improvement fund into which Contractor shall deposit quarterly as specified in Section 13 of the Contract.
Resolution	An action that will resolve an Incident i.e., allow the users to carry out their business functions. This may be a temporary work-around or the permanent repair or replacement of a faulty configuration item.
Resolve	See Resolution
Resolution Time	The time between when an Incident is created (either automatically or manually) and the time the Incident is Resolved.
Respond	See Response

Term	Definition
Response	Contractor taking and logging meaningful action to progress the testing and restoration of any Service ID, or, as the case may be, security Services, that has an active Incident ticket opened in the Incident Management system as defined by the Incident and Problem Management process which is part of the CCPM. Examples of meaningful response actions include the following, all pursuant to the CCPM: • Calling the Commonwealth to obtain additional information to help progress the testing and restoration of the logged incident • Requesting access to a facility • Requesting release of a Service ID for testing • Requesting contact information required to progress the incident management process • Escalating the Incident to technical support for additional testing and analysis
RFP	The Request for Proposal (RFP 6100022698) issued by the Commonwealth for Data Center Computing Services.
Root Cause Analysis (RCA)	A formalized approach and report used to determine the base (or Root) cause of an Incident or Problem.
Run Book	A book containing all of the information needed to perform day-to-day operations and to respond to emergency situations. This information must include the following: •Resource information about the data center and its hardware and software •Process information, including step-by-step procedures for operational and emergency processes
SAP Vendor Number	A vendor identification number for the Commonwealth's SAP ordering and payment processing systems.
Scheduled Availability	24/7/365, unless otherwise specified in a Service Level, minus Scheduled Downtime, Customer Time, Hold Time, and Emergency Downtime.
Scheduled Downtime	Downtime expected and agreed to by the parties, expressed monthly, for which the underlying systems were taken off- line for routine or scheduled maintenance during the Measurement Window.

Term	Definition
Scheduled Uptime	All time except Scheduled Downtime.
Security Incidents	An Incident or Problem that is identified as negatively affecting the security of a Service or a security breach or attack.
Security Patches	A Software update that improves the security of a Service.
Security Update	An Equipment or Software update that improves the security of a Service.
Service Catalog	A listing of Services with pricing and descriptions that are available to the Commonwealth for delivery by Contractor.
Service Delivery Failure	A major recurring problem which is not directly reflected in Service Level performance and for which there is no formal Chronic Problem issue project underway.
Service Desk	The organization that interfaces with end-users on service requests and trouble reporting.
Service Fees	The fees set out in Schedule C, Service Catalog.
Service ID	the unique identifier assigned to a Service by Contractor.
Service Improvement Plan	A written plan submitted by the Contractor setting out the Contractor's plan for improving its Services.
Service Level	The quality and response standards set for Contractor's performance of the Services delivered and are defined in Schedules Schedule J.1 - Datacenter Service Level Management, Schedule J.2 - Datacenter Service Level Matrix, and Schedule J.3 - Datacenter SLA Definitions.
Service Level Agreements (SLAs)	A collection of Service Level commitments provided by Contractor with associated cures.
Service Level Availability	The actual availability of access and all functionality of the Services described in a Service Level expressed as percentage of the Scheduled Availability for such Services.
Service Level Credit	The credits due the Commonwealth in the event the Contractor fails to meet the SLA objectives defined in Schedules Schedule J.1 - Datacenter Service Level Management, Schedule J.2 - Datacenter Service Level Matrix, and Schedule J.3 - Datacenter SLA Definitions.

Term	Definition
Service Level Default	A single failure of the Contractor to meet the applicable Minimum Service Level for a specific CM or KM in the applicable Measurement Window (*e.g.*, monthly).
Service Level Management	The business process for managing compliance with Service Levels.
Service Level Termination Event	Multiple failures over time of a single Service Level or a pattern of failure over time across multiple Service Levels as set out in Schedule J to the Contract.
Service Outage	Any event that unexpectedly denies a service's full functionality to the end-users.
Service Restoral Incident(s)	An Incident where the Service was not available or was in a Degraded Condition and actions were taken to restore the Service to full functionality.
Service(s)	The Services, function and responsibilities described in the Contract, including the Services set forth in Schedule C (Services Catalog) and Schedule F (Statement of Work).
Services Locations	The locations from which Services are provided as agreed upon by the parties as listed in Schedule E (Datacenter Locations).
Severity Level	A priority setting assigned to an Incident or Change that represents the impact the event has on Service. This level is set by the person reporting the Incident or requesting the Change and may be adjusted by authorized personnel at the Commonwealth.
Silver	A level of service that has a specific Availability value or Response time interval requirement.
Small Diverse Business (SDB)	A minority, woman, veteran or service-disabled veteran business enterprise as determined by BSBO.
Software	A collection of one or more programs, databases or microprograms fixed in any tangible medium of expression that comprises a sequence of instructions (source code) to carry out a process in, or convertible into, a form executable by an electronic computer (object code).

Term	Definition
SSAE 16	A service organization reporting standard for performing an examination of a service organization's controls and processes. (Statement on Standards for Attestation Engagements (SSAE) No. 16)
Standard Service Request	A service request that is routine in nature and that does not require extensive engineering or solutioning to develop the request.
Statement of Work (SOW)	The Services, function and responsibilities described in the Agreement, including the services set forth in Schedule F (Datacenter Statement of Work).
Subcontractors	A third party (including an affiliate of Contractor) to which Contractor subcontracts or otherwise delegates its obligations to perform the Services.
Systems Development Life Cycle (SDLC)	A methodology used to create or modify a software application or system.
Targeted Application Infrastructure	Used to describe a particular Contractor's application's infrastructure related components or configuration items (CIs) When measuring actual application infrastructure related availability it is important to look at all the components that make up the application infrastructure such as all Servers, Storage, Networking, Firewalls, etc. components as defined in the CMDB.
Term	The duration the Contact between the Commonwealth and the Contract.
Termination Assistance Services	All necessary and appropriate actions to accomplish a complete, timely, and seamless transition of any Terminated Services from Offeror to the Commonwealth, or to any replacement provider designated by the Commonwealth.
Termination for Convenience	A termination based on a determination by the Commonwealth that termination is in its best interest.
Termination for Convenience Fee	A fee due to the Contractor in the event the Commonwealth terminates the Contract for convenience, as more fully set forth in Section 32(a) of the Contract.
Text	A data format in which information can be stored that is usable by a standard personal computer

Term	Definition
Third Party	Someone indirectly involved in the Contract, but who is not a principal party to the Contract.
Third Party Contract	A contract with a Third Party.
Third Party Software	All Software products (and all modifications, replacements, upgrades, enhancements, documentation, materials and media related thereto) that are provided under license or lease by a Third Party to Contractor or Commonwealth.
Tier III Datacenter Rating	Uptime Institute Tier Standard: Topology, TIA-942 Telecommunications Infrastructure Standard for Data Centers, and BICSI 002-2011 Data Center Design and Implementation Best Practices.
Tiered Disaster Recovery	A Disaster Recovery plan that allows for multiple Return to Operation (RTO) timeframes to satisfy varying Commonwealth requirements.
Transition CAP Notice	Written notice that Contractor has or is reasonably likely to fail to deliver the Transition Services.
Transition Failure Event	Failure of the Contractor to complete the Transition Services within the timeframe set out in the Detailed Transition Plan.
Transition Milestone	Those tasks and associated completion dates set forth in Schedule D (Transition Milestones).
Transition Orders	The orders for existing Commonwealth services that will be placed to transition those services into the Contract.
Transition Plan	The plan set out and agreed to by the parties in Schedule M – Detailed Transition Plan detailing the activities, timescales and responsibilities for transitioning the services from Commonwealth to Contractor, including Transition Milestones.
Transition Program Management Office (TPMO)	The organization responsible for transitioning services to the Contractor's control. The TPMO will provide program management Services to deliver architecture, transition plan integration, and organizational change management, as well as quality assurance, verification of testing, financial oversight, and operational readiness for the Mainframe and Server transition/consolidation program.

Term	Definition
Transition Services	The transition activities, functions and deliverables described in the Detailed Transition Plan and such other tasks as are necessary to enable Contactor provide the Services.
Vulnerability Analyses	A security analysis to determine the possibility of an unauthorized intrusion, loss of data, denial of service or other security breach.
x86	A series of computer microprocessor instruction set architectures based on the Intel 8086 CPU.
XML	A data format standard allowing computing systems to exchange information over a data connection.

SCHEDULE B

GOVERNANCE

1. **Management Meetings**. There shall be weekly meetings of the Management Committee during the Transition Period and monthly meetings thereafter. The purpose of such meetings shall be to (1) track the progress of the Transition and Transformation Plan, (2) review Contractor's performance of the Services Levels, (3) resolve disputes, (4) track the progress of the Services and other projects, (5) coordinate and plan for any new hardware or software acquisitions and service deployments, and (6) address any other matters properly brought before the Management Committee.

2. **Management Committee**. "*Management Committee"* shall be a committee comprised of ten members, five of whom shall be appointed by Commonwealth and five of whom shall be appointed by Contractor from Contractor's executive management staff. Commonwealth and Contractor shall each have one (1) vote with respect to matters that are brought before the Management Committee for resolution. Commonwealth shall designate one of its members on the Management Committee to act as the chairperson of the Management Committee. Both Commonwealth and Contractor can change the individuals on the Management Committee on an as-needed basis. The Management Committee shall be authorized and responsible for (1) generally overseeing the performance of this Contract, (2) providing input and advise to the Governor's Office of Administration regarding Commonwealth's strategic and tactical decisions in respect of the Services, the Systems and any other aspect of the business relationship between Commonwealth and Contractor under this Contract, and (3) monitoring and attempting to resolve disputes regarding the provision of the Services and the Services Levels.

3. **Commonwealth Computing Procedures Manual**. For each Commonwealth Agency and as part of the Services, Contractor shall establish procedures pursuant to which Contractor proposes that policies of Commonwealth and Contractor will be adhered to during the Term for the Commonwealth, and shall deliver to Commonwealth, not later than thirty (30) days prior to the commencement of the activities contemplated under the Transition Plan for the Commonwealth's approval or comment, a draft Commonwealth Computing Procedures Manual generally summarizing (1) the Services, (2) the computer hardware and software environments in which, and the various Services Locations at which, the Services will be performed, (3) the documentation, if any, which provides further details regarding the Services, (4) the procedures Contractor intends to use, and the activities Contractor proposes to undertake, in order to manage the Services, and (5) the procedures of a management reporting system that Contractor will use to manage this Contract and communicate to and with Commonwealth. Commonwealth may, at its request, participate to whatever degree it desires in the preparation of the draft Commonwealth Computing Procedures Manual. Contractor may periodically propose and, at the request of Commonwealth, shall promptly propose updates of the Commonwealth Computing Procedures Manual to reflect any changes in the operations or procedures described therein, all of which proposed changes shall be subject to Commonwealth's approval or comment. Reference Schedule H - Commonwealth Computing Procedures Manual for additional details.

Introduction

The Enterprise Services Catalog provides descriptions for the specific entries shown including descriptions of related Enterprise Services Catalog items that will be needed to place a selection into its proper context.

The Enterprise Services Catalog is laid out with the following sections.

1) Catalog of Services
2) Enterprise Services Catalog Template
3) Compute Services - Fully Managed Services
4) Compute Services - Managed Only Services
5) Compute Services - Co-location Services
6) Compute Services - Mainframe Services
7) Compute Services – Infrastructure as a Service
8) Third-Party Software
9) Additional Technical Resources
10) Additional Technical Services

Enterprise Services Catalog Template

Service Attribute	*Service Attribute Description*
Service Name	*Title of Service*
Provider Part Number	*Provider Part Number*
Orderable Unit	*Orderable Unit (e.g. Per Server, Per Request)*
Description	*Short description of the service*
Service Customers / Users	*Any participating Commonwealth agency, office, board, commission, or bureau; unless otherwise noted*
Service Prerequisites	*The identified technical prerequisite or related additional services or activities required when this service is ordered. This does not include contractual terms or conditions.*
Fulfillment Timeframe	*This attribute describes the timeframe required to fulfill the request. This applies only to Services which are available to process as a Standard Service Request. Otherwise, this is marked as Not Applicable.*

Schedule C.3

Termination Fees

Termination for Convenience Fees

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Opt - Year 8	Opt - Year 9	Opt - Year 10
(A) Termination Fee Base	$30,000,000 00	$75,000,000 00	$30,000,000 00							
(B) Value of Services Performed*	(Services Performed)	(Services Performed)	(Services Performed)							
(C) Actual Termination for Convenience Fees	C =A-B	C =A-B	C =A-B							

No Termination for Convenience Fees are available after Year 3.

Termination for Conveinence Fees are not cumulative.

(*) The value of all Services performed by the Contractor consistent with the terms of the Contract prior to the effective date of termination

Schedule D

Transition Milestones

Milestones include the completion of all tasks, deliverables and interim milestones associated with such Milestone as set forth in the Transition Plan. The Earn Back period is thirty (30) calendar days from the Transition Milestone Due Date and applies to those Milestones indicated with "Y" in the Earn Back column. The Acceptance Criteria for each Milestone includes criteria described in Schedule F and Schedule K of the contract.

Note: If a Milestone is dependent on another Milestone and the first Milestone is missed, the subsequent Milestones remain in effect. An example is: if M-3 is missed, M-5 is still enforced.

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
M-1	Key Staffing	30 calendar days from Contract Effective Date	• Key Personnel team completed per Schedule G • staffing plan approved • detailed project organizational chart approved • resumes for each key personnel listed on the team submitted • staff contingency plan approved	$50,000 One-time	N	• Commonwealth review and approval
M-2	Contract Management Plan	60 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-11.01 o D-11.02	$50,000 One-time	Y	• Commonwealth review and approval
M-3	Datacenter Architecture Plan and Roadmap	90 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-01.01 o D-01.02 (Initial Deliverable Approval) o D-01.03 (Initial Deliverable Approval) o D-01.04 (Initial Deliverable Approval) o D-01.05 (Initial Deliverable	$150,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			Approval) o D-01.07 o D-03.01 o D-03.04 o D-03.08 o D-04.01 o D-04.05			
M-4	Detailed Transition Plan	180 calendar days from Contract Effective Date	• Completion of Data Gathering o All data gathering checklists completed, validated, reviewed and approved • Completion, submittal and acceptance of data gathering report on B2B interface to Commonwealth's ITSM system that includes interfaces for the following: o Incident Management o Change Management o Problem Management o Known Errors o Request Management o Invoicing Process • Completion and acceptance of the Detailed Transition Plan using Schedule M – Detailed Transition Plan • Delivery and acceptance of the following Deliverables from Schedule K: o D-05.01 o D-05.04 o D-05.10	$250,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ D-10.01 • The Detailed Transition plan must contain: ○ An **overall (master) plan** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Datacenter** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Agency** which includes but is not limited to: ▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness ○ A **plan by Application** which includes but is not limited to:			

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			▪ transition governance plan ▪ transition risk and mitigation plan ▪ due diligence timeline ▪ configuration / testing verification ▪ operational readiness			
M-5	Commonwealth Compute Process Manual (CCPM)	180 calendar days from Contract Effective Date	• Delivery and acceptance of the following Deliverables from Schedule K: o D-02.01 o D-02.04 o D-02.09 o D-02.15 o D-02.17 o D-02.18 o D-02.23 o D-02.26 o D-02.29 o D-02.32 o D-02.37 o D-02.42 o D-02.47 o D-02.52 o D-02.57 o D-02.62 o D-02.67 o D-02.70 o D-02.75 o D-02.81 • Completion and Acceptance of final	$75,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			CCPM as listed within Schedule L of this contract. This includes but is not limited to: o Incident (including Security) o Problem o Change o Order/Request o Billing o Service Level			
M-6	Network Connectivity	120 calendar days from Contract Effective Date	• Completion and Acceptance of the Network Connectivity to the Commonwealth	$250,000 One-time	N	• Commonwealth review, testing and approval
M-7	Security	180 calendar days from Contract Effective Date	• Completion and acceptance of security architecture, solution, policies and procedures which included but is not limited to: o Delivery and acceptance of the following Deliverables from Schedule K: ▪ D-07.01 ▪ D-07.06 ▪ D-01.03 (Initial Deliverable Approval) ▪ D-09.01 ▪ D-09.02 o Implement security management plan o Implement security and firewall plan o Policies and procedures are in place	$250,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			for physical security o Policies and procedures are in place for data and network security o Policies and procedures are in place for personnel security, such as annual background checks o Security assessment is conducted to ensure data safety and confidentiality			
M-8	ITSM System Integration	180 calendar days from Contract Effective Date	• Completion and Acceptance of Integration between Commonwealth's ITSM system and Offeror's ITSM System including but is not limited to: o Incident connectivity has been tested and incidents created and updated on either side flow back and forth between systems o Problem connectivity has been tested and problems created and updated on either side flow back and forth between systems o Change requests connectivity has been tested and requests created and updated on either side flow back and forth between systems o Configuration items in both system CMDBs are reconciled o Test Invoices have been processed through the ITSM system to the Commonwealth's AP system o Reporting from Offeror's ITSM system is available to	$100,000 One-time	Y	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			Commonwealth			
M-9	Financial Management	180 calendar days from Contract Effective Date	• Completion and acceptance of billing process and form of invoice approved • Schedule K Deliverable D-02.01 completed • Process implemented, tested and accepted providing an enterprise bill providing the details required by the Commonwealth	$75,000 One-time	Y	• Commonwealth review and approval
M-10	Operational Readiness	240 calendar days from Contract Effective Date	• Completion and acceptance of an Operational Readiness Report indicating Offeror is "Ready" to transition the Commonwealth's Applications and Services to other Datacenters. This report must include but is not limited to the following: o Delivery and acceptance of the following Deliverables from Schedule K: ▪ D-01.01 ▪ D-01.02 ▪ D-01.03 ▪ D-01.04 ▪ D-01.05 ▪ D-01.06 ▪ D-01.07 o Transition Project Office established and fully staffed o Program plan and architecture developed and approved by the Commonwealth	$150,000 One-time	N	• Commonwealth review and approval

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			○ Processes and Tools implemented to support the transition change control, schedule, quality, communications, risk and issue management ○ Datacenter environment configured , tested and acceptance			
M-11	SSAE 16 Audits of EDC	On the July 31st following the Commonwealth's acceptance of Milestone M-14	• Completion and Issuance of a SSAE-16 Audit Reports as detailed with the Appendix A (Terms and Conditions) on the Commonwealth's EDC Datacenter • Schedule K Deliverable D-08.02	$100,000 One-time	Y	• Commonwealth review and approval
M-12	DPH Transition Completed (1)	18 months from Contract Effective Date	• Completion and acceptance of ALL applications transitioned from the DPH to new Datacenters which includes but is not limited to the following for each application: ○ High availability, backup and DR are operational for identified systems. ○ CCPM specific details for application are available in KMP. ○ Operations dashboards to report immediately on status and alerts for transitioned applications. ○ Service Level agreements are identified and supporting metrics in place. ○ System operational for scheduling and	$2,500,000 per month or partial month for six (6) months	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			tracking of ticket-based tasks and incidents. o System is available to begin data collection to produce configuration, monitoring and management status reports. o Systems with DR plans have an updated DR plan and test scheduled. o Operational support assumed and workloads migrated. • High-Speed direct link to current DPH location is disconnected. • Signoff that all Services provided by DPH have been successfully transitioned			
M-13	DPH Transition Completed (2)	24 months from Contract Effective Date	• Completion and acceptance of ALL applications transitioned from the DPH to new Datacenters which includes but is not limited to: o High availability, backup and DR are operational for identified systems. o CCPM contains specific details for apps transitioned are available in KMP. o Operations dashboards are in place to report immediately on status and alerts for transitioned apps. o Service Level agreements have been identified and supporting metrics in place. o System is operational for scheduling and tracking of ticket-based tasks and incidents. o System available to begin data collection in order to produce	$5,000,000 per month or partial month	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			configuration, monitoring and management status reports. o Systems with DR plans have a replacement plan and test scheduled. o Operational support has been assumed and workloads migrated. o High-Speed direct link to current DPH location is disconnected. o Signoff that all Services provided by DPH have been successfully transitioned			
M-14	EDC Operational Transition Completed	12/31/2014	• Completion and acceptance of operational control and support of the EDC which includes but is not limited to the following: o Schedule K deliverable D-01 o Schedule K deliverable D-08.01 o Schedule K deliverable D-08.06 o Verification CMDB of record with Offeror's configuration info includes EDC assets and CI's o Service catalogs, processes, and procedures are transitioned o Multi environments/instances are available for identified systems o High availability, backup and DR are operational for identified system o CCPM specific details for applications are available in KMP. o Operations dashboards are in place to report immediately on status and alerts for apps o Service Level agreements have been identified and supporting metrics in	$100,000 per month or partial month	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			place o System is operational for scheduling and tracking of ticket-based tasks and incidents o System is available to begin data collection in order to produce configuration, monitoring and management status reports o Transition orders completed and accepted by the Commonwealth			
M-15	Department of Labor and Industry Datacenter Transition Completed	30 months from Contract Effective Date	• Completion and acceptance of ALL applications transitioned from the DLI Datacenter to new Datacenters which includes but is not limited to the following: o Service catalogs, processes and procedures fully established, documented and approved o Multi environments and instances are fully functional for transitioned systems o High availability, backup and DR are operational for transitioned systems o CCPM contains specific details for apps transitioned are available in KMP o Operations dashboards are in place to report immediately on status and alerts for transitioned apps o Service Level agreements have been identified and supporting metrics in place o System is operational for scheduling and tracking of ticket-based tasks and incidents o System available to begin data	$1,000 000 One-time	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

Milestone Number	Transition Milestone	Milestone Due Date	Acceptance Criteria	Milestone Credit	Earn Back	Dependency on Commonwealth
			collection in order to produce configuration, monitoring and management status reports o Transition orders completed and accepted by the Commonwealth			
M-16	Department of Revenue Datacenter Transition Completed	30 months from Contract Effective Date	• Completion and acceptance of ALL applications transitioned from the DOR Datacenter to new Datacenters which includes but is not limited to the following: o Service catalogs, processes and procedures fully established, documented and approved o Multi environments and instances are fully functional for transitioned systems o High availability, backup and DR are operational for transitioned systems o CCPM contains specific details for applications transitioned are available in KMP o Operations dashboards are in place to report immediately on status and alerts for transitioned apps o Service Level agreements have been identified and supporting metrics in place o System is operational for scheduling and tracking of ticket-based tasks and incidents o System available to begin data collection in order to produce configuration, monitoring and management status reports o Transition orders completed and	$1,000,000 One-time	N	• Commonwealth review and approval of work product plus assisting in data gathering, planning, ordering, implementing, testing and accepting the transition of the applications

1 Contractor Guidelines

This Schedule contains the Statement of Work ("SOW") for the Services. Note: references to Exhibits in this Schedule F refer to exhibits as they appeared in the RFP.

2 Program Objectives

The Commonwealth is seeking to implement a new datacenter service model that provides various infrastructures/computing platforms to service the needs of the Commonwealth in a secure and flexible manner. This initiative must realize the following objectives:

- Provide a reliable, flexible, secure, and robust IT infrastructure to support the transformation of the Commonwealth into an information-focused organization.
- Provide a multiple datacenter architecture utilizing the Contractor's datacenter assets to support the current and future capacity and service level demands.
- Include primary support for the Commonwealth's Enterprise Datacenter (EDC) operations and its computing assets including but not limited to datacenter facilities operations and infrastructure support.
- Leverage Contractor's established processes and tools necessary to ensure consistent and predictable pricing to facilitate accurate and timely budget projections.
- Provide engineering support that anticipates changes in business and technical requirements and make recommendations for staying current with industry best practices.
- Ensure that the Contractor's datacenters adhere to the Commonwealth's contractual, regulatory, and policy compliance requirements for security, architecture, and systems development life cycle (SDLC) standards.
- Establish a tiered service/capability to support high-availability hosting, backup, and disaster recovery (DR) Services to maintain continuity of government operations.
- Provide multiple environments and instances to support the enterprise application portfolio. For example; Development, Integration, System / User Acceptance Test (SAT/UAT), Training, load Testing, Pre-Production and Production.
- Continue to consolidate Commonwealth datacenters to achieve cost savings, energy consumption reductions, optimal space utilization, and improvements in IT asset utilization in accordance with the government-wide datacenter consolidation initiative currently underway.

To satisfy the Commonwealth diverse datacenter requirements, the Contractor must provide the necessary infrastructure for the following critical purposes:

- Provide production, development and hosting of new and legacy business applications and databases that run on mainframes (IBM and Unisys), mid-ranges and distributed platforms
- Support options for high-availability, backup/recovery, and multiple levels of DR Services in support of the Commonwealth.

The Contractor's datacenter architecture must consist of multiple geographically dispersed datacenters, referred below as a 2+ (two-plus) architecture. The Contractor must utilize the EDC as one of its datacenters and provide a minimum of one additional datacenter to meet the 2+ architecture requirement. It is the Contractor's option to utilize the EDC as one of its primary datacenters. The Contractor's datacenters must have the ability to provide multiple levels of DR Services in the event of a disaster, which must also include an option to support high availability (HA) application infrastructures.

The Contractor is responsible for ensuring successful delivery of IT infrastructure Services, providing the Commonwealth with visibility into (performance, capacity, security, SLA's etc.), as well as, working in partnership with the Commonwealth as required to ensure seamless operations. In turn, the Commonwealth will provide oversight to ensure that the Contractor is delivering agreed-upon Services and that the business requirements are clearly communicated and satisfied, and provide timely feedback on contractor performance. Commonwealth agencies, OA/OIT and the Contractor must work together on IT planning, including service and capacity planning, strategic and tactical planning, and IT resource and budget planning.

The datacenter approach must provide a computing infrastructure that delivers reliable, effective and technologically current Services seamlessly to the Commonwealth in a cost-effective manner. The cost for those Services must remain less than the cost the Commonwealth would have incurred for providing the same infrastructure itself. Applications hosted in the Contractor's datacenters must meet Quality of Service (QoS) requirements as determined by the Commonwealth agency application owners. The Commonwealth will avoid capital expenditure by acquiring Services through Capacity on Demand. The Commonwealth agencies will consume resources as a service and pay only for those resources that it uses. The Commonwealth and The Contractor must engage in proactive oversight of datacenter operations. The Commonwealth requires visibility into the Contractor's management practices and effective monitoring channels that include the following:

- Program and project progress reports that track milestones, deliverables, risks, and financial data.
- Commonwealth Computing Procedures Manual (CCPM) that provides up-to-date detailed description of all processes and procedures used to support the computing needs of the Commonwealth via the Contractor's Knowledge/Service Management Portal (KMP). The CCPM must contain specific sections dedicated to the operational procedures for each Commonwealth datacenter customer.
- Scheduling and tracking of ticket-based tasks and incidents.
- Operations dashboards with status and alerts based on real-time and historic data collected by instruments, agents, scanners, and logs that monitor the hosted applications, batch operations, network, security, and service performance measures.
- Other configuration, monitoring and management status reports as needed.

- Recommendations and offerings by the Contractor for improved processes and procedures for delivery of Services that are based on a program of continuous quality and process improvement as implemented by the Contractor.

2.1 Service Level Agreements

Service Level Agreements ("SLAs") are made part of this Contract as Schedule J.1, J.2, and J.3. The Contractor is also required to have or implement a quality and process improvement program that focuses not on just meeting minimum requirements but on meeting or exceeding the target requirements.

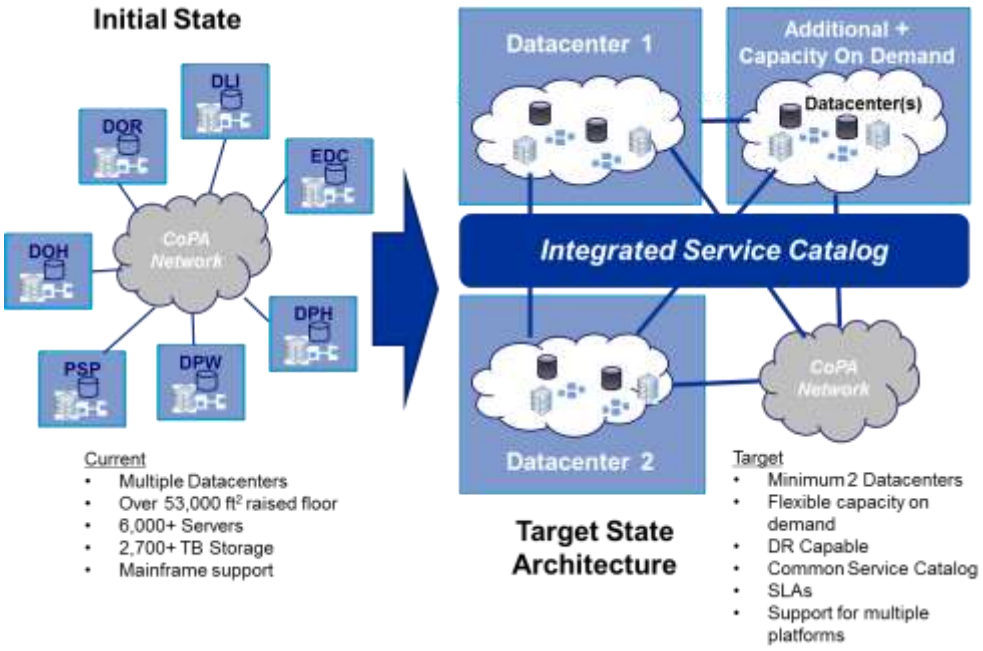
2.2 Solution Requirements Overview

A key outcome of the Commonwealth datacenter strategy is to transition from the current individually managed datacenters with different levels of service to enterprise level datacenter architecture with a common set of basic Services combined with available specialized Services dependent upon specific customer requirements. To facilitate this request for Services, the Commonwealth has structured the solution requirements into three areas, as follows:

- Transition Services;
- Datacenter 2+ Architecture (includes operations support for the Commonwealth's EDC); and
- Common Services Portfolio

2.2.1 Datacenter 2+ Architecture

The Contractor's architecture must leverage a minimum of two geographically separated datacenters located in the continental United States that would allow for enhanced disaster recovery capabilities as well as leverage excess capacity (virtual capacity on demand). The Commonwealth requires that the architecture include operations support for the EDC. The Contractor must be able to leverage additional capacity from other datacenter resources within its provider network to satisfy the needs of the Commonwealth. The architecture must support multiple computing platforms including but not limited to x86 (physical and virtual), midrange, mainframes, and storage systems. All of the Commonwealth computing workloads must be transitioned from the current state to the new target state architecture.



The 2+ datacenter architecture must include secure redundant network connections to the Commonwealth's network and the Internet. Contractor network connections must terminate at different end points within the Commonwealth's network. The Contractor must implement a multi DR solution to limit the impact of any disruptive event at any datacenter location. This requirement is targeted for all systems that are currently covered by a DR solution. The solution must also have the capability to support future disaster recovery requirements by providing tiered DR capability within its datacenters.

Each datacenter must have the ability to support multiple security and network zones to support specific agency requirements. For example: access, web, application, and data zones. The specific configuration and number of individual zones may be different per agency and application.

To support the potential of future demand and Services beyond the capacity of the two datacenters, the Contractor must be able to leverage additional capacity from other datacenter resources within its provider network.

2.2.2 IP conversion strategy

The Contractor must provide an IPv6 strategy which includes an enterprise migration plan to take the Commonwealth from the IPv4 address format to the IPv6 format.

The Contractor must provide infrastructure and equipment that supports IPv6 andIPv4, except were limited due to the requirement that the Initial transition approach of the Commonwealth's mainframe and SAP environments must be as close to the Commonwealth's current configuration as possible. As technology refreshes replace this equipment, the infrastructure and equipment must support IPv6 andIPv4

2.2.3 Common Services Portfolio

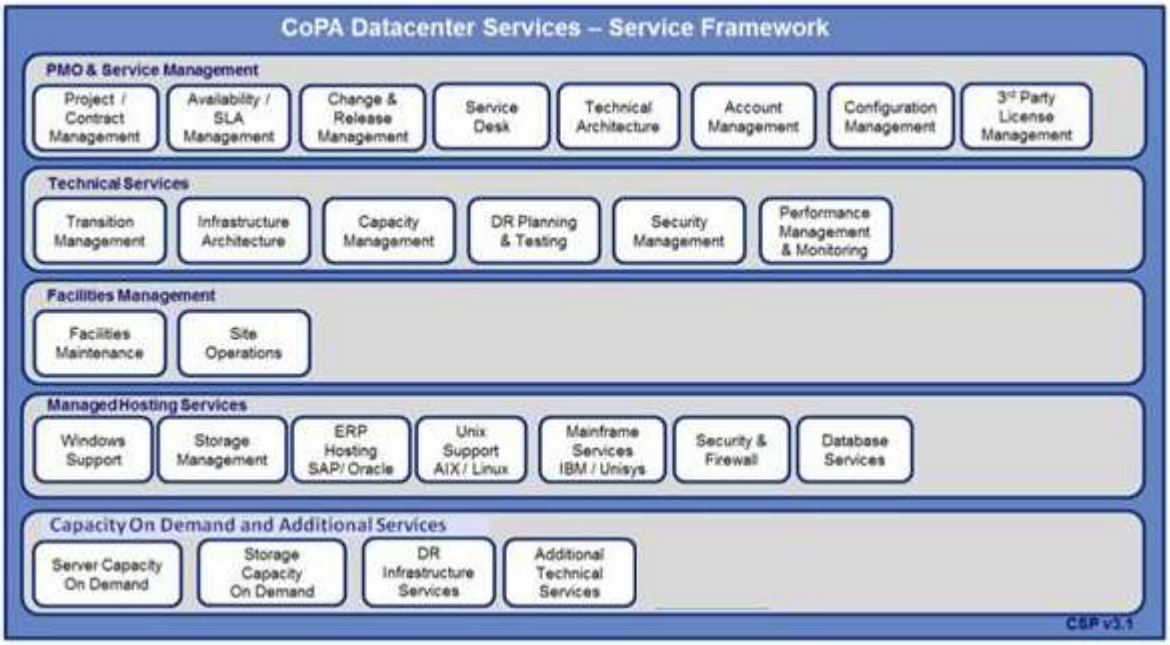
Based on the review of current and future requirements as well as industry offered Services; the following five (5) Key Services Areas must be used as a framework for the new datacenter common portfolio of Services.

Key Service Area Framework

	Key Service Area	Service Overview
1	Program Management Office (PMO) & Service Management	Provides for overall project management and operational service management (e.g. PMO, Account, Availability, Service Level Agreement (SLA))
2	Technical Services	Technical support services resources (e.g. Transition Management, Infrastructure Architecture, Capacity Planning)
3	Facilities Management	Facility operational support services (e.g. Facility Management, Operations Support)
4	Managed Hosting Services	Managed hosting/platform services for existing and future applications (e.g. Windows, Unix, SAP Hosting, Mainframe)
5	Capacity on Demand and Additional Services	Provides for additional capacity on demand offerings to support disaster recovery or increased demand for server and storage infrastructure (e.g. Cloud-centric offerings, Infrastructure as a Service (IaaS), Platform as a Service (PaaS)). Also access to additional skilled technology resources if required.

The Contractor is required to provide a complete set of Services within these service areas. The Services are presented below and the requirements are further detailed in the Task section that follows.

Expanded Services Framework



2.2.4 Data Protection

The Contractor must provide security of Commonwealth data. The Contractor must ensure that all data (at rest and in transit) is kept secure and confidential. If Contractor's solution involves data residing or routing outside the continental United States; the Contractor must meet the security requirements as described in this Contract to ensure the data is kept secure and confidential.

The Contractor must provide data protection Services including Data Loss Prevention (DLP) and Database Firewall (DBFW) Services to identify, monitor and protect sensitive and confidential Citizen Personal Identifiable Information (PII) in use, data in transit, and data at rest through deep content inspection and analysis of information exchange both at data storage locations and administrative/access endpoints.

Reference Documentation

N/A

Requirements

1.	The DLP service must: a) Discover confidential data wherever it is stored, inventory sensitive data, and automatically manage data cleanup. b) Monitor confidential data usage and provide enterprise visibility. c) Enforce security policies to proactively secure data and prevent confidential data from leaving Commonwealth systems. d) Manage policies across the enterprise, remediate and report on incidents, and detect content from centralized management platform. .
2.	The DBFW service must: a) Alert or block database attacks and abnormal access requests, in real time to protect against database attacks including SQL injection, Buffer overflow, Denial of Service. b) Detect and patch database software vulnerabilities c) Provide both agent based and network based database activity monitoring. d) Audit all access to sensitive data by privileged and application users, and enforce corporate policies on data usage e) Provide centralized management and advanced analytics f) Discover new databases and database objects in scope for security and compliance projects and automatically apply appropriate protection and audit policies
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

2.2.5 Transition Services

Transition to the new baseline datacenter architecture and common Services portfolio must be carefully planned and executed. The Contractor is required to provide a proven methodology and plan to establish the target environment and then conduct an orderly transition of existing infrastructure and Services to the new environment.

The Contractor must transition Services from the incumbent contractor where there is an incumbent contractor, as well as, transitioning Services located at the Commonwealth managed datacenters. The Contractor must identify critical success factors and risk mitigation strategies, and describe how it must coordinate and manage other Commonwealth contractor related activities impacting the Contractor's plan. The Contractor must provide an estimate of any required Commonwealth resources, including the skills needed and the duration required for each of the resources required in order for the Contractor to implement its solution. The Commonwealth expects to provide limited resources.

The Contractor must thoroughly plan, evaluate and provide comprehensive and realistic activities and timeframes for accomplishment of transition activities given identified parameters within the Commonwealth's requirements as described in **Schedule K - Key Program Deliverables** and **Schedule D - Transition Milestones**.

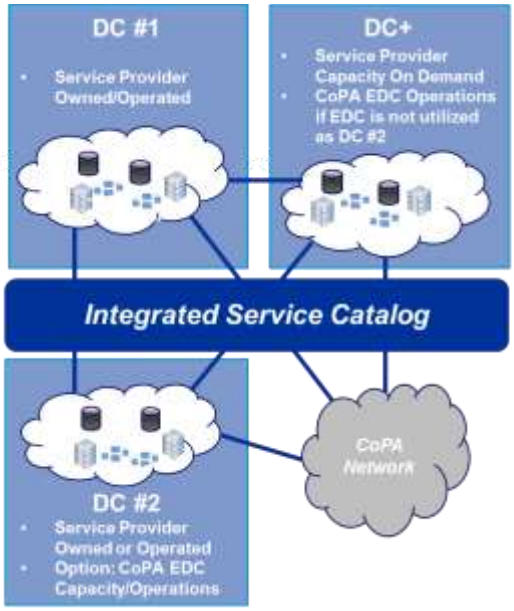
3 Tasks

3.1 Establish Datacenter Architecture

The Contractor must provide a multi-datacenter, multi-platform solution that must support the migration of all of the Commonwealth's current workloads. In order to support future Services, the Contractor must lead the Commonwealth into the future, and be able to address all current and future datacenter requirements. The Contractor must provide cost-effective, efficient, and forward-looking technologies for integrating Services. The Contractor must also address how it must allow for service updates and new technology offerings. The Contractor must describe how it must perform sizing exercises for different infrastructure to ensure the Commonwealth is getting a minimum of "like for like" or increased computing capabilities.

Baseline Architecture

In an effort to simplify the administration of IT assets, reduce IT costs, improve the provisioning of IT Services, and, in general improve the quality of IT Operations, the Commonwealth has established a preferred datacenter baseline target state architecture.



Baseline Datacenter Architecture

- Minimum 2 Datacenters
- Manage the CoPA EDC within architecture
- Flexible capacity on demand
- Redundant Secure Network Links between Datacenters and CoPA Network
- DR Capable
- Common Service Catalog
- SLAs
- Support for multiple platforms

The datacenter baseline target state architecture is based on a shared Services model in which a minimum of two geographically-separate datacenters (includes operations support for the EDC) provide a wide range of common IT Services to the Commonwealth. While not necessarily mirror images of each other, each datacenter must be capable of supporting critical

Commonwealth processing in the event the other datacenter goes offline (as, for example, in the event of a datacenter disaster). To address the need for additional capacity and new Services over time the Contractor may provide additional capacity beyond the two datacenters with secure connections to other Contractor capacity.

Initially, this target datacenter combination would host the Commonwealth's existing collection of shared information systems and currently outsourced Services. Over a prescribed period of time, the new datacenter architecture must support the transition of additional IT workloads presently being processed at a variety of datacenters owned and operated by Commonwealth agencies, thus permitting these datacenters to be decommissioned.

3.1.1 Multi Datacenter Environment (2+ Architecture)

The Contractor must provide a multi datacenter environment. All datacenters must be managed and maintained by the Contractor, including the Commonwealth's EDC and may be either a standalone facility, or integrated into existing qualified facilities. The multi datacenter environment is to facilitate high availability, capacity on demand, and the recovery of applications and Services that are deemed critical to the Commonwealth. The multi datacenter requirement is to provide a minimum of two datacenters. The Contractor may provide additional capacity and Services utilizing additional facilities beyond the two required datacenters.

Reference Documentation

Schedule E – Data Center Locations

Requirements

1.	The Contractor's datacenter architecture must consist of multiple geographically disbursed datacenters. Any datacenters being used in a back-up function must be at least 50 miles apart from the associated primary location for the service. Using **Schedule E – Data Center Locations**, the Contractor must list the address of all Datacenter locations from which the Contractor will provide the Services.
2.	
3.	The Commonwealth Equipment must be managed and maintained by the Contractor.

4.	Each datacenter must have the capability to provide DR for the other, for identified critical applications.
5.	The Contractor must utilize appropriate methods to achieve datacenter sustainability, such as realizing a low Power Usage Effectiveness (PUE) ratio.
6.	Each datacenter must have robust physical security, including biometric access control, video surveillance, and routine security officer patrols.
7.	In a datacenter environment that hosts both Commonwealth and non-Commonwealth clients, Contractor must provide segregation of Commonwealth data and computing resources from other clients' data and computing resources. The Contractor is required to provide system and data segregation between different agency application environments. The Contractor may not use the EDC to provide services to Non-Commonwealth clients. The Commonwealth may permit the Contractor to provide services to COSTARS members if written permission is granted by the Commonwealth.
8.	The Contractor must utilize elastic datacenter infrastructures to accommodate variable workloads.
9.	The Contractor must provide 24/7/365 staffing, (e.g. Operations staff, technical support staff, security staff, and management.) The Contractor must manage security/background checks, monitoring and reporting on employees and coordinate those requirements with Criminal Justice agencies.
10.	The Contractor must accommodate meeting and workspace for Commonwealth and Contractor IT staff and management.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.1.2 Network and Security Architecture

Secure and robust network connections are critical to the overall datacenter architecture. Connections between the datacenters and access to the Commonwealth's network must be planned, established, and tested prior to the transitioning of Services. All Contractor datacenters and locations must coordinate connections between the Contractor's network and the Commonwealth's fiber network (COPANET).

Reference Documentation

N/A

	Requirements
1.	All datacenter locations must connect to and provide access from COPANET.
2.	The Contractor must provide dual network termination points to connect to COPANET.
3.	The Contractor must provide network security via firewall and security devices.
4.	All Contractor datacenter facilities must have secure Internet access capabilities. Internet access must provide virus and intrusion protection systems with reporting capabilities.
5.	Multiple security zones must be configured within each datacenter to support specific agency requirements. For example: access, web, application, and data zones. The specific configuration and number of individual zones may be different per agency and application.
6.	Secure connections are required for traffic that may traverse between Datacenters and between Datacenters and Commonwealth. Encryption must be a minimum of 128-bit and must be FIPS 140-2 certified to meet Criminal Justice Information Services (CJIS) requirements. (Refer to Pennsylvania State Police (PSP) Summary of CJIS Requirements and CJIS Security Policy.)
7.	Remote access to datacenters supporting CJIS systems must meet minimum security requirements identified in CJIS Security Policy. These requirements include but are not limited to identifying remote user's identity, IP address and connection must be FIPS 140-2 certified with a minimum of 128-bit encryption.

Deliverables
Deliverables are defined in **Schedule K – Key Program Deliverables**

3.1.3 Datacenter Architecture and Technology

The Contractor must evaluate the Commonwealth computing infrastructure(s) and develop and implement an IT architecture that must support all current systems and applications, utilizing existing and/or underutilized technologies where appropriate, to provide a high level of quality computing Services to the Commonwealth, in a cost effective manner. An overall review of all Commonwealth computing Services is required, as the requirement is to consolidate all Commonwealth based computing Services into the Contractor's datacenter architecture. This architecture design is to include the current DR programs and structure and must be implemented along with the production and testing environments.

The Contractor must provide a multi-platform solution that must support the migration of all of the Commonwealth's current workloads. The Contractor must create a target environment that minimizes application latency concerns.

The Contractor must also develop an infrastructure environment, which must lead the Commonwealth into the future, and be able to address all current and future datacenter requirements.

Reference Documentation

Schedule J.1 – Data Center Service Level Management

Schedule J.2 – Data Center Service Level Matrix

Schedule J.3 – Data Center SLA Definitions

Requirements

1.	The Contractor must develop the architecture and define the technology to support the Commonwealth computing systems.

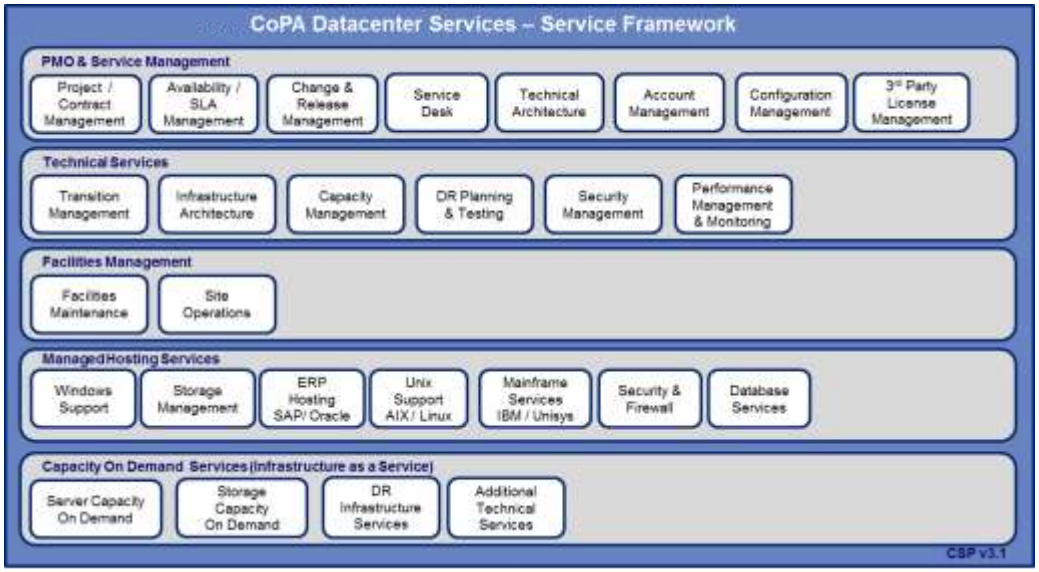
2.	The Contractor must Provide all technical system support and reporting including: • Multi-Platform Systems Support • Multi-Tiered Storage Management • Network Management • Security Management • Capacity planning • Performance analysis and tuning • Technology Refresh/Life Cycle Management • Annual Audits and Certifications
3.	The Contractor must provide a storage management approach which meets the Commonwealth's needs. The storage management approach must include, but not be limited to, the following: • **Basic** – based on Pay-As-You-Go allocation model with no upfront resource allocation and resources are reserved on demand per workload. (shared, multitenant) • **Committed** – based on Allocation Pool allocation model which gives a minimal initial commitment of resources plus the ability to burst above that minimum if additional capacity is needed – usually a percentage of resources reserved for agency with over-allocation. (shared, multitenant) • **Dedicated** – based on Reservation Pool allocation model – 100% of resources are reservation–guaranteed. (dedicated, single tenant)
4.	The Contractor must provide real-time monitoring and monthly reporting of system availability, performance, utilization, efficiency, and capacity reporting for the entire datacenter architecture.
5.	The Contractor must provide a tiered Disaster Recovery ("DR") solution to ensure that applications and associated hardware that currently have an active DR plan will continue to have offsite Services available in the event of a primary system outage. The tiered DR solution must include an option to support high availability (HA) architectures. The tiered DR solution must be in the overall datacenter architecture design.
6.	Configuration Item Reconciliation: The Contractor must perform an initial asset review of the targeted inventory for all datacenter configuration items (CI) that will be managed. The Contractor must reconcile and validate that appropriate relationships exist for all datacenter configuration information in the Configuration Management Database (CMDB) system. Contractor must ensure that CIs are properly mapped in order to support the established Service Level Agreements (SLAs). The Contractor must provide an automated interface between its CMDB and the

	Commonwealth's CMDB.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2 Enable Common Service Portfolio

The Commonwealth requires that the Contractor's service management practices be based on the ITIL v3 framework and guidance. The Datacenter Architecture, which conforms to a service-oriented structure, is prescribed by the Commonwealth common service framework. The common service framework is comprised of 27 discrete IT Services divided into five (5) categories of service:

- **PMO & Service Management** – This category of service defines the overall datacenter management structure, including interactions with the Commonwealth and business partners.
- **Technical Services** – This category of service defines the datacenter architecture, and prescribes standards for datacenter continuity and security. This level also defines the workload transition process, for when Commonwealth Agencies migrate applications to the new datacenter computing Services model.
- **Facilities Management** – This category of service defines day-to-day datacenter operations and maintenance.
- **Managed Hosting Services** – This category of service defines a set of Commonwealth enterprise datacenter managed Services, each designed to accommodate the specific needs of the Commonwealth.
- **Capacity On Demand and Additional Services** – This category of service defines a set of infrastructure as a service (IaaS) offerings, each designed to provide just-in-time resources to the Commonwealth.



3.2.1 Program & Service Management

3.2.1.1 PMO & Contract Management

The PMO & Contract Management service is responsible for the overall program, projects, and contract elements, and must maintain an active working relationship with the Commonwealth project team. Contractor must assign an executive management team that must drive the processes to complete the due diligence required to make informed decisions and Services offerings that must meet the needs and requests of the Commonwealth. This executive team must also provide ongoing direction and leadership supporting the contract and designated Services, for the duration of the Contract.

The Contractor is required to provide and maintain operational, technical, and management staff contacts so that it is clear to the Commonwealth whom is the most direct contact for each operational area.

Reference Documentation

Schedule H - Commonwealth Computing Procedures Manual

Requirements

1.	The Contractor must establish and maintain a program and project management framework, throughout the term of the contract.

2.	The Contractor must establish and maintain a protocol for project estimation: ▪ Scope ▪ Hardware / Software ▪ Manpower to develop, test and implement ▪ All other resources required
3.	The Contractor must collaboration meetings, technical exchanges, and forums: Through established procedures and meetings address in good faith all issues, needs, technical exchanges and forums with the Commonwealth team. Provide the technical knowledge, and knowledgeable staff, to effectively support and guide the Commonwealth's technology needs.
4.	
5.	The Contractor must establish interim contract management procedures during the transition of datacenter Services to monitor and manage service delivery (conforming to Commonwealth policies and procedures) including but not limited to the following; Problem Management, Change Management, Service Level monitoring and reporting, physical and logical security, project management, etc. while the service is transitioned from the Commonwealth to the Contractor. All interim contract management procedures must be negotiated in good faith and approved by both parties.
6.	The Contractor must establish and maintain a process for change management for the Datacenter contract as requested or required. The final process developed must be coordinated with the Commonwealth contract compliance group and mutually agreed to by both parties.
7.	Subcontractor Relationship Management: The Contractor must establish and enforce standards for ensuring subcontractor performance. The Contractor is responsible for all Services provided by subcontractors.
Deliverables Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.1.1 Financial Management

The Contractor must provide financial management for Services to provide accurate and cost effective stewardship of IT assets and resources. Financial management must be used to plan, control, and recover costs expended in providing the Services. Overall, the goal of financial management is to offer a truly transparent analysis of the Commonwealth spending on Services. This analysis of efficiency must be capable of being used to create intelligent, metric-based cost-reduction strategies.

Clear and transparent invoicing, both for the Commonwealth and for individual agencies, is required to insure integrity and accountability of all invoices. It is expected that invoicing may vary somewhat on a monthly basis whenever Services are either increased or decreased.

The Contractor must work with the Commonwealth to identify major investments as part of the budgetary planning process. The Commonwealth must review strategic and tactical objectives as indicated in the planning process to measure impact on its budget(s).

A significant percentage of the Commonwealth's funding comes from federal sources. Contractor must provide detailed service information necessary to ensure the uninterrupted flow of federal funds.

On a monthly basis, the Contractor must present the Commonwealth with a single enterprise invoice and multiple agency invoices for chargeback purposes. The agency's invoices must include sufficient detail to validate and accurately allocate charges to funding sources based on actual usage.

The Contractor is required to capture and provide information related to monthly volumes of work, counts, and utilization of specific infrastructure areas. The Contractor and the Commonwealth will develop a set of detailed, equitable and repeatable chargeback procedures for each provided Service based on either actual monthly utilization or allocation methods depending on which is most appropriate. The chargeback procedures must include the ability to map to discrete programs and funding sources identified by agencies with this requirement.

The Contractor must leverage any current chargeback procedures and implementation configuration to accelerate the implementation of the new process. The Contractor must expand the chargeback system to capture all related computing related charges associated with the Datacenter project.

Reference Documentation N/A	
Requirements	
1.	The Contractor must provide a uniform rate structure for the Services.
2.	The Contractor must provide monthly invoicing for Services to the Commonwealth. The Contractor must provide invoices that identify Services rendered, pricing, and agency specific service usage. The Contractor must connect to the Commonwealth's ITSM system. The Commonwealth does not require a full charge back system. The agency invoices must provide billing detail so the agency has full transparency into the services it consumed. Billing details must include all services procured by agency general ledger (GL) code. A Service may be allocated across multiple GL codes. Adjust agency level billing due to failing to meet SLAs.
3.	Invoices must reflect when Services are either increased or decreased.
4.	The Contractor must follow Interim Financial Management procedures for providing invoices, invoice verification and charge back to datacenter customers including but not limited to the following; service components, asset management, asset transfer, forecasting, etc ,as the Commonwealth transitions its current architecture to the Contractor's Services.
5.	The Contractor must provide cost effective approaches and suggestions to improve Services while maintaining or lowering the cost for Services.
6.	The Contractor must integrate Financial Management with other service management processes, especially with SLA, Capacity and Configuration Management.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.1.2 Governance & Policy Compliance

Major IT decisions related to this Contract must be reviewed and approved according to the Commonwealth's governance policy.

Reference Documentation

Schedule B - Governance

Requirements:

1.	Major IT decisions must be made under the guidance of the Commonwealth governance organization.
2.	Design and architecture decisions must be made with a high level of integrity and advance the interests of the Commonwealth. All designs must be approved by the Commonwealth.
3.	All policies and procedures must be executed in a consistent manner to ensure the Services are completed as planned and consistent with specifications. Audits must be conducted on a yearly basis to verify and report on compliance with policies and procedures.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.1.3 Subcontractor Management

The Contractor may provide some of its Services and offerings via subcontractors. The Contractor must be the prime provider of Commonwealth Services, and is responsible to contract with subcontractors, manage its subcontractors, and for Contractor's performance and the performance of its subcontractors throughout the term of the Contract.

Reference Documentation

N/A

Requirements

1.	The Contractor must obtain, manage, and be responsible for all Services or offerings provided by subcontractors. Subcontractors may change over the course of this contract. Contractor is required to notify the Commonwealth of the new subcontractor(s) and assure the Commonwealth that there will not be a conflict of interest, and that the new subcontractor meets or exceeds the qualifications of the replaced subcontractor. The Commonwealth must approve all subcontractors.
2.	CJIS Security Policy requires fingerprint based background checks and executing a Management Control Agreement (MCA) and Security Addendum with the Pennsylvania State Police (additional information is provided in the PSP exhibit material).

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.1.4 Business Partners Management

The Commonwealth has business partners such as banks and insurance companies that require connections to its hosted systems and applications. The Contractor must coordinate with the Commonwealth to support any Commonwealth – Business Partner agreements that require a committed connection to its hosted systems.

Reference Documentation

N/A

	Requirements
1.	The Contractor must provide coordination and support of Commonwealth – Business Partner agreements that require connections and Services to the Contractor's datacenter Services to ensure that any committed connections and service levels are maintained.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.1.5 Additional Planning Services

The Commonwealth may use different/additional methods for requesting technical information and support. Depending on the type of request those methods could include but not be limited to:

- Statement of Objectives (SOO)
- Work Order
- Service Request
- Request for Technical Analysis
  - Cost-Benefit Analysis
  - Conceptualization
  - High Level Estimate (HLE)
  - Technical Opinion(s)

Reference Documentation

N/A

Requirements	
1.	Statement of Objectives - The Contractor must perform requested additional Services across various functional areas, where the work requires funding either because of materials needed or because the activity requested is not part of the base contract.
2.	Work Orders - The Contractor must perform work across various functional areas, where the work is considered part of the base contract and where no additional funding is required.
3.	A Service Request will be used to request work within one functional area, where the work is considered part of the base contract and where no additional funding is required.
4.	Requests for Technical Analysis will be used to seek information regarding potential technical solutions. The documents generated by the Contractor must provide the Commonwealth with direction regarding a specific technology and possibly the estimated cost to implement the solution. Four types of requests for technical analysis may be made by the Commonwealth. These requests are described below: • Cost-Benefit Analysis - A cost-benefit analysis is requested when the Commonwealth wants to know not only the implementation cost of a solution, but also the cost-benefit ratio for Commonwealth implementation of the solution. It may be used to analyze a single solution against the status quo, or compare the relative costs of multiple solutions.

	• Conceptualization - A conceptualization is requested when the Commonwealth has an objective, but is unsure about the possible technical means of fulfilling it. The Contractor must examine multiple paths for achieving the objective, and provide the technical benefits and consequences of the possible solutions presented. Costs are not considered in a conceptualization. • High Level Estimate (HLE or sometimes referred to as a rough order of magnitude ROM) - A HLE is requested when the Commonwealth has a clear technical direction and needs rough estimates on the cost of implementing it. HLEs may be used to attach a cost estimate to a prior conceptualization or technical opinion produced by the Contractor. • Technical Opinion(s) - A technical opinion is requested when the Commonwealth has a specific technology or set of technologies it wants the Contractor to analyze for both technical merits and suitability for deployment in the Commonwealth environment. While product and operational costs provided in Contractor's literature may be considered in a technical opinion, the Contractor's deployment and operational costs must not be calculated or presented.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.1.6 Continual Service Improvement

The purpose of the Continual Service Improvement is to reduce risk, improve service quality, improve client satisfaction, and ensure service transparency through a continuous cycle of evaluation and improvement.

Reference Documentation

N/A

Requirements:

1.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
2.	The Contractor must provide Continual Service Improvement to improve service quality.
3.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
4.	The Contractor must provide Continual Service Improvement to ensure service transparency.
5.	Customer Satisfaction Surveys – Survey of Service Desk satisfaction is a key component of providing best in class customer service. The Contractor must perform surveys of Service Desk satisfaction for a subset of the problems, questions, or requests that are resolved by, or coordinated by, the Service Desk. The Contractor must create and advertise a web site for day-to-day feedback from datacenter customers which is accessible through the Contractor's KMP. The Contractor must perform customer satisfaction survey on a quarterly basis. The Contractor must receive completed surveys of Service Desk satisfaction from the Commonwealth and tabulate results from such surveys.
6.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.2 Availability/SLA Management

The purpose of the System Availability and SLA function is to ensure that each service is delivered within, or exceeds, the agreed availability service level, and prescribed credits are received by the Commonwealth when the service level has not been achieved. Availability Management provides a point of focus and management for all availability related issues, ensuring that availability targets are established, measured, and achieved. The basic requirement is to balance the value and quality of Services with the costs of the Services. Availability and SLA management will be responsible for establishing and reviewing the SLA's to meet the Commonwealth's requirements. Contractor should review referenced exhibits for a list of SLAs and associated descriptions, tools and methodologies.

Availability/SLA Management ensures that datacenter service availability standards, as prescribed in appropriate datacenter SLAs, are achieved.

Reference Documentation

Schedule J.1 - Data Center Service Level Management

Schedule J.2 - Data Center Service Level Matrix

Schedule J.3 - Data Center SLA Definitions

	Requirements	**Describe Compliance**
1.	The Contractor must establish a formal Availability and SLA Management service. This service must include representatives from the Contractor and the Commonwealth for reviewing and approving the availability and SLA metrics. Contractor must publish the formal Availability and SLA Management plan based on a Service Catalog. This service must identify key Services and the associated level of availability or capacity as appropriate, identify the Services that will be measured by an SLA, and define the basis on which the SLA service levels will be monitored and obtained. The Contractor must obtain approval from the Commonwealth.	

2.	The Contractor must use Service Level Measurement Tools to measure and report Contractor's performance of the Services at a level of detail sufficient, as determined by the Commonwealth, to verify Contractor's compliance with those Service Levels described in **Schedule J.3 Data Center SLA Definitions.** The Contractor must review and update the required sections within Schedule J.3 Data Center SLA Definitions. The Contractor must complete the following sections in each of the Critical Service Levels and Key Measurements: • Collection Process – identify how the measurement data must be collected • Reporting Tools – identify any tools, automated or manual, that must be used • Raw Data Storage (Archives) – identify where data must be stored and accessible by the Commonwealth for further analysis. The Contractor is responsible for storing raw data used to generate SLA reports for the duration of the contract plus 3 years. The Contractor must make that raw data available to the Commonwealth via the Contractor hosted knowledge management portal for no-less than the most recent 13 months. Data older than the most recent 13 months must be provided on request in a format prescribed by the Commonwealth within 5 business days of the request. • Reporting Format/s – identify the proposed reporting format
3.	Contractor's Availability Management process must integrate Availability Management with other service management processes, such as SLA, Capacity Management, Problem Management and Service Desk.
4.	The Contractor must establish automated non-compliance indicators. The Contractor's process for managing Services performance must automatically e-mail the designated Commonwealth contact when SLA service parameters are not met. The Contractor must create email notification groups by major service. The Contractor must utilize this, or a similar process for outage notification.

5.	The Contractor must investigate all instances of non-compliance. The Contractor must notify the Commonwealth of an outage as defined in the CCPM. The Contractor must complete a root cause analysis (RCA) for all major outages, and provide a detailed report to the Commonwealth and impacted user. Completion of the Incident report must occur within 2 days of the incident and the RCA within 10 days of the incident.
6.	The Contractor must use integrated tools, methods, and activities for reporting service and component availability. The Contractor must ensure proactive measures to improve availability of Services are implemented whenever it is cost justified.
7.	The Contractor must integrate Agency Availability Management processes with SLA Management. On a monthly basis, the Contractor must consolidate all system SLA availability reports into a management operations report, summarizing availability, outages, and SLA compliance by platforms.
8.	The Contractor must develop and maintain a Portal/Website for agencies to view operational status, planned maintenance, and component level outages.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.3 Change & Release Management

Change & Release Management ensures that all changes within the datacenter environment are planned, executed, monitored, documented, and that the change produced the intended effect. The Contractor must establish the overall Change & Release Management function and manage the daily operations of the functions. This must ensure that all changes are processed in a uniform manner that required documentation, approvals, and notifications are completed before the change is implemented within each of the lower infrastructure environments and then moved into the production environment. Post implementation review and approval requires that all steps have been completed as documented, and within the time frame allotted. All change and release documentation must be maintained in a manner that facilitates random compliance auditing. On a yearly basis, random selections of changes must be audited for compliance purposes.

Reference Documentation

Schedule H - Commonwealth Computing Process and Procedures Manual

	Requirements	Describe Compliance
1.	The Contractor must establish a formal Change & Release Management function. This function must include representatives from the Contractor and Commonwealth to support the review and approval of all changes. Contractor must publish the formal Change & Release Management plan. The Contractor must identify key elements and roles; Request for Change Form & Process, Change Manager, Change Advisory Board, Emergency Change Advisory Board, Notification process, Change review process. The documentation and process must follow industry best practices. The Contractor must train appropriate Commonwealth staff on the process as requested by the Commonwealth. The Contractor's Change Management & Release management process must consider and integrate with the Commonwealth's individual change management policies and procedures, for example from January to May of each year, Department of Revenue (DOR) maintains a "no update policy" to DOR servers that have any production Tax-Related Applications running on them.	
2.	The Contractor must institute a Change Advisory Board (CAB).The CAB members must ensure that the requested changes are thoroughly checked and assessed from both a technical and business perspective.	

3.	The Contractor must test infrastructure related changes & releases before implementation. This includes Contractor managed hardware and any Contractor managed software. The Contractor must file a Pre-Change Test Plan, as part of the Change & Release request process, including results before final approval to proceed. The Contractor must create and maintain test environments where testing must be conducted and evaluated prior to implementing any change into production environments.
4.	The Contractor must establish and manage scheduled maintenance periods, and communicate the scheduled outages. The Contractor must create a notification process for maintenance, emergency, and unplanned outages. The Contractor must establish regular maintenance periods for each computing platform. Maintenance periods must be coordinated per agency due to different peak business requirements. The Contractor must create mechanism to notify clients of expected and unexpected outages. .
5.	The Contractor must notify affected Commonwealth agencies before and after any changes. The Contractor must provide Change & Release Notifications prior to implementation via a central web site and e-mail.
6.	The Contractor must Validate all changes after implementation. The Contractor must complete a post change review to validate the success or failure of the change or release, and post the information within the change record. Take follow up action as appropriate.
7.	The Contractor must prepare back out procedures for all changes. As part of the Change & Release process, the Contractor must file a back out plan as appropriate to remove the change and restore Services to the prior level.
8.	The Contractor must track all (successes / failures) changes and produce Change &

	Release management statistics. The Contractor must create and deliver a monthly Change & Release Management Report to the Commonwealth, detailing changes, implementation status, and outage time periods as compared to planned outage schedules.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.4 +Service Desk

As part of the Services, Contractor must provide telephone support (e.g., a "Service desk") to the Commonwealth to assist the appropriate end users in determining, tracking and resolving questions regarding the Services. Contractor must provide telephone support through such telephone support infrastructure maintained by the Contractor. This telephone service desk is to augment the required "online" Service Desk capabilities as set forth in the RFP.

The Service Desk must be the single point of contact for authorized Commonwealth users regarding incidents, which include events that cause or may cause an interruption or reduction of service, as well as requests for information, and requests for Services relating to all of the Services provided within the Contractor's catalog of Services. The Contractor's Service Desk must have processes for Service Delivery and Service Management that are ITIL-conformant. The Service Desk process includes Service Management processes: Incident Management, Problem Management, Change Management, Configuration Management and Service Request Management.

Currently most Commonwealth agencies provide a local Help Desk function to support staff's desktops, local printing systems, applications, and the general public users it serves. The majority of the agency Help Desks utilize the Commonwealth's Enterprise ITSM. A connection between the Commonwealth's Enterprise ITSM and the Contractor's Service Desk is required to keep Help Desk tools synchronized.

In addition, the Contractor must provide an Internet accessible KMP as a central repository for processes and procedures, communications plans, and other relevant documentation to be shared with the Commonwealth. Knowledge Management will be a function shared by the Commonwealth along with the Contractor. This must allow the Commonwealth to combine data from all Commonwealth agencies and the Contractor, reorganize it, make it understandable, and present it to the Commonwealth.

The Contractor must coordinate with the Commonwealth to provide feedback on the effectiveness and accuracy of KMP content. In addition, the Contractor must notify the Commonwealth when incorrect information is identified, reference material becomes outdated, or when the content is rendered inaccurate. At the Commonwealth's discretion, the Contractor may be required to develop content, as needed, including answers to frequently asked questions, reference/educational materials, and other documents to be added at the Commonwealth discretion.

The Contractor must create and keep current a CCPM that documents the processes, procedures and timelines used to meet the requirements of this contract. The CPPM must provide detailed process descriptions to support the computing needs of the Commonwealth utilizing best practices and be made available (via Contractor's Portal) to all Commonwealth agencies throughout the term of the contract.

Reference Documentation Schedule H - Commonwealth Computing Procedures Manual	
Requirements	
1.	The Contractor must provide an integrated Service Desk process with the other Service Management processes, including Incident Management, Problem Management, Change Management, Configuration Management and Service Request Management. The final Service Desk processes and procedures must consider current Commonwealth service management policies and procedures.
2.	The Contractor must provide a Service Desk with processes and tools for Service Delivery and Service Management that are ITIL-conformant.
3.	The Contractor must seamlessly integrate the Service Desk (including tools, technology and processes) with the Service/Help Desk(s) of other identified Agency Service Desks as required. The Contractor must coordinate the integration of the proposed Service Desk with the Commonwealth's Enterprise ITSM System. Integration with other agency ITSM systems is not required.
4.	The Contractor must analyze incident trends, and recommend and implement actions, with Commonwealth's approval, to reduce incidents.
5.	The Contractor must conduct random surveys of authorized users of the Service Desk in accordance with the Commonwealth each month.
6.	The Contractor must develop and document processes regarding interfaces, interaction, and responsibilities between Level 1 Support personnel, Level 2 Support personnel, and any other internal or external persons or entities that may either submit notice of an incident or receive notice of an incident.
7.	The Contractor must ensure staffing levels and work allocation remains appropriate to handle incident volumes and incident response targets.
8.	The Contractor must provide trained service desk personnel.
9.	The Contractor must ensure that the Service Desk is available at all times (i.e. 24 hours a day, 365 days a year).

10.	The Contractor must manage all Incidents and/or Service Requests from authorized users relating to Contracted Services.
11.	The Contractor must provide weekly reports to the Commonwealth on Service Desk activities, performance, and adherence to established SLAs. Service Desk reporting must include at a minimum: • Key issues relating to Service Desk processes, improvements, script development. • Status as to Service Desk staffing, training, and authorization. • Integration activities and issues with other Service Desks belonging to the Commonwealth. • Trend analysis must include (13) most recent months. If the Service has been in place less than thirteen months then trend analysis must include all months of Service. • Calculate metrics and provide monthly reports. • Number of Contacts, to include all interactions (Calls, phone calls, electronic, automated or otherwise). • Number of calls abandoned, average call duration, average time to answer, average time to abandon. • Number and percentage of Contacts resolved. • Number and percentage of Contacts passed to other Service Desks. • Other pertinent information regarding Service Desk operation and performance.
12.	The Contractor must enable a KMP accessible by all authorized users. Content for the KMP must be approved by the Commonwealth.
13.	The Contractor must record all incidents, problems, service requests, change requests, and configuration information in the software recording tool. All updates to the record, contacts with clients or vendors, and resolutions must be recorded in a real-time and consistent manner. This recording tool must house the KMP.
14.	The Contractor must monitor reporting system to ensure incidents and problems are being addressed to meet agreed SLAs.
15.	The Contractor must ensure alerts are transitioned successfully. Transition must include the transfer of system and application monitoring alerts with the ability to turn-off the problem alert process during maintenance windows and other scheduled outages.
16.	The Contractor must provide interim Support Desk Procedures to be used as the Commonwealth transitions from its current support architecture to the Contractor's

	Service Desk. The Contractor must provide Service Desk operation throughout the transition to the Contractor's fully managed service.
17.	Incident Management - The Contractor's Incident Management process must encompass Incident Management processes deployed across all Service Components that are designed to: restore service as quickly as possible, minimize disruption to the Commonwealth, aim for highest levels of availability and service quality, completely transparent and auditable delivery of service, and promote the highest level for user satisfaction.
18.	Problem Management - The Contractor's Problem Management Process must minimize the adverse effect on the business of Incidents and Problems caused by errors in the IT infrastructure, Applications, systems and supporting components, and proactively prevent the occurrence of Incidents and Problems by identifying and eliminating causes of failure.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.5 Technical Architecture

The Technical Architecture function will oversee the ongoing design of the various computing platforms that will support the Commonwealth's existing computing topologies, as well as plan for the approaching consolidation of the Commonwealth datacenters. The intent is to design an infrastructure which will ultimately utilize multiple datacenters for processing, tiered DR Services, and on-demand Services in a secure environment. At the conclusion of the design, and after approval by the Commonwealth, the Contractor must document the environment via a Service Catalog.

The Contractor must design the technical architecture of the computing systems based on current best practices, to support the evolving technologies and business needs of the Commonwealth. The volume of computing and storage will vary during the term of the contract due to applications development, testing, certification, the retirement of existing production environments, as well as cyclical processing demands such as the various tax seasons. The Contractor must be able to expand and contract service offerings based on Commonwealth needs

in a timely and cost effective manner.	
Reference Documentation N/A	
Requirements	
1.	The Contractor must create a Service Catalog. Define the Services and platforms to be offered. The Contractor must provide a detailed list of Services, via a common Service Catalog to be provided to the Commonwealth. The Contractor must utilize an industry standard software product to ensure the detailed service offering is recorded.
2.	The Contractor must design and build the IT architecture required to support the Services. The Contractor must design and build the IT technical architecture to support the Services selected by the Commonwealth. The Contractor must provide the design to the Commonwealth for review and approval prior to execution. All designs must be approved by the Commonwealth.
3.	The Contractor must design platform and support lifecycles. The Contractor must provide a technical support staff structure for the Services and platforms to be offered. Support must include all skills needed to plan, operate and support each technology platform.
4.	The Contractor must provide Technical Support Services. The Contractor must provide the skills of and the size of the support staff to plan,

	manage, and operate the various IT infrastructure platforms.
5.	Interoperability The Contractor must design architectures with system components that facilitate system data accessibility.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.5.1 Technology Refresh

Technology refresh is an ongoing activity required of the Contractor. The Contractor must prepare technology impact statements that address the key technologies planned for refresh or technologies identified to be of interest to the Commonwealth. These impact statements must provide a wide range of information, including the following matters applicable to the Contractor's environment:

- Technology trends
- IT Infrastructure Contractor releases and offerings
- IT Infrastructure Contractor retirement of older versions of products
- Proposed scheduling of Contractor releases into the datacenter environment
- Potential impact of the new releases on business applications in the datacenter infrastructure
- Potential impact of the new releases on deployment and operational processes
- Risk analyses with recommendations for mitigation of risks

The Commonwealth and the Contractor must review the impact statements. Based on these reviews, the Contractor must recommend a plan and schedule for technology refresh to the Commonwealth. Since the expected usable life of any hardware approved for the datacenter environment is about 36 months, the plan must project an 18-month window into the future, and include resource estimates for each recommended refresh activity. Software refresh will depend on software releases and the Contractor must ensure operational compatibility with existing Commonwealth applications and/or functionality or must provide upgrade alternatives and options. The Contractor must obtain Commonwealth approvals prior to implementing technology upgrades that will affect Commonwealth operations.

Reference Documentation

N/A

	Requirements	Describe Compliance
1.	The Contractor must document and update Technical Architecture approach and project plan including; Service Catalog, IT Architecture, and Technical support	
2.	The Contractor must review and refresh technology on a scheduled basis.	
3.	The Contractor must provide technical Architecture Staffing.	

Deliverables
Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.5.2 IT Service Continuity Architecture

The Contractor's IT Service Continuity Architecture must provide tiered DR capabilities and Services for applications that have been identified by the Commonwealth. The Contractor must provide a Service Continuity solution that includes DR computing, storage, networking systems and recovery processes and must be included in the overall Commonwealth architecture design. Only critical applications and associated equipment identified by the Commonwealth must be addressed with DR systems. Additional information regarding Tiered Service Delivery and Tiered DR can be found in referenced supporting exhibits.

The Commonwealth will lead the Business Continuity effort with assistance from the Contractor.

Reference Documentation

Schedule J.1 – Data Center Service Level Management

Schedule J.2 – Data Center Service Level Matrix

Schedule J.3 – Data Center SLA Definitions

Requirements	
1.	The Contractor's DR Architecture and Plan and Business Continuity Plan (COOP) must be documented by the Contractor and approved by the Commonwealth.
2.	IT Service Continuity Architecture and Plan - The Contractor must obtain Backup hardware and software and must be configured and available per an agreed to Service Level to process the identified critical applications. Where applicable, data must be electronically replicated (including disk-2-disk) to the backup systems (off site) to insure a successful recovery. Wherever data replication is not viable, backup tape data must be utilized.
3.	Recovery systems must be available via network access. Routing must be configured and tested during initial system architecture design. The Contractor must include the network requirements of the DR plan in the design

	of the network architecture.
4.	Recovery documentation for each identified system/ application must be required. Information must include the targeted backup hardware, software, networking changes, data location, restoration and access process, execution authorization, and notification to service owner when an application has been restored to service. The Contractor must create recovery documentation for each system / application identified as a critical system where DR is required.
5.	The Contractor mus creat a DR support plan. The Contractor's DR team must notify the Commonwealth when a recovery plan is to be put into action, and must manage questions and issues that may arise after implementation. The Contractor must create a DR team that manages the execution of the DR plan from declaration to recovery when required.
6.	For critical systems identified as having a current tested DR Plan within the DPH, the Contractor must update the associated DR test plans for the new target environment. Successful testing of each revised DR Plan is required prior to Commonwealth acceptance.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.1.6 Account Management

The Account Management function is responsible to provide each Commonwealth agency with oversight of the contracted Services and support required to satisfy the Commonwealth's computing needs. The Account Manager must provide direct interface with the Commonwealth agencies ensuring daily operations and needs are provided, and create monthly operational summaries reporting to both the agencies and the Commonwealth. This report must address all operational events and issues that occurred during the month that would have effected service level attainments, problems and incidents, and recommendations for changes needed to provide continuous, secure computing Services. Each Commonwealth agency will interact with its assigned Account Manager to discuss needs, issues, problems or costs.

Reference Documentation

Schedule G - Staffing Plan and Key Positions

Requirements		Describe Compliance
1.	The Contractor must assign an Account Manager to each identified agency. The Account Manager must be responsible for all Services provided, represent the Commonwealth agency's needs, and be the advocate for the agency throughout the Contractor's organization. Based on the size and application complexity of the Commonwealth agency, the Contractor must assign additional account management resources. Account Managers must understand agencies line of business and business trend analysis. The Contractor must assign a minimum of five (5) dedicated account managers.	
2.	Account Managers must meet with assigned agency contacts on a regular basis. This must be at minimum weekly during the initial program start and through transition.	
3.	The Contractor must meet with Commonwealth teams on a monthly basis. This must be at minimum weekly during the initial program start and transition to monthly meetings with the Commonwealth teams to address problems and assure continuous service improvements.	
4.	The Contractor must participate in agency-sponsored IT planning sessions on a quarterly basis. Contractor must schedule quarterly computing capacity reviews to ensure sufficient processing capacity, needs, and issues are being addressed. Suggest changes when necessary.	
5.	The Contractor must advocate for agency interests. Contractor's Account Management team must advocate for the Commonwealth's interests. For example, intervene with Service Desk personnel to resolve a major problem; problem escalation process, support root cause analyses process. Another example, coordinate with agency and service providers to ensure timing of technology refreshes have the least impact on the agency.	
6.	Monthly status reports - The Contractor must ensure The Commonwealth is aware of operational status and project update information on a monthly basis. The Contractor must create and deliver a monthly status report, summarizing operational metrics as defined in the CCPM, by service platform, including highlights and exceptions, and project status.	

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.7 Configuration Management

The Contractor's Configuration Management system must ensure complete and accurate recordkeeping relative to datacenter assets; hardware, operating system software, firmware, and network. The Contractor's Configuration Management Database (CMDB) system must be synchronized with the proposed datacenter Change and Release Management processes. Also included must be associations of infrastructure configuration items (CIs) and Agency application infrastructure to support application infrastructure related SLAs.

At the end of the contract the Contractor must provide the Commonwealth with a final electronic copy of the CMDB.

The following list identifies but does not limit the roles and responsibilities that the Contractor must perform:

- Define and document Configuration Management standards and procedures per ITIL v3 standards.
- Establish an electronic interface to the Commonwealth's CMDB(s) to keep current both the Commonwealth's CMDB and the Contractor's CMDB.
- Establish process for tracking configuration changes
- Establish process interfaces to Incident and Problem Management, Change Management, technical support, maintenance and asset management processes
- Establish appropriate authorization controls for modifying configuration items
- Establish configuration baselines as reference points for rebuilds, and providing ability to revert to stable configuration states
- Establish process for verifying the accuracy of configuration items, adherence to Configuration Management process, identify process deficiencies and recommend corrective actions

The Commonwealth must require online access to configuration related information and reports to satisfy application updates and audit requirements.

Reference Documentation

Schedule H - Commonwealth Computing Procedures Manual

Requirements		Describe Compliance
1.	The Contractor must provide a documented process to track configuration changes accordingly to ITIL V3 framework.	
2.	Per agency request, the Contractor must provide specific application related infrastructure component configuration information.	
3.	The Contractor must provide current configuration reports at an agency level by datacenter component.	
4.	The Contractor must perform continuous review and updates to the Contractor's and Commonwealth's CMDB to maintain accuracy of the CMDBs.	
5.	CMDB that constitutes the common repository created by the Contractor to include, but not be limited to, location information, service information, configuration information, application information, billing data, inventory data, and performance data. This data must be provided to the Commonwealth via electronic interface in a format approved by the Commonwealth.	

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.2.1.8 3rd Party License Management

Currently the Commonwealth manages over 2,000 business applications that require numerous software platforms and products. The Contractor's 3rd Party License Management service must ensure accurate inventory and licensing compliance for all Contractor provided infrastructure software products. The Contractor must be solely responsible for the management of all infrastructure software products provided through this contract.

The Contractor must coordinate with the Commonwealth to ensure compatibility between Commonwealth provided applications related software, and the Contractor provided infrastructure software. The Contractor must provide a method for tracking and reporting on both Contractor provided and Commonwealth provided software that must reside on the managed infrastructure.

The Contractor must provide the ability to purchase the Third Party Software listed in Exhibit B.4 - DPH - Third Party Software and additional third party software if required to provide the contracted services. The Contractor is responsible for the licensing and maintenance and support for the Third Party Software. The Commonwealth at its sole discretion may procure third party software from appropriate contracts.

The Contractor must provide the ability to purchase maintenance and support for the Third Party Software listed in Exhibit B.10 - DPH – Hybrid Third Party Software. The Contractor is responsible for the maintenance and support for the Third Party Software. The Commonwealth at its sole discretion may procure third party software maintenance and support from appropriate contracts.

Reference Documentation

Exhibit B.4 - DPH - Third Party Software

Exhibit B.10 - DPH – Hybrid Third Party Software

Requirements	
1.	The Contractor must provide, as requested, current software license reports for in scope infrastructure. For example specific OS version and patch levels per service instance.
2.	The Contractor must implement continuous service improvement process related to 3rd party software management to improve service quality, efficiency, and effectiveness.

3.	The Contractor must implement 3rd Party Software Management initiatives to achieve reduced costs of Services and to meet or exceeded ROI (Return on Investment) analysis projections.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.2 Technical Services

3.2.2.1 Transition Management (New Customer and/or Services)

The Transition Management service ensures the systematic planning, management, execution, and monitoring of major changes to the datacenter environment(s). This Services offering is to support new customers and/or new Services (i.e. remote file servers, remote databases, etc.). This service offering includes the phased migration of Commonwealth applications to the Contractor's managed service excluding initial transition.

Information and tasks pertaining to the transition of the initial Targeted Datacenters and Agencies can be found in Section 3.3 – Transition Services.

Reference Documentation

N/A

Requirements	
1.	Transition Management Office – The Contractor must create a Transition Management Office and team that must be responsible for the migration projects of hardware and applications from the Commonwealth's locations to the new target datacenter environments.
2.	The Contractor must create a computing environment; hardware, software, network systems, peripherals, and devices as required to migrate the Services from the Commonwealth.
3.	The Contractor must provide recommendations for the repurpose, replacement, or retirement of existing Commonwealth hardware, software, network systems, and peripheral devices as required after system migrations have been completed.
4.	Optimize Current Process and Procedures – The Contractor must coordinate with Commonwealth customer to review and plan for a transition of processes and procedures. The Contractor must implement a plan for optimization of the existing

	processes, procedures, tools, etc. to provide more efficient and effective Services.
5.	The Contractor must develop detailed plans to migrate Commonwealth applications, and associated infrastructure from Commonwealth datacenters to the Contractor's datacenters. On a monthly basis, the Contractor must create a report to detail the transition projects on the plan, status, risks, and the forecasted transition date.
6.	The Contractor must coordinate with Commonwealth applications project teams to plan and execute the application and infrastructure migration plans.
7.	The Contractor must revise datacenter disaster recovery plans on the occasion of major changes to the datacenter hardware, software, or network portfolio.
Continual Process Improvement	
8.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
9.	The Contractor must provide Continual Service Improvement to improve service quality.
10.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
11.	The Contractor must provide Continual Service Improvement to ensure service transparency.
12.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
13.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.2.2 Infrastructure Architecture

The Infrastructure Architecture service will define and manage the scope and design of the infrastructure architecture for the computing systems to support the evolving needs of the Commonwealth. This range of Services includes design of the mainframe, mid-range, x86 servers, (both physical and virtual), Local Area Network (LAN), storage, backup systems, and the DR systems. The design will also need to detail how the most current data will be restored to the targeted DR system.

Efforts are underway to re-write many of the Commonwealth business applications. For example, some of the mainframe applications are being migrated to newer server based systems. The Contractor must consider the planned retirement of some of the mainframe workload, and at the same time consider the offsetting growth in other server platform environments.

At the direction of the Commonwealth, the Contractor must transition Commonwealth based computing infrastructure to one of the datacenters. The Contractor must work with the Commonwealth agencies to understand the systems involved, and the timeframe of these migrations. Working with the Commonwealth agencies, the Contractor must provide the design, project management, hardware and technical support required to test and migrate these systems to the new production environment. At its discretion, each agency must provide the applications staff to support the migrations.

The Infrastructure Architecture service will review and recommend hardware, software, and the technical configurations required to build the requested infrastructure environments. Prior to migrating each of the current application workloads to the new target infrastructure, the Contractor must work with each Commonwealth agency to develop a mutually agreed to Acceptance Test Plan that includes the testing of application infrastructure performance characteristics.

Reference Documentation

Schedule J.1 – Data Center Service Level Management

Schedule J.2 – Data Center Service Level Matrix

Schedule J.3 – Data Center SLA Definitions

Requirements

1.	Define the infrastructure technology Services to be offered. The Contractor must provide a detailed list of Services and computer platforms to be provided to the Commonwealth.
2.	The Contractor must design and build the IT infrastructure architecture to support the

	Services required by the Commonwealth. Design must provide as much interoperability and open standards as possible. All designs must be approved by the Commonwealth. The Contractor must provide the design in a Visio format to the Commonwealth for review and approval prior to execution. This diagram must be dated and maintained as Services are altered for the duration of the engagement.
3.	The Contractor must address CJIS and Criminal History Record Information Act (CHRIA) requirements for agency application infrastructure designs where required. Some agency application infrastructure designs (e.g. PSP) require additional security and encryption level requirements imposed by CJIS.
4.	SAP Infrastructure Design The Contractor's target infrastructure design for the Commonwealth's SAP environments must include a certified SAP sizing report prior to migration of the systems.
5.	Commonwealth Wide Area Net connectivity. The Contractor must implement initiatives to provide connectivity from the datacenter to the Commonwealth Network. Redundant network links are required. The Contractor must connect to and manage the requisite connections. The Contractor must provide ongoing network support Services to manage these links including the ability to increase capacity as needed to support changes in the application infrastructure requirements.
6.	Develop Acceptance Test Plan. Prior to migrating each of the current application workloads to the new target infrastructure, the Contractor must work with each Commonwealth Agency to develop a mutually agreed to Acceptance Test Plan that includes the testing of application infrastructure performance characteristics.
7.	Provide System Acceptance testing. The Contractor must conduct system acceptance testing, and provide the Commonwealth with written verification prior to declaring the system is fit for use. This acceptance test must include validation of infrastructure performance against system performance characteristics agreed to by both parties.
8.	Ready for use certification. The Contractor must provide the Commonwealth with written verification prior to

	declaring the Service is ready for use. The Service will not be considered ready for use until written acceptance is obtained from the Commonwealth.
9.	Support User Acceptance Testing. Contractor must support the Commonwealth's user acceptance testing. The Commonwealth must not be charged for Services until written acceptance is obtained from the Commonwealth.
10.	Provide Application Infrastructure environments. The Contractor must provide non-production and production environments for each of the application computing platforms. The non-production environments will be used for testing new technologies and applications, updates and upgrades, prior to production implementations. The Contractor must identify proposed solution to individual or consolidated non-production environments for agencies.
11.	Design service lifecycle. The Contractor must rovide the infrastructure design for the Services and platforms to be offered. The Contractor must provide ongoing evaluation and recommend new technologies to enhance, improve, and reduce the cost of Services.
12.	Define Technical Support functions. The Contractor must plan, manage, and operate the IT infrastructure, based on the various service levels offered.
Continual Service Improvement	
13.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
14.	The Contractor must provide Continual Service Improvement to improve service quality.
15.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
16.	The Contractor must provide Continual Service Improvement to ensure service transparency.
17.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
18.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables
Deliverables are defined in **Schedule K - Key Program Deliverables**

3.2.2.3 Capacity Management

The Capacity Management activity focuses on the planning and scheduling of the Commonwealth's infrastructure capacity and growth. Capacity planning includes consideration of data communications, networking, processing, storage, and other environmental variables. The Contractor must issue periodic reports showing usage, trends, capacity forecasts, and recommendations for upgrades.

Processor capacity planning focuses on estimating, measuring, and reporting on the central processing unit (CPU) and memory usage, including peak usage and average usage over time.

Forecasting of each agency's application-based processor and memory usage must be determined using projected transaction and user volumes supplied by the Commonwealth. The Contractor must track application-based processor and memory usage and report the usage and trends to the Commonwealth. The Contractor must make periodic recommendations for upgrading existing server capacity.

Data storage capacity planning focuses on estimating, measuring, and reporting on data storage used per application over time.

Forecasting of application-based data storage usage will be provided by the Commonwealth. The Contractor must track current data storage usages and report the usage and trends to the Commonwealth. The Contractor must make periodic recommendations for upgrading existing data storage capacity.

New application infrastructure capacity planning focuses on estimating, measuring, and reporting on network, server, and data storage usage over time per application. New processing requirements must be established during testing in test environments. The Contractor must track application-based infrastructure usage. The Contractor must make monthly recommendations for upgrading existing infrastructure capacity.

The following list identifies but does not limit the roles and responsibilities that the Contractor must perform:

- Establish comprehensive Capacity Management planning process
- Identify future business Commonwealth requirements that will alter capacity requirements
- Assess capacity impacts when adding, removing or modifying applications
- Capture trending information and forecast future agency infrastructure capacity

requirements based on agency defined thresholds

- Recommend changes to capacity to improve service performance
- Assess impact/risk and any cost of capacity changes with agencies
- Maintain capacity levels to optimize use of existing IT resources and minimize agency costs
- Ensure adequate capacity exists within the IT environments

Reference Documentation

Schedule H - Commonwealth Computing Procedures Manual

	Requirements
1.	The Contractor must work with each agency, develop the initial Capacity Management Plan based on an inventory and review of each of the agency applications and associated managed infrastructure. The Contractor must develop the initial Capacity Management Plan and provide quarterly updates to the plan.
2.	The Contractor must meet with the Commonwealth and agency representatives on a monthly basis to assess the future datacenter resource requirements; processors, storage space, network (LAN & WAN), selected application transactions, and number of users, etc.
3.	The Contractor must produce an annual datacenter Capacity Plan and Trend Analysis.
4.	The Contractor must produce a monthly planned vs. actual resource usage report.
5.	The Contractor must recommend methods for reducing hardware "footprints", e.g., replacing server storage with network attached storage and aggressive server virtualization.
6.	The Contractor must allow emergency or temporary orders for additional Services or capacity without a minimum service commitment.
Continual Service Improvement	
7.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
8.	The Contractor must provide Continual Service Improvement to improve service quality.

9.	The Contractor must implement initiatives to improve client satisfaction. The Contractor must provide Continual Service Improvement to improve client satisfaction.
10.	The Contractor must provide Continual Service Improvement to ensure service transparency.
11.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
12.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.2.2.4 DR Planning & Testing

The DR Planning & Testing service ensures that the Contractor provides expert assistance in developing, documenting, deploying, and testing tiered datacenter recovery strategies that includes access for Commonwealth end users. This service must protect the identified applications processing at the datacenters, Commonwealth employees and constituents who utilize the application.

The Commonwealth will provide the Contractor with a list of agency applications that require a DR solution and related DR plan after contract is awarded. The Contractor is expected to provide DR Planning and Testing Services for agency applications that require DR Services. For Commonwealth agency applications that do not currently have DR plans, these Services must be provided in the event the Commonwealth elects to order DR services for these applications.

Reference Documentation

Schedule J.1 – Data Center Service Level Management

Schedule J.2 – Data Center Service Level Matrix

Schedule J.3 – Data Center SLA Definitions

	Requirements
1.	The Contractor must meet with the Commonwealth and agency representatives on an annual basis and upon request to assess its DR requirements. Post contract award, Contractor must document the Tiered DR plans in an online software program that must be available to Commonwealth and Contractor staff. The documented plans must be made available at the time each individual critical application is transitioned to the Contractor's managed Services.
2.	The Contractor must review and update Disaster Recovery Plans (DRPs) – The Contractor must review existing Disaster Recovery Plans (DRPs) to determine gaps in existing or future DR Services, within the first 120 days after the Effective Date. The Contractor must at least annually review and update the disaster recovery plans. The Contractor must assist the Commonwealth in identifying dependencies/limitations to DR testing due to non-Contractor infrastructure.
3.	The Contractor must provide the Commonwealth and agency representatives with access to an online DR planning tool.
4.	The Contractor must provide the Commonwealth and agency representatives with access to an automated emergency notification system. This would be invoked on the occasion of a disaster or other emergency.
5.	The Contractor must assist the Commonwealth and agency representatives as requested to review agency identified critical business applications and related IT applications and infrastructure.
6.	The Contractor must assist the Commonwealth and agency representatives as requested in developing, documenting, deploying, and exercising its tiered disaster recovery plans. The Contractor must perform a successful recovery test within 6

	months of transition to the Contractor's Managed Service.
7.	The Contractor must assist the Commonwealth and agency representatives as requested in coordinating disaster recovery exercises. Frequency of DR exercises will be at the discretion of the Commonwealth. The Contractor must every six (6) months test the operability of the disaster recovery plan then in effect.
8.	The Contractor must assist the Commonwealth and agency representatives as requested in developing, documenting, deploying, and exercising its continuity of operations (COOP) and continuity of government (COG) plans.
9.	The Contractor must assist the Commonwealth and agency representatives as requested in integrating its disaster recovery plans into its COOP and COG plans.
10.	As requested by the Commonwealth, the Contractor must evaluate the efficiency of business partner disaster recovery and/or business continuity plans.
11.	In concert with the Commonwealth and agency representatives, the Contractor must lead the recovery operations as requested in the event of a disaster or other major disruption.
12.	The Contractor must conduct disaster recovery planning and activities in accordance with the Business Continuity Institute Good Practice Guideline or similar standard.
13.	The Contractor must ensure DR Planning & Testing Services are documented in the Service Catalog.
Continual Service Improvement	
14.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
15.	. The Contractor must provide Continual Service Improvement to improve service quality.
16.	. The Contractor must provide Continual Service Improvement to improve client satisfaction.
17.	. The Contractor must provide Continual Service Improvement to ensure service transparency.
18.	

	The Contractor must provide Continual Service Improvement to ensure service sustainability.
19.	The Contractor must provide Continual Service Improvement to validate business case for cost of service.
20.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverable**	

3.2.2.5 Security Management

The Security Management service must ensure the confidentiality, integrity and availability of Commonwealth information and infrastructure systems. All support and implementation activities must be conducted in accordance with, but not limited to, leading industry and Commonwealth standards, which include, but are not limited to, ISO 27001:2005 and ISO 27002:2005. The Contractor must support all related system audits at the Contractor's expense. The Contractor must maintain current security ISO 27001, ISO 9001 and ISO/IEC 20000 certifications.

The Contractor must comply with Commonwealth IT policies and directives as well as federal and Commonwealth laws, regulations and policies, including but not limited to the Criminal History Record Information Act (CHRIA), Health Insurance Portability and Accountability Act (HIPAA), Criminal Justice Information Services (CJIS) regulations, The United States Social Security Administration (SSA)regulations, IRS (Internal Revenue Service) Publications, Commonwealth Information Technology Bulletins (ITBs) and the Payment Card Industry (PCI) standards. The Contractor must work with each agency to understand and ensure compliance with all laws, regulations, and policies as they pertain to each individual agency.

Reference Documentation

Exhibit J.1 through J.3 - Commonwealth Security and Compliance Requirements

Exhibit G.6 - PSP - CJIS Security Policy

Exhibit G.9 - PSP – CCHRI

Exhibit G.7 - PSP - Summary of CJIS Requirements

Exhibit G.12 - PSP - CHRIA Handbook

Requirements

1.	The Contractor must develop an annual Security Management Plan.
2.	The Contractor must deploy complement of network security systems. The Contractor must implement at minimum: spam filtering, anti-virus, malware protection, firewall (web, application), intrusion prevention and detection, web content filtering, virtual private network, and data loss prevention systems.
3.	The Contractor must perform quarterly (at the Contractor's expense) Vulnerability Analyses (VA) and penetration testing to identify new or emerging information

	security threats. The Contractor must perform penetration testing (at the Contractor's expense) and present the results of each VA on a quarterly basis. Should exposures be identified, plan and remediate the exposure in accordance with Commonwealth IT policy guidelines. The Contractor must report results to the Commonwealth within the time set out in an applicable SLA. The above requirement is for all systems/subsystems that the Contractor is responsible for including managed servers/virtual servers, network devices, security devices including , but not limited to, the following: • Performing web application firewall administration and securing web applications behind it. • Ensuring and maintaining PCI level 1 compliance. • Implementing DLP for the data center server assets to avoid a breach. • Implementing Database Firewall to secure database assets from breach.
4.	The Contractor must review network and other security logs for evidence of attacks. The Contractor must utilize enterprise grade intrusion detection tool(s) to systematically identify, stop, and report security threats. The Contractor must produce a monthly Security Log Analysis as part of the monlthy status reports as described in RFP section IV-5 Reports and Project Control.

5.	Apply operating system and other security patches. The Contractor must implement a Patch Management Program to ensure the timely application of security updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines. The Patch Management Program must adhere to the Change Management process that includes Commonwealth approvals.
6.	The Contractor must restrict physical access to all network systems and equipment with biometric or other second factor access control systems.
7.	The Contractor must restrict access to all data in the Commonwealth network infrastructure. The Contractor must restrict and control all data access right, groups and special permissions based on the data security program designed by the Commonwealth security team and/or specified by the agencies. Access level changes and exceptions must be executed only when approved paperwork is complete and approved. A file of all access changes must be maintained by the Contractor for audit purposes. The Contractor must support Commonwealth initiated security audits.
8.	The Contractor must evaluate the security standing of network-connected subcontractors. The Contractor must conduct information security audits of prominent subcontractors on an annual basis.
Continual Service Improvement	
9.	**3.3** Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
10.	The Contractor must provide Continual Service Improvement to improve service

	quality.
11.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
12.	. The Contractor must provide Continual Service Improvement to ensure service transparency.
13.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
14.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.1.1 Performance Monitoring & Management

The Performance Monitoring & Management Service of the infrastructure components, databases, and applications provide the critical input for meeting service level commitments. Performance monitoring is a proactive method to identify and respond to system database, processor utilization, or environmental problems that may affect the Services, or might negatively affect Services in the near future. The selected performance monitoring tools must also provide one of the key inputs for calculating SLAs, and the associated monthly evaluation and reporting needs.

The Contractor must collect performance information and report on infrastructure and application performance status on a daily basis using performance management and monitoring tools.

All tracked performance information must be reported daily, including processing performance, network (LAN / WAN) performance, and storage performance data. The Contractor must determine trends in conjunction with the Commonwealth, and all trends must be reported to address, if necessary, any changes from an established baseline. Forecasts of future usage must be determined based on expected growth in application transaction volume and expected deployment of future applications.

The Contractor must provide a base level of performance monitoring for key infrastructure components such as server, storage, network, and security. Additional Performance Monitoring Services such as database and application monitoring must be offered to the Commonwealth as an additional level of service.

Agency applications may require additional application level monitoring provided and managed by the Commonwealth Agencies. The Contractor must allow additional Commonwealth based monitors to be installed and managed by individual Commonwealth Agencies.

Reference Documentation

Schedule J.1 – Data Center Service Level Management

Schedule J.2 – Data Center Service Level Matrix

Schedule J.3 – Data Center SLA Definitions

Requirements

1.	The Contractor must use performance monitor software tool(s) to monitor selected infrastructure Services. The selected infrastructure service must be presented to the Commonwealth for approval.

2.	The Contractor must create and maintain performance monitoring procedures for each platform to ensure each system is monitored in a consistent manner. All identified systems must be monitored under the parameters established in the CCPM. •
3.	Performance information reporting - The Contractor must collect and report on the performance data on a monthly basis. The Contractor must utilize these reports to ensure SLA's are being achieved. A monthly report must be created to provide a review of how well the systems are performing. Also, the Contractor must provide daily reporting. The Contractor must recommend system changes to correct over and under system utilization, as well as system upgrades as appropriate. These reports and recommendations must be shared with the Commonwealth. The Contractor must provide daily performance reports summarizing incidents for the past 24-hours and immediate reports of incidents and routine status reports of incidents in progress for resolution such as a network or server outage that impacts Commonwealth Services. Examples of automated notifications include, but are not limited to, drive full (Warning, critical), unscheduled reboots, server instability, etc. and to be defined in the CCPM. Contractor must have to ability to provide performance information on a daily, weekly, and monthly basis.
4.	The Contractor must support the load testing of applications by providing additional targeted performance monitoring Services during the testing period. This service must be made available as an additional service. The Contractor must provide load-testing performance monitoring as an add-on service.
5.	Performance Monitoring training - The Contractor must provide the Commonwealth with training on the use of performance management tools and reporting.

6.	The Contractor must support for agency level monitors - agency applications may require additional application level monitoring to be provided and managed by the Commonwealth agencies. The Contractor must support synthetic transactions in applications to create a "dashboard" view that applications are working properly. The Contractor must allow additional agency based monitors to be installed and managed by individual Commonwealth Agencies.
Continual Service Improvement	
7.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
8.	The Contractor must implement initiatives to improve service quality. The Contractor must provide Continual Service Improvement to improve service quality.
9.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
10.	The Contractor must provide Continual Service Improvement to ensure service transparency.
11.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
12.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.2 Facilities Management

3.3.2.1 Facilities Architecture / Maintenance

The Facilities Architecture and Maintenance service must provide and staff a minimum of two fully operational datacenter facilities in a multi datacenter mode. This service requires the integration and alignment of the non-core Services, including those relating to the premises, required to operate and maintain a datacenter that fully supports the core objectives of this project.

These datacenters must be geographically dispersed to provide protection from regional disruptions such as weather, power or other emergencies. The process of locating and managing these physical environments must include defining the physical site requirements, selecting appropriate facilities, and designing effective processes for monitoring and maintaining environmental Services and managing physical access. Effective management of the physical environment reduces the possibility of service interruptions due to unauthorized access and damage to computing equipment and personnel. Please review Exhibit D.7 - EDC Facility Summary for information regarding the EDC facilities.

Facilities Management includes all aspects of providing and managing the physical environment. For example; power and power distribution, cooling and ventilation, fire detection and suppression, building security and access control, and environmental monitoring are all required. Listed below are the basic Services required, but not inclusive of all Services needed, to manage an enterprise class datacenters required by the Commonwealth.

Reference Documentation

Exhibit D.7 - EDC Facility Summary

Requirements

1.	Safe and secure datacenter. Two layers of authentication and appropriate clearances ist be required. The Contractor must provide datacenter environments which are secured to ensure that only authorized personal have physical access to the buildings, systems and all levels of data. This includes data storage within networked storage devices, servers, tapes, diskettes, optical and paper formats. The Contractor must comply with the security requirements of the Commonwealth. The Contractor must immediately inform the Commonwealth of any vulnerability or weakness in the Services, and recommend a solution or mitigation. TheContractor must assess the EDC facilities and provide a report to the

	Commonwealth as it pertains to required security upgrades.
2.	The Contractor must provide fully redundant environmental Services. To include, but not limited to, HVAC, UPS conditioned power and distribution, generator backup, automated transfer switch, fire suppression system. The Contractor must integrate its Facilities Management process with Service Management processes, especially Change Management, Incident Management, Service Continuity Management and Availability Management. The Contractor must confirm its ability to provide, manage, maintain and operate multiple Tier 3 equivalent facilities. The Contractor must assess the EDC facilities and provide a report to the Commonwealth as it pertains to required HVAC and power upgrades.
3.	The Contractor must staff the datacenters with appropriate operational and management levels of personnel 24/7/365. Critical engineering and management staff must be available to the Commonwealth Monday through Friday, between 8am – 5pm Eastern time excluding Commonwealth observed holidays. Access to operational staff must be available 24/7/365. Video surveillance system must be utilized at all entry points and throughout the datacenter and tape storage areas. Datacenter Staff are required to adhere to the Commonwealth requirements for background checks and security clearances. The Contractor is required to monitor the status of staff and to take appropriate action for staff found to subsequently have violated prescribed legal or ethical standards as described in **Schedule G –Staffing Plan and Key Positions**. Such violations must be immediately reported and appropriate actions taken. Commonwealth verification of the requirements will be necessary prior to staff working on Commonwealth related systems.
4.	Procurement Planning - The Contractor must provide program and processes to alter the datacenter environment and to refresh the environmental Services at end-of-life, and as additional Services are needed.
5.	Physical Access to Facilities- The Contractor must coordinate with the Commonwealth to provide for physical access and facilitate inspections by government authorities (including the Commonwealth) for auditing the conduct of government business.

	The Contractor must assess the EDC facilities and provide a report to the Commonwealth as it pertains to required physical access to the EDC facility.
6.	SLA Reporting - The Contractor must identify and create environmental service level objectives in the form of SLAs, and report on the service availability, problems, and corrective actions on a monthly basis. The Contractor must assess the EDC facilities and provide a report to the Commonwealth as it pertains to monitoring, maintain and reporting on EDC SLAs.
7.	The facilities must be designed and operated with environmentally friendly equipment and techniques, and be SSAE 16 compliant. The Contractor must assess the EDC facilities and provide a report to the Commonwealth as it pertains to monitoring, maintaining and reporting on EDC SLAs.
8.	The Contractor must schedule (at its expense) a SSAE 16 audit of the EDC datacenter no more than 12 months after the effective date of the contract.
Continual Service Improvement	
9.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
10.	The Contractor must provide Continual Service Improvement to improve service quality.
11.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
12.	The Contractor must provide Continual Service Improvement to ensure service transparency.
13.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.2.2 Site Operations

The Site Operation service must provide datacenter operations staff and management to operate and monitor the IT computing equipment and Services being provided. The staff must interface with Commonwealth staff to institute best practice datacenter Services. Datacenter operations include, but are not limited to, management of the computing platforms, storage, local area networking, security firewall, tape backup, and offsite tape rotation systems.

Reference Documentation

N/A

	Requirements	Describe Compliance
1.	The Contractor must monitor and operate the various computer systems, network, network and local disk storage and firewall security systems. pThe Contractor must rovide datacenter operations staff to monitor the computer system platforms, associated disk systems, networking Services and firewall and security systems. The Contractor must ensure proper equipment operations, timely batch jobs processing and appropriate response to any abnormal end and error conditions. The Contractor must support application specific operations as determined by the application owner. This includes executing the troubleshooting procedures required by the application owners as detailed within the CCPM. This may include operational activities and initial troubleshooting steps, contact and escalation lists (aka "Run Book"). This information must be maintained by the Contractor on an application by application basis and must be hosted within the Knowledge Management Portal. A daily operations batch schedule report must be created and used to log normal / abnormal conditions. Abnormal conditions must be investigated for problem determination and rerun. Any abnormal condition that cannot be corrected must be referred to technical support staff for resolution. The Contractor must properly clean and maintain equipment to minimize problems and outages, at intervals established with the Commonwealth or in compliance with	

	stated and written specifications. The Contractor must assess the EDC facilities and provide a report to the Commonwealth as it pertains to monitoring, maintaining and operating the installed infrastructure.
2.	For the systems that utilize tape backup Services, the Contractor must provide a structured tape management approach. For systems that utilize disk-2-disk backup approach the Contractor must provide a structured disk-2-disk approach. The Contractor must manage and maintain the tape backup system and Services. The Contractor must rotate designated tapes to, and returned from approved offsite storage location. Maintain detailed audit log of tape movement. Some agency applications fall under additional CJIS and CCHRI security requirements for tape backups. The Contractor must provide datacenter operations staff to manage and maintain the tape management system. Tapes must be rotated to, and returned from an approved offsite vaulting subcontractor. An automated software process must be utilized to report the completion status of backup processing, with electronic notification of failures sent to Contractor technical support, and identified Commonwealth staff for follow up and corrective action. The Contractor must provide the facilities to Retrieve External Storage Media from on-site and off-site storage as requested by the Commonwealth or as required in an emergency. The Contractor must wipe or erase the data and configuration information resident on the media prior to disposal or re-use, and in accordance with Commonwealth standards. The Contractor must dispose of retired media in an environmentally sound manner after purging any Commonwealth data using Commonwealth, and/or Federal guidelines/policies prior to disposing of media. The Contractor must operate media libraries and library management systems as required to provide the Services. mhe Contractor must Maintain an existing inventory control system to properly manage External Storage Media in storage and prepare them for shipment to the

	contingency site. The Contractor must assess the EDC tape backup facilities and provide a report to the Commonwealth as it pertains to manage and operated the installed tape backup systems and media operations.
3.	The Contractor must monitor physical access and security of the datacenter. Video surveillance is required. The Contractor must staff the datacenter with appropriate level of staff and management 24/7/365. The Contractor must monitor physical access to the datacenter and respond to security incidents in a consistent and auditable manner. All breaches must be reported to the Commonwealth for review and follow up action as required. Monitoring of the video system for all entry points and throughout the datacenter and tape storage areas must be included in this responsibility. The Contractor is required to adhere to the Commonwealth requirements for background checks and security clearances. Commonwealth verification that the requirements have been met will be necessary prior to Contractor working on Commonwealth related systems.
4.	The Contractor must manage and maintain equipment configuration inventory system. The Contractor must provide staff to create and maintain a configuration record for all hardware and software components in the datacenter. This must be an accurate record of all software, computing, disk storage, tape, network, racking, cables, and environmental equipment.
5.	The Contractor must provide programs and processes to alter the operational environment, and to refresh the Services at asset end-of-life or implementation of new technology Services, as these Services are needed.
6.	The Contractor must identify and create service objectives for the site operational Services in the form of SLAs, and report on the service availability, problems, and corrective actions on a monthly basis.

Continual Service Improvement	
7.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
8.	The Contractor must provide Continual Service Improvement to improve service quality.
9.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
10.	The Contractor must provide Continual Service Improvement to ensure service transparency.
11.	The Contractor must integrate Continuous Improvement Program processes into Availability Management and Service Level Management.
12.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.3 Managed Hosting Services

For all Managed Hosting Services, the Contractor must actively monitor the daily operations of the infrastructure used to provide the services. The Contractor must execute the troubleshooting procedures required by the application owners as detailed within the CCPM. This may include operational activities and initial troubleshooting steps, contact and escalation lists (aka "Run Book"). This information must be maintained by the Contractor on an application by application basis and must be hosted within the Knowledge Management Portal.

3.3.3.1 Windows Support

This service must provide hosting, operations and support Services for Microsoft Windows based servers (physical and virtual) located at the central datacenters. Contractor must support various hardware systems and various versions of the Microsoft operating systems, and support service software. The Contractor must provide support for both physical and virtual servers. Currently the Commonwealth utilizes virtualization technology from VMware and Microsoft's Hyper-V. See attached Exhibits for hardware and software details. The number and level of support staff members required to perform the below listed tasks must be determined by the Contractor, based on number of Commonwealth clients, hardware, software, and operating systems being serviced.

Listed below are the basic Services required, but not inclusive of all Services needed, to manage an enterprise class datacenter required by the Commonwealth. The Contractor must include these Services within the base level of Services in this Offering. Change requests must be approved and authorized using the change management process.

Reference Documentation

N/A

	Requirements
1.	The Contractor must monitor local operations, troubleshoot and resolve operational issues. The Contractor must actively monitor the daily operations of all MS Windows servers. Maintain a log for each server detailing hardware / software configuration and critical service operations. The Contractor must review and document its review of system logs on a weekly basis to ensure critical system Services are processing without errors. The Contractor must complete weekly server log indicating which logs were reviewed, date and initial the log.

	•
2.	The Contractor must monitor system backup processing on a daily basis. The Contractor must review daily backup log for successful completion. Note failures, and correct the problems. The Contractor must create problem record for any abnormal condition and any repairs that have been made, re-execute as appropriate. An automated software process must be utilized to report the completion status of backup processing, with electronic notification of failures sent to Contractor technical support, and identified Commonwealth staff for follow up and corrective action.
3.	The Contractor must provide Microsoft Hyper-V and VMware trained staff holding manufacturer recognized certifications for hardware and software technical support. Post award; the Contractor must provide the Commonwealth a resume or CV for Key Positions assigned to this engagement. A copy must be maintained on Contractor file including verified background clearances as required.
4.	The Contractor must provide cost effective operational and technical support for the Windows computing platform. The Contractor must provide platform level operational and technical support for the computing platform. The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. The Contractor must provide a tiered level of support Services (e.g. Gold, Silver, and Bronze). The Contractor must provide technical advice and support to the Application Development and Maintenance (ADM) and Database Administration (DBA) staffs, as required. Post award; The Contractor must provide Commonwealth with a resume or CV for Key Positions assigned to this engagement. A copy must be maintained on Contractor file.
5.	The Contractor must ensure network connectivity and consistent system response

	times. The Contractor must utilize automated system management tool(s) to ensure real-time monitoring and notification of server availability and response times. Stop / Start times of servers will be a source of input for SLA measurements. Identify tool set(s).
6.	The Contractor must ensure server operating systems are maintained with the current patch level, based on the Services provided by the server. The Contractor must analyze monthly service patches and determine which need to be applied, by server type. The Contractor must create a change record, log the update in the server log, install based on server maintenance schedule and update the server configuration record. The Contractor must notify impacted Commonwealth users immediately of any unscheduled service interruptions via email/web. The Contractor must be document normal work hours and holiday schedules with each agency to determine the contact method and escalation process of each Commonwealth agency.
7.	The Contractor must provide a review and analysis of system performance/capacity to determine if current performance/capacities are sufficient to support the needs of the stakeholders.
8.	User Account Management - phe Contractor must Provide certified operating system administration staff to create and maintain the registration of profiles, associated groups, and the security permissions required to service the approved client base of the operating systems.
9.	Procurement Planning The Contractor must provide program and processes to refresh the hardware at asset end-of-life, and as upgrades are needed to meet anticipated growth in utilization.
10.	SLA Reporting The Contractor must collect actual system availability, utilization and response time data. On a monthly basis, the Contractor must create a Service Level Agreement

	report for the Commonwealth team.
11.	Installation of Windows updates/patches must be coordinated by Agency. For IES, windows version upgrades must be SAP certified. The Contractor must coordinate at an agency level and account for any required patching as technology upgrades require.
12.	The Contractor must provide Software License Management.
Continual Service Improvement	
13.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
14.	The Contractor must provide Continual Service Improvement to improve service quality.
15.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
16.	The Contractor must provide Continual Service Improvement to ensure service transparency.
17.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.3.2 Storage Management

The Storage Management service must provide hosting and operational support Services for storage management systems. Storage management systems must be maintained at current support levels for optimal performance, recoverability, and secure operations. Systems must be located in the Contractor's datacenters. The Contractor must support the hardware and software components of these systems.

The proposed storage management service and solution must address adherence to multiple security and compliance requirements relating to the storage and management of multiple types of data assets (e.g. CHRIA law, criminal history).

Reference Documentation

N/A

	Requirements
1.	The Contractor must monitor local operations, troubleshoot and resolve operational issues. The Contractor must monitor system backup processing on a daily basis. The Contractor must actively monitor the daily operations of all storage units. The Contractor must maintain a log for each storage unit. The Contractor must complete weekly service logs indicating the frequency logs are reviewed, and the status of the daily backup process. The Contractor must create problem records for any abnormal condition and any repairs that have been made. •
2.	The Contractor must provide appropriately trained staff that hold current manufacturer certifications for hardware and software technical support (where available). Staff must interact with vendor support Services as needed. The Contractor must provide Commonwealth with a resume or CV for Key Positions assigned to this engagement. A copy must be maintained on Contractor file including required background checks and clearances as required.
3.	The Contractor must provide platform level operational and technical support for the computing platform. The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or

	Commonwealth Users. The Contractor must provide a tiered level of support Services (e.g. Gold, Silver, Bronze)
4.	The Contractor must monitor system backup processing on a daily basis. The Contractor must review daily backup log for successful completion. The Contractor must note failures, and correct the problem. The Contractor must create problem record for any abnormal condition and any repairs that have been made. An automated software process must be utilized to report the completion status of backup processing, with electronic notification of failures sent to identified Commonwealth staff and Contractor technical support for follow up and corrective action.
5.	The Contractor must ensure network connectivity, and consistent system response times. The Contractor must identify and use automated system management tool(s) to ensure storage system availability and expected response times. Stop / Start time records must be a source of input for SLA measurements.
6.	The Contractor must ensure storage device operating systems are maintained with the current system patch level, including firmware upgrades. The Contractor must analyze monthly service patches and determine which patches need to be applied. The Contractor must create a change record, log the update in the storage system log, and install based on maintenance schedule. The Contractor must notify impacted Commonwealth users immediately of any unscheduled service interruptions via email/web. The Contractor must document normal work hours and holiday schedules with each agency to determine the contact method and escalation process of each Commonwealth agency. The Contractor must coordinate at an agency level and account for any required patching as technology upgrades require.
7.	The Contractor must utilize data storage conservation techniques such as data de-duplication or other industry standards, to reduce the overall footprint of the data.

8.	The Contractor must propose options/solutions for self-provisioning or limited self-management of storage as a service.
Continual Service Improvement	
9.	. Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
10.	The Contractor must provide Continual Service Improvement to improve service quality.
11.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
12.	The Contractor must provide Continual Service Improvement to ensure service transparency.
13.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.3.3 ERP Hosting – SAP / Oracle

ERP Hosting – SAP service must provide hosting and operational support Services for two SAP-ERP systems that are currently located at the DPH. One system Services the General Accounting System application, and the other Services the Integrated Tax System application for the Department of Revenue. Each application has associated development and testing environments support on segregated equipment. Contractor must support various production and non-production versions of the applications and the associated hardware. The roles and the number of staff members required to perform the below listed tasks must be determined by the Contractor.

Due to the critical and complex nature of these SAP environments, the Commonwealth requires an experienced SAP hosting provider. The Contractor's proposed target infrastructure design for the Commonwealth's SAP environments must include a certified SAP sizing report prior to migration of the systems.

The ERP Hosting – Oracle service must provide hosting and operational support Services for the current Oracle Enterprise system utilized by the Pennsylvania Liquor Control Board (PLCB). The application has associated development and testing environments support on segregated equipment. Contractor must support various production and non-production versions of the applications and the associated hardware.

Reference Documentation

N/A

Requirements	
1.	The Contractor must provide ERP Hosting Services for SAP and Oracle based applications.
2.	The Contractor must monitor local system operations, troubleshoot and resolve operational issues. The Contractor must actively monitor the daily operations of all ERP systems. The Contractor must maintain a log for each server detailing hardware / software configuration and critical service operations. The Contractor must review and document its review of system logs on a weekly basis to ensure critical system Services are processing without errors. The Contractor must complete weekly server log indicating which logs were reviewed, date and initial the log.

	•
3.	The Contractor must monitor system backup processing on a daily basis. The Contractor must review daily backup log for successful completion. Note failures, and correct the problem. The Contractor must create problem record for any abnormal condition and any repairs that have been made. An automated software process must be utilized to report the completion status of backup processing, with electronic notification of failures sent to Contractor technical support, and identified Commonwealth staff for follow up and corrective action.
4.	The Contractor must provide IBM, SAP, and Oracle trained staff holding current manufacturer certifications for hardware and software technical support. Staff must interact with vendor support Services when needed. The Contractor must provide Commonwealth with a resume or CV for Key Positions assigned to this engagement. A copy must be maintained on Contractor file including required background checks and clearances as required.
5.	The Contractor must provide cost effective operational and technical support for the computing platform. The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. The Contractor must provide a tiered level of support Services (e.g. Gold, Silver, and Bronze).
6.	The Contractor must ensure network connectivity, and consistent system response times. The Contractor must utilize automated system management tool(s) to ensure real-time monitoring and notification of server availability and response times. Stop / Start times of servers must be a source of input for SLA measurements. Identify tool set(s).
7.	The Contractor must ensure server operating systems are maintained with the current system patch level, based on the Services provided by the server. The Contractor must analyze monthly service patches and determine which patches need to be applied, by server type. The Contractor must create a change record, log the update in the server log, and install based on server maintenance schedule.

	The Contractor must implement a Patch Management Program to ensure the timely application of updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines.
8.	User Account Management The Contractor must provide certified system administration staff to create and maintain the registration of profiles, associated groups, and the security permissions required to service the approved client base of the system.
9.	Procurement Planning The Contractor must provide program and process to refresh the hardware at asset end-of-life, and when upgrades are needed to meet anticipated growth in utilization.
10.	SLA Reporting The Contractor must collect actual system availability, utilization and response time data. On a monthly basis, the Contractor must create a SLA report for the Commonwealth and Vendor Management teams.
Continual Service Improvement	
11.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
12.	The Contractor must provide Continual Service Improvement to improve service quality.
13.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
14.	The Contractor must provide Continual Service Improvement to ensure service

	transparency.
15.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.3.4 UNIX Support – AIX / Linux

The Unix Support – AIX / Linux service must provide hosting and operational support Services for AIX and Linux server systems. The systems must be located in the Contractor's datacenters. Contractor must support various versions of the AIX and Linux operating systems. The number of staff members required to perform the operational tasks listed below must be determined by the Contractor.

Reference Documentation

N/A

	Requirements
1.	The Contractor must onitor local operations, troubleshoot and resolve operational issues. The Contractor must actively monitor the daily operations of all AIX / Linux systems. The Contractor must assume responsibility for all master and subordinate console functions. The Contractor must issue operator commands to control all In-Scope platforms. The Contractor must Assume the responsibility for and perform all console operations. The Contractor must monitor the performance of online interactive traffic and take appropriate action to resolve online-system-related incidents and/or problems, including escalating (as appropriate) the incident and/or problem to the proper Level 2 Support group. The Contractor must monitor the transmission of files between the Commonwealth and any other parties as designated by Commonwealth. The Contractor must provide operational support for data transmission (send/receive), consistent with commercial or agency standards. The Contractor must manage, maintain, monitor, and control online and batch process, both scheduled and unscheduled (including on-request processing). The Contractor must maintain a log for each server detailing hardware / software configuration and critical service operations. The Contractor must review the system logs on a weekly basis to ensure critical system Services are processing without errors. The Contractor must review and document its review of system logs on a weekly basis to ensure critical system Services are processing without errors. The Contractor must complete weekly server log indicating which logs were reviewed, date and initial the log. The Contractor must maintain and update the operational documentation for all operations procedures and Services. •

2.	The Contractor must provide a review and analysis of UNIX system performance/capacity to determine if current performance/capacities are sufficient to support the needs of the UNIX stakeholders. The Contractor must perform an initial review and audit of the current UNIX usage, procedures and reports and provide an analysis of the current UNIX usage, processes and reports currently being supported. The Contractor must document its review and audit findings and recommendations.
3.	Production Control and Scheduling (including batch processing) The Contractor must schedule batch jobs within Commonwealth agency defined windows to achieve maximum performance as long as required batch completion times are met. A cross platform (e.g. Window, Unix, and Mainframe) system must be required. Where practicable, provide for automated scheduling of batch work and processes including backups. Commonwealth agencies have a number of applications that require scheduling software / batch processing software (i.e. $Universe, SAP certified, etc.), this software is heavily integrated into many of these systems. The Contractor must develop, maintain, and utilize an emergency contact list and escalation procedures to resolve abnormally ended jobs. The Contractor must resolve abnormally ended jobs caused by conditions external to production programs. The Contractor must repair abnormally ended jobs when possible and perform job restarts in accordance with the Service Management Manual. The Contractor must check job outputs and print queues, and change job priorities. The Contractor must notify Commonwealth agencies in accordance with the Contractor's proposed notification procedures in the event that applications do not execute properly.
4.	The Contractor must monitor system backup processing on a daily basis. The Contractor must review daily backup logs for successful completion. The Contractor must note failures, and correct the problem. The Contractor must create problem record for any abnormal condition and any repairs that have been made. An automated software process must be utilized to report the completion status of backup processing, with electronic notification of failures sent to Contractor technical

	support, and identified Commonwealth staff for follow up and corrective action.
5.	The Contractor must provide AIX and Linux trained staff that hold current manufacturer certifications for hardware and software technical support. The Contractor must provide technical advice and support to the Application Development and Maintenance (ADM) and Database Administration (DBA) staffs, as required. Post award; The Contractor must provide Commonwealth with a resume or CV for Key Positions assigned to this engagement. A copy must be maintained on Contractor file.
6.	The Contractor must provide cost effective operational and technical support for the computing platform. The Contractor must provide platform level operational and technical support for the computing platform. The Contractor must list the service levels for the various service tiers that can be provided. See Schedule J.1 Data Center Service Level Management for the definitions of the expected options. The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users.
7.	The Contractor must ensure network connectivity to COPANET, and consistent system response times. The Contractor must utilize automated system management tool(s) to ensure real-time monitoring and notification of server availability and response times. Stop / Start times of servers must be a source of input for SLA measurements.
8.	The Contractor must ensure server operating systems are maintained with the current system patch level, based on the Services provided by the server. The Contractor must analyze monthly service patches and determine which patches need to be applied, by server type. The Contractor must create a change record, log the update in the server log, and install based on server availability schedule. Change requests must be approved and authorized using the change management process. The Contractor must notify the Commonwealth of any scheduled or unscheduled service interruptions.

	The Contractor must implement a Patch Management Program to ensure the timely application of updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines.
9.	User Account Management The Contractor must provide certified system administration staff to create and maintain the registration of profiles, associated groups, and the security permissions required to service the approved client base of the system and application.
10.	Procurement Planning The Contractor must provide program and processes to refresh the hardware at asset end-of-life, and when upgrades are needed to meet anticipated growth in utilization.
11.	SLA Reporting The Contractor must collect actual system availability, utilization and response time data. On a monthly basis, the Contractor must create a Service Level Agreement report for the Commonwealth and Vendor Management teams.
12.	The Contractor must provide Software License Management.
Continual Process Improvement	
13.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
14.	The Contractor must provide Continual Service Improvement to improve service quality.
15.	The Contractor must provide Continual Service Improvement to improve client satisfaction.

16.	The Contractor must provide Continual Service Improvement to ensure service transparency.
17.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.3.5 Mainframe Services

The Mainframe Services must provide hosting and operational support Services for both IBM and Unisys mainframe systems. These mainframe systems run several Logical Partitions (LPAR's) and Integrated Facility for Linux (IFL) partitions. The Contractor must support the mainframe operating systems and the management of the associated partitions. The number of support staff members required to perform the tasks listed below must be determined by the Contractor.

Listed below are the basic Services required to manage the Mainframe systems required by the Commonwealth. Contractor must include these Services in addition to the base level of Services in this Offering.

Reference Documentation

Schedule J.1 – Data Center Service Level Management

Schedule J.2 – Data Center Service Level Matrix

Schedule J.3 – Data Center SLA Definitions

Requirements	
1.	The Contractor must provide Mainframe systems and operations (Unisys, IBM). The Contractor must ability to purchase metered IBM & Unisys Million Instructions Per Second (MIPS). The Contractor must monitor local operations, troubleshoot and resolve operational

	issues. The Contractor must actively monitor the daily operations of all mainframe (current) systems. The Contractor must assume responsibility for all master and subordinate console functions. Issue operator commands to control all In-Scope platforms throughout the organization. The Contractor must provide all tools and apps that are currently being provided, for example MAPPER/APPMAP, browser based terminal emulation access, and middleware components (like OpenTI, IBM WBM & WMQ, etc.) that are critical to agency operations and application usage. The Contractor must assume the responsibility for and perform all console operations. The Contractor must monitor the performance of online interactive traffic and take appropriate action to resolve online-system-related incidents and/or problems, including escalating (as appropriate) the incident and/or problem to the proper Level 2 Support group. The Contractor must monitor the transmission of files between the Commonwealth and any other parties as designated by the Commonwealth. The Contractor must provide operational support for data transmission (send/receive), consistent with commercial or agency standards. The Contractor must manage, maintain, monitor, and control online and batch process, both scheduled and unscheduled (including on-request processing). The Contractor must maintain a log for each system detailing hardware / software configuration and critical service operations. The Contractor must review the system logs on a weekly basis to ensure critical system Services are processing without errors. The Contractor must maintain and update the operational documentation for all operations procedures and Services. •
2.	The Contractor must provide a review and analysis of mainframe usage to determine if current usage is required to support the needs of the mainframe stakeholders. The Contractor must perform an initial review and audit of the current mainframe usage, procedures and reports and provide an analysis of the current mainframe usage, processes and reports currently being supported. The Contractor must document its review and audit findings and recommendations.
3.	Production control and scheduling (including batch jobs) The Contractor must provide a process of scheduling batch jobs within

	Commonwealth agency defined windows to achieve maximum performance as long as required batch completion times are met. The Contractor must provide for automated scheduling of batch work and processes including backups. The Contractor must provide the capability for agencies to schedule and monitor batch processing. The Contractor must develop, maintain, and utilize an emergency contact list and escalation procedures to resolve abnormally ended jobs. The Contractor must resolve abnormally ended jobs caused by conditions external to production programs. The Contractor must repair abnormally ended jobs when possible and perform job restarts in accordance with the Service Management Manual. The Contractor must check job outputs and print queues, and change job priorities. The Contractor must notify Commonwealth agency customers in accordance with the notification procedures in the event that applications and batch processing do not execute properly.
4.	Batch Monitoring The Contractor must actively monitor batch operations on all mainframe systems on a daily basis. The Contractor must maintain a log for each batch system and review the system logs on a daily basis to ensure key batch Services are processing without errors. The Contractor must review and document its review of system logs on a daily basis to ensure critical batch Services are processing without errors. The Contractor must notify Commonwealth agencies in accordance with the notification procedures in the event that batch processing does not execute properly. The Contractor must provide online monitoring of batch processing by the Commonwealth.
5.	The Contractor must monitor system backup processing on a daily basis. The Contractor must provide a process to review daily backup log for successful completion. The Contractor must note any failures, initial and date the log, and correct the problem. The Contractor must create problem record for any abnormal condition and any repairs that have been made. Automated software process must be utilized to report the completion status of

	backup processing, with electronic notification of failures sent to Contractor technical support, and identified Commonwealth staff for follow up and corrective action.
6.	The Contractor must provide cost effective, operational, and technical support for the computing platform. The Contractor must provide platform level operational and technical support for computing platforms including Mainframe, Storage, AIX, LINUX, SAP, Oracle and Windows architects. The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. The Contractor must provide technical advice and support to the Application Development and Maintenance (ADM) and Database Administration (DBA) staffs, as required. The Contractor must list the service levels for the various levels of service tiers that can be provided. See **Schedule J.1 Data Center Service Level Management** for the definitions of the expected options.
7.	The Contractor must ensure network connectivity to COPANET, and consistent system response times. The Contractor must utilize automated system management tool(s) to ensure real time monitoring and notification of system availability and response times. Stop / Start times of servers must be a source of input for SLA measurements
8.	The Contractor must ensure operating systems are maintained with the current system patch level, based on the Services provided by the server. The Contractor must analyze monthly service patches and determine which patches need to be applied. The Contractor must create a change record, log the update in the system log, and install based on system availability schedule. The Contractor must notify the Commonwealth of any scheduled or unscheduled service interruptions with consideration to Commonwealth scheduled holidays and standard workweek. The Contractor must implement a Patch Management Program to ensure the timely application of updates on all infrastructure platforms in accordance with

	Commonwealth IT policy guidelines.
9.	User Account Management The Contractor must provide certified system administration staff to create and maintain the registration of profiles, associated groups, and the security permissions (including password management) required to service the approved client base of the system and application.
10.	Procurement Planning The Contractor must provide a program and process to refresh the hardware at asset end-of-life, and when upgrades are needed to meet anticipated growth in utilization
11.	SLA Reporting The Contractor must collect actual system availability, utilization and response time data. The Contractor must create a SLA report on a monthly basis, for the Commonwealth and Contractor.
12.	The Contractor must provide Software License Management.
13.	The Contractor must coordinate at an agency level and account for any required patching as technology upgrades require.
Continual Service Improvement	
14.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
15.	The Contractor must provide Continual Service Improvement to improve service quality. On a quarterly basis, the Contractor must make recommendations to the

	Commonwealth team any system changes that would be appropriate to maintain or improve SLA commitments.
16.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
17.	The Contractor must provide Continual Service Improvement to ensure service transparency.
18.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.3.6 Security & Firewall

The Security & Firewall service must provide hosting and operational support Services for security products and firewalls located at the datacenters. These security devices and Services protect the equipment and applications in the datacenters from malicious attempts to penetrate the computing environment with worms, phishing, Trojan horse malware, and unlawful data access. The Contractor must install and maintain mainstream security hardware and software utilizing current industry best practices sufficient to protect the enterprise class datacenter environments with a significant volume of sensitive class data (e.g. HIPAA, CJIS, CHRIA, PCI, PII, etc.). The number of support staff members required to perform the tasks listed below must be determined by the Contractor.

Listed below are the basic Services required to manage the security & firewall systems required by the Commonwealth. The Contractor must include these Services in addition to the base level of Services in this Offering.

Reference Documentation

N/A

	Requirements	Describe Compliance
1.	The Contractor must monitor local security operations, troubleshoot and resolve operational issues. The Contractor must actively (normal daily process) monitor the operations of all security, firewall systems and security zones. The Contractor must maintain a log for each server/appliance/system and review the system logs on a daily basis to ensure key system Services are processing without errors. The Contractor must provide the ability to import data to agency SIEM or enterprise SIEM tool for correlation and reporting purposes. The Contractor must provide the ability for Commonwealth agencies to request security modifications (firewall changes) as documented in the CCPM. The Contractor must document review of the system security logs on a weekly basis to ensure critical system Services are processing without errors. The Contractor must complete weekly server log indicating which logs were reviewed, date and initial the log.	
2.	The Contractor must provide security training to Commonwealth personnel specific to the security Services being delivered. The Contractor must provide the Commonwealth with a resume or CV for Key Positions assigned to this engagement. The Contractor must comply with agency background checks and clearances as defined in Appendix A - Terms and Conditions.	
3.	The Contractor must achieve cost effective 24/7 security operational coverage for this critical system. The Contractor must provide dedicated security support staff onsite during scheduled business days, and automated log and notification systems to alert security team of possible intrusion events in real time mode.	

	The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. Security staff must be available to respond and evaluate the severity of the event 24/7/365.
4.	The Contractor must ensure network connectivity, and ensure consistent system response times. The Contractor must utilize automated system management tool(s) to ensure real-time monitoring and notification of server availability and response times.
5.	The Contractor must ensure server/appliance operating systems are maintained with the current system patch level. The Contractor must implement a Patch Management Program to ensure the timely application of security updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines. The Contractor must ensure signature and threat analysis files are updated on a regular basis, and conform to industry best practices. The Contractor must analyze monthly service patches and determine which patches need to be applied, by server type. The Contractor must create a change record, log the update in the server log, and install based on server availability schedule. The Contractor must notify the Commonwealth of any scheduled or unscheduled service interruptions.
6.	The Contractor must provide active security operations, corrective action, and reporting by utilizing Contractor software to monitor inbound and outbound traffic for malicious patterns and content, and take appropriate protective measures. The ability to utilize security management software to detect threats and analyze firewall logs, to proactively detect and protect from malicious events. The Contractor must comply with agency specific security requirements. Comply with all agency and OA/OIT security policies and ITBs. On a quarterly schedule, the Contractor must run appropriate penetration testing, and report results to Commonwealth and Contractor. The Contractor must create monthly report on events, incidents and corrective activities. The Contractor must provide a report that indicates systems not in compliance with security standards.

	The Contractor must provide real time reporting of security breaches.
7.	The Contractor must provide SLA Reporting including but not limited to collecting actual system availability, utilization and response time data. che Contractor must Create a Service Level Agreement report for the Commonwealth and Contractor on a monthly basis.
8.	The Contractor must provide Software License Management.
Continual Process Improvement	
9.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
10.	The Contractor must provide Continual Service Improvement to improve service quality. The Contractor must make recommendations to the Commonwealth team any system changes that would be appropriate to maintain or improve SLA commitments on a quarterly basis.
11.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
12.	The Contractor must provide Continual Service Improvement to ensure service transparency.
13.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables
Deliverables are defined in **Schedule K – Key Program Deliverables**

3.3.3.7 Database Management Services

The Database Management Service must provide the Commonwealth with a "managed database" service offering. The service must include the database platform (Hardware/Software) and the ongoing database management administration Services. The Contractor must provide a multi-tiered level of service (e.g. Gold, Silver, and Bronze) across multiple database platforms. While the Commonwealth's application portfolio (over 2,000 applications) currently utilizes numerous database technologies, the majority of the applications that are utilizing database technologies are using Oracle, Microsoft SQL, IMS, Sybase, or DB2.

It is anticipated the Database Management Services will be an optional service that can be utilized by the Agencies beyond the basic infrastructure Services.

Reference Documentation

N/A

	Requirements
1.	The Contractor must design, manage, and administer database environments that support multiple business applications.
2.	The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. ○
3.	The Contractor must monitor database backup and recovery processing on a daily basis. The Contractor must review daily backup log for successful completion. The Contractor must note any failures, initial and date the log, and correct the problem. The Contractor must create problem record for any abnormal condition and any repairs that have been made. Automated software process must be utilized to report the completion status of

	backup processing, with electronic notification of failures sent to Contractor technical support and identified Commonwealth staff for follow up and corrective action.
4.	The Contractor must provide a multi-tiered level of service (e.g. Platinum, Gold, Silver, Bronze, and Basic) for Oracle, Sybase, Microsoft SQL, IMS or DB2 database platforms. The Contractor must provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users.
5.	The Contractor must utilize the proposed service management Services (e.g. Incident, Service Request, Change, Configuration) to manage database management Services with multiple agency customers.
6.	The Contractor must provide a review and analysis of system performance/capacity to determine if current performance/capacities are sufficient to support the needs of the stakeholders.
7.	The Contractor must monitor system backup processing on a daily basis. The Contractor must review daily backup log for successful completion. The Contractor must note failures, and correct the problem. The Contractor must create problem record for any abnormal condition and any repairs that have been made. An automated software process must be utilized to report the completion status of backup processing, with electronic notification of failures sent to Contractor technical support, and identified Commonwealth staff for follow up and corrective action.
Continual Process Improvement	
8.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
9.	The Contractor must provide Continual Service Improvement to improve service quality.

10.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
11.	The Contractor must provide Continual Service Improvement to ensure service transparency.
12.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.3.3.8 Limited-Use Colocation Services

While the Commonwealth's goal is to move to a fully managed infrastructure Services model, it is anticipated that there will be a need for the Contractor to provide some limited co-location Services within its proposed datacenter Services solution. Some examples of where colocation Services may be required are:

- Support for existing systems in the EDC prior to transformation to a fully managed service.
- 3rd Party Vendor Equipment that requires co-location with the primary systems for performance and/or security reasons.

The Contractor must provide datacenter co-location Services with the following options:

- Co-location Service Option 1: Datacenter Only (Rackspace, power, network connectivity, basic infrastructure Services)
- Co-location Service Option 2: Datacenter with Managed Services Option (Bronze, Silver, Gold Tiers) – Technology owned maintained by 3rd Party or Commonwealth
- Co-location Service Option 3: Remote Hands Support

Currently there are 3 areas within the Commonwealth EDC that are supporting co-location Services. EDC facility summary is provided as **Exhibit D.7**. While many of these systems will be migrated to a fully managed service over time, the Contractor must plan for co-location space in its Datacenter Architecture.

Reference Documentation Exhibit D.1 through D.15 Series - Enterprise Datacenter (EDC) Exhibits	
Requirements	
1.	The Contractor must provide colocation Services within each of the datacenters. One of those centers must be the Commonwealth EDC.
2.	The Contractor must provide Colocation Service Option 1: Datacenter Only (Rackspace, power, network connectivity, basic infrastructure Services)
3.	The Contractor must provide Co-location Service Option 2: Datacenter with Managed Services Option (Bronze, Silver, Gold Tiers) – Technology owned maintained by 3rd Party or Commonwealth
4.	The Contractor must provide Co-location Service Option 3: Remote Hands Support
Continual Process Improvement	
5.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
6.	The Contractor must provide Continual Service Improvement to improve service quality.
7.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
8.	The Contractor must provide Continual Service Improvement to ensure service transparency.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.4 Capacity on Demand Services

3.3.4.1 Server Capacity on Demand

The Server Capacity On Demand is an Infrastructure as a Service (IaaS) offering that ensures the ready availability of server and mainframe capacity to accommodate cyclical, and seasonal, processing requirements, sudden or unplanned production demands, and short-term application development needs. Server capacity may be physical or virtual as requested by the Commonwealth.

The Server Capacity On Demand would include support for the following system platforms:

- X86
  - Windows
  - Linux
- I Series
  - i5/OS
- P Series
  - Linux
  - AIX
- Mainframe
  - IBM
  - Unisys

Reference Documentation

N/A

Requirements

1.	The Contractor must provide a provisioning capability to support on-demand requests for server resource capacity. The Commonwealth will require access to additional capacity on demand for the following platforms: X86 • Windows • Linux IBM I Series • i5/OS IBM P Series • Linux • AIX

	Mainframe • IBM • Unisys
2.	The Contractor must maintain an adequate inventory of Windows/Linux, mid-range, and Mainframe server capacity that must be sufficient to satisfy forecasted informal, ad hoc, and cyclical Commonwealth requests.
3.	As a function of ongoing account management, the Contractor must meet with the Commonwealth/Agencies to assess future server requirements.
4.	The Contractor must encourage Commonwealth server conservation via server virtualization when appropriate.
5.	The Contractor must provide expedited service, when requested, to satisfy urgent requirements.
6.	The Contractor must provide a self-provisioning tool to be used by the agencies to order and configure servers.
Continual Process Improvement	
7.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
8.	. The Contractor must provide Continual Service Improvement to improve service quality.
9.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
10.	The Contractor must provide Continual Service Improvement to ensure service transparency.
11.	. The Contractor must provide Continual Service Improvement to ensure service sustainability.
12.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables
Deliverables are defined in **Schedule K – Key Program Deliverables**

3.3.4.2 Storage Capacity on Demand

The Storage Capacity On Demand service is an Infrastructure as a Service (IaaS) offering that ensures the ready availability of storage capacity to accommodate cyclical, or seasonal, storage requirements, sudden or unplanned production demands, short-term application development needs, and storage access for web enabled devices.

Reference Documentation

N/A

Requirements

1.	The Contractor must maintain an adequate access to, or supply of storage area equipment, to satisfy forecasted informal, ad hoc, and cyclical Commonwealth requests. ○
2.	The Contractor must meet with the Commonwealth on a annual basis, or as requested, to assess future storage requirements.
3.	The Contractor must encourage data storage conservation via data de-duplication, compression, and other industry techniques.
4.	The Contractor must provide expedited data storage service to satisfy urgent requirements, as requested.
5.	The Contractor must provide online storage capabilities (Centralized Private Cloud Storage), which includes web service, browser, and mobile device accessibility, that are fully secure, (compliant with ISO 27000, NIST 800-53, and Secure SDLC). This service must provide file-level encryption, multiple hierarchical permission levels, account level dynamic storage-sizing, and anti-virus capability.
6.	Storage solution must include the capability to make quick copies of databases (SNAPS, Flash copies). Storage backup proposals must include disk-2-disk solutions.

Continual Service Improvement	
7.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
8.	The Contractor must provide Continual Service Improvement to improve service quality.
9.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
10.	The Contractor must provide Continual Service Improvement to ensure service transparency.
11.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
12.	The Contractor must provide Continual Service Improvement to improve/reduce costs.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.3.4.3 DR Infrastructure on Demand

The DR Infrastructure On Demand service is an infrastructure as a service (IaaS) offering that ensures the ready availability of DR infrastructure; servers, storage systems, networking capabilities, etc. This infrastructure must enable Commonwealth datacenters to recover critical business applications and data in the event of a disaster.

Reference Documentation

N/A

	Requirements
1.	The Contractor must maintain an adequate inventory of servers, storage systems, and networking capacity sufficient to satisfy forecasted informal, ad hoc, and cyclical Commonwealth requests. ○
2.	The Contractor must meet with the Commonwealth on a annual basis and as requested to assess its future DR requirements.
3.	The Contractor must revise datacenter and disaster recovery plans, upon request of the Commonwealth.
4.	The Contractor must provide support for the Commonwealth with identifying and establishing DR or Continuity of Government (CoG) capabilities and plans.
	Continual Process Improvement
5.	Related to the project management and contract management role, the Contractor must provide Continual Service Improvement to reduce service risks.
6.	The Contractor must provide Continual Service Improvement to improve service quality.

7.	The Contractor must provide Continual Service Improvement to improve client satisfaction.
8.	The Contractor must provide Continual Service Improvement to ensure service transparency.
9.	The Contractor must provide Continual Service Improvement to ensure service sustainability.
10.	The Contractor must provide Continual Service Improvement to improve/reduce costs.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

3.3.4.4 Additional Technical Services

The Commonwealth may require additional technical support beyond the standard service level based infrastructure Services. The availability and access to skilled resources would complement the standard hosting offerings. The Contractor is expected to provide these additional resources for both short and longer-term engagements.

Reference Documentation

N/A

Requirements

1.	The Contractor must provide access to skilled technology resources. Additional technology support Services categories include but are not limited to: • Infrastructure (mainframe, mid-range and x86) Architects/Engineers • Performance Specialists

	• Database Architects • Database Analysts • Security Architects • Security Analysts • Unix (AIX, Linux) Administrators • Windows Server Administrators • Mainframe Systems Programmers • Batch Administrators • Microsoft Product Specialists (e.g. Exchange, SharePoint) • 3rd Party Software Product Specialists • Basis and SAP Oracle support
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.4 Transition Services

3.4.1 Transition Services – Guiding Principals

At present, the Commonwealth's information technology Services are hosted at a variety of Commonwealth datacenters, including:

- Shared enterprise facilities - (EDC and DPH) and;
- Agency facilities, for example those managed and maintained by DPW, DOR, DOH, PSP and DLI.

The Commonwealth datacenter locations are identified in Exhibit S - Datacenter locations.

In an effort to reduce datacenter costs, simplify datacenter administration, and provide more robust and reliable information Services to the Commonwealth, the Commonwealth datacenter modernization initiative calls for the phased migration or transition of Commonwealth information Services to the newly-established Contractor managed multi datacenter environment.

The Guiding Principles associated with the transition to the new datacenter environment are:

- Transition approach must meet the milestone objectives as described in **Schedule D – Transition Milestones**.
    - Based on the Commonwealth's number of licenses, additional licenses may be needed for the transition of Services. The Contractor is responsible for any additional licenses needed for the transition of service.
    - The Commonwealth, at its sole discretion, may procure the software licenses through existing statewide contract.
- Initial transition approach of the Commonwealth's mainframe and SAP environments requires that the results be as close to the Commonwealth's current configuration as technically possible.
    - Any deviations from current environments must be approved by the Commonwealth.
- Customized approach developed to meet the needs of the Commonwealth
    - The selected Contractor's transition approach must account for Commonwealth specific needs such as the Transition Considerations and Critical Configuration Considerations as described in Exhibits R and T.
    - The selected Contractor must implement a discovery process during transition planning to acquire information required to develop a Detailed Transition Plan.
    - The selected Contractor must include application level transformation models. Transformation models must take into account the initial transition approach that the Commonwealth's mainframe and SAP environments must be as close to the Commonwealth's current configuration as possible.

- The Contractor must provide transformation project managers experienced in projects of similar size and complexity.

This project requires:

- Strong governance model, which includes:
    - Clearly defined roles and responsibilities
    - Jointly developed processes
    - Effective meetings and reporting framework to minimize resource requirements while achieving goals
    - Mechanisms in place to identify and address risks and issues
    - Compliance with applicable policies, standards, processes, and procedures
- Effective communication, which includes:
    - Consistent delivery of key messages through well-defined communication plans
    - Tailored communications to target audiences and stakeholders
    - Communications to meet the needs of the Commonwealth.
- Collaboration and teamwork, which includes:
    - Detailed upfront project planning and feedback
    - Agreement on status for reporting purposes

- Plans scaled to address Commonwealth agency differences in size and complexity
- Establishment and support for successful deliverable review process
- Feedback on deliverables throughout the life of the project.

3.4.2 Transition Planning/Governance

The Contractor's Transition Program Management Office (TPMO) must contain a dedicated consolidation specific program team. The team is responsible to jump-start the consolidation program by bringing respective stakeholders together for a series of transition workshops. The transition workshops must work to align the stakeholders, and produce the following deliverables:

- Overall transition approach and strategy for Server and Mainframe consolidation
- Transition and consolidation governance plan
- Transition risk assessment plan
- Consolidation cost/benefit analysis
- Consolidation stakeholder transition agreements
- Consolidation transition planning guidelines

The TPMO must provide program management Services to deliver architecture, transition plan integration, and organizational change management, as well as quality assurance, verification of testing, financial oversight, and operational readiness for the Mainframe and Server transition/consolidation program. The TPMO must exist under the overall Contractor's PMO office and must include a combination of resources dedicated to the effort full time, plus resources that participate in the program on an as needed basis. The program plan and architecture must be developed by the Contractor and approved by the Commonwealth. The Contractor must ensure processes and tools are implemented to support Transition change control, schedule, quality, communications, risk and issues management.

Proposed Transition Plan

The Commonwealth anticipates the following high-level sequence of transition activities. At minimum, the Contractor's Transition Plan must reference these activities and project timeframes.

Transition Activities

The high level transition milestones and deliverables are described in **Schedule D - Transition Milestones** and **Schedule K - Key Program Deliverables**.

Target Datacenter Transitions

The following table includes the target datacenter facilities that are to be initially transitioned by the Contractor. The target datacenter facilities are defined as the physical Commonwealth facilities that are selected to be transitioned to the Contractor's control and/or facilities. The Contractor must coordinate with each Commonwealth agency or datacenter representative to create a *Facility Specific Transition Plan* for each targeted facility. The Contractor must include target datacenter transitions in its Transition Timeline. The Contractor must include a "pilot"

transition approach to ensure successful transitions of Commonwealth applications and infrastructure. This approach must demonstrate to the agencies that Contractor's approach must be successful before moving forward with additional transition phases.

Contractor must establish a high-speed direct link (not via COPANet) with the current DPH location to enable "systems" connectivity that would facilitate the ability to effect smoother transition of data.

The selected Contractor must not charge the Commonwealth for completion of a Transition Milestone. All transition costs must be included in the selected Contractor's unit prices for the Services.

	Target Datacenter Facilities		Transition Requirement Notes
	Group1 Transitions		
1	**DPH** (All Agency Mainframe – Unisys/IBM; IES SAP, and all other Agency hosted environments)		• The DPH operation and all of its supported agency application workloads must be successfully migrated out of the current facility to the Contractor's Datacenter. • Operations support must be assumed by the Contractor once the workloads are successfully moved to the new provider's datacenter environment. • Key Transition Milestone(s): o Refer to **Schedule D - Transition Milestones**
1	**EDC**		• Contractor must assume operations support of the EDC datacenter • Key Transition Milestone(s): o Refer to **Schedule D - Transition Milestones**
Group 2 Transition			
2	**DLI**		• The DLI datacenter operations and all of its supported application workloads must be successfully migrated out of the DLI facility to the Contractor's Datacenter. • Key Transition Milestone(s): o Refer to **Schedule D - Transition Milestones**
Group 3 Transitions			
3	**DPW** – Rm. 105, 106 (Lower Environments, PACSES)		• The DPW Rooms 105, 106 datacenter operation and all supported application workloads must be successfully migrated out of the current DPW facility to the Contractor's Datacenter architecture. • Key Transition Milestone(s): Refer to **Schedule D - Transition Milestones**

	Target Datacenter Facilities		Transition Requirement Notes
3	**DOR**		• The DOR datacenter operation and all of its supported application workloads must be successfully migrated out of the current DOR facility to the Contractor's Datacenter architecture. • Key Transition Milestone(s): ○ Refer to **Schedule D - Transition Milestones**
3	**DOH**		• The DOH datacenter operation and all of its supported application workloads must be successfully migrated out of the current DOH facility to the Contractor's Datacenter architecture. • Key Transition Milestone(s): ○ Refer to **Schedule D - Transition Milestones**
3	**PSP**		• The PSP datacenter operation (Headquarters) and all of its supported application workloads must be successfully migrated out of the current PSP facilities to the Contractor's Datacenter architecture. • Key Transition Milestone(s): ○ Refer to **Schedule D - Transition Milestones**

3.4.2.1 Transition Program Management

The TPMO function ensures the non-disruptive migration of Commonwealth information Services from current Commonwealth host locations, to the Contractor provided multi datacenter environments.

The Contractor must establish a TPMO and develop the requisite transition plans.

A transition approach and detailed transition plan for each of the Commonwealth's existing Datacenters must be developed by the Contractor and approved by the Commonwealth. The Commonwealth has over 2,000 business applications with over 50% designated mission critical. The Contractor must work with each agency to determine its application environment within each facility. The Contractor's target datacenter environment must be configured and tested prior to migration of the application.

Reference Documentation

Schedule D - Transition Milestones

Requirements		Describe Compliance
1.	The Contractor must establish a TPMO to manage all information service transition activities. The Office must be jointly administered by Contractor and Commonwealth staff. The Contractor must provide a communication plan that must provide an information vehicle for all interested parties.	
2.	The Contractor must provide a functional organization chart for the TPMO, including an estimate of the type and number of full time Contractor resources that are required to ensure the successful transition of Services from current multiple datacenters to the Contractor's datacenter Services.	
3.	The Contractor must analyze applications and design the required computing architecture to migrate Commonwealth datacenters to Contractor datacenter environments. Hardware, software, network, etc. The Contractor must work with Commonwealth technical staff to ascertain the requirements to successfully migrate processing to Contractor datacenter environments	

4.	Optimize Current Process and Procedures – The Contractor must coordinate with Commonwealth agencies to review and plan for a transition of processes and procedures.
5.	The Contractor must revise datacenter DR plans on the occasion of major changes to the datacenter hardware, software, or network portfolio to reflect those major changes.
6.	The Contractor must establish an IT infrastructure that meets all application processing requirements. The Contractor must confirm that the target IT infrastructure meets or exceeds current computing requirements. The Contractor must work with Commonwealth technical staff to design and build the infrastructure required to support the applications being migrated to the Contractor multi datacenter environment.
7.	A multi-faceted Transition Strategy is required: • Comprehensive; • Non-disruptive; and • Compliant with Commonwealth requirements. The Strategy must address the transition of: • Shared infrastructure elements, as appropriate; and • Specific information Services. • Disparate Agency application architectures and impacts to move to the new environment(s) The Strategy must also address the following: • Cost/Benefit for the Agency • Risks and Risk Mitigation Plan The migration order of the Commonwealth datacenters must be provided by the Commonwealth.
8.	The Contractor must identify mandatory requirements and critical success factors that have a direct impact on developing a successful transition plan

9.	The Contractor must create a Transition Timeline that outlines the overall timeline starting at effective date and continues through delivering transition Services for each of the targeted datacenters.
10.	The Contractor must create a generic Infrastructure Element Transition Plan that may be readily adapted to accommodate specific infrastructure element transitions. The Contractor must create a prospective Infrastructure Element Transition Plan. Appropriate EDC, DPH and other Agency Datacenter hardware elements may be re-purposed wherever possible.
11.	The EDC Managed Services datacenter assets must be managed and maintained by the Contractor until they are transitioned to the Contractor's managed Services. The current maintenance contract for the EDC servers is scheduled to expire on June 30, 2014.
12.	The Contractor must create, manage and execute an application / infrastructure migration plan. The Contractor has the primary responsibility for planning and executing the transition of infrastructure elements, with support of Commonwealth technical and business support staff. The Contractor must provide adequate tools and techniques for moving and migrating Commonwealth data to the new target storage environment. The Contractor must ensure that critical applications are not decoupled from key infrastructure components causing system latency.
13.	The Contractor must create a generic Information Service Transition Plan that may be readily adapted to accommodate specific information service transitions.
14.	The Contractor must meet with Commonwealth to produce and execute specific Information Service Transition Plans. The Contractor must select cut over windows

	that minimize system unavailability and coordinate approval with the affected agency. The Contractor must communicate to the Commonwealth cut over date and times. The Contractor must setup a special call number and support staff to take calls concerning the migration, these Services must be made available to transitioned users until the transition is officially signed off as completed. .
15.	The Contractor must work with Commonwealth to create testing, business acceptance and fallback plans.
16.	Service Management Systems – Contractor must transition all agency system management platforms currently in place to the Contractor, consolidating all infrastructure system management responsibilities. The Contractor must make available within the Service Catalog all system management platforms and tools that are currently supporting the Commonwealth infrastructure.
17.	CMDB – The Contractor must work with the Commonwealth to acquire asset information to support the asset management system and configuration management system.
18.	Chargeback – The Contractor must work with the Commonwealth to interface with the Commonwealth's billing processing and validation ITSM system to provide a chargeback system for new and existing Services available on the Contractor's Service Catalog.
19.	Identify Options and Costs – The Contractor must list the appropriate different options that must satisfy the requirements of the transition scope. The Contractor must communicate options with the Commonwealth and obtain approval on selected option(s) to proceed.

20.	The Contractor must expand/reconfigure datacenter facilities to accommodate growth in Commonwealth information and information systems.
21.	The Contractor must produce weekly reports on the progress of the information service transition initiatives.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

3.4.2.2 Security Transition Activities

To maintain continuity of Services, the Contractor must provide training to Contractor's employees and subcontractors on security policies during initial phase of the Transition.

Reference Documentation

Schedule D - Transition Milestones

Requirements

1.	Baseline Security Risk and Vulnerability Assessment The Contractor must conduct a security risk assessment, which includes a penetration test on the In-Scope systems, an architecture review, and a vulnerability assessment. This assessment must result in a report with recommendations for meeting the Commonwealth's baseline security standard.
2.	Security Training The Contractor's security team must meet with the Commonwealth's Security teams (OA & Agency) to participate in creating a comprehensive Security Program strategy. The Contractor and the Commonwealth Security teams must develop security awareness training content consisting of the Contractor's Security Plan documentation, Commonwealth OA and agency security policy guidelines. Security training must be mandatory for employees, contractors and subcontractors assigned to work on the Commonwealth's Datacenter project. Appropriate levels of training must be designated and tracked for compliance based on the specific area the employee must be working in. Both an individual's current training status and overall attainment of group training goals must be tracked and reported in the security clearance database. These levels must range from general security awareness that all employees must participate in to task-specific security and governance requirements targeted at operations, specialist, Commonwealth agency specific regulations, or working rules needed for compliance with Commonwealth or federal mandates unique to certain Commonwealth agencies and programs. This training must be delivered both during the new hire process, and on a regular schedule to be determined during Transition as new updates become necessary.

3.	Initial Security Plan During the initial phase of the Transition the Contractor's security team must work with the Commonwealth's Security Team to create a Security Plan. Begin work on draft policy and procedure documents collectively known as the Security Plan during the start of the Transition Risk and Vulnerability Assessment, which must be completed one (1) month prior to Transition activities. The Contractor must use best practice security standards (as outlined in the Requirements section of the RFP) along with past engagement experience to provide an outline that must address but must not be limited to the following: security strategy and technology roadmaps, security operations procedures, standard hardware and software security configurations, physical security policies and procedures, security incident management, private and protected data use standards, and audit procedures and reporting standards. This set of documents must be used as the foundation of the Contractor's master security plan for Datacenter operations which must be reviewed and updated on an annual basis. ○
4.	On-boarding and off-boarding The Contractor must conduct required background checks for its employees working on the Commonwealth Datacenter project. Where appropriate, The Contractor must use identity management tools to manage access to the systems requiring access by its employees. For systems where the Contractor is unable to use its identity management system, assign staff to manage the access. The Contractor must train Contractor employees on his or her responsibilities within the contract. For logical and physical access to Commonwealth Co-location facilities and environments not managed by the Contractor, the Commonwealth's security access request process must be followed. For off-boarding, The Contractor must update security clearance database with the status of Contractor employee and concurrently update its identity management tool to ensure the access is revoked. The Contractor must provide a monthly report describing personnel actions including but not limited to; new hires, terminations, any change in employee status/duties, etc.,

5.	Complete DR Transition Activities The Contractor must conduct knowledge transfer during the initial phase of the Transition, including review of Commonwealth DR plans and review of Third Party DR contracts. The Contractor must also update the DR plan contact information and any changes made in the first six (6) months of Transition.
Deliverables	
Deliverables are defined in **Schedule K – Key Program Deliverables**	

Schedule G

Staffing Plan and Key Positions

1. Offeror Key Personnel

This schedule lists the Key Personnel. For the purposes of this schedule and the Contract, the following Offeror roles/titles have the following responsibilities:

a) **Engagement Executive -** The Engagement Executive is responsible for overall accountability of the Commonwealth business relationship and the success of the project. Serves as the primary contact for the management of the contract and assist Commonwealth customers with all facets of services, including assisting in building strong customer teaming relationships and delivering the highest level of customer service and satisfaction.

b) **Program Manager (Offeror Project Manager) -** The Program Manager has overall responsibility for delivery of the Services to the Commonwealth and exercises day-to-day supervision of the Program Management Office (PMO). The PMO Manager will manage the overall relationship ensuring that the Offeror fulfills all of its obligations under the Contract by working with the Commonwealth Management Committee to establish, manage, and meet commitments, requirements, and expectations to ensure operational compliance with the Contract. The PMO Manager will have a detailed knowledge and understanding of the Service Levels structure and credits, billing formats, hierarchies and credits, and Services being provided to ensure that Offeror fulfills its obligations under the Contract, including all obligations relating to deliverables. There will be one PMO Manager 100% dedicated to the Commonwealth for the Term. The PMO Manager will be located at the Offeror's Harrisburg, Pennsylvania location.

c) **PMO Transition Manager(s)** – The PMO Transition Manager provides technical expertise and leadership during the transition of the current state datacenter services to the steady state managed datacenter services (i.e. the Commonwealth's new datacenter structure and services to be provided by Offeror pursuant to the Contract), and provides continuing engineering support through the remainder of the Term. In conjunction with the Commonwealth, the PMO Transition Manager develops plan(s) (inclusive of a detailed schedule(s) for performing associated tasks) for Offeror's implementation and transition of the Commonwealth from its legacy providers, cooperating with the Commonwealth to obtain the Commonwealth's approval and acceptance of the Transition Plan, and identifying the Transition Plan roles, responsibilities, and performance contingencies.

There will be two (2) PMO Transition Managers 100% dedicated to the Commonwealth for the entire Ramp-up Period. After the Ramp-up Period, the number of Transition Managers is reduced to one for the Term. The Transition Managers will be located at the Offeror's Harrisburg, Pennsylvania location during transition period.

d) **Availability Manager** – The Availability Manager is responsible for the overall service level management program for all of the Datacenter Services delivered.

e) **Service Level Management Analyst** – The PMO Service Level Management Analyst will prepare and package mutually agreed to operational reports, SLA reports, maintains Operations Manual, and oversees the Governance performance reporting. The Service Level Management Analyst will be located at the Offeror's Harrisburg, Pennsylvania location.

f) **Sr. Enterprise Infrastructure Architect** – The Enterprise Infrastructure Architect is responsible for the overall technology management program for the Datacenter Services delivered. The Enterprise Architect will provide executive level technology oversight to the Program. The Enterprise Architect will provide leadership in the forecasting and outlook for new technologies and services to be added during the term of the Program. The Enterprise Architect must have deep understanding of infrastructure, application deployment, and web and software applications.

g) **Incident Management Manager** - The PMO Incident Manager will provide technical and operational escalations management and resolution by working with the help desk and Operations Centers to provide escalation oversight and back up support for Program Manager. The PMO Incident Manager will provide SLA review, compliance, and management; facilitate chronic issue management and resolution; and address operational and delivery issues and adherence to performance; assist with incidents, issues, and escalations; and provide root cause analysis and resolution.

h) **Change Manager and Change Analyst** – The Change Manager and Change Analyst will provide oversight and overall coordination of standard change management, process across products and services, and provide change management for future strategy and planning.

i) **Finance Manager and Finance Analyst** – The Finance Manager and Finance Analyst will provide billing support and facilitation of the consolidated billing process support for the one single invoice to the Commonwealth.

j) **Agency Account Managers** – Offeror will provide a minimum of five (5) dedicated Agency Account Managers responsible for understanding all of the services provided by Offeror and providing guidance to the agencies in understanding their datacenter business needs. Offeror must assign an Agency Account Manager to each agency that purchases services through the contract. Not all Agency Account Managers must be assigned to a single agency. Offerors shall identify the number of Agency Account Managers that will be assigned to this project as part of their proposal. Agency Account Managers will act as a liaison between Offeror and the agency; strengthen the strategic relationship between Offeror and the Commonwealth; maintain overall responsibility for sales, support, and operations; ensure that agreements are finalized and signed by all parties; provide periodic briefings to the Commonwealth on new services and technologies that may be of interest/use and provide the Commonwealth with pricing information on request. The Agency Account Managers will be located at the Offeror's Harrisburg, Pennsylvania location.

k) **Agency Infrastructure Architects (Service Area Leads)** - Offeror will provide a minimum of five (5) Infrastructure Architects responsible for the detailed design engineering of the Commonwealth's specific datacenter services designs and quotes and for coordinating Commonwealth related requests. There will be at least five (5) Infrastructure Architects dedicated to the Commonwealth for the Term.

l) **Security Manager** – Offeror will provide a Security Manager to oversee all aspects of the project to ensure compliance with all security standards and requirements.

SCHEDULE H

COMMONWEALTH COMPUTING PROCEDURES MANUAL

Contents

1 PURPOSE 3

1.1 Organizational Overview 3

1.2 Transition and Support Activities and Responsibilities 4

1.3 IT Service Management Procedures 5

1.4 Financial Management Procedures 12

1.5 Contract Management Procedures 14

1.6 Relationship Management Procedures 16

1.7 Offeror Operational Procedures 18

1.8 The Commonwealth Customer Operations Manuals 20

Content	Description
1 PURPOSE	The Offeror should describe the purpose of the Commonwealth Computing Procedures Manual. This section should address who should use the Manual, how the Manual is organized, how the initial version and updates will be distributed, version control procedures for the Manual, when updates will occur, and procedures for authorizing and implementing updates. It is intended that the structure of the Manual will require that the individual compliance requirements and business rules of each participating Commonwealth Customer are separately identified where applicable for each section or component part of the Manual.
1.1 Organizational Overview	
1. Offeror Governance Organization	Include organization charts, description of functions performed, contact information.
2. Offeror Management and Delivery Organization	Include organization charts, description of functions performed, contact information.
3. Key Contacts - Offeror	A list of contacts that are key users of the Services and/or perform a liaison function in regard to the Services (by Commonwealth and Commonwealth Agencies, by location).

Content	Description
4. Key Contacts – Third Parties	A list of key Third Parties (maintenance providers, software providers, telecom carriers, etc).
1.2 Transition and Support Activities and Responsibilities	
1. Overall Management and Reporting Process	A description of Offeror management structure, reporting, and review process associated with Transition Services and Transformation Services.
2. Critical Deliverables and Milestones	A list of Critical Deliverables, milestones and timeline for the Transition Services and Transformation Services periods.
3. Interim Performance Management Procedures	A description of interim procedures to monitor and coordinate Service delivery, including Problem Management, Change Management, Service Level monitoring and reporting, physical and Logical Security, project management, work authorization, etc. A description of the responsibilities of both Parties.

Content	Description
4. Interim Financial Management Procedures	A description of interim procedures for invoicing, invoice verification, charge back to the Commonwealth Customers, determining Resource Unit volume by Service Component, asset management, asset transfers, forecasting, Commonwealth Customer support, etc. A description of the responsibilities of both Parties.
5. Interim Contract Management Procedures	A description of interim procedures for managing and administering the Agreement including proposed changes to the Agreement, interpretation procedures, issue-escalation process, and disputes. A description of the responsibilities of both Parties.
6. Other Transition and Support Procedures and Responsibilities	Any other pertinent procedures and responsibilities.
1.3 IT Service Management Procedures	
1. Service Desk	The facilities, associated technologies, and fully trained staff who respond to Calls, coordinate all Incident Management, Problem Management and Request Management activities, and act as a single point of contact for Authorized Users in regard to the Services.

Content	Description
2. Incident Management	The use of people, processes and technology with the primary goal to restore normal Service operations as quickly as possible and minimize the adverse impact on business operations, thus ensuring that the best achievable levels of service quality and availability are maintained.
3. Problem Management	The process, software, techniques and procedures that aid in identification, tracking, communication, and resolution of Problems arising in Customer's IT Environment, and resolving those Problems arising from or related to the Services. The goal of Problem Management is to minimize the adverse impact of Incidents and Problems on the business that are caused by errors within the IT infrastructure, and to prevent recurrence of Incidents related to these errors. In order to achieve this goal, Problem Management seeks to get to the root cause of Incidents and then initiate actions to improve or correct the situation.
4. Change Management	The processes relating to planning and performing all changes in IT environment pertaining to the Services, including changes to individual components and coordination of changes across all components. The Change Management processes will support and include checkpoints to determine any potential or required Change Control Procedures and includes a process of controlling changes to the infrastructure or any aspect of Services, in a controlled manner, enabling approved changes with minimum disruption.

Content	Description
6. Release Management	The process responsible for planning, scheduling and controlling the movement of Releases to Test and Live Environments. The primary objective of Release Management is to ensure that the integrity of the Live Environment is protected and that the correct Components are released. Release Management works closely with Configuration Management and Change Management.
7. Request Management and Fulfillment	The process responsible for managing the lifecycle of all Service Requests.
8. Availability Management	The process responsible for defining, analyzing, Planning, measuring and improving all aspects of the Availability of IT services. Availability Management is responsible for ensuring that all IT Infrastructure, Processes, tools, roles etc. are appropriate for the agreed Service Level targets for Availability.
9. Capacity Management	The process responsible for ensuring that the Capacity of IT Services and the IT Infrastructure are able to deliver agreed Service Level targets in a cost effective and timely manner. Capacity Management considers all Resources required to deliver the IT Service, and plans for short, medium and long term business requirements.

Content	Description
10. Service Level Management (SLM)	The process responsible for negotiating SLAs, and ensuring that these are met. SLM is responsible for ensuring that all IT Service Management Processes, OLAs, and Underpinning Contracts, are appropriate for the agreed Service Level targets. SLM monitors and reports on Service Levels, facilitates Service Delivery Failure actions with the appropriate Governance Committee and holds regular Commonwealth Customer reviews.
11. IT Service Continuity Management (ITSCM)	The process responsible for managing risks that could seriously impact IT Services. ITSCM ensures that the IT Offeror can Always provide minimum agreed Service Levels, by reducing the risk to an acceptable level and Planning for the recovery of IT Services. ITSCM should be designed to support Business Continuity Management.
12. IT Financial Management	The process responsible for managing the Budgeting, Accounting, Invoicing and Chargeback requirements).
13. Information Security Management	The process that ensures the confidentiality, integrity and Availability of an organization's Assets, information, data and IT Services. Information Security Management usually has a wider scope than the Offeror. It normally includes handling of paper, building access, phone calls etc., for the entire organization.

Content	Description
14. Project Management and Support	Project Management and Support will align projects to Commonwealth requirements and deliver projects from request through end-to-end solutioning including turnover to the Commonwealth Customers and validation that project requirements were met in terms of timing, quality, and cost.
15. Service Catalog	A database or structured Document with information about select Services, including those available for Deployment. The Service Catalog is the only part of the Service portfolio published to Commonwealth Customers, and is used to support the request and delivery of select Services. The Service Catalog may include information about Deliverables, prices, contact points, ordering and request processes.
1.4 Financial Management Procedures	
1. Invoicing	The Offeror should describe procedures for invoicing. The content should include procedures for calculating Resource Unit volumes for pricing (per Service Component, as applicable), invoicing of Projects, etc. The content should include procedures regarding disputed invoice amounts.

Content	Description
2. Chargeback	The Offeror should describe procedures for charge back of costs related to the Services and the overall Agreement to the Commonwealth Customers (to include responsibilities and support by both the Offeror and the Commonwealth).
3. Budgeting	The Offeror should describe how it would assist the Commonwealth with the annual budgeting cycle. Process should include estimation of Resource Unit volumes (by Service Component and Commonwealth Customer as appropriate), potential Projects, review cycle, etc. The content should include the responsibilities of Offeror, the Commonwealth, and Commonwealth Agencies.
4. Forecasting	The Offeror should describe procedures for forecasting cost versus budget.
5. Procurement	The Offeror should describe procedures for procurement Services (where Offeror performs procurement on behalf of the Commonwealth, as applicable). The content should include responsibilities and process for both the Commonwealth staff and Offeror.

Content	Description
6. Service Level Credits and Earnback	The Offeror should describe procedures for calculating Service Level Credits on invoices and Earnback calculations.
1.5 Contract Management Procedures	
1. Contract Change Control	The Offeror should describe procedures regarding changes to the Agreement, including changes to any Exhibit or Attachment. Content should include procedures to classify services as a New Service, and resulting process to change the Agreement (including pricing). Content should include notification period and process, authority levels, and escalation procedures for changes to the Agreement.
2. Reporting	The Offeror should describe procedures and activities regarding key standard Reports and requests for ad hoc reports from the Commonwealth and The Commonwealth Agencies.
3. New Service Levels	The Offeror should describe procedures for determining new Service Levels (based on continuous improvement and/or Commonwealth request).

Content	Description
4. Benchmarking	The Offeror should describe procedures for Benchmarking exercises, including determination and agreement of benchmark firm, sample peer group and process used for benchmark, payment for benchmark, review of results, and potential outcome. Content should include dispute resolution process.
5. Auditing	The Offeror should describe procedures for operational and/or financial audits (as required by the Commonwealth auditing and/or regulatory agencies). The Offeror should describe notification process and procedures to resolve audit findings.
6. Offeror Key Personnel and Subcontractors	The Offeror should describe procedures for Commonwealth approval regarding replacement or removal of Offeror Key Personnel and major Subcontractors to Offeror.
7. Dispute Resolution	The Offeror should describe procedures regarding formal dispute resolution process.

Content	Description
1.6 Relationship Management Procedures	
1. Customer Satisfaction Surveys	The Offeror should describe the process to be used for conducting customer satisfaction surveys. Content should include procedures regarding action items and attempts to resolve customer issues.
2. Commonwealth Agencies	The Offeror should describe procedures and responsibilities regarding the relationship between the Commonwealth, the Commonwealth Agencies and the Offeror. Content should include procedures regarding communication and coordination regarding work requests, Service delivery issues, budgeting and financial issues, etc.
3. Authorized Users	The Offeror should describe procedures and responsibilities regarding responding to Authorized Users (including listing of Authorized Users) problems, requests, and questions.

Content	Description
4. Third Party Vendors	Offeror to describe procedures for relationship regarding Third Party Vendors which may provide services, Equipment, and/or Software that are ancillary to (or support) the overall delivery of Services. Procedures and coordination with key Third Party Vendors should be documented.
5. Other Third Parties	The Offeror should describe procedures for any other contact or requests from other Third Parties in regard to the Agreement.

Content	Description
1.7 Offeror Operational Procedures	
1. Operating Level Agreements (OLA)	OLAs are internal "back-to-back" agreements that define how two different Service Component Providers will work together to support the delivery of defined IT Services to the Commonwealth and Commonwealth agencies. The OLAs will define how Service Component Providers will work together to meet the Service Requirements documented in SOWs and Service Level Requirements documented in formal SLAs for the DCS initiative. The OLAs are a set of operational processes that supplements the IT Service Management section of the Commonwealth Computing Procedures Manual providing the second level detail required for individual Service Components to interoperate. Simply stated, the OLA "bolts" multiple Service Components together operationally.
2. Operational Procedures (by Service Component, as applicable)	The Offeror should describe the activities that the Offeror proposes to undertake in order to provide the Services, including those directions, supervision, monitoring, staffing, reporting, Planning and oversight activities normally undertaken by the Offeror which shall be consistent with those Offeror activities used to provide services similar to the Services.

Content	Description
3. Service Responsibility Matrix (SRM)	A map of the Functional Service Areas which potentially overlap Offeror responsibility and Commonwealth responsibility required to deliver business solutions to the business units. A Service Responsibility Matrix will be developed for each such area to delineate which party is responsible for performing select service elements and/or providing assistance or input.

Content	Description
1.8 The Commonwealth Customer Operations Manuals	
1. Individual Commonwealth Customer Operations Manual	The Commonwealth Computing Procedures Manual will also contain specific sections dedicated to operational procedures for Services provided to individual The Commonwealth Customers (each a "**The Commonwealth Customer Operations Manual**"). Each The Commonwealth Customer Operations Manual will address unique operational requirements of the respective The Commonwealth Customer, including operational areas such as the following: • Runbooks • Data safeguarding, use and release restrictions • Data security policies • Disaster Recovery requirements • Notification levels and procedures (e.g. problems and initial Severity Level procedures)

15 PERCENTAGE OBJECTIVES 12

1 General

The Commonwealth has adopted the ITIL framework and has established Service Level Management to maintain and improve IT Service quality, through a constant cycle of agreeing, monitoring, measuring, and reporting upon IT Service achievements and the instigation of actions to eradicate poor service.

The Service Level Performance Measures and their targets that are described in this Schedule J.1 have been specifically designed to support the Service Level Agreements set forth in Schedule J.2.

The methodology set out in this Schedule J.1 supports the Service Level Management cycle of agreeing, monitoring, measuring, reporting and improving the delivery of the services to the Commonwealth.

Effective on the Service Commencement Date, the Contractor will perform the Service to which Service Levels apply, so that the Service Level Performance will, in each month of the Term, meet or exceed, the Service Levels.

New Service Levels (Critical Measurements, Key Measurements) may be added or substituted by the Commonwealth as specified in this Schedule J.1 during the Term. For example, such additions or substitutions may occur in conjunction with changes to the environment and the introduction of new Equipment or Software to support a new or additional catalog service. However, where such Equipment or Software or such means of Service delivery is a replacement or upgrade of existing technology to support an existing catalog service, there shall be a presumption of equivalent or improved performance.

The achievement of the Service Levels by the Contractor may require the coordinated, collaborative effort of the Contractor with other third party contractors. The Contractor shall provide a single point of contact for the prompt resolution of all Service Level Defaults and all failures to provide high quality Services to the Commonwealth, regardless of whether the reason for such Service Level Defaults, or failure to provide high quality Services to the Commonwealth, was caused by the Contractor.

2 Service Level Measurement Descriptions

2.1 Application Infrastructure Availability

The Service Level for "Application Infrastructure Availability" measures the percentage of time all or a portion the application infrastructure is Available and not in a Degraded Condition.

Application Infrastructure Availability will be determined based on whether a component of the infrastructure assigned to an application in the CMDB meets the Service Level Performance Measure set out in Schedule J.2. Each associated processing environment (e.g. production, test, development, etc.), is a separate application and has its own SLA.

If Contractor monitoring indicates that any component of the application infrastructure has an issue, i.e. is unavailable and/or has a performance issue, Contractor will notify Commonwealth of the issue. If any application associated with the component has been impacted by the issue, an incident will be reported in accordance with the incident

management procedure defined in the Commonwealth Compute Procedures Manual (CCPM), which may include whether the application is available or in a Degraded Condition. If the Commonwealth notifies the Contractor that the application has been impacted, then a Service Level Default will have occurred, if a Service Level Performance Measure as set out in Schedule J.2 has not been met and a Service Level Credit will be applied consistent with section 5.1 of this Schedule J.1, unless Unisys provides root cause analysis to indicate that the impact to the application was not caused by the component issue. If the Commonwealth cannot identify an application impact then the Service Level Credit will apply only to the component of the application infrastructure which was not available.

If the Commonwealth identifies an impact to an application, prior to Unisys notifying the Commonwealth of component unavailability, the Commonwealth will report an incident in accordance with the Incident Management procedure defined in the CCPM. Unisys will investigate and determine the status of associated infrastructure components as defined in the CMDB, and if any infrastructure components are unavailable or have a performance issue, then a Service Level Default will have occurred, if a Service Level Performance Measure as set out in Schedule J.2 has not been met and a Service Level Credit will be applied consistent with section 5.1 of this Schedule J.1, unless Unisys provides root cause analysis to indicate that the impact to the application was not caused by a component failure.

2.2 Measuring Incident and Problem Resolution

The Service Level for "Incident and Problem Resolution" measures the percentage of Incident events with resolution times (commonly known as "Mean-Time-To-Resolve" – MTTR) within the limits specified within the appropriate Commonwealth Compute Procedures Manual based on the Incident Priority/Severity. These incidents are either user reports or monitoring system generated events indicating a service issue.

2.3 Measuring Other Service Management and Service Delivery

The Service Level for "Other Service Management and Service Delivery" measure the percentage of projects or solution requests, Backups, recoveries, and proposals that are delivered within the limits specified within the appropriate Commonwealth Compute Procedures Manual based on the request.

3 Reporting

Unless otherwise specified in this Schedule J.1, each Service Level (Critical Measurement, Key Measurement), Deliverable, and Transition Milestone shall be measured and reported on a monthly basis. The format, layout and content of such monthly report shall be as directed by the Commonwealth. The Contractor's monthly performance reports are due by the 5th Business day of each month and shall include a set of soft-copy reports such that the Commonwealth is able to verify the Contractor's performance and compliance with the Service Level (Critical Measurement, Key Measurement), Deliverable (until all Deliverables are received and approved by the Commonwealth), and Transition Milestone.

The Contractor shall provide detailed supporting information for each report to the Commonwealth in a format suitable for use on a personal computer. The data and detailed supporting information

shall include the methodology used by Contractor to calculate the service level performance based on the data measured and reported by the measurement tool such that the Commonwealth is able to reproduce the calculations made by Contractor and validate the results reported in the monthly Service Level Performance reports. All detailed supporting information shall be the Commonwealth's Confidential Information, and the Commonwealth may access such information online and in real-time, where feasible, at any time during the Term. In addition, Contractor shall provide the Commonwealth with direct, unaltered access to review and audit all raw data collection related to Service Levels.

The Contractor will create, maintain, and provide to the Commonwealth detailed procedure documentation of its Service Level measurement process used to collect Service Level data and calculate Service Level attainment. The process documentation must include quality assurance reviews and verification procedures. The measurement process must be automated to the extent possible, and any manual data collection steps must be clearly documented, verified and auditable. All methods, codes and automated programs must be documented and provided to the Commonwealth for validation and approval. The Contractor must ensure it tests and validates the accuracy and currency of the documentation and measurement process on a quarterly basis.

4 Notice Requirements for Additions, Deletions & Modifications

Subject to *Section 27* (Change Control) of the Contract , the Commonwealth will send notice to the Contractor at least ninety (90) days prior to the date that additions or deletions to Performance Categories, or additions or deletions to Service Levels (which include the movement of Critical Measurements to Key Measurements and Key Measurements to Critical Measurements), or modifications to Service Level Pool Percentage Allocation for any Critical Measurements or additions or deletions to Deliverables are to be effective. The Commonwealth may send only one such notice (which notice may contain multiple changes) each calendar quarter. Movement of Critical Measurements to Key Measurements and Key Measurements to Critical Measurements does not constitute creation of new service levels.

5 Service Level Credits

In the event of a Service Level Default, the Contractor shall provide the Commonwealth credits as defined below:

5.1 Schedule J.2 and Schedule J.3 set forth the information required to calculate whether the Service Level has met a Service Level Default level and how the Service Level is calculated and reported. For each Service Level Default, the Contractor shall provide credits to the Commonwealth, subject to Section 6 below, a Service Level Credit that will be computed in accordance with the following formula:

Service Level Credit = 100% of the effected month's invoicing for the service(s) that experienced a Service Level Default, unless otherwise identified in Schedule J.2, to a maximum credit not to exceed the At-Risk Amount as defined in **Schedule A - Defined Terms**

For example, assume that the Contractor fails to meet a Critical Measurement Service Level. If an infrastructure component fails and has no impact to an application then the Service Level Credit for the month totals the amount of the infrastructure component that was invoiced for that particular month. If an infrastructure component fails which has an

impact to an application, then the Service Level Credit for the month totals the amount of the fee for all infrastructure components associated with an impacted application as invoiced in the month that the application was impacted. If the Contractor's Monthly Invoice Amount for the infrastructure components for the month in which the Service Level Default occurred was $100,000, the credit would be $100,000.

If the event occurs where the total monthly credit amount exceeds the At-Risk Amount, each Service Level Default will be calculated based on the percentage of the total credit Amount and applied to the At-Risk Amount. An Example is if the At-Risk Amount is $100,000 and there are three Service Level Defaults (#1 = $50,000, #2=30,000 and #3=$80,000 for a total of $160,000) then the credit for Defaults would be calculated as follows:

Default 1		Default 2		Default 3		Total Credits Due
$50,000	+	$30,000	+	$80,000	=	$160,000

Default 1		Total Credits Due		Default 1Proration
$50,000	/	$160,000	=	31.25%

At-Risk Amount		Default 1 Proration		Credit Due for Default 1
$100,000	X	31.25%	=	$31,250

If more than one Service Level Default has occurred in a single month, the sum of the corresponding Service Level Credits shall be credited to the Commonwealth.

5.2 In no event shall the amount of Service Level Credits credited to the Commonwealth with respect to all Service Level Defaults occurring in a single month exceed, in total, the At-Risk Amount.

5.3 The Contractor shall notify the Commonwealth in writing if the Commonwealth becomes entitled to a Service Level Credit, which notice shall be included in the standard monthly reporting for Critical Measurements and Key Measurements as described in Section 3 above. The monthly reports shall also describe any failure to meet Key Measurements for the month.

5.4 The total amount of Service Level Credits that the Contractor will be obligated to pay to the Commonwealth, with respect to Service Level Defaults occurring each month, shall be credited on the invoice that contains charges for the month during which the Service Level Default(s) giving rise to such credit(s) occurred. For example, the amount of Service Level Credits payable with respect to Service Level Defaults occurring in August shall be set forth in the invoice for the August Monthly Invoice Amount issued in September.

5.5 Subject to , *Section 23* (Service Levels) of the Contract, the Contractor acknowledges and agrees that the Service Level Credits shall not be deemed or construed to be liquidated damages or a sole and exclusive remedy or in derogation of any other rights and remedies the Commonwealth has hereunder or under the Contract.

6 Earn-Back

The Contractor shall have Earn-Back opportunities with respect to Service Level Credits as follows:

6.1 The Service Level must be identified as Earn-Back Eligible per Schedule J.2 with a "Y" in the column titled "Earn-Back Eligible"

6.2 Within fifteen (15) days after the Earn-Back period as shown in Schedule J.2, the Contractor shall provide a report to the Commonwealth that will include, with respect to each Critical Measurement for which there was a Service Level Default, the following:

6.2.1 Statistics on the Contractor's average monthly performance during the Earn-Back period

6.2.2 The amount of Service Level Credit imposed for Service Level Default

6.2.3 The total amount of Service Level Credits imposed for Service Level Defaults

6.3 If the Contractor fails to meet the "Earn-Back Minimum" objective, Service Level Credits will be calculated and applied on the next billing cycle.

6.3.1 Earn-Back WILL NOT be available to the Contractor if it fails to meet the "Earn-Back Minimum" objective (Credit applied on the next billing cycle).

6.4 If the Contractor fails to meet the "Required" objective, Service Level Credits will be calculated and applied to the invoice following the Earn-Back period as shown in Schedule J.2 if an Earn-Back is not earned or immediately upon failure of a "Required" objective.

6.4.1 Earn-Back WILL be available to the Contractor if it fails to meet the "Required" objective and Earn-Back is available. If the Contractor meets the "Required" objective for the following Earn-Back period as shown in Schedule J.2, the Contractor will not be required to issue the credit.

6.4.2 If, during the Earn-Back period, the Commonwealth deletes the Critical Measurement (including demotion of a Critical Measurement to a Key Measurement) that corresponds to the Service Level Default giving rise to such Earn-Back review period, Contractor shall continue to track its performance for such former Critical Measurement and shall be entitled to an Earn-Back if and to the extent, and at the time, it would have otherwise been entitled to such Earn-Back in accordance with the procedures described in Section 6.4.1 above had the Critical Measurement not been so deleted or demoted to a Key Measurement during such Earn-Back review period.

6.5 If the Contract is terminated for default all service credits are due upon notice of termination.

7 Additions, Modifications, and Deletions of Service Levels

The Commonwealth may add, modify or delete Critical Measurements or Key Measurements as described below by sending written notice in accordance with Section 4 above.

7.1 Additions

The Commonwealth may add Service Levels in accordance with this Section 7.1 and by providing written notice in accordance with Section 4. Service Level commitments associated with added Service Levels will be computed as follows:

7.1.1 Where at least nine (9) consecutive months of verifiable service measurements exist for a particular Service that is being provided by the Contractor, the Parties agree that the Service Level shall be defined as the average for the Nine-Month Measurement Window however the target will not equal 100%, or

7.1.2 Where no measurements exist for a particular Service that is being provided by the Contractor, the Parties shall attempt in good faith to agree on a Service Level commitment using industry standard measures or third party advisory services (for example, Gartner Group, Yankee Group, etc.), or

7.1.3 Where less than nine (9) months or no measurements exist for a particular Service that is being provided by the Contractor, and the Parties fail to agree on a Required Service Level and an Earn-Back Minimum Service Level commitment using industry-standard measures as described in Item 2 of Section 7.1 of this Schedule, the Parties shall do the following:

7.1.3.1 The Contractor shall begin providing monthly measurements within ninety (90) days after the Contractor's receipt of the Commonwealth's written request and subject to agreement on such measurements in accordance with the *Section 27* (Change Control Procedures).

7.1.3.2 After nine (9) or more actual Service Level attainments have been measured (or should have been measured per Section 7.1.3.1 of this Schedule J.1 and if not so measured; constructed as described in Section 7.1.3.2.1 of this Schedule J.1), the Commonwealth may at any time in writing request that Section 7.1.1 above be used to establish the Service Level commitments:

7.1.3.2.1 If the Contractor is responsible for measuring actual service level attainments for nine (9) consecutive months and fails to provide one (1) or more measurements during the Six-Month Measurement Window such that nine (9) consecutive measurements are not available, the missing measurement(s) shall be constructed according to the following:

(i) if one measurement is missing, the missing measurement shall be constructed by using the highest of the eight (8) actual measurements, or

(ii) if two (2) or more measurements are missing, the first missing measurement shall be constructed by using the highest of the actual measurements and adding to that measurement twenty percent (20%) of the difference between that measurement and one hundred percent (100%) and each of the remaining missing measurements shall be constructed by using the highest of the actual measurements and

adding to that measurement thirty-five percent (35%) of the difference between that measurement and one hundred percent (100%).

For example, if there were four measurements for a particular Service, and the highest of the four measurements were 95%, then the measurements for the missing two months would be deemed to be 96.00% (representing 95.00% plus (20% of 5%)) and 96.75% (representing 95.00% plus 35% of 5%)), respectively.

7.1.3.2.2 If the Contractor has provided twenty-four (24) actual Service Level attainment measurements for any particular Service provided by the Contractor, and the Commonwealth has not used Item 1 of Section 7.1 of this Schedule to establish Service Level commitments, then continued provision of actual Service Level attainment measurements shall be subject to the Parties' mutual agreement in accordance with the *Section 27* (Change Control Procedures).

7.2 Deletions

The Commonwealth may delete Critical Measurements or Key Measurements by sending written notice in accordance with Section 4 herein.

8 Service Delivery Failure

If either (i) three (3) Service Level Defaults occur in any six (6) month period, or (ii) the Problem Management Process, as defined in the Commonwealth Computing Procedures Manual (CCPM), has identified a major recurring Problem not directly reflected in SLA performance and there is no formal Chronic Problem issue project underway to address such Problem (each a "Service Delivery Failure" or “SDF”) , then within thirty (30) days of the occurrence of such Service Delivery Failure, Contractor will provide the Commonwealth with a written plan (the "SD (Service Delivery) Service Improvement Plan") for improving the Contractor's performance to address the Service Delivery Failure, which plan will include a specific implementation timetable. The SD Service Improvement Plan will be subject to the Commonwealth's approval. Within 30 days of the Commonwealth's approval, or such other timeframe agreed to by the Commonwealth, Contractor will implement the SD Service Improvement Plan, which will include making timely and appropriate investments in people, processes and technology. In addition, the Contractor will demonstrate to the Commonwealth's reasonable satisfaction, that the changes implemented by Contractor have been made in normal operational processes to sustain compliant performance results in the future.

If Contractor fails to implement the SD Service Improvement Plan in the specified timetable, or if after the implementation of the SD Service Improvement Plan performance has not consistently improved, Contractor will be liable for a Service Level Credit in an amount equal to 10 percent (10%) of the then-current monthly invoice (the "SDF Credit"). The SDF Credit will be applied to the monthly invoice until such time as Contractor has demonstrated, for three (3) consecutive months, effective Service delivery, as evidenced by satisfying the criteria specified in the Problem Management RCA process related to the Service and/or no reoccurrence of the Service Level Defaults which triggered the applicable Service Delivery Failure. The SDF Credit will not be subject to Earn-Back. Under no circumstances shall the imposition of the SDF Credit described

above or the Commonwealth's exercise of any other rights hereunder be construed as the Commonwealth's sole or exclusive remedy for any failures described hereunder. SDF Credits are not to be considered a part of the At-Risk Amount calculation in relation or Service Levels and are a separate commitment from the Contractor indicating the Contractor's commitment to delivering service.

Further, the Contractor will work with the Commonwealth to define and document a repeatable Chronic Service Issue Resolution process in the Problem Management section of the Service Management Manual to be effective on the Effective Date. At a minimum, the process should address:

8.1 Establishment of a project team to drive and manage the process improvement

8.2 Approach to development of an Improvement Plan which will include milestones, resources and dependencies

8.3 Approach to Program Management of Plan implementation including integration of improvements/changes into daily operational processes

8.4 Implementation of Progress Reporting within the Contractors management structure, the Commonwealth and the Commonwealth Customers

8.5 Closure process to transition solution into normal operations including alignment of processes defined in the Service Management Manual

9 Commencement of Obligations

The obligations set forth herein shall commence on the first full month of service delivery in accordance with provisions set forth in Section 7.1 above.

10 Improvement Plan for Key Measurements

If the Contractor fails to satisfy any Key Measurement for three (3) months in any rolling six (6) month period, the Contractor shall provide the Commonwealth with a written plan for improving the Contractor's performance to satisfy the Key Measurement within thirty (30) days of the third (3^{rd}) failure to meet the Service Level for the Key Measurement. At Contractor's sole cost and expense, the Contractor shall promptly implement such plan. If Contractor fails to implement the plan in the specified timetable, or if after ninety (90) days after any such implementation of the plan, the Key Measurement has not consistently improved, then the Commonwealth may at its option declare that such failure will constitute a Service Delivery Failure and Contractor will comply with the requirements of Section 8 above.

11 Measuring Tools

As of the Effective Date, the measuring tools and methodologies set forth in Schedule J.3 represent acceptable measuring tools and methodologies for the Critical Measurements and Key Measurements designated.

If there are any Critical Measurement Service Levels for which the measuring tools and methodologies have not been agreed upon by the Commonwealth and the Contractor and for which measuring tools are not included in Schedule J.3, and the Contractor fails to propose a measuring

tool for such Critical Measurement that is acceptable to the Commonwealth prior to the date upon which the Contractor shall be responsible for Service Level performance and Service Level Credits due for Service Level Default, such failure shall be deemed a Service Level Default for the Critical Measurement until the Contractor proposes and implements such acceptable measuring tool. The Commonwealth will not unreasonably withhold approval for the Contractor's recommendation for an alternate tool.

Tools for new Critical Measurement Service Levels will be implemented according to the *Section 27* (Change Control Procedures). Upon the Commonwealth's written notice approving a proposed alternate or new measurement tool, such tool shall be deemed automatically incorporated into Schedule J.3 as of the date for completion of implementation set forth in the Commonwealth's notification without requirement for an additional written amendment of this Agreement.

If, after the Effective Date or the implementation of tools for new Critical Measurements, the Contractor desires to use a different measuring tool for a Critical Measurement, the Contractor shall provide written notice to the Commonwealth, in which event the Parties will reasonably adjust the measurements as necessary to account for any increased or decreased sensitivity in the new measuring tools; provided that, if the Parties cannot agree on the required adjustment, the Contractor will continue to use the measuring tool that had been initially agreed to by the Parties.

It is not anticipated that changes in the measuring tools will drive changes in Service Levels; rather, the need to collect and accurately reflect the performance data should drive the development or change in performance monitoring tools. Contractor will configure all measuring tools to create an auditable record of each user access to the tool and any actions taken with respect to the data measured by or residing within the tool. All proposed measuring tools must include functionality enabling such creation of an auditable record for all accesses to the tool.

12 Times

Unless otherwise set forth herein, all references in this Schedule to Times shall refer to definition as described in **Schedule A – Defined Terms**.

13 Single Incident/Multiple Defaults

If a single incident results in the failure of the Contractor to meet more than one Service Level and the Service Level Credits are calculated in the same way, the Contractor shall issue Service Level Credits for every failure not to exceed the invoice amount of the impacted services and not to exceed the At-Risk Amount.

An example would be if a network component experienced a failure that denies access to ten subscribed services ("Application Infrastructure Availability" in this example). The CMDB would identify the impacted services and Service Level Credits would be due on all ten services to a maximum credit of the invoice amount for the ten services not to exceed the At-Risk Amount.

If a single incident results in the failure of the Contractor to meet more than one Service Level, and the Service Level Credits are not calculated in the same way, the Contractor shall issue Service Level Credits for the highest Service Level Credit not to exceed the At-Risk Amount.

An example would be if a subscribed service invoice is $500 per month and one Service Level Credit is defined as the "Monthly Invoice Amount for Impacted Service" ($500 in this example)

and one Service Level Credit is defined as $5,000. The credit would be calculated at the higher amount ($5,000 in this example).

14 Exclusions

For purposes of calculating Available Time and Availability, the Scheduled Uptime and Downtime shall not include any period of Downtime that is the result of scheduled time required to perform system maintenance (for example, preventive maintenance, system upgrades, etc.), provided that such time has been mutually agreed between the Parties and is scheduled so as to minimize the impact to the Commonwealth's business. The Contractor shall maintain Availability during such periods to the extent reasonably practicable. In addition, Service Level failures shall be relieved to the extent caused by the Commonwealth.

15 Percentage Objectives

Both parties understand that certain Service Levels may not be measured against an objective of one hundred percent (100%), for example, Time (days, hours, etc.), defects, etc. where zero (0) hours/days and zero percent (0%), respectively, are the appropriate objectives. The calculations described in this Section will be modified when appropriate to reflect these objectives. For example, if the Service Level involved defects in lines of code where zero percent (0%) is the objective, lowest would be changed to highest in Item 1 of Section 7.1 herein, highest would be changed to lowest in Item 3.2.1 of Section 7.1 herein and one hundred percent (100%) would be changed to zero percent (0%) in Item 3 of Section 7.1.

Schedule J.2

Data Center Service Level Matrix

Description of Schedule

This Schedule J.2 sets forth the following:

1. For Critical Measurements (CMs)

- the numeric measurements for Minimum Service Levels and expected Service Levels;
- the timing regarding the commencement of obligations for each critical Service Level
- a cross-reference to Schedule J.3 where the qualitative description of the performance category and the associated critical Service Level can be found

2. For Key Measurements (KMs)

- the numeric measurements for minimum Service Levels and expected Service Levels;

Service Level Matrix

Ref [a]	Service Level Categories	Required	Earnback Minimum	Earnback Eligible	Earnback Period (Consecutive Months)	Measurement Window	SLA Class[b]	Default Remedy Type[c]

SL29	Batch Processing Completed Successfully	99.900%	99.500%	Y	6 mos	Monthly	KM	Monthly invoice amount for impacted Service
SL30	Reports Delivered On Time	98%	95.00%	Y	6 mos	Monthly	KM	$10,000.00 Credit on invoice
SL31	Off-Site Media Management	95.000%	90.000%	Y	6 mos	Monthly	KM	Monthly invoice amount for impacted Service

Notes:

(a) Ref- See Schedule J.3 for detailed description of the Service Level metrics.

(b) SLA Class as defined in Schedule J.1.

(c) Amount listed for Key Measurements to be used in the event the Key Measurement becomes a Critical Measurement through Change Management. While the Service Level remains a Key Measurement no Default Remedies are due.

1. Contractor Guidelines

This Schedule contains specific service level requirements that the Contractor must meet in order to perform the requested Services.

1.1. Service Level Class Definitions

There are two classes of Service Level performance metrics used, Critical Measurements (CMs) and Key Measurements (KMs).

- **Critical Measurements (CMs)** are performance measurements defined for the most important service areas. CMs will have associated fees, e.g. Service Level Credits, payable by the Contractor to Commonwealth for missed CMs according to the terms of the negotiated contract.

- **Key Measurements (KMs)** are performance target measurements for non-critical service areas. KMs are not eligible for Service Level Credits. Key Measures cover less critical service deliverables, sub processes or interim activities that are related to CM performance, and are reflective of overall effective and efficient service performance management. Based on periodic contractual SLA reviews, adjustments may be negotiable and KMs may be promoted to CMs.

Service Level measurement and reporting normally begins immediately following the Service Commencement Date. However, to allow for stabilization where appropriate, application of Service Level Credits may be reduced or waived for some period of time (to be negotiated) after the Service Commencement Date.

2. Service Level Details

The following pages describe each Service Level, its calculation, and other details relevant to the Service Level.

SL01 Application Infrastructure Availability – Platinum

Service Level Reference	Description
Application Infrastructure Availability – Platinum	
Service Category	Availability
Metric Description	This Service Level measures the percentage of time all or a portion of the application infrastructure is Available and not in a Degraded Condition during the applicable Measurement Window.
Metric Inclusions	Server instances and related CIs supporting targeted applications are identified in the CMDB. Scheduled hours of operations and maintenance windows for each infrastructure element related to the targeted applications will be maintained in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• All items defined in Hold Time and Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for targeted Applications Infrastructure Availability is the sum of actual Available Time for the individual applications divided by the sum of expected, scheduled Available Time for the applications, with the result expressed as a percentage. • = 1 – ((Sum of minutes the application infrastructure component is not Available or in a Degraded Condition) / ((1440 minutes per day) X (calendar days in month))) expressed as a percentage
Service Level Reporting Window	Monthly

SL02 Application Infrastructure Availability – Gold

Service Level Reference	Description
Application Infrastructure Availability – Gold	
Service Category	Availability
Metric Description	This Service Level measures the percentage of time all or a portion of the application infrastructure is Available and not in a Degraded Condition during the applicable Measurement Window.
Metric Inclusions	Server instances and related CIs supporting targeted applications are identified in the CMDB. Scheduled hours of operations and maintenance windows for each infrastructure element related to the targeted applications will be maintained in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• All items defined in Hold Time and Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for targeted Applications Infrastructure Availability is the sum of actual Available Time for the individual applications divided by the sum of expected, scheduled Available Time for the applications, with the result expressed as a percentage. • = 1 – ((Sum of minutes the application infrastructure component is not Available or in a Degraded Condition) / ((1440 minutes per day) X (calendar days in month))) expressed as a percentage
Service Level Reporting Window	Monthly

SL03 Application Infrastructure Availability – Silver

Service Level Reference	Description
Application Infrastructure Availability – Silver	
Service Category	Availability
Metric Description	This Service Level measures the percentage of time all or a portion of the application infrastructure is Available and not in a Degraded Condition during the applicable Measurement Window.
Metric Inclusions	Server instances and related CIs supporting targeted applications are identified in the CMDB. Scheduled hours of operations and maintenance windows for each infrastructure element related to the targeted applications will be maintained in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• All items defined in Hold Time and Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for Targeted Applications Infrastructure Availability is the sum of actual Available Time for the individual applications divided by the sum of expected, scheduled Available Time for the applications, with the result expressed as a percentage. • = 1 – ((Sum of minutes the application infrastructure component is not Available or in a Degraded Condition) / ((1440 minutes per day) X (calendar days in month))) expressed as a percentage
Service Level Reporting Window	Monthly

SL04 Application Infrastructure Availability – Bronze

Service Level Reference	Description
Application Infrastructure Availability – Bronze	
Service Category	Availability
Metric Description	This Service Level measures the percentage of time all or a portion of the application infrastructure is Available and not in a Degraded Condition during the applicable Measurement Window.
Metric Inclusions	Server instances and related CIs supporting targeted applications are identified in the CMDB. Scheduled hours of operations and maintenance windows for each infrastructure element related to the targeted applications will be maintained in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• All items defined in Hold Time and Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for targeted Applications Infrastructure Availability is the sum of actual Available Time for the individual applications divided by the sum of expected, scheduled Available Time for the applications, with the result expressed as a percentage. • = 1 – ((Sum of minutes the application infrastructure component is not Available or in a Degraded Condition) / ((1440 minutes per day) X (calendar days in month))) expressed as a percentage
Service Level Reporting Window	Monthly

SL05 Application Infrastructure Availability – Basic

Service Level Reference	Description
Application Infrastructure Availability – Basic	
Service Category	Availability
Metric Description	This Service Level measures the percentage of time all or a portion of the application infrastructure is Available and not in a Degraded Condition during the applicable Measurement Window.
Metric Inclusions	Server instances and related CIs supporting targeted applications are identified in the CMDB. Scheduled hours of operations and maintenance windows for each infrastructure element related to the targeted applications will be maintained in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• All items defined in Hold Time and Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for targeted Applications Infrastructure Availability is the sum of actual Available Time for the individual applications divided by the sum of expected, scheduled Available Time for the applications, with the result expressed as a percentage. • = 1 – ((Sum of minutes the application infrastructure component is not Available or in a Degraded Condition) / ((1440 minutes per day) X (calendar days in month))) expressed as a percentage
Service Level Reporting Window	Monthly

SL06 Resolution Time - Severity Level 1 Incidents

Service Level Reference	Description
Resolution Time - Severity Level 1 Incidents	
Service Category	Incident and Problem Resolution
Metric Description	This Service Level measures the percentage of time Contractor resolves Severity Level 1 events within the applicable time period. Also known as Mean Time To Resolve (MTTR) for Severity Level 1 Incidents.
Metric Inclusions	Includes all Applications Infrastructure components as defined by the CMDB and Severity Level 1 events that are assigned to the appropriate Service Level. The time limits for the resolution of each are as listed below. Time frame for resolution shall be based on the tier designation for the highest mainframe, server or instance associated with the respective incident. For incidents not associated with a specific mainframe, server, or instance, the resolution timeframe shall be measured as a Silver tier. Platinum < 90 minutes Gold < 120 minutes Silver < 180 minutes Bronze < 240 Minutes
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for Resolution Time – Severity Level 1 is the total number of Incidents that are or become Severity Level 1 that are Resolved within the relevant Resolution Time specified, divided by the total number of Incidents that are or become Severity Level 1 during the applicable Measurement Window, with the result expressed as a percentage. • = (Number of Severity Level 1 Incidents Resolved within Limit) / (Total Number of Severity Level 1 Incidents) expressed as a percentage
Service Level Reporting Window	Monthly

SL07 Resolution Time - Severity Level 2

Service Level Reference	Description
Resolution Time - Severity Level 2	
Service Category	Incident and Problem Resolution
Metric Description	This Service Level measures the percentage of time Contractor resolves Problems within the applicable time periods. Also known as Mean Time To Resolve (MTTR) for Severity Level 2 Incidents.
Metric Inclusions	Includes all mainframes, servers, and instances associated with targeted applications and other Severity Level 2 events not associated with servers or instances. The time limits for the resolution of each mainframe, server or instance are as listed below. Time frame for resolution shall be based on the tier designation for the highest mainframe, server or instance associated with the respective incident. For incidents not associated with a mainframe, server, or instance, resolution shall be measured as Silver tier (< 360 minutes). Platinum < 90 minutes Gold < 180 minutes Silver < 360 minutes Bronze < 960 Minutes
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** The Service Level calculation for Resolution Time – Severity Level 2 is the total number of Incidents that are or become Severity Level 2 that are Resolved within the relevant Resolution Time specified, divided by the total number of Incidents that are or become Severity Level 2 during the applicable Measurement Window, with the result expressed as a percentage. • = (Number of Severity Level 2 Incidents Resolved within Limit) / (Total Number of Severity Level 2 Incidents) expressed as a percentage
Service Level Reporting Window	Monthly

SL08 Resolution Time - Severity Level 3/4

Service Level Reference	Description
Resolution Time - Severity Level 3/4	
Service Category	Incident and Problem Resolution
Metric Description	This Service Level measures the percentage of time Contractor resolves Incidents within the applicable time periods. Also known as Mean Time To Resolve (MTTR) for Severity Level 3 and Severity Level 4 Incidents.
Metric Inclusions	Severity Level 3 - For all Severity Level 3 Incidents , the incident shall be resolved within 3,780 business minutes (i.e. 63 hours) Severity Level 4 - For all Severity Level 4 Incidents, the incident shall be resolved within 4,860 business minutes (i.e. 81 hours or 9 business days) Total business minutes shall be measured during only those minutes between 8:00 AM and 5:00 PM inclusive, Monday through Friday inclusive (1 Business day = 9 Business hours = 540 Business minutes); (1 business minutes = 2,700 minutes)
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	8:00AM – 5:00 PM
Days of Measurement	Monday through Friday
Calculation	• **Summary:** The Service Level calculation for Resolution Time – Severity Level 3/4 is the total number of Incidents that are or become Severity Level 3 or 4 that are Resolved within the relevant Resolution Time specified, divided by the total number of Incidents that are or become Severity Level 3 or 4 during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of Severity Level 3 Incidents Resolved within Limit) +(Number of Severity Level 4 Incidents Resolved within Limit)) / ((Total Number of Severity Level 3 Incidents) + (Total Number of Severity Level 4 Incidents)) expressed as a percentage
Service Level Reporting Window	Monthly

SL09 Solution Request Fulfillment

Service Level Reference	Description
Solution Request Fulfillment	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor successfully implements a solution request within the timeframe committed to the requester as measured in the applicable Measurement Window. All phases of the solution implementation process from the Commonwealth Customer approval of the solution proposal through implementation and the Commonwealth Customer acceptance into production are included in this measure.
Metric Inclusions	For purposes of calculating this Service Level, only those requests which require a solution proposal that has been accepted by the Commonwealth will be included in the calculation. Solution requests without a production date established by the time the order is received will be counted as a missed expectation.
Metric Exclusions	None
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of projects that are successfully completed during the applicable Measurement Window on or before the due date specified in the applicable solution proposal and/or a subsequent project plan, divided by the total number of projects that should have been completed during the applicable Measurement Window, with the result expressed as a percentage. • = (Number of solution requests completed within limit during the measurement window) / (Total number of solution requests due within the measurement window) expressed as a percentage
Service Level Reporting Window	Monthly

SL10 Standard Service Request Fulfillment

Service Level Reference	Description
Standard Service Request Fulfillment	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor successfully completes Standard Service Requests that do not require a solution proposal to be approved by the Commonwealth. Specific target timeframes are either established in the CCPM or a specific commitment date outside of the standard timeframe may be established at the Commonwealth's discretion.
Metric Inclusions	Included as Standard Service Requests shall be an agreed upon set of service requests as specified in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• Elapsed time waiting for the Commonwealth or a Commonwealth Customer's required approval or hold shall be excluded. • All items defined in Note 2 at the bottom of this Schedule J.3 • Exception: An Agency unplanned Standard Services Request for more than 10% above the Agency's most recent approved demand forecast. The Contractor must notify the Commonwealth of the need to order Equipment within two business days of receipt of the order, the Contractor provides the Commonwealth with an acceptable estimated time to deliver the Equipment, and the Equipment is delivered within the time specified. •
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of Standard Service Requests successfully completed by Contractor during the applicable Measurement Window and within the required timeframes specified in Commonwealth Compute Procedure Manual (CCPM) or other agreed to date, divided by the number of Standard Service Requests that should have been completed by Contractor during the applicable Measurement Window, with the result expressed as a percentage. • = (Number of Standard Requests completed within limit) / (Total Number of Standard Requests due within the measurement window) expressed as a percentage •
Service Level Reporting Window	Monthly

SL11 Completion of Project/Solution Phase

Service Level Reference	Description
Completion of Project/Solution Phase	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor successfully completes a phase (e.g. procurement, floor prep, network prep, physical install, turn-up and test, production) milestone no later than the committed timeframe. All phases of the solution implementation process following the Commonwealth Customer approval of the solution proposal through implementation and the Commonwealth Customer acceptance into production are included in this measure.
Metric Inclusions	For purposes of calculating this Service Level, only those requests which require a solution proposal or project plan that has been accepted by the Commonwealth and a production date established will be included in the calculation. If a milestone is missed, the rescheduled milestone will also be included in the measurement
Metric Exclusions	All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of project or solution requests successfully completed by Contractor during the applicable Measurement Window and within the required timeframes specified in Commonwealth Compute Procedure Manual (CCPM) or other agreed to date, divided by the number of Project and solution requests that should have been completed by Contractor during the applicable Measurement Window, with the result expressed as a percentage • = (Number of project/solution requests completed within Limit) / (Total Number of project/solution requests due within the measurement window) expressed as a percentage
Service Level Reporting Window	Monthly

SL12 Solution and Procurement Proposals Delivered

Service Level Reference	Description
Solution and Procurement Proposals Delivered	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor provides a viable proposal to the Commonwealth, in response to a solution or procurement request, within the timeframe established in the Commonwealth Computing Procedures Manual for commodity and standard requests or a jointly agreed to commitment date for custom requests.
Metric Inclusions	Each proposal submitted to the Commonwealth will be considered a measurable event. If there are multiple proposals for one request due to requirements changes then subsequent iterations will be counted as another event. Each will count as an event and an opportunity to succeed or fail.
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of viable proposals submitted to the Commonwealth during the applicable Measurement Window on or before the due date determined from the Commonwealth Computing Procedures Manual for Standard and Commodity Requests or jointly agreed for custom requests, divided by the total number of proposals that should have been submitted during the applicable Measurement Window, with the result expressed as a percentage. • = (Number of solution and procurement proposal requests completed within interval during the measurement window) / (Total number of solution and procurement proposal requests due with the measurement window) expressed as a percentage
Service Level Reporting Window	Monthly

SL13 CMDB Content Accuracy and Timeliness

Service Level Reference	Description
CMDB Content Accuracy and Timeliness	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of an audited statistically valid sample of Inventory Records (as defined below) during the Measurement Window that is determined to be Accurate (as defined below) by such audits.
Metric Inclusions	The audited sample for this Service Level must contain a number of randomly selected CMDB Inventory Records that is reasonably acceptable to the Commonwealth. The random selection shall be a statistically significant stratified random sampling representing all Commonwealth Customers each month. **Definitions for purposes of this Service Level:** Accurate means all Critical Inventory Attributes are correctly and completely populated in the CMDB Inventory of Record. Critical Inventory Attributes means those database fields in an Inventory Record that are essential for Contractor's successful delivery of Service and necessary for Commonwealth's successful performance of retained responsibilities, including architecture, IT planning, and reconciliation of invoices. Critical Inventory Attributes that must be audited are set out in CCPM and may be modified over time in accordance with the CCPM. CMDB Inventory of Record means the inventory of CIs, including all Equipment and Software, to be created and maintained by Contractor in accordance with the CCPM. Inventory Record means the record for a single item of Equipment or Software in the Inventory of Record, including all of the Critical Inventory Attributes for that item.
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of CMDB Inventory Records that are audited during the applicable Measurement Window and that are Accurate, divided by the total number of Inventory Records that are audited during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of valid records found) / (Total Number of Records Audited)) expressed as a percentage

Service Level Reporting Window	Monthly

SL14 Software License Renewal Timeliness

Service Level Reference	Description
Software License Renewal Timeliness	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the timeliness of all license and maintenance renewals for software managed by Contractor.
Metric Inclusions	This SLA includes the renewal of software licenses included in the Agreement and hardware maintenance agreements included in hardware service charges (HSC) to a the Commonwealth Customer (e.g. renewal of SSL certificates, application utility software, custom solution hardware (covered by a maintenance agreement) charged to the Commonwealth Customer through the HSC).
Metric Exclusions	• Renewals for software or maintenance purchased outside of this contract by the Commonwealth or the Commonwealth Customers and not included in Contractor's charges to the Commonwealth are excluded. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	This Service Level measures the timeliness of all license and maintenance renewals for software managed by Contractor.
Days of Measurement	N/A
Calculation	• **Summary:** Renewals are routinely expected to be installed ten (10) or more business days prior to the renewal due date for the item or service. (Renewal due date is the date when the current license or maintenance contract expires.) The Service Level calculation for Software License Renewal Timeliness is a percentage derived from the total number of all renewals processed divided by the total number due for the month that were renewed before the renewal expiration date without disruption in service. • = ((Successful Software Renewals implemented within Time Frame) / (Total Software License Renewals Completed)) expressed as a percentage
Service Level Reporting Window	Monthly

SL15 Successful Backups

Service Level Reference	Description
Successful Backups	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor completes backup jobs successfully during the applicable Measurement Window in accordance with the relevant criteria specified in the Commonwealth Computing Procedures Manual.
Metric Inclusions	Backup jobs include all registered backup clients (including but not limited to all file systems, databases, application files, operating systems, applications and respective Data).
Metric Exclusions	• If there is an appropriate tool available and in use that captures open files, then the backup of open files are included as part of the backup. If there is not an appropriate tool available and in use for the capture of open files, then open files are skipped and not counted against this Service Level. Any batch jobs related to infrastructure backups, or other functionality exclusively for Contractor would be excluded. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level is the sum of the number of times Contractor completes backup jobs successfully and complete on time during the applicable Measurement Window divided by the of the sum of the number of times Contractor began or should have begun backup jobs within the applicable measurement window, with the result expressed as a percentage. • = ((Number of Successful Backups) / (Total Number of Backups Attempted)) expressed as a percentage
Service Level Reporting Window	Monthly

SL16 Successful Recoveries

Service Level Reference	Description
Successful Recoveries	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor completes data recoveries successfully and on time during the applicable Measurement Window in accordance with the relevant criteria specified in the Commonwealth Computing Procedures Manual.
Metric Inclusions	Recoveries include all registered recovery clients (including but not limited to all file systems, databases, application files, operating systems, applications and respective Data).
Metric Exclusions	• Any batch jobs related to infrastructure recoveries, or other functionality exclusive for the Contractor would be excluded. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of data recovery jobs that are completed successfully and on time in accordance with the relevant criteria set forth in the Commonwealth Computing Procedures Manual during the applicable Measurement Window, divided by the total number of data recovery jobs that were attempted or scheduled to be completed during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of Successful Recoveries) / (Total Number of recoveries attempted)) expressed as a percentage
Service Level Reporting Window	Monthly

SL17 Security Incident Notification Timeliness

Service Level Reference	Description
Security Incident Notification Timeliness	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor completes identifying and notifying CoPA of detected security incidents in accordance with ITB-SEC024.
Metric Inclusions	Time required receiving and analyzing reactive and/or proactive incidents from any and all managed sources including, but not limited to, firewalls, intrusion detection/prevention devices, VPN appliances, switches, routers, and all other equipment over which Commonwealth traffic traverses. Time required contacting CoPA and reporting the incident in accordance with ITB-SEC024.
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of Security Incidents reported in accordance with ITB SEC-024 using the procedure set forth in the Commonwealth Computing Procedures Manual, divided by the total number of detected security incidents, with the result expressed as a percentage. • = [(number of incidents reported in accordance with ITB SEC-024) / number of detected incidents)] expressed as a percentage
Service Level Reporting Window	Monthly

SL18 Security Update Timeliness

Service Level Reference	Description
Security Update Timeliness	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor completes Security Updates successfully and on time during the applicable Measurement Window in accordance with the relevant criteria specified in the Commonwealth Computing Procedures Manual.
Metric Inclusions	Security Updates include all updates and changes designated as a Security Update at the time or request/order. These updates includes, but are not limited to, Security Patches, Firewall configuration changes, proxy updates and changes, and Identity Management changes.
Metric Exclusions	• Any batch jobs related to infrastructure recoveries, or other functionality exclusive for the Contractor would be excluded. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of Security update requests that are completed successfully and on time in accordance with the relevant criteria set forth in the Commonwealth Computing Procedures Manual during the applicable Measurement Window, divided by the total number of Security update requests that were requested to be completed during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of Security Updates) / (Total Number of Requested Security Updates)) expressed as a percentage
Service Level Reporting Window	Monthly

SL19 Incident Management Communication – for Severity Level 1 Incidents

Service Level Reference	Description
Incident Management Communication – for Severity Level 1 Incidents	
Service Category	Incident & Problem Resolution
Metric Description	This Service Level measures the percentage of time the Contractor provides the notices to the applicable users within the following timeframes with respect to Incidents that are or become Severity Level 1 Incidents and that are not Resolved in less than one (1) hour from the Start Time for such Incident. • First notice: Within one hour of incident ticket creation • Subsequent notices: every 30 minutes A notice is defined as : • Verbal communication to user, as documented in the ticket • Bridge call including user, as documented in the ticket • Email to user, as documented in the ticket Such notices shall not be deemed to have been provided unless (a) the user that reported the Incident has been contacted by the Contractor and such notice of status has been provided or (b) Contractor has left a voice mail (or if not possible because the user does not have a voice mail box, sent an email or attempted some other reasonable means of communication) for the user.
Metric Inclusions	Includes all Severity Level 1 Incidents
Metric Exclusions	• Severity Level 2, 3 and 4 Incidents • Duplicate Incident reports for the incident • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of Incidents that are or become Severity Level 1 Incidents, that have Start Times during the applicable Measurement Window, that have actual Resolution Times of greater than one (1) hour and for which Contractor provided the applicable user the required notice(s) within the required timeframe(s) as set forth in this Section, divided by the total number of Incidents that are or become Severity Level 1 Incidents, that have Start Times during the applicable Measurement Window and that have actual Resolution Times of greater than one (1) hour, with the result expressed as a percentage. • = ((Number of Incidents with Communications within established intervals) / (Total Number of

	Severity Level 1 Incidents)) expressed as a percentage
Service Level Reporting Window	Monthly

SL20 Root Cause Analysis Delivery

Service Level Reference	Description
Root Cause Analysis Delivery	
Service Category	Incident & Problem Resolution
Metric Description	This Service Level measures the percentage of time Contractor reports the results of a Formal Root Cause Analyses for Service Restoral Incidents within the timeframes below during the Measurement Window: • RCA's due within ten (10) Business Days from the request of the RCA.
Metric Inclusions	An user may request a Formal RCA for incidents that require more in-depth analysis than required with the normal Root Cause Analysis process. The Formal RCA is documented and tracked within the Problem Management process, and upon completion, is presented by the Contractor Problem Management Team to the affected the Commonwealth Customer and the Commonwealth for review and approval. Contractor shall perform a Formal Root Cause Analysis with respect to any Service Restoral Incident, if requested by the Commonwealth, and that has a Start Time during the applicable Measurement Window.
Metric Exclusions	• Those Service Restoral Incidents for which the Commonwealth or the Commonwealth's Customer does not request a Formal Root Cause Analysis. • Duplicate Requests • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of written Formal Root Cause Analyses that are delivered to the Commonwealth within the timeframes specified in this Section during the applicable Measurement Window, divided by the total number of written Formal Root Cause Analyses that should have been delivered to the Commonwealth during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of Formal Root Cause Analyses Delivered within established interval) / (Total Number of Formal Root Cause Analyses Due)) expressed as a percentage
Service Level Reporting Window	Monthly

SL21 Chronic Problems

Service Level Reference	Description
Chronic Problems	
Service Category	Incident & Problem Resolution
Metric Description	A Chronic Problem means a problem which meets any of the following criteria: 1. The existence two or more incidents with the same root cause for the same software, service, process, or hardware for which Contractor, the Commonwealth, or the Commonwealth Customer, have designated as a problem requiring a Root Cause Analysis with a corrective action plan. 2. The existence of three or more service failures or outages for the same software, service, process, or hardware within the same month for any two (2) months within any rolling six (6) months. 3. The existence of three (3) or more service failures or outages for the same software, service, process, or hardware within any rolling six (6) month period for which no root cause has been determined. Multiple Incidents that are opened contemporaneously for the same software, service, process, or hardware due to the same root cause shall be deemed to be a single incident for purposes of this Service Level.
Metric Inclusions	All incidents and Problem Investigation reports for all services covered by any service level metric.
Metric Exclusions	• Problems which have a published Root Cause Analysis with an associated action plan approved by the Commonwealth Customers and which has all agreed corrective actions on schedule (not exceeding their completion dates) and have had no reoccurrences of the same failure may be excluded at the Contractor's request and the Commonwealth's approval. • All items defined in Note 2 at the bottom of this Schedule J.3 • Duplicate Incident reports for the same Incident
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** Contractor's performance shall be measured by determining the total number of Problems that are or become Chronic Problem(s) during the applicable Measurement Window. • ((the number of Chronic Problems) / (the total number of problems)) expressed as a percentage
Service Level Reporting Window	Monthly

SL22 High Risk Security Patch Updates

Service Level Reference	Description
High Risk Security Patch Updates	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the timeliness in which high-risk security patches are applied. All high risk security patches must be applied within five (5) business days from the date the software vendor or applicable industry guiding entity provides notice to the Contractor or other date as agreed to by the Commonwealth or the Commonwealth Customer.
Metric Inclusions	Includes those security patches for which the vendor or applicable industry guiding entity indicates is high risk.
Metric Exclusions	• Excludes low and medium risk patches • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of high risk security patches released five (5) business days prior to the beginning and end of the measurement window that were installed within five (5) business days divided by the total number of high risk security patches released five (5) business days prior to the beginning and end of the measurement window, with the result expressed as a percentage. • = ((Number of high risk intrusion protection updates installed within established interval) / (Total Number of high risk intrusion protection updates installed)) expressed as a percentage
Service Level Reporting Window	Monthly

SL23 Change Management Effectiveness

Service Level Reference	Description
Change Management Effectiveness	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor successfully implements Changes to the Services.
Metric Inclusions	Changes are not successfully implemented if they: (i) do not comply with the Change Management procedures (including the Change Control Process), (ii) do not comply with the Change Management procedures detailed within the Commonwealth Computing Procedures Manual, (iii) cause Severity Level 1 Incidents or Severity Level 2 Incidents, within 168 hours of implementing the change, (iv) exceeds the reserved implementation or maintenance window as approved within the ITSM Change Request, or (v) are backed out.
Metric Exclusions	• Severity Level 1 and Severity Level 2 incidents that occur during the implementation window for the change and are resolved before the Implementation or Maintenance window ends. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the number of changes that are successfully implemented by Contractor during the applicable Measurement Window, divided by the number of changes that should have been implemented by Contractor during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of Successful Change Management Requests) / (Total Number of Change Management Requests Scheduled during the period)) expressed as a percentage
Service Level Reporting Window	Monthly

SL24 Service Desk – Call Answer Time

Service Level Reference	Description
Service Desk – Call Answer Time	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the elapsed time an user is placed on hold after leaving the interactive voice response or Automatic Call Distribution System to the time the phone call is answered by a live support technician.
Metric Inclusions	All phone calls to the Service Desk shall be included in the calculation of this Service Level with no exceptions for phone calls to the Service Desk during any period of Downtime.
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3 • Excludes the time a caller is listening to a Menu of choices before being routed to a helpdesk agent.
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of seconds, for all phone calls to the Service Desk during the applicable Measurement Window, between the time the phone caller first selects a menu option on the IVR or Automatic Call Distribution System for assistance by a live support technician to the time the phone call is verbally answered by a live support technician ready to start working on the phone call, divided by the total number of all phone calls to the Service Desk during the applicable Measurement Window. • = (Average Time a Call takes to be answered by Service Desk Agent) expressed in seconds
Service Level Reporting Window	Monthly

SL25 Service Desk – Abandon Rate

Service Level Reference	Description
Service Desk – Abandon Rate	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of phone calls to the Service Desk that are abandoned by the user after the user selected a service option and prior to a live support technician answering the phone call.
Metric Inclusions	All phone calls to the Service Desk shall be included in the calculation of this Service Level with no exceptions for phone calls to the Service Desk during any period of Downtime.
Metric Exclusions	• Calls disconnected prior to an automated voice response system completing the Menu of choices for callers are not counted as abandoned. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of phone calls to the Service Desk during the applicable Measurement Window that are abandoned by the user (prior to an automated voice response system answers), divided by the total number of phone calls to the Service Desk during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number Of Abandoned Telephone Calls) / (Total Number Of Telephone Calls)) expressed as a percentage
Service Level Reporting Window	Monthly

SL26 Incident Ticket Quality

<table>
<tr><th>Service Level Reference</th><th>Description</th></tr>
<tr><td>Incident Ticket Quality</td><td></td></tr>
<tr><td>Service Category</td><td>Other Service Management and Delivery</td></tr>
<tr><td>Metric Description</td><td>This Service Level measures the quality and timeliness of the Contractor’s incident management and communication of incident management activities (as defined in the Commonwealth Computing Procedures Manual Commonwealth Computing Procedures Manual). Contractor must update the incident tickets at a minimum on the following frequencies:
<table>
<tr><th><u>Service Restorals</u></th><th><u>Service Requests</u></th></tr>
<tr><td>P1: every 15 minutes</td><td>P1: Daily</td></tr>
<tr><td>P2: 30 minutes</td><td>P2: Weekly</td></tr>
<tr><td>P3: daily</td><td>P3: every 2 weeks</td></tr>
<tr><td>P4: weekly</td><td>P4: Monthly</td></tr>
</table></td></tr>
<tr><td>Metric Inclusions</td><td>Includes a statistically valid random sample of Service Restorals and Service Requests closed during the Measurement Window, all priorities.</td></tr>
<tr><td>Metric Exclusions</td><td>• Excludes Change Requests (CRQ), solution requests (REQ), and Problem Management (PBI)
• All items defined in Note 2 at the bottom of this Schedule J.3</td></tr>
<tr><td>Hours of Measurement</td><td>24x7</td></tr>
<tr><td>Days of Measurement</td><td>365</td></tr>
<tr><td>Calculation</td><td>• Summary: This Service Level calculation is the number of sampled tickets in the Measurement Window which meet the defined quality and communication frequency criteria divided by the total number of sampled tickets in the Measurement Window, with the result expressed as a percentage.
• ((Number of service restorals and requests that met the interval) / (the total number of service restorals and requests)) expressed as a percentage</td></tr>
<tr><td>Service Level Reporting Window</td><td>Monthly</td></tr>
</table>

SL27 Service Desk – Customer Satisfaction

Service Level Reference	Description
Service Desk – Customer Satisfaction	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the average scores of the customer satisfaction surveys taken on a random statistical sample of customers that had a service contact with the Contractor during the measurement period. The surveys will be conducted in accordance with the Commonwealth Computing Procedures Manual.
Metric Inclusions	Survey responses shall be on a five (5) point scale (with five (5) being the most satisfied) or shall reflect such other satisfaction criteria established pursuant to the survey design process.
Metric Exclusions	• All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** At the Commencement Date, This Service Level calculation is the sum of all scores for each response (question answered) for the surveys that are returned during the applicable Measurement Window, divided by the total number of responses for all surveys that are returned during the applicable Measurement Window. • = (Average Score of Surveys)
Service Level Reporting Window	Monthly

SL28 Batch Scheduling Launched on Time

Service Level Reference	Description
Batch Scheduling Launched on Time	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor starts the Batch job schedules defined in the standard scheduling tool or manually scheduled at the established start time associated with such schedules specified in the Commonwealth Computing Procedures Manual. Established start time is defined for this Service Level as the first Batch job, which is started after 12:00 noon eastern time, starts within five (5) minutes of its scheduled time as detailed the CCPM.
Metric Inclusions	Scheduled Batch jobs include normally scheduled and recurring production jobs, as well as production jobs that are run on an as-needed basis.
Metric Exclusions	• Any batch jobs related to infrastructure backups, or other functionality exclusive for Contractor would be excluded. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of Batch job schedules defined in the standard scheduling tool that are started during the applicable Measurement Window at the established start time associated with such schedules as set forth in the Commonwealth Computing Procedures Manual, divided by the total number of Batch job schedules that should have been started during the applicable Measurement Window, with the result expressed as a percentage. • = (Number Of Batches Launched On Time) / (Total Number Of Batches Scheduled) expressed as a percentage
Service Level Reporting Window	Monthly

SL29 Batch Processing Completed Successfully

Service Level Reference	Description
Batch Processing Completed Successfully	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the percentage of time Contractor completes Batch jobs successfully and on time during the applicable Measurement Window in accordance with the relevant specifications located in the Commonwealth Computing Procedures Manual.
Metric Inclusions	Batch jobs include normally scheduled and recurring production jobs, as well as production jobs that are run on an as-needed basis. To be considered Successful the Batch must complete within the schedule window for that particular Batch Job.
Metric Exclusions	• Any batch jobs related to infrastructure backups, or other functionality exclusive for Contractor would be excluded. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is the total number of Batch jobs that are completed successfully and on time in accordance with the relevant criteria set forth in the Online CCPM repository during the applicable Measurement Window, divided by the total number of Batch jobs that should have been completed during the applicable Measurement Window, with the result expressed as a percentage. • = ((Number of successful batches) / (Total number of batches scheduled)) expressed as a percentage
Service Level Reporting Window	Monthly

SL30 Reports Delivered On Time

Service Level Reference	Description
Reports Delivered On Time	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level for reports delivered on time as outlined in Schedule K reports measures the percentage of time Contractor delivers the reports on time in accordance with the requirements. Each Report provided with respect to a Critical Service Level or Key Measurement shall be deemed an individual Report for the purposes of calculating this Service Level.
Metric Inclusions	Schedules as set forth in the Commonwealth Computing Procedures Manual.
Metric Exclusions	• Any reports identified as Critical Monthly reports in the Commonwealth Computing Procedures Manual and measured in Critical Service Levels. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	24x7
Days of Measurement	365
Calculation	• **Summary:** This Service Level calculation is a count of the total number of reports that were not successfully delivered (i.e. on time and in compliance with content and format requirements) during the applicable Measurement Window. • = ((Number of reports delivered on time) / (Total number of reports scheduled to be delivered)) expressed as a percentage
Service Level Reporting Window	Monthly

SL31 Off-Site Media Management

Service Level Reference	Description
Off-Site Media Management	
Service Category	Other Service Management and Delivery
Metric Description	This Service Level measures the accuracy of the Contractor's management of off-site media, specifically the physical location and electronic tracking accuracy of off-site media. The measure is intended to sample one-twelfth of the universe of off-site media such that each the Commonwealth Customer's complete environment is sampled at least once per year.
Metric Inclusions	All media for which Contractor receives an off-site storage resource unit charge.
Metric Exclusions	• Virtual tapes and tapes retained in locations designated within Schedule E. • All items defined in Note 2 at the bottom of this Schedule J.3
Hours of Measurement	N/A
Days of Measurement	N/A
Calculation	• **Summary:** This Service Level calculation is based on a statistically valid random sample representing one-twelfth of the universe of off-site media and is the sum of the number of times a tape is either physically in the correct location or electronically listed in the correct location divided by the total number of tapes in the random sample, with the result expressed as a percentage. • = ((Number of correct audits) / (Total number of audits))expressed as a percentage
Service Level Reporting Window	Monthly

3. Notes

Note 1: Contractor's failure to achieve any Service Level will not constitute a Service Level Default or accrue toward a Service Level Termination Event to the extent such failure is directly attributable to any Force Majeure events as (as defined in Paragraph 65 of the Contract.

Note 2: Contractor's failure to achieve any Service Level will not constitute a Service Level Default or accrue toward a Service Level Termination Event to the extent such failure is directly attributable to any of the following:

(i) the failure or unavailability of equipment or other resources for which the Commonwealth is operationally and managerially responsible pursuant to the Contract,

(ii) changes made to the environment by the Commonwealth that were not communicated in accordance with the Change Control Procedure or other method agreed upon by the Parties, and

(iii) scheduled and approved maintenance windows.

Introduction –Program Deliverables

This Schedule sets forth certain obligations of Offeror regarding Program Deliverables. The Offeror must deliver to the Commonwealth any Key Program Deliverables as described below, in format and content acceptable to the Commonwealth.

As specified below, Offeror shall provide each Key Program Deliverable on or before the date specified in this Schedule. The Key Program Deliverable Acceptance Criteria and the Commonwealth Sign-off Matrix will be developed prior to the Effective Date and will be in the format referenced below in this document.

Key Program Deliverables

D-01 Datacenter Architecture Plan and Roadmap

The Datacenter Architecture Plan and Roadmap will include the Offeror's proposed Datacenter Architecture that will be utilized to support the Project. The Datacenter Architecture Plan and Roadmap should include at minimum sections that support the following:

- 2+ Datacenter Architecture (with EDC) - describes the overall Datacenter Architecture used in the delivery of the Offeror's Enterprise Datacenter Services. This should include details on datacenter specifications, location, physical security, and capacity. The architecture will show how the Commonwealth's Enterprise Data Center (EDC) will be incorporated into the Offeror's overall datacenter capacity.

- Datacenter Network Architecture - describes the required network connectivity between each of the datacenters. Included are connection requirements to the Commonwealth's network COPANET. The Offeror will also describe its Internet connection to the proposed Datacenter(s).

- Datacenter Security Architecture - describes the security architecture used to ensure the confidentiality, integrity and availability of Commonwealth information and infrastructure systems. The Security Architecture will describe the security technology components such as firewalls, intrusion detection devices, virus detection, etc. that will be utilized in the Offerors solution. Datacenter Security implementation activities must be conducted in accordance with, but not limited to, leading industry and Commonwealth standards such as ISO 27001:2005 and ISO 27002:2005.

- Datacenter Technology Environment - describes the Datacenter technology used in the delivery of the Offeror's Enterprise Datacenter Services. A summary of the planned allocation of platforms within each of the proposed datacenters should be included. Note: more detailed technology specifications shall be provided in the *D-03 Technology Architecture and Refresh Approach* deliverable.

- Datacenter Implementation Roadmap – presents the detailed implementation plan for the enablement of the overall Datacenter Architecture. The Datacenter Implementation Roadmap shall Reference roles and responsibilities, as well as critical dates and timelines.

EDC Assessment		
D-01.01	Effective Date + 45 days	Offeror must assess the EDC facilities and provide a report to the Commonwealth as it pertains to: • Required security upgrades • Required HVAC and power upgrades • Required physical access to the EDC facility • Monitoring, maintain and reporting on EDC SLAs • Monitoring, maintaining and operating the installed infrastructure
Multi Datacenter Environment (2+ Architecture)		
D-01.02	Effective Date + 60 days – with quarterly updates	*Datacenter Architecture Plan and Roadmap* Datacenter Architecture Plan and Roadmap includes: • 2+ datacenter architecture (with/plus EDC) • Datacenter Network Architecture • Datacenter Security Architecture • Datacenter Technology Environment • Datacenter Implementation Roadmap Offeror must publish quarterly updates to the Datacenter Architecture Plan and Roadmap to include proposed updates to the technical architecture and implementation plan
Network and Security Architecture		
D-01.03	Effective Date + 60 days – with quarterly updates	*Datacenter Architecture Plan and Roadmap – Network and Security Architecture* The Network and Security Architecture - describes the network and security architecture to support the 2+ datacenter architecture.
Datacenter Architecture and Technology		
D-01.04	Effective Date +60 days– with quarterly updates	*Datacenter Architecture Plan and Roadmap* – Datacenter Technology The Datacenter Technology describes the technology used in the delivery of the Offeror's Enterprise Datacenter Services.
D-01.05	Effective Date +90 days – with quarterly updates	*Datacenter Architecture Plan and Roadmap* – Datacenter Technology Roadmap The Datacenter Technology Roadmap will identify specific, short-term steps and schedules for project of changes with estimated timings and cost impact to Commonwealth datacenter customers.

D-01.06	Effective Date + 180 days	*Datacenter Architecture Plan and Roadmap – Configuration Item Reconciliation* *The Configuration Item Reconciliation is the validation and update of the CMDB of record with the Offeror's configuration information including the EDC assets and CI's.*
Limited-Use Colocation Services		
D-01.07	Effective Date + 30 days	*Datacenter Architecture Plan and Roadmap*

D-02 Commonwealth Computing Procedures Manual (CCPM)

Offeror will develop documentation in accordance with the requirements in **Schedule H** - **Commonwealth Computing Procedures Manual (CCPM)**. This comprehensive services management manual will include, but not be limited to, the following sections as described in **Schedule H**:

- Organizational Overview
- Transition and Support Activities and Responsibilities
- IT Service Management Procedures
- Financial Management Procedures
- Contract Management Procedures
- Relationship Management Procedures
- Offeror Operational Procedures
- Commonwealth Customer Operations Manuals

Additional Planning Services		
D-02.01	Effective Date + 14 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide the initial version of the Commonwealth Computing Procedures Manual (CCPM) (see Schedule H CCPM Commonwealth Computing Procedures Manual) that includes Offeror's overall program and service management processes and procedures. The comprehensive manual includes the following sections: • Organizational Overview • Transition and Support Activities and Responsibilities • IT Service Management Procedures • Financial Management Procedures • Contract Management Procedures • Relationship Management Procedures • Offeror Operational Procedures • The Commonwealth Customer Operations Manuals PMO & Contract Management will focus on the bolded sections of the CCPM.

D-02.02	As needed during transition	After review and approval from the Commonwealth, Offeror must provide ongoing updates to the CCPM during the startup and transition phase
D-02.03	Yearly or as required	Offeror must provide CCPM updates as required as new services are added and yearly after the transition phase.
Availability/SLA Management		
D-02.04	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document the Availability and SLA Management approach and providing updates to the CCPM.
D-02.05	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Availability and SLA Management approach and project plan with Commonwealth stakeholders.
D-02.06	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* SLA Achievement Report, detailing system availability, SLA attainment, and reason for outages.
D-02.07	As Needed	*Commonwealth Computing Procedures Manual (CCPM)* Root Cause Analysis (RCA) report for all major outages within SLA (e.g. hours/days of outage).
D-02.08	As requested	*Commonwealth Computing Procedures Manual (CCPM)* Ad hoc – Availability and SLA Reports
Change & Release Management		
D-02.09	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document the Change and Release Management approach and project plan updating appropriate sections to the CCPM.
D-02.10	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Change and Release Management approach and project plan with Commonwealth stakeholders.
D-02.11	Weekly	*Commonwealth Computing Procedures Manual (CCPM)* Weekly Change Management Meeting with the Change Advisory Board
D-02.12	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Monthly Change & Release Management summary report containing the number of changes, by platform, by Commonwealth organization, and status.

D-02.13	Yearly	*Commonwealth Computing Procedures Manual (CCPM)* On a yearly basis, randomly select completed Changes & Releases for detail auditing to determine compliance to policies. Create a summary report of the finding and make recommendations for improvements where appropriate.
D-02.14	Per Change Event	*Commonwealth Computing Procedures Manual (CCPM)* Complete Change Control & Release Management process for each change event adhering to the letter and spirit of the policy and process. Maintain a complete copy of the change / release for possible future audit.
Service Desk		
D-02.15	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document the Service Desk approach, organization, schedule and project plan.
D-02.16	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Service Desk approach and project plan with Commonwealth stakeholders
D-02.17	Effective Date + 60 days	*Knowledge Management Portal (KMP)* Offeror must provide a Knowledge/Service Management portal that describes the Offeror's contract information, pricing schedules, service offerings and operating procedures (operational, service delivery processes, SLAs, service ordering, etc.)
D-02.18	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Commonwealth Computing Procedures Manual (CCPM) including but not limited to the following: Datacenter Operations, Change Management, Service Desk Operations, Security Management, Backup Management, Disaster Recovery, Performance Management, Asset Management, Service Level Management and Configuration Management. The Offeror must make the CCPM available on the Offeror's Knowledge/Service portal. See Schedule H Commonwealth Computing Procedures Manual (CCPM) for additional detail.
D-02.19	Effective Date +180 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must describe the process to keep separate and current specific sections of the CCPM dedicated to the operations of individual Commonwealth customers.
D-02.20	Effective Date +90 days	Knowledge Management Portal Offeror must provide Knowledge/Service portal training to authorized Commonwealth stakeholders

D-02.21	Weekly	*Commonwealth Computing Procedures Manual (CCPM)* Weekly summary report containing the type of incidents and problems being reported to the Service Desk. Identify measures being taken to reduce or eliminate stated incidents and problems.
D-02.22	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Monthly summary report containing the type of incidents and problems being reported to the Service Desk. Identify measures being taken to reduce or eliminate stated incidents and problems.
Account Management		
D-02.23	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their Account Management approach and project plan.
D-02.24	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Account Management approach and project plan with Commonwealth stakeholders
D-02.25	Monthly	Monthly summary report containing the operational availability report on all systems in service, events and issues that occurred during the month. Report shall contain operational metrics by service platform, highlights and exceptions, and project status updates.
Configuration Management		
D-02.26	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their Configuration Management approach, tool(s) and project plan.
D-02.27	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Configuration Management approach, tool(s) and project plan with Commonwealth stakeholders
D-02.28	As Requested	Offeror must provide Agency / Commonwealth level Configuration Management Reports
3rd Party License Management		
D-02.29	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their 3rd Party License Management approach, tool(s) and project plan.

D-02.30	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the 3rd Party License Management approach, tool(s) and project plan with Commonwealth stakeholders
D-02.31	Per request	Offeror must provide Software License Reports
Capacity Management		
D-02.32	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their Capacity Management approach, tool(s) and project plan.
D-02.33	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must review the Capacity Management approach, tool(s) and project plan with Commonwealth stakeholders
D-02.34	Effective Date + 240 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must present the baseline Capacity Management Plan
D-02.35	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must issue periodic reports showing usage, trends, capacity forecasts, and recommendations for upgrades.
D-02.36	Annual	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide technology usage report (i.e. MIPS, vcpu, storage, etc.) by stakeholder and overall usage by the Commonwealth. The report must show monthly technology growth patterns by stakeholder.
Windows Support		
D-02.37	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must present their roadmap and project plan to address the Windows Operations and Management including but not limited to the following; windows servers, backups, network connectivity, technical support, staffing, etc.
D-02.38	Effective Date + 45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must present plan to address the assessment recommendations identified in the Windows Operations and Management project plan.
D-02.39	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present a report describing the methodology the Offeror will follow to perform a Windows backups audit finding and recommendation to the Commonwealth Stakeholders, the audit report will include findings, recommendations, project plan and cost estimates.

D-02.40	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide SLA report(s). Provide a report detailing system availability, SLA attainment, reason for outages, and recommendations for improvements.
D-02.41	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Continuous Improvement Report. Provide a report detailing system availability and SLA attainment. Recommend system and cost improvements as appropriate.
Storage Management		
D-02.42	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must present their roadmap and project plan to address Storage Management including but not limited to the following; data storage, backups, network connectivity, technical support, staffing, etc.
D-02.43	Effective Date + 45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must present plan to address the assessment recommendations identified in the Storage Management project plan.
D-02.44	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present a report describing the methodology the Offeror will follow to perform a system backups audit finding and recommendation to the Commonwealth Stakeholders, the audit report will include findings, recommendations, project plan and cost estimates.
D-02.45	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide SLA report(s). Provide a report detailing system availability, SLA attainment, reason for outages, and recommendations for improvements.
D-02.46	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Continuous Improvement report(s). Provide a report detailing system availability and SLA attainment. Recommend system and cost improvements as appropriate.
ERP Hosting – SAP / Oracle		
D-02.47	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must present their roadmap and project plan to address ERP Hosting including but not limited to the following; data storage, backups, network connectivity, technical support, staffing, etc.

D-02.48	Effective Date + 45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must present plan to address the assessment recommendations identified in the ERP Hosting project plan.
D-02.49	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present a report describing the methodology the Offeror will follow to perform a system backup audit finding and recommendation to the Commonwealth Stakeholders, the audit report will include findings, recommendations, project plan and cost estimates.
D-02.50	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide SLA report(s). Provide a report detailing system availability, SLA attainment, reason for outages, and recommendations for improvements.
D-02.51	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Continuous Improvement report(s). Provide a report detailing system availability and SLA attainment. Recommend system and cost improvements as appropriate.
UNIX Support – AIX / Linux		
D-02.52	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must present their roadmap and project plan to address UNIX Support including but not limited to the following; data storage, backups, network connectivity, technical support, staffing, etc.
D-02.53	Effective Date + 45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must present plan to address the assessment recommendations identified in the UNIX Support project plan.
D-02.54	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present UNIX audit finding and recommendation to the Commonwealth Stakeholders, the report will include findings, recommendations, project plan and cost estimates.
D-02.55	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide SLA report(s). Provide a report detailing system availability, SLA attainment, reason for outages, and recommendations for improvements.
D-02.56	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Continuous Improvement report(s). Provide a report detailing system availability and SLA attainment. Recommend system and cost improvements as appropriate.

Mainframe Services		
D-02.57	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must present their roadmap and project plan to address Mainframe Support (IBM & Unisys) including but not limited to the following; data storage, backups, network connectivity, technical support, staffing, etc.
D-02.58	Effective Date + 45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must present project plan to address the assessment recommendations identified in the Mainframe Support (IBM & Unisys) plan.
D-02.59	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present mainframe audit finding and recommendation to the Commonwealth Stakeholders, the report will include findings, recommendations, project plan and cost estimates.
D-02.60	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide SLA report(s). Provide a report detailing system availability, SLA attainment, reason for outages, and recommendations for improvements.
D-02.61	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Continuous Improvement report(s). Provide a report detailing system availability and SLA attainment. Recommend system and cost improvements as appropriate.
Database Management Services		
D-02.62	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their Database Management approach, tool(s) and project plan.
D-02.63	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Database Management approach, tool(s) and project plan with Commonwealth stakeholders
D-02.64	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present backup audit finding and recommendation to the Commonwealth Stakeholders, the report will include findings, recommendations, project plan and cost estimates.
D-02.65	Effective Date	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Database Management Service Architecture document (Oracle, Sybase, and MS SQL).

D-02.66	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Database Management Service Usage Reports
Server Capacity on Demand		
D-02.67	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their Server Capacity on Demand approach, tool(s) and project plan.
D-02.68	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Server Capacity on Demand approach, tool(s) and project plan with Commonwealth stakeholders
D-02.69	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must host a quarterly meeting with the Commonwealth to review current server utilization on all managed server platforms and locations, and forecast future quarter's server processing requirements. Recommendations to increase capacities will be made, when approved by the Commonwealth; the additional equipment will be scheduled for deployment.
Storage Capacity on Demand		
D-02.70	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their Storage Capacity on Demand approach, tool(s) and project plan.
D-02.71	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Storage Capacity on Demand approach, tool(s) and project plan with Commonwealth stakeholders
D-02.72	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must host a quarterly meeting with the Commonwealth to review current SAN storage utilization on all managed SAN platforms and locations, and forecast future quarter's SAN storage requirements. Recommendations to increase capacities will be made, when approved by the Commonwealth; the additional equipment will be scheduled for deployment.
DR Infrastructure on Demand		
D-02.73	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must host a quarterly meeting with the Commonwealth to review current disaster recovery service and capabilities, and forecast future quarter's disaster recovery requirements. Recommendations to increase capacities will be made, when approved by the Commonwealth, the additional equipment and services will be scheduled for deployment.

Additional Technical Services		
D-02.74	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide a monthly report on technical support services usage by Commonwealth datacenter customer.
Limited-Use Colocation Services		
D-02.75	Effective Date + 30 days	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must document their approach, tool(s) and project plan for supporting Limited-Use Colocation Services.
D-02.76	Effective Date +45 days	*Commonwealth Computing Procedures Manual (CCPM)* After review and approval from the Commonwealth, Offeror must review the Limited-Use Colocation Services approach, tool(s) and project plan with Commonwealth stakeholders
D-02.77	Effective Date +60 days	*Commonwealth Computing Procedures Manual (CCPM)* Present backup audit finding and recommendation to the Commonwealth Stakeholders, the report will include findings, recommendations, project plan and cost estimates.
D-02.78	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Limited-Use Colocation Services Usage Reports
Performance Monitoring & Management		
D-02.79	Monthly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide monthly summary report containing the performance level achieved for each system being monitored. This report will be reviewed with the Commonwealth and plans will be made to address system utilization as appropriate.
D-02.80	Daily	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide daily reports containing the performance level achieved for each system being monitored. Daily reports summarizing incidents for the past 24-hours and immediate reports of incidents and routine status reports of incidents in progress for resolution such as a network or server outage that impacts a facility and our business. These reports will be reviewed with the Commonwealth and plans will be made to address system utilization as appropriate.

Transition Program Management		
D-02.81	Effective Date + 60 days	*Commonwealth Computing Procedures Manual (CCPM)* Establish Interim Contract Management Procedures during the transition of datacenter services. Offeror must describe an interim procedure to monitor and manage service delivery including but not limited to the following; Problem Management, Change Management, Service Level monitoring and reporting, physical and logical security, project management, etc. while the service is transitioned from the Commonwealth to the Offeror.
D-02.82	Weekly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Transition Status reports, including any schedule variance that cannot be remediated will trigger the escalation procedures outlined in the Transition Plan/Agreement, which will be developed during Transition.
Security & Firewall		
D-02.83	Quarterly	*Commonwealth Computing Procedures Manual (CCPM)* Offeror must provide Continuous Improvement report. Provide a report detailing system availability and SLA attainment. Recommend system and cost improvements as appropriate.

D-03 Technology Architecture and Refresh Approach

The Technology Architecture and Refresh Approach will include the Offeror's proposed the Technology that will be utilized to support the architecture and delivery of services across all platform and services. The Technology Architecture and Refresh Approach should include at minimum sections that support the following:

- Datacenter Technology - describes the technology used in the delivery of the Offeror's Enterprise Datacenter Services. The technology descriptions should include hardware, software that will be included in the overall solution delivery. The technology should also include a complete list of those Service Level measurement and monitoring tools that will be used to measure and report Offeror's performance of the Services at a level of detail sufficient, as determined by the Commonwealth, to verify Offeror's compliance with those Service Levels described in **Schedule J.1 Datacenter Service Level Management** as of the Effective Date.

- Datacenter Technology Roadmap - will identify specific, short and long term steps and schedules for planned and proposed future changes with estimated timings and cost impact to Commonwealth datacenter customers. This should be the basis for generation of technology roadmaps which will include schedules, dependencies and requirements for introduction of new technology changes as well as acquisition, support, and retirement of current software/hardware.

- Configuration Item Reconciliation - is the validation and update of the CMDB of record with the Offerors configuration information including the EDC assets and Configuration Items (CI's).

Technology Refresh		
D-03.01	Effective Date + 30 days	*Technology Architecture and Refresh Approach* Offeror must document the following Technical Architecture approach and project plan including; Service Catalog, IT Architecture, and Technical support
D-03.02	Effective Date +45 days	*Technology Architecture and Refresh Approach* After review and approval from the Commonwealth, Offeror must review the Technical Architecture approach and project plan with Commonwealth stakeholders
D-03.03	Effective Date + 60 days	Offeror must identify the technical architecture organization and staff.
Infrastructure Architecture		
D-03.04	Effective Date + 45 days	*Technology Architecture and Refresh Approach* Offeror must document the approach and project plan for the computing infrastructure architecture and review with Commonwealth Stakeholders
D-03.05	Effective Date + 45 days	*Technology Architecture and Refresh Approach* After review and approval from the Commonwealth, Offeror must document the approach and project plan for the network architecture to connect Offeror's datacenter(s), review with Commonwealth Stakeholders
D-03.06	As requested by Commonwealth Stakeholders	*Technology Architecture and Refresh Approach* Offeror must describe the process to request a review new technologies evaluations by Commonwealth datacenter customers.
D-03.07	Per request – prior to a new application infrastructure service	*Technology Architecture and Refresh Approach* Offeror must provide Infrastructure Architecture Design Reports
Performance Monitoring & Management		
D-03.08	Effective Date + 30 days	*Technology Architecture and Refresh Approach* Offeror must document their Performance Monitoring and Management approach, tool(s) and project plan.

D-03.09	Effective Date +45 days	*Technology Architecture and Refresh Approach* After review and approval from the Commonwealth, Offeror must review the Performance Monitoring and Management approach, tool(s) and project plan with Commonwealth stakeholders

D-04 IT Service Continuity Architecture and Plan

The IT Service Continuity Architecture and Plan will include the Offeror's proposed Disaster Recovery (DR) solution architecture. The DR solution architecture will describe how the Offeror will deliver multiple tiers of disaster recovery services. The IT Service Continuity Architecture and Plan will also describe the Offeror's approach to reviewing the Commonwealth's current DR Plans and the updating of those plans in coordination with the Commonwealth.

IT Service Continuity Architecture		
D-04.01	Effective Date + 30 days	*IT Service Continuity Architecture and Plan* Offeror must describe their methodology for reviewing and refreshing technology on a scheduled basis.
D-04.02	Effective Date + 30 days	*IT Service Continuity Architecture and Plan* Offeror must provide an IT Service Continuity Architecture and Plan to Implement DR solution
D-04.03	30 days prior to transition of each critical application	*IT Service Continuity Architecture and Plan* Offeror must describe their approach to providing Develop/Update Agency Application DR and Business Recovery Plan(s)
D-04.04	Depending on DR Tier Solution • Current DR • Tier 0 • Tier 1 • Tier 2 • Tier 3 • Tier 4	*IT Service Continuity Architecture and Plan* Offeror must develop a plan to transition agencies to Tiered DR Solution • Currently have DR (DPH) – at time of transition • Tier 0 – Transition + 90 days • Tier 1 – Transition + 60 days • Tier 2 – Transition + 30 days • Tier 3 – at time of transition • Tier 4 – at time of transition
DR Planning & Testing		
D-04.05	Effective Date + 30 days	*IT Service Continuity Architecture and Plan* Offeror must document their Tiered Disaster Recovery approach, tool(s) and project plan.

D-04.06	Effective Date +45 days	*IT Service Continuity Architecture and Plan* After review and approval from the Commonwealth, Offeror must review their Tiered Disaster Recovery approach, tool(s) and project plan with Commonwealth stakeholders
D-04.07	Monthly	*IT Service Continuity Architecture and Plan* Offeror must provide report(s) describing schedule of stakeholder participation in DR solution

D-05 Transition Management Plan

The Transition Management Plan will provide a detailed overview of the Offeror's transition management approach, process and procedures. The Transition Management Plan will describe the enablement of the Transition Project Management Office (TPMO) and also provide a detailed implementation schedule of transition activities and milestones. The Transition Management Plan should include at minimum sections that support the following:

- Transition Management Approach
- Transition Project Management Office (TPMO) Organization and Responsibilities
- Transition Management Communications Plan
- Transition Schedule

Transition Management (New Customer and/or Services)		
D-05.01	Effective Date + 60 days	*Transition Management Plan* Offeror must create a Transition Roadmap with major milestones and present it to the Commonwealth for review
D-05.02	Effective Date + 90 days	*Transition Management Plan* After review and approval from the Commonwealth, Offeror must create a Detailed Transition Project Plan with major milestones and present it to the Commonwealth for review
D-05.03	Weekly	*Transition Management Plan* Offeror must create a report for the Commonwealth detailing the transition projects on the plan, status, schedule, risks, and the forecasted transition date.

Transition Program Management		
D-05.04	Effective Date + 60 days	*Transition Management Plan* Offeror must present their approach to transition Commonwealth computing assets. The approach must include a roadmap and project plan to successfully transition Commonwealth computing assets using the schedule identified in the RFP
D-05.05	Effective Date + 90 days	*Transition Management Plan* Present and review the transition roadmap and plan to Commonwealth stakeholders.
D-05.06	Effective Date + 60 days	*Transition Management Plan* Establish Interim Contract Management Procedures during the transition of datacenter services. Offeror must describe an interim procedure to monitor and manage service delivery including but not limited to the following; Problem Management, Change Management, Service Level monitoring and reporting, physical and logical security, project management, etc. while the service is transitioned from the Commonwealth to the Offeror.
D-05.07	Effective Date + 60 days	*Transition Management Plan* EDC / Legacy Datacenter Infrastructure Maintenance Strategy – Offeror must document their strategy as it related to providing a solution to the infrastructure maintenance expiration issue at the EDC and any other datacenter that has the same or similar issue.
D-05.08	Effective Date + 60 days	*Transition Management Plan* Offeror must provide the procedure to standup their Transition Management Office
D-05.09	Weekly during transition	*Transition Management Plan* Offeror must provide Transition Status reports, including any schedule variance that cannot be remediated will trigger the escalation procedures outlined in the Transition Plan/Agreement, which will be developed during Transition.
Security Transition Activities		
D-05.10	Effective Date + 60 days	*Transition Management Plan* Offeror must provide their Security Transition Plan
D-05.11	Weekly updates during transition	*Transition Management Plan* Offeror must provide their Security Transition Status Report(s)

D-06 Agency Level DR Plan(s)

The Offeror is required to assist the Commonwealth Agencies with updates to or development of their current DR Plans (DRPs). These Agency Level DR Plans will reflect the Offeror's DR approach and solution for DR testing. The following describes the Offeror's responsibilities regarding the updating of Agency Level DRPs:

- Within six (6) months after the Effective Date, Offeror shall complete the update all existing Agency-specific Disaster Recovery Plans and technical recovery guides to reflect all changes implemented to the Services infrastructure prior to or during the performance of Transition Services.
- For Applications lacking tested Disaster Recovery Plans, Offeror shall work with Commonwealth Agencies to complete a gap analysis of the current Disaster Recovery Plans and technical recovery guides compared to the requested recovery time objective, as specified in **Schedule J.1 Datacenter Service Level Management**, and update the Disaster Recovery Plans with the results within forty-eight (48) months after the Effective Date.
- For Agencies without a Disaster Recovery Plan, the Offeror shall work with Agencies to develop a basic Disaster Recovery Plan and technical recovery guides within eighteen (18) months after the Effective Date.

DR Planning & Testing		
D-06.01	Monthly	*Agency Level DR Plan* Offeror must provide report(s) describing the schedule of DR test being performed by stakeholders
D-06.02	Monthly	*Agency Level DR Plan* Offeror must provide report(s) describing the results of stakeholder DR test
D-06.03	As requested– Per Agency Critical Application	*Agency Level DR Plan* Offeror must provide DR Test Plans as required

D-07 Security Management Plan

The Security Management Plan will address the overall security management for the planned facility security implementation for the EDC, the Offeror Facilities, software and equipment deployment specifically for data and online security, annual security assessments and other standard security concepts for ensuring the safety, security and confidentiality of Commonwealth Data.

The Security Management Plan shall include a complete description of the personnel security management program. It shall comply with background check requirements specified in the Terms and Conditions and shall provide a methodology for ongoing evaluation and reporting of any change in status of Offeror personnel that would negatively impact their ability to continue to meet Commonwealth or Agency security requirements.

Security Management		
D-07.01	Effective Date + 30 days	*Security Management Plan* Offeror must document their Security Management approach, tool(s) and project plan.
D-07.02	Effective Date +45 days	*Security Management Plan* After review and approval from the Commonwealth, Offeror must review their Security Management approach, tool(s) and project plan with Commonwealth stakeholders.
D-07.03	Quarterly	*Security Management Plan* Offeror must provide the Commonwealth with a report containing the detailed results of the Vulnerability Analyses testing. Include any remediation activities that are required.
D-07.04	Monthly	*Security Management Plan* Offeror must provide the Commonwealth with the detailed monthly Security Log Analysis report. Include any remediation activities that are required.
D-07.05	Ongoing	*Security Management Plan* Offeror must maintain a hardcopy file of all security access changes. The copy will contain the date, time, file changes, access rights applied and the name of the security officer completing the access request.
Security & Firewall		
D-07.06	Effective Date + 30 days	*Security Management Plan* Offeror must document their Security and Firewall approach, tool(s) and project plan.
D-07.07	Effective Date +45 days	*Security Management Plan* After review and approval from the Commonwealth, Offeror must review the Security and Firewall approach, tool(s) and project plan with Commonwealth stakeholders
D-07.08	Monthly	*Security Management Plan* Threat Assessment and Analysis Report. Provide a monthly report detailing the threat assessments, volume and major types of malware detected, volume of SPAM rejected, corrective actions, and recommendations that would improvement security of Commonwealth systems.
D-07.09	Monthly	*Security Management Plan* Offeror must provide SLA reports. Provide a report detailing system availability, SLA attainment, reason for outages, and recommendations for improvements, security incident notification, and security change request intervals and results.

D-07.10	Monthly	*Security Training and On-boarding Status Report* Offeror must provide a monthly Security Training and On-boarding Status Report detailing security training, changes to project personnel, and background check status and results.

D-08 Facilities Management Plan

The Facilities Management Plan will address management for both the EDC facility and the proposed Offeror's facility(s). The Facilities Management Plan should describe the Offeror's plan for providing and managing the physical environment. For example; power and power distribution, cooling and ventilation, fire detection and suppression, building security and access control, and environmental monitoring. Provide an approach for yearly review and self-verification that the datacenters will be managed, maintained and operated at the equivalent of Uptime Institute of Tier 3 rating. The plan should also address how the Offeror will support SSAE-16 compliance audits.

Facilities Architecture / Maintenance		
D-08.01	Effective Date + 60 days	*Facilities Management Plan* Offeror must present their assessment of the EDC and any required facility changes/modification required to upgrade the facility to meet service level objectives. The assessment must include a roadmap and project plan to make any required facility modifications.
D-08.02	On the July 31st following the Commonwealth's acceptance of Milestone M-14	*Facilities Management Plan* Present results of the SSAE 16 audit of the EDC. The audit period is to cover the period from Transition completion through the following June 30th
D-08.03	Monthly	*Facilities Management Plan* Offeror must provide monthly Facilities SLA Report, detailing environmental equipment availability, SLA attainment, and reason for outages.
D-08.04	Quarterly	*Facilities Management Plan* Offeror must provide quarterly Facility service improvement report. Report changes and improvements to the facility or the maintenance of the facilities.
D-08.05	Annual	*Facilities Management Plan* Offeror must provide annual SSAE 16 audit reports for each datacenter facility being used to support the Commonwealth. The Audit Report for the EDC must be provided on the anniversary of the Audit Report described in Deliverable D-08.02.

Site Operations		
D-08.06	Effective Date + 60 days	*Facilities Management Plan* Offeror must present their assessment of the EDC monitoring and staffing changes/modification required to upgrade the facility to meet Commonwealth service level objectives. The assessment must include a roadmap and project plan to make any required monitoring and staffing modifications.
D-08.07	Effective Date + 90 days	*Facilities Management Plan* Present plan to address the assessment recommendations identified in the EDC monitoring, project plan and staffing report.
D-08.08	Daily, Monthly	*Facilities Management Plan* Offeror must provide daily and monthly SLA report(s), detailing environmental equipment availability, SLA attainment, and reason for outages.
D-08.09	Quarterly	*Facilities Management Plan* Offeror must provide quarterly site operations improvement report. Identify changes or improvements to the site operations that would assist the Offeror in meeting the agreed facility SLAs.

D-09 Security Risk and Vulnerability Assessment Report

The Offeror will execute a Baseline Security Risk and Vulnerability Assessment. The assessment report must include a roadmap and project plan to make any required security modifications prior to final transition of services.

Security Transition Activities		
D-09.01	Effective Date + 60 days	*Security Risk and Vulnerability Assessment Report* Offeror must execute a Baseline Security Risk and Vulnerability Assessment. The assessment must include a roadmap and project plan to make any required security modifications.
D-09.02	Effective Date + 90 days	*Security Risk and Vulnerability Assessment Report* Present results of the Security Risk and Vulnerability assessment along with a Roadmap and Project Plan to address the recommendation identified in the assessment.

D-10 Gap Analysis Report

The Offeror will execute a Data Center Gap Analysis. The analysis report must identify gaps in the current data centers and the Offeror's recommendations and corrective approach.

Gap Analysis Activities		
D-10.01	Effective Date + 120 days	*Gap Analysis Report* Offeror must execute a Data Center Gap Analysis. The analysis must include gaps identified and a roadmap and project plan to institute any recommendations and corrective actions.
D-10.02	Effective Date + 150 days	*Gap Analysis Report* Present results of the Data Center Gap Analysis along with a Roadmap and Project Plan to address the recommendations identified in the analysis.

D-11 Contract Management Plan

The Contract Management Plan will address management for the overall contract. The Contract Management Plan should describe the Offeror's plan to ensure it is adhering to the terms and conditions of the contract and providing the services/products that meet the requirements of the project. The Contract Management Plan must identify the activities to be performed or initiated to manage, track, amend, and close the contract. The Contract Management Plan must include but is not limited to: participants roles and responsibilities, task accomplishment plan, status reports, deliverable management, contact performance management, risk management, and contract closeout.

Contract Management Plan		
D-11.01	Effective Date + 45 days	*Contract Management Plan* Offeror must document its Contract Management approach, tool(s) and project plan.
D-11.02	Effective Date + 60 days	*Contract Management Plan* After review and approval from the Commonwealth, Offeror must review its Contract Management approach, tool(s) and project plan with Commonwealth stakeholders.

D-12 Schedule C.2 - Service Descriptions Initial Completion

Schedule C.2 (Service Descriptions) is a description of the Services that are orderable by the Commonwealth from the Catalog of Services contained within Schedule C.1. Schedule C.2 must include enough detail to allow an authorized Commonwealth employee to have a brief understanding of the service referenced within the document. A template has been provided as part of the executed Contract and is the basis for this deliverable.

Schedule C.2 – Service Descriptions Initial Completion		
D-12.01	Effective Date + 30 days	*Schedule C.2 – Service Descriptions Initial Completion* Contractor must document and provide to the Commonwealth, a completed Schedule C.2 containing all Services listed and priced within Schedule C.1 – Catalog of Services using the template included within Schedule C.2 of this Contract at the time of execution.

Deliverable Acceptance Criteria Matrix

This section is provided for the Offeror to understand the process the Commonwealth will use for acceptance of Deliverables/Milestones that are committed to in the RFP. The Matrix provided below is an example of the template that will be used to capture Deliverables/Milestones and other information related to the acceptance process.

It is critical to the success of the Data Center Computing Services project that the deliverable acceptance process is thorough and that any deficiencies are addressed as early as possible to minimize impacts to the Services. Designated Commonwealth working teams will be reviewing the Deliverables/Milestones throughout the phases of development. The Offeror will solicit input from the Commonwealth team members as the items are developed with the goal of understanding expectations in advance so as to obtain acceptance upon delivery. Feedback and suggestions received from the Commonwealth must be incorporated into the Deliverables/Milestones. The Commonwealth will identify the individuals authorized to provide formal Acceptance Approval / Nonconformance notification to the Offeror for the Deliverables/Milestones. The deliverable acceptance process will comply with the following guidelines and be formally documented in the Commonwealth Computing Procedures Manual (CCPM).

1. The Offeror will give written notice to the Commonwealth that a Deliverable / Milestone is complete.
2. A walk-through review of the Deliverable and/or Milestone will be scheduled by the Offeror seven (7) days following the issuance of the written notice to the Commonwealth. The purpose of the walk-through is to provide a forum for discussion and review of the Transition Deliverable / Milestone with the approver/s. If additional review, physical inspection, on-line access or backup information is required, the Commonwealth will notify the Offeror at this time.
3. The Commonwealth will provide the Offeror with notice that the Deliverable / Milestone is Accepted or notice of Noncompliance no later than seven (7) days after the walk-through, fourteen (14) days after notice of completion.
4. If the Commonwealth does not provide notice to the Offeror of their Acceptance or Nonconformance within fourteen (14) days of notice of completion, the Offeror will give the Commonwealth written notice that the request was not received and the Acceptance Review Period will be extended an additional seven (7) days.
5. The Enterprise Datacenter Services Transition Management Committee will review all Deliverable / Milestones which have not received written notice of Acceptance or Noncompliance within fourteen (14) days after notice of completion. The Enterprise Datacenter Services Transition Management Committee's goal is to determine and document the Commonwealth and Offeror actions necessary to complete the review minimizing any potential delays to the project and addressing any substantive issues.
6. For any Deliverables / Milestones which are found to be Noncompliant, the Offeror will address the nonconformity (and any other problems of which it has knowledge) and redeliver the item to the Commonwealth using the process outlined above.

The status of each Deliverable and any associated issues will be managed through a monthly deliverables review meeting between the Commonwealth and the Offeror. The objective of the meeting is to review the status of all deliverables, communicate deliverable owners and

deliverable recipients for upcoming deliverables, review rejected deliverables and remediation plans for those deliverables.

RE: **BAFO Request for Proposal (RFP Number 6100022698) for the Commonwealth of Pennsylvania Data Center Computing Services**

Dear Ms. Brown:

Thank you for selecting Unisys to participate in the "Best and Final Offers" (BAFO) phase of the evaluation process. We reviewed the BAFO request and we are pleased to submit our improvements to our Technical, Cost, and SDB submittals.

Our two primary production Datacenters (Commonwealth's EDC and the Unisys Ashburn facility) were selected to enable High Availability and, by design, are less than 90 miles apart. We welcome the opportunity to better explain and clarify how the Unisys proposed Datacenter Model was designed to support High Availability configurations between two physical production Datacenters and easily supports Production Servers in one physical Datacenter and lower server environments (DEV and Test Servers) in the other physical Datacenter. **Please find the Unisys answers to the 2+ Datacenter Architecture BAFO questions in Tab 1.**

As part of Orals, the Commonwealth provided Unisys with written questions that were addressed during our presentation and asked a number of additional questions at the end of our Presentation. When analyzing and categorizing the types of questions asked, Unisys discovered that most of the questions were related to our proposed Security Offering.

Protecting citizen data has always been important to the Commonwealth. Security becomes even more important as the Commonwealth transitions to the proposed on-demand compute environment; quite simply the agencies must have the confidence in the security of the new environment to meet their diverse regulatory requirements such as CHRIA, FERPA, HIPAA/HITECH, IRS 1095, PCI and CJIS during transition, and steady state operations. The Unisys team understands this is fundamental to the success of the initiative and is committed to a successful transition and operation of the new environment.

We leverage our teaming partner - Deloitte's robust public sector security risk framework that integrates several regulatory requirements, as the foundation of our security management plan. This readily available catalog of rationalized regulatory requirements and controls will help us appropriately address the people, process and technology aspects of our security solution. **Please find the details on our Security improvements and clarifications in Tab 2.**

Also during the Orals, the Unisys Team received several questions around our x86 Technical Infrastructure. As a result, we have made several revisions and enhancements to our Technical Submittal focused on clarifying our x86 Technical Infrastructure offering. **Please find the details on our Technical Infrastructure improvements and clarifications in Tab 3.**

Finally, we proposed a small number of technical changes that improve both transition and operations while providing efficiencies. **A summary of major improvements are listed below and the details for all of our operational efficiencies are in Tab 4.**

- As part of an effort to continue to refine the Transition Plan and enable an earlier migration out of the DPH while limiting overall operational risk, the Unisys Team's overall timeline for Transition is now 18 months. The Unisys Team continues to plan to complete the EDC's Transition by Month 6 and now plans to complete the DPH migration by Month 12. If the new contract effective date is before December 31, 2013, the reduced DPH transition timeline will allow the Commonwealth to avoid a DPH contract extension.

- The Unisys Team refined the 2+ Data Center architecture approach by adjusting the functions provided by the Unisys Eagan data center and its network connectivity. This modification simplifies the planning and migration activities for the DPH and agency individual data centers during Transition while maintaining the flexibility to meet changing business needs.

Should you have any questions about this BAFO response or need additional information, please continue to contact Dean R. Shaner.

We appreciate this opportunity to provide improvements and clarification to our proposal in support of your mission.

Sincerely,

[redacted]

[redacted]. Edward Coleman

1. BAFO Datacenter Questions

No.	BAFO Question
1	*Describe how Unisys's proposed 2+ Data Center Architecture will support a High Availability configuration between multiple physical data centers with equal parts of an application distributed between physical data centers?*

A key design feature of the Unisys Data Center Architecture is to support high availability configurations and applications running across multiple physical data centers. This design requires a set of fundamental components or capabilities to enable effective communications between applications and support movement of applications between sites, thus enabling the placement of applications on physical or virtual server workloads across multiple data centers. These components or capabilities are:

- **Location of Physical Data Centers**- Distance between data centers is a major consideration when architecting a high availability configuration. Separation of greater than 90 miles can cause latency problems which in turn can be expensive to remedy. Unisys strategically selected the [redacted] site to complement the EDC. Distance between these sites is 90 miles.
- **Storage** – In a high availability environment with applications divided between multiple data centers, a robust storage architecture must be deployed across the data centers to easily move data across application components. Furthermore, due to the tight coupling of many Commonwealth applications, the production, development, test, QA, or disaster recovery workloads will be no more than 90 miles apart between the EDC and Unisys [redacted] data centers after transition is completed. The short distance between the sites allows for large amounts of data to be replicated quickly between the applications so application fail-over and API calls can occur rapidly; this is a key architectural approach in any high availability environment for applications that are in clusters or in multiple data centers.

  Unisys will be supporting both IBM and EMC storage systems along with various replication products that are in the existing environment today supporting current application needs. Servers will be connected to storage systems through a Storage Area Network (SAN) allowing the servers to load their operating system and application components via the SAN, thereby allowing the servers to connect to any operating system or application workload whether production, development, test, QA, or disaster recovery; equally any sever can switch out a workload for another with automation scripting or manual intervention. All storage products will have the same architecture between EDC, Unisys [redacted] and Unisys [redacted]

- **Latency Elimination** - In high availability environments where applications are tightly coupled and distributed between two or more data centers, like the Commonwealth, latency elimination becomes critical, so intercommunication between the applications is not impacted. Upon completion of transition, the production, development, test, QA and disaster recovery workloads will be within 90 miles. Both data centers are essentially on an extended high speed low latency Ethernet LAN segment, much in the same way they are today between the EDC and the DPH. Being on a low latency link is critically important so that there is no disruption of API calls between application components in different data centers; the further the distance between distributed application components, the more likely there will be errors or a performance degradation.
- **Networking** – A logically flat, robust network architecture needs to be the same across sites to simplify rules and performance management of routers and LAN switches providing predictable performance characteristics between distributed applications. To facilitate this, Unisys will be utilizing Cisco networking products within the EDC, Unisys [redacted] and Unisys [redacted] Consequently, the way an application traverses a network in one data center will be the same as the other center(s), thereby eliminating conditions that may impact performance between applications in multiple centers.
- **Security** – A key component in any high availability environment is the security architecture and it must be robust to deal with the distributed nature of applications located across multiple centers. When locating application components across data centers, firewall provisioning and management is essential between sites so there are no inconsistencies between the sites. This is crucial to maintain adherence to security regulations such as HIPPA, FTI, CJIS, PCI, CHRIA and Commonwealth policies. For further information on the revised and enhanced Unisys Security Management Plan,please refer to Section 3.2.2.5.

  To facilitate this, Unisys will be standardizing on Juniper firewalls for the capability to create virtual firewalls, and ability to provision between sites and integrate with automation software for the self-provisioning of virtual server workloads between data centers. The value of Juniper firewalls is its policy management engine and virtual firewall capability to turn-up and down like firewalls in multiple data center in a high availability environment.

  As an additional security measure for applications between sites, Unisys will be deploying Imperva application firewalls along with McAfee Data Loss Protection appliances. These appliances will secure application workloads and communications between centers. Between the deployment of Juniper and Imperva firewalls, Unisys will be able to effectively manage and secure communications of applications across multiple data centers.

- **Load Balancing** – Splitting web and application servers between data centers for high availability requires load balancers that have geographic balancing capabilities; therefore, Unisys will be standardizing on F5 load balancers to manage and route

incoming requests for Windows, Linux, and AIX hosted applications that are located across multiple data centers.

- **Configuration Management Database** – High availability of applications across data centers is only possible with a properly populated Configuration Management Database (CMDB) that has the association of infrastructure components to application components so one can effectively manage the complexity of a distributed application architecture. The CMDB is critical to understanding the location of application components and how they are interrelated to the infrastructure, especially if the application is split between data centers. For this reason, a robust CMDB is needed to track the configuration of infrastructure and application components to assure they are properly configured and to aid in assuring successful API communications between applications as well as supporting application workload movement between clusters or data centers.

  In addition, automation software is highly dependent on the CMDB to provision and move workloads between applications in separate data centers. More importantly, if a change is taking place in one center it must be reflected in the other center(s); therefore, change impact management is critically important to be integrated into the CMDB so that it will alert you in the change process if a component needs to be changed in another center.

  To support the above configuration management activities, Unisys will be using BMC Atrium Discovery and Dependency Mapping (ADDM) product to auto discover application infrastructure components in the multiple data centers including their associated relationships. These Configuration Items (CI) will then be populated into the BMC Remedy Atrium CMDB that will be replicated to the Commonwealth's IT Service Management platform.

With the above in place as a foundation to place equal parts of an application in multiple data centers, we can now focus on how the servers will layer on top to facilitate high availability for applications between centers. The Commonwealth's applications run on either a physical or virtual host that are comprised of a variety of operating systems such as MVS, zVM, zOS, zLinux, OS2200, MCP, AIX, Linux, or Windows. To simplify the response, Unisys categorized these operating systems into four system types: Mainframe, AIX, Linux and Windows. Further we defined them as Virtual or Physical since there are differences. These systems enable an application to be split between multiple data centers as follows:

- **Mainframe Systems (MVS, zVM, zOS, zLinux, OS2200, and MCP)** – Upon successful transition Unisys will have placed mainframe systems across Unisys [redacted] and the EDC to host production, development, test, QA, and disaster recovery workloads. The initial configuration of the Unisys and IBM mainframes will be in an active/passive configuration. If a production workload is in the Unisys [redacted] data center and requires disaster recovery for an application, then the passive (disaster recovery) workload would be located in the EDC. The active environment will replicate data to the passive site where the two sites applications

components are kept in sync so, in the event that there is a disruption at the active site, the passive application workload can be turned up within a specified amount of time; optionally, the application can be configured to be active-active across the centers so that there is little delay in disruption of an application workload.

- **Virtual Hosts for AIX, Linux, and Windows** - Given that a significant number of Commonwealth's applications are tightly coupled and spread across multiple operating systems such as AIX, Linux, and Windows, it is architecturally important to consolidate them to a common hardware platform. Doing so when placing application workloads in separate datacenters simplifies management, provisioning and the movement of application workloads from one cluster within or between sites. To overcome this architectural challenge there is no other provider in the marketplace that supports mixed workloads on one common consolidated platform for AIX, iSeries, Linux, and Windows other than IBM Flex Systems. Therefore IBM Flex Systems is the standard platform that Unisys will utilize in all centers for all AIX, iSeries, Linux, and Windows environments. IBM Flex Systems are not constrained by a single fixed storage vendor that then limits scale and cost efficiency; in fact, IBM Flex Systems allow for the integration of a variety of industry leading storage systems, including existing storage systems that are currently hosting applications. Unisys approach mitigates a costly storage migration to new storage platforms and minimizes downtime. To learn more about IBM Flex Systems please refer to Section F 3.2.2.2.

  The IBM Flex Systems virtual servers will connect to the SAN and will load their operating systems and application components from the storage environment via the SAN. This will also allow a virtual server to switch out an application workload between production, development, test, QA, or disaster recovery is the ability to automatically failover the workloads.

  Key to placing equal parts of an application split between physical data centers is being able to move them from cluster to cluster or across datacenters. IBM Flex Systems using the Flex Systems Manager, in conjunction with VMware vCenter and other management tools has the ability to automate the movement of mixed workloads and simplifying the failover process for applications between clusters or across datacenters. Another advantage of the IBM Flex Systems is being able to balance or move application workloads between data centers; consequently, you can readily move production, development, test, or QA workloads between data centers to support changes in business needs or to support various usage patterns.

- **Physical AIX, Linux, and Windows** – The only difference in the AIX and Wintel physical server environment over the virtual environment is that it will be allocated a complete server within the IBM Flex Systems Blade Chassis. All other attributes are the same as indicated above for a virtual server.

The Unisys proposed 2+ Data Center Architecture will not only support a high availability configuration between multiple physical data centers with equal parts of an application

distributed between physical data centers, but also minimize any potential application performance issues when moving the Commonwealth's tightly coupled applications to a new center by limiting the distance separation between the applications to 90 miles, thereby minimizing any potential chance for latency propagation. The further the distance between application nodes, the greater the performance impact due to network latency delay between sites.

Network latency can have a large impact on the performance of application APIs, because at times application components can have timing sequences in their code waiting for the return of information within a given amount of time. If the information isn't received within the expected duration, a time out error will occur impacting the performance and operation of the application. So when splitting applications between two centers for high availability, you want to keep them as close together as possible to achieve the least amount of latency propagation to eliminate any application performance issues. This is exactly what the Unisys solution does, thereby, saving the Commonwealth costly application testing efforts and rewrites in application code.

No.	*BAFO Question*
2	*Describe how Unisys's proposed 2+ Data Center Architecture will support a configuration where the production environment is in one physical datacenter and the lower environments (e.g. development, system test, user acceptance testing) are in another physical datacenter and the lower environments are designated as the DR solution for the production environment. In support of this information, please include details addressing the following:* *a. Identify each datacenter that will be used in the 2+ Data Center Architecture and the Commonwealth workload that will be supported in each datacenter.* *b. In addition to the datacenters that will support the Commonwealth as identified in Unisys's proposal, explain how Unisys will leverage capacity from the other datacenter resources within its provider network if required.*

To support the Commonwealth's mission critical applications, it is essential that the robust architecture that Unisys provides the Commonwealth has the ability to swap out environments within and across multiple data centers. Therefore in a mainframe or open systems environment to accomplish the swap a of production environment in one location with lower environments in another center for disaster recovery Unisys will store all server and application workloads as images on the SAN. By storing images and booting operating systems from the SAN we create a many-to-one relationship of workload images to servers where one server can pull an image from a pool, therefore, allowing the swap out of a lower environment for a production environment in the event of a disaster. In fact the process of swapping workloads out can be automated if desired.

To enable this functionality to take place you need the same robust architecture across centers. Therefore that is an integral part of our architectural design. The robust architecture that Unisys will use is described in the answer above for high availability for

applications in separate data centers. Within this architecture to execute the swap out of environments between production and lower environments for disaster recovery we will use automation scripts in the mainframe environment, and for open systems the IBM Flex Systems Manager, in conjunction with VMware vCenter and other management tools, which can have automation scripts applied. Furthermore a benefit of the IBM Flex Systems over its competition is it has the ability to swap out or move mixed workloads, meaning AIX, ISeries, Linux, and Windows as one unit within or across centers, which is critically important when you have tightly coupled applications. The core of our architecture was designed from the beginning to swap and move workloads and environments within and across data centers.

Unisys will use three data centers in the proposed 2+ Data Center Architecture, the EDC, Unisys [redacted] and Unisys [redacted] Within any of these three centers the Commonwealth can place production, development, test, QA, or disaster recovery workloads; as well Capacity-on-Demand services will be available within all three centers.

To complement these three centers Unisys is extending to the Commonwealth services from our provider network from IBM, Deloitte, and Microsoft. Between these three providers coupled with Unisys services there is an extensive amount of services and resources that we will bring to the Commonwealth. For a sample of these services please refer to **Figure 1-1**.

Figure 1-1. Platforms and Services by Provider

Existing agency workload placement will be between the EDC and Unisys [redacted] to mitigate risk and performance issues given the Commonwealth's tightly coupled applications. Unisys [redacted] and our providers' network will be available for additional

services for Capacity-on-Demand and disaster recovery workloads. For recommended agency mapping of workloads refer to **Figure 1-2**. During transition planning, workloads can be re-located to another center if desired, given our architecture fully supports the movement of workloads between centers as described above.

2. Security Offering Improvements

Security Offering Clarification

As part of Orals, the Commonwealth provided Unisys with written questions that Unisys responded to in writing and also addressed during our presentation. In addition the Commonwealth asked a number of additional questions at the end of our Orals Presentation. When analyzing and categorizing the types of questions asked, Unisys discovered that most of the questions were related to our Security Offering or our x86 Technical Infrastructure.

As a result, we have made significant enhancements to our Technical Submittal focused on improving and clarifying our Security and x86 offerings.

In this section, the Unisys Team has refined the following Security and Network sections to clarify the security services which are used to support establishing, implementing, and maintaining functions to comply with the appropriate Commonwealth security guidelines, including CHRIA, OA/OIT guidelines and ITBs; Agency security requirements; and federal and industry guidelines and regulations (HIPPA/HITECH, FTI, CJIS, and PCI). In addition, a new Sample Security Management Plan has been included. This sample document covers the full format of the plan and is now specific to the security needs of the Commonwealth.

Our revised responses for the identified Requirements in the Schedules or Sections listed below are included in this tab.

Tab	Schedule or Section	Requirements
2	Schedule F Section 3.1.2 Network and Security Architecture	1A, 2A, 4A, 5A, 6A, 6B, 7A
2	Schedule F Section 3.2.2.5 Security Management	Introduction, 1, 2 (A,B,C),4A, 6A, 7A
2	Schedule F Section 3.2.4.6 Security and Firewall	Introduction, 1B, 1D, 1E, 3A, 3C, 4A, 5, 6A, 6B, 6D, 6E, 6F

This page intentionally left blank.

3.1.2 Network and Security Architecture

Secure and robust network connections are critical to the overall data center architecture. Connections between the data centers and access to the Commonwealth's network must be planned, established, and tested prior to the transitioning of Services. All Offeror data centers and locations must coordinate connections between the Offeror's network and the Commonwealth's fiber network (COPANET).

Reference Documentation

Exhibit A - Commonwealth Network Environment

Exhibit P – Enterprise Internet Bandwidth Utilization

	Requirements	Describe Compliance
1.	All proposed datacenter locations will connect to and provide access from COPANET.	Offeror must describe its approach to connect to COPANET.
2.	Dual network termination points to connect to COPANET.	Offeror must describe its networking capability and the ability to support dual termination points in the proposed datacenters environments.
3.	Provide network security via firewall and security devices.	Offeror must describe its network security and access control solution.
4.	All proposed Offeror's datacenter facilities will have secure Internet access capabilities. Internet access must provide virus and intrusion protection systems with reporting capabilities.	Offeror must describe its approach to providing secure access from Commonwealth authorized users via the Internet. The Offeror must describe its approach to providing virus and intrusion protection and reporting.
5.	Multiple security zones must be configured within each datacenter to support specific agency requirements. For example: access, web, application, and data zones. The specific configuration and number of individual zones may be different per agency and application.	Offeror must describe its ability to support the configuration of multiple security zones within its datacenter architecture.

6.	Secure connections are required for traffic that may traverse between Datacenters and between Datacenters and Commonwealth. Encryption shall be a minimum of 128-bit and must be FIPS 140-2 certified to meet Criminal Justice Information Services (CJIS) requirements. (Refer to Pennsylvania State Police (PSP) Summary of CJIS Requirements and CJIS Security Policy.)	Offeror must describe its ability to provide secure network connectivity that meets the standards outlined in the requirement.
7.	Remote access to datacenters supporting CJIS systems must meet minimum security requirements identified in CJIS Security Policy. These requirements include but are not limited to identifying remote user's identity, IP address and connection must be FIPS 140-2 certified with a minimum of 128-bit encryption.	Offeror must describe its ability to comply with the security policies described in this requirement,

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

Offeror Response

1 COPANET

1.A All proposed datacenter locations will connect to and provide access from COPANET.

Offeror must describe its approach to connect to COPANET.

As **Figure 3.1.2-1** below illustrates, the Unisys Team will be meeting the current COPANET connectivity requirements by connecting locally at [redacted] via 10 Gb Ethernet and via 1 x 1 Gb Ethernet connections to an alternate COPANET location from the [redacted] data center. Should direct connectivity to the Verizon PIP network be required, Unisys can terminate Commonwealth provided PIP circuits on Unisys owned and managed equipment at the Unisys Data Centers.

In addition to the [redacted] two new data centers will be utilized – [redacted] and [redacted]. In the [redacted] a new connection to the existing COPANET node will be built using two 10 Gb fiber connections within the [redacted]. Since the distance to connect [redacted] to COPANET is so short, these connections do not require a WAN circuit to be installed, thus saving cost. The [redacted] connectivity is shown on the left diagram of **Figure 3.1.2-1** below:

On the right side of the **Figure 3.1.2-1** above, the COPANET connection to [redacted] is shown. Based on predicted future usage, the [redacted] Data Center will be connected to COPANET via a 1 Gb circuit. To prevent a single point of failure in the connection to COPANET, the COPANET circuit from [redacted] will terminate in a different physical facility than the connection from the [redacted] The locations being considered to terminate the Data Center circuit are [redacted] or [redacted].

It should be noted that the circled number 4 in **Figure 3.1.2-1** indicates a logical circuit number assigned to the circuit being proposed for the Commonwealth, which will be explained in more detail in the next section. The point-to-point circuit4 above will terminate on [redacted] routers in [redacted]. On the COPANET side, the circuits will terminate on existing [redacted] switch line cards, which currently form the edge connection point into COPANET.

In the [redacted] the two 10 Gb fiber connections will terminate directly on the new [redacted] core switches, while the other end of the connection will also terminate on existing [redacted] switch line cards. Unisys will be providing the necessary equipment to terminate these 10 Gb connections. The Commonwealth will be required to provide ports or line card availability on the COPANET nodes (PEs). Any additional PE equipment (line cards or SFPs) would be provided by Unisys.

2 Dual network termination points to connect to COPANET

2.A Offeror must describe its networking capability and the ability to support dual termination points in the proposed datacenters environments.

The new Commonwealth network's proposed design will have the following characteristics:

- The use of the current [redacted] Data Center;
- A [redacted] Data Center;
- A [redacted] Data Center;
- An [redacted] Data Center, if the Commonwealth elects to continue with the current [redacted] approach (using existing the existing Verizon PIP connectivity);
- Diverse connectivity into existing COPANET nodes from the [redacted] and [redacted] (described in detail in the previous section);
- Internet VPN tunnels (site to site) from the [redacted] and [redacted] to [redacted] to

support Capacity on Demand and disaster recovery services;

- Internet access for Unisys employees and Unisys 3rd parties will be provided at the [redacted] using the site's current Internet access, and [redacted] to support Unisys management and tools traffic;
- The Unisys network design addresses both bandwidth and latency concerns;
- The Unisys network design includes both circuit and data center redundancy.

Figure 3.1.2-2 below shows an overview of the 4 new circuits that will be put in place to support the network design. The numbers are grouped together by color, with numbers 1 and 2 (yellow) used for high-speed backbone data center connectivity, 3 (green) for Unisys Internet tools connectivity, and 4 (purple) for COPANET connectivity. The dashed green lines represent the encrypted VPN tunnels from the [redacted] and [redacted] to Unisys [redacted]

Figure 3.1.2-2 – WAN Overview

At the heart of the new design is a high speed, fully redundant, low latency wide area network (WAN). This new backbone WAN will connect the [redacted] and the [redacted] sites together using two separate 10 Gb redundant paths between each site. Using standard [redacted] WAN load balancing across the links (per-destination load balancing), up to 20 Gb of bandwidth will be available between the [redacted] and [redacted]. The [redacted] site will be connected using Internet VPN tunnels to the [redacted] and [redacted].

Figure 3.1.2-3 is a diagram that breaks out the 2 circuits that will be installed in support of this new backbone WAN network. The Unisys Team is confident this WAN design is the appropriate network solution to support the data transformation needs of the Commonwealth, given the amount of data that will likely need to traverse the network from the existing Commonwealth Data Centers to the new Unisys Data Centers. After the data center transition and transformation phases of the project are completed, a bandwidth analysis will be done to evaluate the circuit bandwidth. It

is anticipated that less bandwidth will be needed in the steady state environment than during the transition and transformation stages.

Figure 3.1.2-3 – Data Center Connectivity

As shown in the **Figure 3.1.2-3** above, the fiber acquired from the telecommunication provider(s) will terminate directly on core switches, allowing the deployment of technology between the and . Using a Layer 2 multipath network will be built without the Spanning Tree Protocol (STP) being deployed. This new network design is particularly suitable for large virtualization deployments, private clouds, and high-performance computing environments. When deployed across multiple creates a flat data center switching fabric with:

- High switching capacity
- High cross-sectional bandwidth
- Low predictable latency

To address specific latency concerns regarding physical distance between the data centers, point-to-point telecommunication circuits will be deployed. Based on the fact that it takes approximately 1 millisecond (ms) for light to travel 100 miles, Unisys is estimating that round trip latency between the and sites should be less than 5ms. The reason the latency is not less than 5ms is because additional latency (i.e., non-distance related) is added by the physical telecommunication equipment at either end of the circuit. Point-to-point circuits offer the lowest latency versus traditional network "cloud" or "star" topologies, as the distance the light needs to travel is considerably less.

In addition to (mentioned above) for steady state operations between the and Data Centers, the new Commonwealth network will also be utilizing technology during the transition in situations where the same IP subnets need to be maintained. Unisys experience is that IP addresses often need to be maintained either permanently or temporarily because of the number of servers being moved (servers in the same IP subnet cannot all be moved or relocated at the same time) or the hard coding of IP addresses in applications not allowing new IP addresses to be assigned. In either case, and platforms is a technology that significantly simplifies extending Layer 2 networks across distributed data centers without getting into complicated and unreliable tunneling technologies that were used in the past.

Unisys successfully utilized technology recently on a similarly sized project when moving a large production data center between (approximately 400 miles)

and where no IP readdressing was allowed by our customer. In that project it was necessary to maintain the same Layer 2 subnet across geographically large distances (high latency environment) and [redacted] performed as designed. When all the servers were migrated successfully, [redacted] was turned off.

Figure 3.1.2-4 – [redacted] Overview

As **Figure 3.1.2-4** above shows, [redacted] provides the Commonwealth with the ability to deploy virtual computing resources and clusters across geographically distributed data centers, delivering:

- Transparent workload mobility
- Business resiliency
- Superior computing resource efficiencies

At the [redacted] and [redacted] locations, a completely new [redacted] LAN network will be built for the Commonwealth using state of the art [redacted] devices at the core, distribution, and access layers. Servers will have the ability to be connected to the network in either 10 Gb, 1 Gb, or 100 Mb configurations, with the network itself supporting high availability redundant uplinks, as shown in **Figure 3.1.2-5** above.

At the [redacted] the new [redacted] LAN will also connect to the existing [redacted] core network. By connecting the new [redacted] equipment in the [redacted] to the existing [redacted] equipment the Commonwealth will leverage the benefits of using existing infrastructure to reduce costs, as well as introducing new technology to significantly update the network with the latest equipment. The new [redacted] network for our data centers will include [redacted] network ports and [redacted] network ports.

Figure 3.1.2-6 below shows a more detailed LAN design for the [redacted] and [redacted] Data Centers.

Figure 3.1.2-6 – LAN Detail

4 Secure Internet access

4.A All proposed Offeror's datacenter facilities will have secure Internet access capabilities.

Offeror must describe its approach to providing secure access from Commonwealth authorized users via the Internet.

The VPN clients enable secure Internet access capabilities for Unisys employees and Unisys 3rd parties. The Internet bandwidth Unisys is installing at will be used for Unisys specific Internet facing management tools, such as Unisys understands that the current Internet facing Commonwealth servers that are running today are going over Verizon managed circuits and that this solution will remain unchanged. The current Verizon management and support of the Commonwealth's VPN firewalls will also remain unchanged.

will be connected to the Commonwealth networks using Internet VPN tunnels from th and as shown in the following figure. These tunnels will terminate on FIPS 140-2 complaint network infrastructure in each site.

New Internet bandwidth of will be provided at , as shown in **Figure 3.1.2-7** below. Existing Internet connectivity is already provided out of the and sites. The and sites can quickly be upgraded to , if necessary.

Figure 3.1.2-7 – Internet Connectivity

5 Security Zones

5.A Multiple security zones must be configured within each datacenter to support specific agency requirements. For example: access, web, application, and data zones. The specific configuration and number of individual zones may be different per agency and application.

Offeror must describe its ability to support the configuration of multiple security zones within its datacenter architecture.

The Commonwealth network will be protected through a combination of network and security devices from several "best in class" vendors. The firewall vendor will be [redacted] The [redacted] devices will consist of a combination of devices. Protecting the [redacted] will be [redacted] firewalls; protecting the front end Internet connections will be another set of [redacted] firewalls. The enterprise [redacted] firewalls will also have built in IPS sensors.

The [redacted] box is designed around the concept of multiple security zones. The [redacted] device supports various types of security zones, with the understanding that different agencies may have different requirements. From a Unisys perspective, security zones represent virtual sections of the network, segmented into logical areas. Security zones can be assigned to a physical interface or to a virtual system. When assigned to a virtual system, multiple zones can share a single physical interface.

Figure 3.1.2-8 – Security Zones

Following the multi-zone network architecture, focused on Web, Application, and Database zones, presented above in **Figure 3.1.2-8**, [redacted] offers comprehensive, flexible, and robust security solutions that are ideally tailored for the requirements of the Commonwealth's new data centers. Unisys understands the Commonwealth's need for agencies and applications to be separated with firewalls and the [redacted] enterprise solution best meets this need.

[redacted] offers an unparalleled combination of features addressing these fundamental requirements:

- **Scale:** [redacted] solutions offer the processing scalability required to combat today's sophisticated threats. With the [redacted] offers firewalls that scale, both in terms of throughput and in the number of concurrent sessions, so they can accommodate the intensive security and bandwidth requirements of the next-generation data center.
- **Fabric architecture support:** [redacted] provides switches for fabric architectures, and is leading the way in delivering cohesive security integration in these environments. The [redacted] product line is designed to work with the scalable [redacted] fabric, ensuring optimal flexibility, scalability, and security in these emerging environments.
- **Visibility:** [redacted] security solutions can incorporate the required context, in real time, to provide effective, continuous policy enforcement. With [redacted] provides a deep understanding and visibility into application behaviors and weaknesses to prevent application-borne threats that are otherwise difficult to detect, let alone stop. In addition, [redacted] allows organizations to integrate user identities into their security policies. [redacted] also offers hypervisor integration that enables security teams to incorporate visibility into virtualized components in their security mechanisms.

- **Intelligent enforcement:** Finally, [redacted] offers solutions that can be deployed both on physical devices and in the hypervisor, enabling policy management and enforcement across the entire next-generation data center. As result, organizations realize stronger overall security, and security teams can implement faster configuration changes and reduce the errors that can create security exposures.

6 Secure Network Connectivity

6.A Secure connections are required for traffic that may traverse between Datacenters and between Datacenters and Commonwealth.

The requirement for secure connections is addressed through the use of dedicated point-to-point private connections with appropriate access and routing controls. If the security requirements of the Commonwealth dictate, Unisys will encrypt selected traffic between the data centers using the FIPS compliant [redacted] firewalls and additionally offers the Unisys [redacted] product as an optional Enterprise Services Catalog item to provide a more secure connection if selected. All Commonwealth agency to agency traffic will be encrypted, where required, using the [redacted] Firewalls with 128 bit encryption or higher. The VPN tunnels to [redacted] are established using FIPS140-2 compliant infrastructure.

6.B Encryption shall be a minimum of 128-bit and must be FIPS 140-2 certified to meet Criminal Justice Information Services (CJIS) requirements. (Refer to Pennsylvania State Police (PSP) Summary of CJIS Requirements and CJIS Security Policy.)

Offeror must describe its ability to provide secure network connectivity that meets the standards outlined in the requirement.

Unisys will coordinate with the Commonwealth as part of transition in determining the necessary encryption requirements, like PSP's CJIS Requirements and CJIS Security Policies. Where encryption is required, our solution will provide a minimum of 128-bit encryption that meets FIPS 140-2 certification and meets CJIS requirements. FIPS compliant [redacted] firewalls are capable of 128 bit encryption or higher. Beyond meeting this specific requirement for FIPS 14.2 certified 128bit encryption, Unisys is offering the additional protection of our [redacted] product as an option. Where necessary, Unisys will provide tunnel/VPN termination points for all traffic coming in over the Internet. The tunnels will be able to support 128 bit encryption or higher. These tunnels will terminate on the [redacted] equipment.

7 Remote Access

7.A Remote access to datacenters supporting CJIS systems must meet minimum security requirements identified in CJIS Security Policy. These requirements include but are not limited to identifying remote user's identity, IP address and connection must be FIPS 140-2 certified with a minimum of 128-bit encryption.

Offeror must describe its ability to comply with the security policies described in this requirement.

The Unisys Team understands the importance of protecting data and managing remote access to the Commonwealth systems, especially those systems supporting CJIS and CHRIA controlled data.

The Unisys solution includes an architecture for remote access for system administration of the Commonwealth systems which includes FIPS 140-2 validated VPN infrastructure using a minimum of 128-bit encryption, two factor authentication, role based authentication and tools privilege access, as well as privileged user access control and password vaults. Each of the components within this architecture will be connected with our logging and security infrastructure to support identifying remote user identities, IP addresses and privileged user activity. By using this remote administration architecture, the Unisys Team provides a secure access method to support the Commonwealth's environment and meet the requirements of the Commonwealth policies and applicable regulations including CJIS, FTI, HIPPA/HITECH, and PCI.

Figure 3.1.2-9 is an example of the remote administration access architecture.

Figure 3.1.2-9 – Security Zones

3.2.2.5 Security Management

The Security Management service must ensure the confidentiality, integrity and availability of Commonwealth information and infrastructure systems. All support and implementation activities must be conducted in accordance with, but not limited to, leading industry and Commonwealth standards, which include, but are not limited to, ISO 27001:2005 and ISO 27002:2005. The Offeror must support all related system audits at the Offeror's expense. The Offeror must maintain current security ISO 27001, ISO 9001 and ISO/IEC 20000 certifications.

The Offeror must comply with Commonwealth IT policies and directives as well as federal and Commonwealth laws, regulations and policies, including but not limited to the Criminal History Record Information Act (CHRIA), Health Insurance Portability and Accountability Act (HIPAA), Criminal Justice Information Services (CJIS) regulations, The United States Social Security Administration (SSA)regulations, IRS (Internal Revenue Service) Publications, Commonwealth Information Technology Bulletins (ITBs) and the Payment Card Industry (PCI) standards. The Offeror must work with each agency to understand and ensure compliance with all laws, regulations, and policies as they pertain to each individual agency.

Exhibit G.6 - PSP - CJIS Security Policy

Exhibit G.9 - PSP – CCHRI

Exhibit G.7 - PSP - Summary of CJIS Requirements

Exhibit G.12 - PSP - CHRIA Handbook

	Requirements	Describe Compliance
1.	Develop an annual Security Management Plan.	Offeror must describe its approach to Security Management and provide a sample of a Security Management Plan. Highlight how stated security objectives align with Commonwealth business goals, IT policies, and regulatory requirements.
2.	Deploy complement of network security	Offeror must describe its proposed

	systems. Implement at minimum: spam filtering, anti-virus, malware protection, firewall (web, application), intrusion prevention and detection, web content filtering, virtual private network, and data loss prevention systems.	solution including the following: • Processes and Procedures • Tools / Applications • End User Reports o Standard o Custom • Escalation Procedures Offeror must describe its prior experience relative to providing datacenter management and support of CJIS, CCHRI, HIPAA and PCI systems.
3.	Perform quarterly (at the Offeror's expense) Vulnerability Analyses (VA) and penetration testing to identify new or emerging information security threats. Perform penetration testing (at the Offeror's expense) and present the results of each VA on a quarterly basis. Should exposures be identified, plan and remediate the exposure in accordance with Commonwealth IT policy guidelines. Report results to the Commonwealth within the time set out in an applicable SLA. The above requirement will be for all systems/subsystems that the Offeror is responsible for including managed servers/virtual servers, network devices, security devices including , but not limited to, the following: • Performing web application firewall administration and securing web applications behind it. • Ensuring and maintaining PCI level 1 compliance.	Offeror must describe its capabilities and approach to performing vulnerability analysis and penetrating testing on a quarterly basis. Provide sample reports for each.

	• Implementing DLP for the data center server assets to avoid a breach. • Implementing Database Firewall to secure database assets from breach.	
4.	Review network and other security logs for evidence of attacks. Utilize enterprise grade intrusion detection tool(s) to systematically identify, stop, and report security threats. Produce a monthly Security Log Analysis as part of the monthly status reports as described in RFP section IV-5 Reports and Project Control.	Offeror must describe its solution and approach.
5.	Apply operating system and other security patches. Implement a Patch Management Program to ensure the timely application of security updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines. The Patch Management Program must adhere to the Change Management process that includes Commonwealth approvals.	Offeror must describe its proposed Patch Management program.
6.	Restrict physical access to all network systems and equipment with biometric or other second factor access control systems.	Offeror must describe solution and approach to meet this requirement.
7.	Restrict access to all data in the Commonwealth network infrastructure. Restrict and control all data access right, groups and special permissions based on the data security program designed by the	Offeror must describe solution and approach to meet this requirement.

	Commonwealth security team and/or specified by the agencies. Access level changes and exceptions will be executed only when approved paperwork is complete and approved. A file of all access changes will be maintained by the Offeror for audit purposes. Offeror must support Commonwealth initiated security audits.	
8.	Evaluate the security standing of network-connected subcontractors. Conduct information security audits of prominent subcontractors on an annual basis.	Offeror must describe solution and approach to meet this requirement.
Continual Service Improvement		
9.	Reduce service risks.	Relative to the service in question, Offeror must provide examples of previous Offeror initiatives aimed at eliminating or mitigating service risks.
10.	Improve service quality.	Offeror must provide examples of previous Offeror initiatives aimed at improving service quality.
11.	Improve client satisfaction.	Offeror must provide examples of previous Offeror initiatives aimed at continually improving client satisfaction.
12.	Provide service transparency.	Offeror must provide examples of previous Offeror initiatives aimed at providing service transparency; in particular, visibility into the service execution process.
13.	Ensure service sustainability.	Offeror must provide examples of previous Offeror initiatives aimed at ensuring service sustainability; in

		particular, efforts targeted at cost containment and cost reductions.
14.	Improve/reduce cost of service.	Offeror will provide examples of Security Management initiatives that have been implemented or can be utilized to achieve reduced costs of Services and to meet or exceeded ROI (Return on Investment) analysis projections.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

Offeror Response

Introduction

We understand that maintaining the confidentiality, integrity and availability of citizen data has always been important to the Commonwealth. Security becomes vital as the Commonwealth transitions to the proposed on-demand compute environment and the agencies must have the confidence in the security of the new datacenter to meet their diverse regulatory requirements including CHRIA, FERPA, HIPAA/HITECH, IRS 1095, PCI and CJIS during transition, and ongoing operations. The Unisys team understands this is fundamental to the success of the initiative and is committed to a successful transition and operation of the new environment.

Consequently, we take a holistic approach to security. We leverage our teaming partner - Deloitte's robust public sector security risk framework that integrates several regulatory requirements, as the foundation of our security management plan. This readily available catalog of rationalized regulatory requirements and controls (the security risk framework) will help us appropriately address the people, process and technology aspects of our security solution.

As illustrated in **Figure 3.2.2.5-1**, the Commonwealth ITBs, policies and agency regulatory requirements drive the Security Management Plan, which in turn becomes the implementation blueprint of our datacenter security solution.

Figure 3.2.2.5-1 – A Holistic Datacenter Security Solution Driven by Security Regulations

The Unisys Team will work with each agency to understand their compliance requirements and use our security management plan to define, establish, implement and monitor appropriate safeguards. The Unisys team's security functions will be led by Michael Sheketoff who brings more than 38 years of technical and management experience.

To better support the various objectives of the Commonwealth, the Unisys security team's security function will be organized as depicted in **Figure 3.2.2.5-2**. The figure below also includes the key responsibilities of our security functions.

Figure 3.2.2.5-2 – Unisys Team's Security Functions and Key Responsibilities

Our process begins with establishing the Security Management Plan (Initial Security Plan). The compute environment's security management plan is driven by Deloitte's demonstrated public sector security framework - containing over 3,500 individual regulatory requirements mapped to almost 300 unique integrated requirements that include NIST SP800-53 rev4, CJIS v5.1, CHRIA, HIPAA/HITECH, PCI DSS v2/3, SSA and IRS 1075 rev8-2010. This framework is flexible to add additional controls and regulations as agencies face the need to comply with new regulations and controls.

During transition we use the security risk framework as the foundation, validate the agency requirements, systems security architecture and classify data, and develop and establish the security management plan. The initial security plan, established prior to the start of data center transition will provide the guiding principles (policies and standards) to establish safeguards, maintain a Personally Identifiable Information (PII) inventory and an IT asset inventory, driven by applicable key regulatory requirements.

Using the security management plan as the blueprint, the Unisys security solution is designed - taking in to consideration the people, process and technology. The solution is implemented consistently across the data centers. We have explained our security team's role in supporting datacenter transition as part of Section *3.3.2.2 Security Transition Activities* of this RFP Response. In addition,we have described the security approach to maintain ongoing compliance of the datacenter and safeguard Commonwealth data in section 3.2.4.6 of this RFP response. In addition, the Unisys team uses appropriate encryption solutions to encrypt data at rest and establish segregated network zones to

maintain a multi-layered defense-in-depth approach to safeguard Commonwealth data.

The Unisys team brings in leading industry solutions, to maintain a defense-in-depth security solution, and uses centralized audit log monitoring to safeguard Commonwealth's data and systems. We have illustrated our security technology stack and processes involved in audit log analysis to detect and report security incidents in Figure 3.2.2.5-3 below.

Figure 3.2.2.5-3 – Unisys Team's Security Technology Stack and Audit Log Monitoring Process

Additionally, we implement and operate the security technologies using processes rooted in the ITIL framework. The security governance is carried out with transparency – by sharing the alerts, risks and issues with the Commonwealth's Chief Information Security Officer (CISO) and agency security officers.

Our approach to meet the Commonwealth's *3.2.2.5 Security Management* requirements is detailed below.

1 Security Management Plan, Sample (example)

Develop an annual Security Management Plan. Offeror must describe its approach to Security Management. Provide a sample of a Security Management Plan. Highlight how stated security objectives align with Commonwealth business goals, IT policies, and regulatory requirements.

The Unisys team understands the importance of information security and regulations/standards mandated through the Commonwealth Information Technology Bulletins (ITBs), Commonwealth agency standards/polcies and Federal agencies. The Unisys team has envisioned a six step approach to establish a risk aware data center that

addresses several regulatory requirements such as:

- Health Insurance Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS) regulations
- The United States Social Security Administration (SSA) regulations
- Internal Revenue Services (IRS) Publication 1075
- Commonwealth Information Technology Bulletins (ITBs)
- Criminal History Record Information Act (CHRIA)
- Payment Card Industry (PCI) Data Security Standards(DSS).

We have illustrated our six step process to establish a regulatory compliant data center in the figure below. Our approach has been developed by our teaming partner Deloitte, through their extensive experience facilitating regulatory compliance, enables the use of regulations as a driving factor to proactively assess, identify and mitigate gaps. Throughout this process, the Unisys team will collaborate with the Commonwealth stakeholders to review gaps identified, help prioritize mitigation steps and monitor remediation steps. Note that the collaboration with Commonwealth agencies is required as some of the gaps with the regulatory requirements documented may be with the applications not in Unisys control.

Figure 3.2.2.5-4 – The Unisys Team Collaborates with the Commonwealth, Using Our Six-Step Process, To Establish A Risk Aware Datacenter.

- **Deloitte's public sector security risk framework:** The Unisys team uses its teaming partner, Deloitte's demonstrated public sector security risk framework to identify, assess and document the appropriate data protection controls to secure Commonwealth data. Our approach to use an integrated security risk framework is an innovative method to "assess once, comply and report many regulations".
- Deloitte's public sector security risk framework contains over 3,500 individual regulatory requirements mapped to almost 300 unique integrated requirements primarily driven by NIST SP800-53 rev3 (moderate level). This detailed Microsoft Excel-based framework contains the regulatory requirements and their integrated controls. This technology agnostic approach to manage risks is still a pioneer in state governments.
- **Our related experience:** Our teaming partner, Deloitte has established the security risk framework at over 10 states to help the states integrate and assess security regulatory requirements as part of systems development efforts and conduct integrated enterprise level security assessemnts. Our selected experience includes
  - Commonwealth of Pennsylavania – Department of Public Welfare (DPW)
  - State of Indiana
  - State of Delaware and
  - State of Washington.

Unique and *Distinguishing* Factors

Benefits from the Unisys teaming partner, Deloitte's public sector security risk framework

- Contains authoritative sources from more than 30 regulations & standards
- Provides a core set of risk & compliance management solutions
- Allows for consistent comparison, prioritization & aggregation of risk and compliance across the Commonwealth's agencies
- Allows the team to "hit the ground running"
- Provides pre-configured reportsfor key individual regulations.

For example, the Commonwealth of Pennsylvania DPW's security risk framework rationalizes more than 4,000 individual regulatory requirements into 350 unique integrated requirements, including:

- Commonwealth security ITBs
- DPW security policies and standards
- IRS 1075
- SSA
- HIPAA
- Family EducationalRights Protection Act (FEPRA)
- NIST SP800-53 rev 3 and
- ISO 27001:2005.

Additionally, Deloitte's efforts at the state of Delaware included integration of CJIS and PCI DSS v2. Our teaming partner, Deloitte has also established security risk frameworks at several of our commercial clients including very large Banking & Securities, Life Sciences & Health Care, Retail and Oil & Gas firms. The current version of the framework does not include CHRIA requirements and Deloitte will include them as part of the initial security plan activities.

Reporting for regulatory requirements: The data center's current security posture will be documented as part of the initial security plan and also within the data center's security risk framework. When a Commonwealth agency requires a report on the data center's current measures to meet the agency's corresponding regulatory requirements, the data center security manager will use the pre-existing reporting capability of the security framework to extract reports specific to individual regulations such as IRS 1075, SSA, CJIS and PCI DSS.

Our approach to address the Commonwealth selected seven individual security regulatory requirements: As discussed above, we use our risk framework driven approach to address the Commonwelath selected seven key regualtions, through our six step process. The table below illustrates the key components of our approach to establish a Commonwealth data center that meets the Commonwealth identified security regulations and policies/standards.

Regulation/Policy /Standard	Step1: Used to classify Common-wealth data	Step 2: Integrated with the data center risk framework	Step 3: Considered in data center initial security plan	Step 4: Used to perform baseline risk & vulnerability assessment	Step 5:Used to develop and monitor corrective action plan	Step 6: Used to perform an annual security risk assessment & security plan update	Provides ability to generate individual regulatory reports
Commonwealth ITBs	✓	✓	✓	✓	✓	✓	✓
IRS 1075	✓	✓	✓	✓	✓	✓	✓
CJIS	✓	✓	✓	✓	✓	✓	✓
PA CHRIA	✓	✓	✓	✓	✓	✓	✓
SSA	✓	✓	✓	✓	✓	✓	✓
HIPAA	✓	✓	✓	✓	✓	✓	✓
PCI DSS	✓	✓	✓	✓	✓	✓	✓

Each of the six steps are described below:

Step 1: Data identification process and sensitivity classification

As part of the initial security plan the Unisys team will work with the Commonwealth stakeholders to establish a data classification standard data sensitivity levels and establish a data classification based on applicable regulations and leading practices such as NIST SP800-122 (Guide to protecting the confidentiality of PII).

Perform Commonwealth data classification: The Unisys team will conduct workshops with the Commonwealth stakeholders to define a data classification standard for the Commonwewalth Personally Identifiable Information (PII) based on data sensitivity levels. For example, some of the categories include

- Special handling PII (that contains SSN, driver license number, FEIN, and Medicare ID)
- Protected Health Information
- Federal Taxpayer Information (FTI)
- US Social Security Administration (SSA)
- Criminal Justice Information (CJI), including Pennsylvania's Criminal History Records Information Act (CHRIA)
- Sensitive PII (such as racial/ethnic origin, religious/philosophical beliefs, Trade-union membership and criminal convictions).

From our experience of working with the Commonwealth and several public sector clients, Unisys team understands Commonwealth's regulatory landscape. In the table below, we illustrate our understanding of a sample of Federal and Commonwealth regulations that impact the data used by the Commonwealth data center IT infrastructure.

Type of Data	Regulatory impact
Personal Health Information (PHI) **Electronic Health Records (EHR)**	
Child welfare data	

	□ □□□□

Identify presence of PII within the Commonwealth IT infrastructure: In addition to the above illustrated data classification, Unisys team will conduct a one time data discovery assessment. During development of the initial security plan, we perform a data discovery using the McAfee Data Loss Prevention (DLP) solution's data discovery tool. This assessement supports the Unisys team to identify the presence of PII at rest within the current Commonwealth data center IT infrastructure.

The data collected will be documented as part of the IT asset inventory. This information will be used during the data center transition to establish appropriate data protection controls based on the data sensitivity and regulatory requirements (using the Commonwealth data center security risk framework).

Step 2: Gain an understanding of Commonwealth agency's individual regulatory requirements and define the data center security risk framework

From our experience of working with the Commonwealth and several public sector clients, Unisys team understands Commonwealth's regulatory landscape. We will conduct workshops with the Commonwealth agencies as part of the transition planning to identify the applicable regulations, standards and industry leading practices for the data managed by the data center. We will use this information to integrate each agency's individual regulatory requirements as part of the Commonwealth data center security risk framework and to develop the initial security plan (discussed in step 4). The figure below illustrates a sample of the regulations, standards and industry practices that Unisys team uses to define the Commonwealth data center security framework.

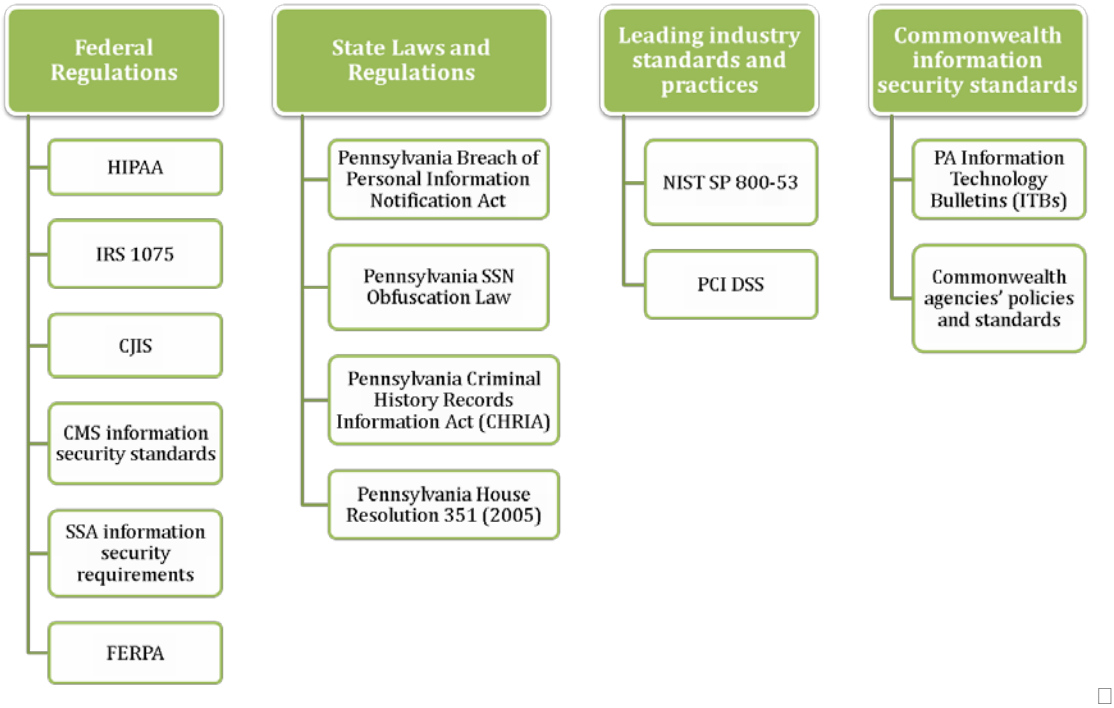

Figure 3.2.2.5-5 – Sample List of Regulations, Industry Standards and Leading Industry Practices Applicable to the Commonwealth

Establish the Commonwealth data center security risk framework

The Unisys team will establish the Commonwealth data center security risk framework. This framework is a broad library of the applicable security and privacy requirements. These requirements are integrated from the relevant Commonwealth ITBs, industry standards, State and Federal regulations. As part of transition and during the ongoing operations, the Unisys team uses this security risk framework to help document data protection controls that meets the relevant regulations and business requirements.

We bring a pre-configured security risk framework to "hit the ground running": We use Deloitte's pre-configured and highly customizable public sector security risk framework to "hit" the ground running and reduce costs. Deloitte, has developed this framework based on more than 12 yers of security and privacy experience within the Commonwelath and the public sector marketplace.

The existing Unisys team's public sector security risk framework provides an integration of regulatory requirments from the following:

- Internal Revenue Services (IRS) publication 1075
- United States Social Security Administration (SSA)
- Health Information Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS)

- Payment Card Industry (PCI) Data Security Standard (DSS) v2.0
- National Institute of Standards and Technology (NIST) Special Publication (SP) 800-53 rev 3.

The screenshot below illustrates the Unisys Team's public sector security risk framework showcasing a sample integration of above described regulatory requirements.

Figure 3.2.2.5-6. Sample Integration of Regulatory Requirements available in our pre-configured Public Sector Security Risk Framework.

As described above, we will conduct workshops with the Commonwealth agencies to identify each agency's regulatory requirements such as Commonwealth ITBs, Commonwealth agency policy/standards and PA Criminal History Records Information Act (CHRIA). The Unisys team will extend the Unisys Team's public sector security risk framework to integrate additional regulations to establish the Commonwealth data center security risk framework.

Once developed, the Unisys team estimates that the data center's security risk framework will contain over 4,000 individual regulatory requirements mapped to over 300 integrated/baseline controls, primarily driven by NIST SP800-53 rev 4 as the primary baseline control. As necessary, we will extend the baseline controls with additional leading industry standards to accommodate selected regulatory requirements that may not integrate with NIST SP800-53. The figure below illustrates our demonstrated approach to extend our public sector security risk framework with additional Commonwealth data center regulatory and policy requirements.

Figure 3.2.2.5-7 – The Unisys Team's Approach to Integrate Data Protection Requirements Using the Commonwealth Data Center Security Risk Framework

The Unisys team uses the security risk framework shown in Figure 3.2.2.5-7 above to identify current state and document the initial security plan (described in Step 3). In addition, we used the security risk framework to perform the baseline security risk assessment (described in Step 4).

As part of ongoing data center transition and maintenance, we use the established security risk framework to identify relevant data protection requirements to help implement appropriate controls to protect Commonwealth data.

Step 3: Document Initial Security Plan (security management plan) and support Commonwealth's need to develop reports based on regulations

We will establish the Commonwealth data center security plan using guidelines provided by leading industry standards: NIST SP800-18 (RFP requirement specified by Q50 of round 1 part 2) and control guidelines established by NIST SP800-53 rev 4. To develop this plan, the Unisys team uses the Centers for Medicare and Medicaid Services (CMS) Systems Security Plan (SSP) template to define and maintain the appropriate security controls.

A copy of a revised and improved sample security plan is attached to this section within this tab of the BaFO submission.

The figure below illustrates the table of contents of the Sample Commonwealth data center initial security plan.

Figure 3.2.2.5-8 – Sample Commonwealth data center initial security plan – Proposed Table of Contents.

Step 4: Conduct baseline security risk and vulnerability assessment

The Unisys team performs the baseline security risk and vulnerability assessment to identify gaps within the current Commonwealth data center infrastructure. The Unisys team will work with the Commonwealth to establish a corrective action plan and prioritize mitigation efforts. We have illustrated our steps to perform the baseline security risk and vulnerability assessment in the table below.

Steps	Activities
Scope and Plan	• [illegible] • [illegible] • [illegible]
Conduct Vulnerability Assessment	• [illegible] • [illegible] • [illegible] • [illegible] • [illegible] • [illegible] • [illegible]

Perform Risk Assessment and Security Architecture Review	
Perform Security Configuration Risk Review	
Reporting	

Step 5: Establish Corrective Action Plan

The Unisys team will work with the Commonwealth stakeholders to review the gaps identified by the baseline security risk and vulnerability assessment for establishing the corrective action plan, determining milestones and prioritizing remediation measures. The Unisys team will work with the Commonwealth to update the corrective action plan based on milestones, results from the annual risk assessment and the quarterly vulnerability assessments. The figure below illustrates a sample corrective action plan process, based on CMS guidelines:

Figure 3.2.2.5-9 – The Unisys Team Works with the Commonwealth Stakeholders To Establish a Corrective Action Plan.

Figure 3.2.2.5-10 illustrates a sample Corrective Action Plan template based on CMS guidelines.

Weakness Identifier	Security Control No.	Weakness Description	POC	Resources Required (One-time)	Scheduled Completion Date	Milestones With Completion Dates
State Defined-x	(i.e. AC-2(2))	[Selected Risk Description from final SAR]	[Name, Office/Org]	[man-hours or costs, indicate resource requirement (i.e. new, reallocated or current)]	[field cannot be changed once negotiated and agreed upon]	[include expected completion date with each milestone]
[System Acronym]-1 (ex.)	CP-3 (2)	BCP training has not been conducted.	John Doe - OCISO	(48 Total Man-hours) 40 man-hours - current	6/30/2013 (This should ONLY contain a date - no additional information)	(CP-3 (2)) Employ automated mechanisms to provide a more thorough and realistic training environment. (06/15/2013) (Ensure you put the completion date just as shown above for EACH milestone.)

Changes to Milestones Date	Completion Date	Weakness Status	Risk Level	Weakness Severity	Exception or Waiver	Comments
[When a corrective action is not completed as originally scheduled indicate new date.]	[MM/DD/YY (Completed means weakness has been fully resolved and tested)]	[Completed/Closed, Delayed or Ongoing/Open]	[High, Medium, Low]	[Significant Deficiency, Reportable Condition, Weakness]	[Provide reason, date and signatory for exception or waiver]	[Add additional detail for any previous entries]
N/A	6/29/2013	Completed/Closed	Medium	Weakness	N/A	

Figure 3.2.2.5-10 – Sample Corrective Action Plan Template

Step 6: Perform an annual review and update of the data center security management plan and security risk framework

The Unisys team will perform an annual review and update of data center security plan and the security risk framework. Unisys team performs the following steps to update and submit the security management plan.

Steps	Activities
Scope and Plan	[illegible]
Update IT asset inventory	[illegible]
Update Security Risk Framework	[illegible]

Perform Security Risk Assessment	
Update and Submit the Security Management Plan	

Our approach to maintain and address individual regulatory requirements specified by the Commonwealth

The Unisys team uses the risk framework driven approach to address individual requirements specified for the regulations as identified above.

Risk framework provides an integrated view of the regulatory requirements: The data center's security risk framework provides an integrated view of the regulatory requirements and provides a unified approach to document the data center's security plan. Each regulatory requirement within the data center risk framework is integrated with a baseline control, that integrates similar requirements. This baseline control is based on NIST SP800-53 rev 4. In addition, NIST SP800-53 is considered as the base of several federal regulations such as CJIS and IRS 1075.

The data center risk framework provides pre-existing reports to generate individual regulatory compliance reports: The Unisys team understands that the Commonwealth agencies have individual regulatory requirements and require reports corresponding to their regulatory requirement. The Unisys team risk framework provides pre-configured reports for the following regulatory requirements:

- Internal Revenue Services (IRS) publication 1075
- Payment Card Industry (PCI) Data Security Standards (DSS)
- Health Informaiton Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS) and
- United States Social Security Administration (SSA).

In addition to the above pre-configured reports, the Unisys team will configure the risk framework to generate reports for PA CHRIA and the Commonwealth ITBs.

Within the security risk framework, each regulatory requirement is reviewed and mapped to a baseline/integrated control (based on NIST SP800-53). Each of the baseline controls are associated a framework control number. The data center's current security posture will be documented as part of the initial security management plan (initial security plan) and also within the data center's security risk framework.

The data center security manager uses the pre-existing reporting capability of the framework to extract reports specific to regulations.For example, if a Commonwealth agency requires a report that describes the data center's security controls to meet IRS 1075, the security manger generates a report that provides the following information

- Security Frameword Identifier (ID)
- NIST SP800-53 Security (control) Domain
- Regulation
- Regualtory reference
- Regulatory Requirement Description
- Established control
- Last assessment date
- Weakness identied
- Mitigation status
- Plan of Action
- Milestone.

These readily available reports will help the Commonwealth agencies to analyze the regulatory posture and submit as part of periodic reports submitted to regulatory agencies.

Sample risk framework report for IRS1075: The figure below illustrates a sample of the risk framework's pre-configured report that will be used to describe the data center's security posture for IRS1075 regulation.

Figure 3.2.2.5-11 – The Unisys Team's Security Risk Framework Provides a Regulatory Report Customized to Commonwealth Agency Requirements (Example of IRS 1075).

Sample risk framework report for PCI DSS: The figure below illustrates a sample of the risk framework's pre-configured report that will be used to describe the data center's security posture for PCI DSS industry regulation.

Figure 3.2.2.5-12 – The Unisys Team's Security Risk Framework Provides a Regulatory Report Customized to Commonwealth agency Requirements (example of PCI DSS).

Through the data center consolidation effort, the Commonwealth is embarking on a path of integration within and beyond the enterprise. We understand this evolution requires a comprehensive security and privacy strategy and approach that are critical to its operation. The Unisys team brings to the Commonwealth a strong mix of industry leading regulatory risk management practices, experienced team members, related Commonwealth and public sector experiences that add value to establish and maintain a regulatory compliant data center. We believe that these qualifications, combined with our technology strategy and implementation capabilities, uniquely position us to collaborate with the Commonwealth to help effectively evolve and mature the data center's security regulatory posture.

2 Network Security System Architecture, Experience

2.A Implement at minimum: spam filtering, anti-virus, malware protection, firewall (web, application), intrusion prevention and detection, web content filtering, virtual private network, and data loss prevention systems.

2.B Offeror must describe its proposed solution including the following:
Processes and Procedures
Tools / Applications
End User Reports
Standard
Custom
Escalation Procedures

The Commonwealth will be protected through the deployment of the following devices at all Internet ingress points: Web & Application Firewall, Anti-Malware, IPS, Content Filter,

VPN Concentrator and DLP, Processes and Procedures to address Acceptable Use, Physical & Logical Access Reviews and the applicable Commonwealth ITBs.

Web and database application firewalls will use the Imperva SecureSphere platform for proactive, real-time alerting and blocking of potential application threats. Imperva offers adaptable security protection for web threats and meets the Payment Card Industry Data Security Standard (PCI DSS) 6.6 requirement for web application firewalls.

Network based Data loss prevention (DLP), anti-virus, anti-malware, and spam filtering will be provided by McAfee Endpoint Protection security , platforms. McAfee DLP Discover allows discovery and verification of sensitive data, while DLP Prevent ensures that sensitive data being transmitted can be encrypted, redirected, quarantined, or even block the data transmission in question.

Traditional network firewall, virtual private network (VPN), and Intrusion Prevention Services (IPS) services will utilize the Juniper SRX enterprise platform, with separate instances for each service to reduce maintenance downtime and impact.

All firewalls will be implemented using the least privilege policy per agency, blocking all traffic by default. Unisys will work with the Commonwealth CISO during Transition to define a set of recommended security zone templates that will be made available to the agencies. The actual security zones for each application will then be defined to include one or more zones such as the following: 1) web/application production zones 2) database production zone 3) testing zone and 4) development zone. Each security zone is logically separated from one another and using the least privilege policy by blocking all traffic between zones by default.

Modification to the policy is accomplished via the change management process and requires agency approval. Unisys initially uses vendor standard security policies/configurations on the anti-virus and DLP platforms and works with the agencies and OA's Security Office to modify these as appropriate to meet Commonwealth security requirements.

Reporting will be provided from the individual tools, in addition to an aggregate view from the enterprise SIEM system. Examples of standard reports include: anti-virus compliance and auditing per system, dropped and suspicious firewall events, overall top enterprise threats from the SIEM, threat trending per month/quarter/etc. Custom reports may also be requested via the Enterprise Services Catalog and will be developed by working with the Commonwealth security staff to identify required information, trending, formatting, etc. from the individual tools as well as the enterprise SIEM.

There are well established and tested escalation processes in place to address incidents. Escalation processes are described in Schedule F, Section 3.2.1.4 "Service Desk". For security incidents, Commonwealth IT Security Incident Reporting Policy will also be followed.

2.C Offeror must describe its prior experience relative to providing datacenter management and support of CJIS, CCHRI, HIPAA and PCI systems.

Unisys currently supports agencies such as the Department of Public Welfare, Liquor Control Board, Department of Revenue, the Department of Health, and the Pennsylvania State Police in the DPH required to adhere to and be audited on the security standards of

CJIS, CCHRI, HIPAA, PCI, NIST, FISMA and IRS. As required, Unisys supports Commonwealth agencies in complying with these stated security requirements by ensuring the appropriate complement of network security devices are implemented for each agency. The Unisys Team also has provided data at rest encryption capabilities and updated training for the support staff as regulations change and audit based remediation activities require changes in the environment.

The Unisys Team has provided data center management in support of other government agencies in support of CJIS, CCHRI, HIPAA, and PCI systems. As an example, Unisys designed a data and records management system for the Alabama Criminal Justice Information Center that meets CJIS and CHRIA requirements. The Alabama Criminal Justice Information Center (ACJIC) is a state agency providing local, state, and federal criminal justice agencies with the information needed to provide citizen safety. ACJIC realized that gaps in its information technology were hindering communications and business continuity. It needed to more efficiently deliver critical information from its network and systems. ACJIC explored several solutions and solution providers before choosing Unisys to help establish an IT infrastructure specifically designed to address the agency's requirements.

4 Security Attack and Threat Assessment

4.A Review network and other security logs for evidence of attack. Utilize enterprise grade intrusion detection tool(s) to systematically identify, stop, and report security threats. Produce a monthly Security Log Analysis as part of the monthly status reports as described in RFP section IV-5 Reports and Project Control.Offeror must describe its solution and approach

Review Network and Other Security Logs

Unisys will implement a security information and event management (SIEM) system that allows for proactive analysis of security logs from all security, network and system platforms. The SIEM collects, aggregates, analyzes, and correlates system logs to identify suspected security incidents and confirms that the full path of attack is identified. These logs include network switches, routers, firewalls, load balancers, intrusion prevention systems, and active directory domain controllers among others. The Unisys SIEM reviews logs from all sources and identifies immediate threats as well as has the ability to perform historical analysis on previous events for trending and lower severity or persistent attacks. Millions of events can be searched quickly and easily, and logs will be normalized and stored in the CEF (Common Event Format) for easy export to the Commonwealth SIEM platform.

Suspected risks and threats immediately go through the incident management process for remediation, and follow up reporting are provided in standard formatting, with custom reporting also available.

The Juniper intrusion prevention system (IPS) sends its logs to the SIEM for real time analysis and correlation with other device logs to determine possible malicious activity. This is accomplished with a signature based system capable of protocol and traffic anomaly detection, zero day protection, and application awareness. Suspected intrusions are blocked based upon the vendor recommended security rating and continually tuned for more accurate detection and less false positives.

The Commonwealth will receive a monthly security report detailing all security incidents, which will be provided to appropriate agency and OA security administration. See item 3 above for additional details on reports.

6 Network Physical Access Restrictions

6.A Restrict physical access to all network systems and equipment with biometric or other second factor access control systems. Offeror must describe solution and approach to meet this requirement

Unisys takes a layered approach to security. Each facility has both physical and logical security in place. Managing access to systems starts with physically securing all network systems and equipment to prevent unauthorized personnel from gaining access. Given the differences in the facilities, however, we will discuss the facilities' physical access controls separately.

For the Unisys [redacted] facility; perimeter security is maintained by camera and an active physical security presence. A guard controls access to interior spaces 24x7x365; the guards are employees of the building owner, not contractors. Access control systems include access to and within the facility. Access control is achieved through three factors of authentication tools, namely keycard, keypad and biometric devices, across up to seven entry points (entry to lobby, two in the mantrap from lobby to main offices, two in the mantrap from offices to vault hallway, from hallway to the Commonwealth Datacenter vault, from the vault into the optional cages). Additional rack-based keypad or keycard controls are included in the Catalog to further restrict physical access to one or more of any agency's racks at the option of the agency.

For the EDC, building perimeter security is maintained by camera. A guard will control access to interior spaces during business hours. During off hours, access is not normally available to personnel who do not have predefined access (e.g., visitors, deliveries), when access to the CTC-1 building is also restricted. Access control systems include access to and within the facility. Unisys will use the existing badge reader systems and biometric access control systems in a double-entry configuration. Additional keypad or keycard controls are available through a change order to further restrict physical access to one or more of any agency's cages or racks at the option of the agency.

Unisys Security Operations Center (SOC) is comprised of security support staff and a suite of automated tools that provide comprehensive 24x7x365 monitoring, alerting, and response to security events.

7. Network Data Access Restrictions

7.A Restrict access to all data in the Commonwealth network infrastructure. Restrict and control all data access right, groups and special permissions based on the data security program designed by the Commonwealth security team and/or specified by the agencies. Access level changes and exceptions will be executed only when approved paperwork is complete and approved. A file of all access changes will be maintained by the Offeror for audit purposes. Offeror must support Commonwealth initiated security audits. Offeror must describe solution and approach to meet this requirement

Unisys will implement a "need to know" and "least privilege" policy in accordance with

Commonwealth logical and data access policies. System administrators will set up user accounts with appropriate levels of data access to restrict and control the access rights of system users based on their role and group designations as specified by the Commonwealth or specific Commonwealth agencies. The Unisys security team will use a privileged identity management suite to manage and monitor the access of privileged users to Commonwealth systems. Additionally, access activity logs produced by Commonwealth systems and management tools are sent to the SIEM for aggregate analysis and reporting. Changes and exceptions will only be made by Unisys upon the receipt of approved documentation from the Commonwealth or Commonwealth agency management. Unisys will perform monthly reviews of logical access changes and will support and fully participate in all Commonwealth initiated security audits. Unisys will maintain a log of all access changes for audit and review at the Commonwealth's request.

This page intentionally left blank.

3.2.4.6 Security & Firewall

The Security & Firewall service will provide hosting and operational support Services for security products and firewalls located at the data centers. These security devices and Services protect the equipment and applications in the data centers from malicious attempts to penetrate the computing environment with worms, phishing, Trojan horse malware, and unlawful data access. Offeror must install and maintain mainstream security hardware and software utilizing current industry best practices sufficient to protect the enterprise class data center environments with a significant volume of sensitive class data (e.g. HIPAA, CJIS, CHRIA, PCI, PII, etc.). The number of support staff members required to perform the tasks listed below will be determined by the Offeror.

Listed below are the basic Services required to manage the security & firewall systems required by the Commonwealth. Offeror must include these Services in addition to the base level of Services in this Offering.

Reference Documentation

Exhibit A - Commonwealth Network Environment

Exhibit J.1 through J.3 - Commonwealth Security and Compliance Requirement

Exhibit G.6 - PSP - CJIS Security Policy

Exhibit G.9 - PSP - CCHRI

Exhibit G.7 - PSP - Summary of CJIS Requirements

Exhibit G.12 - PSP - CHRIA Handbook

	Requirements	Describe Compliance

1.	Monitor local security operations, troubleshoot and resolve operational issues.
	
	Actively (normal daily process) monitor the operations of all security, firewall systems and security zones.
	
	Maintain a log for each server/appliance/system and review the system logs on a daily basis to ensure key system Services are processing without errors.
		Offeror must describe its approach to supporting the needs of the Commonwealth including the following:
		
		• Processes & Procedures
		• Tools / Applications
		• End User Reports
		  o Standard
		  o Custom
		• Tiered Service/Support Levels

	Provide the ability to import data to agency SIEM or enterprise SIEM tool for correlation and reporting purposes. Provide the ability for Commonwealth agencies to request security modifications (firewall changes) as documented in the CCPM. Document review of the system security logs on a weekly basis to ensure critical system Services are processing without errors. Complete weekly server log indicating which logs were reviewed, date and initial the log.	• Escalation Procedures Offeror must describe prior experience relative to providing datacenter management and support of CJIS, CCHRI, HIPAA and PCI compliant systems.
2.	Provide security training to Commonwealth personnel specific to the security Services being delivered. Provide the Commonwealth with a resume or CV for each operational staff member assigned to this engagement. Comply with agency background checks and clearances as defined in Appendix A - Terms and Conditions.	Offeror must describe its approach to supporting the needs of the Commonwealth. Offeror must submit a representative sample of staff resumes typically provided for these positions and describe the process to ensure compliance of background checks and clearances.
3.	Achieve cost effective 24/7 security operational coverage for this critical system. Provide dedicated security support staff onsite during scheduled business days, and automated log and notification systems to alert security team of possible intrusion events in real time mode. Provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. Security staff must be available to respond and evaluate the severity of the event	Offeror must describe its security operations coverage and how it will be applied.

	24/7/365.	
4.	Ensure network connectivity, and ensure consistent system response times. Utilize automated system management tool(s) to ensure real-time monitoring and notification of server availability and response times.	Offeror must describe its real-time monitoring approach and toolset to provide and maintain network availability and performance. Offeror must identify tools it uses to support network availability and performance.
5.	Ensure server/appliance operating systems are maintained with the current system patch level. Implement a Patch Management Program to ensure the timely application of security updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines. Ensure signature and threat analysis files are updated on a regular basis, and conform to industry best practices. Analyze monthly service patches and determine which patches need to be applied, by server type. Create a change record, log the update in the server log, and install based on server availability schedule. Notify the Commonwealth of any scheduled or unscheduled service interruptions.	Offeror must describe its approach to supporting the needs of the Commonwealth. Offeror must describe its approach for testing and validating updates to the OS and 3rd Party software that it supports. Offeror must describe its approach to communicating unscheduled and scheduled outages, including escalation process.
6.	Provide active security operations, corrective action, and reporting by utilizing Offeror software to monitor inbound and outbound traffic for malicious patterns and content, and take appropriate protective measures. The ability to utilize security management software to detect threats	Offeror must describe its Security Operations Process and how it will be applied.

	and analyze firewall logs, to proactively detect and protect from malicious events. Comply with agency specific security requirements. Comply with all agency and OA/OIT security policies and ITBs. On a quarterly schedule, run appropriate penetration testing, and report results to Commonwealth and Offeror. Create monthly report on events, incidents and corrective activities. Report that indicates systems not in compliance with security standards. Real time reporting of security breaches.	
7.	SLA Reporting including but not limited to collecting actual system availability, utilization and response time data. Create a Service Level Agreement report for the Commonwealth and Offeror on a monthly basis.	Offeror must describe its approach to supporting the needs of the Commonwealth.
8.	Software License Management	Refer to 3rd Party Software Management service.
Continual Process Improvement		
9.	Reduce service risks.	Offer methods to eliminate or mitigate service risks.
10.	Improve service quality. Make recommendations to the Commonwealth team any system changes that would be appropriate to maintain or improve SLA commitments	Offeror must describe its approach to supporting the needs of the Commonwealth.

	on a quarterly basis.	
11.	Improve client satisfaction.	Offeror must provide examples of previous Offeror initiatives aimed at continually improving client satisfaction.
12.	Ensure service transparency using documentation methods to ensure service transparency, by providing visibility into service execution.	Offeror must describe its approach to supporting the needs of the Commonwealth.
13.	Improve/reduce cost of service.	Offeror must provide examples of Security and Firewall Support initiatives that have been implemented or can be utilized to achieve reduced costs of Services and to meet or exceeded ROI (Return on Investment) analysis projections.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

Offeror Response

Introduction

Unisys understands the importance of the critical need for the Commonwealth to protect its equipment, applications, and data in compliance with regulations such as HIPAA, PCI, PII, CJIS, and CHRIA, and to protect its computing infrastructure from malicious and unlawful attempts to cause harm. Unisys will leverage its experience with industry leading security and firewall products to provide hosting and operational support services for the Commonwealth.

1 Security Operations Approach, Experience

1.B Actively (normal daily process) monitor the operations of all security, firewall systems and security zones.

The Unisys SIEM platform integrated with the Remedy Incident platform will provide automated and customizable log reviews and incident escalation to dedicated, on-site security operations staff during the scheduled business day's review of critical system processes and components.

The Unisys Team's SNMP monitoring tools also process events on the operational status of the security and firewall platforms. By forwarding the event alerts generated by both the SIEM and the monitoring tools, the event correlation system identifies the actual event and auto-generates incident tickets with ITSM. The network and security support team uses the information from the incident ticket and the details from the SIEM and the monitoring tools to resolve the associated incidents.

1.D Provide the ability to import data to agency SIEM or enterprise SIEM tool for correlation and reporting purposes.

The Unisys Team provides support to export data from the SIEM and central logging tools via CEF (Common Event Format) and CSV (Comma Separated Value) files that can be imported into the Commonwealth SIEM. Requests to provide exported data or integrate with an Agency or enterprise SIEM are supported through the service request process.

1.E Provide the ability for Commonwealth agencies to request security modifications (firewall changes) as documented in the CCPM.

The Commonwealth will be able to request security modifications through the Change Management Process documented in the CCPM. All changes to firewall policy for a specific agency must be approved by the entitled change approver for that agency.

3 Service Desk, Tiered Support, Operational Coverage

3.A Achieve cost effective 24/7 security operational coverage for this critical system.

Offeror must describe its security operations coverage and how it will be applied.

Provide dedicated security support staff onsite during scheduled business days, and automated log and notification systems to alert security team of possible intrusion events in real time mode.

Unisys will provide dedicated network/security support staff onsite during scheduled business days, coupled with automated tools that provide real time notification of suspected security intrusion events. The Unisys Security Operations Center (SOC) is comprised of these security support staff and a suite of automated tools that provide comprehensive 24x7x365 monitoring, alerting, and response to security events. Please refer to Schedule F, Section 3.2.2.5 – Security Management, for more details. Personnel follow specific instructions to mitigate issues according to the Security Incident Procedure (SIP) policy.

3.C Security staff must be available to respond and evaluate the severity of the event 24/7/365.

The Unisys Team uses an integrated series of manual and automated procedures to monitor, respond, evaluate and manage security events. These procedures include a basis to determine the severity of the events and support the appropriate response to resolve the incident.

The Unisys Team also uses an integrated set of tools to monitor and manage the security infrastructure within the data centers. The central security monitoring component is the [redacted] platform which collects, prioritizes, and forwards significant security events to the [redacted]. Network and security events are correlated with other events within BPPM and used to auto-generate incident tickets with the ITSM platform for network, security and other system events. ITSM provides automatic ntofications for Unisys support including the network and security teams, security manager, and Commonwealth stakeholders.

In addition to the security monitoring described above, the Unisys Service Desk (Level 1) supports the security staff as the point of contact for authorized users to call in events and incidents. The Service Desk also provides regular status updates on active events.

Events will be escalated to senior Unisys network/security support resources (Level 3) and/or the OEM as needed to resolve the incident.

4 Monitor network Connectivity, Toolset

4.A Ensure network connectivity, and ensure consistent system response times.

Unisys will provide event management solutions to help confirm network connectivity and consistent system response times. Proactive monitoring tools will be used that monitor excessive delay and latency in the network via ICMP and SNMP. Network monitoring systems [redacted]) will measure and record interface errors, discards, uptime, etc. for real time alerting and historical analysis.

Refer to Schedule F Section 3.1.2 Network Architecture for further details on network connectivity.

5 Patch Management

Ensure server/appliance operating systems are maintained with the current system patch level.

Offeror must describe its approach to supporting the needs of the Commonwealth.

Implement a Patch Management Program to ensure the timely application of security updates on all infrastructure platforms in accordance with Commonwealth IT policy guidelines.

Offeror must describe its approach for testing and validating updates to the OS and 3rd Party software that it supports.

Ensure signature and threat analysis files are updated on a regular basis, and conform to industry best practices.

Analyze monthly service patches and determine which patches need to be applied, by server type.

Create a change record, log the update in the server log, and install based on server availability schedule.

Notify the Commonwealth of any scheduled or unscheduled service interruptions.

Offeror must describe its approach to communicating unscheduled and scheduled outages, including escalation process.

The Unisys technical support team will patch based on Commonwealth /Agency policies as defined in the ITBs. The patch program will address policies, processes, procedures for the following:

- Sources of patches (how to obtain them from the OEM's)
- Toolsets that will be used to stage patches for possible deployment

- Change management procedures supporting the Change Management Process to identify, approve and manage deployment of patches
- Compliance procedures to include utilization of the toolsets to run compliance audits and identify out of compliance CI's with patch policies and approved changes
- Process and procedures to bring out of compliance CI's back into compliance

Unisys will follow the Change Management Process for applying patches to all IT infrastructure CI's. This process will maintain the change record in the [redacted] platform and also update the CMDB configuration management file after completion of the patch release and deployment process. The BMC ITSM change record will be related to the CI's in the CMDB as an audit trail for patch changes upon the completion of the Release and Deployment Process.

The distributed IT infrastructure toolset to support the automation of patch release and deployment is [redacted] Unisys will maintain in this toolset the appropriate patch policies for determining patch deployment and compliance. The [redacted] will be maintained with all the current patches supplied by the OEM's and will be used to manage the production state of patch deployment in the windows environment.

Unisys approach to testing and validating updates to the all CI's is to follow the release and deployment process for all changes into all production environments. The release process includes:

- Change ticket approvals
- Test planning and accepted test results
- Release and deployment planning including release back out plans
- Release testing for risky deployments
- Early life cycle support to help provide a successful deployment
- Release back out for failed releases

The Unisys technical support team will work with the Commonwealth/Agencies to determine patch policies for which patches should be applied to the server/appliance environment. Policies will be implemented to govern changes to the server/appliance environment as it pertains to HIPAA, SOX, CIS, etc. and to conform to the Commonwealth policies.

Unisys will follow the Change Management Process for applying patches to the production environment. This process will maintain the change record in the [redacted] platform and also update the CMDB configuration management file upon deployment for the server/appliance Configuration Item (CI). The Change Record will be related to the CI in the CMDB as an audit trail for changes to servers.

The toolset to support the automation of patch release and deployment is [redacted]. Unisys will maintain in this toolset the appropriate patch policies for determining patch deployment and compliance. The [redacted] will be updated with all the current patches supplied by the infrastructure OEM's and will be used to manage the production state of patch deployment in the infrastructure environment. Unisys will use [redacted] to support:

- Policies for the server/appliance environment
- Software distribution and server/appliance patching
- Compliance management of patches required for security policies

The anti-virus, malware and intrusion detection tools also monitor and update the related signature and threat analysis files within the server, network and security infrastructure using the regular updates provided by the vendors. Antivirus and other signature updates which are automatically pushed to the infrastructure will be processed as part of the tools configurations. Other update files will be loaded during an approved change window and use the change approval process.

Unisys standard maintenance notification and escalation process will be followed, as defined in Schedule F, Section 3.2.3.2 Site Operations.

6 Security Operations

6A Provide active security operations, corrective action, and reporting by utilizing Offeror software to monitor inbound and outbound traffic for malicious patterns and content, and take appropriate protective measures.

Offeror must describe its Security Operations Process and how it will be applied.

The ability to utilize security management software to detect threats and analyze firewall logs, to proactively detect and protect from malicious events.

Unisys will use a combination of intrusion prevention and SIEM (Security Incident and Event Management) software to monitor all inbound and outbound traffic for malicious content in real-time. Unisys will follow the incident and problem management process to expeditiously report and act on all suspected security events, which may include network based blocking of traffic. Firewall logs will be analyzed by both a standardized syslog platform and a SIEM that will correlate with other device logs (e.g. IPS, server, etc.).

Refer to Schedule F Section 3.2.2.5 Security Management for detail on the Unisys Team's Security Operations process.

Refer to questions 1B, 2C and 3C above for details on the security management tools and log analysis to proactively detect and protect from malicious events.

6.B Comply with agency specific security requirements.

Comply with all agency and OA/OIT security policies and ITBs.

The Unisys Team uses the Security Management Plan as the basis to analyze, understand, and document the security, regulatory, and policy requirements for each agency, including OA/OIT security policies and ITBs. The security team uses this information to define, update and maintain the configurations of the security platforms, tools, and monitoring systems to maintain compliance with the related policies.

6.D Report that indicates systems not in compliance with security standards.

The Unisys Team uses the automated management tools ([redacted]) to monitor for compliance for the network, security, and other systems. These tools include configuration templates which are used during automated regular checks on the systems to confirm the configurations continue to comply with the security standards. If a system is identified as not being in compliance, an incident ticket is generated and will be closed after the configuration is returned to a compliant state. The templates are updated through change management to reflect modifications from the Security Management Plan, new or updated OA/OIT policies and ITBs.

Compliance reports are made available through the Services Portal's dashboard.

6.E Create monthly report on events, incidents and corrective activities.

The ITSM system described in Section 3.2.3.2 supports the tracking and reporting on all incidents and the related resolutions. The ITSM system's reporting functionality will be used to generate the monthly reports on security related events, incidents and resolutions. This report is available through the Services Portal dashboard.

6.F Real time reporting of security breaches.

The Unisys Team uses the SIEM to monitor and forward events which are caused by security breaches. Incident tickets are auto-generated in ITSM based on the events and include email notifications to the Unisys security team, security manager, and Commonwealth stakeholders. The SIEM will analyze the incident; and when a security breach is suspected, Unisys will report it as a priority 1 incident using the incident management process as defined in the CCPM, including real time reporting and establishing management conference bridges. Updates on the incidents are available through contacting the Service Desk, participating in status update bridges when available and on the Services Portal.

3. Technical Infrastructure

Technical Infrastructure Clarification

During the Orals phase, the Unisys Team received several questions around our x86 Technical Infrastructure. As a result, we have made several revisions and enhancements to our Technical Submittal focused on clarifying our x86 Technical Infrastructure offering. The Unisys team has updated our proposal with additional information on the IBM Flex System which is a core component of the x86 (Windows and Linux), iSeries and AIX infrastructures.

Unisys is an authorized reseller of VCE's VBlock Technology. Based on the Commonwealth's complete datacenter and technology requirements in this RFP, Unisys performed a detailed analysis between the IBM x86 Flex systems blade technologies and VCE's VBlock Technology. After reviewing the results, we selected the IBM Flex systems as their technology was deemed superior in meeting the requirements of this RFP. The details of our analysis and clarifications on our x86 technology offering is found in this Tab.

In addition, the Unisys Team has updated the IBM storage and tape references to the IBM DS8800 disk storage system and TS7700/TS3500 tape library system.

Our revised responses for the identified Requirements in the Schedules or Sections listed below are included in this tab.

Tab	Schedule or Section	Requirements
3	Schedule F Section 3.2.2.2 Infrastructure Architecture	1A and 1B

This page intentionally left blank.

3.2.2.2 Infrastructure Architecture

The Infrastructure Architecture service will define and manage the scope and design of the infrastructure architecture for the computing systems to support the evolving needs of the Commonwealth. This range of Services includes design of the mainframe, mid-range, x86 servers, (both physical and virtual), Local Area Network (LAN), storage, backup systems, and the DR systems. The design will also need to detail how the most current data will be restored to the targeted DR system.

Efforts are underway to re-write many of the Commonwealth business applications. For example, some of the mainframe applications are being migrated to newer server-based systems. The Offeror must consider the planned retirement of some of the mainframe workload, and at the same time consider the offsetting growth in other server platform environments.

At the direction of the Commonwealth, the Offeror must transition Commonwealth-based computing infrastructure to one of the datacenters. The Offeror must work with the Commonwealth agencies to understand the systems involved, and the timeframe of these migrations. Working with the Commonwealth agencies, the Offeror must provide the design, project management, hardware and technical support required to test and migrate these systems to the new production environment. At its discretion, each agency will provide the applications staff to support the migrations.

The Infrastructure Architecture service will review and recommend hardware, software, and the technical configurations required to build the requested infrastructure environments. Prior to migrating each of the current application workloads to the new target infrastructure, the Offeror must work with each Commonwealth agency to develop a mutually agreed to Acceptance Test Plan that includes the testing of application infrastructure performance characteristics.

	Requirements	**Describe Compliance**
1.	Define the infrastructure technology Services to be offered. Provide a detailed list of Services and computer platforms to be provided to the Commonwealth.	Offeror must describe its ability to provide infrastructure technical Services across multiple computing platforms (mainframe, mid-range and x86). Include explanation of different service tiers (e.g. gold, silver and bronze).
2.	Design and build the IT infrastructure architecture to support the Services required by the Commonwealth. Design will provide as much interoperability and open standards as possible. All designs must be approved by the Commonwealth. Provide the design in a Visio format to the Commonwealth for review and approval prior to execution. This diagram will be dated and maintained as Services are altered for the duration of the engagement.	Offeror must describe its methodology and approach to infrastructure architecture design Services. Offeror must describe the documentation requirements, timelines for both normal requests and emergency situations. Offeror must provide representative sample of infrastructure design documentation.
3.	Address CJIS and Criminal History Record Information Act (CHRIA) requirements for agency application infrastructure designs where required. Some agency application infrastructure designs (e.g. PSP) require additional security and encryption level requirements imposed by CJIS.	Offeror must provide examples of its experience in designing infrastructures that adhere to CJIS and CHRIA requirements.
4.	SAP Infrastructure Design The Offeror's proposed target	Offeror must provide examples of its experience in sizing and design of SAP

	infrastructure design for the Commonwealth's SAP environments must include a certified SAP sizing report prior to migration of the systems.	infrastructures. All designs must be approved by the Commonwealth.
5.	Commonwealth Wide Area Net connectivity. Provide connectivity from the datacenter to the Commonwealth Network. Redundant network links are required.	Offeror must describe its capabilities to connect to and manage the requisite connections. Explain ongoing network support Services to manage these links including the ability to increase capacity as needed to support changes in the application infrastructure requirements.
6.	Develop Acceptance Test Plan. Prior to migrating each of the current application workloads to the new target infrastructure, the Offeror will work with each Commonwealth Agency to develop a mutually agreed to Acceptance Test Plan that includes the testing of application infrastructure performance characteristics.	Offeror must discuss its proposed approach to systems acceptance testing and include the approach to performance testing.
7.	Provide System Acceptance testing. The Offeror must conduct system acceptance testing, and provide the Commonwealth with written verification prior to declaring the system is fit for use. This acceptance test must include validation of infrastructure performance against system performance characteristics agreed to by both parties.	Offeror must discuss its proposed approach to systems acceptance testing.
8.	Ready for use certification	Offeror must provide the Commonwealth with written verification prior to declaring the Service is ready for use. The Service will not be considered ready for use until written acceptance is obtained from the

		Commonwealth.
9.	Support User Acceptance Testing.	Offeror must support the Commonwealth's user acceptance testing. The Commonwealth shall not be charged for Services until written acceptance is obtained from the Commonwealth.
10.	Provide Application Infrastructure environments. Provide non-production and production environments for each of the application computing platforms. The non-production environments will be used for testing new technologies and applications, updates and upgrades, prior to production implementations.	Offeror must describe its approach to the design and management of multiple application infrastructures. Identify proposed solution to individual or consolidated non-production environments for agencies.
11.	Design service lifecycle. Provide the infrastructure design for the Services and platforms to be offered. Provide ongoing evaluation and recommend new technologies to enhance, improve, and reduce the cost of Services.	Offeror must describe its approach to provide service lifecycle design for all Commonwealth computing platforms and associated infrastructures. Offeror must provide the Commonwealth and its agencies the ability to request new technologies to be available.
12.	Define Technical Support functions.	Offeror must list Offeror's support staff levels required to plan, manage, and operate the IT infrastructure, based on the various service levels offered.
Continual Service Improvement		
13.	Reduce service risks.	Relative to the service in question, Offeror must provide examples of previous Offeror initiatives aimed at eliminating or mitigating service risks.
14.	Improve service quality.	Offeror must provide examples of previous Offeror initiatives aimed at improving service quality.

15.	Improve client satisfaction.	Offeror must provide examples of previous Offeror initiatives aimed at continually improving client satisfaction.
16.	Provide service transparency.	Offeror must provide examples of previous Offeror initiatives aimed at providing service transparency; in particular, visibility into the service execution process.
17.	Ensure service sustainability.	Offeror must provide examples of previous Offeror initiatives aimed at ensuring service sustainability; in particular, efforts targeted at cost containment and cost reductions.
18.	Improve/reduce cost of service	Offeror must provide examples of previous technology initiatives implemented by Offeror that achieved reduced costs of Services and that met or exceeded ROI (Return on Investment) analysis projections.

Deliverables

Deliverables are defined in **Schedule K - Key Program Deliverables**

Offeror Response

1 Infrastructure Service Tiers

1.A Define the infrastructure technology Services to be offered.

The Unisys Team offers a solution that provides these managed infrastructure technology services:

- Unisys OS2200
- Unisys Libra
- IBM zSeries
- IBM iSeries
- Network
- Security
- Server/Midrange
- Storage
- Backup
- Disaster Recovery
- IaaS Services
- Data center Facilities

1.B Provide a detailed list of Services and computer platforms to be provided to the Commonwealth.

Figure 3.2.2.2-1 below shows the computer platforms the Unisys team will deploy as part of the Infrastructure Architecture services. Following, there is a description of each of the technologies, and overview of how the Unisys team will utilize those solutions. For your convenience, we also provide references to other sections of proposal if additional information is required.

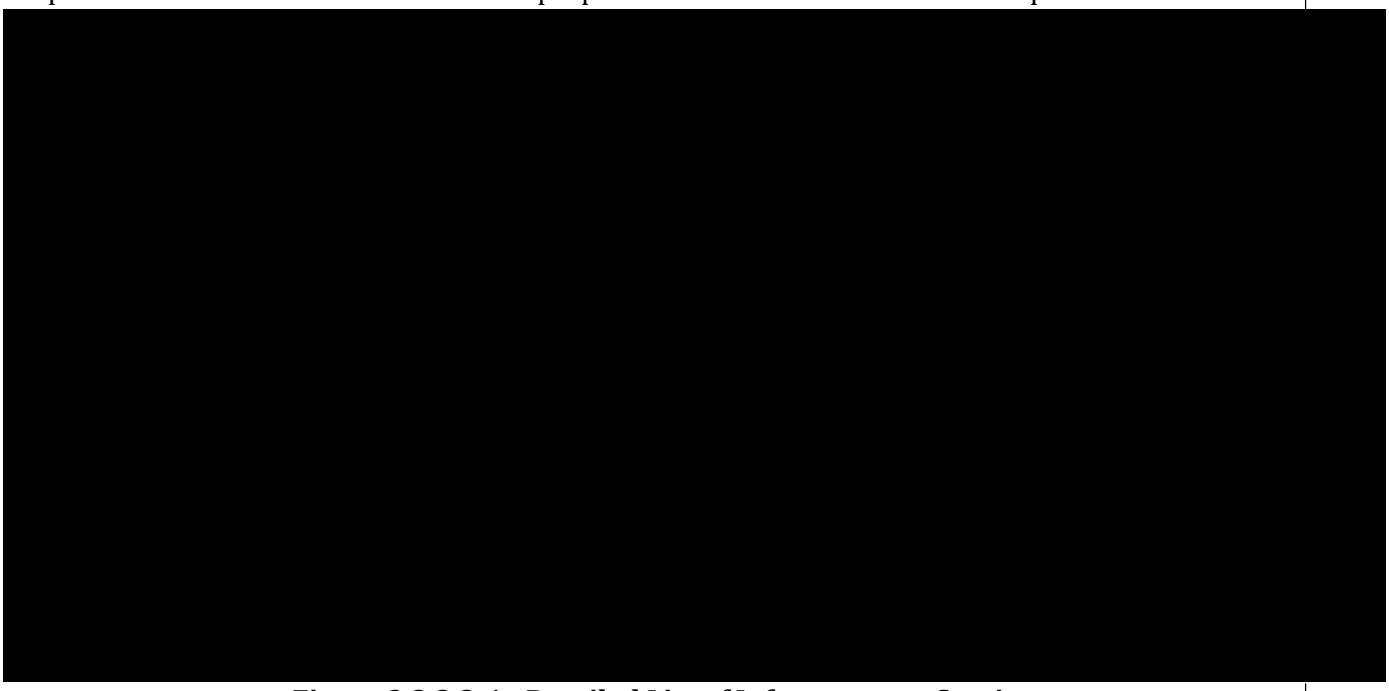

Figure 3.2.2.2-1 - Detailed List of Infrastructure Services

- [redacted] – The [redacted] blade technologies will be utilized by the Unisys team to provide all x86 server services to the Commonwealth. The Unisys team evaluated several platforms for hosting the Commonwealth's server infrastructure, including VCE's VBlock Technology. Unisys found that the [redacted] infrastructure was superior in every significant area of comparison, as detailed below.

A high level comparison chart between [redacted] and [redacted] is shown in **Table 3.2.2.2-1**.

Table 3.2.2.2-1 – [redacted]

Comparison At A Glance	IBM Flex Systems	VCE VBlock
Supports Microsoft Windows	✓	✓
Supports Linux	✓	✓
Supports IBM AIX	✓	

Supports IBM iSeries	✓	
Supports VMWare	✓	✓
Supports Microsoft HyperV	✓	
Supports KVM	✓	
Supports IBM PowerVM	✓	
Supports East/West Traffic For Reduced Network Latency	✓	
Supports Trusted Compute Base and Trusted Platform Module	✓	

- Flexibility and expandability – [redacted] can host AIX, IBM I series, Linux and Windows servers, both virtualized and physical. Additionally, a higher blade density means 1/3 less data center floor space for equivelant CPU counts. Expanding the Flex System is easier because the system is not locked down, thus storage, network and compute node can be expanded separately, as opposed to VBlock, which requires all three to be upgraded at once. Lastly, [redacted] allows for components to apply updates and patches separately, meaning less impact to users. VBlock updates and patching are locked down, and are required to be applied all at once, and only after VCE releases them, meaning all systems are upgraded, whether the underlying workloads are ready for them or not. This increases the risk of critical security and system patches being delayed and greater user impact.

- Performance – [redacted] blades do not have to route traffic to top of rack switches to communicate with other blades. Utilizing east/west communications, Flex Systems significantly reduces communication latency between compute nodes.

- Compute Power – SPECint benchmark testing data shows that [redacted] compute nodes are 9% faster than equivalent VBlock compute nodes. SAP SMP benchmark testing also shows that [redacted] AIX blades can support 10,000 users, as opposed to 6,500 for VCE VBlock.

- Virtualization Support – [redacted] support all major virtualization platforms the Commonwealth lists in this RFP (VMware, Microsoft's HyperV and IBM's AIX based PowerVM) as opposed to the homogenous VMWare environment of the VBlock platform.

- Security – [redacted] utilizes the Trusted Computing Base and Trusted Platform Module to prevent access to system level resources and system controllers, blocking these resources as a means to access operating systems and hypervisors. Additionally, all intra-chassis, east/west communications are

encrypted.

- o Ease of Management – [redacted] is a highly integrated management tool that can manage the entire [redacted] infrastructure, from low level components such as fans and power supplies through the hypervisor to the storage, compute and network components, the [redacted] provides single pane of glass management of AIX, Linux, IBM iSeries and Windows workloads, both physical and virtual, increasing value and cost savings to the Commonwealth.

The [redacted] form the infrastructure for both virtualization and physical servers. Utilization of this technology provides the Commonwealth with increased power, agility, and performance at a lower cost, able to meet the compute needs of the Commonwealth now and into the future. For more information on how the Unisys team will utilize [redacted] please refer to Schedule F, Sections 3.2.4.1, Windows Support; 3.2.5.1, Server Capacity on Demand, and the Linux section of 3.2.4.4 Unix Support.

- [redacted] is an AIX variant of the [redacted] line of blade servers. The Unisys team will deliver all AIX services referenced in this RFP on this platform. Combined with the x86 Flex System blades, the Unisys team brings to the Commonwealth the unique ability to co-locate AIX, Linux and Windows workloads in the same blade chassis, driving down management and deployment costs for the Commonwealth. For more information on the use of the [redacted], please see Schedule F, Section 3.2.4.4 Unix Support.

- [redacted] is a CMOS processor based mainframe which the Unisys team will utilize to deliver Unisys mainframe services to the Commonwealth. Please see Schedule F, Section 3.2.4.5 Mainframe Support for more information.

- [redacted] is an x86 processor based mainframe which the Unisys team will utilize to deliver Unisys mainframe services to the Commonwealth. Please see Schedule F, Section 3.2.4.5 Mainframe Support for more information.

- [redacted] is the mainframe on which the Unisys team will deliver both IBM mainframe and zLinux services to the Commonwealth. Please see Schedule F, Section 3.2.4.5 Mainframe Support for more information.

- [redacted] designed for high performance, reliability, and flexibility and will be utilized by the Unisys team to provide storage to the [redacted] mainframe. Please see Schedule F, Section 3.2.4.5 Mainframe Support for more information.

- [redacted] is a high-end disk storage system designed to provide consistent performance, high availability and simple usability. The [redacted] will be one of the storage platforms the Unisys team will utilize to deliver storage services to the Commonwealth. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] provides storage virtualization by presenting itself to server hosts as a storage device, and to storage devices

as a server host. Utilization of the [redacted] brings power and agility to the Commonwealth at the storage layer, and compliments the virtualization at the server layer. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] is a virtualization engine (virtual tape library) for [redacted] mainframes that uses disk drives for cache to accelerate backup operations. The design is intended to protect data while having shorter backup windows. End-to-end encryption protects data in motion, on cache hard drives and on tape. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] system is an enterprise class storage system, used by the Unisys team to deliver storage to open systems and [redacted] mainframes. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] storage devices provide both file and block storage services. The Unisys team will utilize the [redacted] as one of the storage options available to the Commonwealth through the Enterprise Services Catalog. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] – The Unisys team will utilize [redacted] as one of the options to provide the Commonwealth tape based backup and recovery services. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] will be used by the Unisys team to deliver [redacted] services for the [redacted] mainframes. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] is equivalent in many ways to the IBM SAN Volume Controller, capable of storage virtualization and replication of data and virtual machines across data centers. The Unisys team will use [redacted] as one of the storage service options for the Commonwealth. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] is a continuous data protection solution offered by [redacted] which supports asynchronous and synchronous data replication of block based storage. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] – The Unisys team will utilize [redacted] to perform de-duplication of disk based backup. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] will be utilized by the Unisys team to provide tape based backup and recovery services to the Commonwealth. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] will be utilized by the Unisys team to provide tape based backup and recovery services to the Commonwealth. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] – [redacted] will be utilized by the Unisys team to provide tape based backup and recovery services to the Commonwealth. Please see Schedule F, Section 3.2.4.2 Storage Management for more information.

- [redacted] – [redacted] a web-filtering, content caching internet perimeter security device for large enterprises. The Unisys team will deploy Blue Coat Proxy to provide internet security and content filtering to the Commonwealth. Please see Schedule F, Section 3.1.2 Network and Security Architecture.

- [redacted] – [redacted] is a distributed sniffer system. The Unisys team will utilize [redacted] to quickly analyze problems on the network or to isolate problems specific to an application. Please see Schedule F, Section 3.1.2 Network and Security Architecture.

- [redacted] – Long recognized as a leader in data center networking, the Unisys team will utilize [redacted] routers and switches to provide the Commonwealth LAN and WAN services. Please see Schedule F, Section 3.1.2 Network and Security Architecture.

- [redacted] – The Unisys team will deliver network firewall services to the Commonwealth using Juniper Firewalls. The [redacted] firewalls chosen by the Unisys team allow advanced functionality at the firewall layer. Please see Schedule F, Section 3.1.2 Network and Security Architecture.

- [redacted] – The [redacted] deployed by the Unisys team will offer the Commonwealth ubiquitous load balancing of applications across data centers. Please see Schedule F, Section 3.1.2 Network and Security Architecture.

4. Operational Efficiency Revisions

We are also proposing a number of technical changes that improve operations while providing efficiencies. These Technical improvements and clarifications are summarized below.

Transition

As part of an effort to continue to refine the Transition Plan we were able to accelerate the migration from the DPH to the new data center to 12 months without a measurable increase in risk. With this revised timeline, we will now eliminate a DPH contract extension if the transition can begin prior to January 2014. We were hopeful before submission of our proposal that such an aggressive timeline could be met but the extra time for the BAFO process allowed us to confirm acceleration was achievable with limited additional risk. We also were able to reevaluate the other data center transitions as well and now are committing to their full transition by Month 18. In summary, the EDC will be completely transitioned within 6 months. DPH would be fully transitioned in 12 months; all agency data centers within 18 months. The details on the changes for the Transition Plan are provided within the Work Plan, Section 3.0 and related updates are located in the following indicated sections.

Our revised responses for the identified Requirements in the Schedules or Sections listed below are included in this tab.

Tab	Schedule or Section	Requirements
4	Section 3.0 Work Plan	3.1.2, and 3.2-3.2.2
4	Section 2 Management Summary	2.5
4	Schedule F Section 3.3.2.1 Transition Program Management	3A, 6C, 7B, 9A
4	Schedule M - Transition Plan	Transition Schedule and Detailed transition plan

2+ Data Center Architecture

The Unisys Team refined the 2+ Data Center architecture approach by redefining the services provided by the Unisys [redacted] data center and its network connectivity. This modification simplifies the planning and migration activities for the DPH and individual agency data centers during Transition while maintaining the flexibility to meet changing business needs. As a result of these modifications, the sections in the table below have been updated to reflect that production, Capacity on Demand, and disaster recovery services are available from the [redacted] and EDC Data Centers.

The EDC in Harrisburg, PA is the designated disaster recovery site for Unisys and IBM mainframe services, should the Unisys [redacted] facility become unavailable. Unisys' [redacted] data center remains available for Capacity on Demand services and to further enhance disaster recovery services if the Commonwealth's business or policy needs change or there

is a need for greater than 90 miles of geographic separation. In addition, the IBM Sterling Forest disaster recovery subscription service for the IBM Mainframe is also available through a service request. Therefore there is a full menu of additional services available should the Commonwealth's need change or a horrific event cause a broader disaster recovery response. Details about the changes to disaster recovery are provided in the following sections.

Our revised responses for the identified Requirements in the Schedules or Sections listed below are included in this tab.

Tab	Schedule or Section	Requirements
4	Schedule F Section F.3.1.1 Multi-Datacenter Environment	4A, 7A
4	Schedule F Section 3.2.1.5.2 IT Service Continuity Architecture	3A

Data Loss Prevention

The Unisys Team has decided to use McAfee Data Loss Prevention in place of Symantec Data Loss Prevention. Post submission of our proposal we re-examined our selection against the Commonwealth's goal of integrating new products with existing Commonwealth products to provide the benefits of full integration, reduced risk and lower costs. The McAfee DLP met all of these criteria and therefore we decided to make this our product of choice. Now McAfee DLP will integrate with the Commonwealth's antivirus and malware management tools, as well as reduce risk and operating costs. **All references to Symantec security products, such as DLP, Antivirus, or Malware in the Unisys RFP response are considered changed to the related McAfee product.**

Backup Software

The Unisys Team has also changed its product for backup services. The new product being proposed is EMC Networker. It replaces Commvault Simpana. EMC Networker is a proven solution at the Commonwealth and has been leveraged at the EDC since its inception. We see value keeping a product that has been used successfully by the Commonwealth for many years. Using the EMC product should help reduce risk during transition and provide operational efficiencies longer term. A detailed explanation of EMC Networker is included in the attached Schedule F Section F.3.2.4.2 (Storage Management). **Any references to Commvault, Simpana or Commvault Simpana in the Unisys RFP response are now considered EMC Networker.**

Our revised responses for the identified Requirements in the Schedules or Sections listed below are included in this tab.

Tab	Schedule or Section	Requirements
4	Section 3.2.4.2 Storage Management	Introduction, 1B, 4B, 4G, 7A, 13A, Benefits to Commonwealth
4	Section 3.2.4.7 Database Management Services	1A, 2A

3.0 Work Plan

3. WORK PLAN (RFP REQUIREMENT II-3) 3-3

3.1 WORK PLAN OVERVIEW 3-3
3.1.2 Work Plan Description 3-3
3.2 DETAILED TASK PLAN 3-9
3.2.1 Transition Services 3-10
3.2.1.1 Account Organization 3-11
3.2.1.2 Enterprise Data Center (EDC) to Managed Services Model 3-12
3.2.1.3 Tools Implementation 3-13
3.2.2 Application Workload Migrations 3-13
3.2.2.1 Operational Readiness 3-14
3.2.2.2 Agency Application Workload Migrations 3-15

3. Work Plan (RFP Requirement II-3)

RFP	*Requirement*
II-3	*Work Plan. Describe in narrative form your technical plan for accomplishing the work. Use the task descriptions in Part IV of this RFP and Schedule F as your reference point. Modifications of the task descriptions are permitted; however, reasons for changes should be fully explained. Indicate the number of person hours allocated to each task. Include a Program Evaluation and Review Technique (PERT) or similar type display, time related, showing each event. If more than one approach is apparent, comment on why you chose this approach.*

3.1 Work Plan Overview

3.1.2 Work Plan Description

The program activities have been designed in three primary parts or phases: (1) Transition, (2) Migration, and (3) Steady State Operations, which is expected to be achieved by Month 18 of the program schedule. The overall program is supported by a program management framework which includes detailed planning, effective communication, and status tracking. This section includes a high level narrative of our proposed work plan along with selected pictures of the detailed work plan which is included in Attachment 9 to Section 3.0 – Schedule M. This section also includes details on the Unisys methodology that was used to design our proposed program plan and will be used to refine it based on Commonwealth feedback.

Transition activities build the foundation that the steady state organization needs to function including development of the final organizational plan, the communications plan, the financial management plan, and the development of policies and procedures, which will govern and guide the program's steady state operation. This activity sets plans and executes the transition from the current steady state operations model to the new operating model.

Transition consists of projects and tasks that will be executed to support the implementation of the resources, processes, procedures, and tools required to effectively deliver steady state data center compute services to the Commonwealth. In other words, we will create the IT service management infrastructure to support the new environment's hardware and software infrastructure. Transition will be broken further into smaller projects such as Tools Implementation, Transition of Services, and Service Desk Implementation. Examples of these types of activities include the enhancement to support the expanded scope for the BMC Remedy system, implementation of revisions to Service Management processes like change management, hiring and training of transition PMO staff, and knowledge transfer for implementation of Managed Services. In this phase, we will leverage our significant knowledge and broad experience with the Commonwealth to speed this process.

Migration activities focus on the relocation and provisioning of both the physical infrastructure and planned movement of applications to the target platforms. The re-envisioning of the current DPH, EDC, and incorporation of agencies currently outside the managed services contract will be planned, focused teams will be established to address each migration, and they will execute the individual actions required to accomplish the migration.

Migration will be comprised of activities that prepare the receiving data centers for the migration of applications, often called Infrastructure Readiness, as well as projects that will migrate applications and their data from Commonwealth Data Centers to Unisys facilities. The projects will be organized around migrating applications from each data center and be broken into manageable sizes. For example, the DPH Data Center will be broken into approximately nine smaller projects with scope based on inter-application dependencies, number of servers, and applications.

Transition Program Management activities consist of tasks that the Transition Program Office will execute to improve each project's performance in quality and performance to schedule. This will include tasks such as quality reviews; gathering and distribution of lessons learned, status meetings, and reports; and oversight of the project schedule rollup. Key attributes of these tasks are consistency, sharing, adjustments, and oversight.

As the incumbent vendor, Unisys will continue to provide outstanding service to the Commonwealth's mission-critical application infrastructure hosted in the DPH and staff augmentation services to the operations in the EDC until each location is fully transitioned to the new model. Our incumbency provides us with the uncommon ability to seed the

transition and migration teams with knowledgeable resources who understand the Commonwealth infrastructure, considerably reducing ramp-up time training staff on basic infrastructure support and each agency's priorities and nuances. It is during this time that we will accelerate our focus on reforming our organizational structure and work processes to meet the new model's changing requirements.

Once the transition activities conclude, **Steady State Operations** begins using the new operating model, which is developed during the Transition and Migration phases. Continuous Service Improvement activity commences during this phase providing opportunities to assess, design, and implement changes to the program processes to increase the value of the services to Commonwealth.

Table 3-1 below shows a projection of the work effort required to complete the transition by major activity.

Table 3-1. Transition Work Effort by Major Activity

Task Activity	Total Person Hours Allocated
Transition Project Management	42,705
Transition of Services	157,186
Tools Implementation Project	18,784
Infrastructure Readiness Project	45,869
Application Workload Migrations	56,998

The following Gantt chart shown in **Figure 3-2** provides a very high-level view of the timelines for the overall activities of this program.

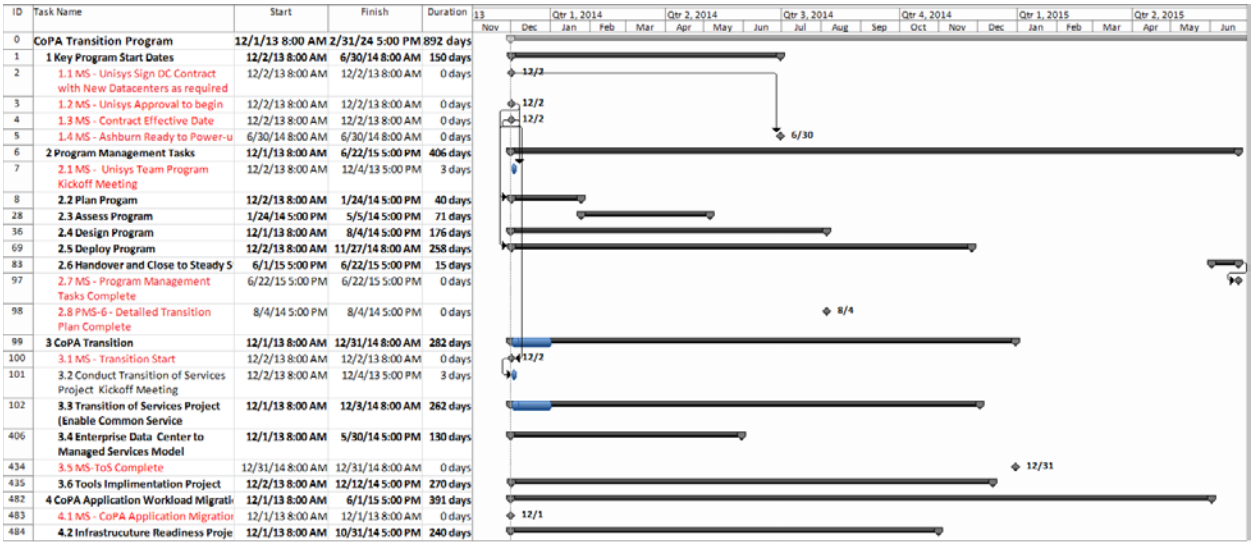

Figure 3-2. High-level Schedule of the Commonwealth's Transition Program

Transition Program Management Office – Project Start up

During **Month 1** of the program, much focus will be placed on program startup and long lead-time activities such as placing orders for the establishment of the telecommunications infrastructure. Executive planning sessions will be held to confirm a common understanding of scope, priorities, and timing. The Unisys Team will work with the Commonwealth to begin reviews and joint planning sessions for the Transition of Services, Tools Implementation, and Operational Readiness, which are critical to the EDC's transition to a Managed Services model. Unisys, IBM, and Deloitte are in the exceptional position to be able to leverage existing knowledge to expedite the turnover to the Unisys Team. Also, our account architecture team will create the architecture deliverables and review them with the Commonwealth to allow for long lead-time items such as circuits, core network equipment and storage, x86, AIX, and mainframe 'seed' equipment to be ordered.

During **Month 1** we bring key personnel on board to support the new contract starting with our Engagement Executive, [redacted] our Transition Executive, [redacted] our second Transition Manager, [redacted] and our Senior Enterprise Infrastructure Architect, [redacted] We will backfill positions currently held by Ann and Dave on the DPH contract.This team will lead all aspects of the transition efforts. We will also bring on our Service Excellence Officer, [redacted] to build our Service Excellence Office that will initially reform workflows of existing ITIL V3-aligned processes to meet the new services model requirements.

Transition Assessment and Data Gathering

Months 2 and 3 will contain many design and data gathering activities. We will begin the Tools Implementation tasks. The data center migration teams will begin analyzing the data collected from the BMC Atrium Discovery and Dependency Mapping (ADDM) tool to create move packages. Move Packages are defined as a group of dependent applications and data across several infrastructure components. We will conduct initial planning sessions with the Commonwealth stakeholders to solidify the order and timing of data center migrations. During this period, our key personnel will acclimate, and our Transition Program Management Office (TPMO) will be taking shape. As we move into Month 2, a team will begin detailed planning on the EDC's transition to quickly facilitate the transition to the Managed Services model.

It is also during **Months 2 and 3** that our executive leadership will work with Commonwealth executive leadership to solidify our approach to governance, communication, and reporting for steady state ongoing services, which will begin from the day an application is migrated to a Unisys Data Center, or workload in the EDC transitions to the managed services model. As dates are assigned to move packages, we will finalize the specific staff transition timeline for moving existing staff with Commonwealth knowledge to the new contract and we will start infusing our teams on both sides with new resources from IBM, Deloitte, and our SDB partners. We will on-board our Agency Account

Managers to acclimate the agencies to the changes in procedure and the support organization between the existing contract and the new model.

Transition Program Development – Process/Tool Refinement and Implementation

Many contract milestones will be completed in **Months 4 through 8.** To accomplish these milestones, we will complete the implementation and integration of the ITSM System with the Commonwealth ITSM system along with drafting of the CCPM. The ITIL V3 processes will be finalized and rolled out to the team. The Unisys Data Center core infrastructures will be installed, tested, and connected to COPANET, which will result in operational readiness. Early in this period, the Data Center Migration Teams will begin detailed planning on the DPH migration to facilitate complete migration within 12 months. The Unisys Team will initiate training of the Commonwealth stakeholders that will cover many aspects of the contract, operational procedures, and review of strategy and plans aligned with program key deliverables.

At this time, the Unisys Team will complete the transition of the Enterprise Data Center from the current staff augmentation model to the new managed services model. Existing Unisys Team members augmented with additional staff will completely assume the site's management responsibilities. After the Enterprise Data Center is operating in the steady state, agencies with applications hosted in the EDC can order additional services through the Enterprise Services Catalog and change order processes, and the Unisys Team will be accountable for Service Level Agreements (SLAs) within the EDC under the new contract.

DPH, DOR and DLI Application Workload Migration

Months 6 through 12 will focus almost exclusively on detailed planning and executing the DPH migration. To achieve this, Unisys, IBM, and the Commonwealth will work closely to plan the migration projects. The Unisys Team will be augmented with additional project management and technical resources that will perform migration tasks directly, or backfilling DPH team members who will be reassigned to provide a strong foundation of knowledge and experience to the DPH migration effort. The Commonwealth will verify the move packages that were identified by the Migration Team, develop and refine test plans for each application, and participate alongside the Unisys Team throughout the project to deliver a successful move. During this period, the Migration Team will put a strong communications strategy in place and plan to enable all stakeholders to have access to schedules and project plans. Unisys will develop a communications cadence of notifying affected users 30, 7, and again 2 days before any significant events such as re-IP events (if necessary) and move events.

Because the DPH will be migrated in at least nine separate move packages, an agency could have application infrastructure managed at the Willow Oak Data Center and the Unisys Data Center concurrently. As the migration move packages are relocated to the Unisys Data Center and the application infrastructure for each application is operating in the steady state, agencies with applications hosted in the Unisys Data Center can order

additional services through the Enterprise Services Catalog and Change Order processes, and the Unisys Team will be accountable for SLAs under the new contract. For all application infrastructures that remain at the Willow Oak Data Center, the Unisys Team will be accountable for SLAs under the current DPH contract until the infrastructure is relocated to the Unisys Data Center. By **Month 12**, the Unisys Team will complete the migration of the Data PowerHouse agency application infrastructure from the Willow Oak Data Center to the Unisys Data Centers.

The Department of Revenue (DOR) Data Center Migration is also included in this wave to avoid over allocation of DOR resources during its busy personal tax season.

DLI was chosen for this wave due to its size and complexity. The planning and execution of this move will complete by **Month 16**. IBM will take the lead on this migration because of its knowledge and experience with the Department of Labor & Industry (DLI).

At the end of **Month 12**, the DPH contract will officially expire, and all relevant staff supporting the existing DPH and EDC workloads will have transitioned to the new contract.

Agency Application Workload Migration – PSP, DOH, DPW

In **Months 13 through 18,** the migration team will plan and relocate the applications within the Pennsylvania State Police (PSP) ,Department of Health (DOH) and Department of Public Welfare (DPW) Data Centers. Again, we took the time of year into account for the PSP Data Center migration. This wave is intended to begin planning in December of 2014 and complete in May 2015, which will avoid busy summer and year-end holiday months.

As each agency application migration completes, the Unisys Team will officially assume responsibility for providing managed services to the agency from the Unisys Data Center, and when operational in steady state, the Unisys Team will be accountable for the achievement of service level commitments.

As Unisys and the Commonwealth conduct detailed Migration Planning the order and combinations of data centers by wave may change as we continue to refine the planning and movement of the various agencies' infrastructure.

After transition and migration are complete, our fully populated steady state organization, processes and tools will be fully deployed and operating in the new environment. New capabilities of capacity on demand, self provisioning, an expanded Service Desk capability, and ITIL V3 processes will be available and in use by this time. Further details of the transition from the current state to the new state of the Commonwealth's compute environment can be found in the following sections; a thorough discussion of the topic is provided in **Schedule M.**

3.2 Detailed Task Plan

The Unisys Work Plan is focused on the accomplishment of transition, migration, and steady state. Transition begins with a series of projects, tasks, and activities. Transition includes the required steps to implement a managed services model. Our Team will work closely to design and implement the processes, tools, and organizational structures required to deliver continuous services to the Commonwealth and stakeholders. The work products from these services will support the PMO and the rest of the team during execution of ongoing operations. A key element of the transition is transfer and implementation of the Unisys standard management toolset. This includes BMC Remedy ITSM, (Nagios) for monitoring, and BMC's Atrium Discovery and Dependency Mapping (ADDM) tool.

Our team will work with the Commonwealth to identify a technology refresh plan for existing hardware in the EDC during the EDC transition. Unisys will work with the Commonwealth to address a continuance of hardware maintenance until the infrastructure is replaced.

The daily TPMO operations will be tightly aligned with the PMO operations. [redacted] and her executive leadership team will drive effective handoffs of transition projects to the steady state. For transition architecture strategy and support, the TPMO will interface directly with the Senior Enterprise Infrastructure Architect, [redacted] and his team of Agency Infrastructure Architects.

Figure 3-3 shows the proposed Level 2 schedule for the Commonwealth's Transition Program.

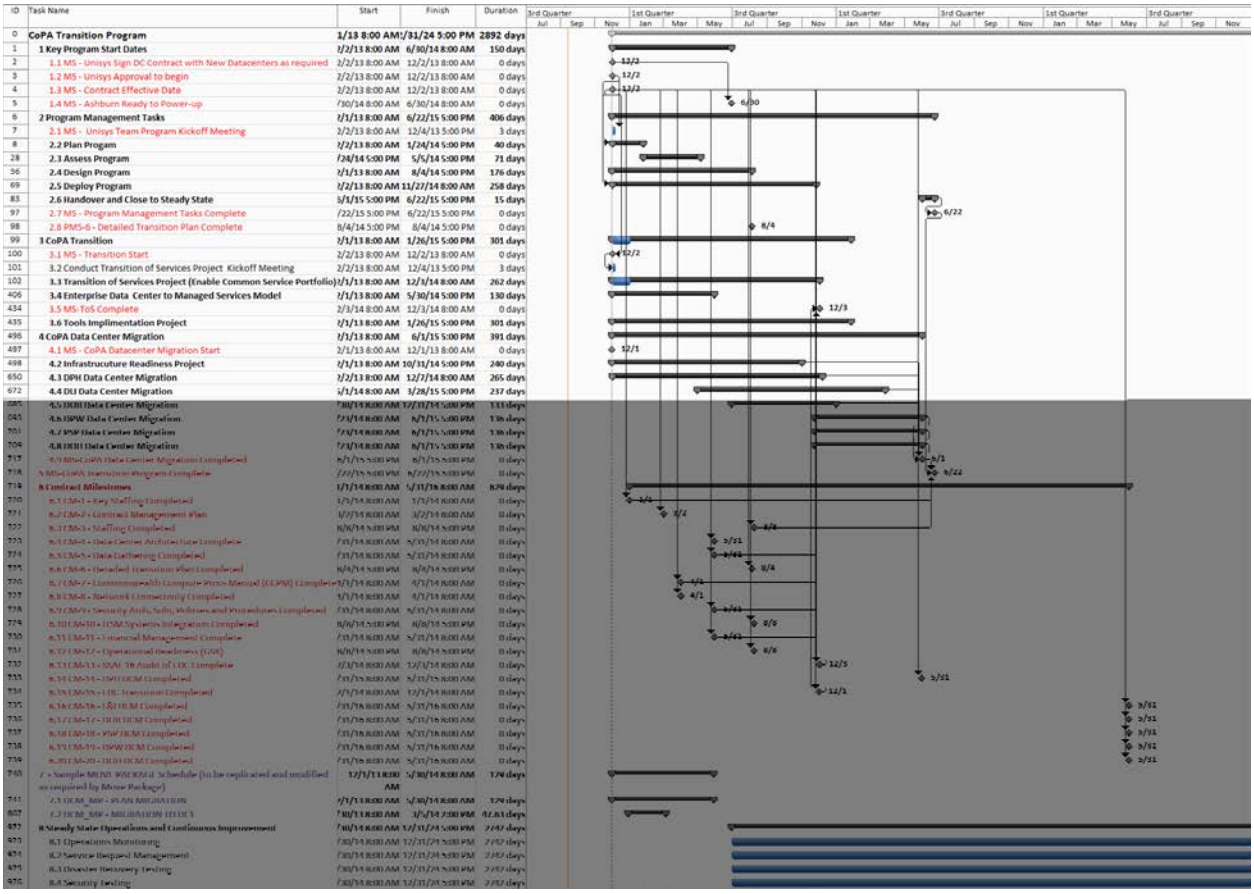

Figure 3-3. Level 2 Schedule of the Commonwealth's Transition Program

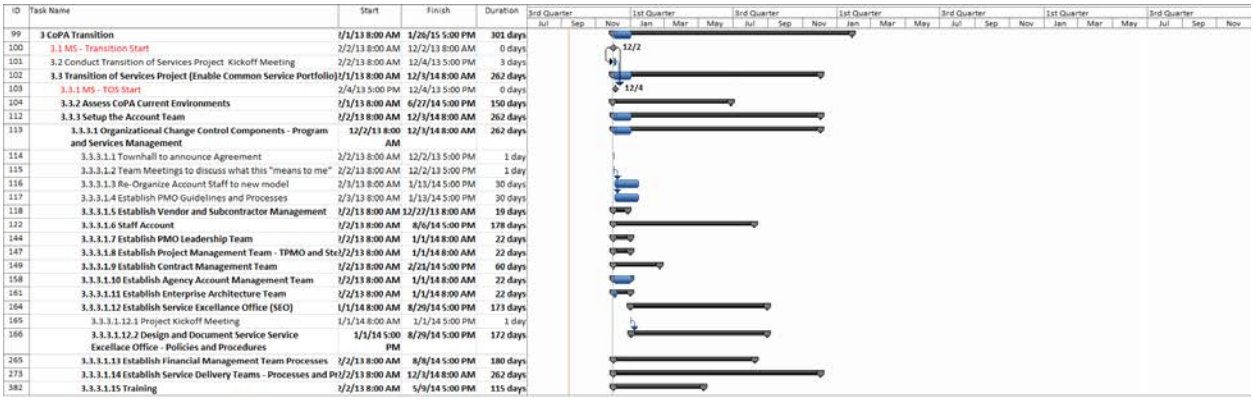
Our approach on transition timing was developed with the Commonwealth's goals in mind. Our initial focus is on transition of the EDC to a managed services model followed by data center migrations to move agency applications from the Willow Oak Data Center to a Unisys Data Center. These priorities will enable the Commonwealth to transition all obligations under the current DPH contract to the new data center compute services contract. In parallel, we are focusing on the accomplishment of key program deliverables within specified time frames. Remaining agency migrations will then take place between Months 6 and 18 with fewer constraints and priority than those for the DPH and EDC migrations.

3.2.1 Transition Services

Transition Services are the cornerstone of a successful relationship between the Commonwealth and the Unisys Team. In the Transition Services projects, tasks, and activities, the Commonwealth and the Unisys Team will work closely to design and implement the processes, tools, and organizations that are necessary to provide excellent services continuously to the Commonwealth and your stakeholders. The outputs from

these services will assist the PMO and the rest of the entire team in executing the program's ongoing operations.

Among the important outcomes from the Transition Services projects will be deliverables such as the Commonwealth Computing Procedures Manual (CCPM), which will provide both the Commonwealth and the Unisys Team with a defined set of expectations. Along with the CCPM, these projects will establish the Program Management Office and the tools and processes they need to successfully deliver services to the Commonwealth. These tools and processes will include those that are needed to effectively support the ITIL V3 framework, provide the Commonwealth transparency into the billing, and establish the Service Desk. **Figure 3-4** below shows the Transition phase of the project.



ID	Task Name	Start	Finish	Duration
99	3 CoPA Transition	1/1/13 8:00 AM	1/26/15 5:00 PM	301 days
100	3.1 MS - Transition Start	2/2/13 8:00 AM	12/2/13 8:00 AM	0 days
101	3.2 Conduct Transition of Services Project Kickoff Meeting	2/2/13 8:00 AM	12/4/13 5:00 PM	3 days
102	3.3 Transition of Services Project (Enable Common Service Portfolio)	1/1/13 8:00 AM	12/3/14 8:00 AM	262 days
103	3.3.1 MS - TOS Start	2/4/13 5:00 PM	12/4/13 5:00 PM	0 days
104	3.3.2 Assess CoPA Current Environments	1/1/13 8:00 AM	6/27/14 5:00 PM	150 days
112	3.3.3 Setup the Account Team	1/2/13 8:00 AM	12/3/14 8:00 AM	262 days
113	3.3.3.1 Organizational Change Control Components - Program and Services Management	12/2/13 8:00 AM	12/3/14 8:00 AM	262 days
114	3.3.3.1.1 Townhall to announce Agreement	2/2/13 8:00 AM	12/2/13 5:00 PM	1 day
115	3.3.3.1.2 Team Meetings to discuss what this "means to me"	2/2/13 8:00 AM	12/2/13 5:00 PM	1 day
116	3.3.3.1.3 Re-Organize Account Staff to new model	2/3/13 8:00 AM	1/13/14 5:00 PM	30 days
117	3.3.3.1.4 Establish PMO Guidelines and Processes	2/3/13 8:00 AM	1/13/14 5:00 PM	30 days
118	3.3.3.1.5 Establish Vendor and Subcontractor Management	1/2/13 8:00 AM	12/27/13 8:00 AM	19 days
122	3.3.3.1.6 Staff Account	1/2/13 8:00 AM	8/6/14 5:00 PM	178 days
144	3.3.3.1.7 Establish PMO Leadership Team	1/2/13 8:00 AM	1/1/14 8:00 AM	22 days

Figure 3-4. Initial Organization Set Up and EDC Transition

3.2.1.1 Account Organization

Unisys understands we are only as strong as our team. Early in the transition process, we will focus on training existing staff on changes brought on by the new contract; acquiring outstanding supplemental resources to deliver services; and providing the tools, processes, and work environment to enable them to be successful.

The activities for Account Organization will provide the framework to establish an effective Program Management Office.

3.2.1.1.1 Establish PMO Guidelines and Processes

Establishing the PMO guidelines and processes will include developing the interim Contract Management procedures as necessary, developing the vendor and Subcontractor Management policies and procedures, and modifying the existing Billing processes.

3.2.1.1.2 Organize Account Personnel

Organize Account Personnel will include tasks supporting talent acquisition and staff training, providing work space, and implementing standard work processes.

The Unisys Team identified individuals who will fill key positions as required by the Commonwealth. During these activities, Unisys will move individuals to these key roles by identifying and training them to assume the new roles. We will also identify other roles that are required early to lead organizations through the transition period.

Staffing plans for the technical and support teams will be reviewed and revised during the PMO's formation, including the PMO leadership team and the Project Management team, including the Transition Project Management team, the Enterprise Architecture team, and the Service Excellence team. Unisys will develop this plan to assign resources to the appropriate roles during the transition. We will engage Small Diverse Business partners to supply services and staffing requiring the establishment of processes for interaction among partners.

Contract, role, and industry-specific training will be planned and provided as appropriate to the staff as they move to their roles. This training includes CCPM, billing, Advanced ITIL V3, PMP, ITIL Foundation, and others as necessary. Unisys will partner with Harrisburg University to coordinate and deliver training.

Establishment of the Service Excellence Office will enable and drive the reformation of existing ITIL V3 processes, the drafting of the Commonwealth Compute Procedures Manual, and the implementation of quality processes and policies.

3.2.1.2 Enterprise Data Center (EDC) to Managed Services Model

The EDC will transition to a Managed Services model. Key to this project is knowledge transfer and implementation of the Unisys standard management toolset. Unisys is uncommonly positioned to enable this transition quickly, using our current team that supports the EDC. This team is very knowledgeable of the Commonwealth's current environment, which will enable an expeditious knowledge transfer process. This project will depend on the implementation and customization of the BMC Remedy ITSM Toolset, Nagios for monitoring, and BMC's Atrium Discovery and Dependency Mapping (ADDM) tool. During the EDC's transition, Unisys will work with the Commonwealth to identify a technology refresh plan for existing hardware in the EDC. Until the infrastructure is replaced, Unisys will work with the Commonwealth to include continuance of hardware maintenance.

3.2.1.3 Tools Implementation

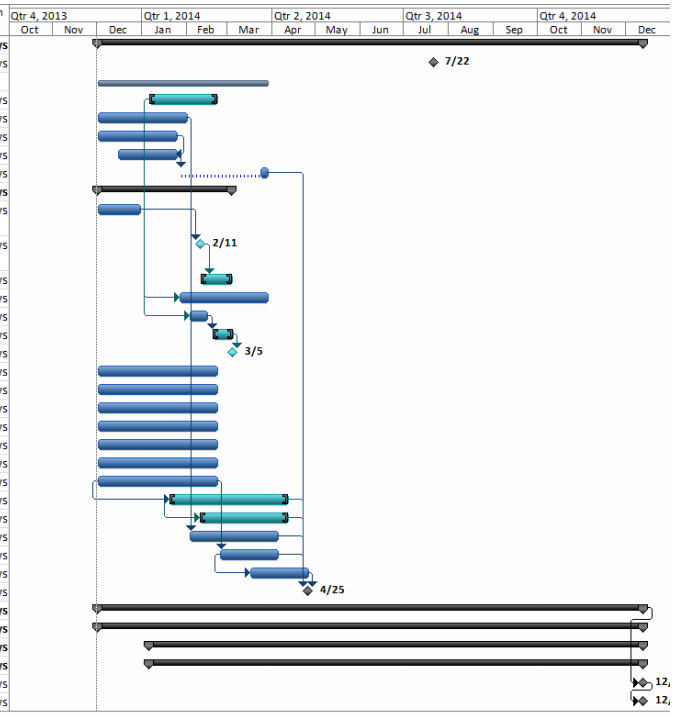

Figure 3-5. Tools Implementation Project Activities and Timeline

Unisys developed a technical architecture to support a multi-data center environment, network and security, and data center support architecture. The tools implementation project (**Figure 3–5**) is the precursor and basis for many other activities in the transition of services. Unisys will implement tools such as BMC's Remedy Suite for ITSM, PMG for Services Catalog and billing data, SolarWinds and Nagios for monitoring, BladeLogic for provisioning, and PureShare for dashboards along with other tools to form the architecture, which will be wrapped by processes and performed by Unisys, IBM, and Deloitte. The PMG Services Catalog is unique in the industry because it provides an active service catalog and workflow that can begin at the customer's request. Much of the industry focuses the service catalog on self-provisioning and other IT tasks. The Real-time Dashboard is also unique because it provides an active CIO dashboard that can be set up with much of the report data while also sharing the data at the right level of detail for a variety of management levels and uses.

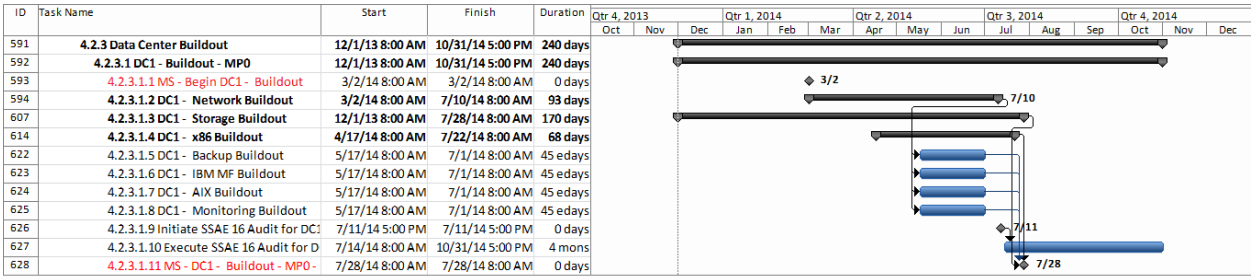
3.2.2 Application Workload Migrations

At Unisys, we believe the term Data Center Migration is a misnomer. The focus is and should be on the applications. The processes the team will follow require much input and participation from the Commonwealth application owners. Automated tools such as ADDM alongside traditional tools are used to minimize the dependency on customer input and

maximize accuracy. Each migration project will last about 3 months. On the project, technical teams and applications teams will work closely to define the exact scope, plan tasks, identify risks, develop solutions, and identify optimum times for outages that will minimize the impact on the end users. In the 3-month project, much of the effort is spent on planning, verifying, and re-planning, all with the goal of a successful migration.

But before any applications can be moved, the receiving data center must be made operationally ready. This includes implementing the infrastructure components required to meet or exceed the service levels required.

3.2.2.1 Operational Readiness



ID	Task Name	Start	Finish	Duration
591	**4.2.3 Data Center Buildout**	**12/1/13 8:00 AM**	**10/31/14 5:00 PM**	**240 days**

628	4.2.3.1.11 MS - DC1 - Buildout - MP0 -	7/28/14 8:00 AM	7/28/14 8:00 AM	0 days

Figure 3-6. Operational Readiness Timeline

To achieve operational readiness, the data center must be prepared by connecting the data center to COPANET and have a local area network designed, built, tested and operational, including data security devices such as firewalls and intrusion detection and prevention. Tools such as Remedy by BMC must be enhanced to support the expanded scope to support ITIL V3 processes for incident, problem, change, release, asset, configuration, and service level management. Supporting tools such as PMG for billing and service catalog, ADDM for automated discovery, BladeLogic for provisioning and automated patching, PureShare for dashboards, and Nagios for monitoring must also be operational. Infrastructure such as storage, virtual servers, physical servers, monitoring, and backup must be in place. Operational Readiness activities and timeline are shown in **Figure 3–6.**

Figure 3-7. Agency Application Workload Phased Migrations

The application workloads supported in the agency data centers are planned to be moved in three phases, as shown in **Figure 3–7.** The first phase is focused on the Data PowerHouse Data Center, the Department of Labor & Industry, and Department of Revenue. Application workloads supported in the Pennsylvania State Police, Department of Public Welfare and Department of Health data centers will move last in the final phase. Unisys determined the order of agency migrations based on lower periods of activities, but also recognize that due to in-flight projects and other activities, these priorities may change. Each of these agency data centers will be divided into multiple projects based on size, complexity, and number of applications. Each project includes a similar set of tasks including documenting the application scope and supporting infrastructure, determining the move strategy for each component, such as "over the wire" or "lift-n-shift", and order of application migrations. This activity is followed by detailed planning; identification of hardware in the receiving data center; remediation of hardcoded IP addresses in the application; test plan creation; data transfer, which will be planned to avoid peak work periods, and finally testing.

The Unisys plan includes over-the-wire transfer of data and when appropriate, operating systems and applications. This approach will minimize risk that may occur during reinstallation activities by using the current operating system and application setting and minimize outages by synchronizing periodically throughout the weeks leading to the migrating events, and can be more easily scheduled around peak work times for the agencies.

Each plan will include notifications to Commonwealth stakeholders 30, 7, and 2 days before events. Application owners will be expected to verify each application successfully migrated through appropriate testing activity.

2.0 Management Summary

2. MANAGEMENT SUMMARY 2-3

2.1 THE PATH FORWARD 2-3
2.2 THE UNISYS TEAM 2-4
2.3 OUR EXECUTIVE LEADERSHIP TEAM 2-7
2.4 UNISYS SOLUTION 2-14
2.4.1 Unisys Tenets 2-14
2.5 THE PROPOSED SOLUTION 2-14

"As a Pennsylvania-based corporation, Unisys and many of our employees depend on the critical services the Commonwealth will provide through this initiative. That is added incentive for our team to succeed and meet your expectations. As a demonstration of our commitment to the Commonwealth I will personally serve as the executive sponsor to ensure the highest levels of service and satisfaction."

Commonwealth Executive Sponsor
Chairman and CEO
Unisys

This page intentionally left blank.

2. Management Summary

RFP	*Requirement*
II-2	*Management Summary. Include a narrative description of the proposed effort and a list of the items to be delivered or services to be provided.*

This RFP is much broader and far more significant than consolidating infrastructure. The essence of this opportunity is optimized "compute services," supporting the Commonwealth's applications by providing the right service in the right capacity when it is needed and in a way that is cost effective, transparent, and secure. When the transition is complete and the benefits are realized, the industry will recognize this initiative for what it is—a paradigm shift in service delivery for state government.

2.1 The Path Forward

This engagement is an innovation effort to transform information technology (IT) at the Commonwealth to a robust yet flexible offering that supports current and future capacity and service levels that evolve, expand, and contract with the flow of changes in the Commonwealth's business and operating environment. No longer is it acceptable to carry fixed costs that burden the Commonwealth financially when changes in the economy, government funding, or government needs occur. IT at the Commonwealth must be an enabler of these changes to optimize your operating environment going forward.

The Commonwealth is seeking a fundamental shift in the way it acquires and operates IT by implementing a fully consumptive, secure private cloud services utility model. The model is based on an IT Service Management platform that leverages ITIL V3 best practices and Lean Six Sigma methods to create an "optimization framework" for an enterprise-centric IT infrastructure.

Ultimately, the Commonwealth and its chosen service provider will move the current Commonwealth applications to an Infrastructure as a Service (IaaS) operating model in which agencies can scale transactions and compute capacity based on need, therefore optimizing the cost of supporting these applications. **That is much different from today's contract which features fixed pricing for most services, limited transparency, and little flexibility to scale according to changing needs. The new model will provide the opportunity to lower costs of service and the means to tailor services to specific needs. As your current service provider, we welcome these changes.**

2.2 The Unisys Team

To be successful and to mitigate risk to the greatest degree possible, this innovative effort must start with a world-class team delivering specific and proven experience with the Commonwealth of Pennsylvania. Unisys, as the prime contractor, will be totally responsible for successfully delivering the compute services in this RFP's scope. As a Pennsylvania-based company with approximately 23,000 employees worldwide, Unisys has a long and successful record of accomplishment of working with you and other prestigious organizations on similar innovative efforts.

Innovation - Flexible Pricing Models

Unisys Experience with:

- *Defense Information Systems Agency (DISA)*
- *Internal Revenue Service (IRS)*
- *City of Minneapolis*
- *American Red Cross*
- *California State University System(CSU)*

For this engagement, we will bring forward many local IT experts—currently more than 150—who support the Commonwealth today and we build on that core group with new staff and skills to actively pursue robust new programs for continuous innovation and improvement. We again have partnered with **IBM** and others you know but also have engaged several new partners, including **Deloitte Consulting** (Deloitte). All have been carefully selected for their unique skills, knowledge or resources to enable success of this engagement, to deliver on time and on budget, and to meet the Commonwealth's high expectations for flexibility, service quality, and client satisfaction. We are blending resources most experienced with your applications and systems with new skills and new ideas to drive ongoing innovation and efficiencies.

Stability and reliability of your compute services environment will be our top priority. We estimate that our team – The Unisys Team – currently manages approximately 75 percent of your in-scope compute capacity. That level of knowledge and experience is a key differentiator between the Unisys Team and others that claim they have the credentials necessary to transition the Commonwealth's most important systems.

IBM and Deloitte are exclusive partners to the Unisys Team. Both are premier companies and experienced providers of services and technology to the Commonwealth. As illustrated in **Figure 2-1,** we considered many factors when we selected IBM and Deloitte for our core, "best of breed" team to deliver compute services to the Commonwealth.

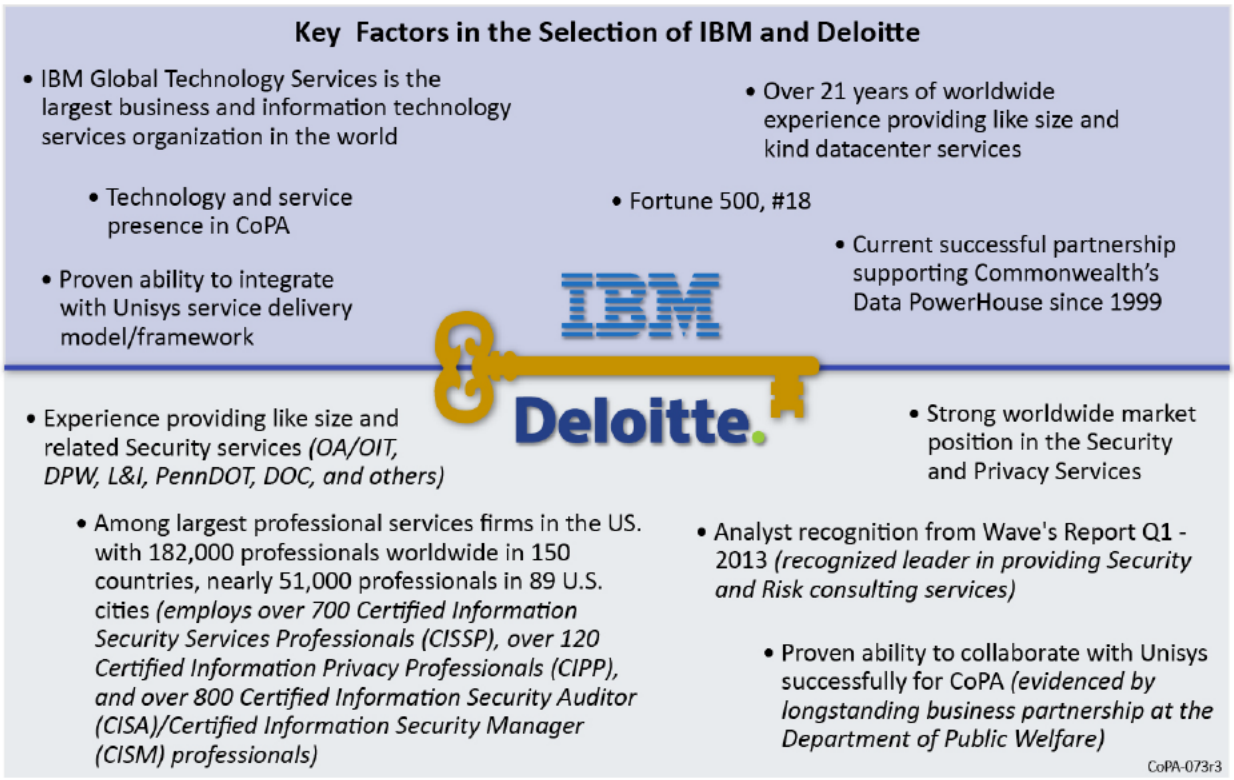

Figure 2-1. Key Factors

Figure 2-2 highlights the entire Unisys Team and each team member's role. Recognizing the value of the Commonwealth's approach with its own staff augmentation contract, Unisys assembled a large pool of Small Diverse Businesses (SDBs) to improve our ability to source the best technical resources at the best value while helping the local, small and diverse business community. Those SDB firms include **American Personnel Managers, Acclaim Systems, Credo Technology Solutions, Domino Technologies, e & e IT Consulting Systems, Info-Matrix Corporation, Innovative Business Concepts,** and **PCN.** We also selected **Pierson Computing Connection Incorporated** to provide certain technology components of our solution, and **Latus Commercial Realty** to provide commercial real estate services. In addition, we have added **Harrisburg University of Science and Technology** to provide educational and training support.

With added focus on innovation and emerging technologies, our team also includes BMC, Cisco, EMC, Microsoft, PMG, PureShare, Juniper, and VMware. These companies are on the leading edge of new technologies that can transform the way we operate and in turn deliver significant efficiencies. Section 4 of our proposal provides a detailed perspective of Unisys qualifications and additional details on the members of our team.

Figure 2-2. The Unisys Team

This consortium is world class. It includes the two primary inventors and suppliers—Unisys and IBM—of the technology infrastructure and system software running nearly all of the Commonwealth's business application systems. Therefore, the Unisys Team will have a direct line to software developers and technical support experts worldwide for issues that require around-the-clock problem solving.

We know success revolves around the Commonwealth's business application systems and keeping them fully operational. Unisys and IBM together offer more than 100 years of working knowledge of the Commonwealth's business application systems. Further, we augmented our team with Deloitte, the largest, most experienced applications integrator, developer, and application maintenance provider in support of the Commonwealth's business application systems. Deloitte also provides a variety of mission-critical IT

Committed to the Commonwealth

Local Knowledgeable Resources

*In **Pennsylvania**, Unisys, IBM, and Deloitte Consulting **employ 6,962 people** with more than **900 people** in the **metropolitan Harrisburg** area.*

security services to the Commonwealth. Our team will leverage Deloitte's application knowledge and security capabilities extensively, further promoting success overall.

The Unisys Team has unsurpassed collective knowledge of your applications, business, history, nuances, people, policies, processes and systems. The Unisys Team has an unmatched – unrivaled record of accomplishment in the managed infrastructure services, security, and application services space for the Commonwealth. For example:

- We have consistently met high levels of availability and met or exceeded service level requirements
  - Specifically:
    - **Achieved overall 99.9915 percent availability** in the DPH since 2008
    - **Achieved greater than 99 percent of all SLAs** since 2008
- We have had no security breaches in the DPH
- We successfully completed a number of innovative initiatives, including:
  - Implementation of the enterprise shared infrastructure
  - Inclusion of tiered service levels and rate card
  - Piloting of self-provisioning
  - Near 100 percent ITIL V3 Foundation certification of all Unisys DPH and [redacted] delivery staff

Bottom line—we have assembled a team with by far the most experience and knowledge specific to the Commonwealth supplemented by a global network of experts to assist, as necessary. This team comprises experienced staff—many of whom you already know—starting with our executive leadership.

2.3 Our Executive Leadership Team

Because of this engagement's importance and our commitment to the Commonwealth of Pennsylvania, [redacted], Unisys Chairman and CEO, has chosen to serve as Executive Sponsor and will personally ensure our company's complete commitment to its success.

In addition to [redacted] role as Executive Sponsor, Unisys established an Executive Leadership Committee to support the efforts of our Harrisburg-based service delivery leadership team. This committee, which consists of senior business and service delivery executives from Unisys, IBM and Deloitte, was established to provide direct visibility into our respective organizations to

"We have an excellent service delivery team assigned to this initiative. [redacted] are some of the very best in service delivery. I trust their judgment and have empowered them to make the necessary decisions locally to keep the project on schedule and meet your expectations. Their team is complemented by a Unisys Executive Leadership Committee focused on providing whatever additional corporate resources and support are necessary to succeed."

—[redacted]
Commonwealth Executive Sponsor
Chairman & CEO

enable us to meet our commitments to the Commonwealth during transition and steady state operations. This committee also will be tasked to resolve issues that may arise but cannot be resolved locally. The committee will provide executive leadership, support, and direction throughout the engagement's entire life and will be a vital component of the transition and steady state governance model. **Figure 2-3** identifies the members of our Executive Leadership Committee.

Figure 2-3. Unisys Executive Leadership Committee

Our Service Delivery Team

The Harrisburg-based Unisys leadership team, depicted in **Figure 2-4,** will be led by [redacted]. As Engagement Executive, [redacted] has worked closely with key Commonwealth executives to manage many aspects of the current Data PowerHouse (DPH) Program over the past five years. On joining Unisys, [redacted] oversaw the successful transition to shared services in 2008. This transformed service delivery and saved the Commonwealth $240 million.

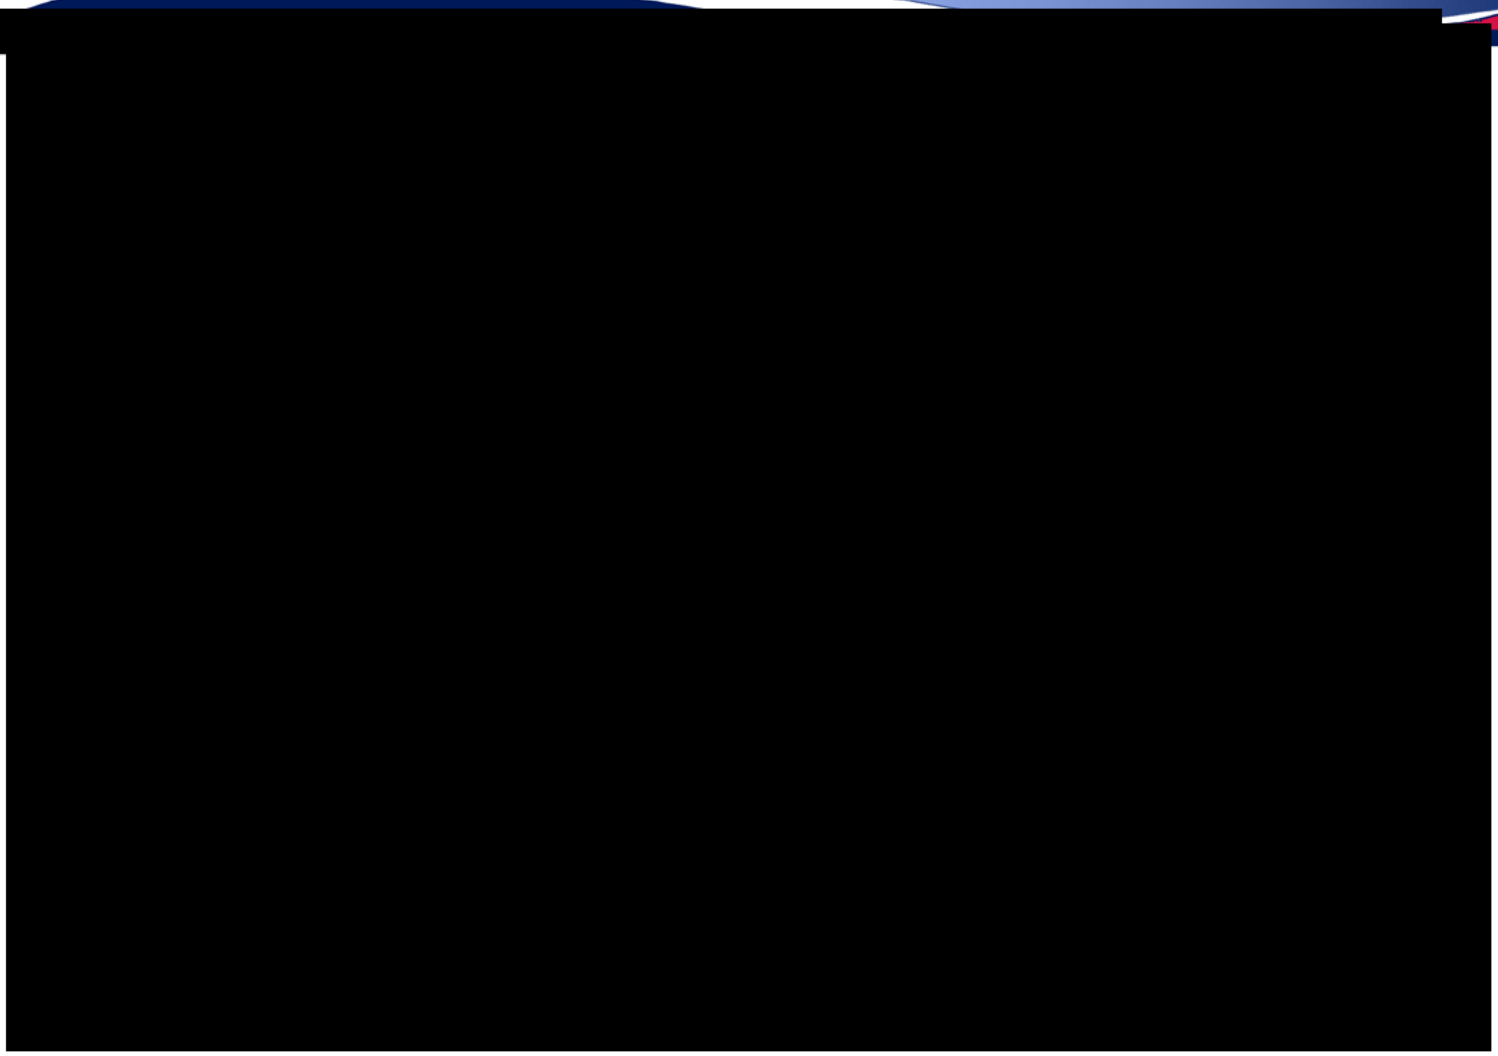

Figure 2-4. Unisys Harrisburg Service Delivery Team

During her tenure with Unisys, [redacted] spearheaded a number of innovative technology solutions, including server virtualization that reduced costs for the Commonwealth. She also fostered the evolution of the DPH architecture to new technology concepts, including disk-based backup solutions and flexible service offerings. [redacted] has demonstrated great sensitivity when it comes to customer satisfaction by implementing a number of in-depth survey processes designed to take the customer's pulse at many different levels on all aspects of service. She has held her team accountable to document issues and follow-up actions in collaboration with the agencies. These activities improved customer satisfaction significantly. [redacted] Certifications – ITIL V3 Foundation.

[redacted] was presented with the 2012 Outstanding Leadership and Innovation ("Ollie") award from former Commonwealth CIO George White for his efforts at OA-Information Technology (OIT) to support the Pennsylvania State Police. The "Ollie" award is sponsored by the Office of Administration's Office for Information Technology and Government Technology magazine.

[redacted] will serve the Commonwealth as lead Agency Account Manager. [redacted] is a 23-year Unisys employee who has worked at the Commonwealth of Pennsylvania since 2002 in a variety of Project Management and Client Services Management roles supporting numerous Commonwealth organizations. Since 2005, he has worked on site at the Commonwealth Technology Center in very close collaboration with the Commonwealth CTO, CISO, Client Management, Enterprise Data Center, Enterprise Networking and Security, Enterprise Services, GIS, PMO, and many agencies. Certifications—ITIL V3 Foundation and PMP.

[redacted] will serve the Commonwealth as the Service Delivery Executive (Program Manager). [redacted] brings 14 years of experience leading large Service Delivery organizations, most recently supporting outsourced engagements for Computer Sciences Corporation (CSC). [redacted] will leverage his experience with leading large-scale data center delivery teams, including a team at Textron, where he directed the consolidation of 10 sites with multiple mainframes and more than 800 open systems servers and then managed an ongoing Service Delivery team of 500 employees. Certification—ITIL V3 Foundation.

[redacted] will serve the Commonwealth as PMO Transition Manager. [redacted] brings 27 years of IT delivery experience working for large IT outsourcing firms before joining Unisys at the beginning of this year. As a Transition Management leader working for Dell Services (formerly Perot Systems), [redacted] led multiple large-scale data center transitions, migrations, and system upgrades during his 5-year tenure. [redacted] managed Perot Systems' Healthcare Business Unit portfolio of transitions and data center migrations. Certifications—ITIL V3 Foundation and PMP.

[redacted] will serve the Commonwealth as the Senior Enterprise Architect under the new contract. He has 16 years of IT industry experience working for IBM in several architect roles before joining Unisys in 2011 as the Lead Client Architect managing the Unisys North American Client Architect team, which includes oversight of the Client Architects supporting the Commonwealth. While working for IBM, [redacted] served as Transformation Integration Architect, leading a large team of architects to develop technical components to build a multitenant data center to support the State of Georgia's strategic consolidation plans. Certifications—ITIL V3 Foundation, Open Group Master IT Architect, and IBM IT Architect Certifications.

[redacted] will serve the Commonwealth as the Chief Security Manager. [redacted] brings more than 38 years of technical and management experience, working with a number of federal and state government agencies, including the Pennsylvania State Police (PSP), for which he managed security for the new Commonwealth Law Enforcement Assistance Network (CLEAN). He also collaborated with JNET to provide access to CLEAN by JNET users without requiring additional authentication and assisted Office of Administration/Office for Information Technology (OA/OIT) leadership with creating Security ITBs. [redacted] efforts enabled deployment of the new Megan's Law application to its full user base much faster than would have been achievable otherwise, enabling PSP to meet its legislatively mandated deadline. Certifications—CISSP (Certified Information Systems Professional) and SANS GSEC (Global Information Assurance Certification Security Essentials Certification).

[redacted] will serve the Commonwealth as the Service Excellence Officer. [redacted] is currently the Operations Director for Unisys in North America responsible for all Unisys customers; [redacted] will be 100 percent dedicated to the Commonwealth. A 32-year employee with Unisys, [redacted] brings considerable successful experience across our client base. In his current role, he led a number of key initiatives under our ITIL V3 and Lean Six Sigma-based Continual Service Improvement Program. [redacted] led several service improvement initiatives for the Commonwealth, including multiple Kaizen Process Optimization workshops with the Unisys Team supporting the Commonwealth of Pennsylvania. One of these workshops laid the groundwork to transition the DPH contract from an antiquated Remedy system to the current ITSM 7.6 Remedy system. Certifications—Six Sigma Lean Black Belt and ITIL V3 Foundation.

Section 5 of our proposal provides a detailed description of the entire Unisys staffing plan, including other key personnel on the Unisys Team.

Our team is organized around your needs and largely based in Harrisburg -- close to you. That will help facilitate more effective coordination and communications. **Figure 2-5** is a high-level description of the functions of each of our seven core teams.

Figure 2-5. Seven Functional Teams

To illustrate the interaction between our team and the Commonwealth team, we present **Figure 2-6.** It is a high-level graphical depiction of the coordination and flow of communications between our respective organizations. Having significant experience with the Commonwealth, Unisys understands that it is not as simple as one Unisys point of contact to a single Commonwealth counterpart. The Commonwealth organization is multidimensional; each agency has its own management structure and IT support team, and the OA manages the contract on behalf of the agencies.

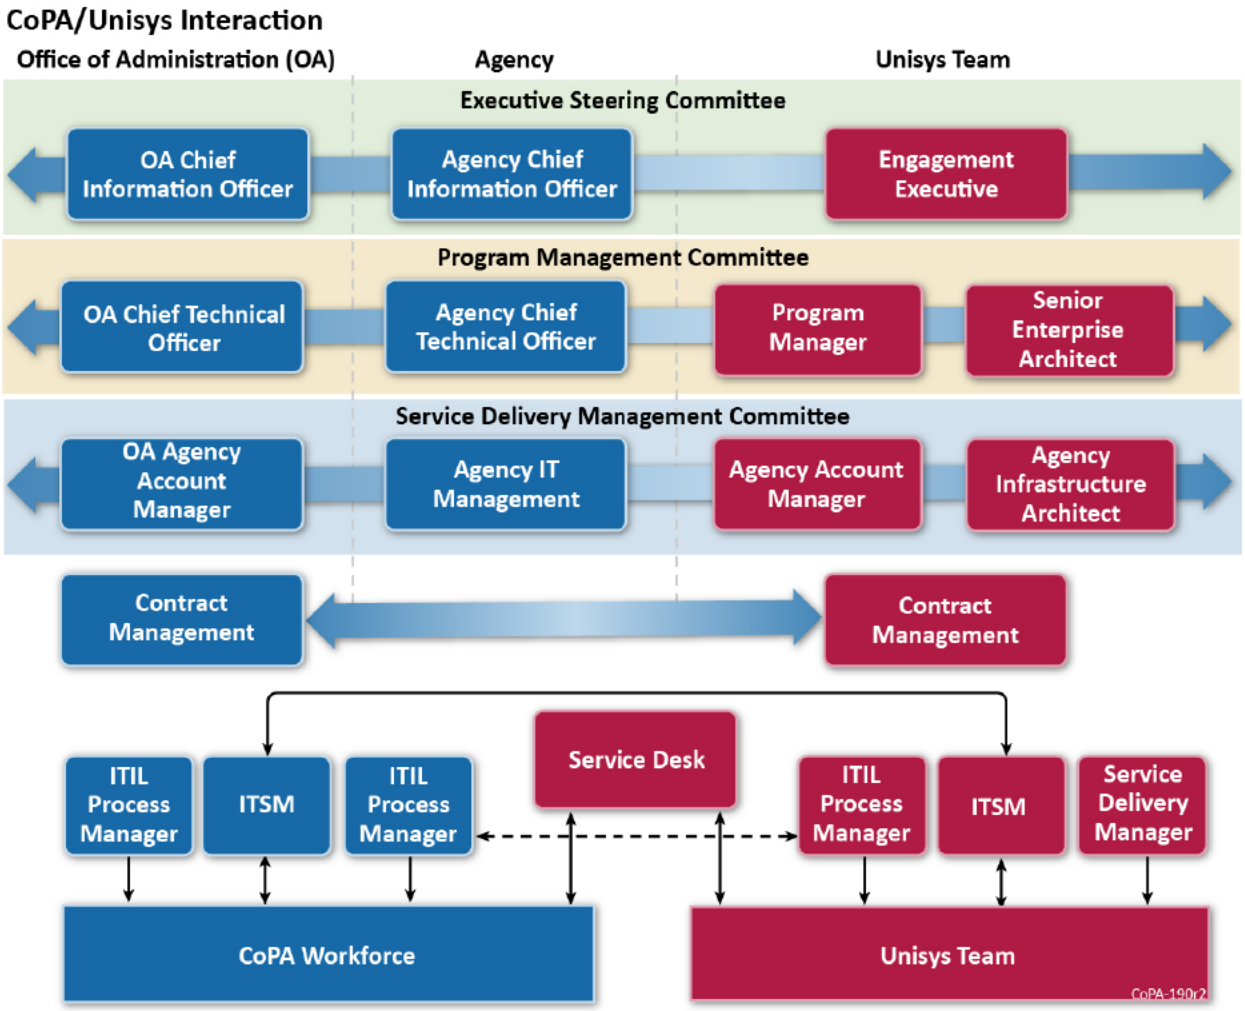

Figure 2-6. Commonwealth and Unisys Communication and Interaction Flow

As part of our deliverables, Unisys will develop, with you, a comprehensive stakeholder communications plan involving our leadership team in addition to our project and service delivery staff. That will enable those affected but not included above to have the necessary information on each stage of the transition.

Now that you have been introduced to the Unisys Team and our key leadership staff, the sections that follow highlight the solution strategy we followed to meet the Commonwealth's requirements as well as an overview of our proposed solution.

2.4 Unisys Solution

2.4.1 Unisys Tenets

Given our knowledge of the Commonwealth, and a detailed review of the RFP's requirements, we carefully selected our consortium partners, and designed a solution based on the following tenets:

- **"Do no harm" –** Every aspect of the engagement must be performed without any unplanned interruption of services
- **"Align compute services with the business" –** Our proposed solution must provide a transparent and flexible compute services environment aligned with the business needs of the agencies
- **"Achieve success together" –** Work closely with Commonwealth staff, understand and address their individual issues, and provide needed training to facilitate knowledge transfer and adoption of best practices
- **"Focus on moving software applications rather than moving hardware" –** This is about moving software applications that support the most important functions of Pennsylvania state government
- **"Managing change is key to success" –** We must implement strong change management practices, a solid training plan, and effective communications when transforming the Commonwealth to its future model
- **"Recognize and respect differences among individual agencies" –** We must recognize that agencies will have their autonomy to execute their business goals while assisting the Office of Administration with achieving its enterprise objectives
- **"Innovation is a must" –** In all aspects of our solution, we must look ahead…not back
- **"Security is paramount" –** We must encapsulate everything we do with a strong security framework that protects all Commonwealth data and IT resources.

2.5 The Proposed Solution

Our proposed solution is designed to eliminate any application latency risks to the Commonwealth's applications while providing an ongoing cost-effective solution to meet the Commonwealth's security, operational, and financial objectives. To deliver the required services and meet the RFP's requirements, we carefully architected two key components: the **Data Center Infrastructures** that will underpin the services delivered through a **Component-based Operating Model,** both of which are described below.

Data Center Infrastructures

As depicted in **Figure 2-7,** Unisys will provide a network of Tier 3 data centers interconnected to provide the optimum data center environment. This network improves resiliency and largely mitigates any application latency issues with the move of the DPH

and other agency data centers to the new compute environment. In addition to the [redacted] our data center approach will be to leverage two additional compute facilities in [redacted]. A contributing reason we chose the [redacted] facility as a primary production site is its location, which is within a [redacted] an important metric relative to the reduction of any potential latency issues with moving the Commonwealth's applications to a new location. Also, there is a robust telecommunications infrastructure in the [redacted] area to locate the workloads that currently exist in the DPH. Remaining agency data centers will be located in either the [redacted] or [redacted] facilities. During data gathering, we will study network latency and other factors with the productions applications in the agency data centers to determine the best location for the workloads based on potential latency issues that need to be mitigated. An important consideration in the selection of [redacted] as a data center is to provide Capacity on Demand services and geographical separation for disaster recovery workloads to better protect the Commonwealth in the event of a natural disaster occurring on the East Coast. Today, Commonwealth disaster recovery workloads are greater than 50 miles apart, but they are in the same geographical zone which poses a risk to the Commonwealth. [redacted] provides the ability to locate disaster workloads in the [redacted] or vice versa if geological separation is desired.

We plan to leave the [redacted] "as is" during migration to mitigate risk and to focus on other transition activities. Unisys will establish the IT Service Management (ITSM) infrastructure for the Commonwealth in the [redacted] initially and then a redundant copy in [redacted] to provide the compute services outlined in this proposal and to accommodate existing applications.

Unisys will deploy a network-operating environment that is fully fault tolerant and provides the scalability and flexibility needed going forward while reducing network-operating costs. Furthermore, this network will be integrated into COPANET to interconnect the compute facilities in **Figure 2-7**.

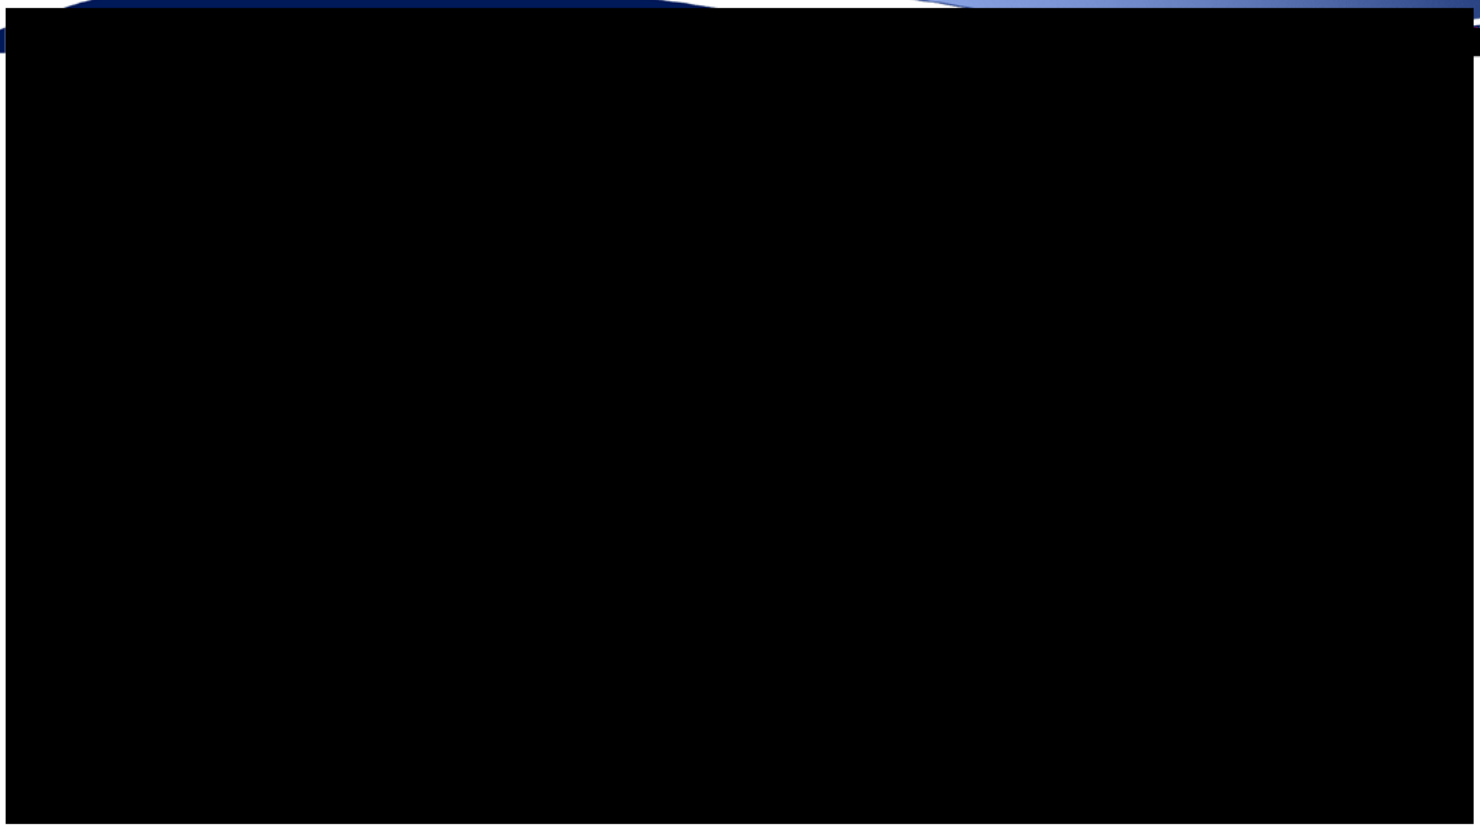

Figure 2-7. Proposed Data Center Architecture

Unisys also will deliver a modern disaster recovery plan and framework that leverages the use of Capacity-on-Demand computing to have the right amount of compute resources when needed eliminating the expense of having dedicated systems sitting idle. The Unisys approach to disaster recovery is based on systems as workloads that can be located in any facility that in turn can leverage capacity-on-demand models to make disaster recovery cost-effective moving forward.

While our compute centers are geographically dispersed to provide the maximum protection (risk reduction), flexibility and cost efficiencies, their operations will be integrated through the Component Based Operating Model depicted in **Figure 2-9**. The primary support center that will operate this model will be in the Harrisburg area, thereby providing not only convenient access by Commonwealth staff but also the opportunity to base the vast majority of our delivery and support team in Harrisburg avoiding the typical phone support only model provided by others.

Common Infrastructure Architecture

Within each of the data centers is a common infrastructure architecture to support the Managed Hosting and Capacity-on-Demand Services. It is important to note there is no difference in the infrastructure platform to support Managed Hosting or Capacity-on-Demand thereby simplifying the management and provisioning efforts which enables the

ability to optimize and scale of workloads, leading to cost efficiencies. The components that make up the infrastructure architecture are depicted in **Figure 2-8** below.

Figure 2-8. Common Infrastructure Architecture

Component Based Operating Model

To achieve the RFP's requirements, Unisys developed a component-based operating model as depicted in **Figure 2-9.** This model encompasses the requirements in the RFP and reflects a logical view that the Commonwealth can easily visualize. This compute services model illustrates the main deliverables and services and will sit on top of all compute data center facilities in **Figure 2-7** that Unisys provides for Commonwealth workloads, whether production or disaster recovery based.

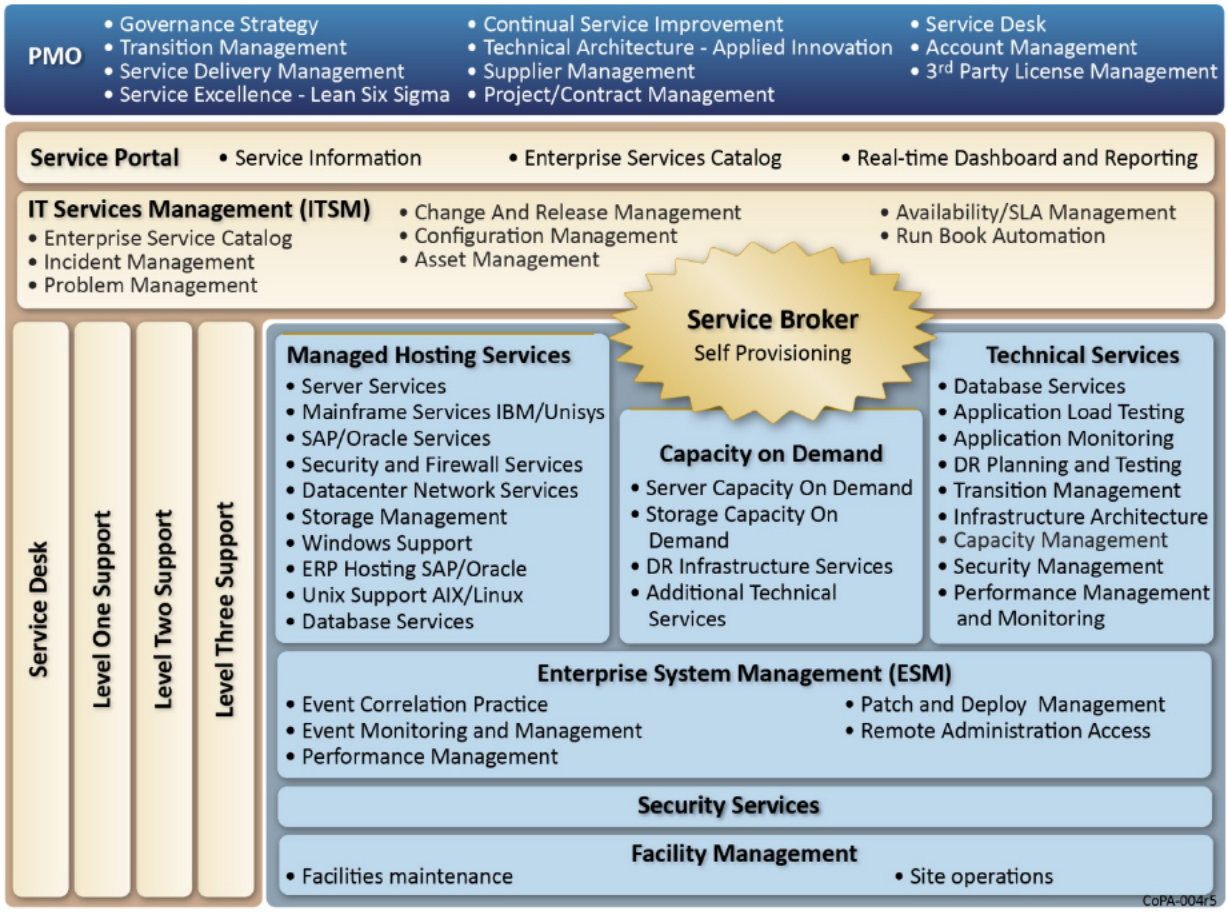

Figure 2-9. Component Based Operating Model

The Component Based Operating Model is broken down into the following components to support the requirements within the RFP:

1. **Program Management Office –** Establish a local and dedicated Program Management and Service Excellence Office that provides a focus on governance, a drive toward continued value, and cost savings by deploying Lean Six Sigma practices based on studies of cycle time and defect analysis from events that are extracted from the IT Service Management platform. By removing cycle time waste and defects of the operating environment, Unisys will provide the Commonwealth with continued cost savings and a higher quality IT compute environment. This same office is responsible for the ongoing governance of driving continuous service improvement and innovation.

2. **Service Portal –** Create an enterprise services portal, enterprise services catalog, and real-time dashboard to provide a single interface to all agencies to interact, provision, and be able to determine the performance of the IT operating environment in near real time. Each agency will have the ability to develop its own

personality with its service portal. Agencies will be able to configure their portals to develop their own "look and feel," determine the services they want to publish or offer, provision, and report on, in near real time, while still having access to the overall view of the enterprise as appropriate.

3. **IT Service Management –** Deliver an enterprise IT Service Management platform based on ITIL V3 best practices and Lean Six Sigma methods that drive the maturity of the IT operating model with a goal of achieving an efficiency gain of 5 percent year over year. Of significant importance is the development of an enterprise wide Configuration Management Database (CMDB) that defines the service that IT delivers to the Commonwealth. The creation of services in the CMDB will allow the Commonwealth to proactively determine business impact by determining a fault before it occurs and allowing maximum use of IT resources to reduce ongoing cost. Each agency will have its own instance in the service management environment to provide operating autonomy. Unisys will provide a federated service management environment to the OA so it has the overall view of the total IT operating environment at the Commonwealth. The Commonwealth can be comfortable knowing that Unisys supports a multitude of IT Service Management Systems, including BMC Remedy and ServiceNow. Our Component-based Operating model can be enabled with any one of the named IT Service Management Platforms.

4. **Managed Hosting Services and Capacity on Demand –** Enable an adaptive, flexible, and secure hardware compute environment that is based on a consumptive utility model with a "no volume commit" attribute that provides the agencies with the autonomy to perform their IT functions and meet their business requirements. In the Unisys compute model, there is fundamentally no difference between Managed Hosting Services and Capacity on Demand because they are served from the same hardware platforms and managed by the same ITSM management platform. As an innovation effort and to make sure the Commonwealth is aligned with market trends, the Unisys Team includes optional Virtual Private Cloud offerings from Microsoft and VMware in the Catalog of Services. From Microsoft, we included Azure, Office 365, and Dynamics as optional services. From VMware, we included its new offering in the marketplace for virtual private cloud capacity for Windows as an optional service.

5. **Service Broker –** Unisys will provide the Commonwealth with a consolidated, optimized, and centralized multitenant compute environment in which the agencies will not have to compromise their control by being able to self-provision workloads through the use of an enterprise service portal and catalog. Once ordered from the service catalog, the request will be processed through ITSM for change approval. When the request is approved, the Service Broker will invoke an automated runbook to execute the provisioning effort. Once the provisioning effort is complete, the runbook will update the Configuration Management Database. Agencies will be able to maintain a very real level of control over their compute environment required to meet the business need. As an innovation effort, the Service Catalog and

Service Broker will be an integrated pair to provision not only capacity from the private cloud environment we are providing the Commonwealth, but also all services from partners such as IBM, Microsoft, and VMware. Our vision for the Service Catalog and Service Broker is you can provision any service from any provider at any time with "no commit" that is then managed by the Component Based Compute Model provided in this RFP. One provisioning model and one management model will unify the compute model for the Commonwealth and provide the business flexibility and optimized compute environment the Commonwealth is looking for.

6. **Technical Services –** Unisys will provide a set of selectable services that can be procured from the services catalog to manage given applications in the Commonwealth agencies. These technical services can be people- or management-based services and can be procured in a consumption-based approach.

7. **Security Services –** Achieve and maintain a robust and comprehensive security environment that meets the IT Security policies set forth by the Commonwealth and enable agencies to meet their regulatory compliance requirements. The data center security environment will be established with the assistance of Deloitte, which has over 10 years of experience working with the Commonwealth to create, implement, and manage security policies and using Deloitte's demonstrated security framework to help the agencies meet diverse regulatory requirements.

8. **Facility Management –** Provide the ongoing management for all data centers whether Unisys or Commonwealth owned facilities.

9. **Service Desk –** The Service Desk will take calls from IT support staff to log incidents that were not automatically generated from the event monitoring system. The Service Desk will use knowledge management to try to resolve an event within an agreed time. If the event cannot be resolved in the agreed time, it will be escalated to Level One Support.

10. **Level One Support –** Level One Support manages all events that are automatically generated from the hardware and application environments as well as resolving incidents that are received from the Service Desk. Level One will use various tools, runbooks, and knowledge management to resolve incidents. If the incident is not resolved within a given time, it will be escalated to Level Two Support.

11. **Level Two Support –** Level Two Support is a team of very knowledgeable resources who can solve a wide array of Commonwealth compute issues. This team largely knows the individuals in the agencies and has an ongoing relationship with them. When Level Two Support believes it cannot resolve the incident in a timely way, it will pull in Level Three Support resources.

12. **Level Three Support –** Level Three Support is a team of architecture experts that deeply understands the compute architecture that supports the Commonwealth

applications. This team is also an integral part of driving continuous improvement plan by identifying inefficiencies in the compute architecture.

Because of the Component Based Operating Model already described and the innovative approach to provisioning compute services, Commonwealth IT professionals may ask questions about how to provision workloads, how to manage and report on the workloads, and how to drive continuous improvement. To answer those expected questions, we provide brief summaries below.

"How do I provision workloads?"

The process will begin with logging onto the services portal that will be configured with a look and feel for each agency. In accordance with the agency and personal login credentials, users will be presented with the services they may provision. Provisioning a service will be an "Amazon-like" experience in which a user will select services from the catalog and provide quantity and key information to order the service. Once the "shopping cart" is filled, the order will be submitted and provisioned using the Service Broker. Each order processed by the ITSM system will have to be preapproved or approved when submitted. No runbook will be generated until a change is approved. Once a change is approved, the runbook will be executed to provision the desired service. Equally important, the CMDB will be automatically updated with the configuration information and the up- and downstream relationships as part of the runbook's execution.

"How do I manage and report in near real time the performance of those workloads?"

With the move to "IT as a business," it is imperative to be able to report in near real time the active performance, health, and quality of the IT services being provided to the Commonwealth. Unisys will provide real-time dashboards that are configurable by user preferences, meaning there are base profiles created for views for a CIO, CTO, Program Manager, and IT professional that enable these users to select the items they want to view on the dashboard. **Figure 2-10** is a representative example of a real-time dashboard.

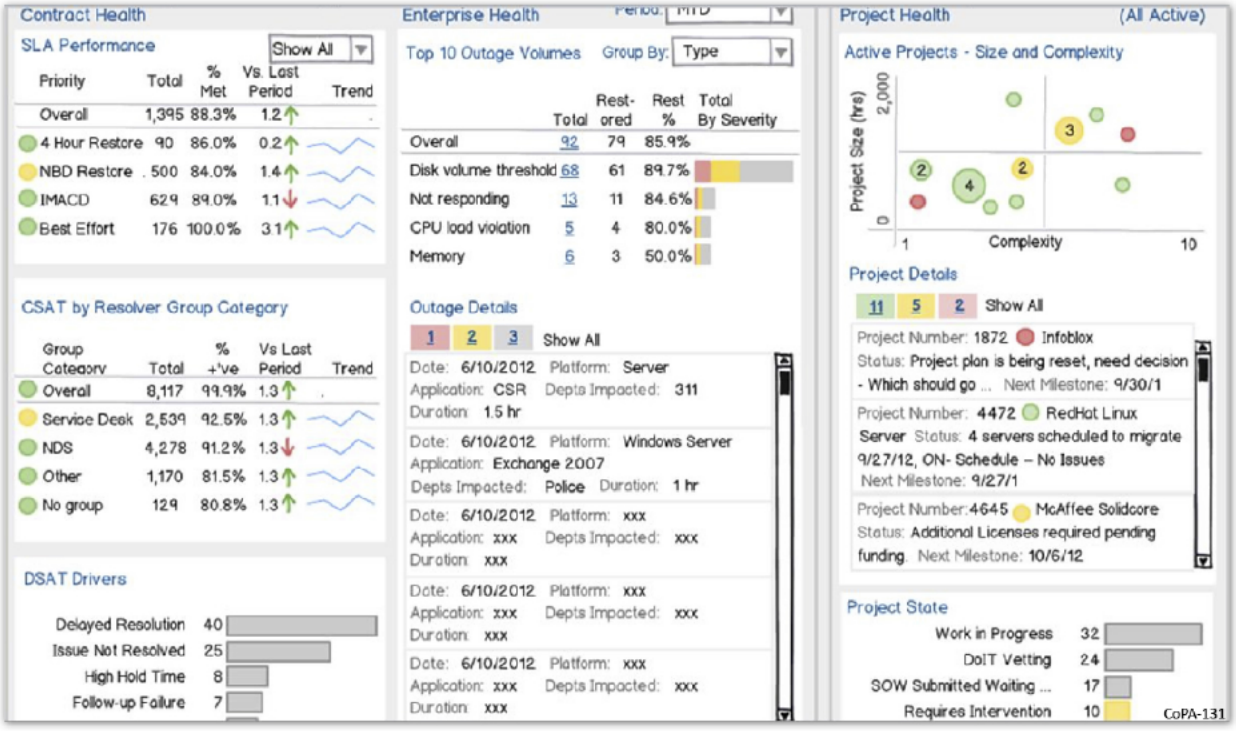

Figure 2-10. Real-time Dashboard

"How do I drive continuous improvement to drive greater value and cost containment?"

The Unisys team will provide a fulltime, dedicated Service Excellence Office. The office is responsible for driving Continuous Service Improvement to the Commonwealth throughout the entire ITIL V3 life cycle, across all Commonwealth Agencies, IT domains, and applications infrastructures. Unisys will apply Lean Six Sigma methodologies to analyze current and trending cycle times and defects collected from industry leading measurement tools. The Service Excellence Office will proactively eliminate anomalies to improve the operating environment from the time services are automatically provisioned through transition, implementation, and the ongoing IT Service Management. This will provide the Commonwealth with reduced costs, drive greater value, and increases quality while providing the Commonwealth with the highest client satisfaction experience.

To deliver and fully realize these solution's benefits, Unisys will develop and execute a comprehensive and reasonable work plan that focuses on the work effort to:

1. **Transition –** implement the component based operating model depicted in **Figure 2-9** across all future state data centers

2. **Migrate applications –** migrate the Commonwealth's applications to the new secure compute environment and immediately adopt the service reference architecture

3. **Implement Continual Service Improvement and Innovation Program (CSIIP) –** implement a continuous improvement program that drives out costs, generates additional value, and improves ongoing quality and client satisfaction.

Work Plan Overview – Simplified, Low Risk, and Based on Experience

> ***Work Plan** – Low Risk and Based on Experience*
>
> *Our competition may know the outsourcing business, but they do not know the Commonwealth to the degree of the Unisys Team. That is a critical distinction.*

Because of the critical nature of the Commonwealth's business systems, you cannot afford to have a service provider that needs to learn on the job. Unisys and our partners fully understand that the Commonwealth's critical business systems cannot be put at risk and that no unexpected downtime is acceptable. In building our proposed work plan, Unisys leveraged our knowledge and experience with the Commonwealth's infrastructure and business systems.

Our plan is realistic and achievable. During the first 18 months, the Commonwealth and our team will drive significant change. The realism of the Transition Work Plan is key to minimizing risk to the Commonwealth while we transform your current delivery processes and organization, implement new processes and organizations, and migrate applications from existing data centers to new locations.

On contract approval, Unisys will immediately initiate several actions. For example, the Unisys Team will mobilize in Harrisburg to begin the process of planning and initiating the transition. We will do this quickly because many of the identified resources are already on site and available to assist. Another action will be to formally stand up various governance teams and begin the flow of information. Some of our technical staff will prepare the various data center sites for migration and begin to install the network connections to COPANET. Concurrently, discussions will begin immediately to plan the [redacted] transition and DPH migration.

During this period and continuing through transition, our main responsibility will be confirming the current production systems are fully operable. Some of our current experts on these systems will actively engage with key members of the project teams; while others will maintain their focus on providing the high levels of service the Commonwealth has come to expect from our team. These experts will come together in the steady state to continue to provide and improve services that will meet or exceed all contractual commitments. **Figure 2-11** depicts the timeline for the various activities in the program.

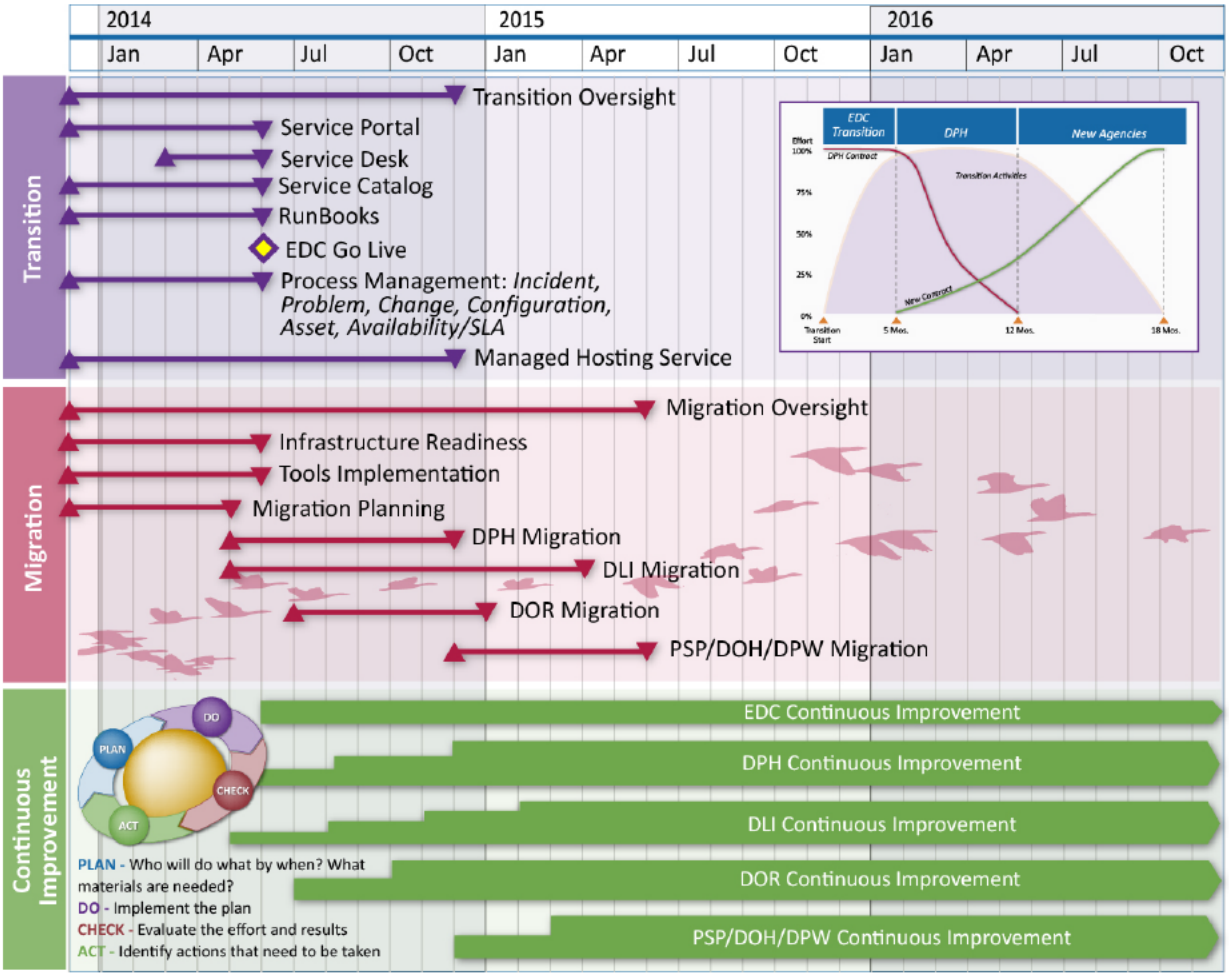

Figure 2-11. Work Plan Timeline

Transition

A major transition from the current operating model is required to achieve the objectives outlined in this RFP. Our approach to transition embodies our tenet of "Do No Harm." Therefore, we will use our detailed knowledge of the Commonwealth systems and lessons learned from prior transitions to mitigate risk. These include finalizing an aggressive but realistic transition plan with significant input from and approval of OA/OIT and the affected agencies.

Transition activities center on People (our team and your team), Process (policies, methodologies and procedures), and Technology (tools)—all required to successfully deliver the new component based operating model. One of the first tasks will be standing up our Program Management Office because it will play a key role throughout transition, transformation, and beyond.

At the core of our service delivery model is an IT Service Management Platform that supports the new processes and tools being implemented. This platform facilitates high-quality service delivery as well as improved sharing of information among all the new data centers, including the [redacted] However, achieving the new model differs, depending on where current applications are hosted. The major difference is that the [redacted] will not be moving; therefore, all the tasks for a physical move of IT infrastructure and applications will be unnecessary for the [redacted] An advantage for the Unisys Team is that we currently have significant technical resources helping to manage the [redacted] Also, one of our partners, Domino, manages the PennDOT systems in the [redacted] Together, we have knowledge of nearly all the technology. Therefore, we are very confident that we can methodically transfer total responsibility to our team in 6 months and very quickly the [redacted] will begin realizing the new model's benefits.

Transition and transformation of the DPH and the other agency data centers will require a complete relocation of applications and adoption of the new component based operating model. To accelerate the benefits of the new model to the Commonwealth, we architected the transition so that as applications are transferred to the new facility, they are operating in the transformed environment. That means you will receive value more quickly, and at the end of the transition, all systems will be transformed, in the steady state, and ready for a program of continuous improvement.

Application Migration

To migrate applications to the new data centers, the Unisys Team will be required to prepare the new data centers. These activities include establishing connectivity between COPANET and the data centers; establishing Commonwealth-specific infrastructure such as core LAN services; and implementing the infrastructure to support tools and shared infrastructure devices such as firewalls, backup, and monitoring. This project, Infrastructure Readiness, combined with the transition activities described above together will achieve the Operational Readiness milestone defined by the Commonwealth.

We will start with the DPH and then generally repeat the process (transition, infrastructure readiness, and so forth) above, incorporating additional lessons learned as we proceed. Again, a "Do no harm" strategy will be used to mitigate the risk of unplanned outages for all transitions and migrations.

In the Application Migration activities, there are three major focus areas:

- The first is **Operational Readiness,** which will provide the infrastructure and processes required to host applications. In these tasks, our team will create detailed designs and implement the Wide Area Network (WAN), Local Area Network (LAN), Storage and Backup infrastructure, Monitoring, Tools, Server Management, Dashboard, and Information Technology Service (ITSM) infrastructures.
- The second major focus area is the **Application Migration (AP) Planning,** which runs in parallel with Operational Readiness. In the planning framework, the AP team

will analyze application affinity information gathered electronically as well as in meetings with the agencies and their application owners to determine application move groups. Draft application move group packages based on the information gathered will be created, results of the analysis will show which applications are related to share infrastructure with potential latency dependencies, schedule restrictions, size, complexity, or relate to and depend on other applications. A typical move package will not exceed 125 servers, instances, or images, including Wintel, Linux, or AIX instances and mainframe images. Applications will be targeted to the facility that provides the most benefits, but the Commonwealth will be the final approving authority of any plan.

- The last is the **execution of the migration plan** that overall will move thousands of agency applications in manageable phases. This by far will be the most intensive and most important of all the activities. Even though our team has significant knowledge of the various applications, this must be a collaborative effort with agencies to prevent unexpected interruption of the business of government. The Unisys Team will work closely with the OA/OIT and the agencies to develop detailed plans for each application to be migrated. These plans will include an Hour-by-Hour (HxH) plan, which will detail the step-by-step plans for the test, re-IP, and move events, which will include all precautions required to provide the appropriate level of security needed, fallback plans, testing and acceptance criteria, which will be used to determine the event's success.

As illustrated in **Figure 2-11**, the [redacted] transition and transformation are planned to occur within 6 months, DPH within 12 months, and all agency data centers within 18 months. This schedule exceeds the requirements of the RFP and we believe is reasonable.

To oversee all these transition and migration activities is Unisys Transition and Program/Project Management. The Transition Executive, Scott Lorah, will provide a collaborative, transparent, and candid process for the development and management of the plans, adherence to the plans through verified accomplishments, risk management, issue management, quality deliverables, and process improvement. The emphasis of our approach is to provide clear analysis of progress, identify opportunities for improvements, review lessons learned, and implement best practices for each project.

The Unisys Program Management Office (PMO) will have overall responsibility for meeting the contract requirements. Also, guiding and overseeing the Transition Program will be a Program Steering Committee comprising members from OA, agencies, Unisys, and our partner IBM. Also, Project Steering Committees will be used to guide and oversee each of the agency-focused projects.

"Security is Paramount"

Protecting citizen data has always been extremely important to the Commonwealth. Security becomes even more important as the Commonwealth transitions to the proposed on-demand compute environment; quite simply the agencies must have the confidence in the security of the new environment to meet their diverse regulatory requirements such as

CHRIA, FERPA, HIPAA/HITECH, IRS 1095, PCI and CJIS during transition, and steady state operations. The Unisys team understands this is fundamental to the success of the initiative and is committed to a successful transition and operation of the new environment with security being paramount in all decision making.

Consequently, we take a holistic approach to security. We leverage our teaming partner - Deloitte's robust public sector security risk framework that integrates several regulatory requirements, as the foundation of our security management plan. This readily available catalog of rationalized regulatory requirements and controls will help us appropriately address the people, process and technology aspects of our security solution. Also, the Unisys Team has very experienced, nationally recognized security experts that we will engage when preparing and executing our security specific security management plan for the Commonwealth.

As illustrated in Figure 2-12 below, the Commonwealth ITBs, policies and agency regulatory requirements drive the Security Management Plan, which in turn becomes the implementation blueprint of our datacenter security solution.

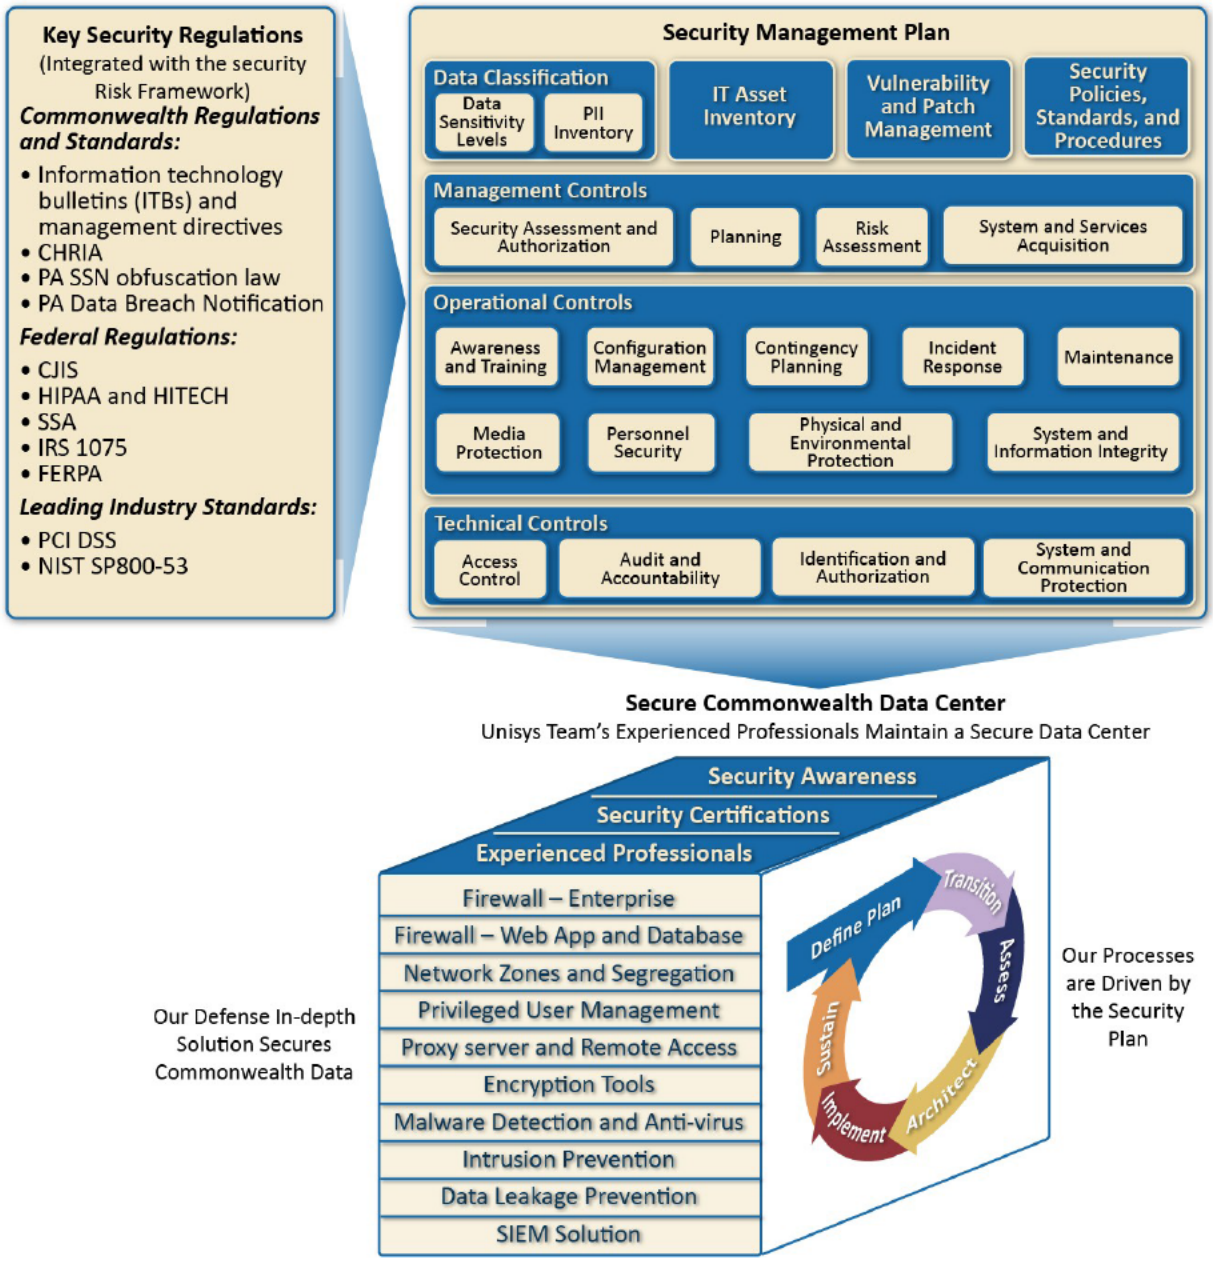

Figure 2-12. Our Holistic Datacenter Security Solution is Driven By the Security Regulations

Security Management Plan. The compute environment's security management plan is driven by Deloitte's demonstrated public sector security framework - containing over 3,500 individual regulatory requirements mapped to almost 300 unique integrated requirements that include NIST SP800-53 rev4, CJIS v5.1, CHRIA, HIPAA/HITECH, PCI DSS v2/3, SSA and IRS 1075 rev8-2010. This framework is flexible to add additional controls and regulations as agencies face the need to comply with new regulations and controls. The success of the security framework, particularly the flexibility it provides to "assess once and comply with many regulations", is demonstrated in its use in over 10 states - where the security framework is used to integrate and

assess security regulatory requirements in systems development efforts and conduct integrated enterprise security assessments.

During transition we use the security risk framework as the foundation, validate the agency requirements, systems security architecture and classify data, and develop and establish the security management plan. The plan describes how the integrated controls are implemented consistently across the compute facilities

We will perform an annual review and update of the security management plan to keep the Commonwealth abreast of their emerging security needs. Schedule F, section 3.2.2.5 Security Management Section provides more detailed description of the security management plan, and how agencies will be able to obtain their individual regulatory requirement views to meet their regulatory and compliance needs.

Security Solution. Using the security management plan as the blueprint, the Unisys security solution is designed - taking into consideration the people, process and technology. The solution is implemented consistently across the data centers.

Security Technologies: The data center security solution is designed and implemented during the transition along with established processes for continual improvement during ongoing operations. We have selected leading security technologies to provide defense in depth protection that includes:

Security Processes: We implement and operate the security technologies using processes rooted in the ITIL framework. The security governance is carried out with transparency – by sharing the alerts, risks and issues with the Commonwealth's Chief Information Security Officer (CISO) and agency security officers. The service portal provides customizable dash boards for the CISO and agencies for them to see relevant security metrics and allow for collaborative and transparent management processes to help effectively manage the security risks and issues.

Security Team: We have a proposed a world class security team, led by Mike Sheketoff and supported by our teaming partner Deloitte, who play a significant role during transition by performing the baseline security assessments, security architecture reviews and developing the security management plan. Again, all our efforts will be coordinated with the Commonwealth's security team to ensure we are meeting all expectations and leveraging their vast knowledge of the Commonwealth's security landscape. Deloitte's large pool of qualified specialists, helps us implement security technologies like data loss prevention and database firewall solution, perform quarterly vulnerability tests and annual updates to the security management plan. The Unisys team operates the security environment with trained professionals, following the ITIL process foundation. We provide more details of our proposed security operations and solutions in Schedule F, Section 3.2.4.6.

On-going Security Thought Leadership: The Commonwealth enterprise must secure a significant amount of extremely sensitive and confidential data. Internal and external threats continuously test the security measures that protect this data. These threats are ever increasing and are dynamic. Concurrently government budgets are becoming smaller while the need for enhanced security is growing much larger. To meet this need Unisys proposes two additional enhancements to our security proposal.

The first would be to conduct regular security educational seminars with agency leadership to provide greater visibility and understanding about the need and value of a comprehensive security program. The seminars would also provide updated information on threats and what agencies can and should do to mitigate these threats. Unisys proposes that these seminars would be a joint effort between the Unisys Security Team and the Commonwealth CISO.

The second enhancement is Unisys developing and supporting an ongoing Cyber-Security Research and Development Initiative to identify best practices, as well as new security processes and tools, and then test new products and processes in a controlled environment.

The recomended home for this initiative would be Harrisburg University since they have a comprehensive security curriculum, availability to faculty and students as needed, and lastly security topics that directly impact government could be featured at the Government Technology Institute's Innovation Center. The knowledge coming from the Center could be integrated into educational programs such as the Certified Government CIO (CGCIO) and Government IT Managers (GITM) programs. That would ensure this valuable information becomes an integral part of professional development for current and aspiring government IT leaders. Again, decisions related to the initiative and its operations would be guided by the Commonwealth CISO.

Collectively these enhancements to our proposal restate our commitment to security and recognize the need for the Commonwealth to have all of the tools it needs to combat the increasing threat of cyber-crime.In summary, we understand the importance of meeting the diverse agency security requirements through meticulous planning, and implementation of a robust security solution. We have assembled a team of world class specialists with demonstrated success at the Commonwealth, to implement the next generation security that is critical for the new compute environment. **Our solution and our people will closely couple with the Commonwealth's security requirements and their security experts. The blending of our respective expertise and experiences will provide a comprehensive approach during and after the transition of the Commonwealth's most sensitive data and computing resources.**

Continuous Improvement

Unisys will establish a dedicated Service Excellence Office that proactively manages continuous service improvement, ITIL V3 process management, quality, and customer satisfaction through a comprehensive Quality Plan. This quality plan will focus on continuous service improvement, reducing risk, improving service quality, client satisfaction, and transparency, while reducing overall IT costs. We believe this is a key differentiator in our partnership with the Commonwealth. Unisys will develop, implement, manage and govern two detailed Quality Plans. The initial Quality Plan will be a Transition Quality Plan to make sure that quality is a primary focus in the critical Transition of the

Commonwealth agencies to the new IT Services contract. Unisys will then develop and manage the IT Services Management Quality Plan, for steady state ongoing operations.

As applications are migrated to the new data centers, they will operate using the new tools and processes, thereby realizing the benefits of the new compute services model. Once applications and systems are transformed, they will reach the steady state. The future steady state model will leverage disciplined processes aligned with ITIL V3 best practices and accountability to deliver against stringent SLAs across more than 30 categories. This evolution from the current state to the future state will leverage state-of-the-art technology and tools coupled with the component based operating model as defined in **Figure 2-9**, and up-to-the-minute statistical reporting across the enterprise displayed on high-tech dashboards at the fingertips of Commonwealth agencies.

To keep these systems optimized, we propose an active and ongoing program to continually find new technologies or new processes that improve performance or lower the cost of operations. We call this our Continual Service Improvement and Innovation Program (CSIIP).

To optimize performance for the Commonwealth during steady state operations, Unisys will implement an ongoing program of Continual Improvement, as depicted in **Figure 2-12**. We developed and use a methodology that has worked well for our clients worldwide, and we will implement it at the Commonwealth. Collaboration is the main premise, and we know from experience that the Commonwealth wants to actively participate in bringing positive change to its compute operations. This program will be led and sponsored by the Service Excellence Office on the Unisys Team.

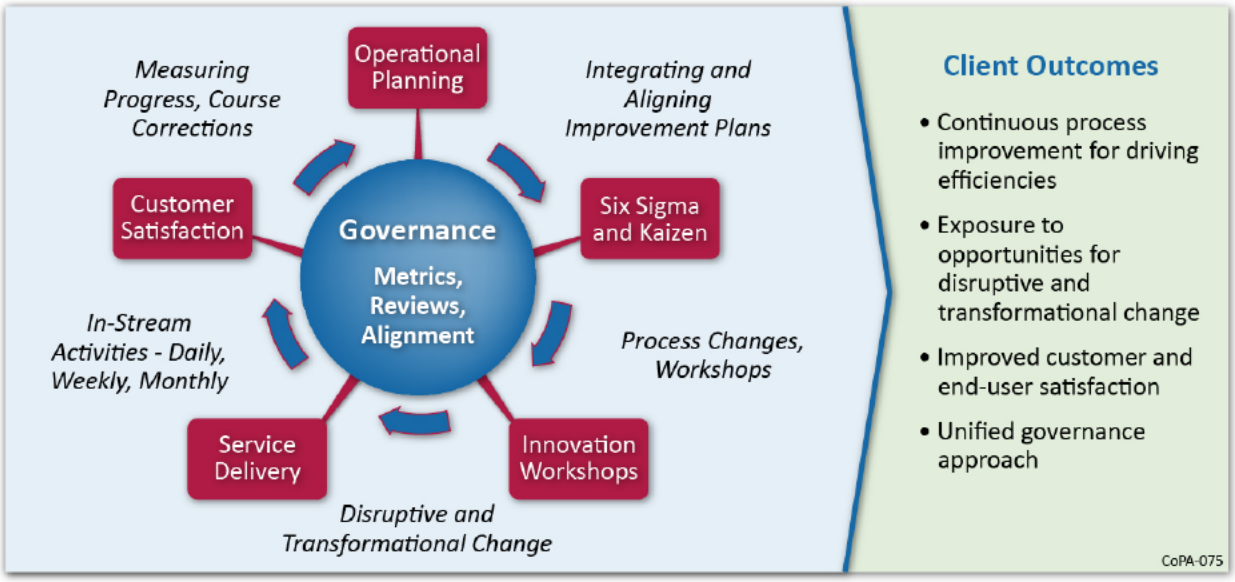

Figure 2-12. Continual Service Improvement and Innovation Program (CSIIP)

Rather than an ad hoc compilation of capabilities, tools, and methods, the CSIIP provides Unisys with a continuous and systematic way to deliver improvement and innovative outcomes for the Commonwealth by leveraging a highly structured yet flexible approach depicted in **Figure 2-12**. Two key elements include our CSIIP and Innovation Workshops.

"The Commonwealth has been a valued Unisys customer for many years. Together, we successfully completed major projects that have provided significant innovations and value like the DPH. I am confident that, if entrusted with this most important engagement, our team will raise the bar even higher for the Commonwealth and its citizens."

[redacted]
Commonwealth Executive Sponsor
Chairman & CEO

The CSIIP process includes two types of workshops, Improvement/Kaizen or Innovation Workshops. We will use a global pool of trained facilitators who have conducted workshops across a wide range of industries worldwide.

Improvement/Kaizen workshops are joint sessions between the Commonwealth and Unisys, which focus on identifying opportunities for improvements and categorizing, prioritizing, and developing high-level business cases and implementation roadmaps for the most promising opportunities. Opportunities are governed on a SharePoint portal to provide agencies with visibility and transparency to the continual improvement process.

One of the CSIIP's major features is the ability to consolidate and analyze the many inputs required to effectively develop an innovation and improvement plan. This will provide the Commonwealth with the necessary information to make informed decisions based on relative cost/benefit, alignment with strategy, and ROI for various actions of varying scale from incremental through to truly "breakthrough" initiatives.

Unisys will also collaborate with the Commonwealth by hosting innovation workshops to drive continuous innovation. These workshops will focus on opportunity identification, categorization, prioritization of innovation opportunities, and then on the development of high-level business cases and implementation roadmaps for the most promising opportunities identified.

Innovation is what drives businesses and organizations to excel and is required to meet the ever increasing need for 'faster-better-cheaper.' Unisys' approach looks at all aspects of innovation (strategy, people, process and technology). All are required to be aligned for a program to be successful and impactful. Unisys will work with the Commonwealth and its agencies to clearly understand their strategic IT vision and then work with the each to provide a programmatic approach to innovation. Unisys will work with the Commonwealth to implement a "high-yield innovation pipeline" process to identify and incorporate new innovations into the Commonwealth Agency's IT and infrastructure for the Pennsylvania citizens receiving services.

The work plan we identified will provide a thoughtful, realistic, and achievable roadmap to meet the RFP's requirements, and just as important your high expectations for delivering a solution that will make the Commonwealth a leader in enterprise compute services.

Innovation Workshops

Unisys Innovation Workshops are collaborative workshops with the Commonwealth designed to explore opportunities for disruptive and transformational change. We will expose the Commonwealth to the latest disruptive technologies and trends and collaboratively examine opportunities for strategic business benefit.

Why the Commonwealth Should Choose the Unisys Team?

All critical services delivered by Commonwealth agencies will depend on this engagement's success. Therefore, it is vital to identify and mitigate all risks so the transition to a new operating model can happen without unplanned outages or reduction in service levels. The consequences of failure are immense and frankly unthinkable.

The Unisys Team of premier technology and service companies has the most experience and knowledge specific to the Commonwealth. As the Unisys Team has been the sole provider of managed DPH services to the Commonwealth, no other offerer can claim this level of expertise. Our experience includes a 13-year track record—measured and reported monthly—that no other team can claim. We have vast knowledge of the existing infrastructure, thousands of agency applications, and Commonwealth processes and business environment. This experience and knowledge will be essential to mitigate risk associated with this innovative endeavor and ultimately meet your high expectations.

And because we are your current service provider, we have greater flexibility and offer more opportunities to customize the work plan to further mitigate risk and meet individual needs of the many agencies that depend on these services. The challenge of the DPH contract's termination on December 31, 2014 will become much less of an issue.

In 1999, we accepted the challenge of consolidating the Commonwealth's 17 data centers and succeeded. In 2008, we accepted the challenge of reinventing Commonwealth operations to shared services, saved $240 million and succeeded. Now in 2013 and beyond, we are totally committed to accept this new challenge and successfully deliver the results expected by this RFP.

This page intentionally left blank.

3.3.2.1 Transition Program Management

The TPMO function confirms the non-disruptive migration of Commonwealth information Services from current Commonwealth host locations, to the Offeror provided multi datacenter environments.

The Offeror must establish a TPMO and develop the requisite transition plans.

A transition approach and detailed transition plan for each of the Commonwealth's existing Datacenters must be developed by the Offeror and approved by the Commonwealth. The Commonwealth has over 2,000 business applications with over 50% designated mission critical. The Offeror must work with each agency to determine its application environment within each facility. The Offeror's target datacenter environment must be configured and tested prior to migration of the application.

Requirements		Describe Compliance
1.	Establish a TPMO to manage all	Offeror must describe the proposed TPMO,

	information service transition activities. The Office will be jointly administered by Offeror and Commonwealth staff. Provide a communication plan that will provide an information vehicle for all interested parties.	and discuss the mission, goals and objectives, and the roles and responsibilities of the Offeror. Offeror must provide at least one sample where Offeror has successfully created an office similar to the required TPMO.
2.	Provide a functional organization chart for the TPMO, including an estimate of the type and number of full time Offeror resources that will be required to ensure the successful transition of Services from current multiple datacenters to the Offeror's datacenter Services.	Offeror must describe the TPMO structure including but not limited to the number of full time resources and the role of the TPMO in the transition.
3.	Analyze applications and design the required computing architecture to migrate Commonwealth datacenters to Offeror datacenter environments. Hardware, software, network, etc. Work with Commonwealth technical staff to ascertain the requirements to successfully migrate processing to Offeror datacenter environments	Offeror must describe solution and approach to meet this requirement. Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the needs of the Commonwealth.
4.	Optimize Current Process and Procedures – Coordinate with Commonwealth agencies to review and plan for a transition of processes and procedures.	Offeror must describe its overall plan for optimization of the existing processes, procedures, tools, etc. to provide more efficient and effective Services. The description must include approach, plan, and methodologies.
5.	Revise datacenter DR plans on the occasion of major changes to the datacenter hardware, software, or network portfolio to reflect those major changes.	Offeror must describe solution and approach to meet this requirement.

6.	Establish an IT infrastructure that meets all application processing requirements. The Offeror must confirm that the target IT infrastructure meets or exceeds current computing requirements. Work with Commonwealth technical staff to design and build the infrastructure required to support the applications being migrated to the Offeror multi datacenter environment.	Offeror must describe solution and approach to meet this requirement. Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the needs of the Commonwealth.
7.	A multi-faceted Transition Strategy will be required: • Comprehensive; • Non-disruptive; and • Compliant with Commonwealth requirements. The Strategy will address the transition of: • Shared infrastructure elements, as appropriate; and • Specific information Services. • Disparate Agency application architectures and impacts to move to the new environment(s) The Strategy must also address the following: • Cost/Benefit for the Agency • Risks and Risk Mitigation Plan The migration order of the Commonwealth datacenters will be provided by the Commonwealth.	Offeror must describe the transition (interim and steady state strategies) and transition plans that it has employed during other similar size engagements.

8.	Identify mandatory requirements and critical success factors that will have a direct impact on developing a successful transition plan	Offeror must describe the 3-5 characteristics, conditions, or variables it believes will have a direct and critical impact on the effectiveness, efficiency, and viability of the Offeror's solution. Offeror must describe its approach to mitigating risks and ensuring these critical factors are successfully addressed.
9.	Create a Transition Timeline that outlines the overall timeline starting at effective date and continues through delivering transition Services for each of the targeted datacenters.	Offeror must describe the overall timeline from the start of pre-Transition activities through the point at which the Offeror expects it will be delivering predictable, repeatable Managed Service Results that meet the requirements of the RFP. The schedule must include a description of the critical milestones related to Transition efforts for each targeted Commonwealth datacenter. Any critical milestones identified must be included in the Transition Project Plan.
10.	Create a generic Infrastructure Element Transition Plan that may be readily adapted to accommodate specific infrastructure element transitions. Create a prospective Infrastructure Element Transition Plan. Appropriate EDC, DPH and other Agency Datacenter hardware elements may be re-purposed wherever possible.	Offeror must describe a realistic Transition Project Plan to transition the Commonwealth's datacenters to the proposed architecture.

11.	The EDC Managed Services datacenter assets must be managed and maintained by the Offeror until they are transitioned to the Offeror's managed Services. The current maintenance contract for the EDC servers is scheduled to expire on June 30, 2014.	Offeror must describe its transition approach to address the transition of operations and management of the EDC infrastructure from the Commonwealth to the Offeror's support Services and how it intends to address the server maintenance expiration issue.
12.	Create, manage and execute an application / infrastructure migration plan. The Offeror has the primary responsibility for planning and executing the transition of infrastructure elements, with support of Commonwealth technical and business support staff. The Offeror must provide adequate tools and techniques for moving and migrating Commonwealth data to the new target storage environment. The Offeror must ensure that critical applications are not decoupled from key infrastructure components causing system latency.	Offeror must describe solution and approach to meet this requirement. Offeror must provide at least one sample where it has successfully migrated application and hardware. Offeror must describe its proposed tools and techniques for moving and migrating Commonwealth data to the new target storage environment.
13.	Create a generic Information Service Transition Plan that may be readily adapted to accommodate specific information service transitions.	Offeror must outline a prospective Information Service Transition Plan to take over support of migrated Commonwealth systems and applications. Offeror must provide at least one sample where it has successfully completed application and hardware migrated.
14.	Meet with Commonwealth to produce and execute specific Information Service Transition Plans. Select cut over windows that minimize system unavailability and coordinate approval with the affected agency.	Offeror must describe solution and approach to meet this requirement. Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the needs of the Commonwealth.

	Communicate to the Commonwealth cut over date and times. Setup a special call number and support staff to take calls concerning the migration, these Services must be made available to transitioned users until the transition is officially signed off as completed. .	
15.	Work with Commonwealth to create testing, business acceptance and fallback plans.	Offeror must describe solution and approach to meet this requirement. Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the needs of the Commonwealth.
16.	Service Management Systems – Offeror must transition all agency system management platforms currently in place to the Offeror, consolidating all system management responsibilities. The Offeror must make available all system management platforms and tools that are currently supporting the Commonwealth infrastructure.	Offeror must describe solution and approach to meet this requirement.
17.	CMDB – Work with the Commonwealth to acquire asset information to support the asset management system and configuration management system.	Offeror must describe its approach to capturing, validating and storing all configuration information required to perform the Services within 120 days of the Effective Date of the Contract. In particular, the Offeror must address how it will identify and relate critical associations (e.g. Application to Server, Server Tier to Application, Application to Disaster Recovery Time Objective, software to server, etc.) for the enterprise. Offeror must describe its approach to transitioning the data and related processes from the existing CMDB or equivalent

		system/database to the Offeror's solution and how the Offeror must ensure accuracy of data across Service Management areas to ensure accurate and timely invoicing and chargeback to the Commonwealth.
18.	Chargeback – Work with the Commonwealth to interface with the Commonwealth's billing processing and validation ITSM system to provide a chargeback system for new and existing Services available on the Offeror's Service Catalog.	Offeror must describe its transition approach to Chargeback Management. Offeror must describe its approach to assisting the Commonwealth in transitioning Commonwealth customers from the existing Chargeback system. The description must include an expected analysis of the current billing system environment, expected termination assistance, communications plans, strategy for testing and major milestones.
19.	Identify Options and Costs – List the appropriate different options that will satisfy the requirements of the transition scope. Communicate options with the Commonwealth and obtain approval on selected option(s) to proceed.	Offeror must describe proposed approach.
20.	Expand/reconfigure datacenter facilities to accommodate growth in Commonwealth information and information systems.	Offeror must discuss its approach; the expansion/reconfiguration plans must include the EDC.
21.	Produce weekly reports on the progress of the information service transition initiatives.	Offeror must describe its proposed approach to providing weekly transition progress reports.
Deliverables		
Deliverables are defined in **Schedule K – Key Program Deliverables**		

Offeror Response

3 Requirements Analysis Approach

3.A Analyze applications and design the required computing architecture to migrate Commonwealth datacenters to Offeror datacenter environments. Hardware, software, network, etc.

Offeror must describe solution and approach to meet this requirement.

The Commonwealth benefits from the 13+ years of experience the Unisys Team has supporting the Commonwealth of Pennsylvania and its key applications residing in the Data PowerHouse and Enterprise Data Center. The Transition and Data Center Methodology utilized by Unisys keeps the applications at the center of focus.

The first step in planning the Transition is to understand the applications supported within each data center. The Unisys Team will accomplish this during the Data Gathering phase leveraging [redacted] tool to understand all applications running in the environment and their relationship to each other and to the infrastructure. Additionally the Commonwealth may choose to request two additional tools through a service request in situations where the application owners may need additional help to identify technical requirements. [redacted] the industry leading asset analytics tool, gathers detailed infrastructure information to provide the appropriate future-state infrastructure environment for each application/component. The application owners will also have at their disposal a process developed by Unisys Team members called Application Performance Impact Assessment that takes a top-down approach to identify those applications that are critical and require a deep dive. The process is supported by tools and software utilized for latency issue detection and validation.

Once the information gathering and documentation is complete, the Unisys Team will generate a draft move package grouping based on the application dependencies, the number of applications, and the number of servers. The move package groupings are reviewed at an application grouping level with representatives from the Commonwealth prior to creating the initial project schedules. The project team and application owners will provide a detailed review and input into the detailed project schedules. This input will include a review of the scope of each application, confirmation of related applications as well as input into the appropriate day, date and time of day that reduces the impact to the stakeholders who utilize the application(s).

During the project, additional attention is paid to each application to provide a smooth migration. These tasks include reviewing the applications for hard coded IP addresses, firewall rules, and other issues that may occur during the migration. Based on the information gathered and the analysis of application requirements, the required computing architecture at the target data center environment will be reviewed and validated accordingly. Development and execution of detailed test plans both before and immediately after the migration is required to verify the application will execute as expected. Lastly, each migration project is not completed until the application owner has confirmed the application executes as expected.

6.C Work with Commonwealth technical staff to design and build the infrastructure required to support the applications being migrated to the Offeror multi datacenter environment.

Unisys will provide a network of data centers that supports relocation of Commonwealth applications. All Unisys data centers other than the EDC are Uptime Institute Tier 3 equivalent facilities.

The EDC workload will remain untouched except for provision of metering for the computer room. Updates to the facility infrastructure including BMS, UPS, generators, and air conditioning will be presented for Commonwealth approval.

7 Multi Faceted Transition Strategy

7.B The migration order of the Commonwealth datacenters will be provided by the Commonwealth.

The Migration Strategy will address the transition of: Shared infrastructure elements, as appropriate; and Specific information Services. Disparate Agency application architectures and impacts to move to the new environment(s)

Unisys proposes a phased and comprehensive approach in assessing and implementing data center migrations and consolidations. This approach focuses on several key areas. First, we identify risk and risk mitigation. Unisys treats these moves like a controlled disaster recovery – every action is planned, tested, and validated with documented, rehearsed back-out and contingency plans. Second, is the business and application centric approach, we take the time to detail business requirements and understand application interdependencies disruption to the business. Finally, we use a thorough and comprehensive program management methodology to making the data center migration as smooth and non-disruptive as possible and will not short-cut planning activities.

Phase 1, Data Gathering and Analysis, will concentrate on developing a complete understanding of the current application and infrastructure inventory. Based on this information Unisys will be able to identify the requirements that will be used as inputs to the overall migration plan. A master migration plan will be negotiated with business stakeholders strives to minimize potential impacts to normal business operations. Phase 1 will concentrate on the following key areas:

- Project and resource planning
- Application inventory and physical asset inventory
- System and Application Mapping including dependencies and interdependencies
- Identification of either assets or application that will be retired, moved or consolidated
- Identification of requirements such as outage windows, change control process, validation needs, site availability and capacity constraints
- Aligning the applications and systems into move groups or migration bundles
- Selecting migration strategies and technical requirements for each application
  - Based upon Application RTO and RPO
  - Physical moves, data migrations to new “seed” equipment at the target site are two examples of migration strategies
- Building of a Master Migration Schedule

The overall goals of Phase 1 are to discover the assets to be moved and gain consensus on a migration schedule.

Phase 2 is the detailed site planning that establishes target site readiness to host the moved assets. Design of the new storage assets, verification of network and facilities plans, and a rollout plan for new assets are completed at this time. Key goals for this period include:

- Validate that target site build-out plans will meet the time and infrastructure needs for the asset migration
- Validate that new storage infrastructure is designed appropriately and in order
- Validate that new server roll-outs are timed appropriately to meet migration schedule
- Finalize all scheduling for transportation and OEM re-certification of assets

At the conclusion of Phase 2, Unisys and the Commonwealth will agree to initiate migration activities.

Phase 3 is the execution of the move plans. For each of the move groups, Unisys creates detailed task level runbooks that choreograph every action during the move. These plans are tested via table top exercises; the actual moves are coordinated by the Unisys Team and tested by the application support teams. Key activities include:

- Finalizing detailed night of move project plans
- Completing migration workbooks containing detailed procedures for application shutdown, server power-off/power-on, and other key technical activities
- Testing and rehearsal of move activities
- Final site visits to confirm target site is ready for asset move
- Disassembly, packaging, transportation and re-assembly of all assets
- Verification of proper functionality at target site

Phase 3 concludes with the Commonwealth's acceptance of the Data Center migration.

Unisys Data Center migration methodology has been successful in dozens of large data center moves. Key to our success is a disciplined quality assurance program. Unisys will assign a subject matter expert not directly involved in the engagement to review the project at pre-determined points in time known as "QA Gates." The QA reviewer will look for issues that create risk in several areas with an emphasis on those that may jeopardize the migration timelines or pose a threat to maintaining normal business operations. The QA reviewer will meet with a set of Client stakeholders and project sponsors to review how well Unisys is meeting expectations. Chart in **Figure 3.3.2.1-5** summarizes the steps in the methodology and the estimated QA Gate timing.

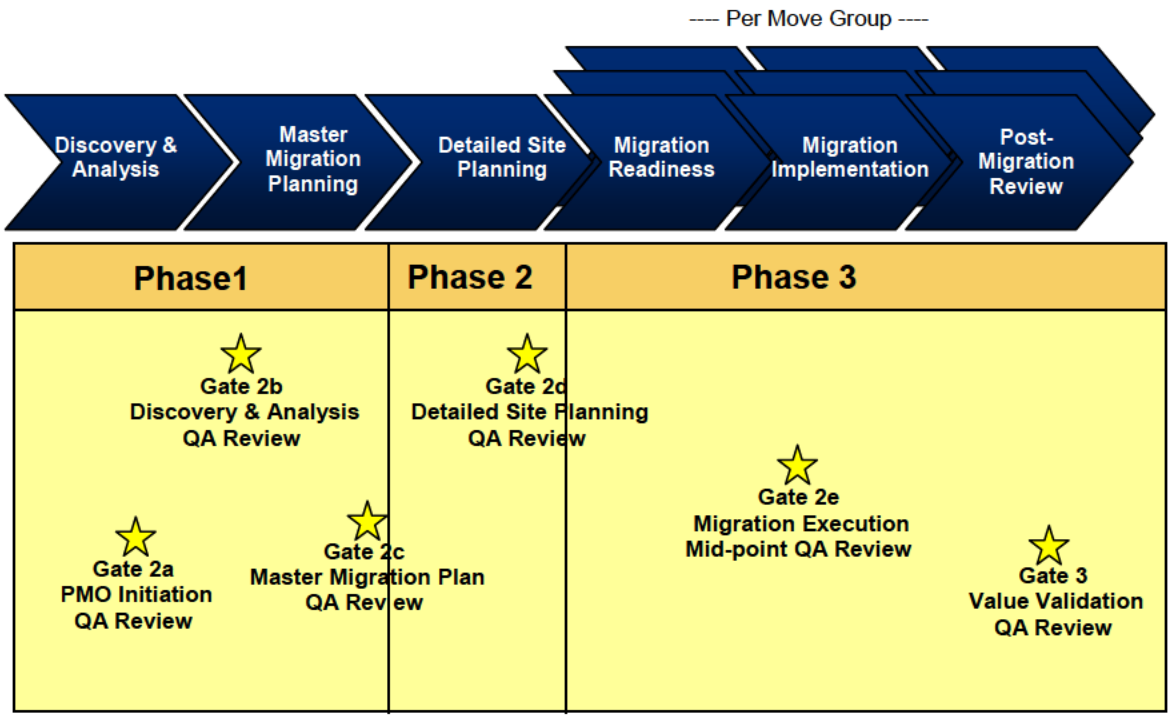

Figure 3.3.2.1-5 – Migration Phases

Once move groups are established the data center migrations will be accomplished using a variety of tools and techniques. The type of migration will be suggested by the Unisys Team but in all cases reviewed and agreed upon by the application owners.

The primary methods will be:

- Over-the-Wire – This is also known as P2P, V2V or Seed. This option will minimize the duration of the application outage required. For over-the-wire moves, seed hardware is first located in the receiving site and made production ready. A small application is placed on each server in the sending site to replicate the OS, application and application data onto the specific drives at the receiving site. Installation of the application is done during a monthly planned outage. An initial copy is executed soon after installation and sync copies are periodically executed leading up to the move event. During the move event, a final sync copy is taken after the application is shut down to verify all data and updates have been received in the new data center. Once the final sync is completed, the hardware in the sending data center is shut down and the application in the receiving data center is brought up. Once fully started, the application support team will execute the test plan created during the planning process. After a successful test, the test, the application owner will sign-off that it is ready for turnover to the end users. Using this option requires a shorter application outage. This method has low to moderate risk and a lower cost profile when utilized on assets with less than one year of expected life. As the age of the equipment increases so does the risk but the cost profile decreases due to the expectation of replacing the aging hardware.
- Lift and Shift –This option requires the applications to be shut down by the application support team, the supporting infrastructure will then be shut down and taken out of the racks, placed in shipping containers and transported to the new site via a dedicated professional moving partner. For applications that utilize shared storage, in most cases,

the data will be migrated over the wire using a data pre-application tool prior to the start of the event. In some cases, the project team may choose to ship data via tape. Once at the new site, the servers will be re-racked, cabled, and powered up according to the processes provided by the application support team. Once fully started, the application support team will be expected to execute the test plan created during the planning process. Once the team has successfully executed the test, the application owner will sign-off that it is ready for turnover to the end users. Using this option requires a longer application outage. This method has low to moderate risk and a low cost profile when utilized on assets with greater than one year of expected life. As the age of the equipment increases so does the risk and cost profile.

A third option exists which is a variation of the Over-the-Wire option.

- Seed with Greenfield – In this option, seed hardware is installed in the receiving data center, the operating system is installed directly on the hardware, the Application is installed and then the application's data is copied. Once fully started, the application support team will execute the test plan created during the planning process. Once the team has successfully executed the test, the application owner will sign-off that it is ready for turnover to the end users. Using this option requires a shorter application outage but presents a high risk profile and a higher cost profile.

In all cases, minimal changes are made to the environment to minimize the risk and expedite resolution of any incidents discovered during the migration events.

Early in the planning process, the Project Managers will work with the Application Owners to identify and agree on the migration method for each infrastructure device supporting an application being migrated. In most cases, shared services infrastructure devices such as Storage and Virtual Machines (VM) will be migrated over-the-wire to allow for flexibility in move package creation.

9 Transition Timeline

9.A Create a Transition Timeline that outlines the overall timeline starting at effective date and continues through delivering transition Services for each of the targeted datacenters.

Any critical milestones identified must be included in the Transition Project Plan.

Figure 3.3.2.1-7 below shows a high level timeline of projects and activities as compared to the Commonwealth's Milestones. The Unisys Team is uniquely able to accomplish this accelerated timeline as a result of the close relationship our team has delivering current and prior projects with the Commonwealth. We save time on the DPH and EDC migrations by skipping over the major learning curve of a vendor that is not currently supporting Commonwealth environments.

SCHEDULE M

DETAILED TRANSITION PLAN

(Offeror to provide Offeror's Detailed Transition Plan within the Schedule)

UNISYS RESPONSE: Transition Plan

Transition Schedule

Data center transition is not a destination; it is a journey that requires thoughtful planning. Unisys views transition as the process through which the Commonwealth Data Centers are prepared for the next generation. The transition does not happen overnight. However, Unisys experience with data center transformation enables us to use best practices and proven tools that accelerate the process and convert time to value. Our Transition Schedule is displayed in **Figure M-9.**

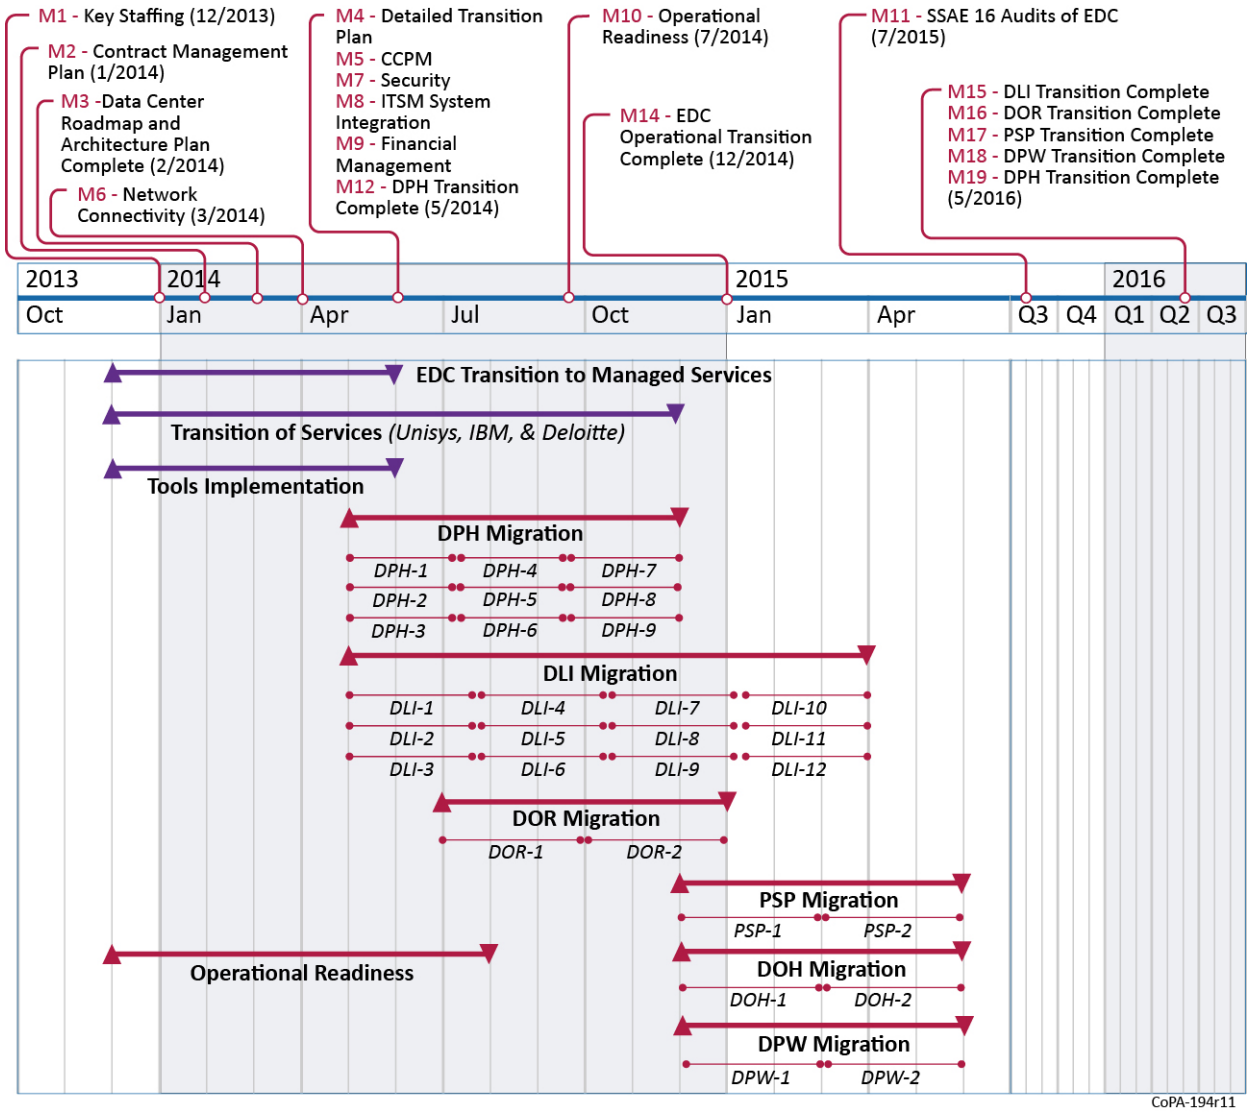

Figure M-9. Transition Schedule

Detailed Transition Plan

On the following pages, Unisys includes our Detailed Transition Plan for Commonwealth review.

This page intentionally left blank.

ID	Task Name	Start	Finish	Duration
0	**CoPA Transition Program**	**12/1/13**	**12/31/24**	**2892 days**
1	**1 Key Program Start Dates**	**12/2/13**	**6/30/14**	**150 days**

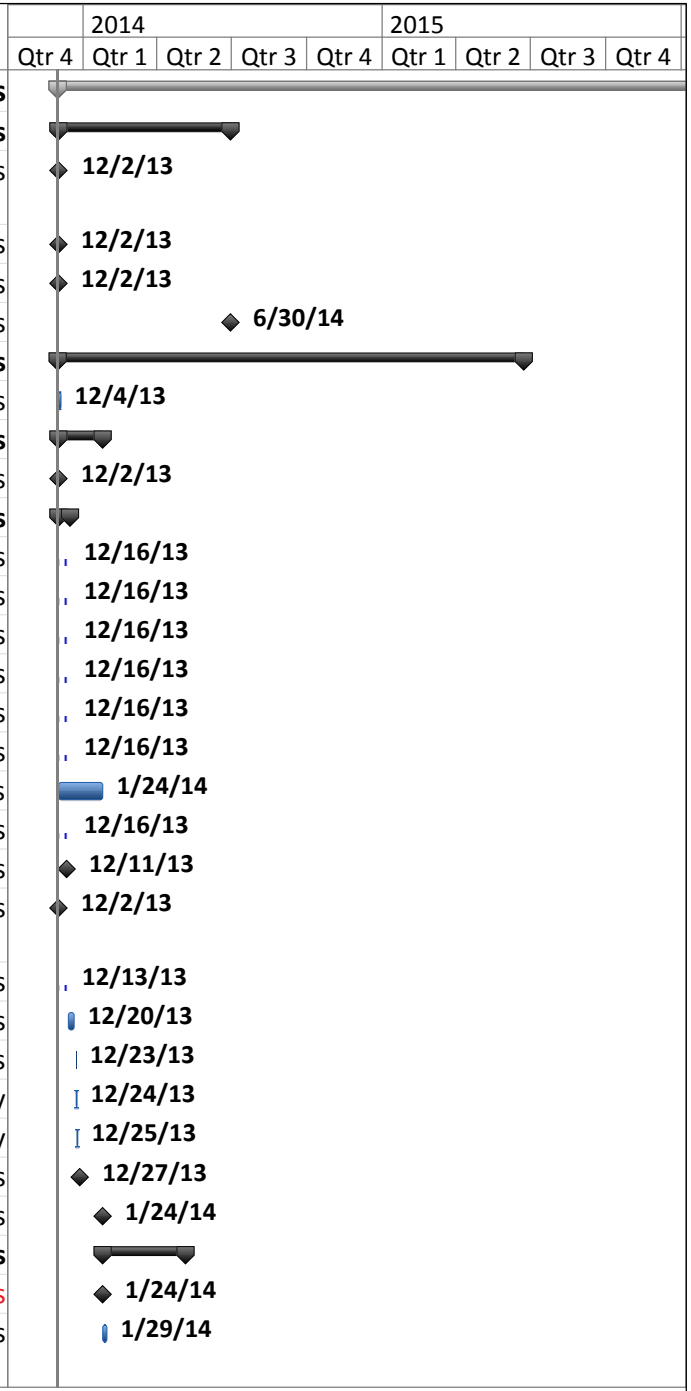
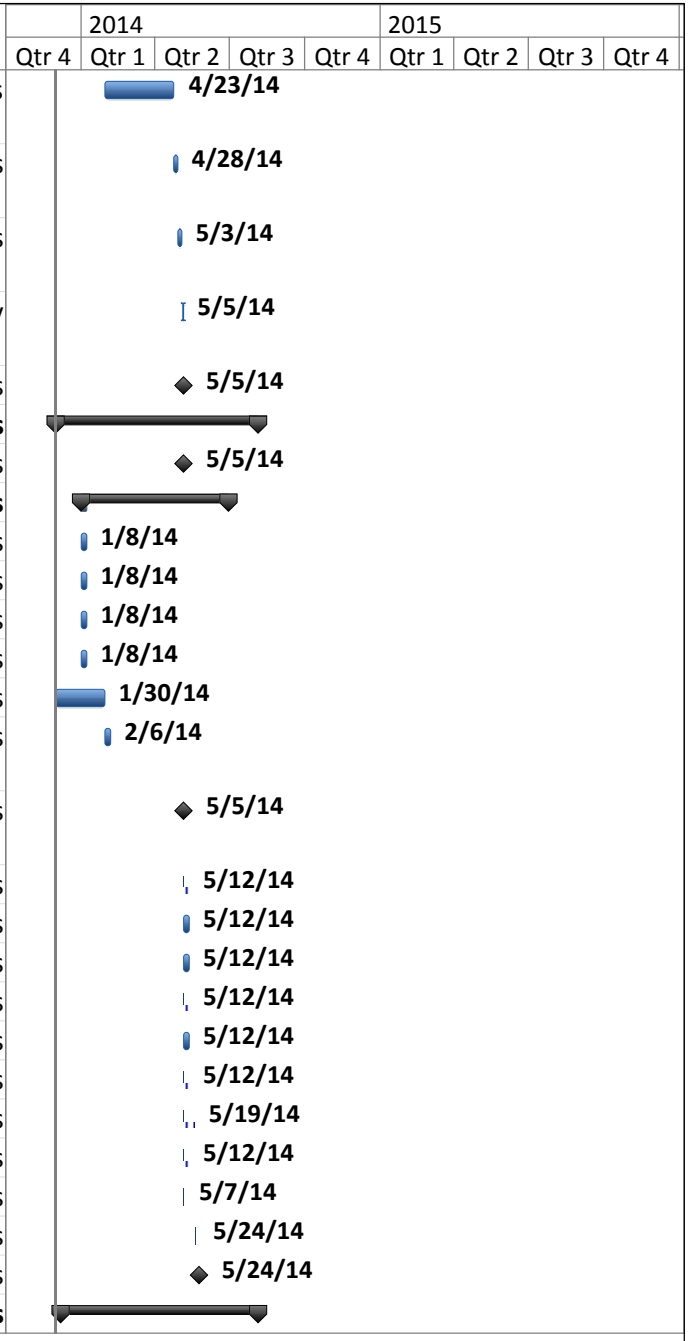
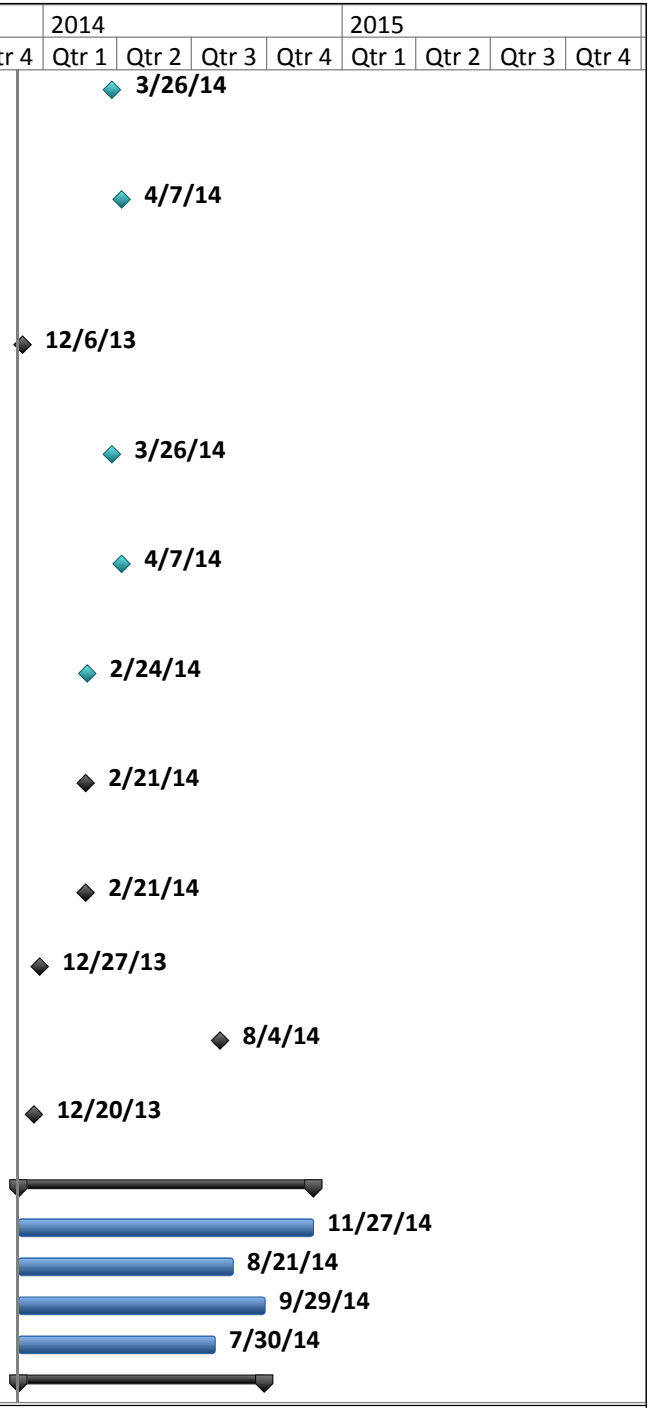
11	2.2.2.1 Update Transition Governance Plan	12/2/13	12/16/13	14 edays
12	2.2.2.2 Update the Initial Transition MPP	12/2/13	12/16/13	14 edays
13	2.2.2.3 Update the Transition Communications Plan	12/2/13	12/16/13	14 edays
14	2.2.2.4 Develop Project Logs (RAID)	12/2/13	12/16/13	14 edays
15	2.2.2.5 Plan Change and Quality Management	12/2/13	12/16/13	14 edays
16	2.2.2.6 Plan Acceptance Criteria	12/2/13	12/16/13	14 edays
17	2.2.3 Setup Transition QA Program	12/2/13	1/24/14	2 mons
18	2.2.4 Obtain the Transition Logistics	12/2/13	12/16/13	14 edays
19	2.2.5 Conduct Internal Transition Kickoff Meetings	12/11/13	12/11/13	0 days
20	2.2.6 Complete Pursuit to Transition Handover and Knowledge Transfer	12/2/13	12/2/13	0 days
21	2.2.7 Schedule and Hold CoPA Kickoff Sessions	12/2/13	12/13/13	10 days
22	2.2.8 Baseline the Transition MPP	12/13/13	12/20/13	7 edays
23	2.2.9 Conduct Checkpoint Quality Review	12/23/13	12/23/13	4 hrs
24	2.2.10 Update Project Logs (RAID)	12/23/13	12/24/13	1 day
25	2.2.11 Perform Internal Status Requirements	12/24/13	12/25/13	1 day
26	2.2.12 PMS-5 - Detailed Transition Plan Completed	12/27/13	12/27/13	0 days
27	2.2.13 MS - Plan Tasks Completed	1/24/14	1/24/14	0 days
28	**2.3 Assess Program**	**1/24/14**	**5/5/14**	**71 days**
29	2.3.1 MS - Start Assess Tasks	1/24/14	1/24/14	0 days
30	2.3.2 Coordinate Assessment Process Review Meeting with Client	1/24/14	1/29/14	5 edays



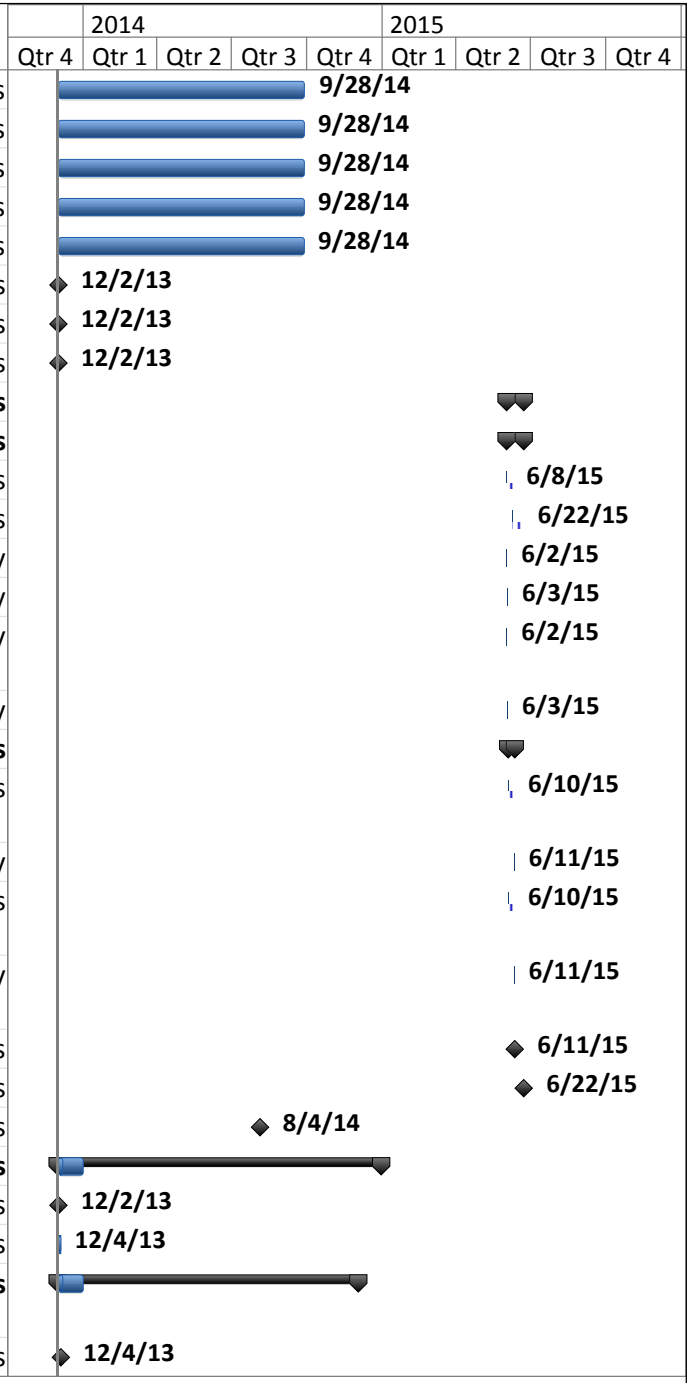
ID	Task Name	Start	Finish	Duration
31	2.3.3 Conduct Customer Assessment Meeting and Data Gathering	1/30/14	4/23/14	3 mons
32	2.3.4 Conduct Internal Review of Workstream Assessment Package	4/23/14	4/28/14	5 edays
33	2.3.5 Gain Client Agreement on Mitigation Plan for Assessment Gaps	4/28/14	5/3/14	5 edays
34	2.3.6 Obtain Workstream Assessment Package Sign Off from Client	5/5/14	5/5/14	1 day
35	2.3.7 Assess Tasks Completed	5/5/14	5/5/14	0 days
36	**2.4 Design Program**	**12/1/13**	**8/4/14**	**176 days**
37	2.4.1 MS - Start Design Tasks	5/5/14	5/5/14	0 days
38	**2.4.2 Develop Program Master Plan**	**1/1/14**	**6/30/14**	**180 edays**
39	2.4.2.1 Goverance Plan	1/1/14	1/8/14	7 edays
40	2.4.2.2 Risk Plan	1/1/14	1/8/14	7 edays
41	2.4.2.3 Data Gathering	1/1/14	1/8/14	7 edays
42	2.4.2.4 Operational Readiness Plan	1/1/14	1/8/14	7 edays
43	2.4.3 Complete Transition Program Schedule	12/1/13	1/30/14	60 edays
44	2.4.4 Review and Gain Approval of Program Schedule from Commonwealth	1/30/14	2/6/14	7 edays
45	2.4.5 Complete Solution Design Documents (SDD) for Each Workstream	5/5/14	5/5/14	0 days
46	2.4.6 Refine the Customer Communication Plan	5/5/14	5/12/14	7 edays
47	2.4.7 Gain Client Agreement on Design Gap Mitigation	5/5/14	5/12/14	7 edays
48	2.4.8 Conduct Internal Program Plan Review	5/5/14	5/12/14	7 edays
49	2.4.9 Review Transition Status Report Templates with Client	5/5/14	5/12/14	7 edays
50	2.4.10 Finalize ITSM Operating Processes and Procedures	5/5/14	5/12/14	7 edays
51	2.4.11 Address Procurement	5/5/14	5/12/14	7 edays
52	2.4.12 Develop Procedures For Each Workstream	5/5/14	5/19/14	14 edays
53	2.4.13 Develop the Program Performance Reporting Plan	5/5/14	5/12/14	7 edays
54	2.4.14 Perform Internal Design Review	5/5/14	5/7/14	2 edays
55	2.4.15 Complete the Customer Design Review	5/19/14	5/24/14	5 edays
56	2.4.16 Complete Design Tasks	5/24/14	5/24/14	0 days
57	**2.4.17 D-05 - Transition Management Plan**	**12/6/13**	**8/4/14**	**171 days**



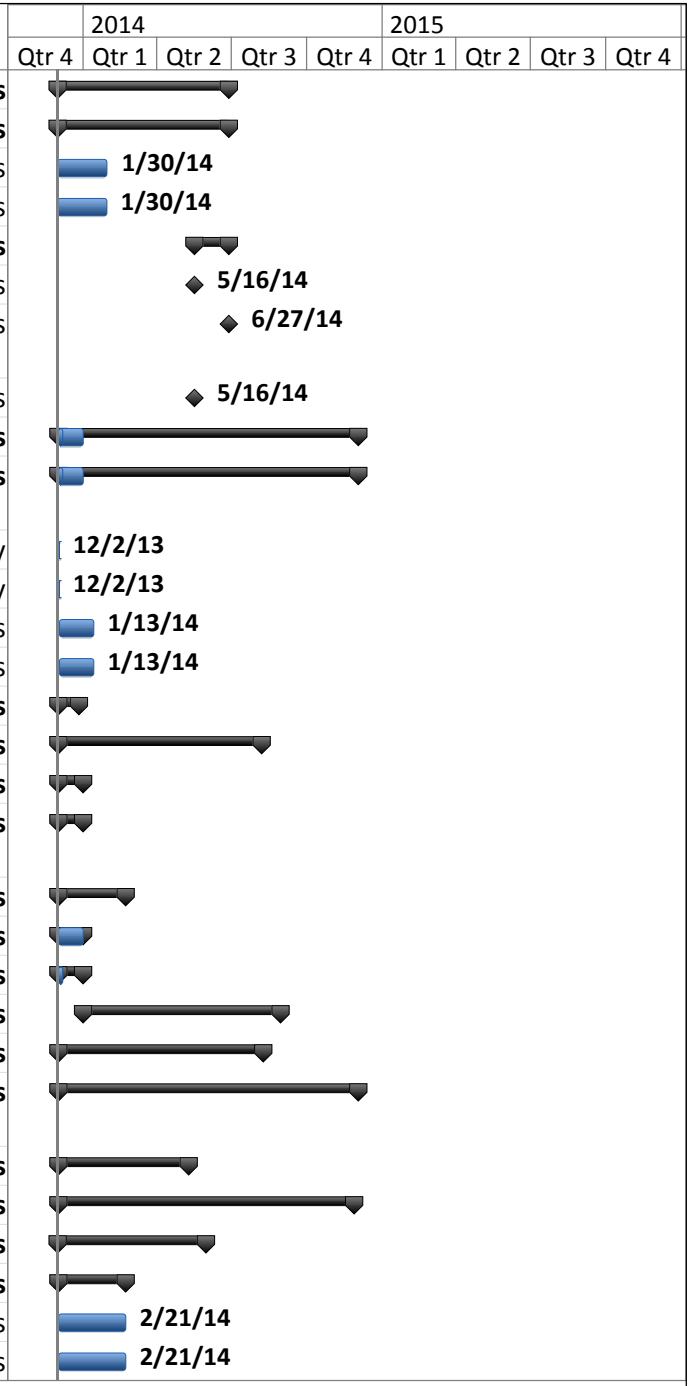
ID	Task Name	Start	Finish	Duration
58	2.4.17.1 D-05.01 - Transition Management Plan - New Customer/Service - Create Transition Roadmap with major milestones and present to the Commonwealth	3/26/14	3/26/14	0 days
59	2.4.17.2 D-05.02 - Transtion Managemetn Plan - New Customer/Service - Create a Detailed Transition Project Plan with major milestones and persent it to the Commonwealth	4/7/14	4/7/14	0 days
60	2.4.17.3 D-05.03 - Transition Management Plan - New Customer/Service First of weekly Transition Status Report	12/6/13	12/6/13	0 days
61	2.4.17.4 D-05.04 - Transition Management Plan - Present approach to transition Commonwealth computing assets. Includes Roadmap and project plans	3/26/14	3/26/14	0 days
62	2.4.17.5 D-05.05 - Transtion Managemetn Plan - Present transition roadmap and plan to Commonwealth stakeholders	4/7/14	4/7/14	0 days
63	2.4.17.6 D-05.06 - Transition Management Plan - Establish Intermim Contract Management Procedures during the transition of datacenter services	2/24/14	2/24/14	0 days
64	2.4.17.7 D-05.07 - Transition Management Plan - Document EDC/Legacy Datacenter Infrastructure Maintenance Strategy	2/21/14	2/21/14	0 days
65	2.4.17.8 D-05.08 - Transition Management Plan - Document prodecure to standup the Transion	2/21/14	2/21/14	0 days
66	2.4.17.9 D-05.09 - Transition Management Plan - Provide the first of the weekly Transition Status Reports	12/27/13	12/27/13	0 days
67	2.4.17.10 D-05.10 - Security Transition Activities - Provide Security Transition Plan	8/4/14	8/4/14	0 days
68	2.4.17.11 D-05.11 - Transition Management Plan - Provide the first of the weekly Security Transition Status Reports	12/20/13	12/20/13	0 days
69	**2.5 Deploy Program**	**12/2/13**	**11/27/14**	**258 days**
70	2.5.1 Start Deploy Tasks	12/2/13	11/27/14	12 emons
71	2.5.2 Manage Transition of Services	12/2/13	8/21/14	262 edays
72	2.5.3 Manage Tools Implementation Project	12/2/13	9/29/14	301 edays
73	2.5.4 Manage Operational Readiness Project	12/2/13	7/30/14	240 edays
74	**2.5.5 Manage DPH Migration**	**12/2/13**	**9/28/14**	**215 days**



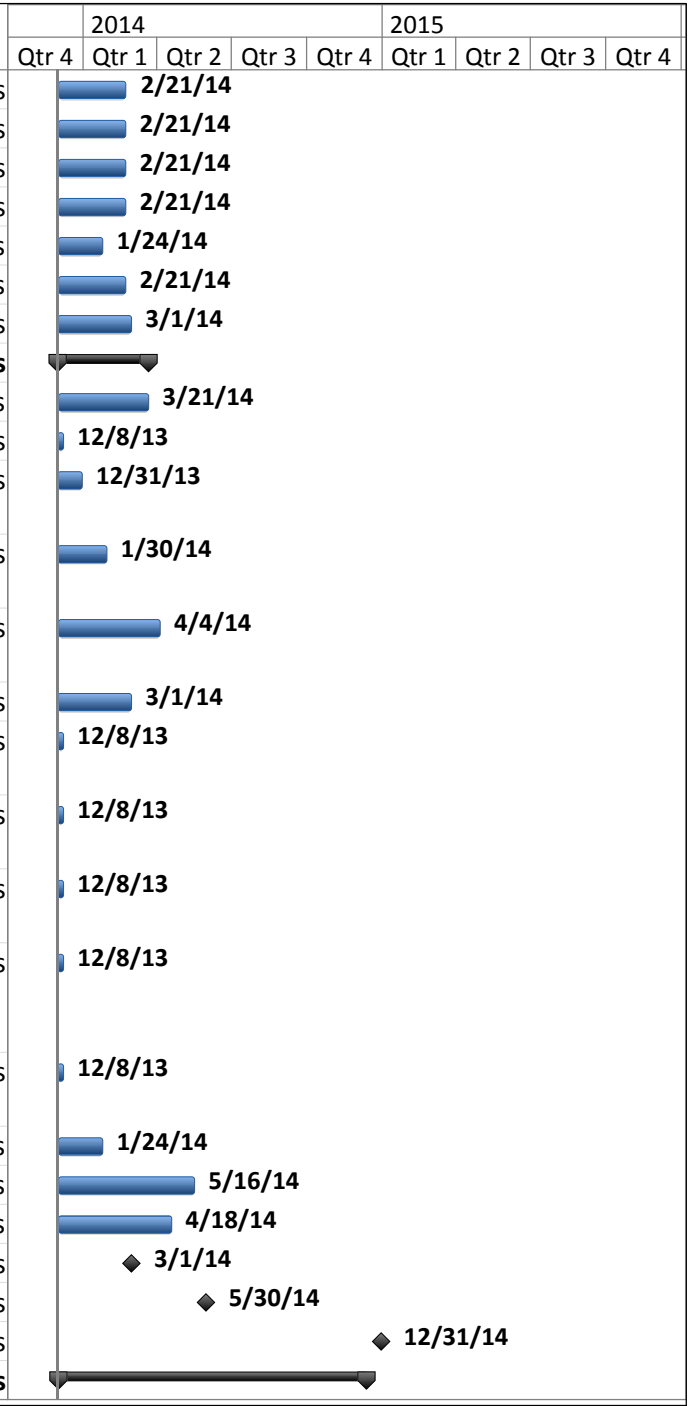
ID	Task Name	Start	Finish	Duration
75	2.5.5.1 Manage DPH Move Group 1	12/2/13	9/28/14	10 emons
76	2.5.5.2 Manage DPH Move Group 2	12/2/13	9/28/14	10 emons
77	2.5.5.3 Manage DPH Move Group 3	12/2/13	9/28/14	10 emons
78	2.5.5.4 Manage DPH Move Group 4	12/2/13	9/28/14	10 emons
79	2.5.5.5 Manage DPH Move Group 5	12/2/13	9/28/14	10 emons
80	2.5.6 Conduct Deployment Checkpoint Review	12/2/13	12/2/13	0 days
81	2.5.7 Hold the Services Operational Readiness Review (ORR)	12/2/13	12/2/13	0 days
82	2.5.8 Final Go-Live (Cutover)	12/2/13	12/2/13	0 days
83	**2.6 Handover and Close to Steady State**	**6/1/15**	**6/22/15**	**15 days**
84	**2.6.1 Transition Feedback**	**6/1/15**	**6/22/15**	**15 days**
85	2.6.1.1 Prepare to Seek Transition Feedback	6/1/15	6/8/15	7 edays
86	2.6.1.2 Gather and Submit Transition Feedback	6/8/15	6/22/15	14 edays
87	2.6.2 Review Initial Operational Reports with Client	6/1/15	6/2/15	1 eday
88	2.6.3 Customer Close-Out Transition	6/2/15	6/3/15	1 eday
89	2.6.4 Hand Off Out of Scope Opportunities to Account Project Office	6/1/15	6/2/15	1 eday
90	2.6.5 Handover to Service Delivery	6/2/15	6/3/15	1 eday
91	**2.6.6 Finalize and Manage Lessons Learned**	**6/3/15**	**6/11/15**	**6 days**
92	2.6.6.1 Finalize and Submit Transition Management Phase Lessons Learned	6/3/15	6/10/15	7 edays
93	2.6.6.2 Identify Vital Few Deals and Communicate Accordin	6/10/15	6/11/15	1 eday
94	2.6.6.3 Prepare for Lessons Learned Review for Transition Management Phase	6/3/15	6/10/15	7 edays
95	2.6.6.4 Schedule and Conduct Lessons Learned Review Transition Management Phase	6/10/15	6/11/15	1 eday
96	2.6.6.5 Drive Lessons Learned Action Items	6/11/15	6/11/15	0 hrs
97	2.7 MS - Program Management Tasks Complete	6/22/15	6/22/15	0 days
98	2.8 PMS-6 - Detailed Transition Plan Complete	8/4/14	8/4/14	0 days
99	**3 CoPA Transition**	**12/1/13**	**12/31/14**	**282 days**
100	3.1 MS - Transition Start	12/2/13	12/2/13	0 days
101	3.2 Conduct Transition of Services Project Kickoff Meeting	12/2/13	12/4/13	3 days
102	**3.3 Transition of Services Project (Enable Common Service Portfolio)**	**12/1/13**	**12/3/14**	**262 days**
103	3.3.1 MS - TOS Start	12/4/13	12/4/13	0 days



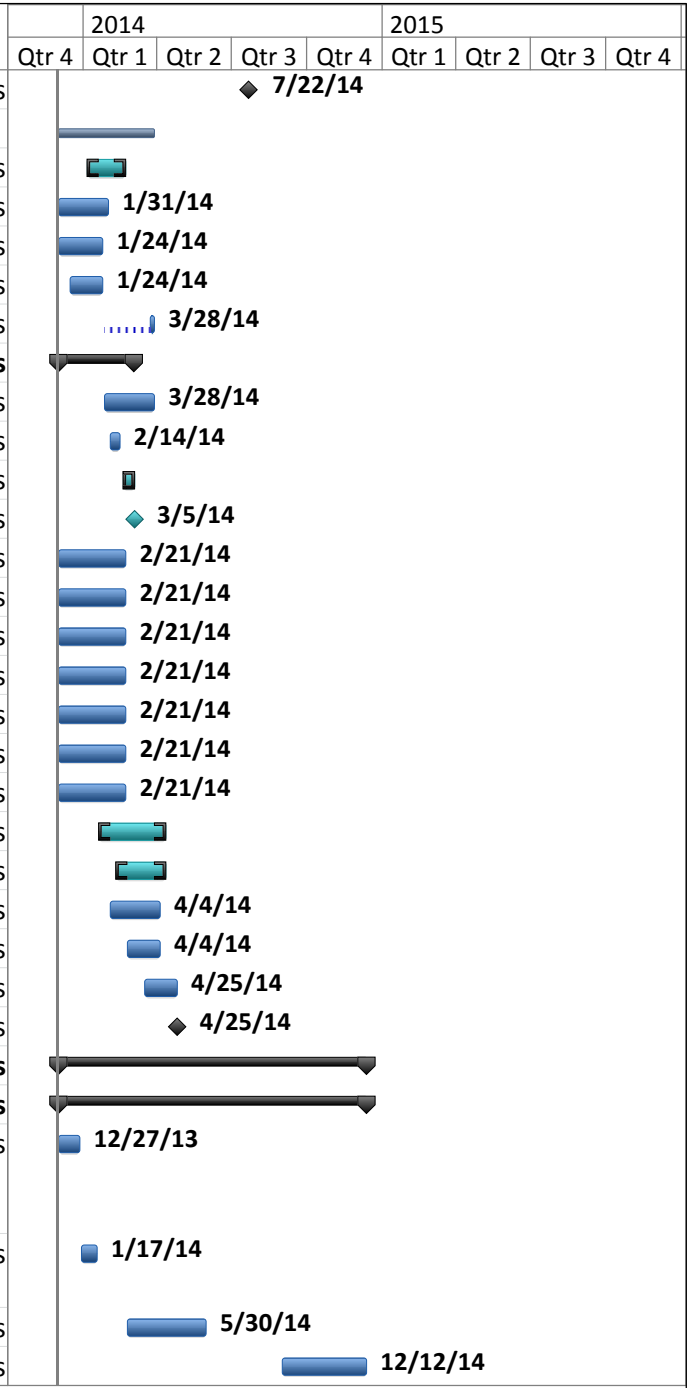
ID	Task Name	Start	Finish	Duration
104	**3.3.2 Assess CoPA Current Environments**	**12/1/13**	**6/27/14**	**150 days**
105	**3.3.2.1 Knowledge Transfer activities**	**12/1/13**	**6/27/14**	**150 days**
106	3.3.2.1.1 Review ADDM Results EDC and DPH	12/1/13	1/30/14	60 edays
107	3.3.2.1.2 Review ADDM results DOR, DLI, DPW, DOH, PSI	12/1/13	1/30/14	60 edays
108	**3.3.2.1.3 D-10 - Gap Analysis Report**	**5/16/14**	**6/27/14**	**30 days**
109	3.3.2.1.3.1 D-10.01 - Gap Analysis Report	5/16/14	5/16/14	0 days
110	3.3.2.1.3.2 D-10.02 - Gap Analysis Report - Present results and roadmap	6/27/14	6/27/14	0 days
111	3.3.2.2 PMS-5 - Data Gathering	5/16/14	5/16/14	0 days
112	**3.3.3 Setup the Account Team**	**12/2/13**	**12/3/14**	**262 days**
113	**3.3.3.1 Organizational Change Control Components - Program and Services Management**	**12/2/13**	**12/3/14**	**262 days**
114	3.3.3.1.1 Townhall to announce Agreement	12/2/13	12/2/13	1 day
115	3.3.3.1.2 Team Meetings to discuss what this "means to	12/2/13	12/2/13	1 day
116	3.3.3.1.3 Re-Organize Account Staff to new model	12/3/13	1/13/14	30 days
117	3.3.3.1.4 Establish PMO Guidelines and Processes	12/3/13	1/13/14	30 days
118	**3.3.3.1.5 Establish Vendor and Subcontractor Manager**	**12/2/13**	**12/27/13**	**19 days**
122	**3.3.3.1.6 Staff Account**	**12/2/13**	**8/6/14**	**178 days**
144	**3.3.3.1.7 Establish PMO Leadership Team**	**12/2/13**	**1/1/14**	**22 days**
147	**3.3.3.1.8 Establish Project Management Team - TPMO and Steady State**	**12/2/13**	**1/1/14**	**22 days**
149	**3.3.3.1.9 Establish Contract Management Team**	**12/2/13**	**2/21/14**	**60 days**
158	**3.3.3.1.10 Establish Agency Account Management Tean**	**12/2/13**	**1/1/14**	**22 days**
161	**3.3.3.1.11 Establish Enterprise Architecture Team**	**12/2/13**	**1/1/14**	**22 days**
164	**3.3.3.1.12 Establish Service Excellance Office (SEO)**	**1/1/14**	**8/29/14**	**173 days**
265	**3.3.3.1.13 Establish Financial Management Team Proce**	**12/2/13**	**8/8/14**	**180 days**
273	**3.3.3.1.14 Establish Service Delivery Teams - Processes and Procedures**	**12/2/13**	**12/3/14**	**262 days**
382	**3.3.3.1.15 Training**	**12/2/13**	**5/9/14**	**115 days**
399	**3.3.3.1.16 Relocate Account Team**	**12/2/13**	**11/28/14**	**259 days**
406	**3.4 Enterprise Data Center to Managed Services Model**	**12/1/13**	**5/30/14**	**130 days**
407	**3.4.1 Perform EDC Assessment**	**12/2/13**	**2/21/14**	**60 days**
408	3.4.1.1 Identify Required Security Updates/Upgrades	12/2/13	2/21/14	60 days
409	3.4.1.2 Identify HVAC and power upgrades	12/2/13	2/21/14	60 days



ID	Task Name	Start	Finish	Duration
410	3.4.1.3 Identify physical access required for facility	12/2/13	2/21/14	60 days
411	3.4.1.4 Review BMS System quality and information	12/2/13	2/21/14	60 days
412	3.4.2 Integrate Building Management System to BMC BEM	12/2/13	2/21/14	60 days
413	3.4.3 Integrate DCIMI to BMC BEM	12/2/13	2/21/14	60 days
414	3.4.4 Implement Rackwise	12/2/13	1/24/14	2 mons
415	3.4.5 Install Electrical SubMetering	12/2/13	2/21/14	3 mons
416	3.4.6 SSAE 16 Audit of EDC	12/1/13	3/1/14	90 edays
417	**3.4.7 Knowledge Transfer activities**	**12/1/13**	**3/21/14**	**80 days**
418	3.4.7.1 Create/update Runbooks	12/2/13	3/21/14	4 mons
419	3.4.7.2 Verify CMDB contains EDC assets and Cis	12/1/13	12/8/13	7 edays
420	3.4.7.3 Document current Service Catalogs, processes and procedures are transitioned	12/1/13	12/31/13	30 edays
421	3.4.8 Multi-environments/instances are available for identified systems	12/1/13	1/30/14	60 edays
422	3.4.9 Verify High Availability, backup and DR are operational for identified systems	12/2/13	4/4/14	90 days
423	3.4.10 Verify specific details for CCPM are in KMP	12/1/13	3/1/14	90 edays
424	3.4.11 Verify Operational dashboards are in place to report on status and alerts	12/1/13	12/8/13	7 edays
425	3.4.12 Verify Service Level agreements have been identified and supporting metrics are in place	12/1/13	12/8/13	7 edays
426	3.4.13 Verify system is Operational for scheduling and tracking of ticket-based tasks and incidents (ITSM/Remedy)	12/1/13	12/8/13	7 edays
427	3.4.14 Verify system is is operational to begin data collection in order to produce Configuration, monitoring and management status reports	12/1/13	12/8/13	7 edays
428	3.4.15 Verify all Transition Orders are completed and accepted by the Commonwealth	12/1/13	12/8/13	7 edays
429	3.4.16 Implement ITIL Processes	12/2/13	1/24/14	2 mons
430	3.4.17 Complete Staffing	12/2/13	5/16/14	6 mons
431	3.4.18 Implement Tools	12/2/13	4/18/14	5 mons
432	3.4.19 PMS-13 - SSAE 16 Audit of EDC Completed	3/1/14	3/1/14	0 days
433	3.4.20 PMS-15 - EDC Transition Completed	5/30/14	5/30/14	0 days
434	3.5 MS-ToS Complete	12/31/14	12/31/14	0 days
435	**3.6 Tools Implimentation Project**	**12/2/13**	**12/12/14**	**270 days**



ID	Task Name	Start	Finish	Duration
436	3.6.1 MS - Tools Implementation Project Start	7/22/14	7/22/14	0 days
437	**3.6.2 Install BMC ITSM**			
438	3.6.2.1 Prep Foundation Data	1/6/14	2/21/14	35 days
439	3.6.2.2 Configure CFG Mgt	12/2/13	1/31/14	45 days
440	3.6.2.3 Configure Release Mgt	12/2/13	1/24/14	40 days
441	3.6.2.4 Configure Service Level Mgt	12/16/13	1/24/14	30 days
442	3.6.2.5 ITSM Configured & Tested	1/27/14	3/28/14	5 days
443	**3.6.2.6 CCPM Approach & Reviews with COPA**	**12/2/13**	**3/3/14**	**66 days**
447	3.6.3 Configure DSO - Remedy Synch	1/27/14	3/28/14	45 days
448	3.6.4 Install & Configure KM	2/3/14	2/14/14	10 days
449	3.6.5 Load KM ITSM Procedures, SC, Contract Pricing	2/19/14	3/4/14	10 days
450	3.6.6 KM Loaded	3/5/14	3/5/14	0 days
451	3.6.7 Install & Configure EDC & DPH ADDM Discovery	12/2/13	2/21/14	60 days
452	3.6.8 Install & Configure DOR ADDM Discovery	12/2/13	2/21/14	60 days
453	3.6.9 Install&Configure DLI ADDM Discovery	12/2/13	2/21/14	60 days
454	3.6.10 Install & Configure DOH ADDM Discovery	12/2/13	2/21/14	60 days
455	3.6.11 Install & Configure PSP ADDM Discovery	12/2/13	2/21/14	60 days
456	3.6.12 Install & Configure DPW Discovery	12/2/13	2/21/14	60 days
457	3.6.13 Install BPPM/BEM/SIM Monitoring & Integration	12/2/13	2/21/14	60 days
458	3.6.14 Configure Availability Management	1/20/14	4/11/14	60 days
459	3.6.15 Configure Capacity Management	2/10/14	4/11/14	45 days
460	3.6.16 Install & Configure Bladelogic for Servers (EDC	2/3/14	4/4/14	45 days
461	3.6.17 Configure Standard Reporting BMC	2/24/14	4/4/14	30 days
462	3.6.18 Configure Pureshare Dashboards	3/17/14	4/25/14	30 days
463	3.6.19 ITSM Configured for Operations	4/25/14	4/25/14	0 days
464	**3.6.20 Security Tools**	**12/2/13**	**12/12/14**	**270 days**
465	**3.6.20.1 Data Loss Prevention**	**12/2/13**	**12/12/14**	**270 days**
466	3.6.20.1.1 Perform requirements gathering and design the data center DLP solution to monitor the datacenter egress points	12/2/13	12/27/13	20 days
467	3.6.20.1.2 Implement pilot solution and configure DLP policy on one egress point	12/30/13	1/17/14	15 days
468	3.6.20.1.3 Implement DLP solution for DCM Phase 1	2/24/14	5/30/14	70 days
469	3.6.20.1.4 Implement DLP solution for DCM Phase 2	9/1/14	12/12/14	75 days



ID	Task Name	Start	Finish	Duration
470	**3.6.20.2 Database Firewall (DBFW)**	**1/6/14**	**12/12/14**	**245 days**
471	3.6.20.2.1 Perform requirements gathering and design the data center DBFW	1/6/14	1/31/14	20 days
472	3.6.20.2.2 Implement pilot solution and configure DBFW	2/3/14	2/21/14	15 days
473	3.6.20.2.3 Implement DBFW solution for DCM Phase 1	2/24/14	5/30/14	70 days

3.1.1 Multi Datacenter Environment (2+ Architecture)

The Offeror must provide a multi datacenter environment. All datacenters will be managed and maintained by the Offeror, including the Commonwealth's EDC and may be either a standalone facility, or integrated into existing qualified facilities. The multi datacenter environment is to facilitate high availability, capacity on demand, and the recovery of applications and Services that are deemed critical to the Commonwealth. The multi datacenter requirement is to provide a minimum of two datacenters. The Offeror may propose additional capacity and Services utilizing additional facilities beyond the two required datacenters.

Reference Documentation

Schedule E – Datacenter Locations

Exhibit A - Commonwealth Network Environment

Exhibit(s) D.1 through D.15 – Enterprise Datacenter (EDC) Exhibits

	Requirements	Describe Compliance
1.	The Offeror's datacenter architecture must consist of multiple geographically disbursed datacenters. Any datacenters being used in a back-up function must be at least 50 miles apart from the associated primary location for the service.	Offeror must describe the process of establishing a multi datacenter environment, including facility management, resource sharing, operational coordination, and inter-datacenter communications. Provide proposed datacenter architecture and locations. Using **Schedule E – Datacenter locations**, the Offeror must list the address of all proposed Datacenter locations that will host the Commonwealth's applications and data.
2.	Tier III equivalent datacenter facilities proposed by the Offeror must have had consistent availability of 99.99% in the past six months as of December 31, 2011.	Offeror must provide current availability reports of its proposed datacenter(s) with its submittal.

3.	The EDC assets will be managed and maintained by the Offeror. The current maintenance contract for the EDC servers is scheduled to expire on June 30, 2014.	Offeror must describe its approach to transition operations and management of the EDC infrastructure from the Commonwealth to the Offeror's support Services and how it intend to address the server maintenance expiration issue.
4.	Each datacenters will have the capability to provide DR for the other, for identified critical applications.	Offeror must describe the process of providing DR for critical applications from one datacenter to the other. Also, describe additional DR Services if included in the overall proposed offering.
5.	Datacenter sustainability.	Offeror must describe its methods of achieving datacenter sustainability, such as realizing a low Power Usage Effectiveness (PUE) ratio.
6.	Robust physical security, including biometric access control, video surveillance, and routine security officer patrols.	Offeror must describe its security methods and techniques that will be used to protect Commonwealth computing assets and ensure compliance with Commonwealth security requirements.
7.	In a datacenter environment that hosts both Commonwealth and non-Commonwealth clients, segregation of Commonwealth data, and computing resources from other clients' data and computing resources. The Offeror is required to provide system and data segregation between different agency application environments. Note: The Offeror may not use the EDC to provide services to Non-Commonwealth clients. The Commonwealth may permit the Offeror to provide services to COSTARS members if written permission is granted by the Commonwealth.	Offeror must describe its approach to provide Services in the event a datacenter will be shared with a non-Commonwealth client, describe how segregation of resources will be achieved and maintained. Offeror must describe how systems and data segregation can be maintained between different agency application infrastructure environments.

8.	Elastic datacenter infrastructures to accommodate variable workloads.	Offeror must describe its computing and networking capabilities that will accommodate the growth or contraction of workloads.
9.	24/7/365 staffing.	Offeror must describe the staffing model used to provide 24/7/365 staffing. Operations staff, technical support staff, security staff, and management. Offeror must address how it plan to manage security/background checks, monitoring and reporting on employees and how it will coordinate those requirements with Criminal Justice agencies.
10.	Common work and meeting space.	Offeror must describe its capabilities to accommodate meeting and workspace for Commonwealth and Offeror IT staff and management.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

Offeror Response

4 DR Services

4.A Each datacenters will have the capability to provide DR for the other, for identified critical applications.

The Unisys data center architecture provides an operational model that supports a strategic intent of maturing the Commonwealth's disaster recovery posture. Unisys selection of sites was from its team's portfolio of sites and beyond. The selection criteria included criteria based on the Commonwealth's IT Strategic Plan published in late 2011 for operational characteristics that are required in facilities supporting the Commonwealth. The evaluation of sites over the last 18+ months has always included a mutual DR characteristic. With the [redacted] sites, Unisys has sites that can back each other up. Each has similar facilities infrastructure designed to provide a site ready to operate for the other where applications require.

Examples where this is the case appear throughout the solution such as the placement of the production Unisys mainframe in [redacted] with a DR peer in the [redacted] In fact, where [redacted] was once a cold and warm DR site, now those application

environments are in the [redacted] and [redacted].

In addition, Unisys is able to adjust and widen its DR approach where cost or design dictate. An example is the incorporation of the existing use of the [redacted] facility into the data center fabric as a continuing cold site option for the IBM mainframes. The [redacted] facility is also available to support geographic separation for disaster recovery as the Commonwealth's business or policies change.

While these stand as options, Unisys decisions on how production, test, development, and DR systems are deployed are not assumed. Agency use, including the use of the [redacted] as a participant in the architecture, will be a result of collaboration between the Unisys team and the agency in determining the best deployment for the best cost that meets an application's operating needs.

For example, the Department of Labor and Industry's application DR solutions may be migrated to the data centers in a number of ways, all of which Unisys will call on DLI for review and approval. In this case, specifically, the Unisys migration team along with its architecture, facility and space management teams will work to gain DLI's insight and counsel to collaborate on the best solution for DLI.

For more information and greater detail on the Unisys disaster recovery services please see Schedule F, Sections 3.2.1.5.2 "IT Service Continuity Architecture", 3.2.2.4 "DR Planning and Testing" and 3.2.5.3 "DR Infrastructure on Demand".

7 System and Data Segregation

7.A "In a datacenter environment that hosts both Commonwealth and non-Commonwealth clients, segregation of Commonwealth data, and computing resources from other clients' data and computing resources.

Offeror must describe its approach to provide Services in the event a datacenter will be shared with a non-Commonwealth client, describe how segregation of resources will be achieved and maintained."

Unisys data center architecture provides for secure physical and logical separation from any adjacent facility or campus occupants, including an ability to provide similar segregation within the Commonwealth's IT services area. The Commonwealth's IT environment is secure physically and logically from other potential occupants of the facilities supporting it.

At the [redacted] facility, the Commonwealth environment will occupy an entire "data center vault" at the facility and have its own secure entrance and facility infrastructure. No other facility customers from the other data center vaults are able to access the Unisys Commonwealth data center vault. Additionally, within the vault, 12 ft. tall cage mesh partitions can be used to separate different environments and systems as required.

At [redacted] the Commonwealth of Pennsylvania environment takes a secure data center area with security access controls and power and cooling infrastructure. In addition, the Commonwealth may select to install security caging with "slab-to-slab" steel wire-mesh fencing using the cages listed within the Enterprise Services Catalog or to a custom size via a service request.

3.2.1.5.2 IT Service Continuity Architecture

The Offeror's IT Service Continuity Architecture will provide tiered DR capabilities and Services for applications that have been identified by the Commonwealth. The Offeror must provide a Service Continuity solution that includes DR computing, storage, networking systems and recovery processes and will be included in the overall Commonwealth architecture design. Only critical applications and associated equipment identified by the Commonwealth will be addressed with DR systems. Additional information regarding Tiered Service Delivery and Tiered DR can be found in referenced supporting exhibits.

The Commonwealth will lead the Business Continuity effort with assistance from the Offeror.

Reference Documentation

Schedule J.1 - Datacenter Service Level Management

Requirements		Describe Compliance
1.	DR Architecture and Plan will be documented by the Offeror and approved by the Commonwealth.	Offeror must describe its infrastructure and service offering for a DR and Business Continuity Plan.
2.	IT Service Continuity Architecture and Plan - Backup hardware and software will be obtained, configured and available per an agreed to Service Level to process the identified critical applications. Where applicable, data will be electronically replicated (including disk-2-disk) to the backup systems (off site) to insure a successful recovery. Wherever data replication is not viable, backup tape data will be utilized.	Offeror must describe the design of its Tiered DR plan in the design of the Commonwealth technical architecture. Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the needs of the Commonwealth. Offeror must describe its process for modifying the scope/service level for DR coverage.
3.	Recovery systems must be available via network access. Routing must be configured and tested during initial system architecture design. Include the network requirements of the DR plan in the design of the network architecture.	Offeror must describe the network requirements of its DR plan in its proposed design of the network architecture.

4.	Recovery documentation for each identified system/ application will be required. Information will include the targeted backup hardware, software, networking changes, data location, restoration and access process, execution authorization, and notification to service owner when an application has been restored to service. Offeror must create recovery documentation for each system / application identified as a critical system where DR is required.	Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the tiered DR needs of the Commonwealth.
5.	A DR support plan must be created. The DR team must notify the Commonwealth when a recovery plan will be put into action, and must manage questions and issues that may arise after implementation. Create a DR team that will manage the execution of the DR plan from declaration to recovery when required.	Offeror must provide at least one relevant example from a prior engagement, in which it was engaged, that is similar to the DR needs of the Commonwealth.
6.	For critical systems identified as having a current tested DR Plan within the DPH, the Offeror will update the associated DR test plans for the new target environment. Successful testing of each revised DR Plan is required prior to Commonwealth acceptance.	Offeror must provide its approach to creating and testing DR Plans.
Deliverables		
Deliverables are defined in **Schedule K – Key Program Deliverables**		
Offeror Response		

3 DR, Recovery Systems

3.A Recovery systems must be available via network access. Routing must be configured and tested during initial system architecture design.

Include the network requirements of the DR plan in the design of the network architecture.

Offeror must describe the network requirements of its DR plan in its proposed design of the network architecture.

The Unisys solution leverages the same network for DR as it does for Production applications. The Unisys solution meets the COPANET connectivity requirements by connecting locally at EDC via 2x 10Gb Ethernet and via 1 x 1G Ethernet connections to one of several possible COPANET locations; the exact COPANET location in Harrisburg will be determined during the data gathering activities.

In addition to utilizing the EDC, a new data center will be utilized – [redacted]. In the [redacted] a new connection to the existing COPANET node will be built, as described above, using two 10Gb fiber connections within the Commonwealth Technology Center [redacted] Since the distance to connect the EDC to COPANET is so short, these connections will not require a WAN circuit to be installed, thus saving cost. The 1 Tech Park connectivity is shown on the far left in the diagram below (**Figure 3.2.1.5.2-1**)

[redacted]

Figure 3.2.1.5.2-1 – Commonwealth Network Architecture

On the right side of the diagram above, the COPANET connection to [redacted] is shown. Based on predicted future usage, the [redacted] data center will be connected to COPANET via a 1 Gb circuit. To prevent a single point of failure in the connection to COPANET, the two (2) 10G WAN circuits that run between the EDC and [redacted] will be used to reroute any COPANET traffic should there be a telco link failure. The locations being considered to terminate the [redacted] circuit are 555 [redacted]

[redacted] is connected to the Commonwealth using an Internet VPN tunnel terminated in both EDC and [redacted]. [redacted] has a large amount of commercial Internet bandwidth available from multiple telco providers. Should direct connectivity to the Verizon PIP network be required, Unisys will terminate Commonwealth provided PIP circuits on Unisys owned and managed equipment at the data centers.

A deeper technical description is provided in section F.3.1.2 Network and Security Architecture.

This page intentionally left blank.

3.2.4.2 Storage Management

The Storage Management service will provide hosting and operational support Services for storage management systems. Storage management systems must be maintained at current support levels for optimal performance, recoverability, and secure operations. Systems will be located in the Offeror's datacenters. The Offeror must support the hardware and software components of these systems.

The proposed storage management service and solution must address adherence to multiple security and compliance requirements relating to the storage and management of multiple types of data assets (e.g. CHRIA law, criminal history).

Requirements		Describe Compliance
1.	Monitor local operations, troubleshoot and resolve operational issues. Monitor system backup processing on a daily basis. Actively monitor the daily operations of all storage units. Maintain a log for each storage unit. Complete weekly service logs indicating the frequency logs are reviewed, and the status of the daily backup process. Create problem records for any abnormal condition and any repairs that have been made.	Offeror must describe proposed storage management Services. Offeror must identify tools it uses to support data backups including the following: • Processes and Procedures • Tools / Applications • End User Reports o Standard o Custom • Tiered Service/Support Levels • Escalation Procedures
2.	Provide appropriately trained staff that hold current manufacturer certifications for hardware and software technical support (where available). Staff will interact with vendor support Services as needed. Provide Commonwealth with a resume or CV for each operational staff member assigned to this engagement. A copy will be maintained on Offeror file including required background checks and clearances as required.	Offeror must submit a representative sample of staff resumes typically provided for these positions detailing their experience, education, and certifications.
3.	Provide platform level operational and technical support for the computing platform. Provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users. Provide a tiered level of support Services (e.g. Gold, Silver, Bronze)	Offeror must describe its approach to providing and maintaining different tiered levels of support. Offeror must provide a representative sample of available tiered service support Services.

4.	Monitor system backup processing on a daily basis. Review daily backup log for successful completion. Note failures, and correct the problem. Create problem record for any abnormal condition and any repairs that have been made. An automated software process will be utilized to report the completion status of backup processing, with electronic notification of failures sent to identified Commonwealth staff and Offeror technical support for follow up and corrective action.	Offeror must describe its approach to perform an initial review and audit of the backup policies, procedures and reports, to ensure the accuracy of the backup schedules, retention periods, target directories, and recovery point objectives. Offeror must describe its approach to identifying gaps and potential risks, and how those gaps and risks will be resolved.
5.	Ensure network connectivity, and consistent system response times. Identify automated system management tool(s) to ensure storage system availability and expected response times. Stop / Start time records will be a source of input for SLA measurements. Identify tool set(s).	Offeror must describe its real-time monitoring approach and toolset to provide and maintain network availability and performance. Offeror must identify tools it uses to support network availability and performance.
6.	Ensure storage device operating systems are maintained with the current system patch level, including firmware upgrades. Analyze monthly service patches and determine which patches need to be applied. Create a change record, log the update in the storage system log, and install based on maintenance schedule. Notify impacted Commonwealth users immediately of any unscheduled service interruptions via email/web.	Offeror must describe its approach to patch management. Offeror must identify tools used to manage system patches. Offeror must describe its approach for testing and validating updates to the OS and 3rd Party software that it supports. Offeror must describe its approach to communicating unscheduled and scheduled outages, including escalation process.

	The Offeror must document normal work hours and holiday schedules with each agency to determine the contact method and escalation process of each Commonwealth agency. Coordinate at an agency level and account for any required patching as technology upgrades require.	
7.	Utilize data storage conservation techniques such as data de-duplication or other industry standards, to reduce the overall footprint of the data.	Offeror must describe approach and toolset to meet this requirement. Offeror must describe data retention options/Services to store data for extended periods.
8.	Propose options/solutions for self-provisioning or limited self-management of storage as a service.	Offeror must describe approach and toolset to meet this requirement.
Continual Service Improvement		
9.	Reduce service risks.	Offeror must provide methods to eliminate or mitigate service risks.
10.	Improve service quality.	On a quarterly basis, Offeror must also recommend to the Commonwealth team any system changes that would be appropriate to maintain or improve SLA commitments.
11.	Improve client satisfaction.	Offeror must provide examples of previous Offeror initiatives aimed at continually improving client satisfaction.
12.	Ensure service transparency.	Offeror must provide methods and practices to ensure service transparency, providing visibility into service execution.
13.	Improve/reduce cost of service.	Offeror must provide examples of Storage Management initiatives that have been implemented or can be utilized to achieve reduced costs of Services and to meet or

		exceeded ROI (Return on Investment) analysis projections.

Deliverables

Deliverables are defined in **Schedule K – Key Program Deliverables**

Offeror Response

Introduction

The Unisys solution provides Storage Management through both EMC and IBM storage tools as well as Mainframe-based tools for storage dedicated to the Mainframes. These tools provide Unisys with the means to monitor and manage storage to the Commonwealth's requirements.

The Unisys solution builds upon the EMC storage tools by relying upon the [redacted] backup software suite as well as the [redacted] storage management and monitoring software suite. [redacted] manages the daily data protection processes. [redacted] provides administration dashboards for the underlying data protection infrastructure including backup servers, storage devices, tape libraries, fibre channel switches, replication processes, virtual server instances, as well as MS SQL and Oracle.

The combination of [redacted] and [redacted] will provide the Commonwealth with a comprehensive set of data protection capabilities that stretch across multi-data center infrastructures. [redacted] centralize the management of diverse locations while delivering NAS, SAN, DAS, and WAN backup options. The product set completes the integration of tape-based and disk-based backups including client-based software that optimizes the use of the solution's [redacted] infrastructure by reducing traffic load on the network.

Unisys challenged its partner EMC to match a new market approach to providing unlimited access to backup software that uses a subscription based on the amount of data protected rather than the legacy model of selling software licenses based on the complexity of the backup infrastructure. In support of the Commonwealth's goal of achieving cost savings for quality services and to continue [redacted] long-term support of the Commonwealth, [redacted] responded with an extremely cost competitive model.

1 Storage Management Services

1.B Offeror must identify tools it uses to support data backups including the following:

Processes and Procedures,

Tools / Applications,

End User Reports (standard and custom), and

Tiered Service/Support Levels

The Unisys solution includes the [redacted] software to automate the data backup services and the [redacted] to monitor and manage to data protection policies. The

tools are integrated into the Unisys Nagios collectors within the ITSM Services so that abnormal events and backup failures result in incident tickets which are managed to resolution.

The [redacted] tool also produces detailed dashboards reporting metrics on data backup activity and correlates these to delivery of critical service level requirements for application protection. This reporting mechanism is integrated to the Real-time Dashboard maintained and managed by ITSM Services. This integration provides deep-level backup reporting to the Services Portals available to Commonwealth service managers and staff who can access these dashboards for up-to-date reporting on the Service Level metrics that roll up into the Commonwealth SLAs for Backups and Restores.

The Unisys solution manages Backup services within the Infrastructure Architecture framework described in F.3.2.2.2 (Infrastructure Architecture).

The available ITSM Capacity, Tiered Service Levels, Tools, and End User Reports that are integrated into the Backup Service components are described in detail in Section 1 of Schedule F, Section 3.2.3.2 (Site Operations).

These are the additional tools provided in the Enterprise Services Catalog for replication services within and between data center locations.

[redacted]

The diagram below illustrates a feature available in the Enterprise Services Catalog that is alluded to in the Commonwealth's Disaster Recovery and Business Continuity requirements: the ability to have 3 copies of synchronized data across various data centers. The Unisys solution assumes that the platinum application availability is achieved by building upon application-based data replication that the application can manage to failover in clustered configurations.

The [redacted] product is proposed to manage the requirements for triple data copies. This configuration shown in **Figure 3.2.4.2-1** can be ordered from the Enterprise Services Catalog and then tested to the Commonwealth's most critical application's failover requirements.

The [redacted] can already provide seamless failovers at the server/host layer for Windows and Linux servers running on VMware. As the Commonwealth might expect EMC puts a high priority on integration testing with all of the product lines from its subsidiary VMware and this strategic partnership remains part of the EMC's long-term strategy of providing increased value in the server and application layers.

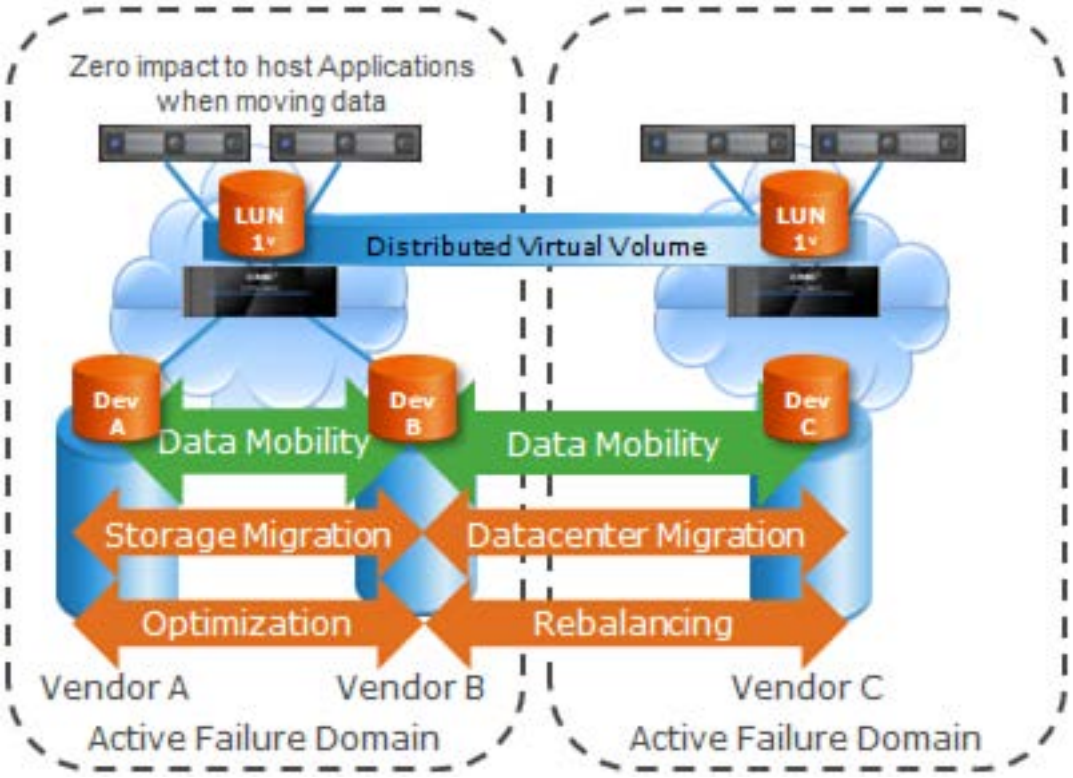

Figure 3.2.4.2-1 - [redacted]

[redacted]: Storage Virtualization and Data Protection

Figure 3.2.4.2-2 illustrates how the EMC's product will allow the Unisys Team to provide value across heterogeneous storage environments. The Commonwealth can select the [redacted] solution in the Enterprise Services Catalog as well as the R[redacted]t solution so that Agencies can migrate data into the Unisys-managed data centers and leverage existing storage assets until the end of their service life.

The V[redacted] configuration is also the means by which Unisys is able to offer the very fast Recover Time Objectives as well as Recovery Point Objectives that can offer near-zero data loss in the event of a disaster. These offerings are summarized below in Section 5.B as the Tier 5 and Tier 6 Disaster Recovery service offerings.

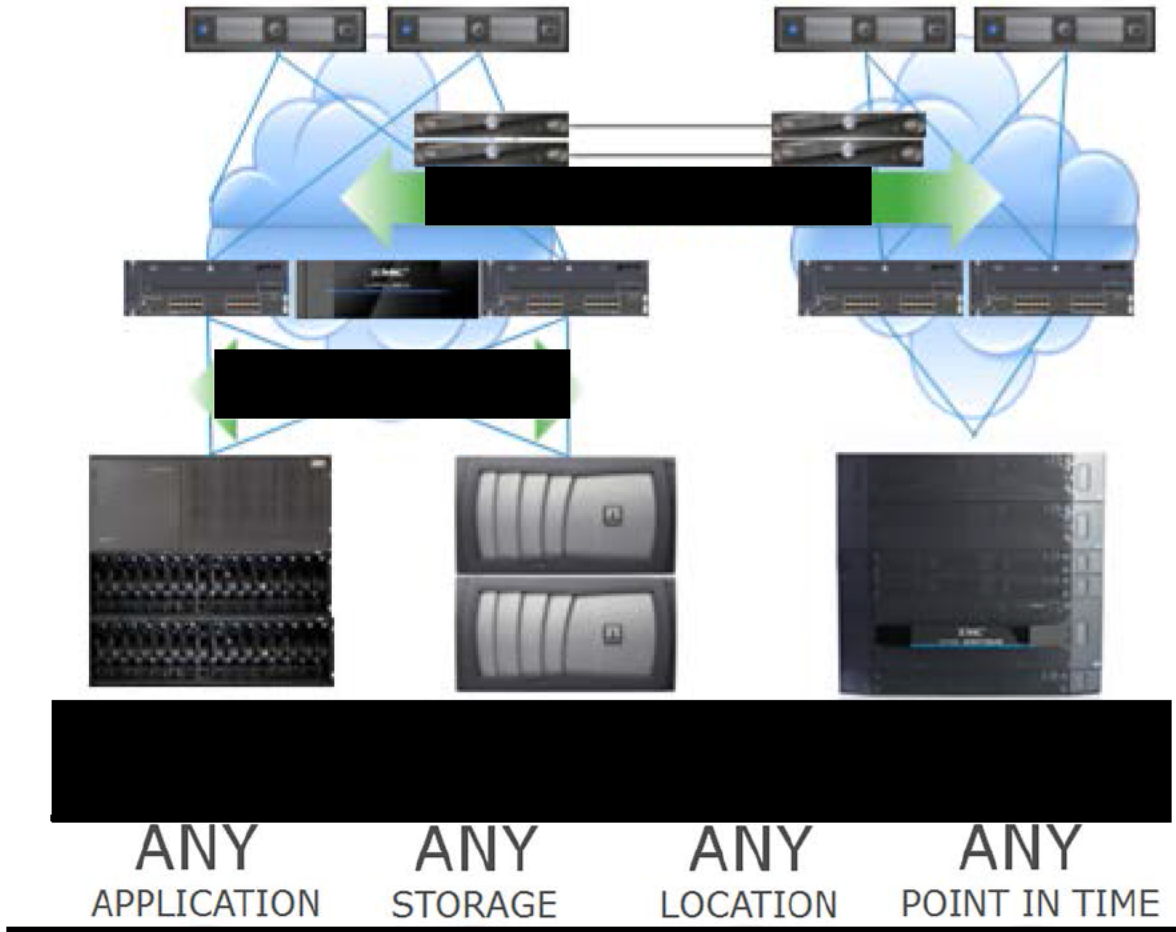

Figure 3.2.4.2-2

Figure 3.2.4.2-3 below shows the failover capabilities of the storage platform in the Unisys solution. The modular frames in the Unisys N+1 architecture can be configured in pairs to further increase the reliability and resiliency of the underlying Storage infrastructure.

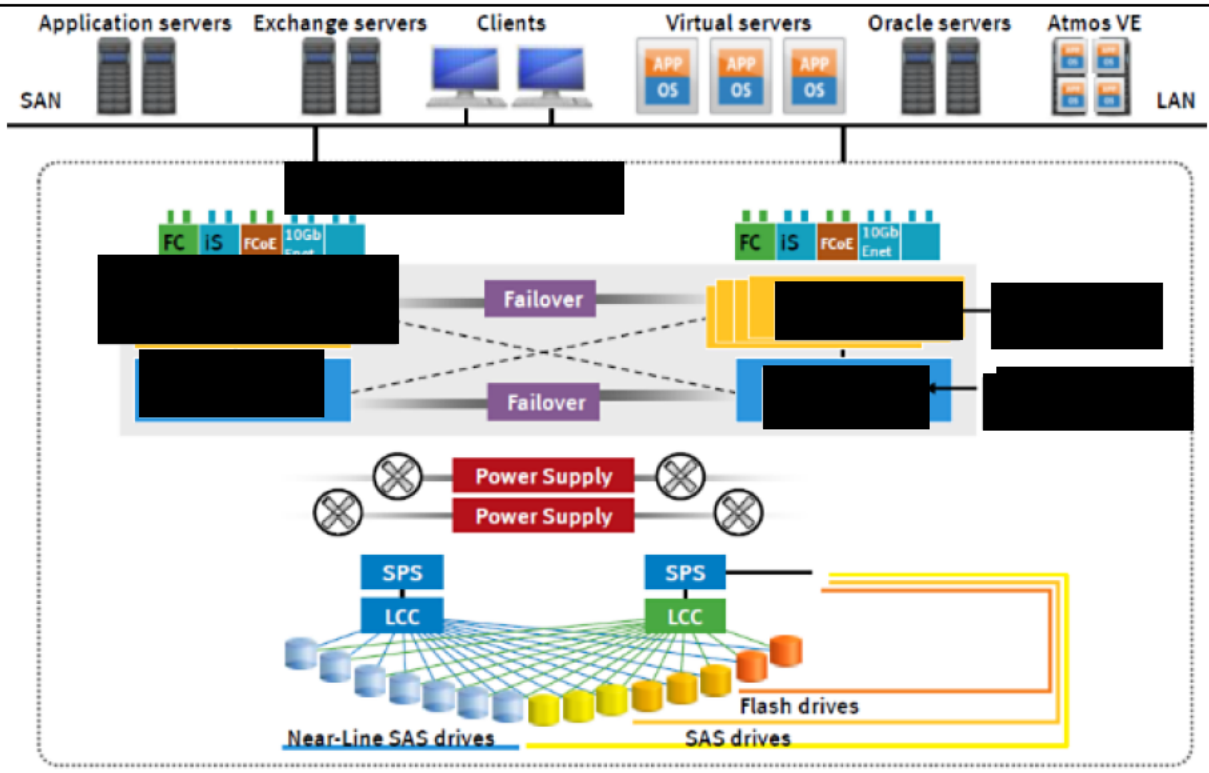

Figure 3.2.4.2-3 - [redacted]

The primary storage trends over the last two decades have reflected the increasing feature sets of mid-tier modular frames. Thus feature sets that customers paid a high premium for in Mainframe-class monolithic storage frames are, over time, refined and offered in the mid-tier frames. No company has been more successful in this storage trend than EMC, and this accounts for its majority market share in the industry. The [redacted] product series takes advantage of the [redacted] software, offered within the Unisys solution, to manage communications between servers and storage. This replicates the process that occurs in the storage controllers of large storage frames and allows a pair of separate [redacted] storage frames to appear as a single entity to the servers through [redacted].

[redacted]

The [redacted] in **Figure 3.2.4.2-4** provides a cost-effective way of integrating diverse storage frames from different vendors and from different frame models from a single vendor and virtualize the storage in a manner that servers are unaware of the storage hardware beneath the [redacted] layer.

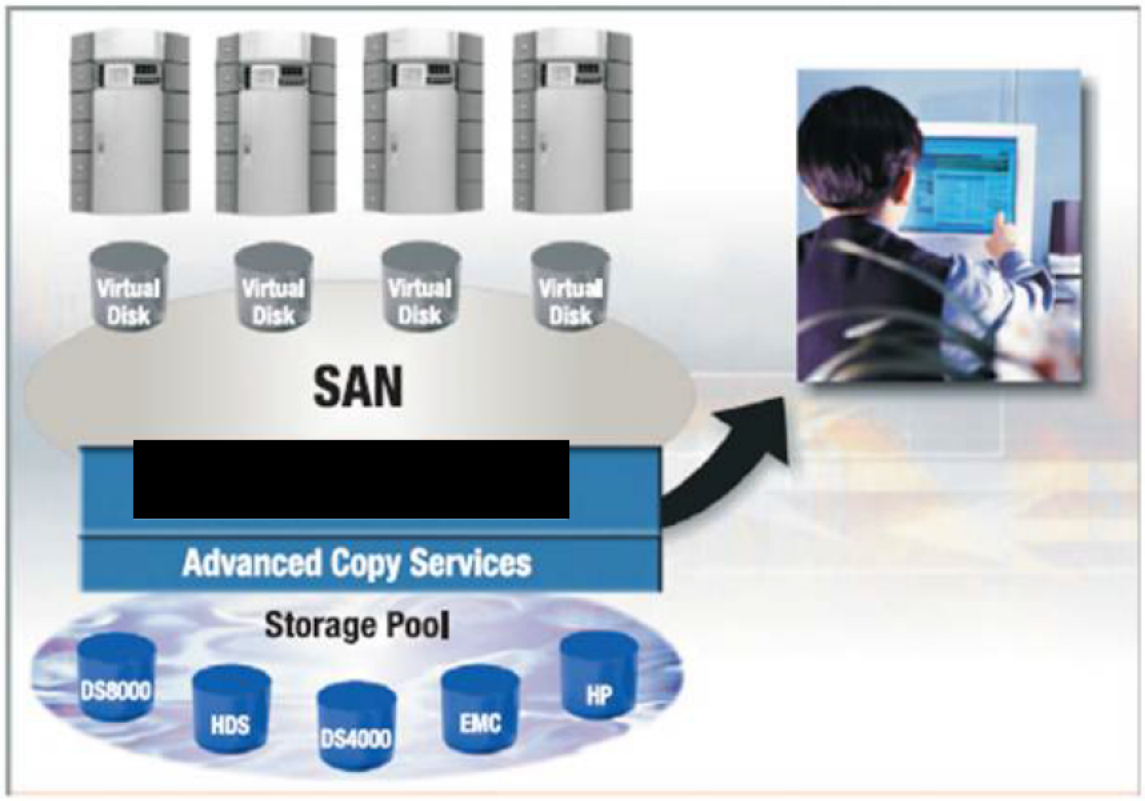

Figure 3.2.4.2-4 - [redacted]

[redacted] is designed to help increase the amount of storage capacity that is available to host applications. By pooling the capacity from multiple disk systems within the SAN, it helps enable storage administrators to reach beyond traditional islands of SAN storage and deploy storage in ways that can help best meet the needs of host applications.

Because the SVC hides the physical characteristics of storage from host systems, [redacted] is designed to help insulate host applications from physical changes to the storage pool. This ability can help applications continue to run without disruption as Unisys makes changes to the storage infrastructure. This will increase availability of Commonwealth services because a hardware refresh of storage frames can be conducted without disruption to the Commonwealth's servers providing access to data even when the replaced storage frame has been evacuated of data and unplugged.

End User Reports

- Standard Reports are summarized in 3.3.2.
- Custom Reports are offered by Unisys via the Enterprise Services Catalog

Tiered Service/Support Levels

The Commonwealth of Pennsylvania has indicated in Schedule J.2 - Datacenter Service Level Matrix the desired service tiers/support levels. In the design of the Services and the infrastructure needed to deliver those Service to the Commonwealth, the Unisys Team defined the Service Tiers to align to those requirements. A fuller explanation and representative sample

of all the Services provided in this structure can be found in the response to Section 3.2.1.5 sub-requirement 1.

4 System Backup Review and Audit, Gap Assessment

4.B Offeror must describe its approach to identifying gaps and potential risks, and how those gaps and risks will be resolved.

During transition and transformation, the Unisys solution includes an extended onsite presence of an [redacted] technical manager who aids the Unisys Team in the search for existing gaps and risks, along with potential improvements to the backup systems during the transition phase of the solution. This technical expert has extensive experience in implementations and in identifying value-add opportunities. The skills of this technical expert are married to the Unisys Team's extensive expertise around current backup operations. Jointly they lead the transition to the more cost effective [redacted] backup infrastructure. The Unisys Team, also working with the [redacted] technical manager, manages the review and audit of backup clients that move from the legacy system into the [redacted] system. During transition a like-to-like set of backup policies, procedures, reports, schedules, retention periods, target directories, and recovery point objectives are built out. The Unisys Team can then present the Commonwealth opportunities to further optimize the infrastructure to improve the quality of services or provide better cost efficiencies for the same services.

The Unisys Backup team is also able to compare the Backup inventory of clients and policies to the CMDB inventory to locate "negative" gaps in case a server or critical data set is introduced into the Fully Managed environment and, through unlikely process failures, was not protected with sufficient backup resources. The Unisys governance processes and the processes generated by the Unisys solution's Enterprise Services Catalog are designed to remove such failures. Additionally, a compare of Backup infrastructure inventory from the backup tools perspective with the CMDB can locate a gap should one occur as an additional level of protection The activities to perform the gap analysis are described in F.3.2.4.2, Requirement 4.

4.G An automated software process will be utilized to report the completion status of backup processing, with electronic notification of failures sent to identified Commonwealth staff and Offeror technical support for follow up and corrective action.

This is included as part of the [redacted] tools as described above in Section 4.D/E.

7 Data Storage Approach and Toolset

7.A Utilize data storage conservation techniques such as data de-duplication or other industry standards, to reduce the overall footprint of the data.

Offeror must describe approach and toolset to meet this requirement.

Offeror must describe data retention options/Services to store data for extended periods.

Unisys offers the Commonwealth the [redacted] platform and the [redacted] of backup software to achieve data de-duplication. [redacted] offers the Commonwealth a means to utilize de-duplication not only at the target backup media to reduce capacity but also

de-duplication at the source of the data the Commonwealth server that is backed up. This latter capacity reduces network load due to backups and speeds up the backup process by using hashed handshakes between backed-up server and the backup server.

Figure 3.2.4.2-5 below shows the basic concepts of [redacted] client and target based deduplication.

The [redacted] integration will now allow large servers that support Commonwealth applications to be backed up by using the very fast Fibre Channel (FC) to write directly to the [redacted] disk target. In some cases where very little has changed on a server, almost no data will be transferred because the [redacted] already has the unchanged blocks on disk. This will speed up the backups for the Commonwealth's most critical database application servers.

Within the Unisys solution, the large database infrastructures will [redacted]" to deduplicate data at the client side to avoid any network transfer at all for blocks of data that were sent in previous backups.

The tight integration of [redacted] reduces the bandwidth required on the IP data network, as well as the disk capacity required. And, because this support offers both client-side deduplication and support of the Fibre Channel protocol using a backup-to-disk workflow, the old VTL 'tape-based' management can be reduced to only appropriate point solutions. This means greater reliability and less complexity. This support also enables all the features that [redacted] and [redacted] offer, including virtual synthetic full backups, clone controlled replication, and global deduplication.

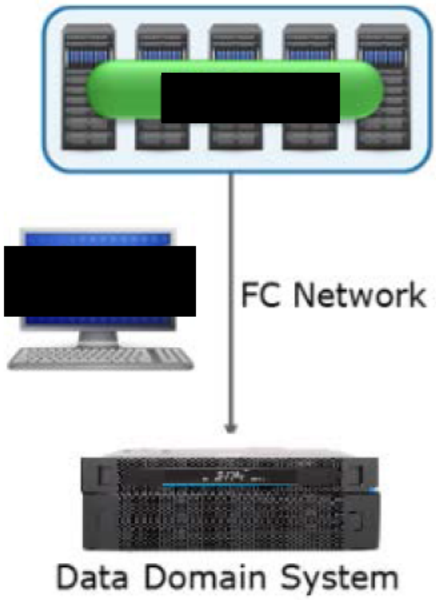

Figure 3.2.4.2-5 – [redacted] Deduplication

Unisys also considered the option of implementing Thin Provisioning for the Commonwealth because this is an industry-standard tool used to reduce storage foot print although it is not widely used. Thin Provisioning would allow a vendor to report that 2 TBs of storage had been allocated to a server but the server would only be provided with a stub or an IOU that would be filled only as the server began to fill up the space with actual data. However Thin Provisioning also brings with it significant risk of performance impacts. Basically if a vendor has "thin provisioned" 1,000 TBs but has only provided 100TBs of actual disk to meet data requests then the I/O demand on the actual disk provisioned is 10 times greater than if the 100TBs had actually landed on 1,000 TBs of actual disk. Unisys would like to caution the Commonwealth to consider both the billing and performance implications of any solutions that represent "Thin Provisioning" as a significant cost saver: That savings comes with a high I/O performance penalty and removes transparency by disconnecting billing statements based on Thin Provisioned storage from the actual storage hardware and software that provide capacity-based performance.

13 CI Reduce Cost of Service

13.A Improve/reduce cost of service.

Offeror must provide examples of Storage Management initiatives that have been implemented or can be utilized to achieve reduced costs of Services and to meet or exceeded ROI (Return on Investment) analysis projections.

The Service Excellence Office will proactively manages quality, continuous service improvement, ITIL process management, and customer satisfaction through a comprehensive quality plan that specifically addresses all of these areas. We believe this is a key differentiator in our partnership with the Commonwealth. Through this new organization and these quality plans, Unisys will drive best in class services and the highest customer satisfaction experience, while reducing overall costs to the Commonwealth.

Please refer to Schedule F, Section 3.2.1.1.6 Continuous Service Improvement for additional details in this area.

A few examples of Storage Management Continuous Service Improvement that have been implemented or can be utilized to achieve reduced costs of Services and to meet or exceeded ROI (Return on Investment) analysis projections are outlined below:

Storage Management

The DPH has implemented Distributed File Systems (DFS) to replicate our DPH File Server down to [redacted] In the event of a true disaster, files to perform our duties during and after the DR will be available. Data replication occurs in real time and is de-duplicated over the wire thus saving bandwidth on the WAN link. This confirms that our documentation, recovery scripts and procedures are current and accessible at all times to support Commonwealth agencies during disaster recovery drill and in the event of an actual disaster. By avoiding having to ship tapes containing this information to [redacted] and having to restore them, Unisys has improved the recovery time objective for disaster drills and disaster events.

Storage Management

As part of the DPH's continuing improvements in its backup infrastructure, the DPH has improved the successful recovery an 8TB database archive for IES from 10.7 hours down to nearly 4 hours by improving the bandwidth from .75Tb/hour to 2TB/hour. The DPH

accomplished this by bypassing the AIX VIO Shared Ethernet Adapter (SEA) built in restrictions and optimizing throughput between the media servers and the [redacted]

Storage Reporting - Service Level and Other Reports:

Throughout the contact, Unisys has provided a vast amount of contractual reporting to the Commonwealth. The reports include, but are not limited to Monthly Performance Reporting for each supported agency/bureau, Major reporting improvements include, Quarterly Vulnerability Reporting, Monthly XIV Storage Reporting for IES and DOR physical hosts, Monthly Storage Reports for PLCB, Monthly VMAX Storage Reports for DPW.

Storage SAN Advances:

Through advanced configuration and deployment of an Avamar grid the DPH is capable of replicating deployments of virtual servers between data centers. This capability is also leveraged for several disaster recovery scenarios including initial DR deployments and annual disaster recovery drills.

Storage Replication for DR:

Storage replication solutions have been implemented for several agencies using the latest disk to disk replication technology. These solutions have enabled a reduced dependency on tape media and drives for backup while providing a disk to disk update to offsite data supporting both data backup as well as disaster recovery requirements. Ongoing research and trials are conducted in conjunction with product support organizations to provide proper configuration and optimal performance for the technology supporting this critical managed service.

Disk-based Backup Strategy:

The Unisys solution leverages [redacted] products to facilitate disk-based backups and data replication to an offsite location. This eliminates cost and unreliability associated with tape media and significantly expedites recovery time in the event of a disaster. The implementation of a disk to disk with data de-duplication strategy for IES resulted in a significant reduction in backup and restore times for the extremely large, rapidly growing SAP data store. At the time that IES migrated to the DPH, the data store in SAP was 5 TB. This data store had previously been backed up across 32 tape drives taking close to five hours to back up. This left IES exposed to issues with tape media that would prevent the ability to restore effectively. Since their implementation, the size of the SAP data store peaked at 9 TB with performance on the disk-based backup solution enabling completion of backups in less than four hours.

Benefits to the Commonwealth

The Unisys Backup Service provides significant costs savings over those offered by competitors. The Unisys solution relies upon [redacted] and IBM technologies. Unisys challenged [redacted] to provide its premium backup infrastructure at more cost effective rates. During the Unisys BAFO efforts [redacted] provided substantial discounts in support of the Commonwealth's goal of reducing costs for critical services.

The Unisys solution for Storage Management provides interoperable, innovative automation

and integration between the Unisys ITSM monitoring and management and the standard management tool suites offered by EMC and IBM. This innovation allows the Unisys ITSM technical support staff to remove costly labor-based monitoring and escalation and provide the Commonwealth with more cost effective solutions.

The Unisys integration of ITSM monitoring and management tools with logging and alert features provided by [redacted] and IBM also provides a higher quality of services for the Commonwealth by automating incident ticket creations to engage technical staff proactively. The ITSM monitoring of event logs within Infrastructure components can create incident tickets on an initial logged event before the event cascades into a service disruption.

This page intentionally left blank.

3.2.4.7 Database Management Services

The Database Management Service will provide the Commonwealth with a "managed database" service offering. The service must include the database platform (Hardware/Software) and the ongoing database management administration Services. The Offeror must provide a multi-tiered level of service (e.g. Gold, Silver, and Bronze) across multiple database platforms. While the Commonwealth's application portfolio (over 2,000 applications) currently utilizes numerous database technologies, the majority of the applications that are utilizing database technologies are using Oracle, Microsoft SQL, IMS, Sybase, or DB2.

It is anticipated the Database Management Services will be an optional service that can be utilized by the Agencies beyond the basic infrastructure Services.

Reference Documentation

N/A

Requirements		Describe Compliance
1.	Design, manage, and administer database environments that support multiple business applications.	Offeror must describe proposed approach to designing and supporting enterprise level database platforms and Services that support multiple agency business applications.
2.	Provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users.	Offeror must describe its approach to supporting the needs of the Commonwealth including the following: • Processes & Procedures • Tiered Service/Support Levels • Tools / Applications • Escalation Procedures • End User Reports o Standard o Custom
3.	Monitor database backup and recovery processing on a daily basis.	Offeror must describe its approach to perform an initial review and audit of the backup and recovery policies, procedures

	Review daily backup log for successful completion. Note any failures, initial and date the log, and correct the problem. Create problem record for any abnormal condition and any repairs that have been made. Automated software process will be utilized to report the completion status of backup processing, with electronic notification of failures sent to Offeror technical support and identified Commonwealth staff for follow up and corrective action.	and reports, to ensure the accuracy of the backup schedules, retention periods, target directories, and recovery point objectives. Offeror must describe its approach to identifying gaps and potential risks, and how those gaps and risks will be resolved.
4.	Provide a multi-tiered level of service (e.g. Platinum, Gold, Silver, Bronze, and Basic) for Oracle, Sybase, Microsoft SQL, IMS or DB2 database platforms. Provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users.	Offeror must describe its approach to providing multi-tiered Services level.
5.	Utilize the proposed service management Services (e.g. Incident, Service Request, Change, Configuration) to manage database management Services with multiple agency customers.	Offeror must describe how its proposed database management Services will support multiple agency service requests.
6.	Provide a review and analysis of system performance/capacity to determine if current performance/capacities are sufficient to support the needs of the stakeholders.	Offeror must perform an initial review and audit of the current usage, procedures and reports and provide an analysis of the current usage, processes and reports currently being supported. Offeror must document its review and audit findings and recommendations.
7.	Monitor system backup processing on a daily basis. Review daily backup log for	Offeror must describe it approach to performing an initial review and audit of the backup policies, procedures and reports, to ensure the accuracy of the backup schedules, retention periods, target directories, and

	successful completion. Note failures, and correct the problem. Create problem record for any abnormal condition and any repairs that have been made. An automated software process will be utilized to report the completion status of backup processing, with electronic notification of failures sent to Offeror technical support, and identified Commonwealth staff for follow up and corrective action.	recovery point objectives. Offeror must describe its approach to identifying gaps and potential risks, and how those gaps and risks will be resolved.
Continual Process Improvement		
8.	Reduce service risks.	Offeror must provide methods to eliminate or mitigate service risks.
9.	Improve service quality.	On a quarterly basis, Offeror must also recommend to the Commonwealth team any system changes that would be appropriate to maintain or improve SLA commitments.
10.	Improve client satisfaction.	Offeror must provide examples of previous Offeror initiatives aimed at continually improving client satisfaction.
11.	Ensure service transparency.	Offeror must provide methods and practices to ensure service transparency, providing visibility into service execution.
12.	Improve/reduce cost of service.	Offeror must provide examples of Database Management Support initiatives that have been implemented or can be utilized to achieve reduced costs of Services and to meet or exceeded ROI (Return on Investment) analysis projections.
Deliverables

Offeror Response		

1 Infrastructure, Database Environment

1.A Design, manage, and administer database environments that support multiple business applications.

Offeror must describe proposed approach to designing and supporting enterprise level database platforms and Services that support multiple agency business applications.

As requested, the Database Management Service is available on a time-and-materials basis through the technical resources provided in the Additional Technical Services section of the proposal. The indicated functions below are provided by the database management technical resources.

The Unisys Team provides services to effectively design, manage and administer database environments that support multiple business applications. Our team is uniquely positioned to provide the Commonwealth with the Database Management services as it brings highly specialized staff and deep experience in supporting a highly available and performing infrastructure.

The Unisys Team provides the Commonwealth with 24x7 support to manage database administration, operations and availability. The following represents the Enterprise Services Catalog of Database Management Services that highlights the available services to design, manage and administer your Enterprise database solution:

Database Management Service	Description
Database Design	• Design multiple agency business application database environments • Design the database server and storage platform topologies • Design high availability and scalable solutions
Database Creation / Management	• Install and patch database software • Create and maintain shell database instance sized appropriately based on supplied requirements • Create high availability/clustered configurations where requested
Backup Management	• Create and establish database backups integrated with the larger system backup strategy • Monitor and verify successful execution, retention and storage of backups
Database Recovery	• Configure and test database recovery solutions from backup or archive log • Support Disaster Recovery planning, rehearsal and execution
Application Release Management	• Support deployment management through various test

	environments per defined work plans • Execute physical deployment of application objects within the database
Data Management and Reporting	• Refresh data from backup/export periodically • Create and execute data alteration / extract solutions periodically via supplied requirements • Standard or custom reports as requested
Proactive Database Performance Analysis	• Proactively monitor and report on database health and performance • Provide periodic reports highlighting performance trends and consumption patterns
Proactive SQL Analysis / Tuning Recommendations	• Proactively monitor and report on database SQL performance in the production environment • Provide monthly reports highlighting performance trends and a list of SQL tuning opportunities • Development of tuning options for identified performance opportunities
Provide Level 2/3 Technical Help Desk Support	• Support triage and resolution of calls from the Level 1 Help Desk • Collect and report metrics, solutions and outcomes of said support

The Unisys Team currently supports multiple agencies and applications within the Commonwealth. We have demonstrated experience successfully managing complex system topologies that support multiple applications within distinct program offices and departments. Our approach on delivering successful projects across multiple agencies requires mature project management disciplines, clearly defined service offerings and efficient and timely communication and partnership with our clients.

2 Service Desk, Tiered Support, Level 2/3 Approach

2.A Provide Level 2 and Level 3 Support to the Service Desk and/or Commonwealth Users.

Offeror must describe its approach to supporting the needs of the Commonwealth including the following:

Processes & Procedures

Tiered Service/Support Levels

Tools / Applications

Escalation Procedures

End User Reports (Standard and Custom)

The Unisys Team provides Level 2 and Level 3 Support to Service Desk and/or Commonwealth Users. The Unisys Team offers multiple levels of database support services to provide timely and efficient handling of service requests, streamlined communications and premium customer service. We provide resources with excellent communication and client service skills to effectively interact with the Service Desk as well as Commonwealth Users to manage database issues/requests.

Our Level 2 technical support provides assistance with basic functionality of the database product, such as availability confirmation, overall performance verification, credential management, authorization and authentication as well as data management services. It is anticipated that Level 2 requests are of limited complexity and usually require limited time to resolve.

The Unisys Team Level 3 technical support includes more specialized and complex services such as targeted performance tuning, database availability and recovery, liaison between application teams and product vendors, overall database configuration, high availability and redundancy management, etc. Level 3 support questions often take more than a single session to resolve, or longer than a single day of engineer time.

The following highlights our approach toward Service Desk and Commonwealth User service/problem requests:

- **Processes and Procedures** – As service requests are identified by clients, the support team logs, triages, investigates and responds to end-user problems or requests. Our team follows a documented problem and incident management process based on the ITIL methodology. Processes and procedures are documented for streamline staff integration as well as facilitating consistent service delivery and expectations. Lastly, our team will focus on timely, clear and targeted communications to effectively manage and close requests with mutual satisfaction.
- **Tiered Service and Support Levels** – The Unisys Team provides tiered services and support levels to provide Commonwealth agencies the ability to customize their support needs. Services are available through the service request process for the tiered support structure highlighted below.

Tiered Support Level	Description
Platinum	Full time resources proactively monitoring database backups. Available 24x7x365 (on-site coverage averages 96 hrs. / week) with responsiveness SLA's. Resources are vendor certified (where applicable) with over 10 years of experience
Gold	Full time resources proactively monitoring database backups. Available 24x7x365 (on-site coverage averages 80 hrs. / week) with responsiveness SLA's. Resources are vendor certified (where applicable) with over 8 years of experience

Silver	□□ Full time resources proactively monitoring providing operational status. Available 24x7x365 on-site coverage averages 60 hrs. / week) with responsiveness SLA's. □□ Resources have over 6 years of qualified experience
Bronze	□□ Shared resources proactively monitoring providing operational status. Available 24x7x365 on-site coverage averages 40 hrs. / week) with responsiveness SLA's. □□ Resources are available from a pool of qualified DBA's with over 4 years of experience
Basic	□□ Shared resources available to support requested execution of listed services. Available 8x5x365 with responsiveness SLA's. □□ Resources are available from a pool of qualified DBA's with over 2 years of experience

- □ **Tools or Applications** – In addition to standard desktop software (Office, etc.) the Unisys Team will leverage enterprise class tools to manage database access, inquiry and management. Examples include TOAD, Erwin, Enterprise Manager, Microsoft Management Studio, etc. Licensing changes for these tools may apply and, if required, the tools can be added to the Enterprise Services Catalog. In addition to the database management tools, the Unisys Team will using the enterprise system management tools described in Schedule F, Section 3.2.3.2.
- □ **Escalation Procedures** –The Unisys Team follows a standard ITIL process flow for service request escalation procedures. The Escalation approach is described in Schedule F, Section 3.2.3.2.
- □ **End User Reports (Standard and Custom)** – The Unisys Team brings highly experienced DBAs that provide not only the support in managing databases and resolving issues, but also assisting with the development of end user reports that help with the management of critical Commonwealth applications. Data Management and Reporting is a service included in our Enterprise Services Catalog and governed by the tiered support listed above.

The overall approach for providing daily operations including Processes and Procedures, Tools and Applications, End User Reports, Tiered Service / Support Levels and Escalation Procedures is described in Schedule F, Section 3.2.3.2.

This page intentionally left blank.

5. Appendix A Modifications

Appendix A modifications

As per the RFP instructions, areas of concern were included within Section 8 of our original response. As part of our BAFO response and in addition to our original proposal, Section 8, Objections and Additions to Contract Terms and Conditions, Unisys submits the following additional term and condition that Unisys would like to negotitate with the Commonwealth.

32. TERMINATION

(a) For Convenience

(1) The Commonwealth may terminate this Contract without cause by giving Contractor thirty (30) calendar days prior written notice (Notice of Termination) whenever the Commonwealth shall determine that such termination is in the best interest of the Commonwealth (Termination for Convenience). Any such termination shall be effected by delivery to the Contractor of a Notice of Termination specifying the extent to which performance under this Contract is terminated either in whole or in part and the date on which such termination becomes effective.

In the event of termination for convenience, Contractor shall receive a termination for convenience fee ("Termination for Convenience Fee").

The Termination for Convenience Fee shall equal the applicable amount set out in Tab #6 of Schedule I (Termination Fees) minus the value of all Services performed by the Contractor consistent with the terms of the Contract prior to the effective date of termination.

Comment [DRS1]: Contractor proposes further discussion on the calculation of appropriate termination fees and related formula, including a termination fee for years 4 through 7

Comment [DRS2]: Contractor also proposes that wind down costs and unrecovered investments should be recoverable for certain other types of termination events similar to our existing contract with the Commonwealth

Small Diverse Business (SDB) Participation Submittal (RFP Requirement II-9)

This Small Diverse Business (SDB) Participation Submittal dated September 20, 2013 in response to the Commonwealth of Pennsylvania Request for Proposal (RFP# 6100022698) is a complete replacement for the Unisys submission on June 19, 2013. This document has been updated and should be considered for evaluation as part of the Unisys Corporation Best and Final Offer.

1.1 Introduction

Unisys carefully considered all available certified Small Diverse Businesses (SDB) in the Commonwealth of Pennsylvania that both complimented and extended Unisys' capabilities and operations providing CoPA with a strong and qualified team (Figure 1). These selected SDBs have these requirements in addition to their experience in the required area of support and their dedication to quality.

In addition to managing and coordinating SDB support requirements, Unisys is committed to mentoring SDB leadership and fostering their growth. The intention is to provide opportunities for them to excel and to provide feedback and dialog that improves and strengthens the SDBs' performance. This philosophy strengthens CoPA's SDBs workforce for this current CoPA project and future projects as well.

Figure 1. Unisys and Small Diverse Businesses (SDB) Provide a Synchronized Team. *Unisys and the SDBs combined functionality provide CoPA with a fully coordinated team.*

1.2 A – Proof of SDB Qualifying Data

RFP	*Requirement*
II-9 A	*To receive credit for being a Small Diverse Business or for subcontracting with a Small Diverse Business (including purchasing supplies and/or services through a purchase agreement), an Offeror must include proof of Small Diverse Business qualification in the Small Diverse Business participation submittal of the proposal, as indicated below:* • *A Small Diverse Business verified by BSBO as a Small Diverse Business must provide a photocopy of their verification letter.*

Unisys has partnered with 13 subcontractors and suppliers that qualify as Pennsylvania Small Diverse Businesses (SDB). Each is currently verified by the Pennsylvania Department of General Services Bureau of Small Business Opportunities (BSBO). Table 1 summarizes proof of the qualifying data. Copies of BSBO verification letters follow this table.

Dear Pasquale Grillo:

The Bureau of Small Business Opportunities has reviewed your request for verification along with your supporting documents. I am pleased to inform you that the Commonwealth has verified your company as a Small Diverse Business, Veteran Business Enterprise (VBE). An automatic email was generated with a copy of your new certificate designating your Small Diverse Business status. If you need to obtain a copy of your Small Diverse Business certificate it can be reprinted on Step 5 within the Small Business Procurement Initiative (SBPI).

Please understand that the information you provided for verification was represented as being true and correct. Please know that the Commonwealth shall treat any misstatement as fraudulent concealment of the true facts punishable as a crime under Section 4904 of the Pennsylvania Crime Code, Title 18, of Pa. Consolidation Statutes relating to unsworn falsification to authorities

Your verification is valid until the expiration date noted above. For additional information or assistance, please contact Bureau staff at (717) 705-2398 or (717) 346-8105 or by email at ra-bsboverification@pa.gov. Best wishes in your business endeavors.

Sincerely,

1.3 B – Small Diverse Business Participation

RFP	*Requirement*
II-9 B	*In addition to the above verification letter, the Offeror must include in the Small Diverse Business participation submittal of the proposal the following information:* *1. Offerors must include a numerical percentage which represents the total percentage of the work (as a percentage of the total amount paid to the Offeror under the contract) that the Offeror commits to paying to Small Diverse Businesses (SDBs) as subcontractors. To support its total percentage SDB subcontractor commitment, Offeror must also include:* *a) The percentage of each subcontract commitment to a Small Diverse Business.* *b) The name of each Small Diverse Business. The Offeror will not receive credit for stating that after the contract is awarded it will find a Small Diverse Business.* *c) The services or supplies each Small Diverse Business will provide, including the timeframe for providing the services or supplies.* *d) The location where each Small Diverse Business will perform services.* *e) The timeframe for each Small Diverse Business to provide or deliver the goods or services.* *f) A completed and signed letter of intent, in the format set forth in Appendix J - SDB Letter of Intent, for each Small Diverse Business.* *g) The name, address and telephone number of the primary contact person for each Small Diverse Business.* *2. The total percentages and each SDB subcontractor commitment will become contractual obligations once the contract is fully executed.* *3. The name and telephone number of the Offeror's project (contact) person for the Small Diverse Business information.*

Our partners were selected based on their experience in providing quality goods and services to Unisys and the Commonwealth. Each firm selected participated in a bidding process with the Unisys Procurement organization to ensure requirements were clearly communicated and the best value for the Commonwealth was obtained through a competitive RFP with our suppliers. The firms listed below were allocated a specific percentage of the Total Contract Value based upon Unisys' evaluation of their capabilities to supply quality IT resources, hardware products, and office facility leasing/administration.

1.3.1 Numerical Percentage of Work Performed by the Small Diverse Businesses

RFP	*Requirement*
II-9 B 1	*In addition to the above verification letter, the Offeror must include in the Small Diverse Business participation submittal of the proposal the following information:* *1. Offerors must include a numerical percentage which represents the total percentage of the work (as a percentage of the total amount paid to the Offeror under the contract) that the Offeror commits to paying to Small Diverse Businesses (SDBs) as subcontractors.*

Unisys commits to paying the selected Small Diverse Businesses (SDBs), as subcontractors and/or suppliers, a numerical total percentage of **29.95%** based on the percentage of the Total Contract Value that represents the total percentage of the total cost submitted in the Cost Volume.

1.3.1.1 (a) Percentage of Dollar Amount – Each Subcontract Commitment to Small Diverse Business

RFP	*Requirement*
II-9 B 1a	*To support its total percentage SDB subcontractor commitment, Offeror must also include:* *a) The percentage of each subcontract commitment to a Small Diverse Business.*

Small Diverse Business	Percentage Each SDB Subcontractor
Acclaim Systems, Inc.	0.67%
American Personnel Managers & Consultants, Inc.	0.67%
Atrion Corporation	3.32%
Credo Technology Solutions, Inc.	1.03%
Domino Technologies, Inc.	1.63%
E & E IT Consulting Services, Inc.	1.39%
Info-Matrix Corporation	4.57%
Innovative Business Concepts, Inc.	0.75%
Latus Capital Advisors Inc.	0.55%
Metropolitan Technology Services Group, LLC	7.50%
PC Network, Inc.	1.08%
Pierson Computing Connection, Inc.	5.25%
Source IT Technologies, LLC	1.54%
Total	**29.95%**

1.3.1.2 (b) Identified Small Diverse Business Entity

RFP	*Requirement*
II-9 B 1b	*To support its total percentage SDB subcontractor commitment, Offeror must also include:* *b) The name of each Small Diverse Business. The Offeror will not receive credit for stating that after the contract is awarded it will find a Small Diverse Business.*

1. Acclaim Systems, Inc.
2. American Personnel Managers & Consultant, Inc. (APMC)

3. Atrion Corporation

September 12, 2013

Rakesh Khetawat
Director
Acclaim Systems Inc.
110 E Pennsylvania Blvd.
Feasterville, PA 19053

Dear Mr. Khetawat:

This letter serves as confirmation of the intent of Unisys Corporation to utilize Acclaim Systems Inc. on RFP 6100022698 (Data Center Computing Services) issued by the Commonwealth of Pennsylvania Office of Administration/Office for Technology.

If Unisys Corporation is the successful vendor, Acclaim Systems shall provide technical services labor for the duration of the contract term and renewal periods.

These services represent 0.67 % of the total amount Unisys Corporation will be paid under the initial term of the contract. The dollar value that the fixed percentage commitment represents will depend on the final negotiated contract pricing and actual contract usage or volume.

Acclaim Systems represents that it meets the small diverse business requirements set forth in the RFP and all required documentation has been provided to Unisys Corporation for its SDB submission.

We look forward to the opportunity to serve the Office of Administration/Office for Technology on this project. If you have any questions concerning our small diverse business commitment, please feel free to contact me at the number below.

Request for Proposal

RFP # 6100022698

Commonwealth of Pennsylvania

Office of Administration
Office for Information Technology

Datacenter Computing Services

Schedule I

Offeror Pricing Forms

Description of Exhibit and Instructions

This Schedule I - Offeror Pricing Forms sets forth the following:

Configuration Definitions

- This tab contains the descriptions of the defined configurations which are used on the Volumetrics and Catalog of Services tabs.
- No entry is required on this tab.

1. Volumetrics

- This tab includes the resource unit categories and target quantities that the Offeror's will use to determine their price.
- Offerors should not assume that these are a guaranteed minimum units over the contract period.
- No entry is required on this tab.

2. Total Charges

- Summary of all Services Charges.
- No entry is required on this tab

3. Technical Staff Rate Card

- Offerors should use this tab to provide their staffing rates for the optional support services
- Offeror should only input in highlighted (yellow) cells.
- This rate card will become part of the service catalog at the Effective Date of the contract.

4. Catalog of Services

- Offerors should use this tab to include their Catalog of Services with pricing.
  See "Configuration Definitions" Tab for detail on what is included in each service catalog item.
- Offeror should only input in highlighted (yellow) cells.
- Only provide costs within the highlighted (yellow) cells; no additional services will be accepted here.
- All costs for services must be included in the item cost in the catalog of services. No additional costs should be incurred by the Commonwealth for the services requested by this RFP.

5. Software

- Offerors should use this tab to include their pricing of the required Third Party Software and Hybrid Third Party Software.
- Offeror should only input in highlighted (yellow) cells.
- Only provide costs within the highlighted (yellow) cells; no additional software products will be accepted here.
- Offerors should price software titles listed or equivalent.
- Offerors must provide a catalog of monthly single unit prices as part of its proposal. a single unit could be a single MIP, a single core, a single user, a single server, etc. The configuration will be determined as part of transition planning.
- Offerors are required to provide all of the listed software within this table. The Commonwealth will assume if there is no price indicated for a particular requested software item; that item will be provided at no cost to the Commonwealth.

6. Termination Fees

- This tab identifies the Termination for Convenience Fees.
- No entry is required on this tab.

Additional Notes

a.) All input tabs (3, 4, 5) should be filled out completely.

b.) Total Charges (tab 2): Information is linked with input tabs and will calculate automatically.

c.) Any cost field left blank will indicate the item will be available to the Commonwealth at no cost.

d.) Formulas are imbedded in all tabs. Offeror must verify that all calculations, subtotal costs and grand total costs are accurate.

e.) Please contact the Issuing Officer with any questions or concerns.

f.) Payment for services under this contract are unit-based. The total units (volumetrics) listed are for informational purposes only and will not be binding on the Commonwealth

g.) All Transition costs must be included in the service prices as included in the Catalog of Services tab over years 1 thru 7. Any change to transition plans shall not alter the costs as included in Offeror's completed Schedule I - Offeror Pricing Form. No additional costs will be incurred by the Commonwealth for changes to Offeror's proposed Transition Plan.

h.) All DC architecture costs must be included in the service prices as included in the Catalog of Services tab over years 1 thru 7.

i.) All pricing must not include any assumptions of a minimum commitment for services from the Commonwealth.

j.) Offerors must include in the base unit pricing for all configurations the components and services required to meet the security requirements of the RFP for all compute services, to include but not limited to Schedule F Sections 3.2.4.6 and 3.2.2.5.

Configuration Definitions (**)

The below definitions and configurations are referenced throughout Schedule I - Offeror Pricing Forms.

(1) Fully Managed and (2) Managed Only

Servers and Storage Services (x86, p-Series, i-Series)

Servers and Storage services should include the server, disk and backup devices, as well as hardware supplies; software, including operating and data management systems; the facilities, including raised floor and office space; and facilities management.

Unit Prices should include all services costs associated with providing, managing, operating, and transitioning to each technology unit per the RFP requirements Schedule F COPA Datacenter Statement of Work;

3.1	Establish Datacenter Architecture
3.1.1	Multi Datacenter Environment (2+ Architecture)
3.1.2	Network and Security Architecture
3.1.3	Datacenter Architecture and Technology
3.2	Enable Common Service Portfolio
3.2.1	Program & Service Management
3.2.1.1	PMO & Contract Management
3.2.1.2	Availability/SLA Management
3.2.1.3	Change & Release Management
3.2.1.4	Service Desk
3.2.1.5	Technical Architecture
3.2.1.6	Account Management
3.2.1.7	Configuration Management
3.2.1.8	3rd Party License Management
3.2.2	Technical Services
3.2.2.1	Transition Management (New Customer and/or Services)
3.2.2.2	Infrastructure Architecture
3.2.2.3	Capacity Management
3.2.2.4	DR Planning & Testing
3.2.2.5	Security Management
3.2.2.6	Performance Monitoring & Management
3.2.3	Facilities Management
3.2.3.1	Facilities Architecture / Maintenance
3.2.3.2	Site Operations
3.2.4	Managed Hosting Services
3.2.4.1	Windows Support
3.2.4.2	Storage Management
3.2.4.3	ERP Hosting – SAP / Oracle
3.2.4.4	UNIX Support – AIX / Linux
3.2.4.6	Security & Firewall
3.3	Transition Services
3.3.1	Transition Services – Guiding Principals
3.3.2	Transition Planning/Governance
3.3.2.1	Transition Program Management
3.3.2.2	Security Transition Activities

Fully Managed Infrastructure is fully owned and managed by the Offeror

Managed Only Infrastructure is managed by the Service Provider but owned by the Commonwealth and/or a 3rd Party

(3) Limited Co-Lo

Limited Co-Lo is infrastructure that is located in the Service Provider managed datacenter(s). Either owned or managed by the Commonwealth; or 3rd Party.

Limited Co-Lo Services Unit Prices should include all services costs associated with providing, managing, and transitioning to each technology unit per the RFP requirements Schedule F COPA Datacenter Statement of Work Unit Prices should include all services costs associated with providing, managing, operation, and transitioning to each technology unit per the RFP requirements Schedule F COPA Datacenter Statement of Work;

3.1	Establish Datacenter Architecture
3.1.1	Multi Datacenter Environment (2+ Architecture)
3.1.2	Network and Security Architecture

3.3.2.2 Security Transition Activities

(4) Mainframe Services - Include both IBM and Unisys Mainframe services

Mainframe services should include the hardware for the mainframe processing units; disk and backup devices, as well as hardware supplies; software, including operating and data management systems; the facilities, including raised floor and office space; and facilities management in addition to the services described below.

Mainframe Services Unit Prices should include all services costs associated with providing, managing, operating, and transitioning to each technology unit per the RFP requirements Schedule F COPA Datacenter Statement of Work;

3.1 Establish Datacenter Architecture
3.1.1 Multi Datacenter Environment (2+ Architecture)
3.1.2 Network and Security Architecture
3.1.3 Datacenter Architecture and Technology
3.2 Enable Common Service Portfolio
3.2.1 Program & Service Management
3.2.1.1 PMO & Contract Management
3.2.1.2 Availability/SLA Management
3.2.1.3 Change & Release Management
3.2.1.4 Service Desk
3.2.1.5 Technical Architecture
3.2.1.6 Account Management
3.2.1.7 Configuration Management
3.2.1.8 3rd Party License Management
3.2.2 Technical Services
3.2.2.1 Transition Management (New Customer and/or Services)
3.2.2.2 Infrastructure Architecture
3.2.2.3 Capacity Management
3.2.2.4 DR Planning & Testing
3.2.2.5 Security Management
3.2.2.6 Performance Monitoring & Management
3.2.3 Facilities Management
3.2.3.1 Facilities Architecture / Maintenance
3.2.3.2 Site Operations
3.2.4 Managed Hosting Services
3.2.4.2 Storage Management
3.2.4.5 Mainframe Services
3.2.4.6 Security & Firewall
3.3 Transition Services
3.3.1 Transition Services – Guiding Principals
3.3.2 Transition Planning/Governance
3.3.2.1 Transition Program Management
3.3.2.2 Security Transition Activities

Offerors must also use exhibit B1 DPH Asset List for configuration requirements for mainframe services.

(5) On-Demand (IaaS) Services

On-Demand Unit Prices should include all services costs associated with providing, managing, operating, and transitioning to each technology unit per the RFP requirements Schedule F COPA Datacenter Statement of Work;

3.1 Establish Datacenter Architecture
3.1.1 Multi Datacenter Environment (2+ Architecture)
3.1.2 Network and Security Architecture
3.1.3 Datacenter Architecture and Technology
3.2 Enable Common Service Portfolio

Configuration Definitions (**)

3.2.1	Program & Service Management
3.2.1.1	PMO & Contract Management
3.2.1.2	Availability/SLA Management
3.2.1.3	Change & Release Management
3.2.1.4	Service Desk
3.2.1.5	Technical Architecture
3.2.1.6	Account Management
3.2.1.7	Configuration Management
3.2.1.8	3rd Party License Management
3.2.2	Technical Services
3.2.2.1	Transition Management (New Customer and/or Services)
3.2.2.2	Infrastructure Architecture
3.2.2.3	Capacity Management
3.2.2.4	DR Planning & Testing
3.2.2.5	Security Management
3.2.2.6	Performance Monitoring & Management
3.2.3	Facilities Management
3.2.3.1	Facilities Architecture / Maintenance
3.2.3.2	Site Operations
3.2.5	Capacity on Demand Services
3.2.5.1	Server Capacity on Demand
3.2.5.2	Storage Capacity on Demand
3.2.5.3	DR Infrastructure on Demand
3.2.5.4	Additional Technical Services
3.3	Transition Services
3.3.1	Transition Services – Guiding Principals
3.3.2	Transition Planning/Governance

Configurations (**)

Limited Co-Lo (Data Center Only Charge)

Limited Co-Lo Configurations	Minimum Specifications	Unit
Co-Lo Config - 1	1/4 Rack Configuration includes: 10U Cabinet Space; 5,000 GB Network Bandwidth; 100Mb/s Uplink; 6 IP Addresses; 5 -110V AC Circuits	Monthly Per Config
Co-Lo Config - 2	1/2 Rack Configuration includes: 21U Cabinet Space; 10,000 GB Network Bandwidth; 100Mb/s Uplink; 14 IP Addresses; 10 -110V AC Circuits	Monthly Per Config
Co-Lo Config - 3	Full Rack Configuration includes: 42U Cabinet Space; 20,000 GB Network Bandwidth; 100Mb/s Uplink; 30 IP Addresses; 20 -110V AC Circuits	Monthly Per Config

Server Configurations (Fully Managed)

x86 Server Configurations	Minimum Specifications	Unit
Windows pConfig - 1	2-way Quad-Core 2.0 GHz; 4 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2	Physical Server
Windows pConfig - 2	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2	Physical Server
Windows pConfig - 3	4-way Six-Core 2.0 GHz; 64 GB RAM; 500 GB SAN Attached Storage; Windows Server 2008 R2	Physical Server

Configuration Definitions (**)

Windows pConfig - 4	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Physical Server
Windows pConfig - 5	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Physical Server
Linux pConfig - 1	2-way Quad-Core 2.0 GHz; 4 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE	Physical Server
Linux pConfig - 2	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE	Physical Server
Linux pConfig - 3	4-way Six-Core 2.0 GHz; 64 GB RAM; 500 GB SAN Attached Storage; RedHat or SUSE	Physical Server
Linux pConfig - 4	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Physical Server
Linux pConfig - 5	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Physical Server
Windows vConfig - 1	2vCPU; 4 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
Windows vConfig - 2	4vCPU; 16 GB Ram; Windows Server 2008 R2;~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
Windows vConfig - 3	8vCPU; 64 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
Windows vConfig - 4	4vCPU; 16 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Virtual Server Instance

Configuration Definitions (**)

Windows vConfig - 5	4vCPU; 16 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance
Linux vConfig - 1	2vCPU; 4 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
Linux vConfig - 2	4vCPU; 16 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
Linux vConfig - 3	8vCPU; 64 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
Linux vConfig - 4	4vCPU; 16 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN;~~ Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Virtual Server Instance
Linux vConfig - 5	4vCPU; 16 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN;~~ Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance

P-Series Server Configurations		
AIX Config - 1	3.0GHz POWER7; 0.5 Cores; 6 GB RAM; AIX	LPAR
AIX Config - 2	3.0GHz POWER7; 1.0 Cores; 12 GB RAM; AIX	LPAR
AIX Config - 3	3.0GHz POWER7; 1.5 Cores; 18 GB RAM; AIX	LPAR
AIX Config - 4	3.0GHz POWER7; 1.0 Cores; 12 GB RAM; AIX; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	LPAR
AIX Config - 5	3.0GHz POWER7; 1.0 Cores; 12 GB RAM; AIX; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	LPAR

Mainframe Configurations (*)		
IBM Mainframe Configurations	**Minimum Specifications**	**Unit**
IBM Mainframe Config - 1	IBM System zEnterprise Processor z/OS	MIP
IBM Mainframe Config - 2	IBM System zEnterprise Processor Virtual Linux Prod IFL	MIP

Configuration Definitions (**)

IBM Mainframe Config - 3	IBM System zEnterprise Processor Virtual Linux Prod IFL; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	MIP
IBM AS400 Config 1	IBM i Series / AS400	CPW
IBM AS400 Config 2	IBM i Series / AS400; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	CPW
Unisys Mainframe Configurations	**Minimum Specifications**	**Unit**
Unisys Mainframe Config - 1	Unisys (Clearpath / Dorado)	MIP
Unisys Mainframe Config - 2	Unisys (Clearpath / Libra)	MIP
Unisys Mainframe Config - 3	Unisys (Clearpath / Dorado); Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	MIP
Unisys Mainframe Config - 4	Unisys (Clearpath / Libra) ; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	MIP

On-Demand (IaaS) Configurations		
IaaS x86 Server Configurations	**Minimum Specifications**	**Unit (per month)**
IaaS Windows vConfig - 1	2vCPU; 4 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
IaaS Windows vConfig - 2	4vCPU; 16 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
IaaS Windows vConfig - 3	8vCPU; 64 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
IaaS Windows vConfig - 4	4vCPU; 16 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN;~~ Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Virtual Server Instance
IaaS Windows vConfig - 5	4vCPU; 16 GB Ram; Windows Server 2008 R2; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN;~~ Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance
IaaS Linux vConfig - 1	2vCPU; 4 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance

Configuration Definitions (**)

IaaS Linux vConfig - 2	4vCPU; 16 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
IaaS Linux vConfig - 3	8vCPU; 64 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN~~	Virtual Server Instance
IaaS Linux vConfig - 4	4vCPU; 16 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN;~~ Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Virtual Server Instance
IaaS Linux vConfig - 5	4vCPU; 16 GB Ram; RedHat or SUSE; ~~Firewall/IDS; Site-Site VPN; VPN Client; VLAN;~~ Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance
IaaS Storage Configurations		
IaaS Storage Config - 1	SAN attached storage; Raid 5; 10K - 15K RPM discs	Monthly per GB
IaaS Storage Config - 2	SAN attached storage; Raid 10; 10K - 15K RPM discs	Monthly per GB
IaaS Storage Config - 3	Network Attached Storage	Monthly per GB

IaaS Backup Configurations		
IaaS Backup Config - 1	Remote Offsite backup per GB	Monthly per GB

Notes:
(*) Offerors must use exhibit B1 DPH Asset List for configuration requirements for mainframe services.

Baseline Units - Volumetrics

Note: The Commonwealth has established multiple scenarios of infrastructure configurations specifically for pricing evaluation, as set forth in Schedule I. The Volumetrics in Schedule I will be used to evaluate Offerors' cost proposals and are not a minimum commitment or an all inclusive representation of every service desired by the Commonwealth.

Notes:

For purposes of submitting a proposal, Offerors should assume that tapes are equivalent in capacity to LTO4 tapes.

* For purposes of submitting a proposal, Offerors should assume that the slower Tier1 RAID5 uses 10K drives and the Tier2 RAID10 uses 15K drives.

** The volume is expressed as native.

*** For purposes of evaluation DASD is expressed in Usable (not Raw)

Catalog of Services

(a) Offeror should only input in highlighted (yellow) cells.

(b) Pricing for individuals config items should only include the price for the identified unit.

(c) Pricing for the managed tiers (ex. "Fully Managed (1) - Platinum Tier") should only include cost for the management of the identified configuration.

Catalog of Services

(a) Offeror should only input in highlighted (yellow) cells.

(b) Pricing for individuals config items should only include the price for the identified unit.

(c) Pricing for the managed tiers (ex. "Fully Managed (1) - Platinum Tier") should only include cost for the management of the identified configuration.

Catalog of Services

(a) Offeror should only input in highlighted (yellow) cells.

(b) Pricing for individuals config items should only include the price for the identified unit.

(c) Pricing for the managed tiers (ex. "Fully Managed (1) - Platinum Tier") should only include cost for the management of the identified configuration.

Catalog of Services

(a) Offeror should only input in highlighted (yellow) cells.

(b) Pricing for individuals config items should only include the price for the identified unit.

(c) Pricing for the managed tiers (ex. "Fully Managed (1) - Platinum Tier") should only include cost for the management of the identified configuration.

Termination for Convenience Fees

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Opt - Year 8	Opt - Year 9	Opt - Year 10
(A) Termination Fee Base	$30,000,000 00	$75,000,000 00	$30,000,000 00							
(B) Value of Services Performed*	(Services Performed)	(Services Performed)	(Services Performed)							
(C) Actual Termination for Convenience Fees	C =A-B	C =A-B	C =A-B							

No Termination for Convenience Fees are available after Year 3.

Termination for Conveinence Fees are not cumulative.

(*) The value of all Services performed by the Contractor consistent with the terms of the Contract prior to the effective date of termination

List Of Items For Offeror

Clarification	*Text*
1	*Section 3.2.2.5 (Security Management) of the RFP states "The Offeror must comply with Commonwealth IT policies and directives as well as federal and Commonwealth laws, regulations and policies, including but not limited to the Criminal History Record Information Act (CHRIA), Health Insurance Portability and Accountability Act (HIPPA), Criminal Justice Information Services (CJIS) regulations, The United States Social Security Administration (SSA) regulations, Internal Revenue Services (IRS) Publications, Commonwealth Information Technology Bulletins (ITBs) and the Payment Card Industry (PCI) standards."* *Please provide a detailed explanation on how Unisys Corporation ("Unisys") will satisfy each of the security requirements listed below in its base solution. Each requirement in the list must be addressed separately:* • *Criminal History Record Information Act (CHRIA)* • *Health Insurance Portability and Accountability Act (HIPPA)* • *Criminal Justice Information Services (CJIS) regulations* • *The United States Social Security Administration (SSA) regulations* • *Internal Revenue Services (IRS) Publications* • *Commonwealth Information Technology Bulletins (ITBs)* • *Payment Card Industry (PCI) standards*

Unisys Response:

The Unisys Team understands the importance of information security and regulations, standards, and policies mandated through the Commonwealth Information Technology Bulletins (ITBs) and Commonwealth and Federal agencies. The Unisys Team has envisioned a six-step approach to establish a risk aware data center that addresses several regulatory requirements including:

- Commonwealth Information Technology Bulletins (ITBs)
- Health Insurance Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS) regulations
- Criminal History Record Information Act (CHRIA)
- The United States Social Security Administration (SSA) regulations
- Internal Revenue Services (IRS) Publication 1075
- Payment Card Industry (PCI) Data Security Standards (DSS)

As part of our solution, the table below identifies the detailed technical controls that will be implemented, their applicability to each regulation and how the Unisys Team's proposed solution meets each control.

CONTROL	PA ITB	HIPPA-HITECH	IRS 1075 (FTI)	SSA	CJIS	PCI	CHRIA
Common Controls							
Classify as a Business Associate		X					
Add IRS 1075 Exhibit 7 to Contract			X				
Add CJIS Security Addendum to Contract					X		
CHRIA Authorization to Administer Exception letter							X
Notification of Data Loss	X	X	X	X	X	X	X
Provide Background Checks based up ITB-SEC009	X	X	X	X	X	X	X
Use US only Support Personnel	X	X	X	X	X	X	X
Risk Management							
Establish Data Center Security Management Plan	X	X	X	X	X	X	X
Perform periodic review and update of Security Management Plan	X	X	X	X	X	X	X
Perform annual risk assessment of data center operations	X	X	X	X	X	X	X
Awareness and Training							
Provide Security Awareness Training meeting Regulatory requirements	X	X	X	X	X	X	X
Support Security Control Reviews	X	X	X	X	X	X	X
Separation of Data							
Facilitate separation of FTI data from non-FTI data			X				
Facilitate separation of CJIS data from non-CJIS data					X		
Label Physical Media containing Regulated Data	X	X	X	X	X	X	X
Provide Multiple Security Zones (e.g. Web / Application / Database /Test /Dev)	X	X	X	X	X	X	X

We have illustrated our six-step approach to establish a regulatory compliant data center in the figure below. Our approach, developed by our teaming partner Deloitte through their extensive experience in helping organizations achieve regulatory compliance, enables the use of regulations as a driving factor to proactively assess, identify and mitigate gaps. Throughout this process, the Unisys Team will collaborate with the Commonwealth stakeholders to review gaps identified, help prioritize mitigation steps, and monitor remediation steps. Note that while collaboration with Commonwealth agencies is essential throughout the data center transition process, it is particularly required here as some of the gaps with the documented regulatory requirements may be with applications not in Unisys control.

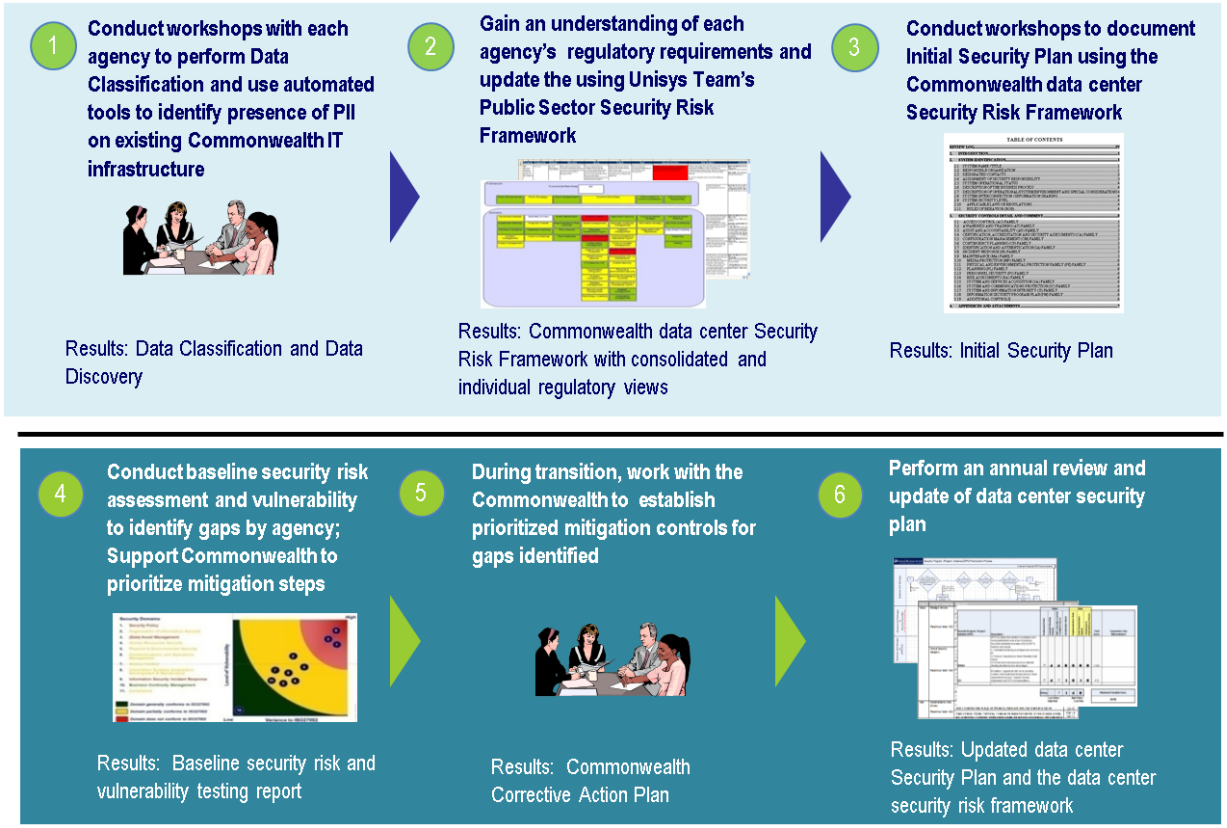

Figure 1 – The Unisys Team collaborates with the Commonwealth, using our six-step approach, to establish a risk aware data center.

Deloitte's public sector security risk framework – The Unisys Team uses its teaming partner, Deloitte's demonstrated public sector security risk framework to identify, assess and document the appropriate data protection controls to secure Commonwealth data. Our approach to use an integrated security risk framework is an innovative method to "assess once, comply and report many regulations".

Our teaming partner, Deloitte's public sector security risk framework contains over 4,000 individual regulatory requirements mapped to over 290 unique integrated requirements initially driven by NIST SP800-53 rev 3 (moderate level). This detailed Microsoft Excel-based framework contains the regulatory requirements and their integrated controls. This technology agnostic approach to manage risks is still a pioneer in state governments.

Our related experience – Our teaming partner, Deloitte has established the security risk framework at over 10 states to help the states integrate and assess security regulatory requirements as part of systems development efforts and conduct integrated enterprise level security assessments. Selected experience includes:

- Commonwealth of Pennsylvania – Department of Public Welfare (DPW)
- State of Indiana
- State of Delaware
- State of Washington
-

For example, the Commonwealth of Pennsylvania DPW's security risk framework rationalizes more than 4,000 individual regulatory requirements into 350 unique integrated requirements, including:

- Commonwealth security ITBs
- DPW security policies and standards
- IRS 1075
- SSA
- HIPAA
- Family Educational Rights Protection Act (FEPRA)
- NIST SP800-53 (Note that the existing framework leverages rev 3, but is in the process of being updated for rev 4 which was recently released. That update will be completed for use with the new Commonwealth data centers, so the rest of this answer refers to rev 4)
- ISO 27001:2005

Unique and *Distinguishing* Factors

Benefits from the Unisys Teaming partner, Deloitte's public sector security risk framework:

- Contains authoritative sources from more than 30 regulations & standards
- Provides a core set of risk & compliance management solutions
- Allows for consistent comparison, prioritization & aggregation of risk and compliance across the Commonwealth's agencies
- Allows the team to "hit the ground running"
- Provides pre-configured reports for key individual regulations.

Additionally, Deloitte's efforts at the state of Delaware included integration of CJIS and PCI DSS v2. Our teaming partner Deloitte has also established security risk frameworks at several of our commercial clients including very large Banking & Securities, Life Sciences & Health Care, Retail and Oil & Gas firms. Although the current version of the framework does not include the Pennsylvania-specific CHRIA requirements, Deloitte will include them as part of the initial security plan activities.

Reporting for regulatory requirements – The data center's current security posture will be documented as part of the initial security plan and within the data center's security risk framework. When a Commonwealth agency requires a report on the data center's current measures to meet the agency's corresponding regulatory requirements, the data center security manager will uses the pre-existing reporting capability of the security framework to extract reports specific to individual regulations such as IRS 1075, SSA, CJIS and PCI DSS.

We use our risk framework driven approach to address the Commonwealth selected key regulations identified in the questions, through our six-step process. The table below illustrates the key components of our approach to establish a Commonwealth data center that meets the Commonwealth identified security regulations and policies/standards.

Regulation/ Policy/Standard	Step1: Used to classify Commonwealth data	Step 2: Integrated with the data center risk framework	Step 3: Considered in data center initial security plan	Step 4: Used to perform baseline risk & vulnerability assessment	Step 5:Used to develop and monitor corrective action plan	Step 6: Used to perform an annual security risk assessment & security plan update	Provides ability to generate individual regulatory reports
Commonwealth ITBs	✓	✓	✓	✓	✓	✓	✓
IRS 1075	✓	✓	✓	✓	✓	✓	✓
CJIS	✓	✓	✓	✓	✓	✓	✓
PA CHRIA	✓	✓	✓	✓	✓	✓	✓
SSA	✓	✓	✓	✓	✓	✓	✓
HIPAA	✓	✓	✓	✓	✓	✓	✓
PCI DSS	✓	✓	✓	✓	✓	✓	✓

Step 1: Data identification process and sensitivity classification

As part of the initial security plan, the Unisys Team will work with the Commonwealth stakeholders to establish a data classification standard data sensitivity levels and establish a data classification based on applicable regulations and leading practices such as NIST SP800-122 (Guide to Protecting the Confidentiality of Personally Identifiable Information (PII)).

Perform Commonwealth data classification – The Unisys Team will conduct workshops with the Commonwealth stakeholders to define a data classification standard for the Commonwealth Personally Identifiable Information (PII) based on data sensitivity levels. For example, some of the categories include:

- Special handling PII (that contains SSN, driver license number, FEIN, and Medicare ID)
- Protected Health Information
- Federal Taxpayer Information (FTI)
- US Social Security Administration (SSA)
- Criminal Justice Information (CJI), including Pennsylvania's Criminal History Records Information Act (CHRIA)
- Sensitive PII (such as racial/ethnic origin, religious/philosophical beliefs, Trade-union membership and criminal convictions)

From our experience of working with the Commonwealth and several public sector clients, the Unisys Team understands the Commonwealth's regulatory landscape. In the table below, we illustrate our understanding of a sample of Federal and Commonwealth regulations that impact the data used by the Commonwealth data center IT infrastructure.

Type of Data	Regulatory impact
Personal Health Information (PHI) **Electronic Health Records (EHR)**	• Health information portability and accountability act (HIPAA) • Federal HHS CMS regulations and information security – Minimum Acceptable Risk Safeguards (MARS) • 45 CFR • Health Information Technology for Economic and Clinical Health Act (HITECH)
Child welfare data	• Federal HHS and PA Adoption and Foster Care Analysis and Reporting System (AFCARS) • Family Educational Rights and Privacy Act (FERPA) • Child Abuse Prevention and Treatment Act (CAPTA) • Child Abuse Prevention and Enforcement Act of 2000 • Social Security Act • Adam Walsh Child Protection and Safety Act of 2006 • Fair Access Foster Care Act of 2005 • Keeping Children and Families Safe Act of 2003 • Children's Health Act of 2000
HHS and Health data	• Family Educational Rights and Privacy Act (FERPA) • Children Online Privacy Protection Act (COPPA) • PA Early Intervention Services Systems Act (Act 212) • Individuals with Disabilities Education Act (IDEA) • Licensure or Approval of Facilities and Agencies (55 Pa. code chapter 20) • Mental Health and Mental Retardation Act of 1966 • PA special education services and programs (Chapter 14 of 20 Pa.B. 3339)
Educational records	• Family Educational Rights and Privacy Act (FERPA)
Criminal History Records	• PA Criminal History Records Information Act (CHRIA) • Criminal Justice Information Services (CJIS)
Federal	• Internal Revenue Service (IRS) publication 1075

Type of Data	Regulatory impact
Taxpayer Information	
Social Security Administration	• United States Social Security Administration (SSA)
Financial and Credit Card Information	• Payment Card Information (PCI) Data Security Standards (DSS) • Payment Application (PA) Data Security Standards (DSS)
Special handling data such as SSNs, driver's license and FEIN	• Commonwealth Information Technology Bulletins (ITBs) • Federal Privacy Act of 1974 • Federal Driver's Privacy Protection Act • Pennsylvania Breach of Personal Information Notification Act - SB 712 • Pennsylvania SSN Obfuscation Law – SB 601 • Pennsylvania House Resolution 351 (2005) • Americans with Disability Act (ADA)

Identify presence of PII within the Commonwealth IT infrastructure – In addition to the above illustrated data classification, the Unisys Team will conduct a one-time data discovery assessment. During development of the initial security plan, we perform a data discovery using the Symantec Data Loss Prevention (DLP) solution's data discovery tool. This assessment supports the Unisys Team to identify the presence of PII at rest within the current Commonwealth data center IT infrastructure.

The data collected will be documented as part of the IT asset inventory. This information will be used during the data center transition to establish appropriate data protection controls based on the data sensitivity and regulatory requirements (using the Commonwealth data center security risk framework).

DID YOU KNOW

Pennsylvania's DPW team was recognized with the Computerworld Honors Laureate in 2013 in the "Safety and Security" category.

DPW was recognized for developing the Information Security Risk Management System which is a big advancement in protecting citizen private information by proactively identifying security risks to reduce identity theft exposure. Our teaming partner, Deloitte was part of the project and assisted DPW in the implementation of the EMC Archer based security risk framework.

THE COMPUTERWORLD HONORS PROGRAM

Step 2: Gain an understanding of Commonwealth agency's individual regulatory requirements and define the data center security risk framework

From our experience of working with the Commonwealth and several public sector clients, the Unisys Team understands Commonwealth's regulatory landscape. We will conduct workshops with the Commonwealth agencies as part of the transition planning to identify the applicable regulations, standards and industry leading practices for the data managed by the data center. We will use this information to integrate each agency's individual regulatory requirements as part of the Commonwealth data center security risk framework and to develop the initial security plan (discussed in step 4). The figure below

illustrates a sample of the regulations, standards and industry practices that the Unisys Team uses to define the Commonwealth data center security framework.

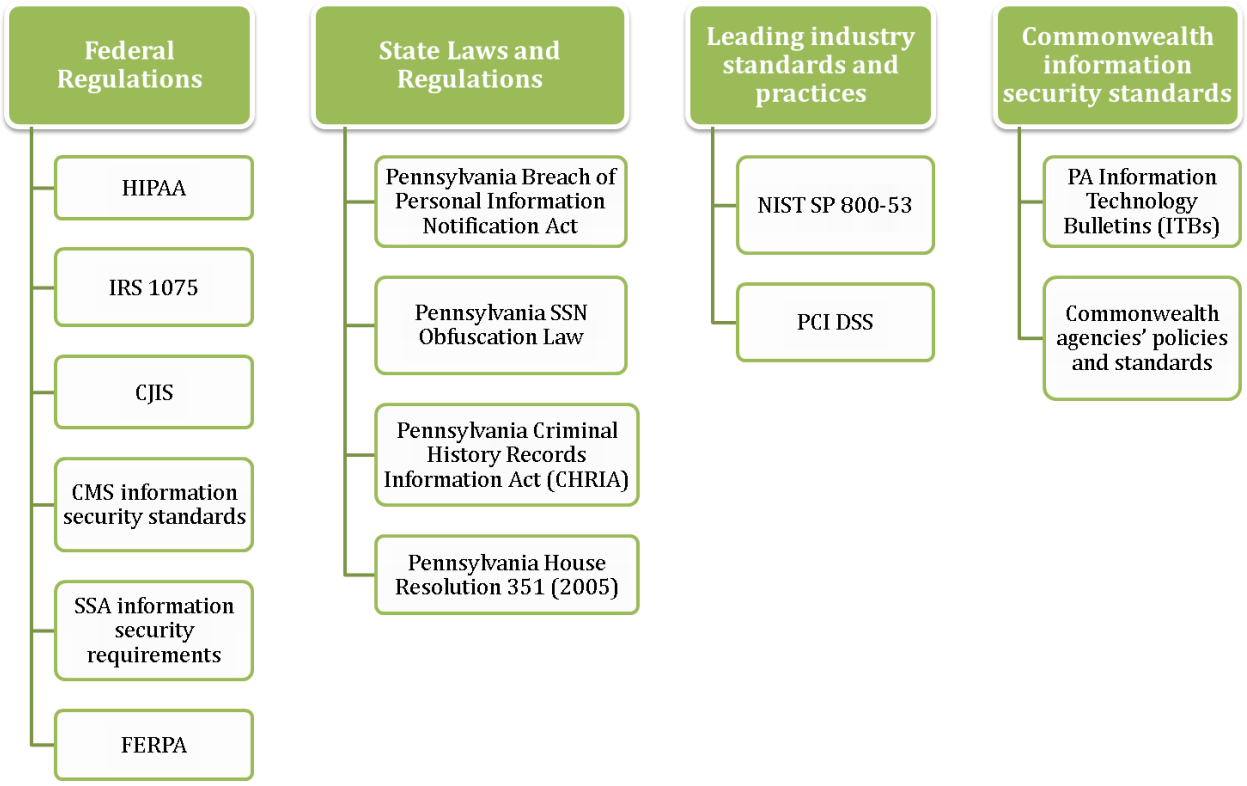

Figure 2 – Sample List of Regulations, Industry Standards and Leading Industry Practices Applicable to the Commonwealth

Establish the Commonwealth data center security risk framework

The Unisys Team establishes the Commonwealth data center security risk framework. This framework is a broad library of the applicable security and privacy requirements. These requirements are integrated from the relevant Commonwealth ITBs, industry standards, State and Federal regulations. As part of transition and during the ongoing operations, the Unisys Team uses the security risk framework to help document data protection controls that meets the relevant regulations and business requirements.

We bring a pre-configured security risk framework to "hit the ground running" – We use our teaming partner Deloitte's pre-configured and highly customizable public sector security risk framework to "hit the ground running" and reduce costs. This framework was developed based on more than 12 years of security and privacy experience within the Commonwealth and the public sector marketplace.

The public sector security risk framework contains over 4,000 individual regulatory requirements mapped to over 290 unique integrated requirements primarily driven by NIST SP800-53 rev 4 (moderate level). This detailed Microsoft Excel-based framework contains the regulatory requirements and their integrated controls. This technology agnostic approach to manage risks is still a pioneer in state governments. The existing Unisys Team's public sector security risk framework provides an integration of regulatory requirements from the following:

- Internal Revenue Services (IRS) publication 1075
- United States Social Security Administration (SSA)
- Health Information Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS)
- Payment Card Industry (PCI) Data Security Standard (DSS) v2.0
- National Institute of Standards and Technology (NIST) Special Publication (SP) 800-53 rev 4

The screenshot below illustrates the Unisys Team's public sector security risk framework showcasing a sample integration of the above described regulatory requirements.

Figure 3 – Sample Integration of Regulatory Requirements available in our pre-configured Public Sector Security Risk Framework.

As described in step 2, we will conduct workshops with the Commonwealth agencies to identify each agency's regulatory requirements such as Commonwealth ITBs, Commonwealth agency policy/standards and PA Criminal History Records Information Act (CHRIA). The Unisys Team will extend the Unisys Team's public sector security risk framework to integrate additional regulations to establish the Commonwealth data center security risk framework.

Once developed, Unisys Team estimates that the data center's security risk framework will contain over 4,000 individual regulatory requirements mapped to over 300 integrated/baseline controls, primarily driven by NIST SP800-53 rev 4 as the primary baseline control. As necessary, we will extend the baseline controls with additional leading industry standards to accommodate selected regulatory requirements that may not integrate with NIST SP800-53. The figure below illustrates our demonstrated approach to extend our public sector security risk framework with additional Commonwealth data center regulatory and policy requirements.

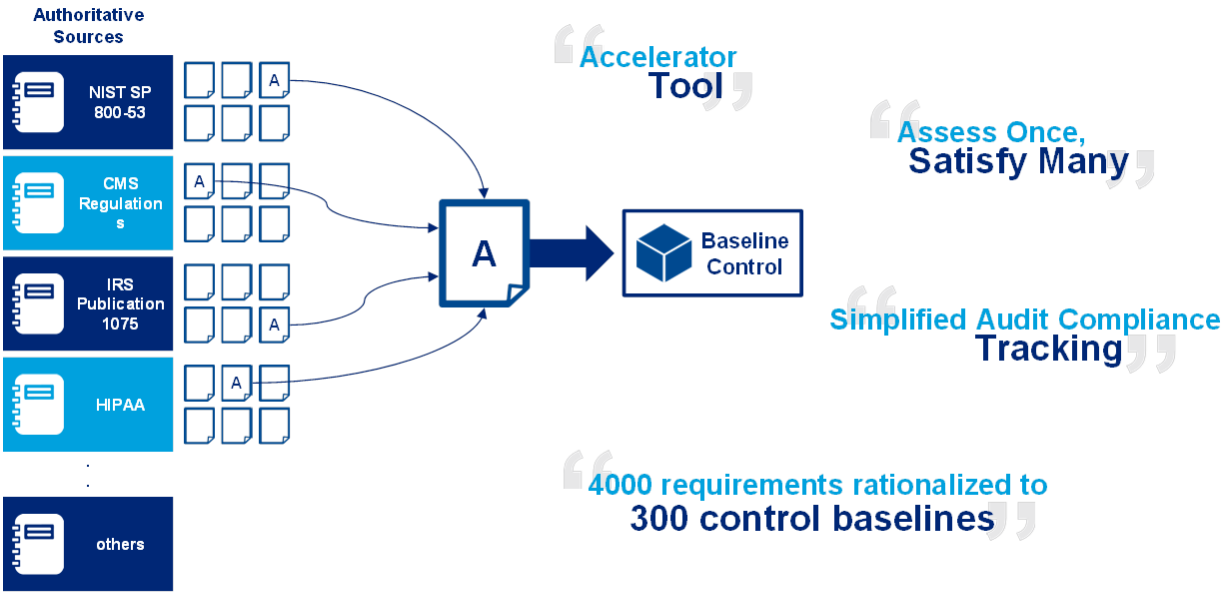

Figure 4 – The Unisys Team's approach to integrate data protection requirements using the Commonwealth data center security risk framework.

The Unisys Team uses this security risk framework to identify current state and document the initial security plan (described in Step 3). In addition, we use the security risk framework to perform the baseline security risk assessment (described in Step 4).

As part of ongoing data center transition and maintenance, we use the established security risk framework to identify relevant data protection requirements to help implement appropriate controls to protect Commonwealth data.

Step 3: Document Initial Security Plan (security management plan) and support Commonwealth's need to develop reports based on regulations

We will establish the Commonwealth data center security plan using guidelines provided by leading industry standards: NIST SP800-18 (RFP requirement specified by Q50 of round 1 part 2) and control guidelines established by NIST SP800-53 rev 4. To develop this plan, the Unisys Team uses

the Centers for Medicare and Medicaid Services (CMS) Systems Security Plan (SSP) template to define and maintain the appropriate security controls. The figure below illustrates the planned Table of Contents of the Commonwealth data center Initial Security Plan.

Figure 5 – Sample Commonwealth data center Initial Security Plan – Proposed Table of Contents.

Step 4: Conduct baseline security risk and vulnerability assessment

The Unisys Team performs the baseline security risk and vulnerability assessment to identify gaps within the current Commonwealth data center infrastructure. The Unisys Team will work with the Commonwealth to establish a corrective action plan and prioritize mitigation efforts. We have illustrated our steps to perform the baseline security risk and vulnerability assessment in the table below.

Steps	Activities
Scope and Plan	• Document project requirements, scope and objectives • Identify Commonwealth's point of Contact ("Commonwealth Trusted Agent"). • Identify and document the time frame for conducting baseline security risk and vulnerability assessment.
Conduct Vulnerability Assessment	• Identify the Commonwealth's target IT and application infrastructure using passive scanning (from public resources such as Search Engines) • Work with the Commonwealth's stakeholders to understand the architecture, business logic/functionality, external dependencies, user roles and privileges within the target IT infrastructure and application • Identify, using passive scanning techniques, the technology and infrastructure dependencies • Perform active reconnaissance and identify network protocols present on the target infrastructure and web applications using network discovery (SolarWinds, Ping and Xprobe2) • Identify well-known open TCP ports and services present on the target infrastructure using port scanning tools (Nmap and SuperScan) • Perform infrastructure vulnerability tests using automated vulnerability scanning tools (Tenable Nessus and Qualys) • Perform database vulnerability testing, using automated database vulnerability scanners (AppDetective Pro) on a total of 50 standard database instances of Oracle, Microsoft SQL Server, MySQL and IBM DB2 • Conduct manual assimilation of the vulnerability scan results to identify false positives and manually verify the vulnerabilities identified by the vulnerability scanning tools.
Perform Risk Assessment and Security Architecture Review	Conduct a security risk assessment and IT architecture review of the existing seven datacenter IT infrastructure using NIST SP800-53 rev 4. The IT security architecture review includes specific components such as, • Trust Zone Architecture. • User Role Design. • Authentication and Authorization. • Data Protection. • Security Audit Logs and SIEM. • Data Privacy.
Perform Security Configuration Risk Review	Perform security configuration risk review using the IRS 1075 based Safeguard Computer Security Evaluation Matrix (SCSEM) on Commonwealth selected infrastructure handling Federal Taxpayer Information (FTI)
Reporting	• Develop and submit the baseline security risk and vulnerability assessment report along with an executive dashboard • Notify the Unisys Security Manager and "Commonwealth Trusted Agent" immediately upon identification/verification of a high severity security vulnerability.

Step 5: Establish Corrective Action Plan

The Unisys Team will work with the Commonwealth stakeholders to review the gaps identified by the baseline security risk and vulnerability assessment for establishing the corrective action plan, determining milestones and prioritizing remediation measures. The Unisys Team will work with the Commonwealth to update the corrective action plan based on milestones, results from the annual risk assessment and the quarterly vulnerability assessments. The figure below illustrates a sample corrective action plan process, based on CMS guidelines:

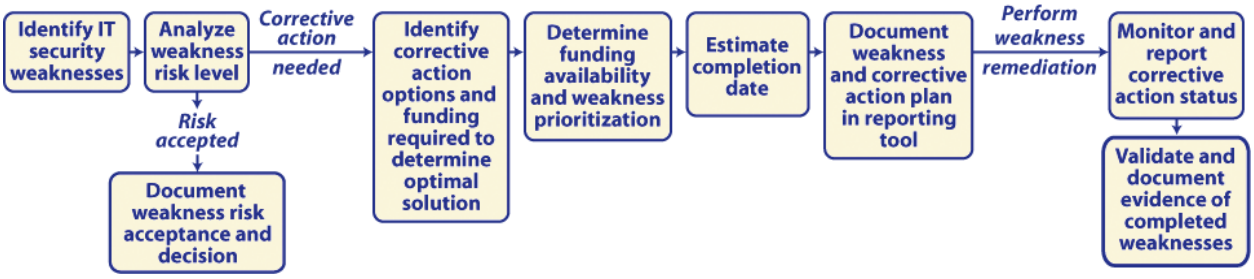

Figure 6 – The Unisys Team works with the Commonwealth Stakeholders to Establish a Corrective Action Plan.

The figure below illustrates a sample Corrective Action Plan template based on CMS guidelines.

Weakness Identifier	Security Control No.	Weakness Description	POC	Resources Required (One-time)	Scheduled Completion Date	Milestones With Completion Dates
State Defined-x	(i.e. AC-2(2))	[Selected Risk Description from final SAR]	[Name, Office/Org]	[man-hours or costs, indicate resource requirement (i.e. new, reallocated or current)]	[field cannot be changed once negotiated and agreed upon]	[include expected completion date with each milestone]
[System Acronym]-1 (ex.)	CP-3 (2)	BCP training has not been conducted.	John Doe - OCISO	(48 Total Man-hours) 40 man-hours - current	6/30/2013 (This should ONLY contain a date - no additional information)	(CP-3 (2)) Employ automated mechanisms to provide a more thorough and realistic training environment. (06/15/2013) (Ensure you put the completion date just as shown above for EACH milestone.)

Changes to Milestones Date	Completion Date	Weakness Status	Risk Level	Weakness Severity	Exception or Waiver	Comments
[When a corrective action is not completed as originally scheduled indicate new date.]	[MM/DD/YY (Completed means weakness has been fully resolved and tested)]	[Completed/Closed, Delayed or Ongoing/Open]	[High, Medium, Low]	[Significant Deficiency, Reportable Condition, Weakness]	[Provide reason, date and signatory for exception or waiver]	[Add additional detail for any previous entries]
N/A	6/29/2013	Completed/Closed	Medium	Weakness	N/A	

Figure 7 – The Unisys Team uses the CMS provided Plan of Action & Milestones (POA&M) template to create the Commonwealth data center Corrective Action Plan.

Step 6: Perform an annual review and update of the data center security management plan and security risk framework

The Unisys Team will perform an annual review and update of data center security plan and the security risk framework. The Unisys Team performs the following steps to update and submit the security management plan.

Steps	Activities
Scope and Plan	• Document scope and objectives • Identify Commonwealth's point of contact ("Trusted Agent"). • Identify and document the time frame to update the security plan. • Understand the business initiatives and additional security objectives that will be required for the year.

Update IT asset inventory	• Update datacenter asset inventory with new/updated/retired:
	  • Software
	  • Hardware and
	  • Information systems.
	• Review and update data classification standard
	• Perform one-time data discovery on datacenter's database instances and servers

Update Security Risk Framework	• Review and update the datacenter security risk framework with additional or updated regulations, policies and standards • Review and update integrated security requirements

Perform Security Risk Assessment	• Use the datacenter security risk framework to conduct a high level security risk assessment of the datacenter operational controls, that includes,
	  • Trust Zone Architecture.
	  • User Role Design, Authentication and Authorization.
	  • Data Protection.
	  • Security Audit Logs and SIEM.
	  • Data Privacy.
	• Work with the Commonwealth stakeholders to define and establish a corrective action plan for identified gaps.

Update and Submit the Security Management Plan	• Identify and document potential mitigation steps • Work with the Commonwealth to categorize gaps into initiatives/security roadmap

Our approach to maintain and address individual regulatory requirements specified by the Commonwealth

The Unisys Team uses the risk framework driven approach to address individual requirements specified by the following regulations:

- Internal Revenue Services (IRS) Publication 1075
- Payment Card Industry (PCI) Data Security Standards(DSS)

- The United States Social Security Administration (SSA) regulations
- Health Insurance Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS) regulations
- Criminal History Record Information Act (CHRIA)
- Commonwealth Information Technology Bulletins (ITBs)

Risk framework provides an integrated view of the regulatory requirements – The data center's security risk framework provides an integrated view of the regulatory requirements and provides a unified approach to document the data center's security plan. Each regulatory requirement within the data center risk framework is integrated with a baseline control that integrates similar requirements. This baseline control is based on NIST SP800-53 rev 4. Note that NIST SP800-53 is used as the base of several federal regulations such as CJIS and IRS 1075.

The data center risk framework provides pre-existing reports to generate individual regulatory compliance reports – The Unisys Team understands that the Commonwealth agencies have individual regulatory requirements and require reports corresponding to those regulatory requirements. The Unisys Team risk framework provides pre-configured reports for the following regulatory requirements:

- Internal Revenue Services (IRS) publication 1075
- Payment Card Industry (PCI) Data Security Standards (DSS)
- Health Information Portability and Accountability Act (HIPAA)
- Criminal Justice Information Services (CJIS)
- United States Social Security Administration (SSA)

In addition to the above pre-configured reports, the Unisys Team will configure the risk framework to generate reports for PA CHRIA and the Commonwealth ITBs.

Process employed to generate individual reports from the integrated risk framework – Within the security risk framework, each regulatory requirement is reviewed and mapped to a baseline/integrated control (based on NIST SP800-53). Each of the baseline controls are associated a framework control number. The data center's current security posture will be documented as part of the initial security management plan (Initial Security Plan) and within the data center's security risk framework. When a Commonwealth agency requires a report that describes the data center's current measures to meet the agency's corresponding regulatory requirements, the Unisys Team will use the pre-existing reporting capability of the framework to extract reports specific to those regulations.

As part of the initial security plan, we will extend the Unisys Team's public sector security risk framework to include additional regulatory requirements such as PA CHRIA and Commonwealth ITBs.

For example, if a Commonwealth agency requires a report that describes the data center's security controls to meet IRS 1075, the security manger generates a report that provides the following information

- Security Framework Identifier (ID)
- NIST SP800-53 Security (control) Domain
- Regulation
- Regulatory reference
- Regulatory Requirement Description
- Established control
- Last assessment date
- Weakness identified
- Mitigation status
- Plan of Action
- Milestone.

These readily available reports will help the Commonwealth agencies to analyze the regulatory posture and submit as part of periodic reports submitted to regulatory agencies.

Sample risk framework reports: The figures below illustrate samples of the risk framework's pre-configured reports. The first illustrates the report that will be used to describe the data center's security posture for IRS1075 regulation. The second illustrates the report that will be used to describe the data center's security posture for PCI DSS industry regulation.

Security Framework ID	Security Domain	Regulation	Regulatory Reference	Regulatory Requirement Description	Established Control	Last Assessment Date	Weakness identified	Mitigation Status	Plan of Action	Milestone
DPP6	Data Privacy & Protection	IRS 1075 Reporting Improper Inspections or Disclosures	10.1 General	Upon discovering a possible improper inspection or disclosure of FTI, including breaches and security incidents, by a federal employee, a state employee, or any other person, the individual making the observation or receiving information should contact the office of the appropriate Special Agent-in-Charge, Treasury Inspector General for Tax Administration (TIGTA) and the IRS (section 10.2).						
DPP6	Data Privacy & Protection	IRS 1075 Reporting Improper Inspections or	10.2 Office of Safeguards Notification	Simultaneously to notifying TIGTA, the agency must notify the IRS Office of Safeguards. The TIGTA contact information is shown in section 10.1.						
DPP6	Data Privacy & Protection	IRS 1075 Reporting Improper Inspections or Disclosures	10.3 Incident Response Procedures	Incident response policies and procedures required in section 9.9 should be used when responding to an identified unauthorized disclosure or data breach incident. Once the incident has been addressed, the agency will conduct a post-incident review to ensure the incident response policies and procedures provided adequate guidance. Any identified deficiencies in the incident response policies and procedures should be resolved immediately. Additional training on any changes to the incident response policies and procedures should be provided to all employees, including contractors and consolidated data center employees, immediately.						
DPP6	Data Privacy & Protection	IRS 1075 Reporting Improper Inspections or	10.4 Incident Response Timeframes	The agency will contact TIGTA and the IRS immediately, but no later than 24-hours after identification of a possible issue involving FTI. The						
DPP6	Data Privacy & Protection	IRS 1075 Reporting Improper Inspections or	10.5 Incident Response Cooperation	The agency will cooperate with TIGTA and Office of Safeguards investigators, providing data and access as needed to determine the facts and

Figure 9 – The Unisys Team's security risk framework provides a regulatory report customized to Commonwealth agency requirements (example of PCI DSS).

Through the data center consolidation effort, the Commonwealth is embarking on a journey of integration within and beyond the enterprise. We understand this evolution requires a comprehensive security and privacy strategy and approach that are critical to its operation. The Unisys Team brings to the Commonwealth a strong mix of industry leading regulatory risk management practices, experienced team members, and related Commonwealth and public sector experiences that add value to establish and maintain a regulatory compliant data center. We believe that these qualifications, combined with our technology strategy and implementation capabilities, uniquely position us to collaborate with the Commonwealth to help effectively evolve and mature the data center's security regulatory posture.

Clarification	*Text*
2.	*Please clarify whether the PSP security requirements described in Section 3.2.2.5 (Security Management) and the referenced exhibits will be met by utilizing a dedicated set of firewalls, hardware, and software for PSP; and if the separations are logical or physical.*

Unisys Response:

The PSP security requirements described in Schedule F Section 3.2.2.5 (Security Management) and the referenced exhibits are met by a dedicated set of server hardware and software in a dedicated cabinet, and are separated by dedicated virtual firewall instances.

In addition, as part of the Enterprise Services Catalog, PSP can select any or all of the following options:

- Dedicated physical firewall(s)
- Secure (locked) cabinet(s)
- Separate secure (locked) cage(s)

Clarification	*Text*
3.	*Please describe in detail how Unisys will provide for justice agency only management of data considering Unisys is not a CHRIA named justice entity.*

Unisys Response:

Unisys understands the Commonwealth's requirement that only CHRIA named justice entities can have access to and manage CHRIA data. We address the requirement of restricting access to and management of data through the combination of the following measures:

1. The Unisys Team will work with the Commonwealth to obtain a Management Control Agreement (waiver) for this contract that allows us to manage CHRIA data as directed by the appropriate CHRIA named Commonwealth justice entity (or entities). In order to obtain the Management Control Agreement, we will show evidence that all Unisys Team personnel who access CHRIA data have passed a security background check per an approved Commonwealth process and have completed security training as to how to appropriately handle CHRIA data based on the regulations in the CHRIA Handbook.

2. If Unisys is not able to obtain a Management Control Agreement from the Commonwealth for this contract, we restrict access to CHRIA data in much the same way as we currently restrict access by the Unisys DPH Support Team. For the Pennsylvania State Police, we currently manage only the hardware not the CHRIA data. Our administrators do not have access to PSP databases to view any data. We enforce segregation of duties between the

Commonwealth and Unisys Team personnel, such as requiring that database administrators be from CHRIA named justice entities only. During the transition phase of the new contract, we will collaborate with the Commonwealth to define a process for obtaining approval from the appropriate CHRIA named Commonwealth justice entity or entities for any requests for DBA services under the contract to work on databases that we suspect may contain data covered by CHRIA.

3. In either case, whether the Unisys Team works under a Management Control Agreement allowing us to manage CHRIA data (#1 above) or whether we are restricted from doing so (#2 above), the following applies:

    a. Through our Data Loss Prevention (DLP) implementation process during the transition phase, we work collaboratively with each Commonwealth agency to discover classified data within that agency, inventory the data, and define appropriate protection measures for the various classifications of data. CHRIA data, per governing regulations, is encrypted while stored and when in transit. These encryption measures offer the first level of protection of CHRIA data while being managed by the Unisys Team. Unisys does not have direct access to the CHRIA data as the ability to decrypt the CHRIA data resides with those who are authorized to access CHRIA data. We only manage the encrypted data.

    b. The Data Loss Prevention (DLP) and Database Firewall (DBFW) tools appropriately identify, monitor and protect sensitive data, including CHRIA data as described in Section 2.3.4, “Data Management”, in Schedule F of our proposal response. These tools allow us to track CHRIA data and through auditing measures, and identify and stop any data breaches at data storage locations and data center egress points.

    c. The proposed implementation also includes the use of the Cyber-Ark privileged account management tool, to manage and log the access to protected data by privileged users including Unisys Team administrators. If the Commonwealth desires, Unisys can also add to the Enterprise Services Catalog the Cyber-Ark module that enables the Commonwealth and the Unisys Team to monitor, log, and audit every action taken by a privileged user.

    d. All Unisys employees and subcontractors providing data center services are subjected to background checks and form signatures and completion of annual security training.

Clarification	*Text*
4.	*Please describe how Unisys will support agency specific Disaster Recovery tests twice a year.*

Unisys Response:

The IT Risk Manager in the Unisys Program Management Office reviews and guides the selection of needed services as part of the Transition activities. Following this review process Unisys builds out the Disaster Recovery infrastructure selected by each agency and works with the agency to schedule the twice-annual testing cycles.

The IT Risk Manager manages the reporting and review for all Disaster Recovery testing with agency directors. Unisys has always used the testing event as a means not only for testing to success but also as an opportunity to identify means to improve services. Unisys expects that the Disaster Recovery testing also results in changes to the agency's plans maintained in the online disaster recovery-planning tool included in the Unisys solution.

The Unisys solution for Disaster Recovery testing takes into account the practices, processes and improvements that the Unisys team has brought to the annual Disaster Recovery testing over the past decade. We have used this experience to model the team of experts that Unisys expects to deploy for a Disaster Recovery test and predict the labor effort needed based on the count of servers involved in the test and the mix of servers that rely upon disk replication for recovery (e.g. Config-4 servers) versus those that use tape-based recovery for recovery.

The Unisys Enterprise Services Catalog provides Agencies with the tools to select the appropriate services to provide Disaster Recovery services that match the criticality of the agency applications that rely upon Unisys IT services.

Clarification	*Text*
5.	*Please describe how Unisys will establish a quiesce point for recovery for tightly integrated environments of mainframe, midrange and x86.*

Unisys Response:

The establishment of a quiesce point for recovery for tightly integrated environments of mainframe, midrange and x86 is highly dependent on application design. Many applications, which have multi-tier environments, have an established process to ensure all transactions are committed before a transaction is complete. For these applications, there is the ability to establish a quiesce point in which the application can be placed in a state to allow a synchronized backup across all tiers to occur. These backups are then used in the recovery process.

Determining quiesce points will be an outcome of populating the Configuration Management Database (CMDB) through auto discovery during transition, which will store the relationships associated to a given application and infrastructure components. The CMDB will store the downstream relationship of components associated to an application; therefore, to determine what needs to be quiesed, the CMDB is used to determine the interdependent components when then indicates the process of creating a quiese point and the automation required to do so.

Interdependency mapping is also an activity Unisys takes up with Agency application owners using the discovered connections. Application architectures are applied to the captured information to provide a view of the applications that permits identification of quiesce points in each of the application's infrastructure tiers and the needed sequence and timing for application sub-system stops and the sequence of tier restarts.

Ultimately, establishing a quiesce point is a function of application design. The Unisys team will be collaborating and working with the Agencies' application owners to identify and establish quiesce points and then build DR plans and build run-books for the applications in its care.

Clarification	*Text*
6.	*Please provide a detailed explanation (i.e. steps required) of how Unisys proposes to transition tightly coupled/integrated applications that reside on multiple and differing technologies (mainframe/midrange/x86) in differing Commonwealth datacenter environments.*

Unisys Response:

Unisys has designed the solution architecture to provide a range of options to meet the risks of transitioning tightly coupled/integrated applications. From the selection of data center locations and their inter-datacenter networks, to the range of tools provided, Unisys has anticipated the issues surrounding application migration. To start, Unisys will create an application taxonomy, which is composed of Agency applications, and their associated components that helps determine tightly coupled/integrated application infrastructure components. The completion of the application taxonomy is then used to determine the application move groups. Unisys will accomplish the creation of the application taxonomy through a Data Gathering phase in the transition that is to be performed in the following manner:

1. Unisys plans to deploy a self-discovery tool that discovers infrastructure and application components. The discovery tool is capable of discovering applications and mapping the conversations between them. Once these application components are discovered they are loaded in the CMDB along with the associated relationships that were identified during discovery. The same holds true for infrastructure components where network IP conversations between devices are captured to create relationships between infrastructure components, which are then captured and loaded in the CMDB. At the end of this auto discovery phase Unisys' goal is to have captured up to 85% of the tightly integrated

application and infrastructure components and their associated upstream and down relationships that can be used to determine move groups.

2. For custom applications or devices not discoverable on the network, Unisys will conduct an application interview and provide questionnaires that will assist the agencies to identify these components. In addition, Unisys will contribute its own knowledge of the Commonwealth's applications during this process. The data collected during this effort is manually entered in the CMDB with the associated relationships.

3. Working in collaboration with the agencies, an audit of the CMDB for accuracy starting from an application name and tracing the relationships down through all related components is completed. Once the audit is complete, we then work in collaboration with the agencies using the CMDB to determine move groups based on the application taxonomy that been derived from the CMDB.

4. With the base application move groups determined, other potential impacts such as, network latency issues, application interface dependencies between other agency applications, and seasonal business restrictions are then factored in to determine the final migration plan of the move groups.

Once the above is completed, we then move into the migration project, which may entail several different migration techniques including

- Over-the-Wire – where data will be copied from the source to the target environment,
- Lift-and-Shift when allowed –where the current infrastructure is turned off, packed and moved to the target data center and
- Greenfield – where application workloads will be reinstalled on new hardware that contains a basic build.

The Unisys Team reviews and recommends one of these strategies for each application but the final decision is made jointly between the Commonwealth and Unisys.

Each phase of the Migration Program provides a solid foundation to prepare for subsequent phases. The early phases of the program collect required data and create the overall migration plan. The middle activities combine to create a high-level approach to the migrations and create the micro design for the migration units. Lastly, detailed plans are created for the migration events. Once the workloads are migrated, we will notify the Commonwealth when physical assets in their environment are ready to be decommissioned.

Move package analysis and design uses information collected in the Data Gathering activities to validate the agencies' current server environments taking into account consideration of outage windows, application release cycles, and anything that could impact the schedule. This data, which cannot be gathered programmatically, is gathered manually through an application interview process. Then this information is analyzed and used to create the initial design which specifies the high-level migration types and the sequenced migration move groups.

Migration analysis and planning activities focus on developing the detailed design and migration plan. The technical solution document takes into consideration environmental readiness including: network, system and storage availability. Any security requirements are identified such as encryption, network zoning and firewall requirements. The micro design takes into consideration any application specific information that could impact the performance of the application in the proposed target environment. This data is manually collected data through the application interview process with the application SMEs. The output from the phases is a refined migration plan and schedule.

Application Migration – The migration phase is executed in the source data center, or over the network. Migration over the network allows server images to be migrated directly to the target environment. The migration approach(s) leverages host-based migration tools allowing for the migration data at a volume/block level, locally or over a distance, between multi-vendor storage subsystems. Once the initial data is migrated, the tools have the ability to refresh the data up to the final cutover. When a source server can be decommissioned, the Commonwealth is notified so they may initiate that process.

As seen in the application migration process described above, the Unisys application migration teams work with the Commonwealth on multiple levels to identify potential challenges including tightly coupled/integrated applications. This is a common situation that has several potential solutions. Each situation is reviewed with the Commonwealth application owners on a case-by-case basis in order to identify the best solution. It is important to understand that just because two applications are tightly coupled does not mean they will experience problems due to being located in separate locations. The three components that determine if remediation needs to take place are

1. Additional latency created by added distance in the network (approximately 1 milli-second per 100 miles),
2. The number of round trips the inter-server communications must make, and
3. The sensitivity of the application and/or user to additional delays.

With this in mind, the four most common solutions to mitigate this risk are:

4. Relocate both applications to the same target data center in the same move package
5. Tune the application to reduce the number of round-trip communications required in the applications
6. Implement WAN acceleration tools
7. Nothing – The additional delay is acceptable

At a high level, the Unisys migration schedule has been designed to begin to mitigate this risk. Often, but not always, closely related applications currently reside in the same data center. As Unisys begins to migrate applications, we will be focused by data centers. In addition, Unisys specifically chose the [redacted] facility due to its proximity to Harrisburg (approximately 90 miles) which adds less than 1 milli-second of latency.

Clarification	*Text*
7.	*Please provide details on each proposed datacenter and what services will/can be provided from each. Address each proposed datacenter individually. Include references to all environments, including but not limited to, production, test, development and DR.*

Unisys Response:

The Unisys 2+ multi-data center architecture permits the placement of any service at any location having sufficient space, power and availability with only one exception – the placement of active mainframes must be at one of the two Unisys locations. Unisys determines the placement of applications, systems and services upon consultation with the Agencies and their application owners.

System Designation	Unisys [redacted]	Unisys [redacted]	Commonwealth Enterprise Data Center
Production	Any equipment type	Any equipment type	No mainframe service
Test	Any equipment type	Any equipment type	No mainframe service
Development	Any equipment type	Any equipment type	No mainframe service
DR	Any equipment type	Any equipment type	No mainframe service
Other	Any equipment type	Any equipment type	No mainframe service

In all other cases, whether considered production, test, development or DR, or considered Fully-Managed, Managed-Only, Limited Co-Location, Mainframe Services or On-Demand (Infrastructure-As-A-Service), or, any site having sufficient space, power and availability can host the service.

Service Type	Unisys [redacted]	Unisys [redacted]	Commonwealth Enterprise Data Center
Fully-Managed	Any service type	Any service type	Any service type
Managed-Only	Any service type	Any service type	Any service type
Limited-CoLocation	Any service type	Any service type	Any service type
Mainframe Services	Any service type	Any service type	No mainframe service
On-Demand (IaaS)	Any service type	Any service type	Any service type

Initially, Unisys anticipates the placement of the [redacted] (Data Powerhouse) systems in Unisys [redacted] with placement of the DR services currently residing at SunGard [redacted] into Unisys [redacted]

IBM Sterling Forest may be used if the Commonwealth elects to continue with its IBM mainframe DR services, as they currently exist via the IBM DR subscription services. No other use for IBM Sterling Forest is intended. The site has been included in Schedule E, "Datacenter Locations", for completeness.

Unisys [redacted]

Unisys [redacted] is hosted within the [redacted] Data Center at [redacted] in [redacted] The site is about 90 direct miles or 104 road miles from Harrisburg and is in the [redacted]. The location is in the same seismic zone as Harrisburg – Seismic Zone 1 – where there is less than a 1% chance of a major earthquake of 5.0 magnitude or greater in the next five years and within 50 km of the [redacted] area.

The facility is at the center of one of the most fiber rich areas of the country and at the center of the key mid-Atlantic networking location in Northern [redacted] Consequently, it provides one of the most flexible and scalable locations to meet the networking requirements that address any possible latency issues encountered during migration.

Unisys [redacted] – Services

Unisys [redacted] may be utilized for Fully-Managed, Managed-Only, Limited-CoLocation, Mainframe Services or On-Demand (IaaS). The facility can be considered for any type of environment including production, test, development or DR.

Unisys [redacted] – Building Design

The facility opened for service in April 2012 and consists of 150,000 square feet of space, of which, approximately 70,000 square feet are usable data center floor space. This data center space is configured as five pods or vaults constructed within a single protective structure as shown on the drawing that follows.

The structure's design and construction includes

- Concrete slab foundation
- 6" reinforced concrete exterior tilt-up outer shell, IBC Type IIB construction
- Interior roof height at 27 feet – 24 feet clearance above 3 foot raised floors
- Roof sprayed, highly reflective polyurethane foam that acts as a moisture barrier as well as an additional protective layer.
- Lateral design supports wind speed of at least 75 miles per hour.
- Implementation of a building-within-a-building design for the vaults providing a 6 to 10 foot air wall between the vaults or the facility's outer wall. Among several benefits of this design, there is no direct path from a vault to the building's exterior and all mechanical and electrical service areas are to the outside of the vaults rendering all raised floor usable to IT equipment and services. In addition, all vaults are access controlled to only those requiring access to the systems inside.

- A signal reference grid (grounding grid) in 20'x20' squares internal to the facility (2/0 AWG), a 4/0 AWG ring around the facility exterior, and a 5/0 AWG ring around the outside of each data center vault. Floor stanchions, conduits, chilled water piping, cabinets, etc., tie into the signal reference grid.
- Offices, meeting rooms and common spaces including showers and a lounge/kitchen area for breaks.
- Curved-steel fencing with security gate post surrounding the mechanical-electrical plant infrastructure.
- Three mantraps with fixed cameras control access to the major security zones within the facility.

Unisys [redacted] – Certifications

The facility meets or exceeds the requirements for

- SSAE-16 Type 2 SOC 1 Compliance (zero exceptions)
- PCI DSS 2.0 Certification
- Safe Harbor Certification (100% compliant)
- FISMA Moderate Compliance
- TIA-942 Data Center Standard (89% of the Tier 3 and Tier 4 requirements; 75% of the Tier 4 requirements)
- Up Time Institute - While not officially rated, mechanical systems meet the requirements for Tier 3; electrical systems meet the requirements for Tier 4.

The facility's SSAE 16 Type 2 SOC 1 and PCI DSS 2.0 audits completed with zero exceptions. The SSAE-16 report is included with Schedule E, "Location of Datacenters". The PCI attestation report is available upon request. Together these audits cover the spectrum of data center operations, focusing on financial integrity, data center physical and personnel security, and financial reporting. In addition, the facility has met all but the time-based requirements for

- Energy Star Rating as Energy Efficient
- LEED Certification

These certifications waiting periods will be complete before the Commonwealth's IT environment resides in the facility.

Unisys [redacted] – Electrical Systems

All components of the building electrical, mechanical, branch circuit monitoring, and environmental monitoring systems are managed by [redacted]'s [redacted]™, a suite of data center infrastructure management systems. There are no single points of failure in the facility's electrical system. [redacted]™ provides

- Monitoring and optimizing of power delivery
- Management of the facility cooling mode and configuration automatically

- Monitoring of the security and environmental systems
- Maximization of performance and uptime
- Meeting SLAs with no maintenance windows
- 2N+2 redundancy at the rack level
- Patented maintenance bypass and isolation technology meeting a "fix-one, break-one with a utility outage" design criteria
- Patented distributed redundant UPS design with live load switching for scalability
- Metered power

Supply - Unisys [redacted] has a [redacted] delivering 21 megawatts at a 14.4 megawatts critical power load. The feed runs 3,300 feet underground in concrete-encased, weather-hardened ductwork from the substation. Because of [redacted] high-priority location in [redacted], [redacted] has increased the redundancy of the substation. Improvements include five 230kV transmission lines that feed the substation (only one is required to support the current substation load) in a geo-diverse fashion (3 from the east, 2 from the west).

The substation electrical distribution is a networked 230kV system with a doubly fault tolerant breaker-and-a-half networked bus configuration. The substation transformers (230kV to 34.5kV) are also in at least an N+1 configuration and [redacted] has assigned a high priority to the [redacted] in terms of contingency analysis for load restoration priority in the case of a systemic utility power outage.

Uninterruptible Power Supply – Electrical circuits (120V, 208V, single or three phase, from 20 to 80 amps) are supplied from Power Distribution Units (PDUs) on the data center raised floor. Each PDU is fed from two separate 1,000kVA Uninterruptible Power Supplies (UPS). Dual-corded equipment in racks or cabinets on the data center raised floor are then supplied circuits from two different UPS's. As a result, dual-corded equipment is protected from loss of power from any single source. In the UPS, the AC signal is rectified to provide auctioneered DC power that is inverted back to supply AC power to the Remote Distribution Units (RDUs) and PDUs on the data floor.

Electrical circuits (120V, 208V, single or three phase, from 20 to 80 amps) are supplied from Power Distribution Units (PDUs) on the data center raised floor. UPS Switch Points (USPs) allow any facility UPS to power any PDU in the facility

Each MSB is backed up by one 2MW diesel generator that will automatically pick up on loss of power. In addition, there is a series of N+2 generators that can pick up any MSB upon failure of its associated diesel generator.

The overall facility UPS topology is a distributed redundant configuration, with a patented maintenance bypass isolation feature. This feature enables the facility to exceed Uptime Tier 4 standards for data centers to be concurrently maintainable or fault tolerant. Because of this technology, the facility is concurrently maintainable and fault tolerant, with a simultaneous utility outage. This innovative level of critical infrastructure redundancy has been termed 2N+2: two completely separate power paths from the power utility to the customer rack (2N) AND all of the

critical components in those two independent power paths have (at least) two extras for backup (N+2).

Our ability to scale power across the facility, from any UPS to any RDU is also a patented technology that differentiates this Unisys facility from our competitors. This technology is especially beneficial to the Commonwealth as it desire to scale over time, as it allows the critical infrastructure to scale seamless as the Commonwealth experiences growth. We can implement and commission new phases of the electrical plant, including UPS load balancing, seamlessly without any interruption to equipment power (or decrease in reliability).

In the Unisys [redacted] data center, Schneider-Electric 1000 kVA dual-module UPS systems with internal bypass and a dedicated System Control Cabinet (SCC) each (and patented external maintenance bypass) are utilized in a distributed redundant configuration. Each PDU (power distribution unit) is fed from two separate 1,000kVA lines from the UPS systems. The facility uses a 2N+2 electrical topology controlled and monitored by [redacted]s patented N-Matrix™ technology.

At 100% capacity, each UPS system may operate on battery for 14 minutes. In the event of a utility outage, the time on battery is not only engineered for the normal 15-second transfer to the dedicated generator but time was allotted in the event of a re-alignment to the redundant generator.

The maintenance performed on these double conversion static UPS systems is in line with the industry standard of a semi-annual UPS inspection followed by an Annual. Readings are taken daily on each system and reviewed by senior staff for any anomalies.

Unisys [redacted] utilizes flooded lead acid batteries in the data center UPS systems. Each 1.8-megawatt UPS system contains two 900-kilowatt modules. Each UPS module has its own dedicated battery string. Each battery is monitored 24x7 by a monitoring system that will visually and remotely indicate a battery that requires preventative maintenance (e.g. impedance, AC ripple and temperature). These batteries will carry a 3-year full warranty and 17 years pro-rated product warranty.

The flooded batteries are maintained monthly by the critical facilities team and annually by an independent specialized battery maintenance vendor. BigFoot is used for CMMS scheduling, tracking and updating. Intellibat, the battery monitoring system, provides an endless amount of analytics showing how the batteries currently sit in their projected life cycle. In the event of a UPS maintenance event, the Unisys [redacted] contracted UPS vendor is required to be onsite within 4 hours of initial call out. However, the backup plan lies within the site's topography of 2N+2 meaning that the site can continue to provide a 2N level of redundancy in the event of the loss of one UPS system through the fix-one-break-one patented technology.

Generation – Unisys [redacted] currently has five 2-megawatt Cummins diesel generators outside the building in a secure fenced-in area. At full operation, the facility anticipates a total of 14 generators. The generators are housed in outdoor container enclosures with belly tanks at one unit per container. The generators burn approximately 120 gallons per hour at full load and can run 24

hours at full load. The facility maintains refueling contracts with multiple suppliers to guarantee delivery within 24 hours from initial contact and to provide continuous top-offs until utility power has been restored.

The generators are exercised monthly at greater than 30% load for at least 30 minutes. The data center facility is transitioned to generator power on a quarterly basis for at least 30 minutes. Any abnormal operating conditions are recorded in material history. Daily logs are taken across the facility's infrastructure, including the electrical systems, HVAC systems, BMS, security operations and general conditions. These logs are maintained by critical facilities operations staff and reviewed by critical facilities management on a regular basis for trending and analysis.

Power Density – The facility power plan delivers high scalable power via diverse paths to each vault. Power densities available are from 150 watts per square foot to 250+ watts per square foot. Even with these high power densities, the facility maintains one of the best PUE (Power Usage Efficiency) in the industry at 1.45. This power density enables Unisys to meet the Commonwealth's IT data center needs in far less space than typically used in facilities like Willow Oak. Combined with the new technology equipment configured to meet the Commonwealth's requirements much less floor space can be employed to provide much more IT resource. This feature of the facility is among the keys to the Unisys solution's unique scalability and flexibility.

Unisys [redacted] – Mechanical Systems

[redacted] has installed centralized 1800-ton air-cooled chillers with waterside economization and with water-cooled chillers installed and scaled as the facility load increases. Facility CRAH (computer room air handler) units are custom-built Energy Labs 100-ton units which stretch from floor to ceiling with the capability to perform airside economization; Unisys [redacted] CRAHs operate on free outside air about 60% of the year.

In airside economization mode, air is pulled from the outside via roof plenums at the top of the CRAH units, passes through the CRAH unit (no chilled water flow through piping), and is pushed under the raised floor to maintain the static pressure used to push cold air into the cold aisles of the facility. The cooling system maintains cold aisle temperature at the outlet of the cold aisle perforated tile at 72 degrees F +/- 5 degrees.

In partial airside economization mode, the process is the same, but chilled water flows through the CRAH unit chilled piping at the same time. During the high-temperature months, the chiller plant cools the facility with CRAH units operating to pull hot air from the data center ceiling over chilled water piping to transfer heat from the data floor to the chilled water return, where that heat is rejected to the air (at the air cooled chillers). The air-cooled chillers also have economizer coils for "dry cooler" mode of operation.

All chillers, pumps, cooling towers and associated HVAC components are N+1 or greater redundancy. The data center air handlers are installed at an N+2 redundancy. Facility HVAC and mechanical systems monitoring is accomplished via Schneider Citect and SynapSense.

A leak detection rope system comprised of multiple zones is used throughout the facility and is routed beneath all CRAH's and chilled water piping throughout the facility. The system is testing quarterly with all results reported into the CMMS. Security roving patrols walk the entirety of the facility on an hourly basis and inspect for any water intrusion at the drip pans. The drip pans have drain valves for drain lines to be attached to in the event draining is needed.

Installation of a well is completing at the [redacted] data center. In addition to utility potable water, reclaimed water is also used by the cooling towers. In all, there are three water sources onsite to support the cooling plant water makeup requirements. Overall, the Unisys [redacted] facility's design incorporates a cooling system with zero single points of failure. In the event of any mechanical system or component failure, the redundant architecture plans for a failure. Included is loss of chiller, chilled water pump, piping rupture, etc. The cooling system meets UTI Tier 3 requirements.

Unisys [redacted] – Fire Systems

Unisys [redacted] utilizes a multi-zone, dual-interlock, pre-action, dry pipe fire suppression system with intelligent smoke and thermal detectors which require both sensors in the same zone to detect an alarm condition in order to admit water into the pipes inside a critical area. Sprinkler heads are also fitted with a high-temperature fusible head in order to preclude admitting water into a computer room area where no fire is present. The fire suppression and alarm system is integrated into the site's Network Operations Center and security office monitoring systems. In the event of a fire, all fire rated doors automatically close but still allow for egress. In addition, the Unisys ITSM system receives the facility alerts and alarms to alert the Unisys Team in Harrisburg to the event.

Non-critical environments are protected by wet sprinkler systems with protection/notification as required by local ordinances/codes.

Unisys [redacted] – Security

[redacted] security team is 24x7.The security lobby is staffed 24x7 by an in-house security team that is comprised of military veterans and career police officers. Each client's equipment within the data center is housed in a vault, cage enclosure or cabinet that is exclusively dedicated to that client. Access is restricted to authorized personnel only, who must pass through multiple security zones delineated by mantraps with card readers and keypads for personal identification numbers, as well as biometric iris scanners. The facility's security features include

- Multiple security zones
- 3600 digital camera coverage
- 3-factor ID for data floor access
- Building within a building design
- Curved-steel fencing with security gate post around the mechanical-electrical plant

Physical Security – At the core of the security operation is the hardened security lobby surrounded by bullet and blast-resistant glass. 175 concrete and steel bollards surround building itself. Excepting the main lobby entrance and shipping and receiving, the only external doors from the

facility are for emergency exit only and do not open from the computer room floors; they open from the corridor that surrounds the data center vaults. These emergency exit doors are protected by intrusion detection alarms that sound in the security office (located in main lobby) and at the door itself.

Entry into the exterior lobby of the facility requires use of a unique RF proximity badge or a call to the Security department with a valid reason for entering the exterior lobby of the facility. Then, all personnel must authenticate via biometric iris scan to enter the interior of the facility. Personnel must be biometrically enrolled using iris scans (and authorized access to the data floor) in order to gain entry onto the data center raised floor areas. Passage through the mantrap then requires entry of a PIN code. Entry of an improper PIN code generates alarms that display on the centralized electronic access control system, which is monitored 24x7x365 by on-site security personnel.

Physical facility security includes a building-within-a-building design, ensuring there is no direct access to the data floor from the external walls of the facility. CCTV that monitors the facilities parking lots, roof and entrances is monitored in the security office. Over 150 steel and concrete bollards surround the facility in front of parking and the main entrance. All other back-of-house MEP infrastructure and the shipping & receiving area is surrounded by steel fencing and secured with entrance gates and a guardhouse.

All visitors to the data center that are not current customers or customer vendors (who are badged and granted access to the facility via customer account custodians) are escorted by [redacted] personnel at all times. Visitor access times are electronically tracked and recorded as they enter and leave secured areas (they are also monitored via CCTV).

The facility's centralized electronic access system is in operation 24x7 – it will alarm if an unoccupied secure space is accessed without proper authentication or even if it is attempted to be accessed without a proper pin code, RF proximity card or biometric iris scan. Generator enclosures are kept physically locked at all times unless they are being maintained by critical facilities staff who are present at all times while the enclosures are open.

The loading dock area is secured by high-security steel fencing, a gate and guard post monitored 24x7 by CCTV. The gate may only be operated by the 24x7-security team physically present at the gate. No vehicles are authorized inside the gated and fenced-in mechanical-electrical plant and loading dock area, besides authorized shipments and shipping trucks. The gated and fenced access to the loading dock area is manned only when a truck has checked in to the front security lobby and cleared security. With advance notice, shipments and items stored in shipping and receiving may be retrieved after normal working hours.

Vehicle access to the site is via a public road entrance. All parking areas are monitored by CCTV with all facility and parking access available 24x7.

Access Control – Unisys [redacted] has a centralized, electronic access control system that provides alarm monitoring points on all personnel and equipment doors, as well as intrusion detection throughout the facility. Photo ID badges with unique personal identification numbers, as well as

biometric iris scanners, provide multiple levels of electronic access control and provide individual accountability throughout the facility. The site's security systems control physical and electronic access to the building, the data center floor, and each vault or caged area.

Access to the facility is restricted to authorized personnel only. All personnel (site employees, clients, vendors, contractors, and any other visitors) must be badged before entrance and badges must be displayed at all times. Each badge is programmed to grant access only to areas the personnel has been authorized to enter. All temporary badges must be returned to security control and logged out daily.

Client access to the facility is strictly regulated by adherence to specific badge authorization procedures. Unisys maintains a minimum of two account custodians from the Unisys Security Team for the Commonwealth vault. The account custodians are deemed authoritative and are exclusively responsible for approving access to the facility and to the vault's equipment cage or cabinet. Authorization is verified by means of a password unique to the Unisys account custodian. After approval has been received at the site for an individual to gain access to the data center and client equipment, a Badge Authorization Form is initiated.

This form verifies the name of the individual, the access time, and what access level they should be granted. The Badge Authorization Form is then sent to the site's Security department, where it is reviewed by the Security Manager and either approved or returned for clarification. Once approved, an access badge is made and an individual PIN code is assigned to that badge. Identification is verified by use of a government picture ID. In the event of a short notice (or nights or weekends) authorization request, the account custodian can telephone the site's Operations Control Center (OCC) and request authorization for access verbally. Passwords will be verified and the OCC will then generate the Badge Authorization Form for Security. Access controls include

- Government-issued ID required
- No public access
- Biometric iris scanning technology to access data floor: multi-point iris recognition and normal pupil dilation required for approved access
- Three-factor authentication to access data center, including Commonwealth-only areas
- Security-only access to shipping and receiving
- MDF/Telco Room protected and access-controlled like a SCIF

Monitoring – Active security monitoring includes

- Multiple security zones
- Multiple access levels for customers and employees
- 43 pan-tilt-zoom digital cameras monitor facility – coverage retained for at least 90 days
- Intrusion detection system on all fire exits
- Multiple fire suppression zones
- Redundant access control and monitoring systems – one in Security and one in NOC

Unisys [redacted] – Building Management

The systems used for building management include:

- GE iFIX is used for monitoring of the overall electrical plant.
- Schneider Citect is used for monitoring of the mechanical plant.
- Trendpoint is used for branch circuit breaker monitoring.
- Intellibat is used for battery monitoring.
- SynapSense is used for data center environmental monitoring.
- Bigfoot's computer maintenance and management system is used for facility equipment maintenance management.

The monitoring systems oversee

- Multiple security zones
- Multiple access levels for customers and employees
- 43 pan-tilt-zoom digital cameras monitor facility – coverage retained for at least 90 days
- Intrusion detection system on all fire exits
- Multiple fire suppression zones
- Redundant access control and monitoring systems – one in site Security and one in the local facility NOC

Data from the BMS and power management systems is tracked and data is collected and analyzed by the critical facilities group. Automated alarming schemes are integrated into the power circuit monitoring system, which emails alerts to both staff and customers that own the affected circuits (low, warning high, high). The systems are backed up daily with software stored onsite. Senior staff continually provides training, and staff is sent to offsite training as available. The training is been pre-approved for verification purposes. In addition, the facility's training matrix helps to determine needs as well as skill assessments. [redacted]'s facilities operations staff is highly trained and skilled, the majority of which are ex-Navy nuclear operators and technicians.

Unisys[redacted] – Operations

Operations within the facility include:

- Above raised floor cleaning in general areas weekly, within the computer rooms annually and sub-floor cleaning every third year.
- Electrical and HVAC system testing monthly, quarterly, semi-annually and annually depending upon the system.
- Service tickets are required for all work to be performed and these tickets require three levels of internal facility approval.

Unisys[redacted] – Networking

Unisys[redacted] has three diverse fiber entrances, [redacted]. The following providers are built into the facility: XO, Zayo Group, Level 3, Fiberlight, Fibergate, Yellowfiber Networks, Datatility, BroadAspect, Cogent, SummitIG.

The Unisys [redacted] facility is carrier neutral and has fiber tethering capability to all of the surrounding data centers in the [redacted] fiber area. Cross-connects from demarc to intermediate demarc are run in multiple secure overhead steel conduits with plenty of growth space. From intermediate demarc to vault racks and cages cross connects are run in overhead ladder racking.

The Unisys [redacted] demark is the MDF (main distribution frame) [redacted] and distributes cross-connects to IDFs (intermediate distribution frame) in the subsequent vaults. The Commonwealth equipment will then connect to the dedicated data center core network as described in Schedule F.

Unisys [redacted] – Computer Room

The vault dedicated to the Commonwealth meets the following specifications:

- Designed to ASHRAE TC 9.9 that is 20-80% humidity and 80.6F at the top of the rack.
- 36" raised floor plenum utilizing 2'x2' Tate Concore raised flooring system.
- Power cutouts are a 4" hole with a 3" steel chase.
- Tate Concore 1250 tiles are rated at 312.5 pounds per square foot.
- A vault isolated by security doors and welded-mesh caging in any plenum spaces (under floor at vault wall and at ceiling at the vault wall).
- Separation from adjacent vaults by mechanical chaises containing CRAH units (facility employee-only security zone).
- 12-foot tall cage mesh standard is used in building optional security cages.

Electrical circuits (120V, 208V, single or three phase, from 20 to 80 amps) are supplied from Power Distribution Units (PDUs) on the data center raised floor. Each PDU is fed from two separate 1,000kVA Uninterruptible Power Supplies (UPS). Dual-corded equipment in racks or cabinets on the data center raised floor are then supplied circuits from two different UPS's. As a result, dual-corded equipment is protected from loss of power from any single source. In the UPS, the AC signal is rectified to provide auctioneered DC power that is inverted back to supply AC power to the Remote Distribution Units (RDUs) and PDUs on the data floor. Power may be monitored down to the circuit.

Unisys [redacted]

Unisys' flagship outsourcing data center is the [redacted] Service Center (ESC) at [redacted] in [redacted] [redacted] is in the [redacted] in a southwest suburb of [redacted] The area is a part of the United States' seismic zone 0 rated with the areas having the lowest seismic risk in North America. The site is approximately 6 miles from [redacted] International Airport.

Built explicitly to host multiple outsourcing data center clients, this advanced service center embodies Unisys' commitment to providing our clients with the best services possible—those that incorporate best-of-class technology and are embedded in industry-accepted standards and forward-thinking, proven methodologies.

The Unisys ESC is a 312,000-square-foot facility that is home to two distinct data centers: The main data center is a 100,000-square-foot raised floor facility. This data center is home to about 3,500 mainframe, UNIX, and Wintel platforms composed of technologies from every major manufacturer, including IBM, Sun/Oracle, Unisys, Dell, HP/Compaq, Microsoft, EMC, and StorageTek. Unisys operations staff provides support to these systems, whose combined processing power equals more than 100,000 MIPS and whose peripheral capability includes more than three petabytes of disk storage and more than 1 million library volumes. Unisys built the second data center to accommodate increasing requirements and is now reserved for the Commonwealth of Pennsylvania. This data center consists of 17,000 square feet of Tier 3 equivalent raised floor.

The Unisys ESC is safe, secure, and protected from disruption or intrusion. All critical procedures, equipment, and software systems have a backup, an acceptable alternative, or a proven workaround solution for use in component or system failure. The ESC also complies fully with industry guidelines for safety, fire protection, uninterruptible power supply, and security requirements. Each year, the ESC is required to pass a SSAE-16 audit for its overall operations.

Multiple SSAE-16 audits that are tailored for specific clients are also performed. Unisys' ESC along with other has Unisys datacenters and Managed Services Centers around the globe hold ISO 27001 certification.

Security at the Unisys ESC includes 24-hour guard protection, a complete badge control system, and interior and exterior video surveillance consisting of cameras and recorders, some with motion detection sensors. Access to restricted or sensitive areas at the ESC is controlled by the badge control system and limited to individuals who need to have it.

With more than 400 professionals on site, the Unisys ESC has the business and technical IT resources with the specialized experience, education, and training needed to support our clients' IT environment. Unisys can closely align our technical IT professionals with the Commonwealth clients' day-to-day system requirements.

Unisys [redacted] – Services

Unisys [redacted] may be utilized for Fully-Managed, Managed-Only, Limited-CoLocation, Mainframe Services or On-Demand (IaaS). The facility can be considered for any type of environment including production, test, development or DR.

Unisys [redacted] – Building Design

The facility sits on a 35-acre campus above the surround area. The structure's design and construction includes:

- 312,000 square feet of space, of which, approximately 100,000 square feet in 1 data center area and 16,700 in a second data center are raised-floor areas.
- Concurrently maintainable facility electrical and cooling services
- Electrical-mechanical support space occupying 30,000 square feet.
- A steel frame structure with a pre-cast concrete panel exterior.
- Walls in the structure provide a 2-hour fire rating.
- Floors are poured concrete over steel pans.
- The roof is a rubber membrane over insulation with rock ballast.
- A truck height loading dock.
- 900 square foot secure staging area.
- Available office and conference facilities.
- Mantraps with fixed cameras control access to the major security zones within the facility.

Mechanical and electrical systems are concurrently maintainable and control the temperature and humidity required in equipment spaces. The facility includes water detection and complete drainage facilities. Grounding is provided by driven ground systems connected to the raised-floor grid system. Emergency lighting exists in all areas of the building.

Environmentally friendly design – [redacted] was upgraded and expanded in 2007 to avoid the problems of many data centers – the rabid consumption of electric power. The Unisys data center in

[redacted] is an environmentally advanced green outsourcing center that reduces its carbon footprint and benefits clients and the community.

For the [redacted] data center, Unisys created a comprehensive solution focused on generating more computing power with fewer physical devices. With this virtualization technology, Unisys can reduce carbon emissions by 67 percent when the number of physical devices diminishes.

Virtualization was just one step. Unisys used integrated and sustainable design elements such as a 30-inch raised floor that maintains superior airflow around servers to maximize cooling efficiency. We also installed a glycol air conditioning system that is more than 40 percent more efficient than those typically found at data centers. This system also uses "free cooling" when the outside temperature is below 50 degrees Fahrenheit, saving 8 percent of power consumption and cost. Other energy-saving equipment includes computer designed fluorescent lighting, central humidification systems, better cable management, and lower emitting emergency generators.

Matching air conditioning with power usage saved $7,000 a month in electric costs in [redacted] This green operational procedure has served as a model for other Unisys data centers to implement.

Unisys saw the surrounding community as an extension of the upgrade and expansion project. During construction, we recycled more than 166,000 pounds of building material—including carpeting, ceiling tiles, conduit, and electrical wire—and achieved a waste recovery rate of 62 percent. Working with the City of [redacted] we also launched land-based initiatives outside our facility, including a 4.5-acre oak savanna restoration that involved the removal of buckthorn, an invasive, non-native plant species that overwhelms native plants. To enhance security for our facility, this project improved views and reduced the risk of brush fire.

Expanding our [redacted] facility was just the first step for Unisys in the IT community. We have already leveraged best practices from [redacted] throughout our existing data centers in North America and around the globe and will continue to do so. This effort has already begun to replicate efforts with clients, including the City of Minneapolis. Unisys is also working closely with power companies to establish baseline metrics for energy efficiency and power utilization.

In December 2007, InfoWorld said, "Now we can add Unisys to the list of companies pushing the green envelope a bit further." Added Victoria Bond, Director, Infrastructure and Operations at Unisys: "This is just the start for [redacted] and Unisys as a whole."

Unisys design criteria for [redacted] as a green data center incorporates green sources of power and works with local utilities that have green sources of power: hydroelectric, wind, solar, and others.

Unisys reevaluated systems, applications, and databases to determine which are essential for our business and eliminated systems that are not required. We consolidated departments, databases, and applications for those that are required. We simplified and modernized our applications and infrastructure. We chose strategies that get us closer to business processes and the inner relationships of our data.

Unisys drove up our own system utilization rates and implemented server virtualization. We internally use shared infrastructure and drive up utilization rates of all our own servers to reduce the total number of servers required and reduce power consumption. The virtualization of servers can reduce carbon emissions up to 67 percent.

Unisys proliferates culture and awareness throughout our organization and the community to welcome suggestions for efficiency, recycling and energy alternatives. Unisys designed a data center that incorporates best practices and is most efficient at power consumption and cooling provision, including optimal airflow. We use computer modeling simulations for optimal airflow and rack and cooling placement on the floor.

Unisys [redacted] saves on cooling by:

- Stepping down computer room air conditioners (CRACS).
- Use of glycol to improve circulation of outside cold air by 8 percent.
- Balance of cooling with load to achieve efficiencies up to 44 percent.
- Utilizing free cooling whenever weather permits.
- Optimal placement of CRACS and racks.

Unisys [redacted] saves on power by

- Using variable speed pumps and fans.
- Turning unneeded equipment off and rotating it.
- Monitoring.
- Computer controlled fluorescent lighting.
- Central humidification.

Unisys established baseline metrics so that we can track improvements as they are implemented, and we use these metrics as we define goals for energy use and savings.

Unisys [redacted] – Certifications

The facility meets or exceeds the requirements for

- SSAE-16 Type 2 SOC 1 Compliance
- ISO 9000, 20001 and 27001 Certification
- ISO/IEC Standard 17799

Unisys [redacted] – Electrical Systems

Supply – Unisys [redacted] maintains two separate supply designs for the two data centers with the facility. The Area F data center, designated for the Commonwealth, receives its supply via a single Xcel Energy Cedarvale Substation Interruptible Service utility feed into two redundant, concurrently maintainable indoor substations that are connected to utility paralleling soft loading switchgear. A dual power distribution system then completes the connections to UPS and generators.

Uninterruptible Power Supply – Area F receives 1400-kilowatt UPS power supplied from an N+1 four-module system.

Generation – Area F has four 1000-kilowatt generators in an N+1 four-module system matched to the UPS. Generators activate 13 to 15 seconds after transfer to the UPS systems. Unisys maintains a 60-hour fuel capacity for the generators at full load.

Power Density – Computer room power is provided to the floor via 12 Liebert 300 kVA PDUs with 400A static switches. Average power and cooling density to the Area F computer room is 80 watts per square foot.

Unisys [redacted] – Mechanical Systems

Unisys [redacted] cooling systems consist of redundant chillers, pumps, cooling towers, controls, and 19-ton glycol/DX CRAC units. A 100,000 gallon chilled water storage tank provides a 1-hour backup operation. In addition, multiple chilled water piping loops run through the facility to provide redundancy. In the event of a municipal water failure, Unisys [redacted] has a backup water well. Dual power sources exist to all mechanical equipment.

[redacted]

Unisys [redacted] – Fire Systems

The Unisys [redacted] fire and smoke detection systems consist of:

- Fenwal and Vesda high sensitivity smoke detection systems
- Fully zoned wet pipe sprinkler system
- A fire suppression system meeting NFPA standards
- A multiple zone water detection system

Unisys [redacted] – Security

Physical Security – Unisys [redacted] maintains on-site guard coverage 24x7x365. Guard coverage is joined with surveillance cameras with video recording. The facility has silent alarm alerting along with

- Badge readers with multiple level access control
- Silent alarm alerting
- Compliant with ISO/IEC Standard 17799
- Lenel 2 factor prox card Secure entrances
- CCTV and DVR monitoring of entrances and exits
- 7x24x365 security officer services

Access Control – The facility maintains a multi-level access control system utilizing role-based access control, badge readers, and mantraps at key security zone boundaries.

Monitoring – All security alarms go to the security desk for response.

Unisys [redacted] – Building Management

Siemens automated building management system with redundant components manages the facility. A facility support team for mechanical/electrical is on-site 24x7x365 with the environment maintaining automated monitoring 24x7x365. A Site Scan Web Based Monitoring System monitors all critical equipment.

Unisys [redacted] – Operations

Unisys [redacted] services personnel include more than 300 professions including Data Center Services, Help Desk and Media Services coverage 24x7x365. Technical support and computer engineering support along with on-site smart hands coverage is available 24x7.

Unisys [redacted] – Networking

Like Unisys [redacted] Unisys [redacted] is a carrier-neutral network location. Six different internet service providers exist in the facility via redundant entrances and points of presence.

Unisys [redacted] – Computer Room

The Area F computer room designated for the Commonwealth provides 16,700 square feet of raised floor space. An illustration of the room as it can be configured shows the floor space available.

Clarification	*Text*
8.	*Please describe in detail how Unisys' data security solution and policies/controls will secure the Commonwealth's data (including any storage or compute device used by Unisys to support the Commonwealth) and meet the requirements of the Commonwealth ITBs, including specifically ITB-SEC020 – Encryption Standards for Data at Rest, and ITB-SEC031 – Encryption Standards for Data in Transit.*

Unisys Response:

The Unisys Team's data security solution and policies/controls will secure the Commonwealth's data and meet the requirements of the Commonwealth ITBs, including specifically ITB-SEC020 – Encryption Standards for Data at Rest, and ITB-SEC031 – Encryption Standards for Data in Transit. The solution starts with our conduct of a baseline security risk and vulnerability assessment, to help the agencies classify their data to determine which data need to be encrypted. Our process for

conducting the baseline security risk and vulnerability assessment, more fully described in Section 3.3.2.2 in Schedule F of our proposal.

- Step 1: **Scope and Plan** where we document project requirements, scope and objectives. See the figure below for a sample of the security assessment and planning data

- Step 2: **Conduct vulnerability assessment** where we use passive and active scanning techniques, and perform infrastructure and database vulnerability testing to identify vulnerabilities.

- Step 3: **Perform penetration testing** where we exploit the vulnerabilities found in Step 2 to fully determine risk to Commonwealth assets

- Step 4: **Perform security risk assessment and architecture review** where we use our public sector security risk framework to develop the data center security risk framework. This framework is customized to the data center, helps integrate several relevant regulatory requirements and perform a risk assessment to identify the data center security posture with regard to relevant regulations and Commonwealth policies. An IT architecture review of the existing data center IT infrastructures is also conducted.

- Step 5: **Perform security configuration risk review** where we assess compliance with applicable regulations (for example, using the IRS 1075 based Safeguard Computer Security Evaluation Matrix on Commonwealth selected IT infrastructure handling Federal Taxpayer Information).

At the conclusion of the baseline security risk and vulnerability assessment, Unisys will have a comprehensive view of the security posture of the Commonwealth. This view will be documented in the baseline security vulnerability assessment report and a remediation plan will be developed. The execution of the remediation plan is the first step in protecting Commonwealth data and assets.

Our solution also leverages both Data Loss Prevention (DLP) and Database Firewall (DBFW) tools to help identify, monitor and protect sensitive and confidential data in transit and at rest at the data storage server locations and data center egress points. As part of this implementation of DLP and DBFW, we will collaborate with each agency to classify their data and determine the appropriate levels of protection (e.g., encryption) needed for each type of data. Our DLP and DBFW implementation approaches are more fully described in Section 2.3.4, Data Protection.

Using our Data Loss Prevention (DLP) and Database Firewall (DBFW) tools assists us to appropriately identify, monitor and protect sensitive and confidential data in transit and data at rest for the Commonwealth. The more specific protection mechanisms that must be employed are defined by governing policies and regulations including CJIS, CHRIA, HIPAA, SSA, IRS, PCI and the Commonwealth ITBs. As discussed earlier, an output of the baseline security risk and vulnerability assessment, which in part assesses the Commonwealth's compliance with these governing regulations, is the remediation plan, where gaps are identified between existing and necessary

measures to protect Commonwealth data. Through the execution of the remediation plan, protection measures will be taken to protect Commonwealth data.

As noted, ITB-SEC020 calls for the protection of stored sensitive, protected or exempt data at rest through the use of encryption in accordance with the Advanced Encryption Standard (AES) for symmetric encryption and following ITB-SEC013 and ITB-SEC014 for asymmetric encryption.

To protect the data that is classified as needing ITB-SEC020-level protection through our data classification activities described above, we will be encrypting all physical tape drives using IBM Tivoli Key License Manager (TKLM). TKLM is platform independent and enables the centralized management and generation of encryption keys that are used by storage platforms such as the IBM TS3500 and Oracle SL8500 Tape Libraries. These keys combined with FIPS 140-2 validated cryptographic modules on the tape drives support encrypting the data stored on the tapes using AES. TKLM will be deployed at both [redacted] and [redacted] to support disaster recovery functionality, but only one instance can own the key generation at a time. TKLM can be configured to support Agency specific master keys and supports role based control to limit access to authorized Commonwealth personnel.

In addition, we offer full disk encryption using the McAfee Full Disk Encryption product. This software is available as a part of the Windows or Linux Server Configuration. We also offer McAfee Endpoint Encryption software that provides advanced data encryption and file encryption for desktops, laptops and removable storage devices. These additional encryption tools meet the current Commonwealth product standard STD-SEC020A, and will be used to encrypt disks or data as determined by the data classification activities described above.

In addition to data at rest, ITB-SEC031 provides encryption standards for data in transit, calling for AES data encryption with 256-bit keys through the use of encryption products that are certified through the NIST Cryptographic Module Validation Program. Data encryption is required based on guidelines found in ITB-SEC019 and whenever required by law. The Juniper firewall and VPN appliances proposed in our solution are FIPS 140-2 compliant that includes NIST validation in accordance with http://csrc.nist.gov/groups/STM/cmvp/validation.html. The NIST certification for the specific Juniper equipment FIPS 140-2 compliance can be viewed as follows (note that though the link indicates 140-1, the certificates are for 140-2):

- Juniper SRX 5800: http://csrc.nist.gov/groups/STM/cmvp/documents/140-1/140crt/FIPS140ConsolidatedCertList0009.pdf.
- Juniper SRX 650: http://csrc.nist.gov/groups/STM/cmvp/documents/140-1/140crt/FIPS140ConsolidatedCertList0016.pdf
- Juniper SRX 3600: http://csrc.nist.gov/groups/STM/cmvp/documents/140-1/140crt/FIPS140ConsolidatedCertList0010.pdf
- The Juniper Pulse MAG4610 AES encryption to be used with VPN has been validated by NIST at http://csrc.nist.gov/groups/STM/cavp/documents/aes/aesval.html number 2553.

The Unisys team will work with agencies to determine the need and the method of encryption on a case-by-case basis within the guidelines of ITB-SEC019 and ITB-SEC031. Unisys will provide data center termination of AES encrypted tunnels using Juniper FIPS-2 NIST certified equipment in accordance with

the guidelines provided by ITB-SEC031 when necessary to meet requirements. Other means of end-to-end encryption such as HTTPS and the Unisys Stealth Solution™ product may mitigate the need for tunnel termination on Juniper equipment and will be used based on a collaborative assessment of the individual application requirements. Note that the Unisys Stealth Solution is an optional product in the Enterprise Services Catalog.

Note also that compliance with the encryption specified in ITB-SEC020 and ITB-SEC031 for an application is dependent on the capability of the application to create and/or use encrypted data. The Unisys Team will provide solutions to address infrastructure compliance with these ITBs, and will work with the agencies as they make application level changes for application compliance.

In summary, data protection starts with our baseline security risk and vulnerability assessment and remediation plan. We will implement DLP and DBFW solutions to identify, monitor and protect identified sensitive and confidential data in transit and data at rest. Based on the classification of the data and applicable governing policies and regulations, such as the Commonwealth ITBs ITB-SEC019, ITB-SEC020, and ITB-SEC031, specific appropriate measures will be taken to protect Commonwealth data including encryption as required to protect data at rest and in transit.

Clarification	*Text*
9.	*Please provide complete details on the Unisys Stealth SolutionTM, its capabilities, and proposed use in the Commonwealth.*

Unisys Response:

The Unisys Stealth Solution™ ("Stealth") is a certified software encryption solution that is designed to secure data-in-motion while at the same time organizing that data into virtualized, cloaked Communities of Interest (COIs) that can co-exist on a single network infrastructure without risk that one COI can see or access another COI. A COI is a group of users and devices (e.g., servers) that must share information. Using Stealth, Agencies and organizations can share a common infrastructure while their data is kept securely isolated from one another; selectively allowing users from other COIs access as needed. Management of COIs is easy with Stealth, as access is defined by user identity (or server device) rather than physical topology.

Stealth is a Multi-Domain hardware/software data protection product that allows data of multiple access levels to be processed without the need for discrete networks and redundant hardware, while maintaining logical separation of the data through the network. By using the Stealth product, separate external networks may be securely consolidated using cryptographic techniques over a single infrastructure deployment.

Stealth provides security by encrypting data using a FIPS 140-2 certified module that employs AES-256 encryption. Stealth is NSA Common Criteria certified at EAL4+ as a multi-domain solution.

Stealth cryptographically separates COIs within a common physical network. Data is protected in such a way that the isolation and containment of data for different COIs is enforced cryptographically. Stealth also optionally allows the Commonwealth or an agency to define "Clear Text COIs" – filters that allow given endpoints to use split tunneling to access both Stealth endpoints via encrypted tunnels as well as predefined unencrypted sites.

Stealth features endpoint software that is installed on client machines and servers to establish secure tunnels through the internal network or across external networks such as the Internet. Stealth Gateway appliances are also available to integrate separate external networks or devices that do not support the endpoint software (printers, third party appliances, etc.) into the internal encrypted network. One Gateway function, called the "Home Gateway" is used to integrate servers supporting the internal network processes such as DNS, Active Directory Domain Controller (DC) and the like. Each endpoint module (and Gateway appliance) utilizes the FIPS certified cryptographic software module to parse and encrypt traffic passed through the secure tunnels.

[redacted]

Stealth endpoint software can be currently installed on many IP based devices, such as Windows® and Linux PCs, servers, laptops, and Windows mobile tablets. Stealth endpoint software for other mobile OS devices is planned for future release. Each endpoint is assigned to a unique virtual COI. The end point encrypts all data leaving the device intended for transmission through a network to another Stealth endpoint in the same COI, where it is unencrypted.

The drawing below shows a representative overview of a number of endpoints and network elements with a set of COIs.

Authentication and Authorization

The Stealth client workstations use Windows based Active Directory or other LDAP-compatible directory services mechanisms (for Windows and Linux) to identify and authenticate users (using credentials as specified by the Commonwealth) prior to performing any functions. For the Commonwealth we assume we would use the existing CWOPA Active Directory, though that is not required.

The administrator's workstation performs identification and authentication using Windows domain or could use local Windows OS mechanisms if the Commonwealth prefers. It requires each user to be identified and authenticated prior to performing any functions, maintaining a local database of accounts or domain accounts including their identities, authentication information, group associations and privilege and logon rights associations for Stealth Administration.

Authorization Server

The Authorization Server ("Auth Server") software provides an interface between the Commonwealth's authentication service and the client endpoints, to automate the user COI assignment process during user logon.

The Auth Server presents a web interface and listens on Commonwealth-specified ports using either http or https protocols; this address is part of the client endpoint installation package. The Auth Server is called once user logon credentials have been verified and the user permitted to log on. The client Stealth endpoint then issues a web call to the Auth Server (via an encrypted tunnel created using the service key included as part of the client endpoint installation package) to search for user assigned certificates in the Windows Security Groups assigned to the user to see if the currently logging in user has any Stealth workgroup membership to be assigned. If this is successful, the new user keys are passed back to the client Stealth endpoint which toggles to the new workgroup keys for each COI the user is a member of.

Several instances of the Authorization Server can be configured and distributed throughout the enterprise to service user logon COI assignment. Once these are identified, the installation provisioning files populate the order and addresses of these servers for each endpoint to get user COI keys during logon processing.

Teaming

The Stealth appliances are designed to be used as teams presenting one virtual IP address for the teams. A team of one is allowed, but is only recommended for small pilots, not production. There can be as many as 255 appliances in a team and can support thousands of users and COI possibilities. The team is normally configured in an N+1 configuration, where N is the number of appliances needed to cover the desired concurrent license count or throughput, plus a hot spare (the +1). The hot spare will take over if any of the N appliances should fail in the team. Replacing the broken appliance requires loading the applicable configuration to the new appliance and adding it back into the team.

Stealth Secure Virtual Terminal (SSVT)

The Stealth Secure Virtual Terminal (SSVT) is a tamper-proof, partitioned USB form-factor Smartcard device with optional storage capability (the "SSVT stick") that will boot essentially any x86 PC using a hardened operating system, a locked-down browser, and a Stealth-secured undetectable tunnel. SSVT bypasses the operating system on the hard drive of the host system and does not interact with it in any way. Any malware on that system that might log keystrokes or connection details or might otherwise snoop on the data being exchanged cannot execute.

SSVT can be used for secure remote access to COPANET or the Datacenters for internal users, as well as securing high-risk transactions from external users. Once a user boots from the SSVT device, a secure AES-256 encrypted tunnel is established to COPANET or the Datacenters. Based on individual user credentials and the implemented configuration, the user would be allowed to access:

a. Web enabled applications (typically the only option for external users)

b. An existing desktop within the agency via a Remote Desktop Protocol (RDP) session (the user's own desktop or a shared remote access kiosk)

c. A virtual desktop through VDI (such as VMware View or Citrix XenDesktop)

For both internal and external users, SSVT communications can lock the communications channel to pre-defined, targeted endpoints (normally a defined set of web sites). Access is only permitted to the targeted endpoints (normally via web browsing).

Other distinguishing features of the SSVT stick include:

- Requires password at boot to provide two-factor authentication (password plus the SSVT device)
- The SSVT image stored on the tamper-proof partition of the USB device cannot be corrupted
- For additional protection, the SSVT image is verified at every boot
- Both Linux and Windows-based SSVT devices are available
- SSVT sticks can be manufactured to be fully read-only, or can include both the read-only bootable partition and a writable partition for saving documents downloaded from the allowed sites
- SSVT sticks are tamper evident, tied to individual users, and serial-numbered for loss/theft management, PIN recovery and rapid turn off.

Technology

The Stealth technology is implemented as an NDIS 5 Intermediate Filter driver or an NDIS 6 Lightweight Filter driver. This allows the Unisys Stealth Solution driver to process all network packets as they traverse the network stack. This gives Stealth the ability to apply the rules, filters and cryptology that have been defined for that endpoint based on the Identity that has been assigned to that endpoint. In addition, the Stealth drivers drop all packets that are not expected (i.e., either Stealth packets or packets from IP addresses matching CLEAR-Text filters on this endpoint). Thus, the device will be obscured from those attempting to discover it via scanning.

Reporting

The Unisys Stealth Solution reports audit events for the health and welfare of each endpoint and the gateway appliances. In addition to their gateway functions, the gateway appliances act as licensing authorities for the installed enclave and record endpoint activity such as successful COI tunnel creation between two endpoints or failed attempts to join a COI that could be an endpoint under attack.

Common Use Cases

Unisys has identified a number of common use cases where Stealth provides value. Of particular importance to the Commonwealth are the following:

- Unisys Stealth Solution for Data Center Segmentation – allows the Commonwealth or an agency to flatten out the physical network infrastructure and use COIs to provide secure separation between application suites as well as between zones. Also enables restricting access to applications via client-side COIs.

- Unisys Stealth Solution for Secure Remote Access – provides the Commonwealth or an agency with secure access for external users, extending the benefits of COI separation to external users.

- Unisys Stealth Solution for Secure Virtual Terminal (SSVT) – as a special case of Secure Remote Access, SSVT provides high confidence that a user's desktop is free from malware when executing high-value/high-risk transactions.

- Unisys Stealth Solution for Regional Isolation – provides highly secure site-to-site connections.

- Stealth technology is currently being used by several organizations to protect their sensitive communications, including secure government agencies like the Coast Guard and private sector companies like Hertz (NZ). The table below includes some of the areas identified in the Response as optional uses of Stealth technology, as well as some other possibilities:

Section	Item	How Met
3.1.2 Network and Security Architecture	6.A Secure Network Connectivity between Datacenters	Juniper VPN with Unisys Stealth Solution for Regional Isolation as an option
3.1.2 Network and Security Architecture	6.B Secure Network Connectivity from the Internet	Juniper VPN with Unisys Stealth Solution for Secure Remote Access as an option
3.1.3 Datacenter Architecture and Technology	2.B.4 Security Zones	Juniper Firewall with Unisys Stealth Solution for Data Center Segmentation as an option
–	–	PSP external users optionally use Stealth Secure Remote Access to access Agency applications via the Internet

To meet the requirements of this RFP, Unisys proposed Juniper firewall and VPN using the Juniper FIPS 140-2 certified encryption module. The Unisys Stealth Solution is not required to meet any of the security requirements of the RFP. It is included in the Enterprise Services Catalog as an option for the Commonwealth to use when the Commonwealth determines it is appropriate; some possibilities are suggested in the table above.

Clarification	*Text*
10.	*If the Commonwealth does not accept the use of Stealth, how will Unisys meet the security requirements of the RFP?*

Unisys Response:

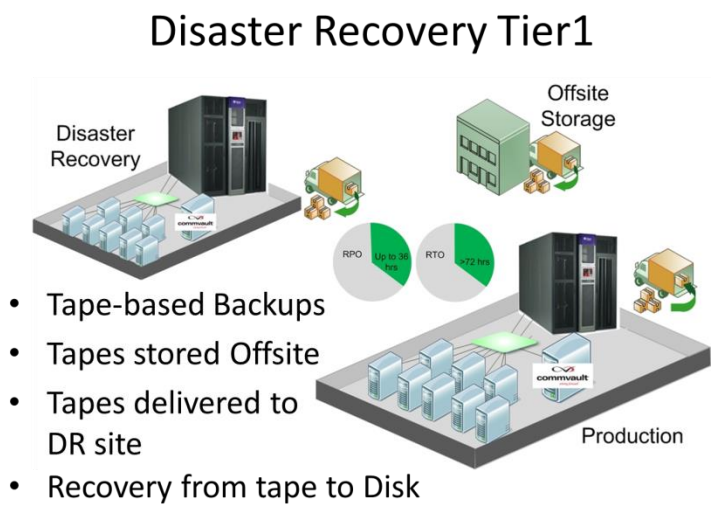
The Unisys Stealth Solution is not required to meet any of the security requirements of the RFP. It is included in the Enterprise Services Catalog as an option for the Commonwealth to use when the Commonwealth determines it is appropriate; some possibilities are suggested in the table at the end of the answer to Question 9 above. .

We will meet the requirements of the RFP by employing the Juniper Firewall and VPN using the Juniper FIPS 140-2 certified encryption module, which is included in the proposed data center configuration.

Clarification	*Text*
11.	*Please provide clarification on the Disaster Recovery tiers listed in Schedule F (pages 63-64) of the proposal, including detailed information on how Unisys will provide Disaster Recovery for application or component level disasters.*

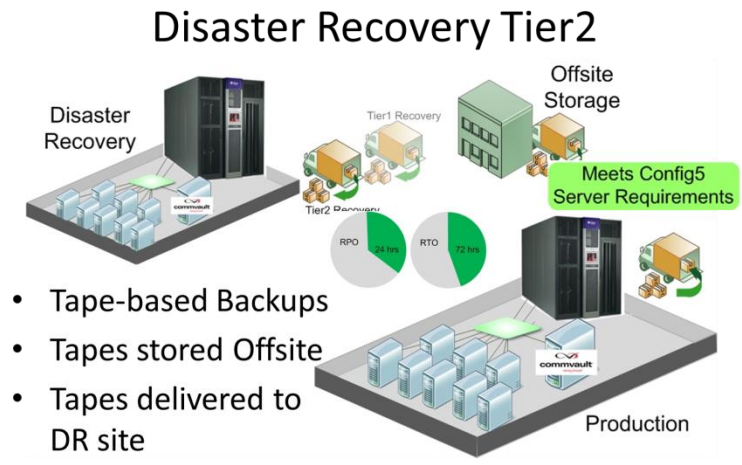
Unisys Response:

All of the Disaster Recovery tiers provided in the Unisys solution offer the Commonwealth and its agencies the means to achieve business continuity following a disaster of sufficient magnitude to render a data center incapable of providing required services. The tools that provide these disaster recovery services can also be implemented to provide recovery from application or component level disasters.



Tier 1

Tier 1 Disaster Recovery services provide tape-based disaster recovery that is initiated after all services protected with Tier 2 tape-based Disaster Recovery services have been restored. This level of service provides a means for agencies to protect and restore non-critical applications following a disaster declaration for a data center. The recovery point objective (RPO) is based on the nightly cycle of writing data to tapes. The recovery time objective (RTO) may exceed 72 hours given that the Tier1 recoveries do not begin until Tier2 recoveries were completed.



Tier 2

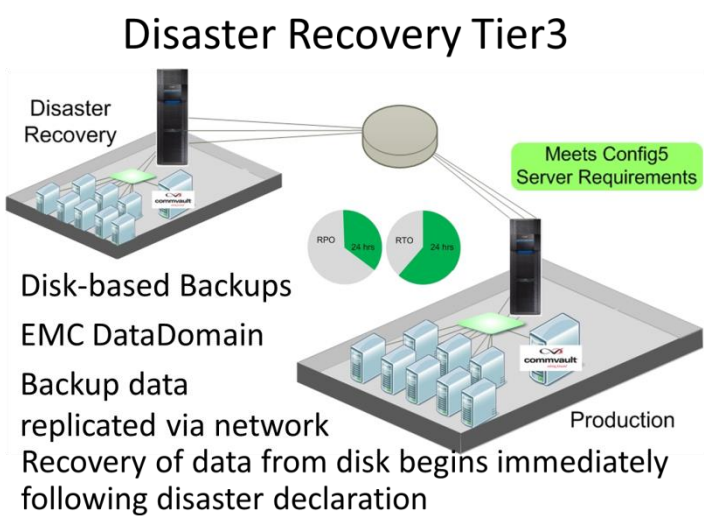
Tier 2 Disaster Recovery services provide tape-based disaster recovery that is initiated upon declaration of data center disaster. This level of service provides a means for agencies to protect and restore applications which support business processes that could reasonably withstand an outage of no more than 72 hours, the stated RTO for this level

of service. The recovery point objective (RPO) is based on the nightly cycle of writing data to tapes. On balance, the Unisys solution provides a greater number of tape drives in DR than in production for data protected by Tier 2 DR services in order to meet the 72-hour RTO. This is because the full backup of Tier 2-protected data can be spread over a week's time with incremental backups during Production cycles but the restore must be completed within no more than 3 days.

The Backup technology provided for tape-based backups in the production environment will be used for restores whenever a limited application or component level disaster occurs that does not necessitate invocation of a full data center disaster recovery declaration. These more limited restore activities can be prioritized above normal backup operations.

Tier 3

Tier3 Disaster Recovery services rely upon backups to EMC's disk-based technologies such as DataDomain to provide an RPO based on the nightly cycle of writing backup data to disks and an accelerated RTO of no more than 24 hours. The backup data is replicated to the Disaster Recovery site as it is written to the DataDomain storage in the production site. Upon declaration of a disaster, the restore process begins immediately at the Disaster Recovery site. These restores are initiated remotely by the Unisys DR team and complete within 24 hours.

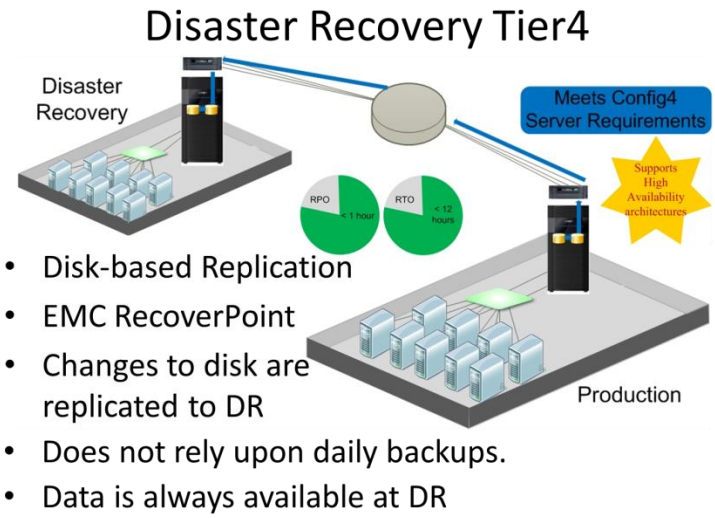


As with Tier 1 and Tier 2 services which also rely upon backup services, the production-based backup-to-disk DataDomain infrastructure is available for restores whenever a limited application or component level disaster occurs that does not necessitate invocation of a full data center disaster recovery declaration. However, the disk-based restores in production are also initiated much more quickly than tape-based restores because the backed-up data remains at the production data center and does not require the recall of data from offsite storage locations.

Tier 4

Tier 4 Disaster Recovery services meet the minimum requirements specified for Config-4 servers. The Tier 4 services rely upon asynchronous disk-to-disk replication of data between the production and Disaster Recovery sites. The RPO for this service is, at most, 1 hour. Unisys manages the network capacity to provide replication of all data in a cost-effective manner to insure that at maximum data change peaks that replication does not exceed 1 hour. The storage replication tools include caching mechanisms so that, when required, replication achieves the highest network

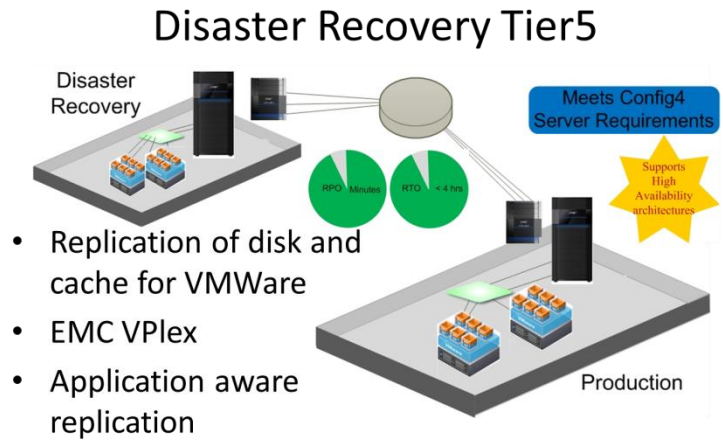
utilization possible. The RTO for this service is no more than 12 hours. As the Unisys DR team has demonstrated in the past, Unisys expects to improve upon the initial RTO by implementing automation steps following successive tests of the DR processes.



As described in Question 5 above, the EMC RecoverPoint replication tool that forms the basis of x86 and Unisys mainframe storage replication can be integrated with Commonwealth application development to include application determined quiesce points so that the recovery provides a data set that is consistent at the application level. The EMC RecoverPoint can also be configured to provide local recovery to the production data center site in order to recover from limited application or component level disasters. The EMC RecoverPoint tool can also be selected from the Enterprise Services Catalog to provide full local copies of SAN-based storage in alternate frames to provide, where needed, an RPO of within seconds.

<u>Tier 5</u>

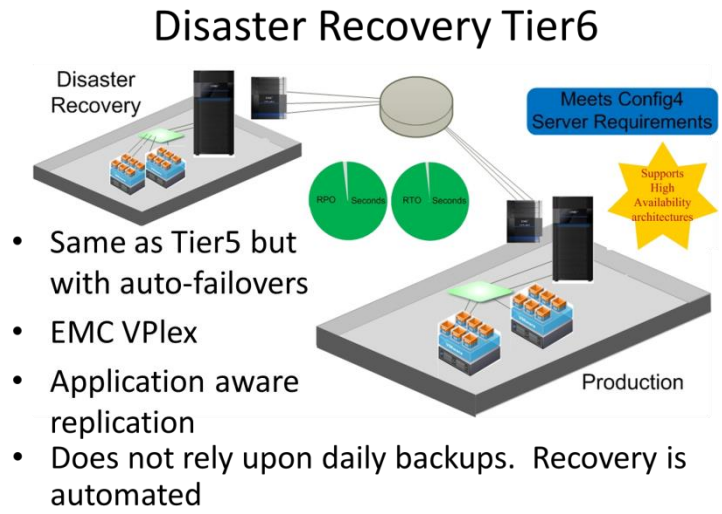
Tier 5 Disaster Recovery services are available for the VMWare-based virtual servers. This is an elevated tier of service. The EMC VNX storage solution that underpins the Unisys storage service for VMWare can be combined with EMC's VPlex technology to provide the foundation VMWare High Availability, VMotion Distributed Resource Scheduler (DRS) and VMWare Fault Tolerance (FT) over distance. The RPO is determined by transfers between the production site and the Disaster Recovery site. The RTO is no more than 4 hours and is largely governed by a re-configuration of the network properties at the Disaster Recovery site which Unisys would expect to automate over time.



This high availability Disaster Recovery/Business Continuity service provides the service resiliency that the Commonwealth may require for emergency services and other highly critical services. The premise of this

service is to provide clustering capability across distances for the Commonwealth.

As with the EMC RecoverPoint tool, EMC's VPlex infrastructure can also be configured to provide high availability services within the production data center. Thus, the Commonwealth can configure clustering within a production data center that delivers an RPO with no lost transactions and an RTO in the range of microseconds. Configured in this manner the Commonwealth may receive full business continuity for the most highly critical applications regardless of local component failures.



Tier 6

Tier 6 Disaster Recovery services are based on the tools and infrastructure detailed in Tier 5 Disaster Recovery services. The primary difference is that the IT Risk Manager and the agency directors determine a degree of automation to insert into the infrastructure so that Disaster Recovery services can be invoked automatically under pre-determined conditions.

As described for Tier 5 above, automation is already included when the Tier 5 or Tier 6 Disaster Recovery service is configured to provide disaster recovery services and clustering capabilities within the production data center.

Clarification	*Text*
12.	*Please provide details on the Security Operations Center(s) described in Schedule F of the proposal, including but not limited to, where the Security Operations Center(s) will be located.*

Unisys Response:

The Unisys Team Operations Centers – Network, Console, and Security – will maintain primary locations within [redacted]. To provide redundancy, the [redacted] will provide the off-hours and emergency alternate location, when required. In addition, each data center facility also maintains facility security and facility network operations centers that can support the primary Security Operations team in the [redacted], as required.

Clarification	*Text*
13.	*Page 641 of the proposal states "We will perform the rogue device discovery will be performed on the data center network that supports up to 2,000 data center servers." Please confirm the above statement should read "We will perform rogue device discovery on the data center network that supports up to 2,000 data center servers." Please provide the reason for the limitation of up to 2,000 data center servers.*

Unisys Response:

The Unisys Team will perform the rogue device discovery on up to 50 Class C IP address ranges within the Commonwealth data center network supporting a total of 2,000 servers.

Description of This Service

As part of this service, the Unisys team performs an analysis on the data center IT infrastructure to identify if the devices exhibit rogue or stealth-like characteristics. This process includes analysis of the Network Dynamic Host Configuration Protocol (DHCP) and Address Resolution Protocol (ARP)/Content Addressable Memory (CAM) data from the data center's core network switches supporting critical datacenter servers.

Frequency of This Service

The Unisys team performs this service quarterly and documents the results as part of the Deliverable #D-07.03 (Security Management Plan).

Scope of This Service

As part of the recurring quarterly assessment, the Unisys team will work with the Commonwealth to identify a representative sample of the data center network segments on a rotational basis. As part of the selection process, the Unisys team helps identify 50 Class C segments supporting up to a total of 2,000 servers that establishes a representative sample of the breadth in Commonwealth IT infrastructure. The selection criteria include:

- Business criticality of data managed
- Regulatory impact
- Additional factors such as public, business partner or private facing network segments, De-Militarized Zone (DMZ) and network segments interfacing with federal systems.

Clarification	*Text*
14.	*How does Unisys propose to secure remote admin access to Commonwealth systems and does Unisys' proposed solution provide multi-factor authentication?*

Unisys Response:

Unisys has proposed Citrix Xenapp Platinum Edition to support secure remote administrator access for Unisys system administrators including partners, and to control access to Commonwealth systems. This solution has multi-factor authentication and complete logging of all activity in order to provide the Commonwealth with a secure solution for remote administration.

The two-factor authentication supports XenApp's VPN and authentication service. Two-factor authentication uses Active Directory including role-based definitions for the first factor and SecureAuth's certificate and pin based technology for the second factor.

Clarification	*Text*
15.	*Please confirm that Unisys' solution addresses the Commonwealth's requirement that Service Request, Incident Management, Problem Management, Change Management incident\requests are initiated in the Commonwealth ITSM system. Unisys' solution must also interface with the Commonwealth ITSM system and exchange data. Unisys' solution must be able to initiate and pass data to the Commonwealth ITSM system in event a request is initiated on Unisys' solution. Please clarify when these processes will be automated and online for Commonwealth use.*

Unisys Response:

To confirm the requirement that Service Request, Incident Management, Problem Management, Change Management incident\requests are initiated in the Commonwealth ITSM system Unisys has proposed synchronizing the Unisys and Commonwealth ITSM systems bi-directionally on a frequency basis that is to be determined in transition. Unisys plans to utilize the BMC Remedy Distributed Server Option (DSO) to synchronize the two Remedy Systems for all major transactions and data including:

- Service Requests
- Incident Tickets/Data
- Problem Tickets/Data
- Change Tickets/Data
- Configuration Information (CMDB)

Transactions for the above can originate from either ITSM platform as our solution supports bi-directional synchronization of transactions. Bi-directional replication of data is to be scheduled on a frequent basis and the intervals are to be determined during Transition.

To synchronize data bi-directionally and successfully, the solution may be dependent upon the Commonwealth making some changes to its ITSM System to accommodate the synchronization approach.

If the Commonwealth decides to move to ServiceNow Unisys will use a different replication technology that we current use for other ServiceNow implementations. The net effect is the same as it will still be a bi-directional synchronization of the data between the two systems.

Unisys is committed to complete the synchronization of the Unisys and Commonwealth ITSM Systems for Commonwealth and Unisys use within the first six months of the contract effective date.

Delivering the Future of IT

Services that Empower Government. Innovation that Serves Citizens.

UNISYS RESPONSE TO
COMMONWEALTH OF PENNSYLVANIA

Oral Presentation
July 29, 2013

UNISYS

Delivering the Future of IT

Services that Empower Government. Innovation that Serves Citizens.

Opening Remarks

[redacted] – Unisys Chief Executive Officer

UNISYS

Delivering the Future of IT

Services that Empower Government. Innovation that Serves Citizens.

Company and Program Overview

[redacted] – Engagement Executive

Recognize and respect differences among individual agencies

We must recognize that agencies will have their autonomy to execute their business goals while assisting the Office of Administration with achieving its enterprise objectives.

Meet the Unisys Team

IBM

- A valued partner on the DPH contract and long-term partner to many Commonwealth agencies
- IBM provides over 90% of technology in use in agency data centers

Deloitte

- Largest provider of Application Integration and Support as well as Security services to the Commonwealth
- National State Security practice is based in Harrisburg, PA

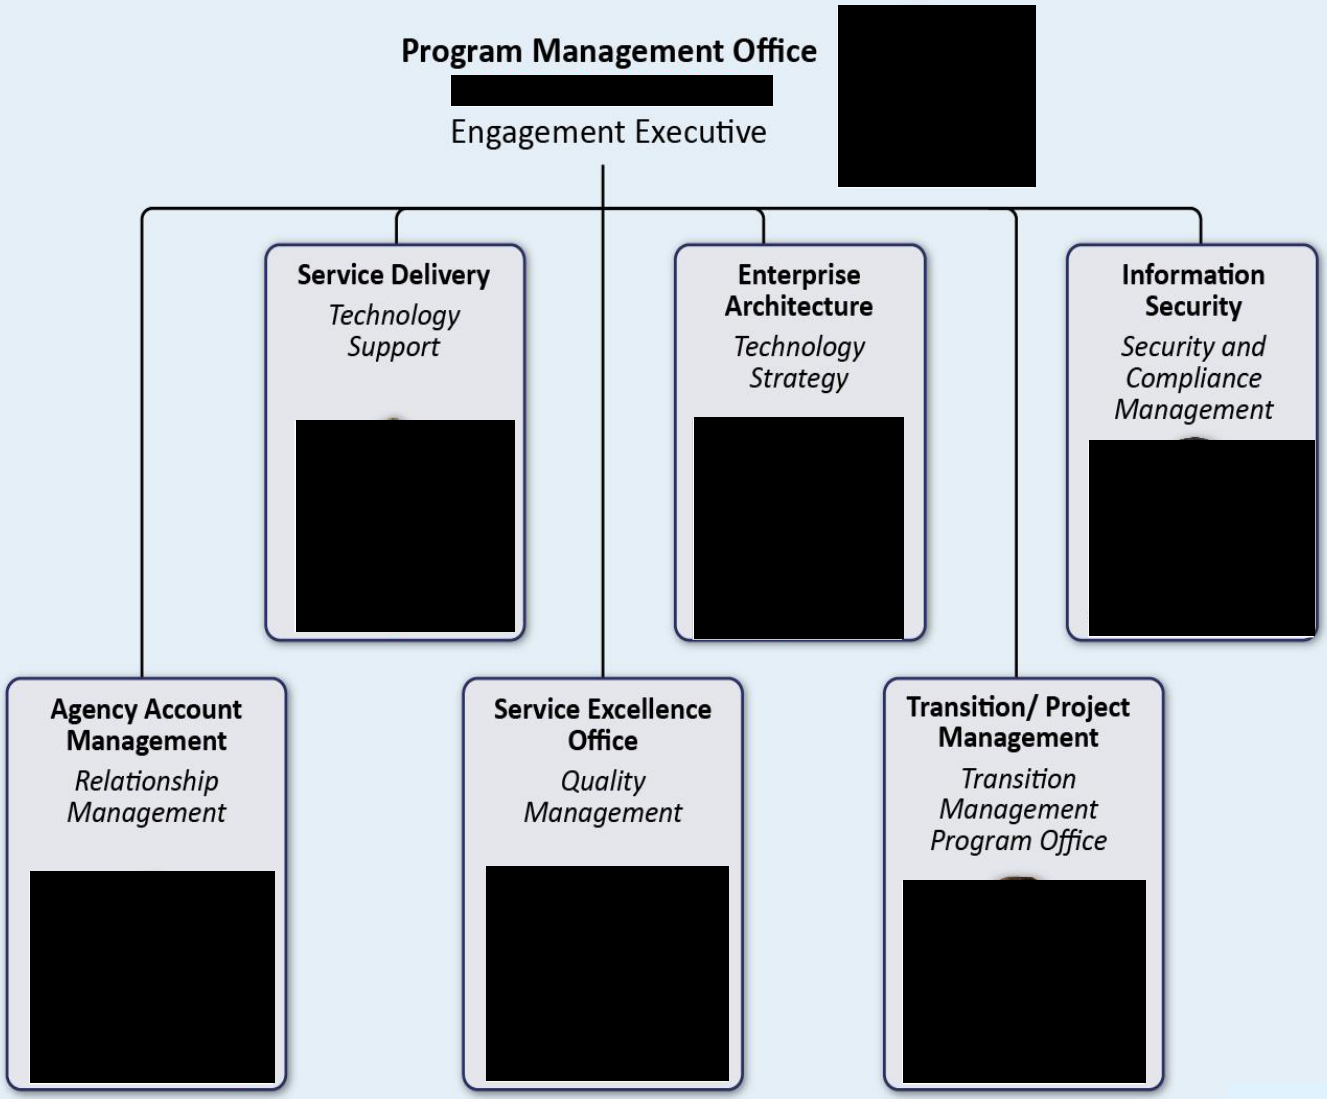
Small Diverse Businesses

- 11 partners providing various services in their areas of expertise
- Commonwealth experience

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Data Center Compute Services Key Personnel



- 28 Key Personnel
- Harrisburg based
- 23 assigned to Commonwealth projects today
- 100% Dedicated
- Experienced leaders
- Growing PA jobs

UNISYS

Unisys Team Foundational Tenets

Unisys and the Commonwealth… Driving Technology for over 50 Years

- Commonwealth applications are **critical** to citizens
- **Innovation** is a must
- Recognize and **respect differences** among individual agencies
- **Align compute services** with the business
- **Managing change** is key to success
- **Security** is paramount
- Focus on **moving applications** rather than moving hardware
- **Flexibility** and **transparency**
- Achieve success **together**
- Do **no harm** – no unplanned service interruptions

© 2013 Unisys Corporation. All rights reserved.

Why choose the Unisys Team?

- **Our team's collective knowledge of the Commonwealth**
- We have a proven record of success over many years of service delivery to Commonwealth agencies
- We have brought innovation to the Commonwealth
- We offer the lowest risk and minimal ramp-up

© 2013 Unisys Corporation. All rights reserved.

Delivering the Future of Computing Architecture

New Models that Drive Efficiency. Experience that Empowers Success.

Compute Architecture Overview

[redacted] – Senior Enterprise Infrastructure Architect

Align compute services with the business

Our proposed solution must provide a transparent and flexible compute services environment aligned with the business needs of the agencies.

UNISYS

An Innovative Architecture

- Flexible
- Secure
- Stable
- Integrated
- Proactive

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Data Center Architecture

Provides the Commonwealth No Single Point of Failure

- Exhaustive search to find a leading data center facility close to Harrisburg versus simply moving all your workloads to existing facilities outside a 100 mile radius.
- Designed to mitigate potential application latency issues
- Provide geo-separation for DR needs
- Each facility supports Production, Test, Dev, DR, Capacity on Demand, Colocation
- Single virtual command center with the primary function being in Harrisburg

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Unisys [redacted] Facility

Located Close to Harrisburg to Minimize Risk

- Location relative to Harrisburg mitigates potential application latency issues
- All workloads from the DPH will move here to minimize application connectivity and interface issues, and efficiently migrate tightly coupled applications

[redacted]

[redacted]

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Unisys [redacted] Facility

Chosen to Provide Geographical Workload Distribution

- Home of many mission critical applications and Public Sector clients
- SSAE-16, ISO 27000, and 9001 certified
- Dedicated computer room with separate secured access
- Two factor physical access
- Multiple carrier access
- LEED certified and award winner

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Commonwealth EDC Facility

Take over in place to provide stability

- Maintain as-is to minimize disruption of existing workloads and network connections
  - COPANET
  - PennDOT
  - Web Services
- Introduce Capacity-on-Demand capabilities to support scalability
- Transition within six months to take over operations support
- Provide a gap analysis and action plan for the facility

UNISYS

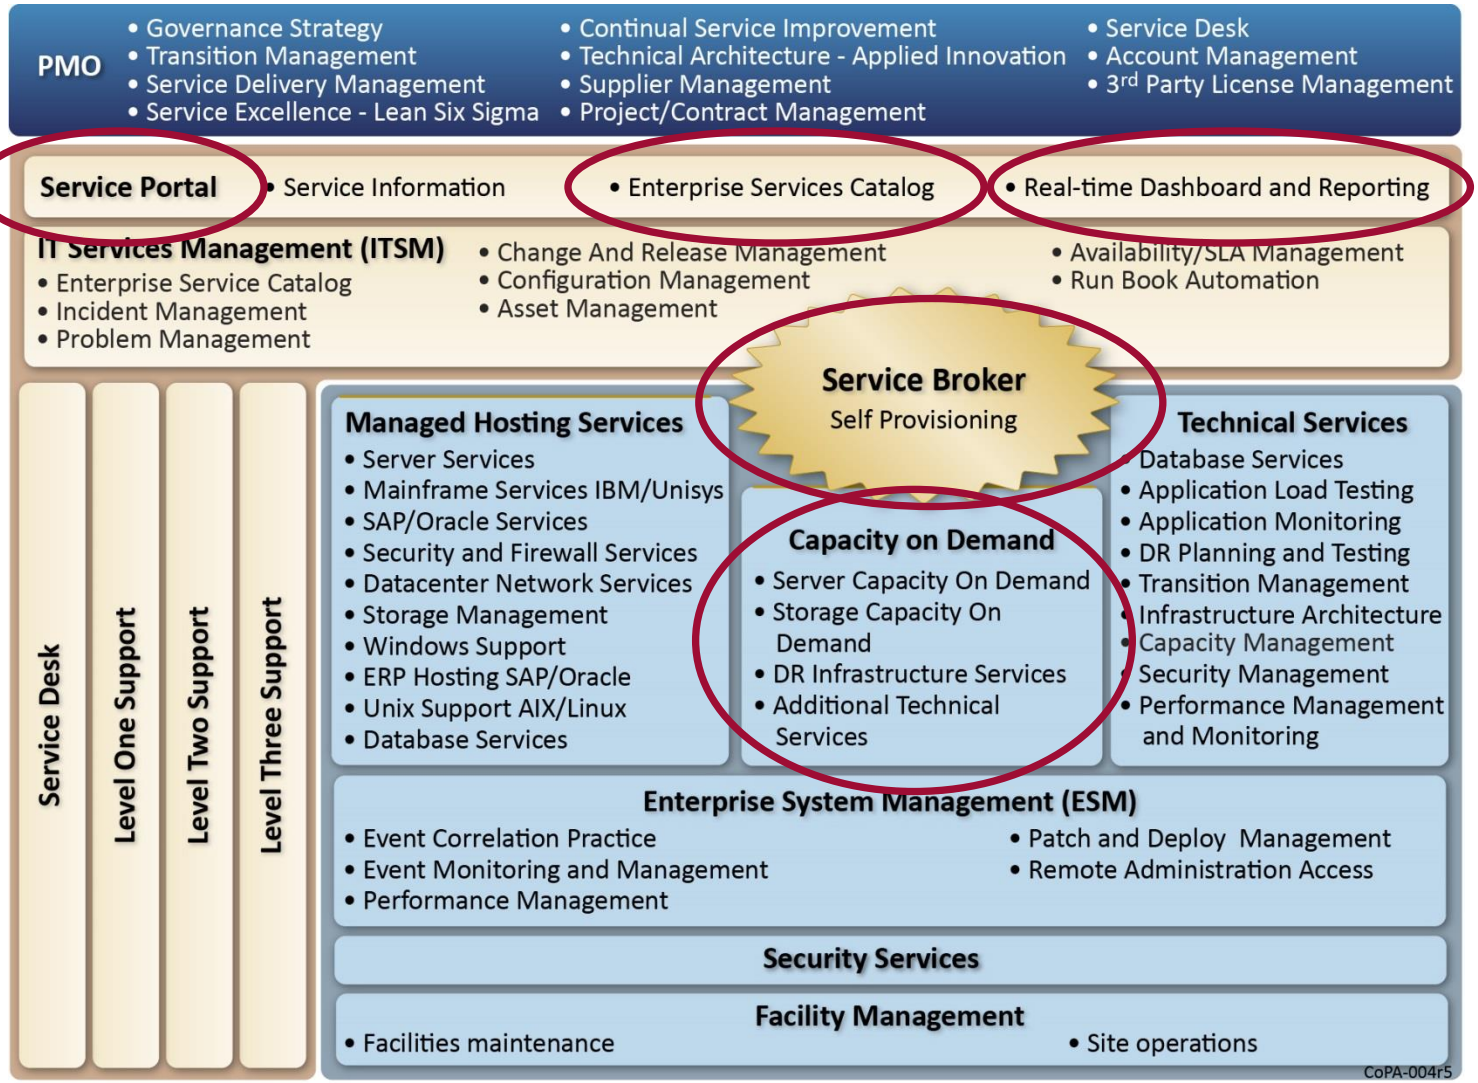
© 2013 Unisys Corporation. All rights reserved.

[redacted]

UNISYS

Integrated Component Architecture

Providing the Model to Support the Commonwealth's Vision



© 2013 Unisys Corporation. All rights reserved.

Services Portal

Providing the Commonwealth a central interface for service engagement

- Central Point for all interaction and information
- Separate instance per agency to provide autonomy and role-based access
- Submit a Request for Service using the Enterprise Service Catalog
- Submit an incident and receive up-to-date status
- View predictive performance indicators
- Search knowledgebase

© 2013 Unisys Corporation. All rights reserved.

Enterprise Services Catalog

Simplifying and Speeding the Service Request Process

- Configurable by agency and role
- Automated Request for Service process
- Configurations included in Schedule I will be in the catalog upon release
- On-line shopping method
- Automated approval process
- Approved orders are submitted to Change Management for approval to provision into service
- Billing on a monthly interval by agency and resource type

© 2013 Unisys Corporation. All rights reserved.

Dashboards and Reporting

Provides Commonwealth a Comprehensive View

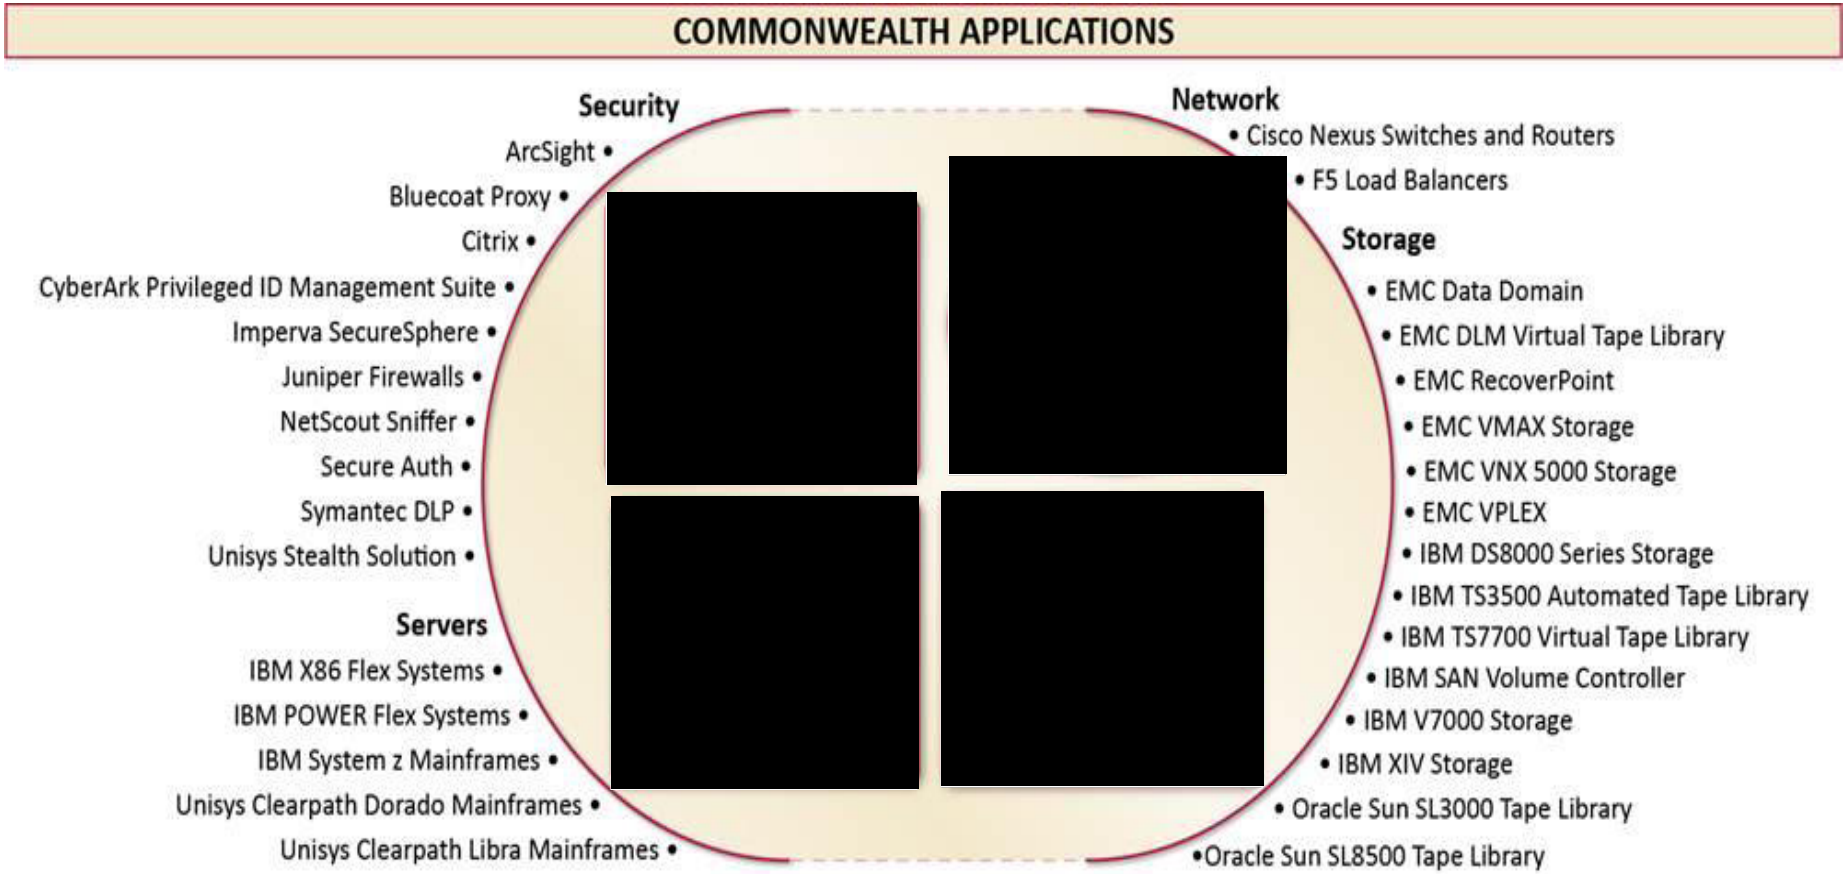
- Configurable by agency and by role
- Proactive metrics to establish a green, yellow, red performance methodology
- Provides near real-time status
- Viewable on mobile devices
- Provides ability to track many types of metrics as long as a data source of metrics can be established

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Managed Hosting Services

Technology Supporting Commonwealth Applications



Maintaining majority of existing technology to eliminate application compatibility issues

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Managed Hosting Services

Common Blade Architecture to Support all Operating Systems

- Move to IBM Flex Systems common blade architecture that supports all distributed operating systems in scope
- Optimizes capacity utilization
- Simplifies self-provisioning
- Provides a central point of management for the physical infrastructure
- Integrates storage seamlessly
- Optimizes space utilization in the data center

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Service Broker

Providing Automated Provisioning of Resources

- Automated runbooks are executed from an approved change to provision and de-provision services automatically
- After provisioning is complete, CMDB is automatically updated
- Agencies can develop their own runbooks to automatically provision application workloads
- Can provision DR workloads in a sequenced manner

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Capacity on Demand

Providing business value by providing resources when needed

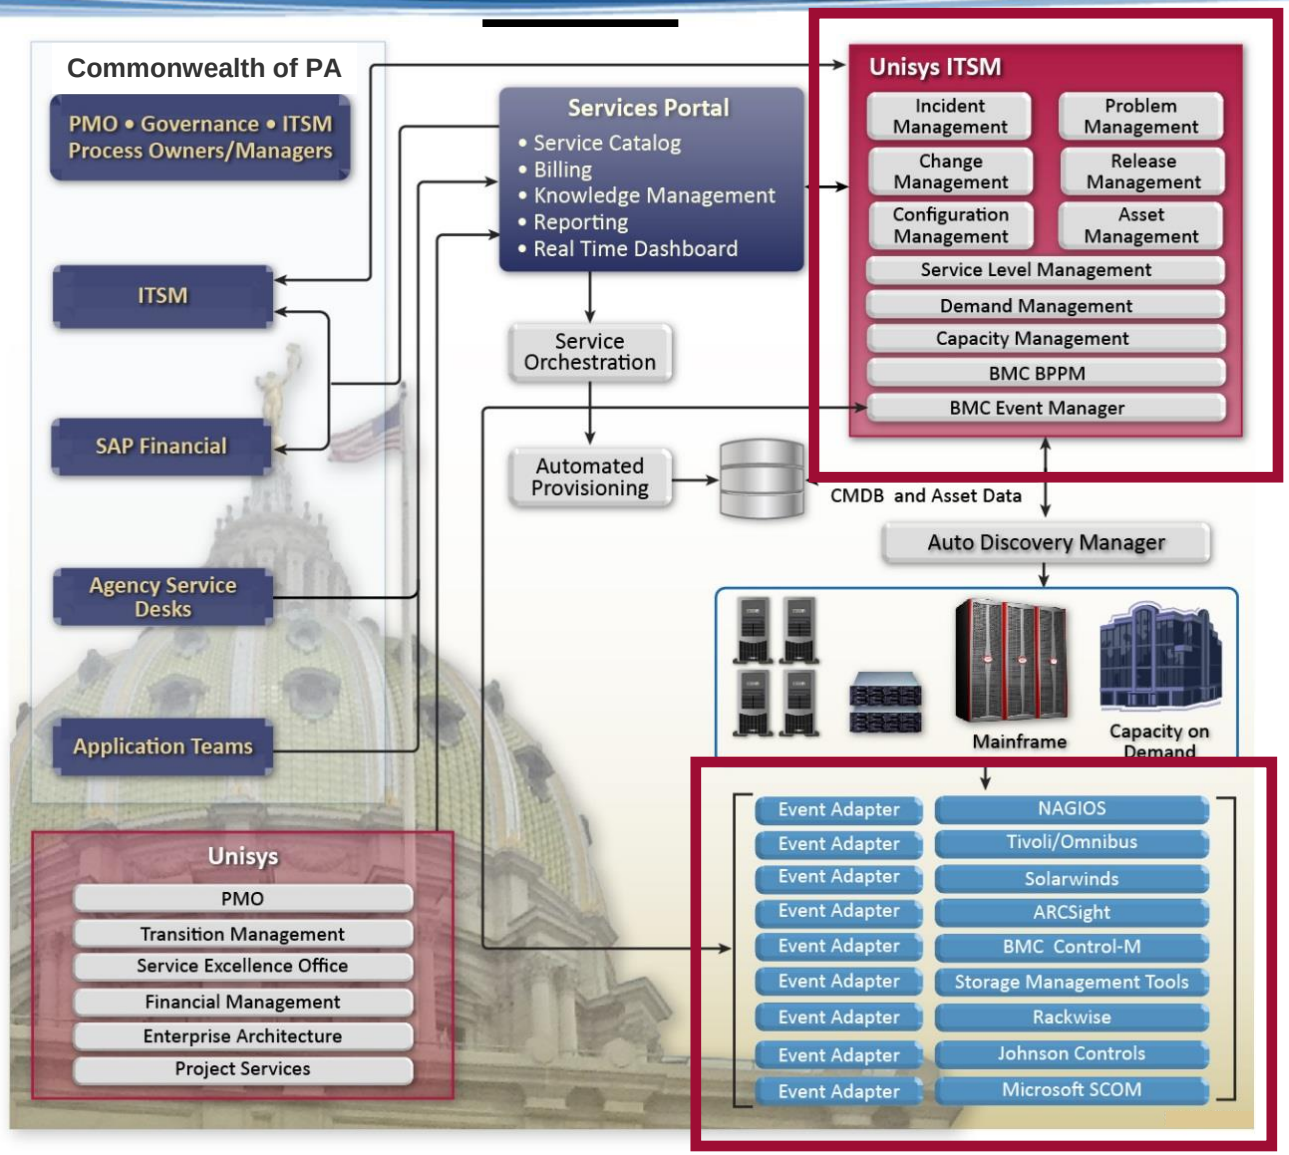
- Available in all three data centers
- Can be provisioned for scale up during disasters, testing, application trouble shooting, and more
- Transparent pricing

UNISYS

© 2013 Unisys Corporation. All rights reserved.

Integrated Service Management

Provides a consistent delivery of services



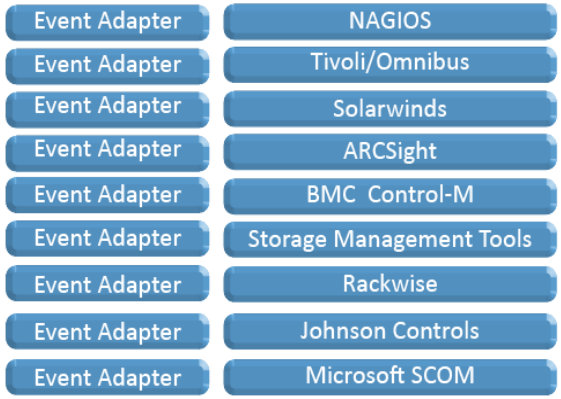
UNISYS

© 2013 Unisys Corporation. All rights reserved.

Integrated Service Management

Provides a consistent delivery of services

- Central engagement point for Commonwealth IT professionals and Unisys Service Delivery staff
- Separate instance for each agency to provide autonomy
- Integrated with the Services Portal and Dashboards to provide an easy to use interface to use the platform
- All single event managers tree up to an event correlation engine to isolate the root event
- Root event will auto create an incident that will be auto-routed to the right skill and support level
- Within the incident ticket, the CMDB relationship tree is visible to determine service impact



UNISYS

© 2013 Unisys Corporation. All rights reserved.

Creating a Comprehensive CMDB

Knowing the interdependencies between application and infrastructure items

- Auto-discovery of application and infrastructure items and their associated relationships
- Once relationships are built from the service tier to the infrastructure component level:
  - Proactive Service Impact can be obtained
  - Change Impact can be performed to determine effect on tightly integrated applications to minimize failed changes
- Provides basis to perform effective event correlation to suppress false events and incident tickets
- Can include relationships to users and locations
- Includes asset information

UNISYS

Delivering the Future of Security

Proactive Frameworks to Safeguard Your Assets, People and Citizens

Security Overview

[redacted] CISSP – Security Manager

Security is paramount

We must encapsulate everything we do with a strong security framework that protects all Commonwealth data and IT resources.

UNISYS

Guiding Design Principles

- Integrated Security Risk Framework
  - Reduce risk
  - Unified across Agencies and Data Centers
  - Improve security consistency
- Meet Diverse Regulatory Requirements
  - CJIS, CHRIA for criminal justice
  - HIPAA for health-related
  - IRS 1075, SSA, PCI-DSS for financial
  - Commonwealth ITBs across the board
- Collaboration

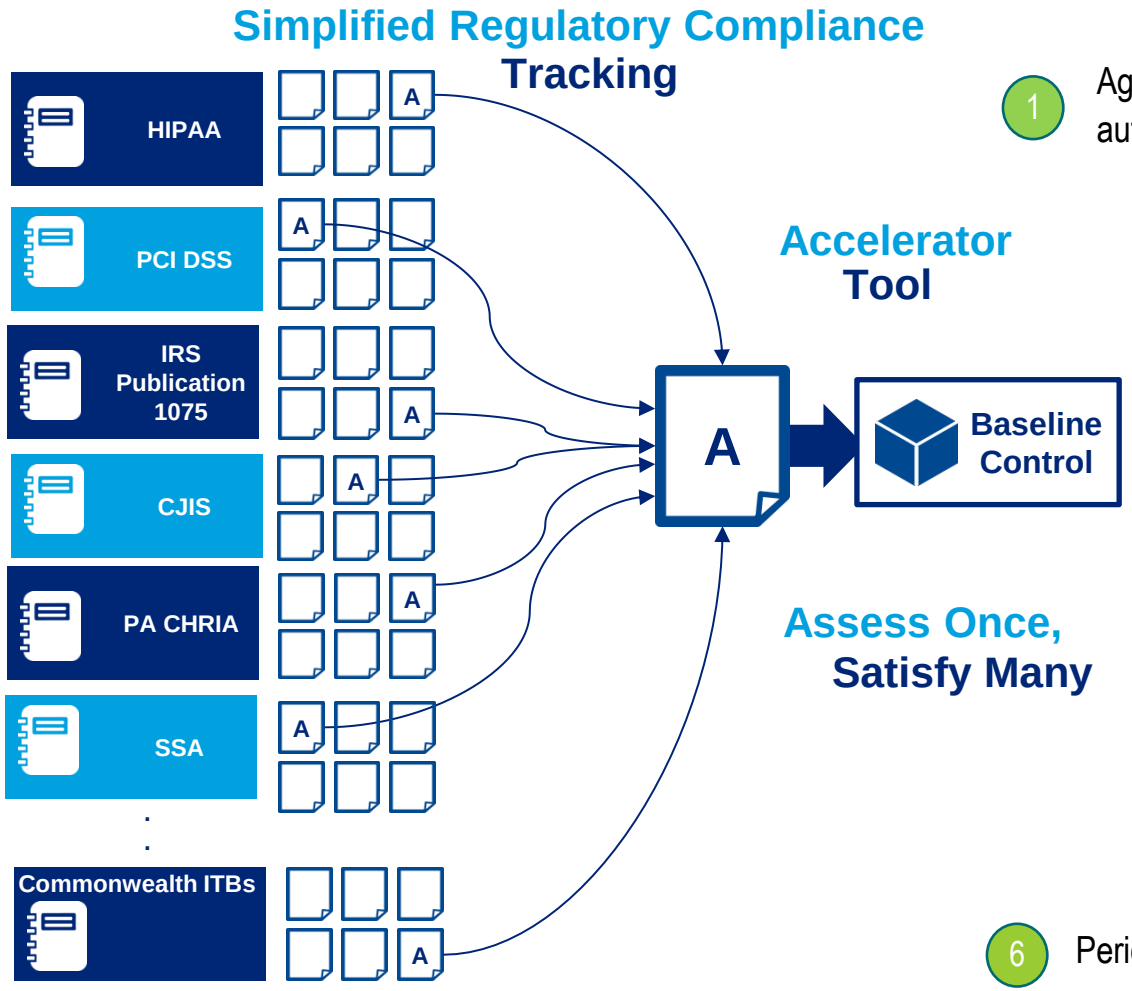
© 2013 Unisys Corporation. All rights reserved.

Security Solution

- One Unified Data Center Security Plan
  - Details vary by Agency, but the plan is common
  - Details vary by data center, but the plan is common
  - Provide both logical and physical security
- Transition Services
  - Establish the Framework
    - Initial security plan
    - Baseline assessment
- Ongoing Operations

© 2013 Unisys Corporation. All rights reserved.

Establishing a Regulatory Compliant Data Center



1. Agency workshops to perform Data Classification; automated tools identify existing PII
2. Understand each agency's regulatory requirements and document the Security Risk Framework
3. Document Initial Security Plan
4. Baseline security risk and vulnerability assessments; identify gaps by agency; prioritize mitigation steps
5. Establish prioritized mitigation controls for gaps identified
6. Periodic review and update of data center security plan

UNISYS

Delivering the Future of Network Connectivity

Consistently Reliable. Locally Flexible. Enabled Productivity.

Network Connectivity Overview

[redacted] – Senior Enterprise Infrastructure Architect

UNISYS

Network Architecture

- Maintaining a core Cisco Nexus architecture to aid in self-provisioning activities
- Three-layer network architecture
- Introducing Juniper virtual firewalls to simplify firewall scaling and policy management
- Introducing F5 application delivery controllers
- Expanding the use of Imperva Application and database firewalls
- Dual network links between data centers with no single point of failure

UNISYS

Delivering the Future of Disaster Recovery

Robust Capabilities. Proven Expertise. Maintained Operations.

Disaster Recovery Overview

[redacted] – Senior Enterprise Infrastructure Architect

UNISYS

Addressing the Commonwealth's Critical DR Requirements

Flexible and Scalable DR options make DR readily available for use

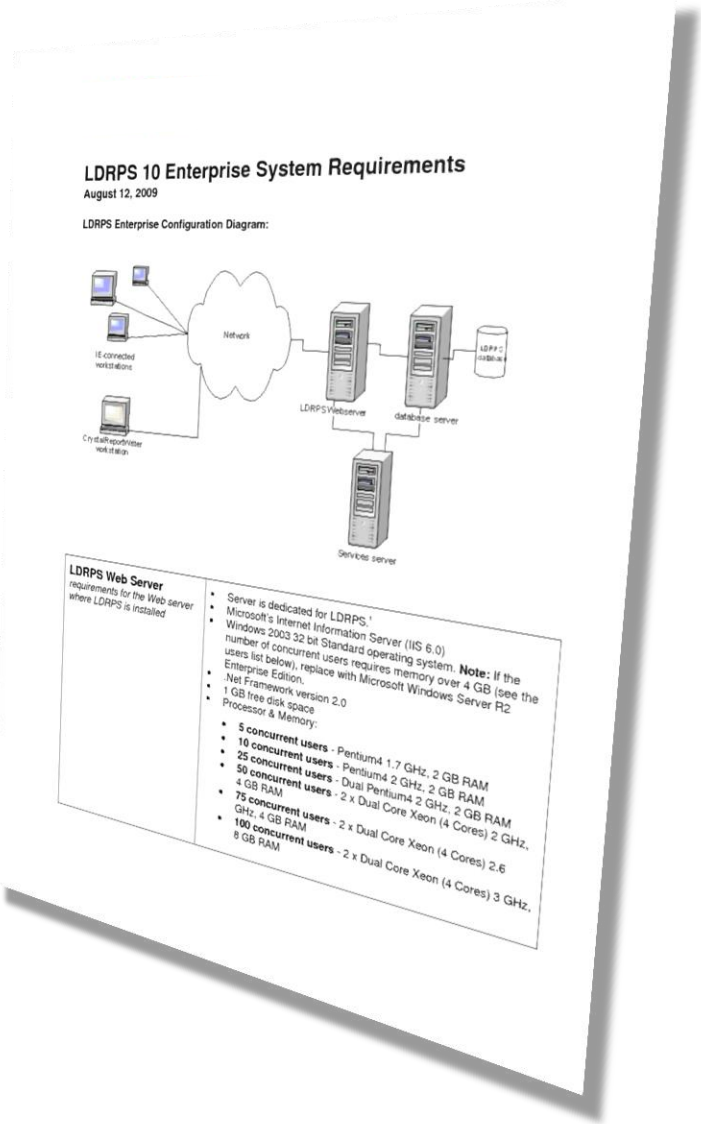
- Current DR being provided by SunGard will be moved to [redacted] after DPH is transitioned to Unisys [redacted]
- IBM Mainframes will continue to use IBM [redacted] site for recovery
- Living Disaster Recovery Planning System (LDRPS) will be used for DR planning
- A dedicated DR coordinator will support the agencies
- The data center architecture and network design enables new DR options
- A rich menu of DR services is available via the Enterprise Services Catalog including six tiers of DR services
- DR services can be selected by the agency in support of their specific business applications

© 2013 Unisys Corporation. All rights reserved.

Coordination enables DR Testing

Executing two DR Tests a year takes Effective Coordination

- DR Planning to document
  - Stored in the DR planning tool
  - Led by the DR coordinator
- Testing
  - Scheduled and coordinated with Agencies
  - ITSM updated to communicate DR tests
- CMDB is central to providing data to identify application components
- After the tests
  - Analysis of results
  - Action plans developed
  - DR plans updated



LDRPS 10 Enterprise System Requirements

August 12, 2009

LDRPS Enterprise Configuration Diagram:

LDRPS Web Server

requirements for the Web server where LDRPS is installed

- Server is dedicated for LDRPS.'
- Microsoft's Internet Information Server (IIS 6.0)
- Windows 2003 32 bit Standard operating system. **Note:** If the number of concurrent users requires memory over 4 GB (see the users list below), replace with Microsoft Windows Server R2 Enterprise Edition.
- .Net Framework version 2.0
- 1 GB free disk space
- Processor & Memory:
  - **5 concurrent users** - Pentium4 1.7 GHz, 2 GB RAM
  - **10 concurrent users** - Pentium4 2 GHz, 2 GB RAM
  - **25 concurrent users** - Dual Pentium4 2 GHz, 2 GB RAM
  - **50 concurrent users** - 2 x Dual Core Xeon (4 Cores) 2 GHz, 4 GB RAM
  - **75 concurrent users** - 2 x Dual Core Xeon (4 Cores) 2.6 GHz, 4 GB RAM
  - **100 concurrent users** - 2 x Dual Core Xeon (4 Cores) 3 GHz, 8 GB RAM

Delivering the Future of Transition Methodology

Leveraging a History of Success along with Low-Risk Processes.

Transition Methodology Overview

[redacted] – Transition Director

Focus on moving software applications rather than moving hardware

This is about moving software applications that support the most important functions of Pennsylvania state government.

UNISYS

Guiding Principles

FOCUS – BALANCE – LEARN

Do THE RIGHT THING

in THE RIGHT WAY

at THE RIGHT TIME

EVERYTIME

- Maintain **focus** on Commonwealth Agencies and Applications
- Maintain an appropriate **balance** between Cost, Risk and Benefit to achieve our goals
- Be a **learning** organization

ALWAYS do what is RIGHT

UNISYS

RE: **Request for Proposal (RFP Number 6100022698) for the Commonwealth of Pennsylvania Data Center Computing Services**

Dear Ms. Brown:

Unisys Corporation is pleased to submit this Key Personnel Details document to provide requested information for the Company and Program Overview section of the Offeror Orals Presentation.

We have included a description of all Unisys Team proposed key personnel for the project including:

- Name
- Position in organization
- Proposed role on project
- Experience in the proposed role
- Qualifications for the proposed role
- Percentage of time the person will be dedicated to the project

We appreciate this opportunity to provide IT Infrastructure support services to support your mission.

Sincerely,

[redacted]

EXECUTIVE LEADERSHIP COMMITTEE 34

Key Personnel Overview

The core of this successful program is comprised of 28 key personnel. They are motivated, seasoned, ITIL V3 Foundations certified and well-educated professionals guided by an executive leader experienced with managing complex IT organizations and projects. The **key personnel** selected by Unisys provide targeted executive focus in key program areas, including program management, service delivery, service excellence and quality, enterprise architecture, transition and steady state project management, information security, and account management.

This organization's key personnel were selected not only for their experience with supporting large, complex customer environments and getting the job done with high success, but also for the collaborative style of their approach. This team of leaders can see the future of the Commonwealth Data Center Computing Services model with all of its nuances and will create a vision with a roadmap guiding the delivery. They work proactively to prioritize and enable desired outcomes to be achieved to your satisfaction. The key personnel listed in the table below have entrusted their faith to Unisys by providing us the exclusive right to represent them in our proposal to the Commonwealth.

All Unisys Team members identified to fill key personnel roles will provide services from the Harrisburg area office and will be 100% dedicated to performing that role on the account, as required in the RFP, with two exceptions which will benefit the Commonwealth. The individual who serves as IBM Mainframe Agency Infrastructure Architect will be assigned on a 50 percent dedicated basis due to minimal changes required to the mainframe architecture. Another architect possessing extensive experience with IBM AIX and Windows platforms be assigned on a 50 percent dedicated basis. This staffing approach will provide the equivalent of a full time employee using two individuals with a better blend of skills to support the project's requirements. In addition, the second PMO Transition Manager specified in Schedule G will work on the project through the transition's duration and will no longer be needed when transition is complete.

The key personnel are briefly introduced to you in the table below, which is followed by a short summary of each of their responsibilities. The individuals who will perform these functions are the project's linchpins. Their performance in the assigned roles will be a determining factor in the program's success.

Engagement Executive: [redacted]

The Program Management Office will confirm that the Unisys Team meets all of your requirements for the new contract under the leadership of [redacted] **(based in Harrisburg)**, who has worked closely with Commonwealth executives to manage many aspects of the current DPH Program during the past 5 years. On joining Unisys, Ann oversaw the contract, managing commitments and expectations for the major transformation and infrastructure consolidation initiative with the contract's extension in 2008.

During her tenure with Unisys, Ann spearheaded a number of innovative technology solutions that reduced cost for the Commonwealth, including server virtualization and the implementation of a shared infrastructure strategy. She also fostered the evolution of the DPH architecture to new technology concepts, including disk-based backup solutions and flexible service offerings. Ann has also demonstrated vigilance in customer satisfaction by implementing a number of in-depth survey processes designed to take the customer's pulse at many different levels on all aspects of service. She has held the team accountable to document issues and follow-up actions in collaboration with the agencies. These activities significantly improved customer satisfaction across the board.

Ann has 26 years of experience with managing large-scale outsourcing contracts, leading teams of more than 500 staff members to achieve service excellence. She thoroughly **understands the Commonwealth's goals for the Data Center Computing Services engagement and has achieved success with managing similar consolidation and Data Center migration initiatives** as the Vice President, Technical Services at Cegedigm-Dendrite. During her 10 years at the company, Ann implemented global data center standards, attained the highest customer satisfaction ratings ever achieved, and grew the operation's scope by more than 900 percent.

Under Ann's direction, her team had many successes, including designing and building a world-class data center from the ground up, then migrating dozens of customers to the center without disruption. **She provided a vision that led to the adoption of new technologies designed to reduce operational costs and provide customers with increased flexibility.** She established a winning culture and a team that always stepped up to the plate regardless of time pressures or the complexity of projects undertaken. Under her leadership, the reputation of the company's support services was dramatically enhanced.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
[redacted]	Engagement Executive	Engagement Executive	15 years
• Unisys, DPH Engagement Executive (2 years) DPH Service Delivery Director (2 years) DPH Chief Technologist (1 year) • Cegedigm-Dendrite, Vice President, Technical Services (10 years) • Electronic Data Systems, Operations Manager (11 years)		• 15 years managing high-quality, large-scale outsourcing programs with extremely high SLA achievement and customer satisfaction • ITIL V3 Foundation Certified • Established Commonwealth leader with 5 years of experience managing the DPH contract, including the 2008 Transformation • 26 years managing programs with complex Data Center Services transitions, including data center facility design, consolidations, and physical and logical data center migrations • Laser focused on driving organizations to continually improve service level performance and customer satisfaction	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

PMO Transition Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as PMO Transition Manager 1 under the new contract. He brings 27 years of IT delivery experience working for large IT outsourcing firms before joining Unisys at the beginning of this year. As a Transition Management Consultant working for Dell Services/Perot Systems, Scott led four large-scale data center transitions, migrations, and system upgrades during his 5-year tenure.

Scott has achieved ITIL Foundations V3 and Project Management Professional certifications and applies the strengths of these methodologies in his approach to transition management. He has a long track record of success with building and leading technology teams on new business development initiatives and transformational programs for existing clients. Scott is a well-organized, communicative business professional who is proficient at establishing fruitful relationships with clients and Unisys technical teams to create synergistic transition support units.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
[redacted]	PMO Transition Manager 1	Transition Director	5 years
• Unisys, Transition Director (1 year) • Dell Services, Transition Management (1 year of responsibility for *all* healthcare transitions and 4 years as a consultant) • Electronic Data Systems, Client Delivery Executive (8 years)		• Provided stellar leadership managing four large-scale data center transitions, migrations, and system upgrades for Dell Services • Exceptional experience with managing accounts, project requirements, and building and leading technical teams • Certifications: ITIL V3 Foundation, Project Management Professional	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Service Delivery Executive (Program Manager): [redacted]

[redacted] **(based in Harrisburg, PA)** will be serving the Commonwealth as the Service Delivery Executive (Program Manager) under the data center compute services contract. He joined the Unisys Team on July 1, 2013 as Service Delivery Director on the Data PowerHouse project. He brings 14 years of experience leading several large Service Delivery organizations supporting outsourced engagements for Computer Sciences Corporation (CSC). Ricky will leverage his experience leading a number of large-scale data center delivery teams, including the Textron account where he directed the consolidation of 10 sites with multiple mainframes and over 800 open systems servers, and then managed an ongoing Service Delivery team of 500 employees.

Ricky is a charismatic, service-driven leader who builds strong performing teams and a winning culture. He has specific management experience with all technologies in use by the Commonwealth. Ricky has attained ITIL V3 Foundations certification and has a demonstrated track record of success with establishing process discipline and sound metrics that have facilitated performance improvements. For example, his attention to process discipline resulted in improving a 60%-70% SLA achievement to consistently realizing 99.5% or better in two separate major CSC clients in less than a year.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
[redacted]	Program Manager (Service Delivery Executive)	Program Manager (Service Delivery Executive) as of July 1, 2013	14 Years
Role on last 3 projects		**Qualifications for Proposed Role**	
• Unisys, DPH Service Delivery Director, effective July 1, 2013 • CSC, Service Delivery Executive (14 years) • Powercom-2000, Global IT Manager (4 years)		• 28 years of experience in senior IT leadership roles, with specialization in large outsourcing engagements • Energetic leader adept at motivating large teams to accomplish goals in fast paced environments • Managed Service Delivery organizations of more than 400 employees through extensive data center consolidation and migration initiatives • Solid track record of process re-engineering to achieve exceptional SLA performance and customer satisfaction • Great communicator with strong emphasis on customer executive relationships	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Service Excellence Officer: [redacted]

[redacted] will serve the Commonwealth as the Service Excellence Officer under the new contract. He is a 32-year Unisys employee who has held a variety of Operations and Quality Management leadership roles supporting numerous Unisys and customer organizations. Michael achieved Six Sigma Lean Black Belt Certification and is well versed in Six Sigma and Lean quality principles. He is ITIL V3 2011 Foundation certified. Leveraging this background, Michael has facilitated numerous client business planning and continual service improvement workshops for Unisys key accounts. Through his leadership, many Unisys teams reengineered operational processes streamlining operations by 30 percent

Michael has conducted multiple Kaizen Process Optimization workshops with the Unisys Team supporting the Commonwealth of Pennsylvania. One of these workshops laid the groundwork to transition the DPH contract from an antiquated Remedy system to the current ITSM 7.6 Remedy system. Michael led the team in the identification of process gaps that needed to be addressed to align local processes with ITIL-aligned industry best practices. He will be leveraging an optimized approach refined from numerous past successes with continuous improvement and process management and confirm that metrics and controls are established, analyzed, improved, and maintained to drive Service Excellence and Continuous Improvement.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
[redacted]	Service Excellence Officer	Director of Operations, North America	2 years
• Unisys, Operations Management for North America Global Managed Services organization (2 years) • Unisys, Account Process Optimization for DPH and the Commonwealth (2012) • Unisys, ITSM7 Transition Kaizen Workshop for DPH and the Commonwealth (2009)		• More than 30 years of experience in service delivery, with focus on operations, quality, service improvement, and finance • Demonstrated leadership in service excellence, with extensive training and experience in Six Sigma Lean (Black Belt), ITIL, Kaizen facilitation, project and program management • In-depth knowledge of the DPH project, account process, and ITSM7 • Certifications: Six Sigma Lean Black Belt, ITIL V3 Foundation (with ITIL Intermediate Practitioner Service Transition/Change Management certification in progress)	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Senior Enterprise Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Senior Enterprise Architect under the new contract. He has 16 years of IT industry experience working for IBM in a number of architect roles before joining Unisys in 2011 as the Lead Client Architect managing the North American Client Architect team, which included overseeing the Client Architects supporting the Commonwealth. While working for IBM, Bryan served as Transformation Integration Architect leading a large team of architects to develop technical components to build a multi-tenant data center to support the State of Georgia's strategic consolidation plans.

Bryan has served in roles providing strategic technical advice to account directors and state agency CIOs and CISOs, developing consumption-based managed hosting service models, and developing business continuity system architectures to support recovery of critical business applications. Having supported numerous agencies for the State of Georgia, he is well versed on the importance of regulatory compliance and has led architecture teams to integrate federal regulatory guidelines and requirements into technology solutions. Bryan is an accomplished technologist and excellent communicator who keeps stakeholders informed through a rigorous architecture review process and periodic technology briefings.

Incident Management Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Incident Management Manager under the new contract. He is an 8-year Unisys employee who has contributed to a number of Unisys outsourcing engagements across multiple service lines, including data center services, managed service desks, and field services. Tom is a versatile, results-driven service delivery professional with a proven ability to develop strong client relationships, build teams, and deliver on commitments with a solid emphasis on quality and continuous improvement.

Tom has held a number of leadership and process management roles, including oversight of problem, incident, and change management processes for many Unisys clients supported in our multi-client service center in Salt Lake City, Utah. He also monitored and managed services as well as maintained consistent delivery to contracted service level agreements. Tom is well-versed in Six Sigma Lean Green Belt and ITIL V3 Foundation methodologies that he consistently applies in the performance of his duties. He will move to Harrisburg at the beginning of the Data Center Computing Services contract.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
[redacted]	Incident Management Manager	Account Relationship and Service Delivery Manager	6 years
Role on last 3 projects		**Qualifications for Proposed Role**	
• Unisys, Account Relationship Manager for a Microsoft Retail store environment (not permitted to name) (1 year) • Unisys, Account Relationship Manager for NEC/7-11 (2 years) • Unisys, Service Delivery Manager, General Growth Properties (2 years)		• More than 6 years of proven ability to direct and deliver new client implementations and steady state operations • Skills: Incident, change and problem management; SLA/KPI management; quality improvement program implementation and management; continuous improvement; and new process development and implementation • Training: ITIL V3, Six Sigma Lean Green Belt	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Change Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Change Manager under the new contract. He is a thorough and results-oriented information technology professional with more than 30 years of experience in delivering advanced technical support to government agencies. Stephen is a 9-year Unisys employee who has worked for the Commonwealth of Pennsylvania as a Service Delivery Manager on the DPH contract. In this role, he has worked with numerous Commonwealth agencies, enabling data center needs and services to be met, including managing large-scale technology refresh projects, the capacity planning process, and all details of agency change and incident management processes.

Stephen is well-known for his ability to achieve results and effectively manage projects as well as his process management diligence. His orientation to detail has effectively confirmed that Commonwealth changes are scheduled and executed by the most qualified resources wherever possible without incident. Stephen has extensive experience with managing organizations through significant periods of change, including leading the DPH ERP implementations for the Integrated Enterprise System (IES) and the Department of Revenue (DOR).

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
[redacted]	Change Manager	Service Delivery Manager	9 years

Role on last 3 projects	Qualifications for Proposed Role
• Unisys, IT Service Delivery Manager at the DPH project (7.6 years) • Unisys, IT Resource and Asst. Technical Support Manager at the DPH project (1.6 years) • Endress+Hauser, Advanced Systems Group Manager and LAN Manager (2 years) • U.S. Air Force (22 years); encompassed several Change Management positions	• More than 30 years of IT experience • More than 9 years of experience on the DPH project, largely as a service delivery manager with deep knowledge of all service delivery processes, particularly change management • Proven change management expertise, having led process creation for 13 Commonwealth agencies, focusing on providing change management resource allocation performance reporting, capacity planning, contractual requirements, and incident reporting for data centers. • Demonstrated expertise in delivering advanced technical support to government agencies and meeting their technology needs by monitoring security, updating systems, and troubleshooting. • Certifications: ITIL V3 Foundation (with ITIL Intermediate Practitioner Service Transition/Change Management certifications in progress)

100% Dedicated to the Commonwealth Data Center Computing Services Project

Change Analyst: Beth Villarreal

Beth Villarreal (based in Harrisburg) will serve the Commonwealth as a Change Analyst under the new contract. She is a 30-year Unisys employee who has worked to support the Commonwealth for the past 16 years in operational leadership positions, including Change Manager, Help Desk Manager, and Agency Liaison to Data Center Operations.

In her current role as Change Manager, Beth works with DPH technical teams to process more than 300 data center infrastructure changes per month on average, confirming that all change requests include required information such as detailed tasks and back out plans. As a true leader, a collaborative approach comes naturally to her when working with the DPH team, and she is diligent in equipping team with process and ITSM product training to successfully execute the change management process.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)

[redacted]	Change Analyst	Change Analyst	10 years
• Unisys, Data Center Analyst for the DPH project (10 years) • Unisys, Computer Operations Supervisor for the DPH project (4 years) • Lockheed Martin, Operations Manager (3 years)		• 27 years of experience providing data center analysis, change analysis, and support • Extensive experience with Remedy IT Services Management, with certifications in change management and resource tracking software • Certification: ITIL V3 Foundation	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Service Level Management Analyst: [redacted]

[redacted] **(based in Harrisburg, PA)** will be serving the Commonwealth as a Service Level Management Analyst under the new contract. She has worked in the IT industry and specifically in large data centers for over 11 years, and will be joining Unisys in July 2013. Suzanne utilizes strong interpersonal skills and a keen attention to detail in order to successfully deliver high-quality, detailed analysis and reporting, which drive cost-effective, quality IT solutions and continuous service improvement to her clients.

Suzanne has detailed knowledge of IT Service Management and in managing ITIL IT processes: service level management, change management, capacity management, and business continuity management. While working in the IT Industry, Suzanne's responsibilities have included: building a comprehensive model for capacity metrics and consolidation reporting; implementing executive reporting summarizing daily processing metrics and current problem status to provide complete transparency; defining and negotiating service-level agreements with customers and service partners to improve customer satisfaction; and managing facility availability activities to 99.99% availability. Suzanne's extensive experience, knowledge, and communication skills will confirm that SLAs are effectively managed, analyzed, and communicated to the Commonwealth.

100% Dedicated to the Commonwealth Data Center Computing Services Project			

Finance Manager: [redacted]

[redacted] will be serving the Commonwealth as the Finance Manager on the Data Center Computing Services contract. He is a tenured Unisys employee who has held various financial management positions for more than 25 years, most recently the past 13 years as the Finance Manager on the Commonwealth of Pennsylvania DPH contract. Gary delivers financial management and billing oversight for several Unisys internal organizations and subcontractors.

Because of his experience with the Commonwealth, Gary has a clear understanding of the Commonwealth's financial processes and requirements for invoicing at the agency level and the tracking of federal funds against grants by project. He has supported restructuring of billing reports into a single Commonwealth invoice with agency-level detail. He is a motivated, conscientious, and diligent professional who takes a meticulous approach to the management of all aspects of finance, including development of financial plans, invoicing and billing activities, change order pricing and processing, and Service Level Agreement tracking.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)

Role on last 3 projects		**Qualifications for Proposed Role**	
• Unisys, Manager, Financial Analysis for the DPH project (14 years) • Unisys, Manager, Business Operations Data Center (7 years) • Unisys, Financial & Asset Control Government Systems (6 years)		• 14 years as a finance manager supporting the DPH project in Harrisburg • In-depth understanding of the DPH billing processes • Designed and implemented many process improvements for the DPH project • Recipient of Unisys Excellence Award • Certification: ITIL V3 Foundation	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Finance Analyst: [redacted]

[redacted] **(based in Harrisburg)** will be serving the Commonwealth as a Financial Analyst on the Data Center Computing Services contract. He has worked in a variety of financial and accounting roles over the past 30 years, with the past 13 years working for Unisys on the Commonwealth of Pennsylvania DPH contract as the Financial Analyst and Project Controller. In his current role, David provides financial reporting and analysis for Unisys management, internal auditors, and external auditors and oversees a wide range of activities, including journal entries, internal billing, external billing, revenue recognition, cash collection, receivables, and asset database entries.

David has extensive experience with preparing amendments to Commonwealth agency fee schedules together with contract change orders. He developed internal processes to confirm the change order impacts agree with timing used in Commonwealth invoicing programs. David continually has an eye on process improvement and was recognized with Unisys Excellence and Silver Recognition Awards for his unwavering customer commitment.

[redacted]	Finance Analyst	Senior Project Controller and Financial Analyst	36 years
• Unisys, Project Controller and Financial Analyst for the DPH project (14 years) • AMP, Financial Analyst (2 years) • AMP, Pricing Accountant (14 years)		• 14 years as project controller and financial analyst supporting the DPH project in Harrisburg • Extensive experience with billing and accounts receivables • Supported the creation and improvement of consolidated billing process • Recipient of the Unisys Excellence Award and Silver Recognition Award for Unwavering Customer Commitment • Certification: ITIL V3 Foundation	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Account Manager: [redacted]

Peter Cavanaugh (based in Harrisburg) will serve the Commonwealth as an Agency Account Manager under the new contract. He is a 23-year Unisys employee who has worked for the Commonwealth of Pennsylvania since 2002 in a variety of project management and client services management roles supporting numerous Commonwealth organizations. Since 2005, he has worked on site at the Enterprise Data Center in very close collaboration with the CTO, CISO, Client Management, EDC, Enterprise Networking and Security, Enterprise Services, GIS, PMO, and many agencies.

Peter developed and introduced a customer satisfaction program for the EDC that continues today under the Bureau of Enterprise Services as an important component of OIT's process for continuous improvement and building strategic relationships. Under this program, he facilitated regular communications and acted as a liaison for OIT with the CIOs for half of the agencies, describing the center's managed services programs, facility services, and benefits.

Communications, customer service and satisfaction, facilitation, infrastructure, project and program management, and strategic relationship building are common threads of Peter's experience of more than a decade working with the Commonwealth and more than 20 years working at Unisys.

Agency Account Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He has more than 15 years of experience working in the IT industry and has supported the Commonwealth of Pennsylvania since 1999, holding positions of progressive responsibility, including his current role as the Service Delivery Manager at the Commonwealth's EDC. In this role, Kannan actively collaborates with many Commonwealth agency IT managers to form technology solutions to address business needs with long-term operational strategies that enable real value to be delivered to the Commonwealth. He is well versed with the Commonwealth standards and ITBs and has personally contributed to developing a few of the ITBs.

Kannan understands the importance of agency participation in major consolidation and migration projects because he played a large role in architecting the e-Government server farm for the Commonwealth to host Web applications for various agencies. On this project, Kannan leveraged excellent leadership and communication skills to direct a team of technical consultants and to collaborate with more than 40 agencies in their successful application deployment and operation, functioning as a liaison, and moving ideas between the development community and the customer community to confirm the needs of the Commonwealth were represented in the server farm's design and delivery.

• Unisys, Service Delivery Manager and Operations Architect, Pennsylvania Commonwealth Technology Center (6 years) • Unisys, Operations Architect, Pennsylvania Commonwealth Technology Center (6 years) • Unisys, Team Leader, Pennsylvania Commonwealth Technology Center (2 years)		• More than 14 years at the Commonwealth's EDC ascending from a technical role in 1999 to the current position as Service Delivery Manager, a role that spans responsibilities for customer relations and satisfaction, technology consulting, operations, and account management. • An original member of the EDC and the center's Operations Architect for more than a decade; offers a very deep understanding of all aspects of the EDC and application hosting. • A very distinctive blend of technology, customer service, operations, and communications knowledge, skills, and experience. • Certifications: PMP, ITIL V3 and V2 Foundation, MCSA 2003, MCSE 2000	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Account Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He is a 7-year Unisys employee who has worked for the Commonwealth of Pennsylvania for more than 15 years, providing technology solutions, consulting, and complex project management services. For the past 7 years, Brian has served the Commonwealth on the Unisys DPH contract in various Service Delivery and Business Management roles acting as a liaison to the Office of Administration and agencies receiving service.

Brian provided exceptional leadership to the DPH team through the alignment with ITIL best practices and the migration to the new ITSM Remedy system. With a service-centric approach, he directed the service delivery organization to support complex solution/design implementation, managed services functions, quality improvement, and cost management activities. He is skilled at contract management and managing vendors and subcontractors to ensure shared accountability for outcomes.

100% Dedicated to the Commonwealth Data Center Computing Services Project

Agency Account Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. She has worked in the IT industry for 14 years and is a 5-year Unisys employee supporting the Commonwealth of Pennsylvania as a Service Delivery Manager on the DPH contract. Lydia has worked with numerous Commonwealth agencies to develop strong partnerships with agency leadership while aligning Unisys service delivery teams with executing policies and procedures as outlined in the contract with a focus on agency priorities and outstanding customer service.

Lydia adroitly oversees subcontractors to maintain top-notch service delivery across environments deployed at the DPH. She has managed numerous successful initiatives, including implementations of new systems for the Pennsylvania Liquor Control Board and the Department of Health, along with hardware upgrades for the Department of State. Lydia is a superb communicator who keeps agency management informed of the status of initiatives and she received numerous accolades from Commonwealth management for her unwavering professionalism and skilled leadership.

100% Dedicated to the Commonwealth Data Center Computing Services Project	

Agency Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. He has more than 18 years of experience in the IT industry working in data center technical management and architecture roles; for the past 4 years, he has worked as a Client Architect supporting the Commonwealth on the DPH contract. In his role at the DPH, Mike designed detailed technical data center solutions for 17 Commonwealth agencies across all technology platforms supported at the DPH.

Mike routinely provides guidance and recommendations to Commonwealth agencies on emerging technologies to increase performance, gain functionality, and reduce cost. He has a solid track record of developing highly accurate solutions that are subsequently implemented successfully because of his attention to detail. With a strong background in data center technical management, Mike understands the importance of having technical team members participate in the solution development and takes a collaborative approach to fostering accountability on the team, promoting a successful implementation.

100% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. She has worked in various roles supporting the Commonwealth over the past 12 years, starting as a long-term consultant to the Department of Public Welfare providing network security expertise for the installation, configuration, and maintenance of the department's extranet. In her current role, Shobha provides architecture services and manages the implementation teams supporting the secure integration of agency applications into the EDC.

Shobha has worked with numerous agencies establishing positive customer relationships and confirming that solutions developed fulfill agency business needs. She has demonstrated superior knowledge across various data center technologies, including Windows server, virtualization, and network. She also attained CISSP certification acknowledging her expertise in security. Shobha is a strong leader who has skillfully led her team through the implementation of several solutions over the 9 years she has worked in the EDC. This experience enables her to implement solutions that are well thought with successful implementation in mind.

Agency Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. He has worked for Unisys supporting many Commonwealth agencies in the DPH over the past 5 years. While at the DPH, Brett spearheaded several initiatives that advanced our architecture and support capabilities in Windows and backup technologies, including consolidation of the DPH NetBackup infrastructure that significantly reduced compute and media resources consumed by the backup process.

Brett has worked closely with many DPH agencies and took the lead in developing and executing the migration of the Integrated Enterprise Systems Windows platform to the DPH. Brett also determined a strategy for using the virtual infrastructure to replicate backup master servers to the disaster recovery site, expediting this component's recovery time from 2.5 hours to 30 minutes. He has consistently applied ingenuity and creativity to developing solutions that solve agency and DPH technology challenges.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
[redacted]	Agency Infrastructure Architect	Systems Analyst and Project Leader	9 years
Role on last 3 projects		**Qualifications for Proposed Role**	
• Unisys, Systems Analyst and Project Leader, at the DPH (5 years) • Business Information Group, Network Engineering Consultant (1 year) • Rite Aid Corporation, Systems Administrator and Development (3 years)		• 5 years of experience as a systems analyst at the DPH managing regular upgrades, security enhancements, virtualization deployments, data center consolidations and migrations, and DR design • Through his ingenuity, has implemented a number of Windows and backup technology innovations to gain process efficiencies at the DPH • Expansive knowledge in the following areas: VMware vSphere ESX/ESXi 3.x, 4.x, & 5.x; Windows 2003, 2008, & 2012; Powershell & VB Script; Active Directory; Security Policies; IIS; DHCP; DNS; FTP; IBM Blade Center Servers; Dell and IBM x86 systems; Enterprise Backup/Replication & Disaster Recovery technologies, including Symantec NetBackup, EMC Data Domain, EMC Avamar, Microsoft Failover Clustering, Network Load Balancing, and Microsoft DFS & DFS-R • Certifications: VMware VCP4, VMware VCP5, Microsoft Windows 2008 MCITP: SA, Microsoft Windows 2008 MCA: Virtualization, MCSA: Windows 2012, and ITIL V3 Foundation	
100% Dedicated to the Commonwealth Data Center Computing Services Project			

Security Manager: [redacted]

[redacted] will serve the Commonwealth as the Security Manager under the new contract. He brings more than 38 years of senior technical and management experience, including 6 years with the Commonwealth covering security design, consulting, project management, technology assessment, automation, and distributed network architecture. Mike has specialized security expertise throughout a broad range of product sets, including identity management, identification and credentialing, access control, and confirming compliance with security standards.

Mike has worked with several federal and state agencies, including the Pennsylvania State Police, where he managed security for the new Commonwealth Law Enforcement Assistance Network (CLEAN) upgrade encompassing security policy; access control by CA SiteMinder; and integration with PSP's RSA Adaptive Authentication using a RadiantOne Virtual Directory Server (VDS) as the user repository. He also collaborated with JNET to most efficiently provide access to CLEAN by JNET users without requiring additional authentication and assisted Commonwealth leadership creating Security ITBs. Mike's efforts enabled deployment of the new Megan's Law application to its full user base much faster than would have been achievable otherwise, enabling PSP to meet its legislatively mandated deadline.

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)

100% Dedicated to the Commonwealth Data Center Computing Services Project			

PMO Transition Manager 2: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as PMO Transition Manager 2 under the new contract. He has spent more than 14 years on the IBM Commonwealth delivery team, gaining extensive experience in transition leadership, project management, IT infrastructure implementations, and IT operations and services management. Dave has held various leadership roles supporting the DPH, supporting the Integrated Enterprise System ERP contract, and as a project leader with the Department of Labor & Industry.

In October 2005, Dave led the transition of the Commonwealth's ERP systems from legacy providers to upgraded systems and network infrastructure on schedule and with no interruption to customer operations or applications. He has been successful on several similar large-scale transitions and projects by designing consistent transition plans with clear team member roles, responsibilities, and deliverables to enable every team member to understand his or her part of the transition. He understands that success relies on working together with the Commonwealth agencies to reach firm agreements on milestones and schedule.

100% Dedicated to the Commonwealth Data Center Computing Services Project			

Availability Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Availability Manager under the new contract. He is a 13-year IBM employee who has worked in operational leadership roles, including Availability and Change Manager and Data Center Operations Team Lead. Over the past 10 years, Mic has served as an IBM Availability and Change Manager for the Commonwealth of Pennsylvania Data PowerHouse project, and for 7 years he managed Data Center Operations for the Commonwealth's Integrated Enterprise System.

Mic brings expertise in overseeing processes, including availability management, trend analysis, change control, project planning, implementation, and reporting. He is adept at evaluating processes and applying process improvements, as evidenced by his contributions during our recent implementation of ITIL process standards and the new Remedy ITSM tool. He is well regarded by the Commonwealth and the DPH team for his expertise in the process management area.

100% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Account Manager: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He has held a variety of IT leadership positions since joining IBM in 1976 and has worked with many Commonwealth agencies in the role of Service Delivery Manager for the past 12 years. He has a strong background and proven expertise in many IBM technologies, including zSeries and iSeries technical management, support of the Disaster Recovery process, and relationship management. Barry possesses strong working knowledge of many Commonwealth agencies' business priorities, aligning cost-effective Data Center solutions to meet agency needs.

Barry has extensive experience with managing Commonwealth agencies through planning and smooth execution of system migrations and upgrades to new hardware and software product upgrades. He possesses superior knowledge of disaster recovery and business continuity planning demonstrated by creation of the disaster recovery plans supporting all IBM mainframe customers of the DPH and coordination of all disaster recovery tests. Barry is highly regarded as an expert in the field and for his knowledge of the Commonwealth, as evidenced by commendable ratings in customer satisfaction surveys during his tenure.

100% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** from our partner IBM will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. Mary has more than 34 years of information technology experience and has been assigned to the IBM Commonwealth of Pennsylvania team since 1996, when she led the design and implementation of multiple complex IBM infrastructure solutions, including the SAP and Unemployment Compensation infrastructure environments.

Mary has supported Commonwealth agencies for the past 17 years, designing and implementing highly available IT systems and subsystems. Using a consultative approach, she works closely with agency IT technical and operations stakeholders to gather their requirements to develop systems management solutions that address needs of the business. Through her solutioning efforts, Mary has been instrumental in assisting the Commonwealth with the realization of goals to reduce the number of data centers and servers and to significantly increase server virtualization at the Commonwealth.

50% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. He has more than 39 years of experience in the information technology field supporting the Commonwealth in various positions demonstrating superb skills in IBM mainframe technologies. Joe has supported the Commonwealth for 27 years, the past 14 years as an IT Architect on the DPH contract, and before that spending several years in various systems support roles at the Pennsylvania Department of Transportation.

Throughout his tenure on the DPH contract, Joe has continuously developed innovative solutions that improved the IBM mainframe platform performance and resiliency for agencies supported at the DPH. With the DPH transformation in 2008, he consolidated several disparate mainframe platforms onto a single z10 frame that exploited group capacity and sub-capacity software to allow the Commonwealth workloads to gain access to available MIPS beyond their allocated capacity and at the same time not exceeding software licensing limits. This innovation saved the Commonwealth millions of dollars by providing additional capacity to agencies experiencing extraordinary processing requirements for short periods.

50% Dedicated to the Commonwealth Data Center Computing Services Project			

Agency Infrastructure Architect: [redacted]

[redacted] **(based in Harrisburg)** from PCN will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. Charlie has worked on a variety of assignments crossing diverse technologies and industries, including government agencies and military contracts. He has performed as a Data Center Infrastructure Architect for large organizations for which he has focused on introducing emerging technologies and solutions to the company's vision and leveraging them to enhance capabilities and reduce cost.

Throughout his career, Charlie has consolidated more than 25 data centers to centralized mega-data centers, built three new data centers, designed six SANs across six data centers, and developed multiple Disaster Recovery solutions including the use of SunGard as well as in house Disaster Recovery solutions using internal infrastructure and data centers. He is skilled in a broad spectrum of data center infrastructure technologies we will be using for the Commonwealth solution.

IBM Project Executive: [redacted]

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the IBM Project Executive (PE) responsible for the leadership of the IBM team. In her current position as the IBM PE, she is responsible for the IBM scope of services to the Unisys Data Power House contract. Her background also includes a previous role supporting the DPH from 2000 to 2005 as the Deputy PE. Kathy's long standing commitment to excellence in support of the Commonwealth of PA agencies positions her well to lead the IBM team. She supported the agency transitions in 2000 during the contract start up and was part of the team who successfully brought the support to steady state.

Kathy has over thirty years of experience in leadership positions providing project management, customer satisfaction, and new business growth at IBM. For over fifteen years, Kathy's career focus has been in Strategic Outsourcing (SO) delivery and project management supporting multiple tower commercial outsourcing contracts with content including: Help Desk, Desktop support, Mid-range server management, Data Center operations, Application Management Services, Network Services and Mainframe print. Her experience includes managing multi-million dollar outsourcing contracts for customers in the Public Sector/State and Local Government, Healthcare, Insurance, and Telecommunications sectors. She holds several certifications including PMI Project Management Professional (PMP), IBM Project Management, IBM Project Executive, and ITILv3 Foundation. Kathy is well positioned to lead the IBM team to support the Data Center Computing Services project with strong, consistent delivery and with innovation to continue bringing value to the Commonwealth of PA.

IBM Delivery Project Executive: [redacted]

[redacted] **(based in Harrisburg)** will serve as the dedicated IBM Delivery Project Executive as he has for the past 10 years on the Data PowerHouse Project. In this capacity, Bob has led the IBM support for the Unisys Team in providing not only outstanding steady-state support for the Commonwealth systems and applications, but also supported the introduction of new technologies such as Linux on System z. Bob has demonstrated his ability to harness the broad resources of IBM for implementation of technical changes, provide additional hardware and software capabilities, and manage technical issues by including the IBM Product Engineering and Software Labs to meet Commonwealth needs.

Going forward, Bob will support the Unisys Team by leveraging the breadth of IBM support in the implementation of new technologies and transitions to new datacenter facilities. His ITIL and PMI certifications and experience with the Commonwealth agencies will guide his leadership of the services management and technical staff to provide the best possible operating environment for the Commonwealth applications.

Executive Leadership Committee

Because of the importance of this engagement and our commitment to the Commonwealth of Pennsylvania, Ed Coleman, Unisys Chairman and CEO, has chosen to serve as Executive Sponsor and will personally ensure our company's complete commitment to its success in the implementation of a new compute services model for the Commonwealth.

In addition to Ed Coleman's role as Executive Sponsor, Unisys established an Executive Leadership Committee shown in the figure below to support the efforts of our Harrisburg-based leadership team. We created this committee to provide direct visibility into senior leadership at Unisys to confirm that we meet our commitments to the Commonwealth, during both transition and steady state operations, and to break down the inevitable barriers that arise during engagements of this magnitude.

Unisys Executive Leadership Committee

Our **Executive Committee** consists of**:**

- [redacted], Unisys President of Global Service Delivery
- [redacted], Unisys Vice President of Global Service Delivery
- [redacted], IBM Vice President of Global Technology Services
- [redacted], Unisys Vice President of North America Service Delivery
- [redacted], Unisys Vice President and General Manager of North America Service Delivery
- [redacted], Unisys Chief Technology Officer, Technology and Innovation
- [redacted], Unisys Vice President, Commonwealth of Pennsylvania Region
- [redacted], Deloitte Principal, Security and Privacy Services

The undersigned party hereby agrees that it has read and completed this form, and has marked the material being submitted in accordance with the instructions above. The undersigned party acknowledges that the Commonwealth is not liable for the use or disclosure of trade secret data or confidential proprietary information that has not been clearly marked as such, and which was not accompanied by a specific explanation included with this form.

The undersigned agrees to defend any action seeking release of the materials it believes to be trade secret or confidential, and indemnify and hold harmless the Commonwealth, its agents and employees, from any judgments awarded against the Commonwealth in favor of the party requesting the materials, and any and all costs connected with that defense. This indemnification survives so long as the Commonwealth has possession of the submitted material, and will apply to all costs unless and until the undersigned provides a written statement or similar notice to the Commonwealth stating that it no longer wishes to exempt the submitted material from public disclosure.

The undersigned acknowledges that the Commonwealth is required to keep all records for at least as long as specified in its published records retention schedule.

The undersigned acknowledges that the Commonwealth reserves the right to reject the undersigned's claim of trade secret/confidential proprietary information if the Commonwealth determines that the undersigned has not met the burden of establishing that the information constitutes a trade secret or is confidential. The undersigned also acknowledges that if only a certain part of the submitted material is found to constitute a trade secret or is confidential, the remainder of the submitted material will become public; only the protected information will be removed and remain nonpublic.

If being submitted electronically, the undersigned agrees that the mark below is a valid electronic signature.

APPENDIX B - PROPOSAL COVER SHEET
COMMONWEALTH OF PENNSYLVANIA
OFFICE OF ADMINISTRATION – OFFICE FOR INFORMATION TECHNOLOGY
RFP# 6100022698

Enclosed in three separately sealed submittals is the proposal of the Offeror identified below for the above-referenced RFP:

Offeror Information:	
Offeror Name	UNISYS Corporation
Offeror Mailing Address	4750 Lindle Road, Harrisburg, PA 17111
Offeror Website	WWW. UNISYS. com
Offeror Contact Person	Dean R. Shaner
Contact Person's Phone Number	(717) 526- 1267
Contact Person's Facsimile Number	(717) 526 - 1175
Contact Person's E-Mail Address	dean.shaner@UNISYS, com
Offeror Federal ID Number	[redacted]
Offeror SAP/SRM Vendor Number	163299

Submittals Enclosed and Separately Sealed:	
☐	Technical Submittal
☐	Disadvantaged Business Submittal
☒	Cost Submittal

[redacted] *Signature*	
Signature of an official authorized to bind the Offeror to the provisions contained in the Offeror's proposal: Printed Name John Edward Coleman	
Title Chairman & CEO	

FAILURE TO COMPLETE, SIGN AND RETURN THIS FORM WITH THE OFFEROR'S PROPOSAL MAY RESULT IN THE REJECTION OF THE OFFEROR'S PROPOSAL

Request for Proposal

RFP # 6100022698

Commonwealth of Pennsylvania

Office of Administration
Office for Information Technology

Datacenter Computing Services

Schedule I

Offeror Pricing Forms

Description of Exhibit and Instructions

This Schedule I - Offeror Pricing Forms sets forth the following:

Configuration Definitions

- This sheet contains the descriptions of the defined configurations which are used on the Volumetrics and Catalog of Services tabs.

1. Volumetrics

- This sheet includes the resource unit categories and target quantities that the Offeror's will use to determine their price.
- Offerors should not assume that these are a guaranteed minimum units over the contract period.
-No entry is required on this sheet.

2. DC Architecture Charges

- Offerors should use this sheet to indicate their charges associated with the startup of their Datacenter Architecture.
- Offeror should only input in highlighted (yellow) cells.

3. Transition Charges

- Offerors should use this sheet to indicate their charges associated with transition as described in Schedule D. All transition costs should be included in these costs.
- Offeror should only input in highlighted (yellow) cells.

4. Total Charges

- Summary of Datacenter Architecture Charges, Transition Charges, and Services Charges.
-No entry is required on this sheet.

5. Technical Staff Rate Card

- Offerors should use this sheet to provide their staffing rates for the optional support services
- Offeror should only input in highlighted (yellow) cells.

6. Catalog of Services

- Offerors should use this sheet to include their Catalog of Services with pricing.
- Offeror should only input in highlighted (yellow) cells.

Additional Notes

a.) All input sheets (2, 3, 5, 6) must be filled out completely

b.) Total Charges (sheet 4): Information is linked with input sheets and will calculate automatically.

c.) Formulas are imbedded in all sheets. Offeror must verify that all calculations, subtotal costs and grand total costs are accurate.

d.) Please contact the Issuing Officer with any questions or concerns.

e.) Payment for services under this contract are unit-based. The total units (volumetrics) listed are for informational purposes only and will not be binding on the Commonwealth

Configuration Definitions

The below definitions and configurations are referenced throughout Schedule I - Offeror Pricing Forms.

Definitions

(1) Fully Managed - Infrastructure that is fully owned and managed by the Service Provider

(2) Managed Only - Infrastructure that is managed by the Service Provider but owned by the Commonwealth and/or a 3rd Party; each of these units typically would also include a Limited Co-Lo charge for datacenter related services.

(3) Limited Co-Lo - Infrastructure that is located in the Service Provider managed datacenter(s). Either owned and managed by the Commonwealth or 3rd Party.

(4) Mainframe Services - Include both IBM mainframe and Unisys mainframe services

(5) On-Demand (IaaS) Services - Provide pricing for Offeror's IaaS offerings using the target configurations listed within.

(6) Configurations - Offerors will use the sample configurations below to support their pricing presentation.

Limited Co-Lo (Data Center Only Charge)		
Limited Co-Lo Configurations	**Minimum Specifications**	**Unit**
Co-Lo Config - 1	1/4 Rack Configuration includes 10U Cabinet Space; 5,000 GB Network Bandwidth; 100Mb/s Uplink; 6 IP Addresses; 5 -110V AC Circuits	Monthly Per Config
Co-Lo Config - 2	1/2 Rack Configuration includes 21U Cabinet Space; 10,000 GB Network Bandwidth; 100Mb/s Uplink; 14 IP Addresses; 10 -110V AC Circuits	Monthly Per Config
Co-Lo Config - 3	Full Rack Configuration includes 42U Cabinet Space; 20,000 GB Network Bandwidth; 100Mb/s Uplink; 30 IP Addresses; 20 -110V AC Circuits	Monthly Per Config

Server Configurations (Fully Managed)		
x86 Server Configurations	**Minimum Specifications**	**Unit**
Windows pConfig - 1	2-way Quad-Core 2.0 GHz; 4 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2	Physical Server
Windows pConfig - 2	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2	Physical Server
Windows pConfig - 3	4-way Six-Core 2.0 GHz; 64 GB RAM; 500 GB SAN Attached Storage; Windows Server 2008 R2	Physical Server
Windows pConfig - 4	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	Physical Server
Windows pConfig - 5	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; Windows Server 2008 R2; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Physical Server
Linux pConfig - 1	2-way Quad-Core 2.0 GHz; 4 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE	Physical Server
Linux pConfig - 2	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE	Physical Server
Linux pConfig - 3	4-way Six-Core 2.0 GHz; 64 GB RAM; 500 GB SAN Attached Storage; RedHat or SUSE	Physical Server
Linux pConfig - 4	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site's Local SAN Storage from hourly data synchronization	Physical Server
Linux pConfig - 5	2-way Six-Core 2.4 GHz; 16 GB RAM; Mirrored 146 15K Hard Drives; RedHat or SUSE; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Physical Server
Windows vConfig - 1	2vCPU; 4 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
Windows vConfig - 2	4vCPU; 16 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
Windows vConfig - 3	8vCPU; 64 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
Windows vConfig - 4	4vCPU; 16 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	Virtual Server Instance
Windows vConfig - 5	4vCPU; 16 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance
Linux vConfig - 1	2vCPU; 4 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
Linux vConfig - 2	4vCPU; 16 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client VLAN	Virtual Server Instance
Linux vConfig - 3	8vCPU; 64 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance

Configuration Definitions

Linux vConfig - 4	4vCPU; 16 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	Virtual Server Instance
Linux vConfig - 5	4vCPU; 16 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance

P-Series Server Configurations		
AIX Config - 1	3.0GHz POWER7; 0.5 Cores; 6 GB RAM AIX	LPAR
AIX Config - 2	3.0GHz POWER7; 1.0 Cores; 12 GB RAM AIX	LPAR
AIX Config - 3	3.0GHz POWER7; 1.5 Cores; 18 GB RAM; AIX	LPAR
AIX Config - 4	3.0GHz POWER7; 1.0 Cores; 12 GB RAM; AIX; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	LPAR
AIX Config - 5	3.0GHz POWER7; 1.0 Cores; 12 GB RAM; AIX; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	LPAR

Mainframe Configurations		
IBM Mainframe Configurations	**Minimum Specifications**	**Unit**
IBM Mainframe Config - 1	IBM System zEnterprise Processor z/OS	MIP
IBM Mainframe Config - 2	IBM System zEnterprise Processor Virtual Linux Prod IFL	MIP
IBM Mainframe Config - 3	IBM System zEnterprise Processor Virtual Linux Prod IFL; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	MIP
IBM AS400 Config 1	IBM i Series / AS400	CPW
IBM AS400 Config 2	IBM i Series / AS400; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	CPW
Unisys Mainframe Configurations	**Minimum Specifications**	**Unit**
Unisys Mainframe Config - 1	Unisys (Clearpath / Dorado)	MIP
Unisys Mainframe Config - 2	Unisys (Clearpath / Libra)	MIP
Unisys Mainframe Config - 3	Unisys (Clearpath / Dorado); Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	MIP
Unisys Mainframe Config - 4	Unisys (Clearpath / Libra) ; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	MIP

On-Demand (IaaS) Configurations		
IaaS x86 Server Configurations	**Minimum Specifications**	**Unit (per month)**
IaaS Windows vConfig - 1	2vCPU; 4 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client VLAN	Virtual Server Instance
IaaS Windows vConfig - 2	4vCPU; 16 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client VLAN	Virtual Server Instance
IaaS Windows vConfig - 3	8vCPU; 64 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
IaaS Windows vConfig - 4	4vCPU; 16 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	Virtual Server Instance
IaaS Windows vConfig - 5	4vCPU; 16 GB Ram; Windows Server 2008 R2; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance
IaaS Linux vConfig - 1	2vCPU; 4 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
IaaS Linux vConfig - 2	4vCPU; 16 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN	Virtual Server Instance
IaaS Linux vConfig - 3	8vCPU; 64 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client VLAN	Virtual Server Instance
IaaS Linux vConfig - 4	4vCPU; 16 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 24 hours via Backup Restoral from Backup Site s Local SAN Storage from hourly data synchronization	Virtual Server Instance
IaaS Linux vConfig - 5	4vCPU; 16 GB Ram; RedHat or SUSE; Firewall/IDS; Site-Site VPN; VPN Client; VLAN; Disaster Recovery Server with a Restoral Interval of 72 hours via Backup Restoral from off-site tape Backups	Virtual Server Instance
IaaS Storage Configurations		
IaaS Storage Config - 1	SAN attached storage; Raid 5; 10K - 15K RPM discs	Monthly per GB

Configuration Definitions

IaaS Storage Config - 2	SAN attached storage; Raid 10; 10K - 15K RPM discs	Monthly per GB
IaaS Storage Config - 3	Network Attached Storage	Monthly per GB

IaaS Backup Configurations		
IaaS Backup Config - 1	Remote Offsite backup per GB	Monthly per GB

Baseline Units - Volumetrics

Note: The Commonwealth has established multiple scenarios of infrastructure configurations specifically for pricing evaluation, as set forth in Schedule I. The Volumetrics in Schedule I will be used to evaluate Offerors' cost proposals and are not a minimum commitment or an all inclusive representation of every service desired by the Commonwealth.

Baseline Units - Volumetrics

Note: The Commonwealth has established multiple scenarios of infrastructure configurations specifically for pricing evaluation, as set forth in Schedule I. The Volumetrics in Schedule I will be used to evaluate Offerors' cost proposals and are not a minimum commitment or an all inclusive representation of every service desired by the Commonwealth.

Notes:

For purposes of submitting a proposal, Offerors should assume that tapes are equivalent in capacity to LTO4 tapes.

* For purposes of submitting a proposal, Offerors should assume that the slower Tier1 RAID5 uses 10K drives and the Tier2 RAID10 uses 15K drives.

** The volume is expressed as native.

*** For purposes of evaluation DASD is expressed in Usable (not Raw)
