4. Prior Experience

RFP	*Requirement*
	Overall *The Offeror must provide information describing its background, services, experience, and qualifications relative to the scope of this RFP. Information that will be considered includes the length of the service, service levels, references, and quality of comparable services provided to other clients. The Offeror should also indicate any additional information that will be helpful to the Commonwealth's evaluation.*

4.1 Overall

Unisys, the Prime Contractor

Unisys, serving as the prime contractor, will be the single point of contact for the Commonwealth. As demonstrated under our existing Data PowerHouse (DPH) contract, Unisys will continue to lead and take full responsibility and accountability for contract execution, subcontractor performance, and all related issues.

"Unisys…has built its own infrastructure of systems and people ready and able to meet customer needs on a global basis. In recent years, Unisys has demonstrated it understands the power of partnerships and exploited this understanding to become one of the premier service organizations in the market."
—Gartner

This engagement is personal to Unisys since we are a Pennsylvania-based company that depends on many Commonwealth services. That is one reason we have worked so hard when awarded Commonwealth contracts.

We believe deeply that our clients must become our partners and we do everything possible to strengthen the relationships by doing whatever is necessary to meet their high expectations of service and quality.

Unisys has worked with many State, Local, Federal, and foreign government clients for more than 50 years. As a result, we have a deep appreciation and understanding of providing mission critical, innovative solutions in the public sector. For many of these 50 years, we have provided services to Commonwealth agencies. In fact, some of our global best practices were created as a result of our work with the Commonwealth.

Our knowledge of the thousands of Commonwealth applications, a thorough understanding of your technical architecture, and an appreciation for and commitment to the needs and

expectations of state agencies, are extremely important to successfully transform the Commonwealth's computing environment.

Unisys believes that one of our most important differentiators is the experience and strength of our entire team. As part of providing background related to our prior experience, we want to start by introducing the Commonwealth to our team.

When combining the like extensive Commonwealth experience of our key partners, IBM and Deloitte, no other service provider will be able to mitigate risk and delivery cost effective on-demand computing capacity better than our knowledgeable team.

4.1.1 Team Introduction and Prior Experience

In anticipation of the release of the Data Center Computing Services Request for Proposal (RFP), one of the first tasks Unisys undertook was an analysis of what partnerships would add the most value and strengthen the already strong Unisys and IBM team serving the Commonwealth. After making the initial partner decisions, we validated our selections against the requirements outlined in the Request for Information (RFI) and then in the RFP issued by the Commonwealth. Finally, after twice validating the requirements, we solidified a core "best of class" team to serve the Commonwealth and to bring a fresh perspective and innovative ideas. Our team members were carefully selected to significantly reduce risk and to deliver this initiative on time and on budget and to provide high quality cost effective ongoing services. This knowledge and experience is a key differentiator between the Unisys Team and others that may claim they have the necessary Commonwealth experience to transition the Commonwealth's most important business systems.

Local Resources

*In **Pennsylvania**, Unisys, IBM, and Deloitte **employ 6,962 people** with over **900 people in Metropolitan Harrisburg area***

Given the RFP requirements, especially for the transition and transformation to an On-Demand infrastructure Private Cloud Model, Unisys formed our consortium under a very specific premise that our strategic partners have an extensive resume of proven experience delivering outsourced compute services as well as specific long-term business experience with the Commonwealth. Entrusting such an important initiative to those with limited exposure to the Commonwealth, increases risk of failure. This is not an environment conductive to implementation by trial and error.

To put it simply, the Commonwealth is looking for a trusted partner to lead a proven consortium of service providers in managing the compute services that supports the Commonwealth's mission and non-mission critical business application systems.

While providing a more transparent and cost effective, On-Demand services model is important, we also understand that this initiative revolves around the Commonwealth's

business application systems. Therefore, beyond just managing the hardware and software and related infrastructure we sought the best possible team to support the agency business applications.

4.1.2 IBM, Key Partner

One of our key determining factors in forming our consortium is **that Unisys and IBM invented or supplied the technology infrastructure that hosts nearly all of the Commonwealth's critical business application systems.**

Another key determining factor is that Unisys and IBM developed a significant portion of the system software infrastructure supporting the Commonwealth's most mission critical business applications.

Also, IBM has been a valued partner with the current DPH project, and therefore has gained valuable long-term experience with the Commonwealth. This experience is extremely important to the success of this project. We are excited to have IBM as a key partner.

As a result of choosing IBM, the two companies (IBM and Unisys) that have successfully provided DPH services for the past 14 years will again work together to best serve the Commonwealth.

4.1.3 Deloitte, Key Partner

Although both Unisys and IBM have more than 50 years of working knowledge of the Commonwealth's business application systems and the underlying technology, we will enhance our team with additional services from Deloitte. Deloitte represents the largest, most experienced applications integrator, developer, and application maintenance provider to support the Commonwealth's business application systems. This experience will be extremely valuable.

Unisys

IBM and Deloitte

No other team possesses the collective knowledge, experience, and track record of this core team in providing managed infrastructure security and application services to the Commonwealth

Also, Deloitte currently provides the Commonwealth with a number of security services. In fact, Deloitte is the largest provider of these services to the Commonwealth. Security is extremely important to this engagement's success and is another important reason Deloitte was selected as a Key Partner.

4.1.4 Teaming Approach

We combined our respective Unisys and IBM management and technical talent, along with Deloitte resources, into a single team. This approach will provide the Commonwealth with

significant experience, and a very detailed understanding of the Commonwealth, its agencies and the specific challenges of implementing such a complex project. Having such a wealth of knowledge gained over decades of working with the Commonwealth and its agencies will be invaluable and frankly is the major differentiator between our team and the competition.

Unisys, IBM, and Deloitte form the core of a "best-of-class" team to deliver compute services to the Commonwealth efficiently and securely.

Figure 4-1 are the key factors in our selection of IBM and Deloitte as key Unisys partners for this engagement:

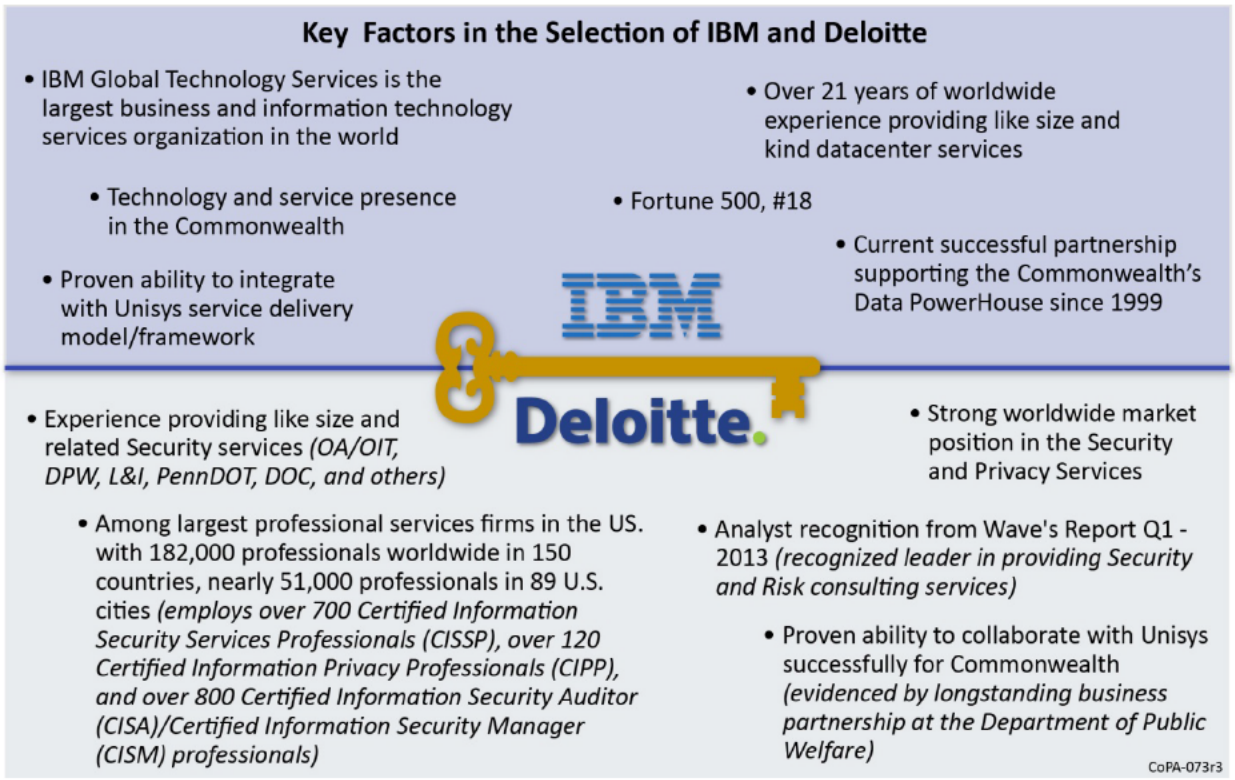

Figure 4-1. Key Factors in the Selection of IBM and Deloitte.

4.1.5 Small Diverse Business Partners

We understand the importance and value of having talented small businesses join our team. Several Small Diverse Businesses (SDBs) have joined as partners. We selected them specifically for their direct experience in providing like services to the Commonwealth. They represent the very best of small businesses in Pennsylvania, and we are proud to have them on our team.

In line with Governor Corbett's support for small business development and expansion, we will be using SDB qualified businesses, including Acclaim Systems, e&e Consulting, Info-

Matrix Corporation, Domino Technologies, American Personnel Management Consultants (APMC), PCN-Network, Innovative Business Concepts (IBC), Credo Technologies, Latus Commercial realty, and Pierson Computing Connection to help us achieve your vision. It is important to note these are ALL—all Pennsylvania-based small businesses. Our selection criteria verified each of these businesses has specific expertise in the areas such as application and infrastructure support service management, help desk, transition services, media management, staffing, cultural change management, and other areas as defined in our proposal.

4.1.6 Why this Team

It is clear….. **No other team possesses the collective knowledge and experience of Commonwealth compute services than the Unisys consortium.**

Also our consortium has a proven record of success over many years of service delivery to Commonwealth agencies. Therefore we offer the lowest risk and virtually no learning curve. That means a much greater probability that your vision will be achieved on time, within budget and fully meeting your expectations. This will be extremely beneficial given this engagement's nature and the need for consistency in affecting the transition and transformation to a new Commonwealth data center operating model. Bottom line—we formed the team that combines the best management disciplines with the experience and expertise to deliver the highest levels of client service, at the lowest risk to the Commonwealth.

Table 4-1 showcases our team and the value they bring to the Commonwealth.

Table 4-1. The Unisys Team

Company	Description
UNISYS	Unisys is an industry leader providing information technology (IT) services and technologies for governments around the globe as well as the world's top banks and other financial services companies. At the Commonwealth of Pennsylvania, we have more than 50 years of demonstrated successful delivery on mission critical systems and programs. We assembled a team of highly qualified information technology professionals who all have extensive Commonwealth-specific knowledge. Our team will be leveraging their experience supporting the Commonwealth's IT environments while meeting the Commonwealth's requirements. As the prime contractor, Unisys will be solely accountable for overall program performance.
IBM	International Business Machines Corporation (IBM) provides IT products and services worldwide. Its Global Technology Services segment provides IT infrastructure and business process services, including strategic outsourcing, process, integrated technology, and maintenance services, as well as technology-based support services. IBM will provide mainframe hardware/software support including installations, upgrades, and support. IBM has more than 50 years of providing like services to the Commonwealth. IBM will be providing technology products and managed services for IBM zSeries mainframes and IBM pSeries AIX mid-range based systems, including disaster recovery and capacity-on-demand services to the project.

Company	Description
Deloitte.	In the United States, Deloitte LLP and its subsidiaries have 57,000 professionals with a single focus: serving their clients and helping them solve their toughest problems. They work in four key business areas: audit, financial advisory, tax, and consulting. Deloitte has significant experience in supporting the Commonwealth of Pennsylvania with some of its most complex projects. Deloitte will be providing technical security services and database management support services to the project.
acclaim SYSTEMS	Acclaim Systems is a leading software solution company offering a multitude of comprehensive and customized services. Acclaim Systems is committed to maintaining client relationships by effectively aligning technology and consulting resources with clients' dynamic business requirements. Acclaim Systems succeeds by investing in the professional fulfillment of their employees. Consistent delivery of high-quality solutions results from employee empowerment. Acclaim Systems, a Pennsylvania certified Small Diverse Business, has extensive experience in providing like services to the Commonwealth. Acclaim Systems will be providing technical and project management support resources to the project.
AMERICAN PERSONNEL MANAGERS and CONSULTANTS, INC.	American Personnel Managers & Consultants, Inc. is a superior human resource management and recruiting firm, staffing and project management company with more than 70 years of experience in staffing and 13 years of experience with staffing, the Pennsylvania Data PowerHouse (DPH) project. APMC is a Pennsylvania-certified Small Diverse Business. APMC will be providing technical support resources to the project.
CREDO TECHNOLOGY SOLUTIONS	Credo is a Pennsylvania-certified Small Diverse Business that has built a tight cadre of team members focused on consistently delivering services that help clients meet their IT challenges. Credo's staff and strategic partners are able to offer business and technology solutions as well as project management offerings. Credo Technology Solutions will be providing technical and project management support resources to the project.
Domino Technologies, Inc.	Since its founding in 1996, Domino Technologies, Inc. has built a solid record of performance working with clients in both the private sector and government. Domino Technologies had consistently delivered innovative business solutions, using the latest technology to fulfill the Commonwealth's goals. Domino Technologies, a Pennsylvania-certified Small Diverse Business, has extensive experience in providing infrastructure-managed services to the Commonwealth. Domino Technologies will be providing technical and project management support resources to the project.
e&e IT Consulting Services, Inc.	e&e IT Consulting Services, Inc. is a Pennsylvania-certified certified Small Diverse Business technology services firm providing staffing in Pennsylvania, Virginia, New Jersey, and the City of Philadelphia. e&e provides all levels of skilled IT professionals to clients in Central Pennsylvania and surrounding areas. e&e is recognized for the sixth consecutive year as one of the Top 50 Fastest Growing Companies in Central Pennsylvania, making significant contributions to the growth, strength, and success of the Central Pennsylvania region. e&e will be providing technical and project management support resources to the project.
INFO-MATRIX CORPORATION	Info-Matrix is a private, woman-owned information technology consulting firm based in Lemoyne, Pennsylvania. Since 1996, Info-Matrix has focused largely on the government sector, with an emphasis on human services IT projects, including Medicaid eligibility, welfare case management, and child support enforcement systems. From Texas to Alaska, Info-Matrix has broad experience at the federal, state, and local levels with hiring experienced professionals with an average of 15 years of IT experience who have distinguished themselves by successfully implementing complex government IT projects mainly at the Commonwealth of Pennsylvania.

Company	Description
	Info-Matrix will be providing technical and project management support resources to the project.
Innovative Business Concepts, Inc.	Since 1989, Innovative Business Concepts, Inc. (IBC) has been a Pennsylvania-certified Woman-Owned Business empowering customers to maximize productivity, efficiency, and cost savings by deploying the best people, practices, and knowledge in the technology industry. IBC provides excellent IT personnel, products, and services. IBC will be providing technical and project management staff to the project.
PCCi Pierson Computing Connection Inc	Pierson Computing Connection, Inc. (PCCi), a Pennsylvania-certified Women's Business Enterprise, is headquartered in Mechanicsburg, Pennsylvania and central to the Harrisburg Regional Technology Corridor Enterprise Zone. The 40-member PCCi team is dedicated to providing computer services with unsurpassed quality, uncommon honesty, and amazing customer satisfaction throughout every aspect of our project management, consulting, and installation services. PCCi has extensive experience in Pennsylvania performing infrastructure installations and setup as well as project management and IT project staffing. PCCI will be supplying infrastructure hardware, installation services, and project management services to the project.
PCN	PC Network (PCN) is a growing, woman-owned IT services company based in Center City Philadelphia that works with enterprises, prime contract partners, and the public sector. PCN provides affordable solutions for the many complex problems facing business today. PCN's customers span the commercial, transportation, defense, and government sectors. Founded in 1988, PCN has evolved from its traditional systems integrator roots to provide a broad range of IT consulting services. PCN has a strong focus on quality with ISO 9001 and TL9000 quality programs and is ISO 27000 compliant. PCN will be providing Customer Satisfaction Survey support, IPV6 Strategy Services, Service Desk staff, and technical/Project management staff to the project.
Harrisburg University Government Technology Institute	Harrisburg University is the first science- and technology-focused, non-profit, comprehensive university to be established in Pennsylvania in more than 100 years. Founded to address the Capital Region's need for increased educational opportunities in science, technology, engineering and mathematics (STEM) careers, Harrisburg University represents a major step to attract, educate, and retain Pennsylvania's diverse 21st century knowledge-based workforce. The University operates several applied centers which are a means of outreach and service to various industries. One of these centers is the Government Technology Institute (GTI), of which Unisys is a Founding Member. Harrisburg University will partner with Unisys Corporation in the delivery of training to Commonwealth of Pennsylvania. A Harrisburg University training coordinator will work closely with the Unisys project team to ensure that all training sessions are planned and delivered in a quality manner. For large training events, sessions will be hosted at the Harrisburg University campus in downtown Harrisburg. In addition, HU will record sessions which will be cataloged and made available for on-demand playback for Commonwealth personnel.

Figure 4-2 graphically represents the Unisys Team.

Figure 4-2. The Unisys Team

4.1.7 Experience and Services Relative to this RFP

Collectively, Unisys and IBM have the experience of hundreds of outsourced managed services implementations, many as large and complex as that of the Commonwealth. The outsourcing services performed by Unisys and IBM at the Commonwealth are great examples of our capabilities in state government. Beyond the Commonwealth, both companies have significant managed services experience in the public sector. For example, Unisys has provided managed outsourcing services to a number of public sector institutions, including the cities of Chicago, Minneapolis, and Santa Clara; California State University; the Metropolitan Police in London, England; the U.S. Department of Agriculture; and the State of Texas. IBM also has significant outsourcing services experience in the public sector providing outsourcing services to organizations such as the states of Georgia and Washington. Recently, IBM was awarded the opportunity from the State of Ohio, to modernize their State Computing Center (SOCC) and the development of a private cloud computing environment.

> ***Experience***
>
> *Where will other teams find all of the necessary experienced staff to support this project?*
>
> *This team will provide highly experienced and qualified candidates primarily sourced from our current local engagements leveraging unique Commonwealth knowledge.*

Also, many of the Fortune 500 corporate giants use our outsourcing services to support their domestic needs and use the global reach of Unisys and IBM to support the needs of the marketplace worldwide.

Likewise, Deloitte one of the world's largest professional services firms, brings knowledgeable and talented staff to this engagement. It also supports many other public sector organizations in addition to the important work it currently does for the Commonwealth.

For example, the State of South Carolina selected Deloitte & Touche LLP ("Deloitte) in March 2013 to assist with the implementation of their Information Security (INFOSEC) Program. The massive data breach that the State suffered in October 2012 and subsequent Governor level involvement in the remediation efforts led to the RFP to implement the INFOSEC program. The Deloitte team started work in March 2013 and the first major set of deliverables were completed on time and budget by May 1st, and included a publicly available report of the initial recommendations.

Beyond our security and managed services experience, our team of Unisys, IBM, and Deloitte, employs more than 638,000 IT professionals in a variety of disciplines, and have significant financial resources associated with more than $140 billion in annual revenue.

In Pennsylvania, Unisys, IBM, and Deloitte employ 6,962 people with more than 900 people in the Harrisburg area alone. That number of local resources not only brings growth and revenue to the Commonwealth, but also provides a wealth of local and very qualified resources to support this opportunity.

4.1.8 Team Qualifications

Unisys

Outsourcing Awards and Credentials

An example of the many Unisys qualifications is the fact that all industry evaluators generally recognize Unisys as a leading performer of Information Technology Outsourcing (ITO) and related services over an extensive period, as evidenced by the recognition and the ratings in **Figure 4-3**.

Figure 4-3. Unisys Outsourcing Awards and Credentials

As previously noted, this section is an introduction to our team and will focus primarily on our key partner's qualifications. The extensive list of other Unisys qualifications is highlighted throughout Section 4.2, Unisys Corporate Information, Section 4.3, Unisys Strategic Direction, and Section 4.4, Unisys Dedication to Quality.

IBM, Key Partner Qualifications

IBM Global Technology Services, part of IBM Global Services, is the largest business and information technology services organization in the world, generating $60.2 billion of revenue in 2011.

As it relates to this RFP, IBM Global Technology Services will provide the Services and has over 21 years of experience in the outsourcing marketplace.

IBM Certifications

An overview of industry-recognized certifications supported by IBM, and applicable to our solution are listed in **Table 4-2**.

Table 4-2. IBM Certifications

Certification	Date	Description	Focus Area
IBM Quality Standards and Frameworks			
ITIL	Since early 1980s	IBM is a funding sponsor, author, reviewer, developer and user of the IT Infrastructure Library. ISO 20000 is a standard for IT service management that enables compliance to ITIL requirements, and IBM holds multiple ISO 20000 certifications throughout the world. IBM as a whole has approximately 11,855 ITIL-certifications across all disciplines and serving multiple industries (as of 1/2/2013). Moreover, all delivery professionals are trained in ITIL compliance.	Best Practices Framework
Six Sigma Lean Sigma	1986 2005	IBM has a long history working with Six Sigma initiatives and has incorporated the defined processes for quality, process measurement and improvement in our IT services. Renewed focus of IBM Process Excellence effort and led to the establishment of their global delivery methodology.	Process Management Methodology
COBIT	–	IBM is a global sponsor of COBIT and offers products and services related to IT Governance and Controls Management that are based on this valuable set of internationally recognized best practices.	IT Governance Framework
PMI	–	IBM Project Managers are required to obtain PMI certification as part of their IBM career advancement.	Staged Maturity Model
IBM ISO Certifications			
ISO 9001:	Since 04/2001 Latest Renewal 12/2011	IBM Corporation, certificate # 82346	Quality Management
ISO 14001	Since 10/2003 Latest Renewal 02/2011	IBM Corporation, certificate # 48320	Environmental Management
ISO 20000	12/10	IBM holds multiple ISO 20000 and BS15000 certifications throughout the world. IBM also achieved ISO 20000 global certification at 18 of their global delivery centers in 22 locations IBM Corporation, certificate #10-02-00-00/ITMS/AD	Service Management/ ITIL Standards

IBM Awards

IBM has received a significant amount of recognition for their products, services, quality, customer satisfaction, and community involvement. Relevant to our solution, the recent notable examples include the following:

SAP

- 2012 SAP Pinnacle Awards
  - Technology Award: Global Technology Partner of the Year
  - Service Award: Transformational Award - Rapid Time to Value

For 40 years, IBM and SAP have helped clients formulate and execute winning strategies. Since the SAP Pinnacle Awards began in 2002, IBM has won 25 awards—more than any other SAP partner. Once again for 2012, IBM has been recognized as the Global Technology Partner of the Year in the annual SAP Pinnacle Awards. It is the second time in three years IBM has captured this coveted title for superior joint engagements to achieving client success enabled by innovative technology.

IBM Industry Analyst Awards

- **Gartner**
  - Gartner Inc. has positioned IBM as a Leader in the Magic Quadrant for Data Center Outsourcing and Infrastructure Utility Services, North America
  - IBM is positioned in the Leaders Quadrant of Gartner, Inc.'s Magic Quadrant for Help Desk Outsourcing, North America
  - IBM is positioned in the Leaders Quadrant of Gartner, Inc.'s Magic Quadrant for Desktop Outsourcing Services, North America
- **Forrester**
  - IBM was positioned as a leader in the Forrester Wave™: Global IT Infrastructure Outsourcing, Q1 2011
  - Information Security Consulting Services, Q1 2011.

Deloitte, Key Partner Qualifications

As it relates to this RFP, Deloitte will bring professionals from Deloitte Consulting LLP and Deloitte & Touche LLP – collectively referred to as "Deloitte", to provide technology and information security services respectively.

Deloitte has nearly 51,000 professionals in 89 U.S. cities, and is one of the largest professional services firms in the United States. Deloitte's portfolio of clients includes many of the nation's largest and most prominent organizations in every sector of the economy.

Deloitte Certifications

Deloitte not only encourages and supports their practitioners obtaining relevant security certifications, but require relevant certifications as a prerequisite for the growth of their practitioners in their firm. Their emphasis on the certifications has enabled Deloitte to be the leading provider of security services with more than 1,000 certified security professionals. This is the largest pool of certified security professionals in the country, including

- More than 700 professionals with the Certified Information Security Services Professional (CISSP) certification
- More than 120 Certified Information Privacy Professionals (CIPP)
- More than 800 professionals with the Certified Information Security Auditor (CISA)/Certified Information Security Manager (CISM) certification.

Deloitte Awards

Deloitte has received a significant amount of recognition for their services, quality, customer satisfaction, and community involvement. Relevant to our solution, the recent notable examples include the following:

SAP

- SAP Pinnacle Quality Award Partner of the Year
- SAP North America Partner Excellence Award: Top Services Partner – Strategic Industries
- SAP Pinnacle Award for Analytics Impact: includes BI, GRC and Financials

Oracle

- Oracle Excellence Awards for Specialized Partner of the Year-North America: Global SI Applications Momentum

CA Technologies

- Security Partner of the Year

Deloitte Industry Analyst Awards

- **Forrester Research**
  - Deloitte named a leader in information security, and receives high marks for client focus and mature offering by Forrester Research, Forrester Wave ™: Information Security Consulting Services Q1 2013", Ed Ferrara and Andrew Rose, February 1, 2013
  - "Deloitte shines when tackling large-scale challenges at mature, complex organizations. Customers facing such issues and looking for a vendor that will marry deep technical capabilities with strong business processes should look to Deloitte."

- "Deloitte maintained its position in the Leaders category thanks to exceptional client feedback and comprehensive, sophisticated, and mature service offerings, with notable strengths in BC/DR and network strategy and design."

- **Gartner**
  - Based on Gartner estimates, Deloitte is the world's largest IT consulting firm, as well as the largest security consulting services firm.
  - The company has established solid branding around its Center for Security & Privacy Solutions, which helps it engage and brand itself with corporate clients.
  - One reason Deloitte succeeds against the four other top firms is that its global delivery network is the largest and most mature compared with those firms.

  Source: Gartner Research: Market Share Analysis: Security Consulting, Worldwide, 2012

4.1.9 Service Levels

The best example of our team's future ability to meet the very demanding service levels required in this RFP is to review our past performance at the DPH. To put it simply —**we are exceeding all service levels and have done so for the last 14 years. Our level of service received an overall average of 8.8 (on a scale of 1 to 10) in the most recent Commonwealth agency survey conducted in October 2012**. Our DPH record speaks volumes about our future performance.

We recognize the need for revised processes and tools to support new, more demanding service levels. Our solution includes the necessary tools, processes, and training to provide the service levels requested.

4.1.10 Quality of Comparable Services

As shown in **Figure 4-4**, Unisys IT services and clients reach across all industries including a large number of Public Sector Clients similar to the scope and size of this RFP. Additional detail on Unisys and our team's quality of comparable services are found throughout this entire section.

Market	Scope	Rationale	Sample Clients
Large Global Organizations	Multi-Sourcing or Selective Sourcing Environments >$75 million Total Contract Value (TCV)	• Provides best-in-class end user services that enable common global processes and tools • Leverage global capabilities and global footprint for data centers • Recent wins validated competitiveness	• Microsoft • UnitedHealth Group • American Red Cross • Eli Lilly • Starbucks
Mid-Cap Multi-Nationals	Full Scope – enterprise computing, applications support, end user services, application outsourcing, Mobile device support $20 to $75 million TCV	• Enables clients to drive common global processes and controls in their organization • Leverage full-line capabilities of Unisys	• Ameriprise • Piper Jaffray • Quest Diagnostics • BlackRock • Imation • 7-Eleven/NEC • Flowserve
Tier 1 Nationals/ Public Sector	Full Scope – enterprise computing, application support, end user services $10 to $1.5 billion TCV	• Leverage brand recognition in key markets • Provides *national* clients with benefits of *global* solutions and best practices • Leverage full-line capabilities of Unisys	• Commonwealth of Pennsylvania • County of Los Angeles • US Federal GSA Catalog • Internal Revenue Service • City of Minneapolis • Defense Information Systems Agency • London Metropolitan Police • California State University System • Texas Workforce Commission
OEMs (PLS)	Global End User Services $75 million TCV	• Provides best-in-class end user services that enable common global processes and tools • Leverage global capabilities and footprint • Recent global wins validate competitiveness	• Dell • Lenovo • Alcatel Lucent • BT

Figure 4-4. Unisys Primary Industries and Markets Served are Similar to the Commonwealth of Pennsylvania's Compute Services Requirements

4.1.11 References and Length of Service

Please see the Client References in Section 4.5 for additional information on Unisys and our team's references and length of services provided to like clients.

This page intentionally left blank.

4.2 Unisys Corporate Information

RFP	*Requirement*
	Corporate Information *The Offeror must provide a narrative describing its background, history, services, and corporate organization. A general overview of the corporate organization is appropriate. If the Offeror is a subsidiary or division of a larger company, this section should concentrate on the operating history of the subsidiary or division which will provide the Services.*

4.2.1 History and Background

In addition to our extensive experience with supporting the Commonwealth's IT infrastructure on our DPH and EDC engagements, Unisys has had a formative role in the IT industry and has a broad base of experience relevant to the Commonwealth of Pennsylvania and the RFP requirements.

Unisys has been a technology leader for more than 140 years. Our predecessor companies include Burroughs—inventors of the world's first commercial calculator, and Sperry—famous for its document retrieval machines, gyroscopes, and ENIAC—the world's first commercially available computer system and first with core memory, virtual memory, and multiprocessing system—are among our other innovations. ENIAC's roots are traced to the University of Pennsylvania, where it was designed in the 1940s. For decades Unisys "wrote the code" for airline reservations systems and check processing. Since the 1990s, we transformed to become services led. More than 85 percent of our current revenue is from services (Refer to **Figure 4-5**).

With precision thinking and relentless execution, our more than 22,000 employees drive our clients' business visions forward. We help thousands of clients in more than 100 countries quickly and efficiently achieve success by delivering the right solutions backed by the right technology. Unisys staff integrate and deliver the solutions, services, platforms, and network infrastructure governments and businesses require to transform their organizations for success in this new era.

4.2.2 Current Services

Unisys provides solutions to 50,000 clients around the world. In 2012, our personnel achieved total worldwide revenue of $3.71 billion attributable to a portfolio of services, systems, and support, helping clients manage information for tangible business results. Of the more than 22,000 employees at Unisys, about 14,000 are in technical delivery roles. Our success is built on combining technical expertise with an in-depth knowledge of the

industry trends and business challenges facing clients. Additionally, we draw upon the resources of an extensive network of third-party alliances. Service and solution delivery that helps clients apply and support technology to improve their business performance accounts for more than 80 percent of Unisys revenue today.

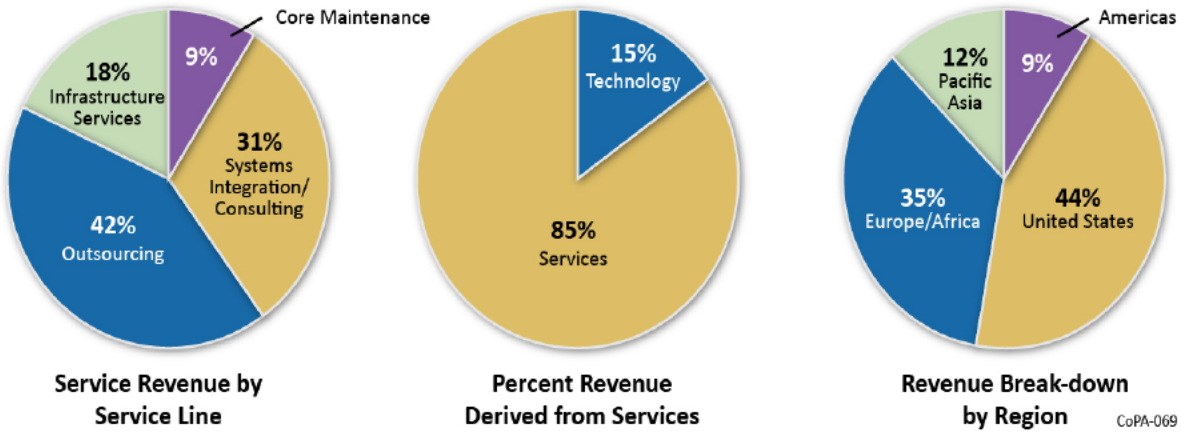

Figure 4-5. Unisys Revenue

4.2.3 Client Focus

As previously stated, this engagement is personal to Unisys since we are a Pennsylvania-based company. It is one reason we have worked so hard when awarded Commonwealth contracts.

We believe deeply that our clients must become our partners. We strengthen our client relationships by doing whatever is necessary to meet their high expectations. This is not only a belief, but applies to our many engagements.

As demonstrated with our joint DPH project, Unisys develops true partnerships with our clients, enabling us to align with each client's culture and business objectives. We complement each client's core business with an IT support structure that promotes excellence and flexibility.

The Unisys business strategy is built on our strength in delivering secure, mission-critical IT operations with a particular focus on areas that are strategic to our clients, such as data center outsourcing operations.

4.2.4 Services, Global Outsourcing is a Unisys Key Strategy

Globally, Unisys is a leader in the IT infrastructure support and managed services market, as evidenced by consistent recognition from independent third party consultants such as Gartner, Forrester, and the Black Book of Outsourcing.

Unisys has deep expertise in outsourcing and provides a wide range of infrastructure services to clients **Figure 4-6** provides a "selected client" summary and evolution graphic that gives an overview of Unisys' outsourcing relationships. This client overview emphasizes our outsourcing approach and represents a client selection with a variety of industry backgrounds, enterprise sizes, and regions. It also shows our commitment to Global Outsourcing Services.

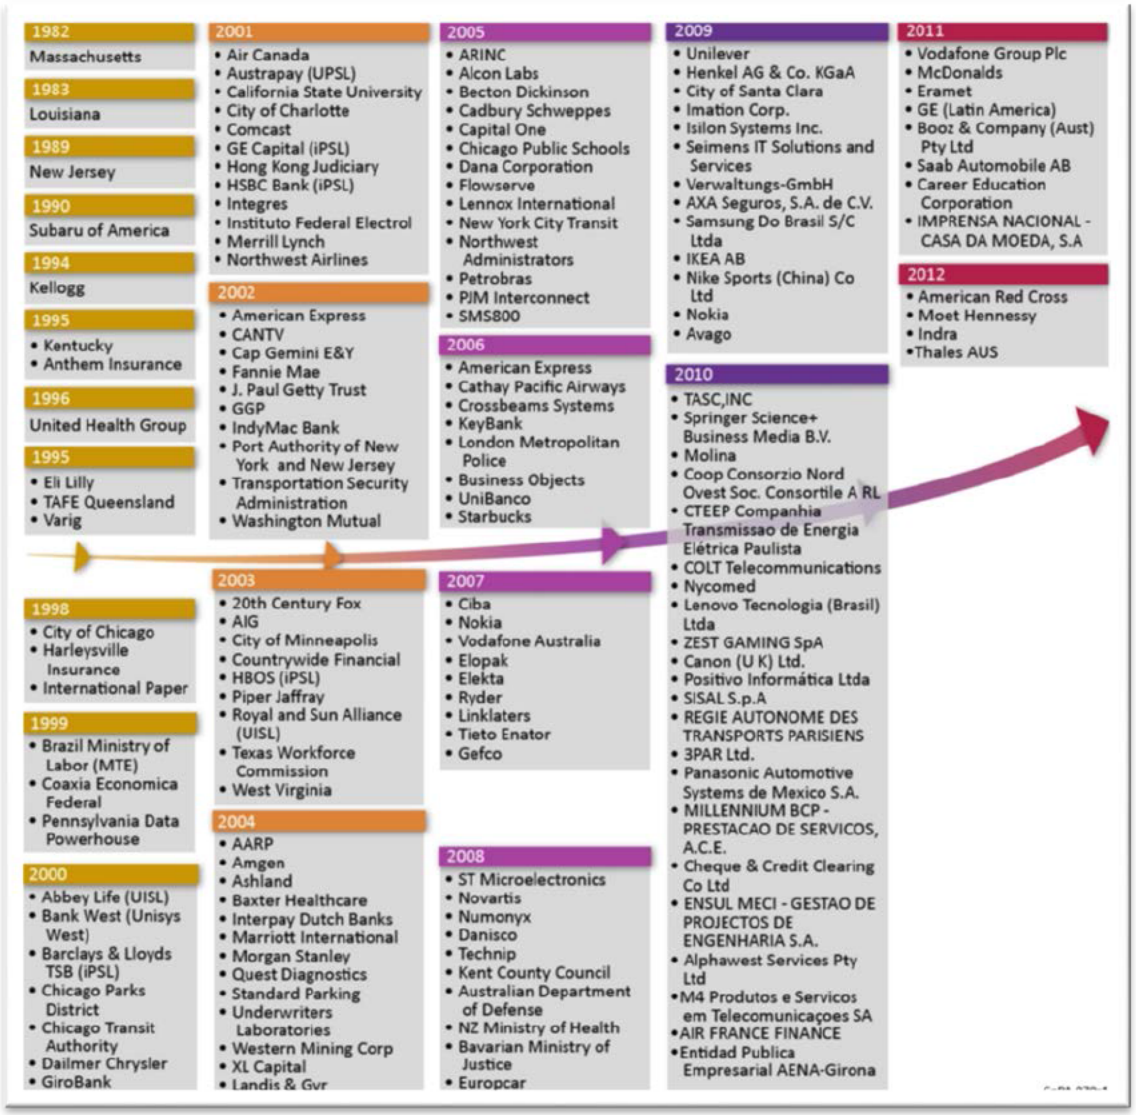

Figure 4-6. Selected Client List

4.2.5 Global Footprint

Our strategy includes the ability to deliver cost-efficient, high quality, and state-of-the art IT outsourcing services. Unisys implemented global sourcing capabilities not just in the United States, but also in Eastern Europe, China, India, South America, and New Zealand.

All services to meet the requirements for the Commonwealth will be hosted and provided from within the United States

Unisys has made strategic investments in system infrastructure, processes, tools, training, and people to build our global delivery model. **Figure 4-7** represents some of our corporate domestic, near shore, and offshore resource strengths in the areas of data center footprints

Figure 4-7. Global Services Footprint

For worldwide volumes, global reach, and market position for services delivered similar to the Commonwealth of Pennsylvania, please see **Figure 4-8**.

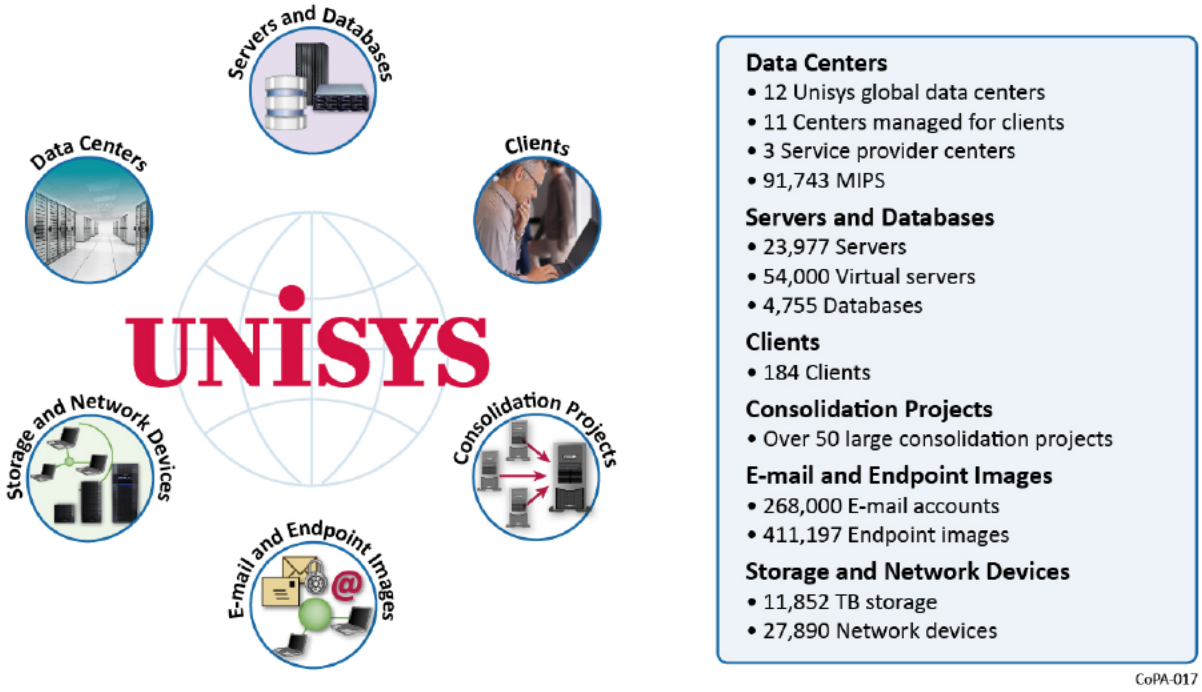

Figure 4-8. Global Services and Worldwide Volumes

4.2.6 Technology Agnostic and Committed to Strategic Partnerships

In addition to our strategic technology partnership with IBM, Unisys maintains strategic alliances with technology front-runners, including Dell, EMC, Intel, Microsoft, Oracle, and VCE, as reflected **in Figure 4-9**.

Figure 4-9. Global Alliances

Strong alliances with industry-leading companies allow Unisys to move quickly and confidently across a full range of advanced services and technologies, allowing our clients to achieve exceptional performance, control costs, have competitive advantage, and effectively manage risk. Strong alliances are instrumental to our ability to deliver solutions for secure business operations. We focus on alliances with proven success to help meet our clients' specific needs.

Unisys plays a leadership role in various market segments, in setting industry standards, and in charting the direction of industry practices and technology. Many of our employees participate in industry standards groups.

4.2.7 Corporate Organization

Demonstrating our commitment to the Commonwealth of Pennsylvania, Mr. Ed Coleman, Unisys Chairman and CEO is the Executive Sponsor of this engagement. Mr. Coleman will personally promote our company's complete commitment to the project's success. Our corporate organization is shown in **Figure 4-10**.

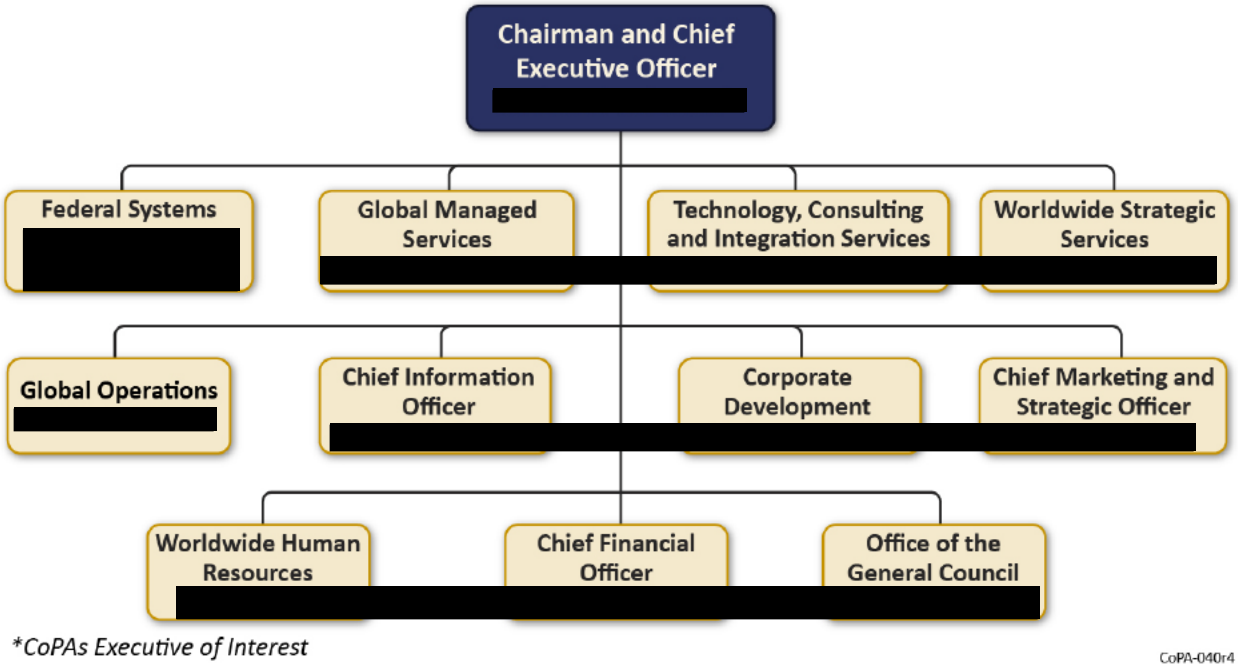

Figure 4-10. Unisys Executive Committee

Executive Leadership Committee

In addition to Ed Coleman's role as Executive Sponsor Unisys has established an Executive Leadership Committee to support the efforts of the Harrisburg-based leadership team. This committee consists of very senior Service Delivery Executives from Unisys, IBM, and Deloitte. This Executive Leadership Committee has been established to provide direct project visibility into the Corporate Executives at all three firms to make sure we meet our commitments to the Commonwealth, during both transition and steady state operations. The committee will also be leveraged to resolve any significant issues during the engagement. This committee will also be part of the formal transition and steady-state governance model that is implemented for this engagement. **Figure 4-11** identifies the members of the Executive Committee.

Figure 4-11. Unisys Executive Leadership Committee

4.3 Unisys Strategic Direction

RFP	*Requirement*
	Strategic Direction *The Commonwealth places strong emphasis on the need for a long-term strategy. The Offeror should describe its strategic direction, and the implications of that strategy for the Commonwealth.*

4.3.1 Unisys Corporate Mission

Unisys is a global information technology service delivery company whose purpose is to deliver mission-critical IT solutions and services that solve our clients' most demanding IT challenges, such as those being delivered by Unisys and our team to the Commonwealth for the past 14 years at the DPH. We differentiate ourselves by the topmost levels of high-quality service and measure success by our customer satisfaction.

Our software, services, and technology offerings are designed from the ground up to operate in the most critical environments, and cost effectively exceed the reliability, scalability, and security requirements needed to achieve our clients' strategic missions.

We define "mission critical" as secure, reliable, scalable computing and processing environments that support our clients' "front office" (i.e., activities that directly impact our clients' customers).

Key Elements of Our Mission

- *Mission-Critical Computing Focus*
- *Delivery Quality is our first priority*
- *Success measured by the highest degree of Customer Satisfaction*

Our mission and the mission of the Commonwealth are clearly aligned. The Commonwealth's "front office" is the 12.6 million citizens who depend on "mission critical services" delivered by the technology and infrastructure in scope of this procurement's scope. The Commonwealth's commitment to deliver these services in a secure, reliable, scalable, and efficient way has been and will remain our commitment as well.

To meet these requirements we are dedicated to six key principles of service delivery designed to make sure our solutions adapt and deliver against the most difficult client challenges and deliver the highest customer satisfaction.

Our six key principles of service delivery are:

1. **First and foremost,** we use our deep, longstanding technical expertise to engineer **mission-critical capabilities** into every market offering.

2. **Second,** we establish a **culture of collaboration**: both externally with our clients and internally at Unisys.

3. **Third,** we engineer consistency into our global service delivery organization, ensuring best practices are propagated quickly, and drive the most **cost effective solution delivery** approach.

4. **Fourth,** we continuously invest in skills to maintain our mission-critical edge; and apply those skills effectively ensuring **global accessibility**.

5. **Fifth,** our innovation focus is to invest heavily to rapidly bring **disruptive technologies** into our portfolio and to our clients through our **continuous innovation** processes

6. **Last and most critically,** we never lose the focus on our existing **clients and their priorities.** We measure our success by the highest **customer satisfaction**.

4.3.2 Corporate Strategy

Our strategy is centered on delivering mission critical solutions in four areas of our clients' IT operations: security infrastructure; data center transformation and outsourcing; end user outsourcing and support; and application modernization and outsourcing.

Our deep knowledge and decades of experience in each of these areas directly and favorably influences the services we deliver to the Commonwealth. The requisites for a secure infrastructure, an understanding of the end user experience and expertise in application performance in a multiple-platform environment are integrated into the services we currently provide to the Commonwealth. Data center transformation is a welcomed addition and something strongly supported by our corporate strategy.

We are highly attuned to a range of IT trends that affect our clients' business and provide opportunities for innovation in how we deliver those solutions. Disruptive IT trends of focus include cloud computing, cyber security, consumerization of IT, mobility, big data, and smart computing, social computing, and IT appliances. These emerging technologies offer many important advantages to our clients. Through collaboration, we will determine which of these technologies will work best and help implement them. Our strategy, related to these disruptive technologies, is to invest and integrate them into the solutions with our four areas of strength to make sure our clients benefit from the latest technology and Unisys intellectual property.

Our Four Areas of Strength

Unisys is a worldwide, world-class services and solutions provider that prides itself on its collaborative approach, inventive solutions, and committed people (**Figure 4-12**). We know the world is changing rapidly—from the consumerization of IT to the convergence of physical and IT security—and it is important that we choose to focus on areas that best address the changing marketplace and our clients' most mission-critical needs.

Figure 4-12. Unisys Areas of Strength and Innovation Focus on Disruptive Trends

Data Center Transformation and Outsourcing—Our standard Data Center solutions enable our clients to update their operations to meet the ever-increasing demands for increased efficiency. We help optimize infrastructure through virtualization techniques. We build and deploy secure, scalable, reliable computing platforms. We help clients think through and implement outsourcing computing requirements, which may or may not include a private or public "Cloud". With our practical engineering expertise, we remove the mystery of the "Cloud" and focus instead on solving business issues. Our heritage in the data center combined with our independent thinking, innovative infrastructure and sourcing capabilities deliver solutions that are more secure, more productive, and more reliable. Our corporate focus and strength in Data Center Outsourcing and distinctive Pennsylvania outsourcing experience, uniquely qualifies Unisys for this opportunity.

Security—Security is an integral part of an IT infrastructure. Our offerings are designed to secure people, assets, systems and data for governments and businesses with no room for

error. We integrate physical and digital security technology. Our solutions protect borders, airports, data centers, financial information and classified data and are integral to many national defense systems. Security is in our DNA and permeates our extensive experience with defense, security, and law enforcement agencies around the world. From creating biometrically enabled national ID cards and sophisticated border control systems to developing national police command and control systems and cyber security operations solutions — we provide mission critical security solutions globally. We will leverage this corporate strength in security to protect the Commonwealth's valuable assets.

Application Modernization and Outsourcing—The application layer in many ways is the core of most mission-critical applications. We deliver industry-specific systems for governments and the financial, transportation and telecommunications sectors using our engineering experience to help our clients modernize their applications. This may involve rewriting applications in a more modern language, creating new features and functions, or integrating various applications into a whole to achieve the desired business outcome. Unisys has more than 30 years of application modernization and outsourcing experience across most industries and government sectors, including 200 million voicemail users worldwide, 600 airports, 22 of the top 25 banks, and 1,500 government agencies. Combining our corporate focus on application modernization with our local application knowledge of key agencies business systems again uniquely qualifies Unisys for this outsourcing initiative.

Unisys Application Modernization and Outsourcing Services (AMOS) enable clients to regain control of their application suite. Historically, enterprises built and integrated their applications in silos. Today, it is cost-prohibitive to maintain them, and the employees who have the knowledge to do so are retiring. In a time of limited resources and global economic pressures, our capabilities extend the life of our clients' current assets, enhancing our clients' productivity and competitive position by modernizing and outsourcing their mission-critical applications.

End User Outsourcing and Support Services—Our services provide anywhere, anytime support for our clients' end users with a one-call global model that increases user satisfaction while driving down support costs. With the rapid increase of knowledge workers, and the fundamental dependency on laptops and mobile devices, providing service to end users takes on a level of importance rising to mission critical. Our services, tools, and methods are designed to support the global enterprise 24 hours a day, 7 days a week with the perfect mix of remote and onsite services designed to keep our clients' operations running. We are differentiated by our ability to leverage the combination of our global ITIL-based Resolution Optimization Model, network of 31 ITO Operations Centers, and 6,000-person strong field force to deliver measurable cost reductions, improved satisfaction levels and faster time to incident resolution.

In summary, we add value to our clients as a "mission-critical" IT solutions provider focused in our four areas of strength, based on a strategy rooted in our traditional engineering expertise, practical innovations and continuous improvement of our service delivery efficiencies. Throughout our history, one constant has remained true—our dedication to delivering mission-critical IT products and services.

4.3.3 Innovation

Our Approach to Continuous Innovation with Our Clients

Though many of our competitors provide informal, disconnected innovation tools and approaches, the Unisys Strategic Innovation Program provides a systematic, cohesive, globally coordinated program. We deliver innovative ideas, solutions, and outcomes for our clients, leveraging a highly structured, yet flexible approach. We will leverage our corporation approach to improve continuous innovation through our dedicated continuous innovation project office assigned to this major initiative.

Three Tenets of our Innovation Approach

- *Identification of key disruptive technologies and trends*
- *Investment and integration into our Portfolio Areas of Strength*
- *"Continuous Innovation" approach to deliver innovation to customers*

Key elements of our innovation approach include identification of the latest disruptive technologies and trends that have strategic benefit to our clients, investing to integrate them into our four portfolio Areas of Strength, and then delivering "continuous innovation" with our clients via our programmatic approach, including our highly collaborative Innovation Workshops.

Transformation with Disruptive Technology Trends

Disruptive technology trends are those that have the potential to rapidly disrupt "business as usual" through compelling combinations of cost improvement, enhanced productivity, and new business capabilities. They provide the opportunity for transformational change (i.e. "*faster-better-cheaper*"), which alters the IT delivery model.

Unisys is investing in technologies around six key disruptive IT trends: cloud computing, mobile computing, social computing, big data, IT appliances, and cyber security, as reflected in **Figure 4-13**.

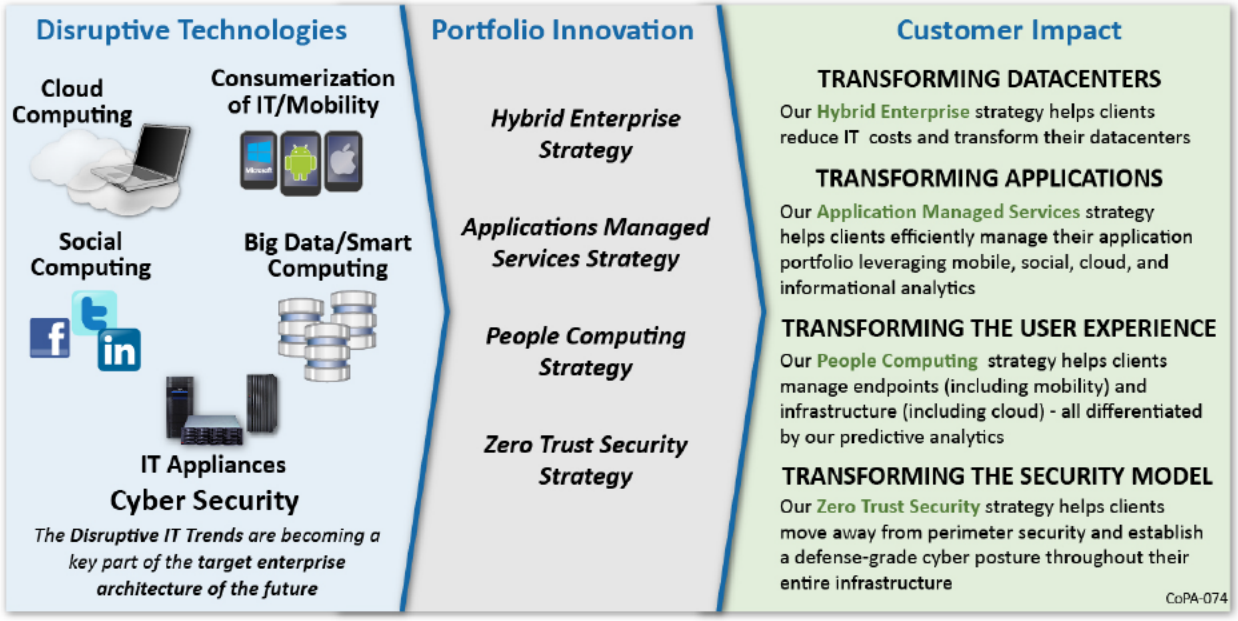

Figure 4-13. Our innovation with the Disruptive Trends is focused on helping clients transform their data centers, applications, and the user experience.

These trends are creating new opportunities for IT to deliver business value and increased productivity through new styles of interaction, automation, and service delivery.

Beyond the individual trends, the seamless "combination" of these trends is becoming ever more critical because it represents an agile new IT fabric for applications, data centers and, most important, the user experience. Mobile and social-enabled applications, deployed from the cloud, with superior information analytics are now the target architecture of the future. Cyber security is critical across all elements. The question is how to achieve this transformation on a production scale across their entire IT architecture.

The Unisys strategy aims to address this client challenge by innovating with the disruptive trends across our four areas of strength — addressing the user experience, applications, and the data center in a holistic manner — and helping our clients move to this desired end state IT architecture of the future.

Innovation in our Portfolio

*A key part of the Unisys strategy is to bring the industry innovation occurring within the **Disruptive Trends** into our **four portfolio areas of strength**. This ensures our clients gain the **operational benefits** of our mission-critical computing focus coupled with the **transformational benefits** of the next generation IT architecture represented by these trends.*

- **Transforming the User Experience** – Our innovation related to **mobility** helps clients transform the end user experience for their constituents, support Bring-Your-Own-Device (BYOD) initiatives driven by the consumerization of IT, and manage this heterogeneous environment across all end points. Our portfolio innovation related to **big data** and **predictive analytics** helps to detect potential issues before they occur and identify opportunity areas for improvement in enterprise service management.
- **Transforming Applications** – Our innovation focus is to help clients modernize their enterprise applications, not just for Web and mobile enablement, but to embrace the collaborative benefits of **social business** platforms and the economic and agility benefits of **cloud development and delivery** from software-as-a-service.
- **Transforming the Data Center** – Our innovation related to **cloud computing** and **cyber security** helps clients move to the desirable end state of the data center of the future, where application deployment options span from public cloud, to internal and hosted private cloud, to traditional and outsourced models, all managed and governed seamlessly in a highly virtualized and secure environment.

Key Unisys Investments for Transforming the Data Center

We clearly understand that an important intent of the RFP is transforming the Commonwealth's traditional data center approach to one that maximizes the latest in technologies, processes and knowledge gained from supporting global IT organizations and operations. Our commitment is to focus all of our knowledge and resources on moving the Commonwealth to a higher level of performance and expanded on-demand service offerings. Also, our corporate strategy will continue to invest in those on-demand service activities to keep the Commonwealth current with industry best practices. Some key areas of investment are as outlined below.

Future IT architecture transformation must occur at the user experience and application level and also designed into the data center of the future. Efficient management of the future data center must occur across all application deployment options from public cloud, to hosted internal-private cloud, to traditional and outsourced environments. On-Demand, **smart computing** and **intelligent analytics** will be increasingly used to optimize data center resources including placement of applications and workloads (e.g. public cloud or private cloud), policy-based optimization (e.g. business rules for decisions related to virtual

machines and cloud service brokering), and management of physical variables such as space, power and cooling.

The key disruptive technologies converging in the data center will clearly be **cloud, cyber security**, and **big data analytics** with **mobile-** and **social-enabled** applications either hosted in the data center or delivered from the cloud. Cloud-based software development will become increasingly important to free developers from tedious infrastructure procurement and setup, thereby reducing cycle times and allowing more time for creative development related to compelling new business models and user experiences. **Cyber Security** will be increasingly important in the data center because of its continued virtualization (e.g. software defined data centers) and highly distributed nature.

In light of our vision for the target enterprise, IT architecture and data center of the future, some of the key Unisys investments in our Data Center Transformation and Outsourcing portfolio include the following initiatives. These corporate investments will bring innovation and cost efficiencies to the Commonwealth:

- **Hybrid Enterprise –** Our investments in **cloud** help clients transform their data centers to support and seamlessly manage all traditional, outsourced and cloud deployment environments from a unified service view.
- **Platform Innovation** – Our investments in **next generation mission-critical computing** provide clients with a game-changing approach to supporting mission-critical workloads on highly cost-effective, industry-standard Xeon processors with support for Windows and Linux operating systems. Also, as part of our platform strategy, we are investing in **big data analytics** with support for Apache Hadoop to allow our clients to identify patterns and insights for competitive advantage from their massive amounts of data.
- **Service Management** – Our investments in **intelligent analytics** allow us to optimize enterprise service management delivery for our clients using predictive analytics from Lean Six Sigma methods to identify opportunities for improvement.
- **Cyber Security** - Our investments in **cyber security** help clients confirm their sensitive data is protected in and across their data centers with industry-leading, military-grade data protection solutions to provide data encryption for regional isolation and targeted communities of interest.
- **Big Data & Intelligent Analytics** – Our investments in **big data readiness** help clients prepare their information infrastructures with solutions that support automated storage resource analysis and optimization. Equally, big data extends to IT Service Management to bring unstructured service data from multiple processes into a structure view to identified continuous improvement efforts to optimize the IT operating environment.
- **IT Appliances** – Our investments in **IT appliances** help clients rapidly deploy highly-optimized functions such as Web and mobile extensions to their enterprise applications.

"Continuous Innovation" with our Clients

In order to optimize performance for the Commonwealth there needs to be an ongoing program of improvement. We developed and used a methodology that has worked well for our clients and we propose its use with the Commonwealth. The premise is collaboration and we know from experience that the Commonwealth wants to actively participate in bringing positive change to its data center operations. The RFP is evidence of the Commonwealth's intention for improved data center performance. Therefore, this process for continual improvement should be highly effective when adopted by the Commonwealth.

Rather than an ad hoc compilation of capabilities, tools and methods, our Strategic Innovation Program provides Unisys with a continuous and systematic way to deliver innovative outcomes for our clients leveraging a highly structured, yet flexible approach. Two key elements include our Continuous Service Improvement and Innovation Program (CSIIP) and Innovation Workshops (**Figure 4-14**).

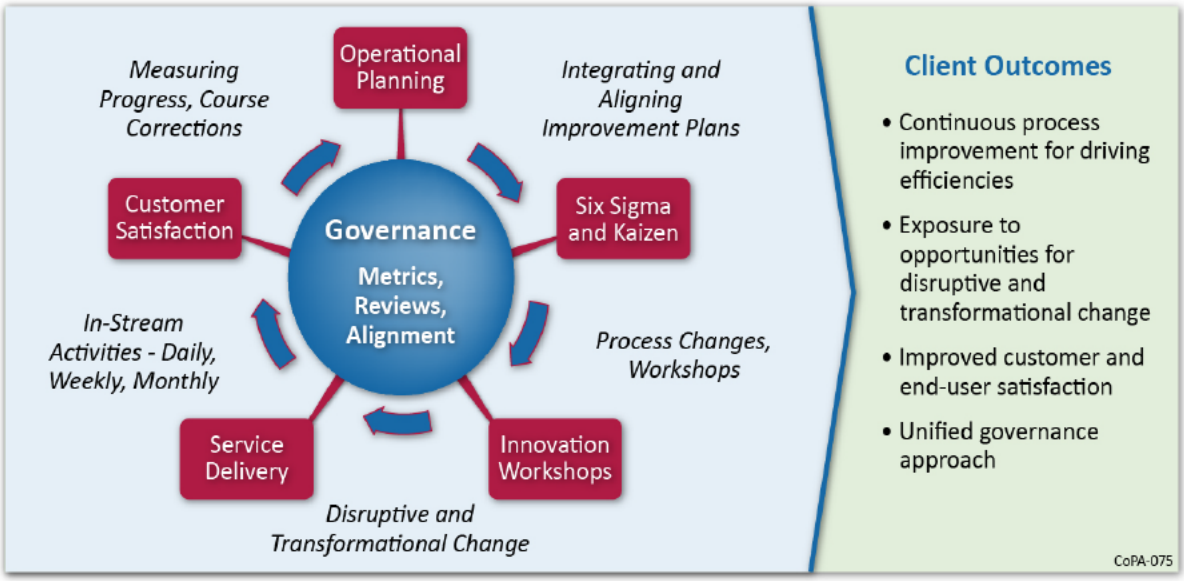

Figure 4-14. Continual Service Improvement and Innovation Program (CSIIP)

CSIIP encourages the proactive identification and introduction of measurable improvements in a specific work area and introduces "innovation in context" to those areas. Our well-defined methodology is an outcome of our Six Sigma Lean practice and supported by a trained team of Black Belts. These resources assist our clients to create a single structure for collaboratively managing issues, opportunities, and subsequent improvement programs.

One of the major features of our CSIIP program is the ability to consolidate and analyze the many inputs required for effective development of an innovation and improvement plan. This provides our clients with the necessary information to make informed decisions based

on relative cost/benefit, alignment with strategy and ROI for various actions, of varying scale from incremental through to truly "breakthrough" initiatives.

Unisys Innovation Workshops are a key part of our "continuous innovation" approach with clients and truly differentiate us as a highly collaborative and trusted advisor. These workshops are internal, client-facing workshops that focus on innovation identification, categorization, and prioritization of innovation opportunities and then the development of high-level business cases and implementation roadmaps for the most promising opportunities identified. We use a global pool of trained facilitators and conduct workshops across a wide range of industry verticals in North America, Latin America, Europe, and Asia Pacific.

Innovation Workshops

Unisys Innovation Workshops are collaborative workshops with our clients designed to explore opportunities for disruptive and transformational change. We expose our clients to the latest disruptive technologies and trends and collaboratively examine opportunities for strategic business benefit.

4.3.4 Hybrid Enterprise – Building the Data Center of the Future

The Hybrid Enterprise is our strategy by which we leverage cloud computing, IT appliances, big data/analytics, and cyber security in our portfolio to enable clients to transform their data centers from a traditional service model to a ***hybrid service oriented organization*** *based on a new utility model that balances costs, service and agility.*

We differentiate with our Integrated Service Management environment for complete visibility, control and accountability across all assets, creating a unified service view to the business.

Cloud computing enables the agility required by organizations to be leaders in today's dynamic economic conditions. It is accelerating time to market for new products and services while reducing costs to design, build, deploy, and support them. The past couple of years have proven that the properties of clouds – elasticity, pay-per-use, standardization, and automation – enable cloud providers and users alike to benefit from economies of scale, faster provisioning times, and reduced runtime costs. The Commonwealth's vision for the future data center aligns very closely with the Unisys Hybrid Enterprise strategy. This alignment will facilitate an improved transformation to the Commonwealth new data center model.

The Hybrid Enterprise is the Unisys approach to transforming the Data Center

Because enterprise IT workloads have highly varying requirements—some suited to cloud, others to traditional deployments in the data center and outsourced—Unisys believes that the data center of the future will need to operate not solely in a cloud model or in a model comprised of multiple cloud entities (hybrid cloud), but in a Hybrid Enterprise model. This hybrid model consists of internal and external infrastructure—some deployed as clouds and others more traditionally operated with a mix of general-purpose and specialized functions.

Our corporate strategy for the Hybrid Enterprise will provide the most flexibility to the Commonwealth as we move forward together.

Unisys Vision for the Hybrid Enterprise

Like the Commonwealth's vision for new compute services, Unisys believes that the data center environment will gradually transform to a virtual data center with no boundaries where IT organizations will manage aggregated virtual capacity and not islands of technology. In general, the data center will transition from a supplier-driven model to a service provider relationship model in which IT is managed in a holistic capacity model driven by attributes such as self-service automation, automated capacity provisioning, service catalogs, and other orchestration tools and processes.

These end states of virtualized data center environments are agile, flexible, and cost-effective and will have the ability to scale up or down according to business demands. Also, organizations will effectively manage the various environments in this virtualized data center, leveraging the Unisys Hybrid Enterprise framework, tools, and processes.

Key Attributes of the Data Center of the Future

- *Highly-virtualized and automated to maximize efficiency*
- *Service oriented*
- *Utility model balances costs, service and agility*
- *Mission-critical security*
- *Seamless management for visibility, control and accountability across all environments*

The Unisys Hybrid Enterprise framework (**Figure 4-15)** is a composition of cloud, non-cloud, internal and external IT service delivery models, that remain unique entities. These entities are bound together by an integrated service management environment, common technology, processes, and policies that optimize agility, enable data and application portability, and reduce risk. Hybrid Enterprise is a holistic approach to transform the data center from a traditional service model to a **hybrid service oriented organization** based on a new utility model that balances costs, service and agility.

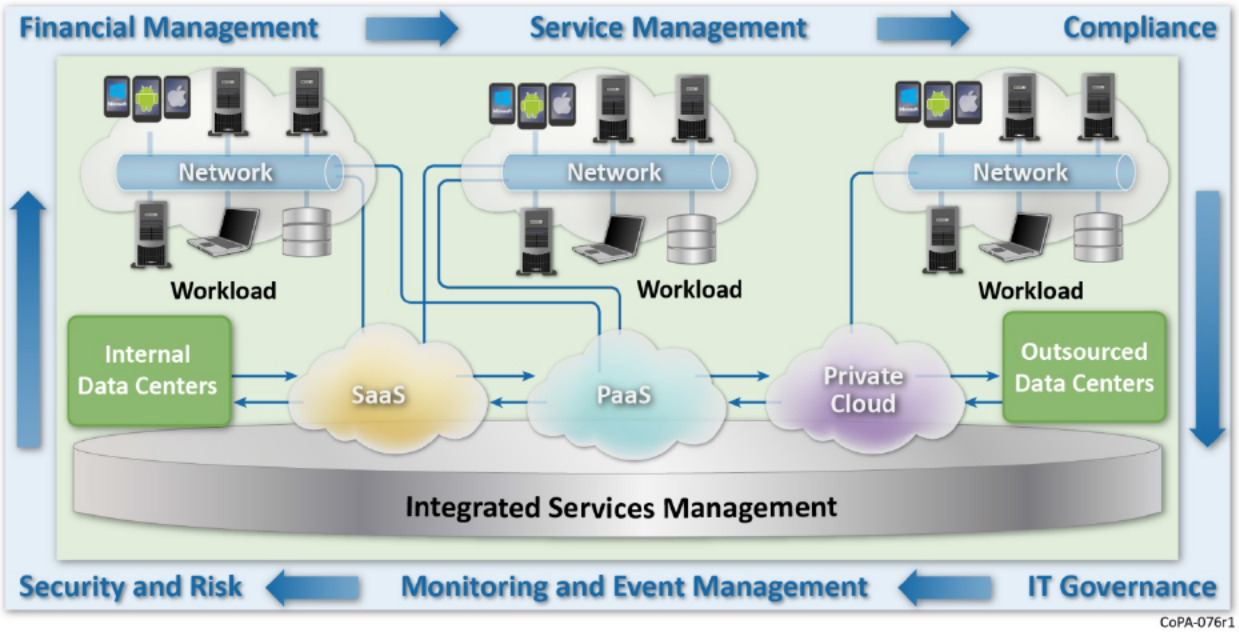

Figure 4-15. Unisys Vision for the Hybrid Enterprise. *An integrated single service view encompassing traditional, cloud, internal, and external IT service delivery models that is borderless, virtual, automated and secure.*

Unisys Hybrid Enterprise Strategy – Addressing Applications, Data Centers, and Management

The Hybrid Enterprise strategy comprehensively addresses strategic considerations across applications, data centers, and management. In this framework, a workload placement decision model is required to characterize applications and drive placement decisions so workloads can run on the optimal infrastructure. A consistent approach is required for building and evaluating data center characteristics, one that meshes with the application demands and optimizes the data center footprint across cloud and non-cloud delivery models while minimizing complexity. Finally, a single unified management environment is required that provides a set of controls to manage governance, risk, compliance, services and costs across all infrastructure types.

To this end, our Hybrid Enterprise strategy focuses on three core areas of the Commonwealth's IT operations:

- **Applications** – We apply a formalized "fit-for-purpose" approach to confirm that workloads – mission-critical and otherwise – are analyzed and placed in the most appropriate environments (i.e. public cloud, private cloud, hybrid cloud, and traditional IT, etc.). The goal is to balance the workloads and maintain optimal performance.
- **Data Centers** – Our consistent methodology and tools for building and evaluating data center characteristics integrates with application modeling processes and optimizes the data center footprint across delivery models—minimizing complexity without compromising processes. These tools and methodology help automate and

self-provision our clients' infrastructure consisting of various environments, including private, public, hybrid cloud and traditional IT.

- **Management** – We employ a comprehensive approach that unifies the management of the virtual data center with a mix of environments and consistently addresses key process areas for all traditional and cloud delivery models. The key attributes of this unified management capability include features such as seamless and integrated monitoring, event management, service management, financial management and compliance.

To help maximize the value of the Hybrid Enterprise, we work closely with our clients to establish a roadmap tailored to their organization's specific business needs and desired outcomes. We bolster this approach with a perspective that manages the cloud transformation across people, processes, policies, and technologies – enabling our clients to confidently maintain control, manage governance and compliance, reduce IT costs, and address both current and emerging operational requirements.

Accelerating the Journey to the Hybrid Enterprise

Our data center strategy allows clients to enter the journey to the Hybrid Enterprise at any point in their life cycle according to their specific business needs. Typical starting points for CIOs are outlined below and supported by our unique set of services across applications, data centers, and management:

Applications

- **Application Alignment** – We create an actionable plan that efficiently migrates workloads to an optimal delivery model (cloud, public, or private) by taking a detailed approach to understanding business goals and objectives while aligning technical capabilities that constitute a business workload. The result is an intuitive migration roadmap that accelerates migrations to a "fit-for-purpose" destination.
- **Workplace Virtualization** – We help our clients centralize some or all of the components of their traditional desktop environment—effectively relocating pieces of the end user computing environment to a data center. This enables clients to increase security, governance and compliance, improve manageability and productivity, deliver a consistent user experience, and reduce management and support costs.

Data Centers

- **Cloud Building and Internal Private Cloud Deployment** – We provide a comprehensive series of consulting, integration and support activities to help clients successfully deploy their cloud environments while maintaining operational compatibility and transforming their existing infrastructure for the delivery of an agile IT-as-a-Service model. We provide a pre integrated, internal private cloud that transforms data center operations to an agile, efficient, and highly automated infrastructure. This helps clients obtain transparency and agility in their operations,

enabling them to deliver services just in time, reducing wait times for resources, and lowering their capital and operating expenditures.

- **Cloud Brokering** – We enable clients to manage multiple private and public clouds from multiple providers in a brokering model that provides a simple "one-stop" service for cloud procurement and management.
- **Hosted Private Cloud Services** – We provide hosted private cloud services which enable accelerated cloud adoption, optimized IT infrastructure, flexible and agile resources, simplified cloud management, and enhanced cloud security. Cloud capabilities are ISO 20000 certified ITIL V3 compliant and can be remotely managed and quickly implemented while ensuring business continuity and higher productivity.

Management

- **Integrated Service Management** – We provide ITIL (V3)-based IT Service Management and Enterprise Systems Management system that is designed to help businesses solve service-related problems by deploying integrated remote monitoring and management capabilities for a range of IT assets and towers. The system converges and unifies event monitoring based on business priorities and co-ordinates service responses across an organization's IT estate, towers, third-party service providers and internal IT teams.

The Unisys approach to address these steps in the journey to the Hybrid Enterprise as illustrated in **Figure 4-16**.

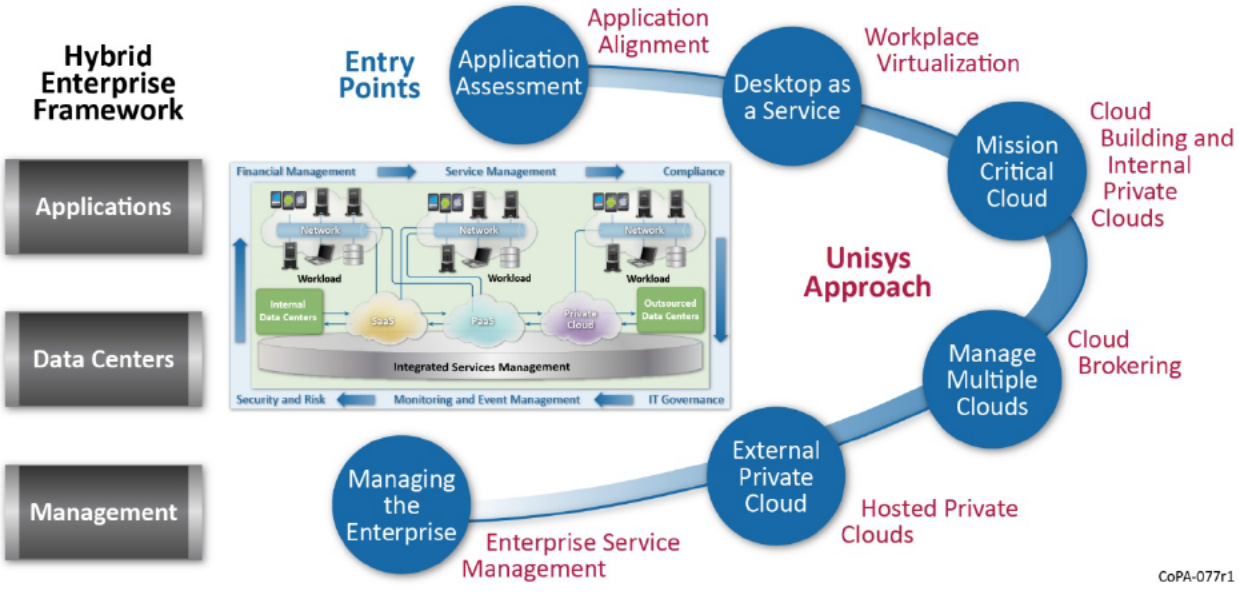

Figure 4-16. The comprehensive Unisys approach to support the journey to the Hybrid Enterprise.

4.3.5 Platform Strategy

We have adopted a heterogeneous platform strategy targeted at cost-effectively optimizing our clients' infrastructure platforms. Our differentiation comes from our mission-critical fabric computing platform which is capable of cost-effectively running ClearPath, Windows and Linux operating systems.

Our vision for the Hybrid Enterprise and the data center of the future is underpinned by our platform strategy that provides a mission-critical and highly cost-effective compute foundation. The Unisys platform strategy is to deliver a highly available and reliable computing experience using advanced fabric technologies and industry-leading Xeon-based processor technology combined with industry standard virtualization; proprietary, standards-based secure partitioning, security, and management software and technologies. Our heritage in mission critical mainframe-class computing uniquely positions us to deliver an inexpensive Xeon-based mission critical computing experience.

"The genius of what Unisys has done is that it has created layers of virtualization and hardware emulation for the OS 2200 and MCP platforms that let it run binary code, unmodified and unrecompiled, that is moved from its own mainframe engines over onto the Xeon engines."

—Timothy Morgan
The UK register

Unisys uses a single, consistent, architecture to support both ClearPath and our Open Systems initiatives. We employ a layered architecture to bring a consistent compute experience to clients. The layers include the infrastructure layer, which combines the platform itself, a system interconnect or fabric, partitioning, and management. A data foundation layer and a solutions layer ride on top of the platform to deliver a "software-defined everything" architecture.

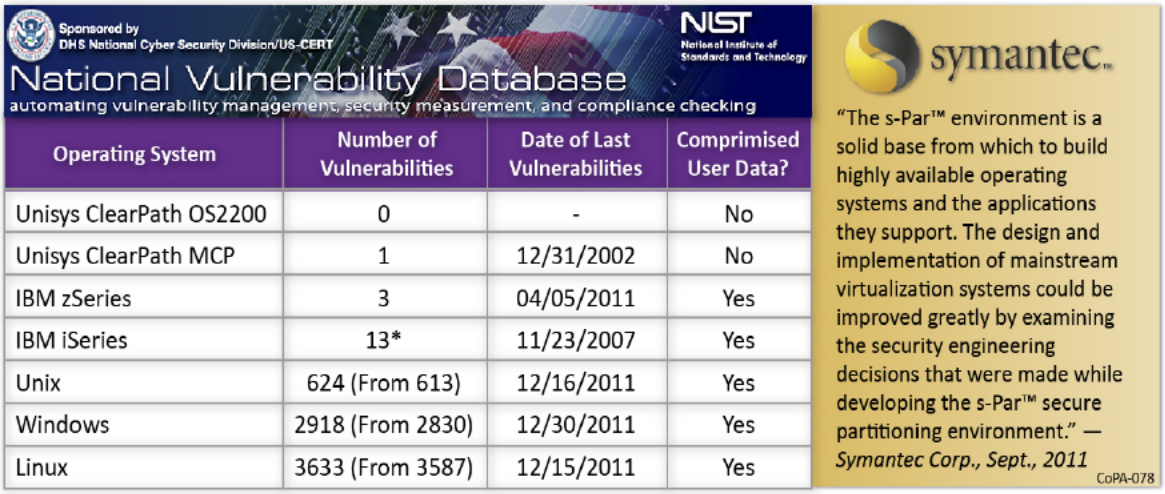
The architecture takes the best from the industry's converged infrastructure plays, but implements it using a single processor architecture, Intel's Xeon. These processors are housed in a multi-socket enclosure designed for high availability and high performance platform. Unisys' partitioning technology allows multiple operating systems and their value stacks to be deployed. These include Unisys' own enterprise class stacks – OS2200 and MCP—along with Windows and Linux and their native tools, applications, databases and transaction environments.

Tenets of our Platform Strategy

- *Mission-Critical Attributes: Security, Scalability, Reliability*
- *Cost effectiveness via standardization*
- *Multiple-platform support for ClearPath, Windows and Linux*
- *"Software defined everything" architecture*
- *Industry leading security and manageability*

A high-speed, low-latency, media-independent fabric interconnects processing platforms, or nodes, providing uniform inter-partition services between partitions in different processing nodes. These secure services allow the software stacks to communicate with each other and the outside world over a software-defined network using dedicated secure virtual circuits and secure virtual switches. Specialized Unisys intellectual property called the Secure Partitioning layer, or s-Par, guarantees

predictable performance, security, and isolation of one partition from another to contain errors **(Figure 4-17)**.



Operating System	Number of Vulnerabilities	Date of Last Vulnerabilities	Comprimised User Data?
Unisys ClearPath OS2200	0	-	No
Unisys ClearPath MCP	1	12/31/2002	No
IBM zSeries	3	04/05/2011	Yes
IBM iSeries	13*	11/23/2007	Yes
Unix	624 (From 613)	12/16/2011	Yes
Windows	2918 (From 2830)	12/30/2011	Yes
Linux	3633 (From 3587)	12/15/2011	Yes

Figure 4-17. NIST National Vulnerability Database showing ClearPath industry leadership

The distributed and elastic nature of this computing complex enables the true Hybrid Enterprise. Our clients can own as much or as little of the complex as they desire, with the balance available in a Platform-as-a-Service (PaaS) arrangement. The architecture also supports advanced business continuance and disaster recovery models because it is inherently disaster resilient. The architecture's flexible nature is enabled by its fabric backbone, which allows owned assets to be distributed over distance and allows easy integration of PaaS resources.

The reliance on a single processor architecture enables our clients to fully use the entire complex, no matter which software solution stacks are required over time - thereby providing a future-proof architecture. As business needs evolve, and the need for one solution stack diminishes and another grows, all hardware assets can be re-provisioned with no waste. This is unique to our converged infrastructure and as a result delivers unprecedented investment protection and flexibility.

4.3.6 Service Management Strategy

Unisys Corporation is a world-class service provider with deep expertise in IT Service Management (ITSM). Our expertise and ITSM service portfolio spans multiple technologies and includes a series of service model archetypes that are unparalleled in the industry. Our client base and expertise includes nearly every commercial and public sector industry vertical. This positions Unisys with expertise that extends far beyond industry best practice.

Integrated Service Management

To achieve the high levels of performance expected and needed to support the Commonwealth's critical services, we recognize the importance of quality service management. In fact, the Commonwealth already took positive steps to bring ITIL best practices, to its operations. Likewise, the entire Unisys Team supporting the current DPH operation is certified in ITIL V3 Foundation.

At Unisys, we made substantial investments in our ITSM Service Portfolio and partnered with key technology suppliers to bring a total solution to our client base. Our ISM practice has some of the most highly skilled ITSM resources in the industry. The team's expertise, which collectively exceeds 1,000 years, spans every discipline of IT with a concentration of BMC Remedy skill sets.

The entire practice is anchored by international standards and industry best practice frameworks such as ITIL, TOGAF, eTOM, COBIT, and ISO. The practice works with our world class deployment team to deliver ITSM services that are unparalleled in the industry.

Unisys BMC has acknowledged as the leading implementer of BMC Remedy ITSM with more than 82 customer migrations to our global multitenant 7.6.04 system as well as dedicated instances.

Value Proposition of Unisys Integrated Service Management

- *World's most comprehensive service management platform*
- *Unified Service view across cloud and traditional environments*
- *Accelerated time to value in upgrading and optimizing service support operations*
- *Ability to right-size costs by moving to a service model for operational improvements*

Service Asset and Configuration Management (SACM) has been a complex area for clients throughout the ITSM community. Our dedicated team is continually feeding years of consulting and industry expertise to implementation guidance. These inputs have helped our clients realize the return on investment that CMDB and SACM have promised for many years.

These examples are representative of what is possible with the optimized architecture we assembled to deliver service management solutions across all IT requirements. All of these are customizable to support client business needs, from management of mobility options to service catalogs and visualization of data across the enterprise.

Integrated Service Management Platform

The Unisys Integrated Service Management (ISM) Environment in **Figure 4-18**, builds the functionality provided in the ITIL IT Service Management framework and provides additional functionality for modular proactive problem management, change management, asset and configuration management, service level management, service request management, and additional dashboard and reporting capabilities.

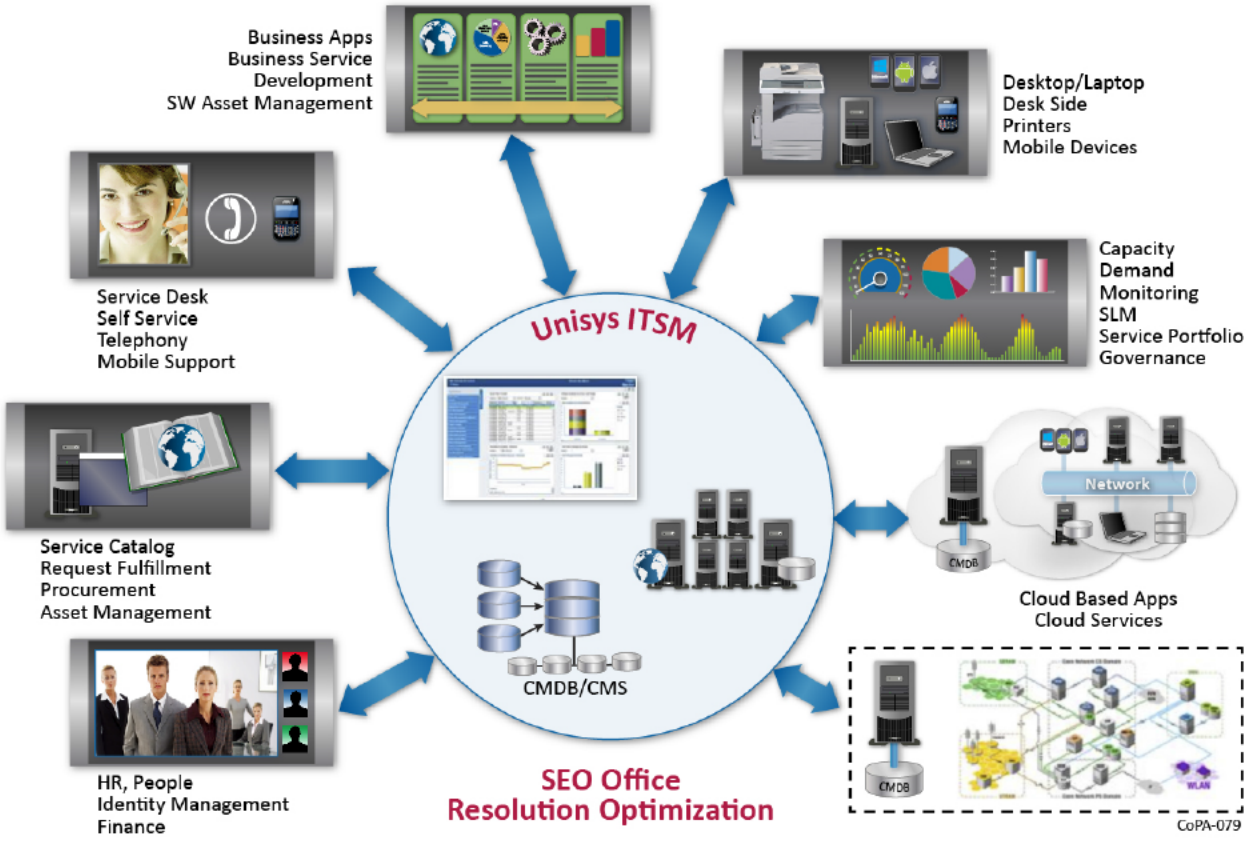


Figure 4-18. The comprehensive Unisys Integrated Service Management Environment

The Unisys ISM platform is made up of the following six services:

1. **Proactive Problem Management:** Helps clients bring IT out of a reactive mode to a predictive mode. This is accomplished by collecting, analyzing and base-lining the current behavior of applications and IT infrastructure, proactively analyzing data to provide recommendations for change management; automatically pinpointing probable cause across technology silos, and initiating standardized problem resolution processes.

2. **Incident Management:** Manages identified incidents resulting from degradation of service or a service outage reported by monitoring systems or user contacts to the Service Desk. Provides full end-to-end management from registration of the incident, through analysis and resolution, to closure and review or a subset of these activities in which the client can perform and track the resolution.
3. **Change Management:** Manages change across the entire IT infrastructure – according to ITIL best practices and organizational policy. Provides better visibility, transparency, and control across the organization. It brings together the process, implementation, and verification components of deploying IT changes through cross-silo integration based on a factory-architected, ITIL-based CMDB.
4. **Service Asset & Configuration Management (SACM):** A set of tools and processes that manages service assets to support the other Service Management processes. SACM discovers and maintains information about infrastructure components (including software, hardware, physical and virtual assets) and integrates it into the service delivery process, leading to efficient and optimized resource allocation.
5. **Service Level Management & Reporting:** Enables real-time, proactive SLA management. Helps to manage the entire range of Service Level Agreements (SLA), from predefined SLAs and monitoring compliance to collecting and analyzing Key Performance Indicator (KPI) data, addressing problem areas, and continually refining the services offered. Analytics provides point-and-click analysis and interactive customizable reports for Incident Management, Problem Management, Asset Management, and CMDB.
6. **Service Reporting:** Provides custom reports and access to data on dashboards. Dashboards enable the linking of critical IT processes to a consolidated view that provides aggregated performance indicators in a single pane of glass. It provides a consolidated, graphical interface of best practice IT metrics for incident, problem, change, and service impact management.

4.3.7 Impact on the Commonwealth

By following our Corporate Strategy, our "best-of-class" team will provide the Commonwealth with the following major benefits:

Cost Efficiencies

Some of the major financial challenges that the Commonwealth is facing include high costs of maintaining its decentralized infrastructure residing in two enterprise data centers and five individual agency data centers. Also, refreshing the Commonwealth's technology on a preplanned basis to limit failures and realizing savings from improved

Key Business Benefits for the Commonwealth

- *Cost Efficiencies and conversion of CAPEX to OPEX*
- *Transformation to Service Orientation and agile IT-as-a-Service*
- *Agility, Flexibility and Scalability benefits of the Cloud Computing model*
- *Mission-Critical Security*
- *Continuous Innovation*

performance is cost prohibitive in these challenging economic times.

To combat these challenges, Unisys recommends a competitive capacity on-demand compute model (private cloud), coupled with full control over fine-grained characteristics of virtual infrastructures, to enable agencies to achieve significant savings in ongoing operating expenses. By leveraging such a competitive subscription model, the Commonwealth will have consistent and predictable pricing to facilitate accurate and timely budget projections.

Also, by freeing up resources currently performing tasks that are easily automated, and by adopting a "factory" model for service delivery, IT organizations can reallocate staff to more productive uses that improve the Commonwealth's ability to meet business goals sooner or more effectively. This proposal fully supports the needs of participants to offload activities to automated environments available in the cloud computing ecosystem.

Service Orientation

Along with cost efficiencies, another key business benefit in terms of the impact to the Commonwealth is service orientation and the ability to move to an IT-as-a-Service model. As previously outlined, this service orientation is reflected across all of the Unisys data center transformation and outsourcing solutions

For example, **CloudBuild Services** enable clients to successfully deploy a cloud while maintaining operational compatibility and transforming their existing infrastructure for the delivery of an agile IT-as-a-Service model.

Agility, Flexibility and Scalability

The Unisys objective is to provide an agile, flexible, scalable, reliable and robust IT infrastructure to support the Commonwealth's transformation to an information-focused organization.

Our Hybrid Enterprise approach that includes cloud building, deployment of internal secure private clouds, cloud brokering, and management of hosted private clouds, coupled with our mission-critical platform technology, will support rapid provisioning of services (in minutes instead of days or weeks in many IT environments), flexibility to scale up or down as business needs dictate, and unprecedented scalability.

Automation in a modern data center environment enables users to have complete control over the timing and availability of IT resources. The productivity gained by being able to provision services rapidly enables users to respond to changing conditions and new requirements quickly, without sacrificing service delivery quality.

Unisys' **Secure Private Cloud** provides improved automation, self-diagnostics, server utilization, compliance and ease of management in the data center environment. Also, Unisys provides the following services that help in seamless integration:

- Enterprise Virtualization Design and Implementation
- Secure Private Cloud Plan, Design, and Implementation
- Full set of Unisys Infrastructure Management Suite (IMS), including Plan, Design, and Implementation
- Training and Mentoring Services
- A master cloud architecture and roadmap

The implementation of Secure Private Cloud computing along with the Unisys IMS suite will enable the Commonwealth to address issues such as the need for cost savings, operational efficiency, capacity flexibility and support for transitioning to a new business model.

Security

Our platform strategy, coupled with our "zero trust" security approach and unique, defense-grade data protection technologies, will enable the Commonwealth to operate in a mission-critical environment that allows the full benefits of cloud computing to be realized without compromising sensitive data.

We provide a secure, durable technology platform with industry-recognized certifications and audits, including PCI DSS Level 1, ISO 27001, FISMA Moderate, HIPAA, and SSAE 16. Our services and data centers have multiple layers of operational and physical security to confirm the integrity and safety of Commonwealth data.

Unisys' **Stealth Solution Suite** – A defense grade enterprise-wide security innovation that makes data communication end points invisible on the network and therefore removed as targets from hackers. Also, Stealth reduces costs through consolidation and virtualization of networks as well as end user and multitenant cloud architectures and will be implemented as part of our solution.

In addition to using Stealth for this engagement, we have combined our corporate strengths in security with Deloitte's local security expertise and knowledge of the Commonwealth, to provide a "best-in-class" security solution and architecture.

Continuous Innovation

Leveraging the innovation in our Hybrid Enterprise framework will provide the Commonwealth with a highly virtualized data center architecture to support current and future capacity and service level demands. Our integration services will consolidate the enterprise and agency data centers to save costs, reduce energy consumption, use space optimally, and improve IT asset utilization.

One of the key advantages of the Unisys Cloud Provisioning System is the ability to seamlessly integrate these hybrid delivery models. This will allow the Commonwealth to have a single model for seamlessly managing all delivery models while allowing the selection of the most effective provider for a given application or workload. We maintain

strong relationships with key partners to meet a wide variety of cloud applications and supporting services.

Commitment to Process, Tools and Automation

A key differentiator of Unisys is our focus on process excellence and automated tooling to optimize efficiencies both on our consulting and systems integration projects and in our production operations. Our history of innovation and intellectual property in this area will make sure that we maximize the business benefits delivered throughout this engagement and throughout the ongoing operations.

4.3.8 Summary Unisys Strategic Direction

Unisys is a global information technology company whose purpose is to deliver **mission-critical** IT solutions that solve our clients' most demanding IT problems. We differentiate ourselves on the highest levels of **service quality** and measure success by our **customer satisfaction**. We have proven our commitment to both service quality and customer satisfaction by providing very similar services to the Commonwealth since 1999. Our quality, as measured by SLAs, and our customer satisfaction, measured by regular surveys of our agency clients, evidences that our corporate strategy is to make our customers highly satisfied with our services. That commitment is unchanged. In fact, our most senior corporate executive, Ed Coleman, has personally affirmed that commitment.

As you can see, our focus areas are well aligned with the Commonwealth's requirements. The Hybrid Enterprise is our comprehensive data center strategy that defines the data center of the future and provides the tools, technologies, and services to successfully navigate the transition. Our heterogeneous platform strategy is targeted at cost-effectively optimizing our clients' infrastructure platforms and is differentiated by our mission critical, fabric computing platform capable of cost-effectively running ClearPath, Windows and Linux operating systems.

To bring this innovation to our clients, the key elements of our approach include: identification of the latest disruptive technologies and trends that have strategic benefit to our clients; investing heavily to integrate them into our portfolio and our four Areas of Strength, and then delivering continuous innovation with our clients in our programmatic approach, including our highly collaborative Innovation Workshops.

In this way, we can bring the industry innovation occurring in the disruptive trends – including cloud computing, mobile computing, social computing, and big data/analytics - into our four portfolio areas of strength so that clients gain the **operational benefits** of our mission-critical computing focus coupled with the **transformational benefits** of the next generation IT architecture enabled by these technologies and trends.

The net result is that we are ideally poised to help the Commonwealth leverage the latest technology trends coupled with our mission critical solutions in a **systematic way** making

sure **real and measurable business value to your many constituents is derived.** We also commit that our team and the technology proposed will help enable that the 12.6 million Pennsylvanians to receive critical services they need and expect.

This page intentionally left blank.

4.4 Unisys Dedication to Quality

RFP	*Requirement*
	Dedication to Quality *The Offeror must provide details of its approach to measuring and maintaining high quality services. The Offeror should provide details of any industry-recognized quality standard to which it is, or will become, compliant (including a timeframe for compliance, if not already achieved), as well as any awards received over the past 18 months. Indicate all quality programs that are externally measured (e.g., Six Sigma, ISO 9001:2000) and how such certifications would directly benefit the Commonwealth. A detailed approach and quality plan should be included in the response to this section.*

High-quality Services

Unisys—Local Quality Commitment to the Commonwealth

The cornerstone of the Unisys Team's approach to quality for the Commonwealth are conformance to ITIL standards in everything we do for service management and the complete implementation of our Continuous Improvement and Innovation Program (CSIIP), which is run and supported by the Unisys Six Sigma Lean (SSL) organization.

ITIL Foundation V3

All Unisys staff supporting the EDC and the DPH are ITIL V3 certified.

Unisys is a recognized IT Infrastructure support and managed services partner in the Commonwealth through our engagements at the Enterprise Data Center (EDC) and the Data PowerHouse (DPH). At the EDC, since May 2000 Unisys resources have provided a variety of IT support services to the Commonwealth's EDC which hosts approximately 3,900 servers, 700 Web-based applications, 97,000 e-mail users, 900 TB of data storage, and 2,000 databases. For the past 13 years, Unisys has provided outsourced operations and technical support services at the DPH for most of the mission-critical systems under the jurisdiction of the Governor's Office.

Just one example of our current commitment to maintaining high-quality services for the Commonwealth is the fact that all operations and technical support staff currently providing services at both the EDC and the DPH are certified in ITIL V3 Foundation. Also, all Unisys senior staff managing both the EDC and DPH are certified in ITIL V3 Foundation.

4.4.1 Approach to Measuring & Maintaining High Quality Services

Unisys approaches the delivery of quality and innovation through an integrated set of programs, processes and standards that will be greatly enhanced and begin with a dedicated, project-level, and local Service Excellence Office (SEO)

Service Excellence Office (SEO)

Measuring and maintaining high-quality services begins with having an organization focused on quality and service excellence. Unisys views quality and continuous service improvement as a critical success factor in driving customer satisfaction for the Commonwealth IT infrastructure. We are establishing a dedicated and local project-level SEO to proactively manage quality, continuous service improvement, ITIL process management, and Customer Satisfaction through a comprehensive Quality Plan that specifically addresses all of these areas. We believe this is a key differentiator in our partnership with the Commonwealth. The SEO will define and oversee of all ITIL process management and analysis functions including Change Management, Release Management, Incident Management, Problem Management, Asset Management, Configuration and CMDB Management, Availability Management, and Service Level Management. More information on our SEO is in our detailed Approach and Quality Plan in Section 4.4.

Dedicated Service Excellence Office (SEO)

A local and dedicated SEO will proactively manage Quality, Continuous Service Improvement, ITIL Process Management, and Client Satisfaction via a comprehensive Quality Plan for this project.

Conformance to IT Standards and Best Practices

Measuring and maintaining high-quality services requires discipline and adherence to industry standards. For the Commonwealth, Unisys will implement a sound service delivery framework and methodology based on industry standards: ITIL and best practices. The Commonwealth seeks a service provider that has significant experience with ITIL and with providing managed services and support to large institutions with highly complex multiplatform applications and technology. Unisys will not just provide staff to the Commonwealth; we will deliver managed services and delivery resources supported by a proven ITIL compliant service delivery framework and a global service and support infrastructure. We are a global managed services provider with a wealth of knowledge and experience in implementing and supporting large, complex IT environments in which we repeatedly conform to ITIL standards, leverage best practices and implement continuous improvement programs for our clients.

The managed services that the Unisys Team provides will be based on the globally accepted ITIL framework providing end-to-end Service Management for the Commonwealth. The ITIL framework, illustrated in **Figure 4-19**, focuses on industry best practices for providing

consistent, reliable, well-defined processes and procedures for delivering IT Service Management. Unisys will also incorporate the Control Objectives for Information and related Technology (CobIT), linking control and Six Sigma defect-reduction practices (measuring and responding to quality issues) to our service delivery methodology, adding this expertise to improve the Commonwealth's IT processes. Our mature practices will lead to world-class service delivery offer the Commonwealth better quality, spend predictability, containment, and reduced complexity across the entire infrastructure.

ITIL Service Management Model

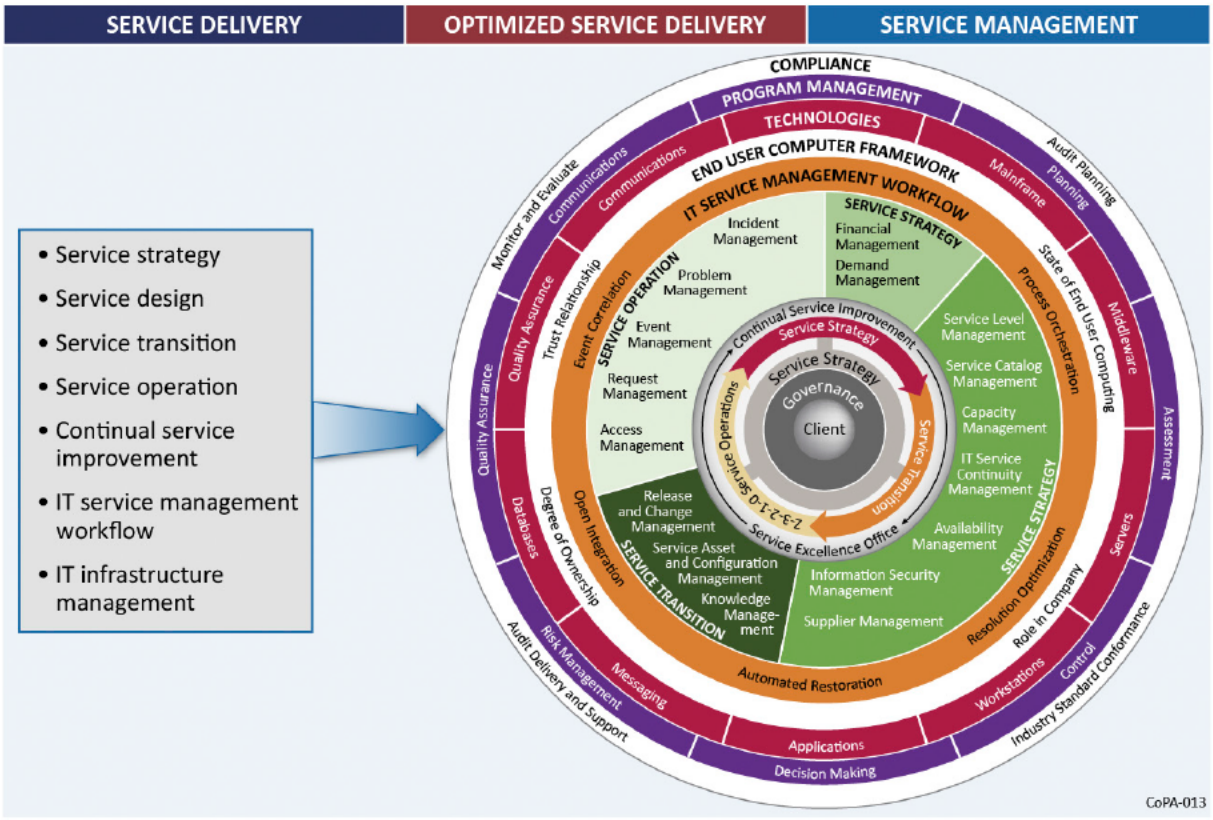

Figure 4-19. ITIL Service Management Model

By embracing this framework, Unisys will provide the Commonwealth with a consistent level of service across the infrastructure, increasing problem resolution times and decreasing downtime to provide a stable, high-performing infrastructure environment and increased agency satisfaction. The Unisys Service Delivery Framework offers the right skills, infrastructure, and best practice processes to provide a cost-effective, flexible, single-source solution for ongoing management of the Commonwealth's infrastructure.

Unisys follows many of the ITIL components today on our engagements at the EDC and the DPH. The Unisys Quality framework at the Commonwealth has introduced operational

efficiencies to improve the mean time to resolve issues and incidents for both the EDC and DPH projects. At the DPH, Unisys deployed our advanced tool suite in which we employed software instrumentation and artificial intelligence techniques to provide automated monitoring, response, notification, and wherever possible, instant corrective action. Our proven Service Delivery Framework, also based on ITIL, has dramatically improved the consistency and predictability of operations and mean time to repair while also improving the overall efficiency of operations at the DPH.

Unisys will implement our proven Service Delivery Framework across all the Commonwealth agencies to provide best-in-class quality solutions.

Quality Measurement Tools, SLAs, SLOs, and KPIs

The ITIL framework contains Industry tools that measure and monitor the IT infrastructure across its life cycle. Unisys has leveraged industry best practices, ITIL V3, and ISO 20000 standards to develop an automated framework that provides a systematic means for our Commonwealth project team to follow and gauge success. By standardizing on mutually accepted key performance indicators and measurements (SLAs, SLOs, and KPIs) we can evaluate the project's effectiveness, the quality of the products, and collect historical data points for trending comparisons. This will provide tracking and guidance for Unisys to promote a continuous state of quality improvement, while providing the Commonwealth with key data points to track the environment's performance and historical reports for trending. Some of the Key Enterprise System Management Tools being provided to the Commonwealth are outlined in **Figure 4-20.**

Enterprise System Management Tools

Scope and Tasks

- Events monitoring and notification
- First level triage and remiediation
- Change management
- Support of production job/scheduling
- Vendor coordinator and management
- Request Management
- Maintenance window coordination

Technologies

- Wintel Servers
- Unisys Mainframes (MCP/2200)
- IBM Mainframe z-Series
- Storage and backup
- Unix servers
- Network devices
- Security (Firewalls/Security Devices)

Tools	
Ticketing	• Remedy 6.0 • ITSM Remedy 7.1 and 7.6 • Service Center
Monitoring	• BMC Impact Explorer (BEM) • NAGIOS • SCOM • Xymon • SPO/Opcon Web • Control M/Opcon XPS • SolarWinds • Mainframe Consoles • Dell Open Manage IT Assistant • HP Open View • SMARTS
Others	• Citrix • LifeRay (Portal and KM) • Microsoft RDP • Telnet • VNC Viewer • Tonysoft • Dell Remote Assistant Console (DRAC)

CoPA-195

Figure 4-20. Enterprise System Management Tools

Quality Measurement Processes—Client Satisfaction Program, Six Sigma Lean Processes, Continuous Service Improvement & Innovation Process and Internal Audit Processes

Unisys will continually align and realign IT services with the changing business needs of the Commonwealth agencies by identifying and implementing improvements to IT services that support business processes, across the entire IT life cycle. We will leverage proven process methodologies to drive improved quality and continuous service improvement for the Commonwealth. These key processes are outlined in **Figure 4-21.**

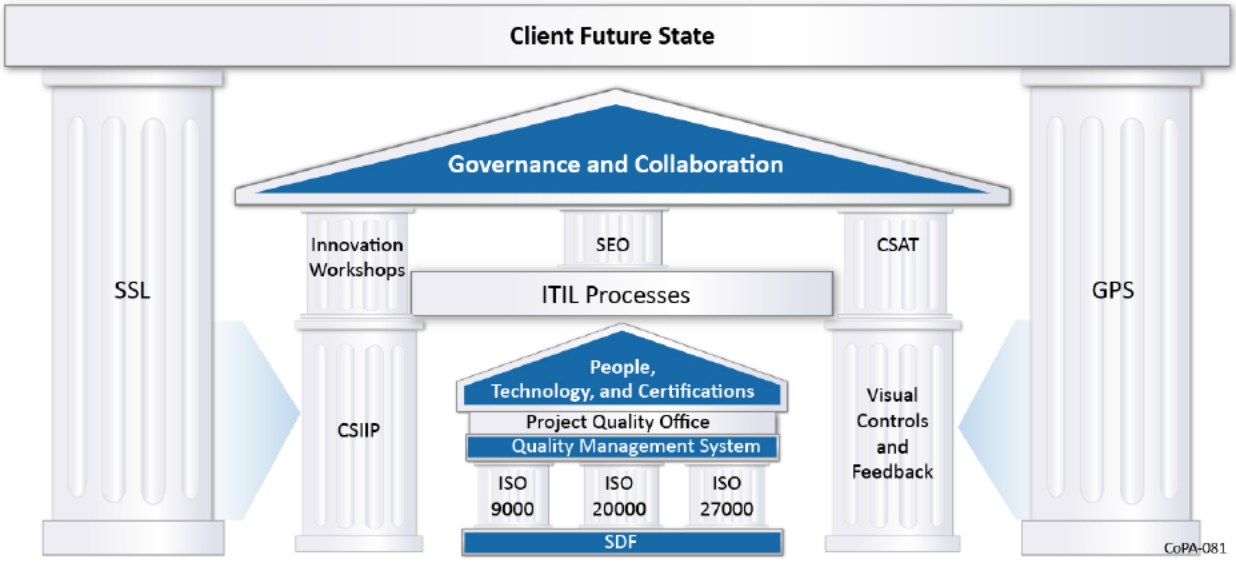

Figure 4-21. Continuous Improvement

Client Satisfaction Program (CSAT)

Providing best-in-class ITIL based IT Service Management and driving excellent Client Satisfaction is extremely important to Unisys and a key focus in our IT Solution. Our SEO will manage a multipronged approach to Client Satisfaction. Our SEO will collect data across multiple levels to gain a clear understanding of the Commonwealth's satisfaction with the IT Services being provided. Our Service Desk will randomly survey Commonwealth customers who call the Service Desk with a request or change that needs to be completed or an incident that needs to be resolved. We will develop a Knowledge Management Portal to allow for direct feedback from Commonwealth agencies. Additional details on the local project implementation of our CSAT program are in our Detailed Approach and Quality Plan in Section 4.4.4.

Global CSAT Auditing

From a corporate perspective, our local CSAT program is a strategic, action-oriented program initiated and followed monthly by the Unisys CEO, Ed Coleman and is a regular agenda item in the CEO's monthly Executive Committee meetings. It supports the Unisys goal of regular, open communication and associated remediation when needed.

Six Sigma Lean (SSL)

Since 2005, Unisys has adopted the Six Sigma Lean methodology and embedded the methodologies and skills across our organization. Our CSIIP process and the SEO activities are supported by Six Sigma Lean methods and techniques. Specifically, our RCA methodologies (such as those for defect reduction) follow the PDCA Cycle and use Six Sigma Lean tools such as the fishbone diagram, graphical analysis, mistake proofing, hypothesis testing, correlation/regression, value stream mapping, and Failure Mode and Effect Analysis (FMEA). Also, key leaders in the Unisys Project Management Office are all trained in Six Sigma Lean and when appropriate will have access to Six Sigma Black Belt level resources. Our Black Belts are trained as facilitators for collaborative events such as Kaizen and Innovation Workshops.

Our Six Sigma efforts focus on improving client satisfaction, operational excellence, and overall efficiency of operations that reduce cost. Unisys has a comprehensive Six Sigma Lean training curriculum with both instructor-led and self-paced classes on topics such as DMAIC, statistical analysis, Lean thinking, Kaizen methods and A3 problem-solving at Yellow Belt, Green Belt and Black Belt levels.

Continuous Service Improvement and Innovation Program

Unisys established our Continuous Service Improvement and Innovation Program (CSIIP) as our standard framework for aligning our improvement focus on our clients' strategic priorities. This has delivered impressive results for multiple Unisys clients around the globe.

The mainly goal of CSIIP is to create an ongoing formal program that encourages the proactive identification and introduction of measurable improvements in a specific work area or work process, and to introduce "innovation in context" to those areas. One of this program's major features is its ability to consolidate and analyze the many inputs required to effectively develop an innovation and improvement plan. These inputs include:

- Executive management objectives
- Key Provider Technology Roadmaps
- Customer Satisfaction Surveys and the Voice of the Customer
- Business and Technology Risk Registers
- Unisys Thought Leadership and Best Practices
- Problem Management analysis from the Unisys Service Excellence Office
- Agent feedback and suggestions

The CSIIP process uses a structured approach to gathering and analyzing these important factors to build a comprehensive roadmap to cover remediation, improvement and innovation opportunities. This will provide the Commonwealth with the necessary information to make informed decisions based on relative cost/benefit, alignment with strategy and return on investment for various actions, of varying scale from incremental through to truly 'breakthrough'.

For additional details of our implementation of Unisys CSIIP, please see our detailed Approach and Quality Plan in Section 4.4.4.

Unisys Corporate Innovation

Unisys Innovation Workshops are collaborative workshops with our clients designed to explore opportunities for disruptive and transformational change. We expose our clients to the latest disruptive technologies and trends and collaboratively examine opportunities for strategic business benefit. **Unisys Global Portfolio Services (GPS)** community monitors industry trends and technology changes. When combined with feedback from the Commonwealth with all of our Client results, this monitoring will help us shape our corporate products and solutions. GPS is also integral and augments the delivery of innovation to our local SEO, which will then advise the Commonwealth on the applicability of technology in its environment.

Unisys Global Infrastructure for Enterprise Computing

For continuous improvement, the local Service Excellence Office will be supported by the corporate Enterprise Computing Program which conducts regular initiatives to drive year-on-year productivity improvements for all Client accounts such as creating command centers and redistributing workload to create more efficient delivery models. An example of this is the introduction of automated runbooks that replaced manual help files at the DPH to bring more knowledge in context' to Level 1 teams.

Internal Audit Processes

Project Quality Office (PQO)

The Unisys PQO is the independent organization at Unisys chartered as the key quality advisor to the operating groups on deal structures, risk management, and project performance. Our PQO reviews and evaluates all aspects of proposals and project engagements with the goal to minimize risk while maximizing client satisfaction over the entire life cycle

The Unisys PQO conducts two types of project reviews—Project Readiness Reviews (PRRs) and Quality Assurance Reviews (QARs)—to identify any potential problems or gaps

- PRRs are designed to confirm that the:
  - Project is properly planned
  - Project plans are sufficiently adequate, accurate and detailed

- Project's contracted solution can be delivered on time and on budget
- Appropriate risk management is included (identify approaches to manage/mitigate risks)

- QARs will be performed periodically by independent reviewers who are not part of the Unisys local account team. This process provides a second level of quality and risk review using individuals who are independent of the Unisys client serving team. This process also provides an unbiased view of engagement progress, risk management actions, client satisfaction, and advice on solving problems and making improvements. The client interview is part of the QAR process.

The Unisys Quality Policy Statement

From a corporate standpoint, Unisys drives client value activities and business excellence initiatives to make our company a world-class provider of choice, Unisys continually improves our client relationships in order to achieve world-class business relationships and client advocacy. Our employees have both internal and external clients and must maintain regular communication with them to clearly understand and meet their changing requirements and expectations. Units at Unisys are required to set measurable quality objectives to continually improve the effectiveness of their processes. We are required to confirm that the applicable statutory and regulatory requirements are met for our products and services. We acknowledge that our people are critical to the success of our Quality Improvement Process and we therefore provide in their development so that they can contribute to this process effectively.

4.4.2 Industry-recognized Quality Standards and Awards

Unisys has consistently achieved top rankings in critical IT managed services and outsourcing evaluations conducted by key market influencers. Unisys is consistently rated in Gartner's Leader Quadrant for Outsourcing Services. We are also a recognized leader in Secure Outsourcing Solutions. These industry-leading awards clearly demonstrate our commitment to provide best in class, high-quality services to the Commonwealth. Please see **Figure 4-22.**

Figure 4-22. Industry Recognitions

Unisys also receives numerous Partner Awards from our IT Managed Services clients. Microsoft, Amgen, Dell, and Starbucks have all recognized Unisys for our Service excellence, quality, and commitment to success. Please see **Figure 4-23.**

Figure 4-23. Partnership Awards

4.4.3 External Quality Certification

Unisys takes pride in industry certifications that show our dedication to technology, quality, and process excellence. We hold more than 30 certifications for quality management and assurance from the prestigious International Organization for Standardization (ISO). All Unisys Data Centers are ISO 27001, ISO 9001, and ISO 20000 certified. A combination of these three certifications makes certain that Unisys is capable in maintaining quality, security, and a true service management system throughout our entire global operation.

Quality Enhancement

Unisys ISO 9001 certified quality assurance (QA) will be provided as part of our PMO, where our QA function is located, and will interact with our global quality assurance team, which will enable the Commonwealth benefits from the leveraged QA program that is deployed throughout Unisys. Our QA function will interact closely with our global Service Delivery Manager and Service Control Managers to make sure that any irregularities to the services will be handled and avoided by realigning processes and resources for better quality delivery. Our QA office will also perform audits to verify that operations documentation is kept up to date and adheres to the highest quality. Documentation will be produced by the service streams and integrated by our global service delivery organization. Unisys developed and is continually aligning operational procedures; the Commonwealth

benefits from them as these are released to production by the service development functions at Unisys.

An example of a typical quality enhancement initiative is the work done with a major US-based retail organization that needed enhanced service delivery (more than originally contracted). Unisys worked with the Commonwealth on the design and implementation of a new process using replacement units with pre-deployed inventory to reduce end user downtime

The following tables reflect Unisys External Quality Compliance, Unisys External Certifications, and Unisys External Certifications for our Staff:

Unisys Compliancy

Certification and Standards	How they Apply at Unisys
ISO 27001 and ISO 27002	To support our clients globally, Unisys uses our Data Centers and Managed Services Centers in the United States, the Netherlands, Hungary, India, China, Brazil, and Colombia. All these locations are ISO 27001 certified. The DPH is certified in ISO 27001 and regularly passes SSAE 16 audits.
ISO 14001	Unisys has two production facilities in the United States; both are ISO 14001 certified.
SSAE 16 Type II and ISAE 3402	Unisys Data Centers and Managed Services Centers in the United Kingdom, the Netherlands, Hungary, India, and China are compliant with SSAE 16 Type II and ISAE 3402.
Specific Data Center Standards	Unisys Data Center operations are based on industry standards certified by ISO. All Unisys Data Centers are ISO 27001, ISO 9001, and ISO 20000 certified. A combination of these three certifications confirms that Unisys can maintain quality, security, and a true Service Management system throughout all of our global operations.
Quality Assurance Methodology	All Unisys operations, countries, and locations operate according to the Unisys Quality System, which is accredited by ISO 9001.
ITIL V3	ITIL (the IT Infrastructure Library) is the most widely accepted approach to IT Service Management in the world. ITIL provides a cohesive set of best practices drawn from the public and private sectors worldwide. It is supported by a comprehensive qualifications program, accredited training organizations, and implementation and assessment tools. Best practice processes are promoted in ITIL support and supported by ISO 20000. Unisys is proud to be a truly global ITIL V3 compliant service provider—we can provide one global service delivery experience throughout all our Managed Services Centers and Data Centers. Fifty five Unisys resources dedicated to the Commonwealth are ITIL V3 certifications
Unisys IT Service Mgmt (ITSM)	The Unisys IT Service Management (ITSM) practice was assessed by Underwriters Laboratories, Inc., which found that the practice is in compliance with that ISO/IEC 20000-1:2005, resulting in a 3-year certification. Unisys was the eighth company to be certified in the United States and the first company to receive certification for its global operations.

Certification and Standards	How they Apply at Unisys
ISO 27001 and ISO 27002	To support our clients globally, Unisys uses our Data Centers and Managed Services Centers in the United States, the Netherlands, Hungary, India, China, Brazil, and Colombia. All these locations are ISO 27001 certified. The DPH is certified in ISO 27001 and regularly passes SSAE 16 audits.
Unisys Desktop Services	Unisys Desktop Services, portal and electronic interfaces, service request management, service supply chain, and maintenance and time and materials billing comply with ISO 9001:2000 and TickIT standards.
Unisys Maintenance, Installation, and Project Management Services	Unisys Maintenance, Installation, and Project Management Services are ISO 9002 certified for operations in Australia, Canada, Europe, Hong Kong, Latin America, Singapore, Taiwan, and the USA
Regulatory Compliance	Unisys service locations meet all FDIC, FFIEC, OCC, NIST, and HIPAA requirements

Unisys Certifications

Certification	Certification Date	Description
ITIL/ITSM-certified service delivery personnel	Date not applicable	All the service delivery personnel assigned to support the Commonwealth are certified to use the Unisys global ITSM platform, which was developed from BMC Remedy 7.6. All our service delivery personnel completed their ITIL V3 Foundation training.
CISSP-certified service security personnel	Date not applicable	Unisys has 135 CISSP-certified services personnel.
PMI-certified service delivery personnel	Date not applicable	Unisys has 170 PMI-certified Project Management resources. Project Management resources assigned to the Commonwealth will be PMI certified.
ISO 9001	Managed Services Center	Quality - 100 percent certification of our global Managed Services Centers (MSCs) providing Enterprise Compute Services.
ISO 9001	Global Supply Chain	Certification for multivendor parts delivery, product distribution, and network integration operations. Unisys is the only company to hold global ISO 9001 certification for multivendor parts delivery, product distribution, and network integration operations.
ISO 17799	Not applicable	Unisys manages to the ISO 27001 standard.
ISO 27001	Managed Services Center	Security - a global standard for best practices in Information Security Management achieved by all 22 major Unisys Data Centers and Managed Services Centers providing Enterprise Compute Services.
ISO 20000	Managed Services Center	ITIL - Certification service for event and service desk management. Desktop services, portal and electronic interfaces, service request management, service supply chain, and maintenance/T&M billing comply with ISO 9001:2000 and TickIT standards.
CMMI	Application Support Center	Capability Maturity Model Integration (CMMI) Level 5 for our primary Application Support Centers and Regional Centers are at least at Level 3.
Sarbanes-Oxley Act	Annual	Global MSCs providing Enterprise Compute Services.
SSAE 16 SOC 1 Type II Audit	Annual	Global MSCs providing Enterprise Compute Services.

4.4.4 Detailed Approach and Quality Plan

Quality, continuous service improvement, and client satisfaction all begin with the voice of the Commonwealth. Unisys recognizes the voice of the Commonwealth and the significant importance of quality and continuous service improvement to reduce risk, improve service quality, improve client satisfaction, and confirm service transparency through a continuous cycle of evaluation and improvement in an IT infrastructure. We view quality and continuous service improvement as a Critical Success factor in driving client satisfaction for the Commonwealth IT infrastructure. Unisys is establishing a dedicated and local project level Service Excellence Office that will proactively manage quality, continuous service improvement, ITIL process management, and customer satisfaction through a comprehensive Quality Plan that specifically addresses all of these areas. We believe this is a key differentiator in our partnership with the Commonwealth. Unisys will develop, implement, manage, and govern two detailed Quality Plans. The initial Quality Plan will be a Transition Quality Plan to make sure that quality is a primary focus in the critical Transition of the Commonwealth agencies to the new IT Services contract. Unisys will then develop and manage the IT Services Management Quality Plan, for steady state ongoing operations. These plans will be documented, updated, and governed through the Commonwealth Computer Procedures Manual (CCPM). Through this new organization and these quality plans, Unisys will drive best in class services and the highest customer satisfaction experience throughout the Commonwealth.

Service Excellence Office

Out Transition Quality Plan begins with the Service Excellence Office (SEO). As shown in **Figure 4-24**, the SEO defines and oversees all ITIL process management and analysis functions, including Change Management, Release Management, Incident Management,

Problem Management, Asset Management, Configuration and CMDB Management, Availability Management, and Service Level Management. Process managers and analysts' responsibilities in the SEO include process effectiveness audits, confirm service delivery teams' comply with proper process execution, and analyze process trends for anomalies. The SEO will manage Continuous Service Improvement programs in collaboration with Commonwealth agencies.

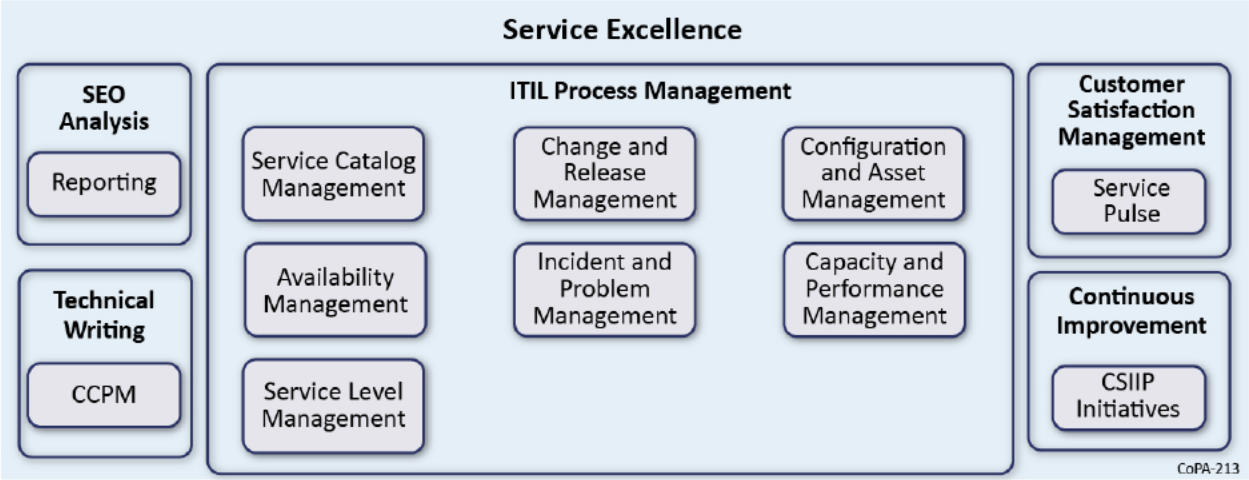

Figure 4-24. Service Excellence and Oversight of ITIL Process Management

The SEO manages and drives quality across the Commonwealth's multidimensional, complex, and matrixed IT service delivery organizations. The SEO will standardize quality across Commonwealth agencies, Unisys, and partner organizations, as well as across all IT service processes, IT monitoring and automation tools, and client satisfaction surveys and processes. Unisys will leverage the ITIL framework, ISO Certifications, Six Sigma Lean tools, and our Continuous Service Improvement and Innovation Program (CSIIP) to proactively make certain the highest-quality IT services are being provided. Please refer to Schedule F, Section 3.2.1.1.6 for organizational details on the SEO.

ITIL Service Delivery Framework – Driving Standardization and Service Excellence

The ITIL Process Management function is at the core of service excellence. This function effectively designs the management practices, processes, functions, roles, knowledge, and skills that the Unisys Team will use to enable us to deliver services that create value to the Commonwealth. Through IT Service Management, processes are developed and executed to facilitate the implementation and management of quality IT services that meet the Commonwealth's needs. This discipline is essential to verify we consistently produce quality services in a timely and cost-effective way.

Unisys engages in quality planning activities to confirm that changes are planned, documented, accomplished and evaluated. Our quality planning process establishes quality goals and objectives that are appropriate to meet the Commonwealth's requirements.

Quality planning provides a framework to guide the evolution and continuous improvement of the Quality Plans through the Plan-Do-Check-Act (PDCA) continuous improvement cycle **Figure 4-25**.

PLAN - Who will do what by when? What materials are needed?

DO - Implement the plan

CHECK - Evaluate the effort and results

ACT - Identify actions that need to be taken

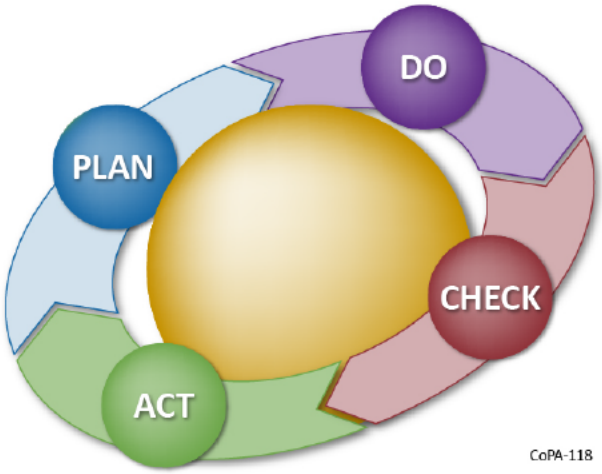

Figure 4-25. Plan-Do-Check-Art Cycle

The quality planning PDCA cycle requires input from each of the highly matrixed organizations and processes in the Commonwealth IT Infrastructure. Input will be proactively obtained from the Commonwealth agencies; Unisys; third-party partners; and from the ITIL management processes: Service Request, capacity and performance, incident and problem, change and release, availability, Service Level management; monitoring and automation tools; and CSAT surveys. The outputs of each phase of the PDCA cycle provide the inputs to the subsequent phase. The SEO will proactively manage this PDCA during transition as well as through the Steady State IT Service Delivery processes.

Continuous Service Improvement

Continuous service improvement and quality will be the key objectives of the SEO. The SEO's objectives will be to focus on increasing efficiency, maximizing effectiveness, and optimizing the cost of Commonwealth IT services and the underlying IT Service Management processes while maximizing customer satisfaction. Unisys will continually align and realign IT services with the changing business needs of the Commonwealth agencies by identifying and implementing improvements to IT services that support business processes. The SEO reviews, analyzes, and makes recommendations on improvement opportunities in each ITIL life cycle phase. These reviews, analyses, and recommendations will also leverage Six Sigma Lean methodologies to drive specific,

measurable results. We identify and implement individual activities to improve IT service quality and improve efficiency and effectiveness of the ITIL processes. Quality standardization will be a major objective for the SEO. This will improve the cost-effectiveness of delivering IT services to the Commonwealth while driving service excellence and maximizing customer satisfaction.

We will accomplish these Continuous Service Improvement objectives by listening to the voice of the customer, building effective relationships, learning each agencies business goals and priorities, leading and proactively managing ITIL processes, and delivering high-quality services to the Commonwealth, while leveraging ISO-certified processes as well as best in class industry tools and methodologies. The SEO will manage key Continuous Service Improvement activities to make sure Unisys is meeting the Commonwealth's IT service objectives, and driving quality and client satisfaction in each Commonwealth agency and its clients. The SEO will review management information and trends to verify that services meet agreed service levels and to make certain that the output of the ITSM processes achieve the desired results. Unisys will leverage Six Sigma Lean practices to drive definitive results. Conducting maturity assessments against the process activities and roles to highlight areas of improvement or concern also will be a key focus, along with internal audits to verify compliance. Six Sigma Lean, Kaizen workshops will be periodically conducted to identify and prioritize Continuous Service Improvement opportunities, analyze data, and present recommendations to senior management to make sure that Unisys is hearing the voice of the customer and meeting the Commonwealth's expectations. We will conduct Quality Management Reviews to consistently drive value to the Commonwealth, through improved services, quality, client satisfaction, customer value, and return on investment, while lowering overall IT costs.

The Unisys Resolution Optimization Model in **Figure 4-26** provides a clear example of how Unisys will provide Continuous Service Improvement to the Commonwealth. The Unisys SEO organization will proactively manage IT incidents, problems, and changes through ITIL Service Management processes and operations. We will leverage ISO-certified processes and Six Sigma Lean tools to drive quality as well as client satisfaction. The quality management processes will be standardized and integrated across all IT domains, the Commonwealth agencies, Unisys, IBM, Deloitte, and the Small Diverse Businesses.

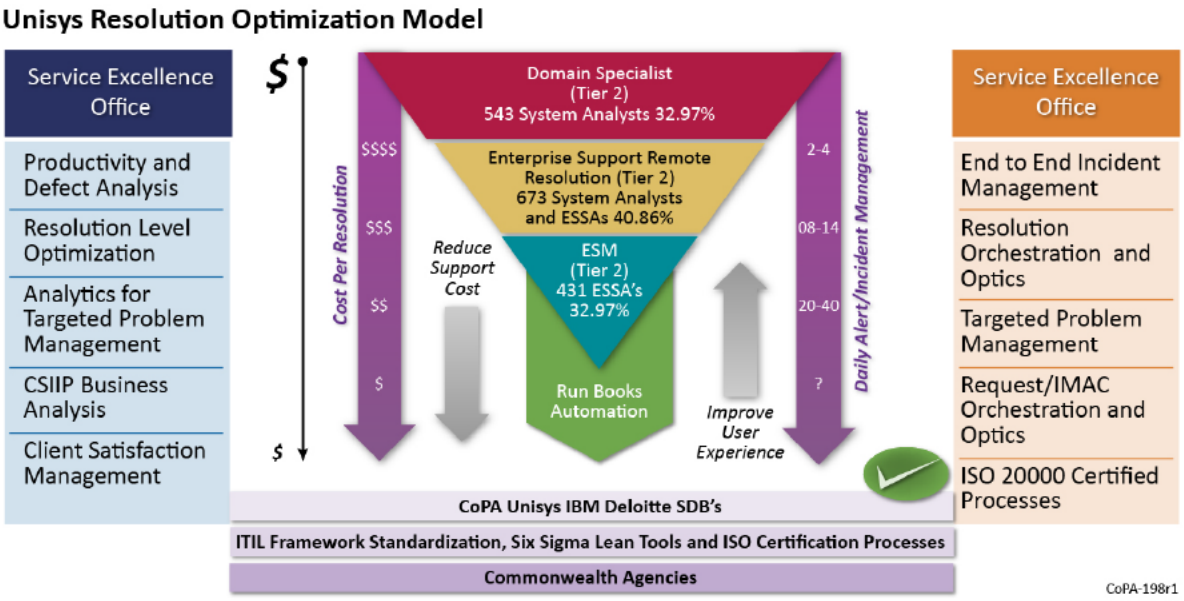

Figure 4-26. Unisys Resolution Optimization Model

A CSIIP SharePoint portal will be created and maintained to include all improvement and innovation actions. This CSIIP portal will be accessible to all the Commonwealth agencies, and will drive transparency for the Commonwealth. The SEO and SSL team will also support innovation activities managed through Innovation Workshops that collaborate with the Commonwealth agencies to plan and develop the future IT strategies and IT solutions. This governance, transparency, and innovation will drive lower cost of ownership and are outlined in **Figure 4-27** and **Figure 4-28**.

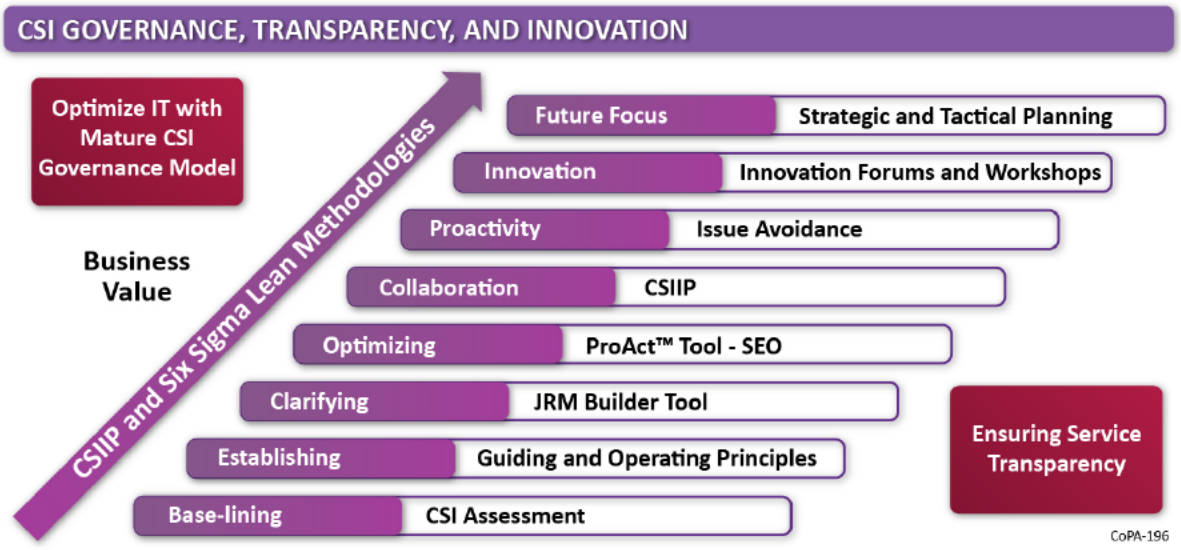

Figure 4-27. Continuous Service Imporvement Governance, Transparency, and Innovation

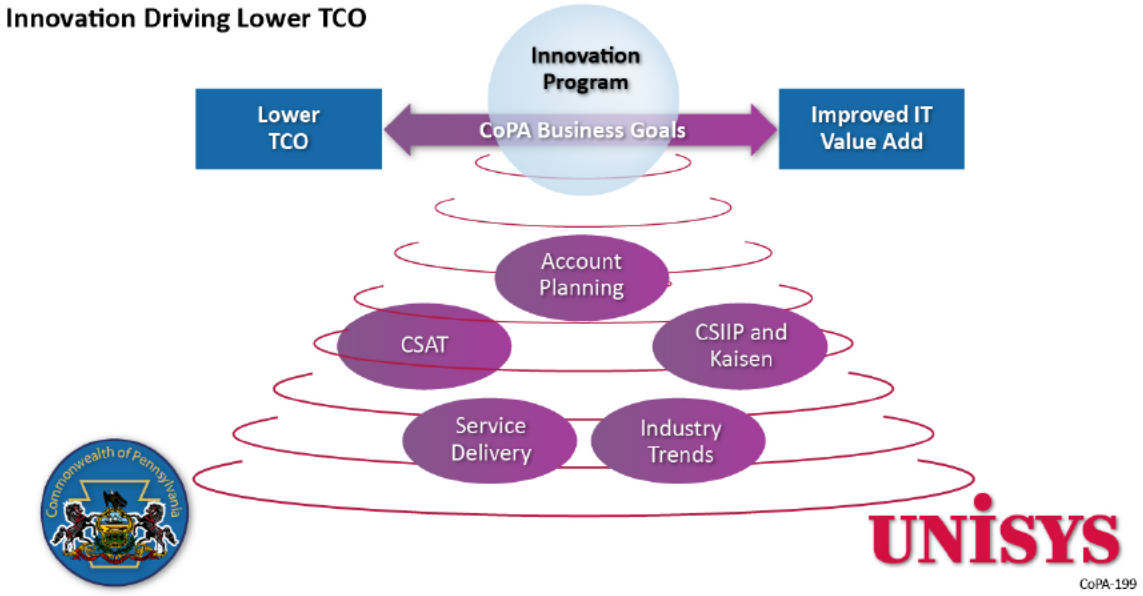

Figure 4-28. Innovation Driving Governance, Transparency, and Innovation

Risk Management and Independent Quality Audits, and Business Continuity Management

Risk management, independent quality audits, and business continuity management are integral Quality Management processes. Unisys is committed to managing risks and making sure that business objectives are achievable and that these processes are followed. Risk mitigation occurs through the implementation of tight quality controls: standard policies, procedures, roles, and Risks, Assumptions, Issues, and Definitions (RAID). Unisys will manage multiple risk registers for large projects, changes, implementations, and transitions. We also will manage an overall Program Risk Register. The risk types, tools, analyses, and processes are outlined in **Figure 4-29**.

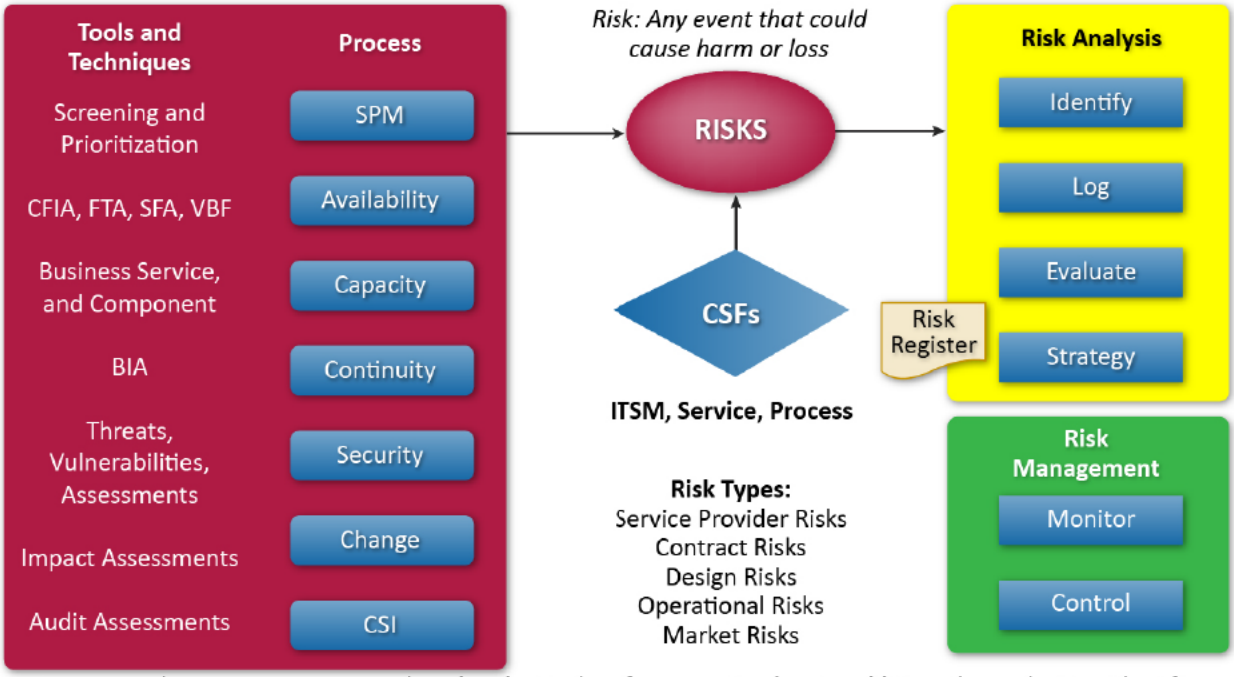

Figure 4-29. Risk Types, Tools, Analyses, and Processes

The Project Quality Office (PQO) is the independent organization at Unisys chartered as the key quality advisor to the operating groups on deal structures, risk management, and project performance. The PQO reviews and evaluates all aspects of proposals and project engagements with the goal to minimize risk while maximizing client satisfaction over the entire life cycle.

Unisys will work with the Commonwealth to conduct two types of project reviews—Project Readiness Reviews (PRRs) and Quality Assurance Reviews (QARs) to identify any potential problems or gaps.

The PRR is designed to confirm that the project is properly planned; the project plans are sufficiently adequate, accurate, and detailed; the project's contracted solution can be delivered on time and on budget; and the appropriate risk management is included (identify approaches to manage or mitigate risks). Unisys will conduct these reviews during major project implementations. Conduct of PRRs will occur specifically during transition to confirm providing a high-quality solution and implementation.

Unisys will also work with the Commonwealth to conduct QARs. They will be performed periodically by independent reviewers who are not part of the Unisys account team. This process provides a second level of quality and risk review using individuals who are independent of the Unisys client-serving team. This process also provides an unbiased view

of engagement progress, risk management actions, client satisfaction, and advice on solving problems and making improvements. The client interview is part of the QAR process.

Business Continuity Management (BCM) is an integral aspect of Corporate Governance and Unisys Quality Solution. BCM includes key areas of disaster recovery, facilities, risk, HRM, supply chain, quality, health and safety, knowledge, emergency, Security Management, crisis communication and public relations. Unisys provides for three levels of business continuity — basic, custom, and emergency. We will work with the Commonwealth to confirm that we provide comprehensive BCM program management; maintain a suitable BCM policy; confirm that decisions are made based on Business Impact Analysis (BIA); and create a Business Continuity Plan, and a Crisis Management Plan, and a Resource Recovery and Solution Plan. The implementation of Recovery Plans will follow a defined and approved risk assessment methodology. Every Business Continuity Plan, Resource Recovery and Solution Plan, and Crisis Management Plan will be tested at least once a year.

Risk management, independent program quality office audit reviews, and business continuity planning are key programs that Unisys will provide and manage in order to minimize risk throughout the ITIL lifecycle phases.

Client Satisfaction

Providing best-in-class ITIL-based IT service management and driving excellent client satisfaction is extremely important to Unisys and a key focus in our IT solution. The SEO will manage a multipronged approach to client satisfaction. We will gather data across multiple levels to gain a clear understanding of the Commonwealth's satisfaction with the IT services being provided. The Service Desk will randomly survey Commonwealth customers who call to the Service Desk with a request or change that needs to be completed or an incident that needs to be resolved. A Knowledge Management Portal will be developed to allow for direct feedback from Commonwealth agencies. A formal Customer Satisfaction Survey will be conducted quarterly to clearly understand the customer satisfaction of each agency and all of the ITIL service management operations areas. Unisys is currently providing these results to the Commonwealth. An example of these CSAT Survey summaries by agency and operational area are shown in **Figure 4-30**. Client-facing Leadership meetings between the Commonwealth CSAT Director and the Service Excellence Officer will be conducted quarterly to review this summary and the corresponding results from the multipronged input gathered in this robust CSAT process. Specific CSAT Action Plans will be documented and implemented to drive rapid service improvement if a remediation plan is required. This detailed CSAT process, analysis, and proactive communication will drive improved quality and greater transparency, while significantly improving the customer experience.

DPH Agency Satisfaction Survey Summary

Overall Agency Satisfaction 2012

Agency	Average
Civil Service (CSC)	9.9
Game Commission (PGC)	9.9
State Police (PSP)	9.9

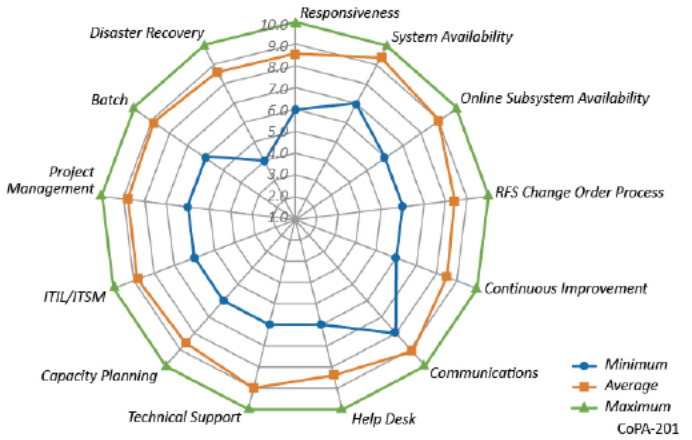

Figure 4-30. Current DPH Agency Satisfaction Survey Summary

Reduced Cost

Unisys is committed to providing the Commonwealth with best in class IT Services managed and driven by a dedicated SEO. The SEO will drive Continuous Service Improvement throughout the ITIL lifecycle. Standardization of ITIL frameworks, along with leveraging ISO-certified processes and Six Sigma Lean tools will drive Continuous Service Improvements. Governance, Transparency, and Innovation Workshops will make sure that the Commonwealth agencies plan and develop their future IT strategies and IT solutions. Risk management, independent quality audits, and business continuity planning will minimize risk throughout the ITIL lifecycle phases. Our multipronged Customer Satisfaction processes will confirm that Unisys clearly understands the voice of the customer and will drive high-quality continuous improvement actions based on collaborative feedback. All of this collectively represents the Unisys Integrated Quality Plan for the Commonwealth. This plan will provide the Commonwealth with the highest client satisfaction experience, best-in-class high-quality IT services and ITIL processes, and a significant lower total cost of ownership, as reflected in **Figure 4-31**.

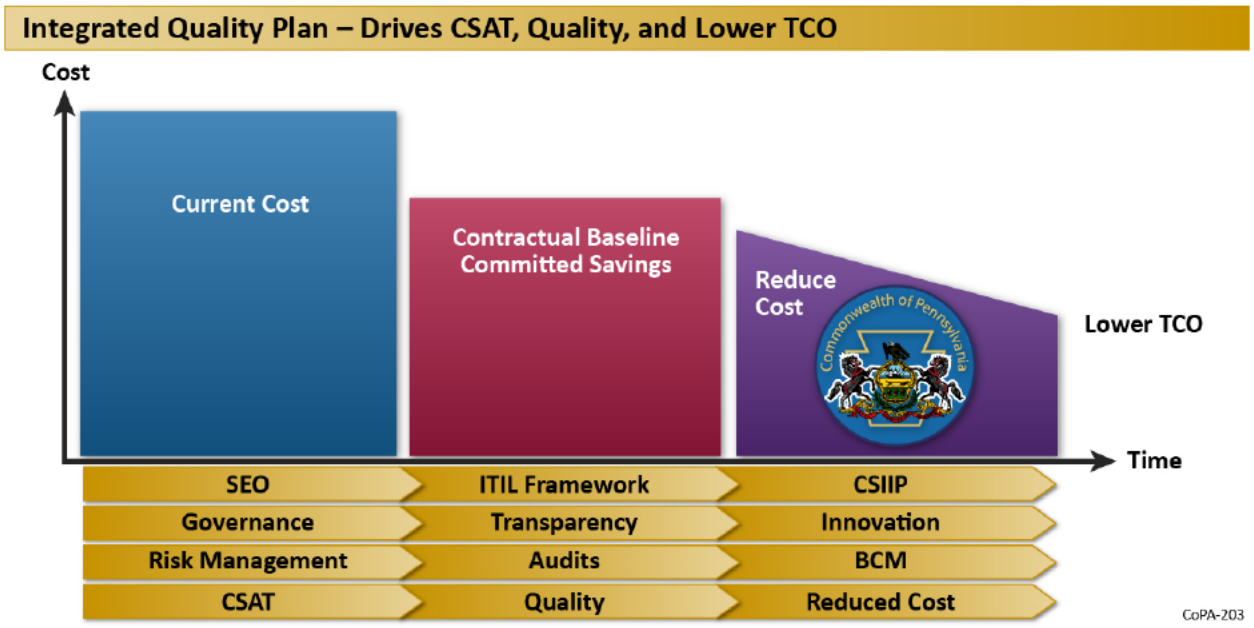

Figure 4-31. Risk Types, Tools, Analyses, and Processes

4.4.5 Summary of the Unisys Dedication to Quality

Unisys is joined by a premier team of experienced companies that were selected in accordance with the requirements of the RFP. Our selection criterion was to assemble a "best-of-class" team to meet all the requirements of the Commonwealth.

Unisys, headquartered in Pennsylvania, plays a leadership role in various market segments, in setting industry standards, and in charting the direction of industry practices and technology. More than 300 of our employees participate in industry standards groups

The ability to sustain quality of service while continually innovating and introducing cost and operational efficiencies is crucial for IT outsourcing providers. The acknowledgement Unisys has received demonstrates our clients' and the market's recognition that Unisys is in the front rank in delivering those benefits consistently around the world.

We believe the combination of the expertise of our local Harrisburg staff, our experience on similar projects (including our engagements at the Commonwealth Enterprise Data Center and Data PowerHouse), and Unisys proven processes and procedures founded on ITIL process and standards form a solid foundation for a partnership with the Commonwealth and differentiate Unisys from all other potential service providers.

Unisys looks forward to partnering with the Commonwealth on this very important opportunity. Our experience as a recognized global leader in designing, installing, and

managing IT infrastructure combined with the Commonwealth's vision, guidance and oversight will further maximize network and system availability achieving the Commonwealth's primary mission of ensuring a seamless delivery of all IT services to the citizens of Pennsylvania.

4.5 Client References

RFP	*Requirement*
	The Offeror must provide at least three (3) customer references for projects similar to this Project using Appendix C – Project References. If the Offeror is using subcontractors to provide a significant portion of services, each subcontractor must also provide at least three (3) references. To the extent possible, references should be selected to represent projects of similar size and complexity to the project described in this RFP. The Commonwealth at its sole discretion may request references from any or all proposed subcontractors.

4.5.1 Project References (RFP Appendix C)

Unisys provides the Commonwealth with at least three customer references and each of our proposed subcontractors are presented using the format outlined in RFP Appendix C – Project References. The customer references presented here are for projects of similar size and complexity to the Commonwealth of Pennsylvania's Data Center Computing Services Project as described in the RFP. **Table 4-3** provides details at a glance of the experience Unisys and our proposed key business partners have as it relates to the requirements of the Commonwealth.

4.5.2 Unisys Project References

Unisys Project Reference 1: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) Outsourcing Agreement
Contract Value	$1.4 billion
Nature and Scope of Project:	**Project Description** In 1997, Governor Tom Ridge pressed forward to improve the delivery of public services through the strategic use of information technology. The Governor's Office of Administration initiated a data center consolidation contract for Commonwealth agencies titled Data PowerHouse (DPH). Unisys has provided the Commonwealth with data center computing services for the DPH and application support services for the Enterprise Data Center (EDC) since 1999. This effort consolidated and outsourced the operations and technical support of 17 formerly separate state agency Data Centers. The DPH, managed by a consortium of 10 companies, led by Pennsylvania-based Unisys, replaced these 17 separate state-run data centers. Unisys uses Information Technology Infrastructure Library (ITIL) standards in the DPH. All Unisys staff that work on the DPH contract are familiar with the key elements, concepts, and terminology used in the ITIL Service Lifecycle and have achieved (at a minimum) ITIL V3 Foundation certification. **Program Management Office (PMO) and Service Management** **Project/Contract Management –** Ann Kirwan-Orner, Unisys Client Account Executive, is responsible for the overall program, projects, and contract elements associated with the DPH contract. Operating under Ann's direction, the Unisys executive management team maintains an active working relationship with the Commonwealth's project team. Unisys hosts a Monthly Service Performance Management Meeting that provides the Commonwealth with an opportunity to review and discuss project performance and on-going initiatives. The Request for Service (RFS) / Change Order (CO) system used by Unisys was developed in conjunction with the Commonwealth and has been customized over time to meet its evolving needs. The process begins with an RFS initiated by the agency though their assigned Unisys Service Delivery Manager (SDM) and OA Enterprise Services Representative (ESR). The SDM schedules a meeting to gather requirements. After the meeting, a RFS document is created and submitted to the agency for review. Unisys creates the supporting documentation and cost information after the requirements have been finalized by the agency. After the agency, OA ESR, and Unisys SDM have approved the final RFS and associated cost a change order is generated. Upon approval of the change order by OA Contract Compliance, Unisys moves forward to implement the required change. **Availability/SLA Management –** Under the DPH contract, each month Unisys reports to the Commonwealth on 445 Service Level Agreements (SLAs). Unisys provides multiple service tiers (i.e. Gold, Silver, and Bronze) and associated service levels within each service offering. This has provided the Commonwealth with the ability to contain costs by selecting the appropriate level of service that meets its specific needs. Unisys employs a quality and process improvement program that focuses on both meeting and exceeding targeted SLA requirements. In the event that an SLA is missed, Unisys investigates the

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) Outsourcing Agreement

problem to determine the root cause and takes action to implement changes to correct the underlying issue.

Change and Release Management – Unisys works in partnership with the Commonwealth to manage all changes that occur in the DPH. Each Unisys SDM holds regular change management meetings with the designated representatives of their assigned agency. In addition, Unisys reviews major changes during the monthly Service Management Meeting attended by OA/OIT and the agencies. Unisys uses the BMC Remedy IT Service Management (ITSM) application to track and manage changes and releases in the DPH. All changes in the DPH require approval by the appropriate authorized Commonwealth representatives prior to implementation. Authorized Commonwealth staff members have direct access into the BMC Remedy ITSM 7.6.4 application maintained by Unisys.

Service Desk – Unisys provides a service desk to the Commonwealth to assist appropriate authorized Commonwealth users in determining, tracking and resolving questions regarding the services we provide. Unisys uses the Incident Management, Problem Management, Change Management, Asset Management, and Change Project modules of the BMC Remedy ITSM 7.6.4 application to support service desk business processes. Unisys developed, updates, and maintains documentation of service desk policies and procedures. The service desk is staffed by individuals with knowledge of the systems that support the Commonwealth's mission critical business applications.

Technical Architecture – Unisys provides the Commonwealth of Pennsylvania with dedicated Technical Architects that oversee the ongoing design of the various computing platforms that support the Commonwealth's existing computing topologies. These Technical Architects understand the unique business and technical needs of each Commonwealth agency. Their understanding of available technology provides them with the knowledge they need to recommend technology changes that result in cost effective solutions that provide increased performance on behalf of the Commonwealth.

Account Management – Unisys has assigned a Service Delivery Manager (SDM) to each of the Commonwealth agencies that receive services in the DPH. The SDM works with the agency and OA/OIT to coordinate projects and address contract questions. The average Unisys SDM has more than 5 years experience supporting the Commonwealth.

Configuration Management – Unisys employs a robust Configuration Management system that ensures complete and accurate recordkeeping relative to datacenter assets (e.g. hardware, operating system software, firmware, and network) contained in the DPH.

Third Party License Management – Unisys provides the Commonwealth with Third Party License Management services related to the numerous hardware and software platforms and products required to support the DPH infrastructure. Our services ensure accurate inventory and licensing compliance for almost 60,000 individual machine or user licenses for more than 100 distinct infrastructure software products. Unisys proactive third Party License Management has resulted in cost savings and credits to the Commonwealth in the amount of $537,382 since 2011.

Technology Services

Transition Management – Beginning in 1999, Unisys successfully consolidated 19 individual Commonwealth owned Data Centers serving 17 agencies into the DPH. This was accomplished within the timelines established by the Commonwealth and with no unplanned disruptions to the agencies involved. In 2008, Unisys commenced with a comprehensive technology refresh initiative to provide updated computing, storage, and

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) Outsourcing Agreement

networking platforms as a result of the Commonwealth extending the DPH contract. This transition involved detailed planning for procurement, infrastructure build out, testing, and workload migration affecting every Commonwealth agency within the project. Unisys demonstrated strong transition management experience utilizing a Project Executive and several Project Managers to work closely with the agency to minimize the business impact of each workload transition. The only major issue encountered during the transition project was a mainframe configuration setting that affected workload performance for the DOT partition. Unisys conducted research to identify the root cause of the problem and implemented corrective action. After action, reviews were conducted to capture lessons learned.

Infrastructure Management – Unisys IT infrastructure services include system engineering, network management and support, data center operations, data storage/archiving, information security engineering, application hosting, disaster recover (DR) services, and systems certification and accreditation.

Capacity Management – Unisys uses automated tools to continuously monitor resource utilization in the DPH. DPH capacity utilization for each agency is reported to the Commonwealth on a monthly basis. These reports show usage, trends, capacity forecasts, and provides recommendations for upgrades when necessary. Reports are segmented by platform (e.g. IBM/Unisys Mainframe, IBM iSeries, etc). Unisys works in conjunction with the Commonwealth to produce a comprehensive capacity planning report on an annual basis. This report includes input gathered from the agencies regarding changes in business requirements that may drive the need for additional or reduced capacity in the future.

Disaster Recovery Planning & Testing – Unisys worked with the Commonwealth to plan and implement a backup/disaster recovery (DR) plan to protect critical IT resources from disasters. Unisys provides the Commonwealth with a 2,900 sq. ft. DR site in southeastern Pennsylvania. Each agency is able to receive DR services specific to its individual needs. Unisys works closely with each agency that receives DR services to coordinate and conduct regular DR testing to ensure that everything will work smoothly in the event of an actual disaster.

Security Management – The information security management system Unisys employs on behalf of the Commonwealth on the DPH project has been ISO/IEC 27001:2005 certified continuously since 2009. Unisys conducts annual audits of the DPH and reports the results to the Commonwealth. Unisys recently moved from using the SAS 70 auditing standard to using the more comprehensive and expansive SSAE 16 standard. Unisys complies with applicable Commonwealth IT policies and directives as well as applicable federal and Commonwealth laws, regulations and policies. All Unisys staff assigned to the DPH attends mandatory security training on an annual basis. This includes training to address the specific security and compliance needs of the Commonwealth.

Performance Management & Monitoring – Unisys monitors systems environments in the DPH on a 24X7X365 basis using industry standard tools (e.g. MS SCOM, nWorks, SightLine, TeamQuest, and Tivoli) to ensure availability and capacity is adequate for the workload. These tools provide the critical input needed to calculate SLAs, and for associated monthly evaluation and reporting needs.

Facilities Management

Facilities Maintenance – Unisys maintains two geographically dispersed data centers to provide the Commonwealth with protection from regional disruptions such as weather, power or other emergencies. The DPH is the primary data center and is a 21,980 sq. ft.,

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) Outsourcing Agreement

tier 2 rated facility based on the current standard established by the Uptime Institute. As managed by Unisys, the DPH has been consistently performing at a tier 3 level. The DPH houses a separate dual-homed network interconnection. Unisys has upgraded intra-facility power distribution, battery backup systems, air conditioning, fire suppression, and security in the DPH. In addition to the DPH, Unisys provides the Commonwealth with agency specific Disaster Recovery capabilities needed to maintain mission critical data processing for 14 agencies' requirements through dedicated space established with SunGard at their Philadelphia site.

Site Operations – Unisys provides the datacenter operations staff and management required to operate and monitor the IT computing equipment and Services being provided in the DPH. Perry Pritchard, Unisys Data Center Manager, is responsible for the DPH and has been in this role for over 14 years. Mr. Pritchard and other Unisys staff regularly interface with Commonwealth staff to institute best practice datacenter services. Unisys datacenter operations in the DPH includes management of the computing platforms, storage, local area networking, security firewall, tape backup, and offsite tape rotation systems.

Managed Hosting Services

Windows Support – Unisys provides hosting, operations, and support services for Microsoft Windows based servers located in the DPH. This includes support for approximately 500 physical servers and 325 virtual servers that utilize virtualization technology from VMware and Microsoft's Hyper-V. All MS Windows servers, network devices, etc. are actively monitored on a 24X7X365 basis using industry standard tools such as MS System Center Operations Manager (SCOM) 2012. The Unisys staff that supports the MS Windows environment in the DPH hold industry recognized certifications from Microsoft, VMware, and Cisco among others. Unisys staff ensures that operating systems are maintained and that current patch levels are applied in accordance with agency requirements. If a service disruption occurs, Commonwealth users are notified and regularly updated via text message and e-mail.

Storage Management – Unisys manages over 1.6 petabytes (PB) of storage in the DPH on behalf of the Commonwealth. This includes management of storage technology from vendors such as EMC and IBM. Unisys provides trained staff members that hold manufacturer certifications from EMC, IBM, and Brocade.

ERP Hosting SAP/Oracle – The Commonwealth was one of the first states to fully integrate business processes in an SAP Enterprise Resource Planning (ERP) system across all state agencies. First implemented in 2002, the SAP ERP system efficiently and securely supports more than 53 state agencies and processes millions of finance, budget, procurement, supplier relationship, plant maintenance, payroll, travel, human resource and employee self service transactions monthly. The Commonwealth's Bureau of Integrated Enterprise System (IES) migrated the SAP ERP system to the DPH in 2010 and has entrusted Unisys with the care of its supporting infrastructure since that time.

UNIX Support AIX/Linux – Unisys provides hosting, operations, and support services for UNIX (i.e. AIX/Linux) based servers located in the DPH. This includes support for 147 virtual AIX images on 8 physical frames as well as 17 physical and 4 virtual Linux servers. All UNIX servers, network devices, etc. are actively monitored on a 24X7X365 basis using industry standard tools such as MS SCOM 2012. The Unisys staff that supports the UNIX environment in the DPH hold industry recognized certifications that include IBM Certified Expert, LINUX, and Oracle among others. Unisys staff ensures that UNIX operating systems are maintained and that current patch levels are applied in accordance with

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) Outsourcing Agreement	
	agency requirements. If a service disruption occurs, Commonwealth users are notified and regularly updated via text message and e-mail. **Mainframe Services IBM/Unisys –** Unisys provides the Commonwealth with hosting and operational support services for both IBM and Unisys mainframe systems located in the DPH and SunGard. Support for five (5) Unisys Mainframe partitions in the DPH and three partitions at SunGard are provided directly by Unisys. Support for IBM Mainframe and IBM Midrange (i.e. IBM iSeries) partitions are provided by IBM under contract with Unisys. **Security & Firewall –** Unisys provides the Commonwealth with hosting and operational support services for security products and firewalls located in the DPH. **Database Services –** Unisys provides the Commonwealth with Database Management Services for the Unisys Mainframes located in the DPH. Mainframe Database services include mainframe software product line to manage database integrity and availability. Unisys also works with the agencies Data Base Administrators to back-up and restore critical Oracle databases. Early in the contract, Unisys also provided Oracle and MS SQL Database Services for various Commonwealth agencies located in the DPH. The Commonwealth subsequently made the decision to move these Database Management Services back in-house. **Capacity on Demand and Additional Services** **Exchange as a Service –** In 2008, as part of our ongoing Enterprise Exchange Management contract with the Commonwealth, Unisys transitioned the Commonwealth's messaging environment from centralized MS Exchange 2000 to Exchange 2007 for 85,000 users supporting 45 state agencies—an upgrade for 60,000 initial end users (which grew to 85,000 users). This transition created one of the largest state-hosted MS Exchange systems in North America. Unisys worked with MS in validating the migration effort. The complexity of this project included the complete messaging migration, on an agency-by-agency basis, from an earlier MS Exchange technology platform to Exchange 2007. Unisys installed all servers, implementing the MS Exchange environment. When the systems and servers went operational, Unisys successfully bid to support the MS Exchange system for the entire Commonwealth. During the migration to Exchange 2007, Unisys assessed all enterprise messaging infrastructure and technology at the Commonwealth's Enterprise Data Center (EDC) facility. We provided the required enterprise-wide utilization reports, including BlackBerry, MS Exchange, network, server (CPU, physical memory, disk utilization, and virtual memory), and MS Outlook Web Access. Unisys also provided weekly spam and antivirus detection reports as well as SAN utilization, storage allocation per cluster, and daily data backup reports. Unisys consultants are currently onsite managing and supporting the Commonwealth's Windows 2008 Active Directory, MS Exchange, BlackBerry, and Enterprise Data Center network and providing Tier 2 support to the agencies.	
Project Duration:	**Start Date Year:** 1999	**End Date Year:** 2014
Nature of the Client:	With more than $1 billion in information technology investments annually, the Commonwealth of Pennsylvania is the equivalent of a Fortune 20 organization providing a diverse portfolio of IT services and solutions to its 12.7 million citizens and business customers. The DPH project is managed by the Office of Administration, Office for Information Technology.	

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) Outsourcing Agreement
Nature of Client Audience:	Employees and citizens of the Commonwealth of Pennsylvania
Number of Users:	73,000+ Commonwealth employees; 12.7 million citizens
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Ann Kirwan, Client Account Executive Unisys provides a total staff of 99 dedicated staff members in support of the DPH. This dedicated staff is broken into 86 (on-site) and 13 (off-site) and is down approximately 30% from peak level. Unisys provides a total staff of 39 dedicated staff members in support of the EDC.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** PA Office of Administration, Bureau of Enterprise Services **Full Address:** [redacted] **Telephone:** [redacted] **E-mail** [redacted] **Relation/Role to Project:** Mr. Salvaggio is currently the Service Portfolio and Quality Manager for the Bureau of Enterprise Services for the Governor's Office of Administration and has been in the role since May 2011. His role includes responsibility for interfacing with the Unisys management team in support of the Commonwealth's DPH contract to ensure service quality issues are addressed and that communication with agency customers are handled in timely and professional manner. **Name:** [redacted] **Title:** [redacted] **Department:** County of Franklin, Pennsylvania **Full Address:** 218 N Second Street, Chambersburg, PA 17201 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted] His role included responsibility for oversight of the Commonwealth's DPH contract with Unisys.

Unisys Project Reference 2: Defense Information Systems Agency (DISA)

Name of Client & Project Title	Defense Information Systems Agency (DISA) – Enterprise Services Directorate (ESD) ClearPath Managed Services, Mainframe and Mid-tier Technical and Application Support Services
Contract Value	$200+ million
Nature and Scope of Project:	**Project Description:** DISA's Enterprise Services Directorate provides excellent processing capability, systems management, communications and storage in support of Department of Defense services, agencies, and combatant commands. Located in 13 secure facilities strategically located throughout the world; Enterprise Services support more than three million users of more than 2,800 applications utilizing more than 25 petabytes of storage. Under the DISA Managed Services contract, Unisys provides all the required capacity and technical services to support DISA's Unisys ClearPath based workloads. The Managed Service includes Unisys ClearPath mainframes, EMC disk storage, DSI Virtual Tape, hardware maintenance, software licenses, software maintenance, and technical support. The DISA Mainframe and Mid-tier support contract requires contractor support to optimize Defense Enterprise Computing Center (DECC) Ogden operations, enhance customer support and ensure continuity of service. The scope encompasses all aspects of technical, application and operational support required by DISA DECC Ogden to include Unisys, IBM, and Server computer system hardware and software (system and functional application) management, system analysis, long-range capacity planning, problem resolution, disk and tape systems management and customer support. Unisys complies with all applicable DoD-approved architectures, programs, standards and guidelines. **Program Management Office and Service Management** **Project/Contract Management –** The Unisys Team established an accountable, integrated program management organization, staffed by experienced, quality personnel focused on supporting the DISA mission. Unisys implemented a Program Management Office (PMO) to coordinate all program efforts, leverage resources, and provide control and visibility of efforts. The Unisys approach to managing a task order is built on Program/Project Management disciplines that are blueprinted within the Unisys Services and Solutions Delivery Framework (SDF). The Unisys SDF Program Management methodology is designed as a framework to ensure that complex business needs are managed, governed and achieved. The tools and processes are designed to help effectively manage change and realize business benefits. With our Program Management framework, teams improve and control business assets through more effective governance of distributed teams and heterogeneous environments. **Availability/SLA Management –** Unisys provides a semi-annual Program Review to evaluate our service level agreements and provide our availability rates – our last availability rate (as of May 2013) was 99.998 percent. Unisys maintains a flexible, responsive, and supportive environment, engages appropriate stakeholders, provide DISA management with necessary insights, and provide the functions needed to support day-to-day and high-priority managed services objectives. **Change & Release Management –** Unisys has established a Quality Assurance organization at the Montgomery Support Center (MSC) to provide unit, regression, and

Name of Client & Project Title	Defense Information Systems Agency (DISA) – Enterprise Services Directorate (ESD) ClearPath Managed Services, Mainframe and Mid-tier Technical and Application Support Services

integration testing of all managed service components prior to deploying (releasing) to the production sites. A test environment mirroring the infrastructure of a production site is used at the MSC to conduct all unit, regression, and integration testing. Test plans are developed and are exercised for every major software component prior to release to the field. DISA customer applications and data are captured and loaded in the test environment to facilitate integration testing. Before any software updates are released to the field, the quality assurance group exercises the customer applications through automated scripts utilizing the Mercury LoadRunner tool to ensure compatibility with the fielded workloads eliminating any possible related update delays or downtime. Our release control maintains copy of every release made to our client.

Service Desk – Unisys customer service/operations support staff provide technical guidance, training, and hands-on problem resolution in resolving ITSM incidents assigned to the Service Desk. We analyze, troubleshoot, and resolve incidents that negatively affect production processing. We escalate incidents and report notifications of interruptions in accordance with documented procedures. We update incident status, track problems for turnover, and make appropriate entries into the Known Error Database for faster resolution in the future. We also assist with automated batch scheduling using both OpCon and Control M.

Technical Architecture – Unisys staff performs overall technical coordination support for the Ogden EPC and Defense DPS environments. We support the consolidation planning, system design, preparation, installation, and testing necessary to ensure minimal disruption to the overall EPC and DPS customer services. Additionally, the Unisys team supports the ongoing operational requirements such as maintenance windows and service recovery or restoration.

Account Management – Unisys provides a Customer Account Manager to oversee and support DISA Enterprise Computing Services. This position ensures the following functions are performed by the appropriate staff: Analyzing customer requirements; staffing technical solutions; preparing business case proposals to include preparing final costs, procurement, acceptance and delivery; and assisting project managers in the successful implementation of their projects.

Configuration Management – Unisys employs a Configuration Management (CM) Office that maintains copies of every product released. Unisys follows the CM standards set forth in ITIL V3 standards.

Technology Services

Transition Management – Unisys has executed transition plans at several locations with no unplanned disruption. Recently Unisys joined with DECC Ogden staff and another vendor to transition employees and workload without disruption and exceeded client expectations.

Infrastructure Management – The Unisys system administration team provides all system administrator functions for SUN Solaris and HP-UX servers maintained by DECC OKC. We support workstations and Entry-Level servers to Midframe/Midrange servers as well as High-End Servers like HP Itanium. Unisys Linux technical staff has multi-platform environment experience with the installation, configuration, and IA compliance of Linux. We support communication protocols used between IBM, Sun, and HP OEs, and the Web servers, network switches, routers, and NIPRNet WAN

Name of Client & Project Title	Defense Information Systems Agency (DISA) – Enterprise Services Directorate (ESD) ClearPath Managed Services, Mainframe and Mid-tier Technical and Application Support Services

connectivity and disaster recovery. We use the Tivoli Enterprise Management software, including Framework, Monitoring, Provisioning Manager, Netcool/OMNIbus, Enterprise Console, and Business Service Manager

Capacity Management – Unisys staff performs overall technical coordination support for the OKC Data Center environment and consolidation planning, design, preparation, installation and testing necessary to ensure DISA activities are accomplished with minimal disruption to the overall DECC OKC customer services. For example, we supported the implementation of the Defense Enterprise E-mail system, which has more than 1 million e-mail accounts and is saving the DOD millions of dollars by leveraging buying power for the entire DOD. Unisys performs sizing and capacity management to ensure DECC OKC can fulfill customer requirement in processing and storage capacity.

Disaster Recovery Planning & Testing – Critical to the operational readiness of the DECC Oklahoma City Unisys ClearPath based workloads, our team manages and address issues related to the data replication (SRDF and RecoverPoint) of ClearPath production data from Oklahoma City to the backup site in St. Louis and perform remote administration on the St. Louis COOP platforms. Unisys assists in planning and development of the Disaster Recovery (DR) process. Unisys personnel participate in the semi-annual DR testing by relocating to the St Louis site to perform touch labor as well remote system access. The Unisys System Administration team has direct access to Unisys Corporate resources, which ensures any situation that might affect ClearPath workload processing receives the appropriate attention by Unisys and our support vendors.

Security Management – The Unisys team provides IA support for the DECC Ogden environment consisting of OS2200 ClearPath, UNIX/Linux, and Windows servers, automated tape libraries, disk farms and SANs. We provide the IA Officer role for the OS2200 Dorado. Our constant oversight and IA maintenance has resulted in a spotless security record. Unisys personnel focus primarily on the security posture of the DECC Ogden Windows environment. This team was recently recognized for a clean SAE 16 audit opinion. Our seasoned professionals provide technical support for Windows XP and 2003/2008 Servers. Our IA team assists with the setup and necessary STIG application to prepare Windows servers for Enclave Connection Authority.

Performance Management & Monitoring – Unisys system management staff (one with TS/SCI) operates and administers the Unisys OS2200 mainframe processing environment. Our team designed and deployed the Automated Message System (AMS/SMART) decision support rules that automate console operations and eliminated human intervention requirements. We also design, construct, deploy, and manage configurations for the Dorado Single Point Operations environment. Unisys supports long-range capacity planning to assess hardware limitations and capabilities for new or increased workloads. Unisys provides hardware configuration and implementation for IBM, Server, and Unisys Dorado OEs that include modeling, sizing, and interpreting data produced by TORCH software.

Facilities Management – Unisys has been supporting DISA Defense Enterprise Computing Center (DECC) Ogden since 1992 and providing centralized information system processing services to DISA's diverse and geographically dispersed DoD customer base. Working under the terms of HC1028-08-D-2027-03, our Unisys Team provides support for all types of DoD customer requirements across Unisys, IBM, HPUX, Solaris, Linux, and Windows operating environments (OEs) and the backend

Name of Client & Project Title	Defense Information Systems Agency (DISA) – Enterprise Services Directorate (ESD) ClearPath Managed Services, Mainframe and Mid-tier Technical and Application Support Services

databases they drive. Our Unisys team provides the full and comprehensive range of technical services including all aspects of system design, configuration, deployment, administration and capacity planning. Our team provides DISA and DISA's customers with 24x7x365 response to their complex technical concerns.

Managed Hosting Services

Windows Support – Unisys provides Windows system administration staff supporting performance tuning, Veritas backup solutions, and RAID implementation using fiber channel storage mediums and SANs for enterprise scale networks. We verify that DECC Ogden assets comply with all IA requirements within their scope of responsibility

Storage Management – Unisys provides support for implementation and daily maintenance of large scale Storage Area Networks (SAN) and Backup capabilities in a secure environment for all sites assigned to DECC OKC. We maintain the SAN for the assigned sites/projects in a Hitachi centric environment and provide guidance to government staff in the effective management of large-scale SANs. We work with government personnel through the use of in-place Change Management (CM) processes for all modifications to the SAN infrastructure, both hardware and software and coordinate with maintenance personnel for modifications to all components of the SAN. Unisys assists in development of Logical Unit Number (LUN) presentations and all SAN troubleshooting efforts. We make all required changes to the SAN fabric using existing CM processes and assist vendor personnel in the maintenance or interruptions of the SAN fabric. Unisys monitor on a daily basis all backup activities for all responsible sites and correct all backup processing anomalies or notify SA personnel of all unresolved problems encountered with backup processing. We provide various modifications, as required, to backup routines and provide reports of those activities. Unisys performs complete and accurate weekly vaulting runs and maintains backup software catalogs. Unisys works with other technicians performing technical refresh in the backup processing environment.

ERP Hosting SAP/Oracle – Unisys supports Level 2 applications and Sustainment Liaison for SAP, BW, CRM, Portal, Crystal Enterprise, and Netegrity SiteMinder. We coordinate between development and production for releases and system changes. Unisys conducts daily application checks - perform follow-up tasks as needed. We maintain alert and event management configuration and respond to event management alerts. We monitor and respond, as appropriate, to problem management and service requests through the problem management and service request systems. Unisys provides consultative assistance related to system level activities. Unisys develops and maintains requisite documentation and standard operating instructions. Unisys monitors products within a SAP/Manugistics environment using system monitors such as Windows Event logs, log files. We monitor products within the Citrix environment using software tools, monitors, and products within the ERP environment. Report any irregularities to the TAO. Unisys personnel performs on call functions as required and be available during such periods 24x7.

UNIX Support AIX/Linux – Our UNIX system administrators (one with TS/SCI) provide all standard system administration functions for Sun Solaris/HP-UX servers maintained by DECC Ogden. The Unisys team includes recognized SMEs in both the HPUX and Solaris that represent DECC Ogden on the Server Technical Advisory Group and

Name of Client & Project Title	Defense Information Systems Agency (DISA) – Enterprise Services Directorate (ESD) ClearPath Managed Services, Mainframe and Mid-tier Technical and Application Support Services

support the most difficult issues. Our Solaris SME authored scripts that allow Service Desk personnel to correct issues without engaging technical support. Additionally, scripts were written for the high availability function saving $25,000 in software costs.

Mainframe Services – Under the DISA Mainframe and Mid-tier support contract, Unisys supports the DECC Ogden operations, enhance customer support and ensure continuity of service of the Unisys Mainframe environment. This includes support for the Unisys ClearPath and Dorado mainframe systems. Our Unisys team provides the full and comprehensive range of technical services including all aspects of system design, configuration, deployment, administration and capacity planning. Our team provides DISA and DISA's customers with 24x7x365 response to their complex technical concerns.

Security & Firewall – Unisys has provided the DECC Montgomery Consolidated Communications Center (CCC) network firewall and security support since its inception in 2003. The CCC is provides network management for DISA. Unisys remotely manages many sites throughout the US and abroad. Our duties include managing, maintaining, and troubleshooting end-to-end connectivity in a secure communications environment for all DISA supported sites, their customers, and their applications. The CCC provides 24/7/365 support for DISA and its customers. Unisys network specialists install, configure, manage, monitor, and troubleshoot all aspects of switch/router, firewall and security device. Unisys supports administration of the following devices:

- All models of Cisco switches L2 and L3 including MSFC and Sup 720.
- All models of Cisco routers including 7200 series.
- Juniper routers including VPNs.
- Cisco content switches.
- F5 Load Balancers.
- Cisco VPN routers.
- Use of Sniffer Distributed, Sniffer InfiniStream, Ethereal (Wireshark) to collect and decode network captures.

Database Services – Unisys Database Administrators support Oracle, Sybase, and MS SQL Server databases. In February 2013, we completed a major database migration to the Test, Production, and Continuity of Operations (COOP) environments without a disruption. Unisys ensures all database software components are loaded and operational for existing and new customer use. We perform pre- and post-release steps, and review, coordinate, install and trouble-shoot all application software releases with minimal disruption to the production environment. We provide system administration, system restoration backups, and COOP backups.

Capacity on Demand and Additional Services

Storage Capacity on Demand – The Capacity Services solution provides a modernized baseline of EMC VMAX disk storage capacity capable of supporting DISA's existing Unisys storage requirements. Additionally, the Capacity Services provides the capability to adapt to DISA's changing requirements. The Capacity Services solution provides DISA's Unisys environment EMC's Symmetrix V-Max series Direct Access Storage Devices (DASD). Unisys delivers a Symmetrix V-Max array to DECC Oklahoma City. Unisys provides the DECC Oklahoma City test and development environment a Symmetrix V-Max array configuration that is robust enough to support the necessary cross-boots to all supported operating environments. Unisys supports the

Name of Client & Project Title	Defense Information Systems Agency (DISA) – Enterprise Services Directorate (ESD) ClearPath Managed Services, Mainframe and Mid-tier Technical and Application Support Services
	DECC St. Louis disaster recovery environment with a Symmetrix V-Max array that supports the replicated data from DECC Oklahoma City. Unisys supports dual Symmetrix V-Max arrays to the Montgomery Support Center. This configuration provides a much-needed data replication testing capability that eliminates the need to test microcode on production systems. This environment also provides the ability to evaluate new methods of replication and their subsequent impact to DISA's environment. Each Symmetrix V-Max array includes enough storage to support the Virtual Tape Library solution.
Project Duration:	**Start Date Year:** 1983 (USAF) – Transitioned to DISA 1994 / **End Date Year:** On-going
Nature of the Client:	DISA provides information technology (IT) and communications support services.
Nature of Client Audience:	United States Armed Services, Defense Agencies, and the Office of the Secretary of Defense
Number of Users:	250,000
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** William Wright, DOD Account Manager Unisys provides approximately 30 FTE's and no consultants. A Unisys Vice President is committed 50%, Senior Manager 100%
Client Contact Information:	Note: The contact details provided for the individuals listed below will change prior to the time that reference contacts are made by the Commonwealth. Please contact Reed Laughlin via phone at (717) 526-1187 or e-mail to edward.laughlin@unisys.com to obtain the latest contact information. **Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** DECC Oklahoma City, OK **Full Address:** 8705 Industrial Blvd., Tinker AFB, OK 73145 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Direct oversight of the ClearPath Operations. **Name:** [redacted] **Title:** [redacted] **Department:** Systems Support Organization **Full Address:** 401 E. Moore Dr, Building 834 Maxwell AFB-Gunter Annex, Montgomery, AL 36114 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Provides daily oversight of the technical support for the ClearPath systems.

Unisys Project Reference 3: California State University (CSU)

Name of Client & Project Title	California State University (CSU) – Data Center Hosting Services
Contract Value	$38 Million
Nature and Scope of Project:	**Project Description** This Data Center (DC) Hosting Services contract supported the CSU Chancellor Office and 23 campuses with PeopleSoft Higher Education Applications and Oracle Databases. DC is located in Salt Lake City, Utah. Data Center Services encompasses; DC Operations, DC Technical Support, Service Desk, Change Management, Incident Management, Network, Security, PMO, Capacity and Performance Management, cRIM (converged remote infrastructure monitoring), Print Support Services, Data Backup and Support, and Disaster Recovery Services - Eagan DC. The contract was forged when the University was faced with the impact of the California Budget Crisis resulting in the need to reduce Information Technology (IT) spending while demonstrating continuous improvement in service delivery. This contract included reassessing IT support to use emerging technologies and to make certain that their IT Infrastructure would support their aggressive software roadmap. **Client Quote** *"With a strong partnership built over the last ten years, Unisys understands our unique needs and requirements. They have given us agility to cost effectively leverage new technologies though Cloud computing and application outsourcing."* [redacted], *California State University* **Services Management** Implemented improvements for Disaster Recovery through the use of images vs. servers reducing recovery point objectives (RPOs) and recovery time objectives (RTOs). Developed a partnership to ensure existing, consistent, effective, and efficient services while also looking towards the future bringing forward new solution opportunities through a mutually beneficial Governance process. **Technical Services** Agility to handle the demand of academic semester/ and quarterly course scheduling peaks throughout the year with flexible computing resources and cost models. Contract provides for a baseline (fixed amount) of compute and storage resources at a fixed price, yet at the same time the flexibility to burst through the cloud services and utilize additional compute and storage resources for variable rates and variable periods of time. **Managed Hosting Services** Delivered flexible Unisys Cloud services (server/storage); scaled up/down for campus registration peaks, year–end processing cycles, and Disaster Recovery.

Name of Client & Project Title	California State University (CSU) – Data Center Hosting Services	
	Unisys is hosting the applications and databases supporting CSU's Oracle/PeopleSoft Higher Education suite.	
Project Duration:	**Start Date Year:** 2001	**End Date Year:** 2016
Nature of the Client:	Largest Public University System in the United States	
Nature of Client Audience:	Students, Faculty, and Administration Staff	
Number of Users:	450,000 Students and 40,000 Employees	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Connie Vaughan, Unisys Client Account Director **Dedicated staff:** 9 (on-site); 35 (off-site)	
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Common Management System Technical Support **Full Address:** CSU Chancellor's Office, Information Technology Services (ITS) 401 Golden Shore, 3rd Floor, Long Beach, CA 90802 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted]. Has direct management contact for Unisys Outsourcing Contract. **Name:** [redacted] **Title:** [redacted] **Department:** Contract Services & Procurement **Full Address:** CSU Chancellor's Office, Contract Services & Procurement 401 Golden Shore, 5th Floor, Long Beach, CA 90802 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Contract Officer that negotiated contract on behalf of CSU and provides ongoing contractual support for amendments and change orders.	

Unisys Project Reference 4: Internal Revenue Service (IRS)

Name of Client & Project Title	Internal Revenue Service (IRS) Service Center Support System (SCSS)
Contract Value	$500+ million
Nature and Scope of Project:	**Project Description:** Under the Service Center Support System (SCSS) contract, Unisys provides maintenance and enhancement of the IRS Tier 1 (mainframe) computing environment. These systems support: (1) integrated computer systems and databases; (2) nationwide access to taxpayer information; (3) online updates to taxpayer information; and (4) authoritative data access to support ongoing case processing. These are the core systems used by the IRS to process the collection of more than two trillion dollars annually. Unisys role as the prime contractor is to provide full systems life cycle maintenance and upgrade of system capabilities in response to evolving IRS processing requirements and the availability of new innovative technology. Over the past 17 years, Unisys has supported the IRS in maintaining and enhancing their mainframe-processing environment. This includes 3 IBM Mainframes (25 images) and 2 Unisys Mainframes (8 images), at the main Computing Centers in Martinsburg, WV and Memphis TN. These platforms host the Integrated Data Retrieval System, providing IRS employees with instantaneous access to taxpayer accounts. This facilitates better, faster, more responsive and more personal service to the taxpayer. The platforms also host the Security and Communications Systems, which provides identification, authorization and audit to prevent unauthorized disclosure of taxpayer information as well as unauthorized access, inspection, and changes. The Computer Assisted Publishing System also runs on the IRS Tier 1 platforms providing the computer resources to maintain the central publishing and distribution capability for IRS published materials. In conjunction with the IRS, we have implemented more than 140 System/Service Initiatives (S/SIs), improving the mainframe hardware and software capabilities with greater security, capacity, and efficiency. We have tailored our maintenance processes to meet the demands of the IRS tax processing seasons and provided highly qualified staff and consultant support. Over the years, our relationships with IRS, IBM, and OEM vendors have grown to facilitate better communications and coordination to meet evolving mission requirements. **Technical Services** Unisys provides support services for the Unisys and IBM environments and storage solutions from IBM, ViON/Hitachi, Oracle, and EMC. Support is also provided for computer room operations, systems operations, configuration management, inter-computer communications, performance monitoring and tuning, system backup and recovery, database management, storage management, data protection, disaster recovery test support, and information security. We have provided the required onsite support with 24x7x365 availability as required. **Facilities Management** Although Unisys does not have direct responsibility for IRS facilities management, we work very closely with the IRS team to make sure that proper planning is conducted to address power and HVAC requirements when implementing new solutions

Name of Client & Project Title	Internal Revenue Service (IRS) Service Center Support System (SCSS)	
	Capacity on Demand and Additional Services Throughout the contract, Unisys has proposed improvements to the SCSS operating environment. These improvements have been for technology enhancement, technology renewal, to satisfy increased requirements or to introduce cost effective innovation. Unisys has worked with the IRS to deliver more than 140 SSIs. These have ranged from the major mainframe consolidation to peripheral device integrations. Recently, these have included storage upgrades to allow virtual tape sharing between the IBM and Unisys platforms, and high volume inter-computer communications that have been tested to support up to 1,500 transactions per second. **Data Center Architecture** Our maintenance support includes apprising the IRS of the mainframe systems technology roadmaps and new capabilities. A major task executed under this vehicle resulted in the consolidation of more than 60 mainframes in 10 IRS Service Centers to 8 mainframes in three Computing Centers. Subsequent consolidation has the pipeline processing workload running on five mainframe systems in two Computing Centers. The enterprise consolidation resulted in hundreds of millions of dollars in cost savings over the life on the contract.	
Project Duration:	**Start Date Year: 1995**	**End Date Year:** On-going
Nature of the Client:	IRS Tier 1 (mainframe) operations	
Nature of Client Audience:	IRS IBM and Unisys Mainframe Branch and the Integrated Data Retrieval System end users	
Number of Users:	50,000	
# & Composition of Vendor Employees & Consultants Assigned:	The team composition varies depending on the number and scope of System /Service Initiatives in progress. During steady state operations, six Unisys employees and six consultants are assigned to the program. Staff are assigned as required to meet delivery commitments. At the peak of consolidation, more than 75 employees and 50 subcontractors were actively engaged in delivering solutions.	
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Internal Revenue Service **Full Address:** 6009 Oxon Hill Road Oxon Hill, MD 20745 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted]

Unisys Project Reference 5: City of Minneapolis

Name of Client & Project Title	City of Minneapolis – Information Technology (IT) Infrastructure Outsourcing
Contract Value	$130 million
Nature and Scope of Project:	**Project Description** In January 2003, the City of Minneapolis awarded Unisys Corporation a seven-year Information Technology (IT) outsourcing contract to manage the City's complete IT infrastructure, from the data center to desktops and mobile devices. Under the contract, Unisys supports multiple city agencies, including the Mayor's Office, City Council, Police, Fire Departments, and the Office of Public Works. In 2011, tech-savvy employees wanted to start using mobile devices in the workplace, the City consulted Unisys for assistance in building a mobility solution to support, govern, and secure wireless devices. The first phase of the mobility initiative—branded Mobility 1.0—completed in 3 months and focused on delivering services specific to the Apple iOS platform with immediate emphasis on iPads and iPad access to the City's infrastructure through VPN clients. The City of Minneapolis determined it was spending too much time and money on routine IT infrastructure management, remedial maintenance, network management, and desktop tasks. The City's IT department found itself being diverted from its core mission of providing information services and planning for better use of e-government systems for all users. Like many businesses, the City faced the challenge of finding new ways to support constituents, achieve cost and efficiency savings, while being able to plan strategically for the future across a multitude of departments. In 2011, the City consulted with Unisys to advance its mobility goals while proactively addressing security risks, management issues, and standards for use that arise when workers introduce mobile devices into city government offices. **Client Quote** *"Our outsourcing relationship with Unisys has enabled city government to realize significant operational efficiencies at a reduced IT cost."* *"We appreciate Unisys flexibility, cost consciousness and IT expertise. Unisys is working closely with the city as we unfold mobile application standards and develop use cases for mobility, such as mobile access to city services by citizens and partners."* [redacted] **Program Management Office and Service Management** A dedicated Unisys Program Management Office coordinates delivery of the services. This single-point-of-contact approach streamlines all service requests, based on Unisys' ITIL/Six Sigma framework, and is a key best practice that Unisys brings to the project. • Data center administration and management • Network and systems monitoring and management

Name of Client & Project Title	City of Minneapolis – Information Technology (IT) Infrastructure Outsourcing

In addition to the initial base services offered, Unisys is also responsible for the managed services to support the City's 311 (non-emergency) and Computer Aided Dispatch 911 (emergency) environment

Technology Services

Technologies supported include, Windows, UNIX, Unisys, EMC, Oracle, and the Windows Office Suite.

- Desktop support services, including desktops, laptops, peripherals; and iPads
- Service Desk services
- Security Analytics and vulnerability services
- Disaster Recovery services
- Technology refresh of laptops, desktops, and servers

Recent secure mobility solutions continue to provide benefits to the city that includes:

- **Time:** Met aggressive timeline for phasing in mobility services
- **Cost:** Leveraged the city's existing LAN infrastructure and current internet wireless provider; a safer, more efficient wireless network at a competitive price; automated management and support services that scale with device numbers; streamlined device deployment through certificate gateway and affordable application deployment via the Apple Volume Purchase Plan
- **Productivity:** Synchronization of mobile devices with desktops through ActiveSync, iPad access to shared drives, upgraded Cisco VPN solution to support roaming workers
- **Security:** Policy management through the service desk and MDM platform system, VPNs and wireless connectivity backed by Cisco security

Capacity on Demand & Additional Services

Unisys delivered Private Secure Cloud Computing and Virtual Storage. This scalable solution provided on-shore support for 85 iPads with ability to accommodate an unlimited number of devices as City of Minneapolis workers begin exploiting mobility-related workflow changes. The city was expecting 10 percent of the municipal workforce to go mobile within the next two years.

Managed Hosting Services

Unisys took ownership of the City's existing servers, storage, PCs and printers. The servers and storage were moved to the Unisys IT Outsourcing Service Centers in Eagan, Minnesota and Roseville, Minnesota. This hardened data center facility provides 24x7x365 availability and application support in a secure, high performance, highly-scalable environment. This transition was accomplished in a record 10 months instead of the projected 18 to 24 months.

Today, Unisys manages and supports over 200 servers and 3,000 desktops for the City. Included among the systems being hosted are the servers supporting the City's Web development and client-facing production Web services servers. Unisys provides full managed hosting services for these servers.

Name of Client & Project Title	City of Minneapolis – Information Technology (IT) Infrastructure Outsourcing	
	Benefits Independent Audit of Unisys Performance: Excipio, a third party consulting firm, was hired by the City to provide an external benchmark of the City's IT department and its contract with Unisys. Excipio reported the following: • The City's contract with Unisys provided the City with an estimated savings of $18.2 million over the contract life • On its own, the City could not have advanced to its current IT state. The City is in a much better place with a more secure IT environment for having outsourced to Unisys • Overall IT process and performance have improved as a result of working with Unisys. There is now an ITIL framework, service level management, stabilized infrastructure, continued innovation, and new tools are introduced on a regular basis. • Outsourcing to Unisys has freed the City's internal IT staff to concentrate on strategic initiatives to better serve city employees and constituents. For example, the deployment of a wireless network that covers all 59 square miles of Minneapolis, providing residents, businesses, and visitors with wireless broadband access anywhere in the city. Additionally, the City is now an aligned organization that drives innovation through technology	
Project Duration:	**Start Date Year:** 2003	**End Date Year:** On-going
Nature of the Client:	The City of Minneapolis is a multi-stakeholder client with a clear vision: to be a world-class virtual city with public services available 24x7x365. Minneapolis and its surrounding cities make up the 16th largest metropolitan area in the country. Its thriving downtown area is home to several Fortune 500 companies.	
Nature of Client Audience:	City of Minneapolis employees	
Number of Users:	3,600 employees at all levels of City of Minneapolis municipal government that provide services to 382,000 citizens	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Jeff Wilke, Unisys Client Account Executive Total staff during start-up was approximately 70 people, approximately 60 staff at operational peak, and ongoing current staff level of 30. This dedicated staff is broken into 15 (on-site) and 15 (off-site).

Unisys Project Reference 6: American Red Cross (ARC)

Name of Client & Project Title	American Red Cross – Information Technology Infrastructure Outsourcing, End User Outsourcing, and Support Services
Contract Value	$80 million
Nature and Scope of Project:	**Project Description** The American Red Cross (ARC) has entrusted to Unisys its complete IT infrastructure for management, service desk, and customer support from the desktop and mobile devices up through and including transition of Data Center operations, applications and systems from the ARC located in the Chicago area into the Unisys Eagan Data Center facility. Disaster recovery is also being provided facilitated out of the Unisys Data Center located in Salt Lake City UT. Operational standards are based upon an ITIL V3 framework. ITSM is used for Cross Functional coordination and ITIL process management and includes Asset Management. Unisys is also responsible for mobility and distributed computing for ARC end user personnel and their devices. American Red Cross sought full Information Technology Operations (ITO) support for their field operations including Incident, Change and Problem Management, Asset and Configuration Management, Service Desk, End User Services (EUS) / Field Services, and Quality Systems Management. Unisys mission is to provide consistent, efficient, and reliable global delivery capabilities for Information Technology (IT) managed services that support the Red Cross's humanitarian mission and assist Red Cross workers in providing rapid, efficient response to people in need. **Client Quote** *"With Unisys as our services partner, we look forward to gaining efficiencies that reduce operating costs and bring new tools and technologies to our end users," said Doug Greene, vice president for Enterprise Technology of the American Red Cross. "This partnership also puts into place the foundation for us to leverage cloud services, which is in line with our strategic direction."* **Service Management** Unisys provides a full range of customer support and data center managed services to support approximately 20,000 Red Cross workers throughout the United States and Puerto Rico. The contract includes on-site services, IT asset management, and service desk support delivered through Unisys Managed Services Centers in Salt Lake City, Utah, Eagan, Minnesota, and Rochester, New York. Unisys delivers these end-user services in an integrated IT services management (ITSM) environment that enables Red Cross workers to use the most convenient channel to obtain support, including telephone, instant messaging, e-mail and the Web. **Technical Services** Unisys provides data center services from its facility in Eagan, Minnesota, with disaster recovery backup in Salt Lake City, Utah. The technical services provided included transition of services, applications and servers from the ARC datacenter located near Chicago into the Unisys data center in Eagan. This also included the implementation of Unisys remote infrastructure management services, that use automated capabilities to monitor and correlate events across all segments of the managed infrastructure – from servers to

Name of Client & Project Title	American Red Cross – Information Technology Infrastructure Outsourcing, End User Outsourcing, and Support Services

mobile devices - to orchestrate both pre-emptive and preventive action against potential IT faults.

Unisys provides enterprise-wide support to Red Cross in the following major areas: Customer Support Services, Data Center, Quality Management, and Cross Functional Services. All services are monitored under negotiated SLAs and reported on monthly.

North American AIX Center of Expertise:

The ARC team was able to leverage best practice, transition knowledge and lessons learned through interaction with the Commonwealth's AIX support team all of whom are members of Unisys NA AIX Center of expertise. The Commonwealth's AIX team shared valuable AIX best practice based in part from lessons learn from the IES AIX Transition.

Customer Support Services

Service Desk

- In June 2012, Unisys took over operations of Red Cross service desk activities and has implemented the BMC Remedy IT Service Management (ITSM) platform for support of non-regulated service desk incidents.
- Unisys also operates the Red Cross' internal Clarify service desk platform for reporting regulated incidents.

Desktop Support Services

- Desktop image management, packaging, and remote implementation.
- Patching for all desktops and servers
- Dispatch and DC HQ onsite Break/fix services HQ desktops (3,000)
- Install, Move, Add, Change, and Disposal.

Data Center

- Unisys hosts Red Cross' data center at its Eagan Minnesota data center facility.
- Unisys provides operations and management for:
  - Servers
  - Storage
  - Local Area Network.
  - Firewalls
  - Content switches
  - Tape Backup Facilities
- Cross Functional Services
  - Availability Reporting
  - Capacity Management, Trend Analysis, and Forecasting (currently in implementation phase)
  - Backup and Restore
  - OS Maintenance
  - Tape Library management
- Key Applications Platforms
  - Microsoft Office, SQL Server, SharePoint, specialized Biomedical applications for Blood Manufacturing, Donor Management, and Blood drive Campaigns
  - Operating Platform:

Unisys Project Reference 7: London Metropolitan Police

Name of Client & Project Title	London Metropolitan Police Service – Information, Communication and Technology (ICT) Contract
Contract Value	$34 million (approximately)
Nature and Scope of Project:	**Project Description** The Metropolitan Police Service (MPS) employs over 40,000 police officers and staff to police the 7.2 million residents of London's 620 square miles. The MPS ICT contract was awarded in December 2005 to Capgemini, with Unisys and BT as key partners. The contract was for 7 years, and has subsequently been extended a further 3 years until 2015. • Applications Management • Hosting (CRIS) and DR services • Break/ fix • Installations, moves, additions & changes • Managed data center space The Unisys applications teams are responsible for managing all application related incidents reported through the Capgemini service desk, managing the third party product suppliers, user acceptance testing, release management and pro active monitoring of all applications services. The team supports over 60 applications and handles some 2,000 incidents per month. Most of the applications are provided by third parties, with the exception of CRIS, CEC, SAP and a few others. Unisys is responsible for managing the incidents and problems passed to third parties, including the relationship with all third parties. The key application areas are Crime recording, Intelligence and all SAP landscapes. The CRIS (Crime recording Information System) application is used to hold details of all crimes committed in London and capabilities to analyze the data for operational business reasons. The Intelligence applications are used for proactive crime analysis and prevention, and for operational deployment. The SAP services are for back office functions and cater to finance management, procurement, invoicing and purchase orders with a data warehouse for analysis needs. The break fix element of the contract includes all hardware maintenance and IMAC services across the entire MPS estate, which includes over 35,000 desktops/laptops, over 2,000 servers, and a quantity of printers and multi-functional devices (MFDs). As part of the overall service, Unisys also provides a Managed Data Centre service, supporting both live and failover systems on a 24x7 basis. Additionally, as part of ongoing technical refresh activities, Unisys Architects design and implement improved system and data centre architectures in line with emerging technologies. A typical recent example of this, is a complete system update moving to a fully virtualized live and failover capability for the MPS' critical Crime Recording Information System. The above services are all delivered to strict service levels that are consistently met by dedicated teams aligned with each area. In addition to standard delivery, Unisys also provides Project services, which are run and overseen by an integrated PMO function. Under a separate contractual arrangement directly with the Metropolitan Police Service, Unisys provides a complete managed service for the mission critical 24x7 Command and Control (C&C) system. This includes data centre hosting with a full DR capability and a complete technology refresh was performed within the last 5 years. Services provided for C&C range from computer operations and service desk, platform support and system

Name of Client & Project Title	London Metropolitan Police Service – Information, Communication and Technology (ICT) Contract
	software upgrades, through applications support and fault analysis to development of changes and enhancements to the applications, which include Call Handling, Dispatch, GIS and an MIS application. The C&C system serves more than 10,000 users with up to 1,000 concurrent users and provides sub-second response times and availability in excess of 99.9% in a high volume transaction environment. Applications are hosted on a mixture of platforms including Windows, UNIX and Unisys mainframe (ClearPath) with a variety of programming languages ranging from Cobol and Fortran to C, C#, Java and JavaScript. Database management systems include Oracle and SQL Server as well as Unisys proprietary DBMS.
Project Duration:	**Start Date Year:** 2005 — **End Date Year:** 2015
Nature of the Client:	System Integrator working on behalf of Metropolitan Police Service
Nature of Client Audience:	Metropolitan Police officers or civilians employed by the police service
Number of Users:	More than 35,000
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Permanently resourced team of technical design, integration, development, test and management resources
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** MPS ICT Account **Full Address:** 95-97 Wandsworth Road, London, SW8 2HG United Kingdom **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Capgemini is the Prime Contractor delivering large ICT outsource to Met Police, with Unisys as a material Sub-Contractor with total responsibility for the applications management and break fix services [redacted] **Name:** [redacted] **Title:** [redacted] **Department:** Department of Information **Full Address:** Edinburgh House 170 Kennington Lane, London, SE11 5DP, UK **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted]

4.5.2 IBM Project References

IBM Project Reference 1: Commonwealth of Pennsylvania (Subcontractor to Unisys)

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (Subcontractor to Unisys)
Contract Value	$500 million (Total IBM contract value in excess of since 1999)
Nature and Scope of Project:	**Project Description** In 1999, the Commonwealth contracted a consortium of Information Technology (IT) providers, led by Unisys and supported by IBM, to provide an end-to-end outsourcing solution. The unified IT team consolidated data centers and established the Data PowerHouse (DPH), one centralized data center to support the Commonwealth's agencies. In 2002, the DPH project was named "Most Strategic" by the Outsourcing Journal in its Editor's Choice Awards, and the Commonwealth extended its contract with Unisys and its team of IT providers. In 2008, the Commonwealth still satisfied with the operations of its centralized data center, yet feeling budget pressures, initiated a contract renegotiation. DPH services were modernized, costs reduced and the contract extended as a result of this renegotiation. IBM has been a major subcontractor on the Commonwealth's DPH initiative since 1999. IBM's related competencies and experience from major engagements in the Commonwealth include the following. **Program Management Office and Service Management** IBM has combined leading management disciplines with experience and expertise to deliver high levels of customer service to both the routine and unique needs of the Commonwealth. IBM consistently demonstrated the skills and experience to perform all aspects of the outsourcing services required by the Commonwealth. IBM has made particular efforts to understand and support the Commonwealth's business requirements and culture through long-term retention of account team personnel. **PMO Program Governance –** IBM established a PMO, which interacted with Unisys to provide overall governance of the program. **Managed Services –** IBM provided all managed service responsibility including problem, change and availability management and capacity planning. **Technical Services** IBM was also responsible for Service Level Agreements (SLAs) associated with the technical environment it managed. The technical solution includes 94 Servers configured with AIX and Windows 2000 operating systems and supporting the SAP applications and Oracle databases. **Facilities Management** IBM provided Facilities Management (FM ERP) services for data center operations management of the Commonwealth of Pennsylvania's SAP R/3 infrastructure from 2002 thru 2005 at which time it was migrated over to the Integrated Enterprise System (IES) services described above. IBM services were delivered on customer premises with customer owned hardware and software.

Manage Hosting Services

Under this contract, IBM provides long-term managed services for mainframe and midrange based systems supporting enterprise applications at several major Commonwealth agencies.

IES - IBM provided midrange data center operations services in support of the Commonwealth IES from 2005 through 2010 at which time the services were brought into the DPH. These services supported the IES SAP –ERP environment, which provided budget, finance, payroll, procurement and human resource functions to most of the Commonwealth agencies.

Additional Services

In 1999, at the start of the DPH contract, there were eight (8) agencies running on separate enterprise server platforms in agency operated data centers; IBM successfully transitioned them to a single data center, multiple processor environment and coordinated upgrades as forecasted capacity requirements were needed. The upgrades that brought about innovative changes are highlighted below.

In 2002, two IBM 2064 processors were installed. The Integrated Facility for Linux (IFL) was introduced into the DPH via one of those processors. The IFL is a processor dedicated to Linux workloads on IBM System z servers. The IFL processor enables agencies to add processing capacity exclusively for Linux workloads: consolidations, re-deployments and new deployments. The use of an IFL can improve the IT economics by consolidating, re-deploying existing and deploying new workloads to reduce expenses in the areas of operational efforts, energy, floor space, and software license fees.

DOT began using the IFL in earnest for their Centric application development. Over time the capacity requirements for zLinux on the enterprise server have grown. Today there are a total of five IFLs on the processor, four of which support the application workload and one is dedicated to system/application monitoring environment.

In 2007 the IBM 2094 processor was installed and the z Integrated Information Processor (zIIP) was introduced into the DPH. The zIIP processor, like the IFL is a special purpose processor. It was initially introduced to relieve the general enterprise server central processors (CPs) of specific DB2 processing loads, but currently is used to offload other z/OS workloads. By relieving the general CP of particular workloads, they often lead to a higher workload throughput at reduced license fees. DB2 for z/OS was the first application to exploit the zIIP, but now there are several IBM and non-IBM products and technologies that have taken advantage of that exploitation.

2008 brought about more changes within the DPH, one of those being a consolidation of all remaining agency workload onto single IBM 2097 processor. The Commonwealth received a "technology dividend" from this upgrade in two ways:

1 The IFLs and zIIP carried over to the new processor at zero cost but provided more capacity
2 IBM software allowed for more capacity per measured unit

At this time two other new functions were implemented, Group Capacity settings for the larger agencies and sub-capacity software licensing was implemented where applicable. The changes resulted in additional cost savings for the agencies.

Benefits of the Solution

Following the system virtualization and data center refresh, Unisys expects the Commonwealth to save upwards of $240 million. Additionally, the Worldwide Strategic Outsourcing team's services, combined with the modernized IT environment, will enable

	the Commonwealth's IT staff to focus on strategic tasks and problem solving, instead of application management on a sprawling environment. **Data Center Architecture** IBM's transformation of the infrastructure will help improve performance for the Commonwealth's end users and business operations.	
Project Duration:	**Start Date Year:** 1999	**End Date Year:** 2014
Nature of the Client:	IBM and Unisys have collaborated to provide managed services for the Commonwealth's enterprise computing services since September 1, 1999. During that time we gained valuable experience in delivering quality services while continually seeking out technology improvements and IT cost savings over the life of the contract.	
Nature of Client Audience:	Commonwealth of Pennsylvania agencies who participate in the DPH and the constituents of the Commonwealth	
Number of Users:	8 million Commonwealth constituents	
# & Composition of Vendor Employees & Consultants Assigned:	The services provided with approximately 64 Full Time Equivalent (FTE) personnel, primarily located in the Commonwealth. During start-up and peak times, the level of effort was up to 135 FTEs.	
Client Contact Information:	Note: IBM is a direct subcontractor to Unisys for the DPH project. Because of this unique relationship, Mrs. Kirwan-Orner can provide direct information related to the relationship between IBM and Unisys under the DPH project. Mr. Crager can provide background perspective as it relates to the services IBM and Unisys provided to the Commonwealth of Pennsylvania under the DPH project. **Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Unisys Corporation, Global Managed Services **Full Address:** 4750 Lindle Road, 3rd Floor, Harrisburg, PA 17111-2428 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted] is has operational and contractual responsibility for the contract that Unisys has with IBM. **Name:** [redacted] **Title:** [redacted] **Department:** County of Franklin, Pennsylvania **Full Address:** 218 N Second Street, Chambersburg, PA 17201 **Telephone:** [redacted] **E-mail** [redacted] **Relation/Role to Project** [redacted] his included work done by IBM under that contract.	

IBM Project Reference 2: State of Georgia

Name of Client & Project Title	State of Georgia – Georgia Technology Authority
Contract Value	$1 billion (over 10 years – 8 base and 2 option years)
Nature and Scope of Project:	**Project Description** The Georgia Technology Authority (GTA) was established on July 1, 2000 to provide the delivery of IT infrastructure services to the state's 85 Executive Branch agencies. In 2007, the State of Georgia conducted a third-party assessment of the state's IT operations and documented serious and chronic problems throughout state government which included aging infrastructure, the inability to meet minimum industry standards, the lack of processes and skills, little coordination of spending, and deficiencies in disaster recovery. Georgia determined that their most efficient method for addressing their challenges was to partner with private-sector leaders in technology service delivery. The State awarded an 8-year contract for IT Infrastructure Services to IBM. The contract includes mainframes; distributed computing servers and associated storage; tape; network connectivity and security; print; service desk; end-user computing and disaster recovery. The result translated into saving money, staying current with modern technology and ensuring that confidential data remains safe and secure from outside threats. IBM provides a scope of service to the State of Georgia that is very similar to that desired by the Commonwealth of Pennsylvania and includes. **Program Management Office and Management Service** Common Information Technology Infrastructure Library (ITIL) based systems management services including incident and problem management, performance management, and capacity management: • Physical database support of Oracle, SQL Server, MySQL, DB2 • Support of AD, eDirectory • Messaging software including MS Exchange, Novell GroupWise and Blackberry. • Web middleware support including WAS, IIS, Net Framework, IBM HTTP Server, and Sun One Web Server. • High-availability cluster services • Server virtualization. • Build and harden server security according to agreed-upon security standards and audit compliance posture. • Manage backup recovery, tape (on/off site) and disaster recovery. • Manage SAN storage area networks (IBM, EMC, and NAS). • Implement standard monitoring tools and provide 24x7 monitoring. **Technology Services** IBM provides mainframe support of UNIX/Windows servers. This includes lifecycle management (acquisition, installation, de-installation, and disposal) and ongoing support (OS patching and hardware break/fix). Operating systems supported include UNIX, Solaris, AIX, Linux, Novell, and Windows 2000, 2003, 2008, and Vista On transformation, systems consolidated into a State of Georgia data center supported by IBM.

Name of Client & Project Title	State of Georgia – Georgia Technology Authority	
Project Duration:	**Start Date Year:** 2009	**End Date Year:** Ongoing
Nature of the Client:	Georgia Technology Authority (GTA) provides the delivery of IT infrastructure services to the state's 85 executive branch agencies.	
Nature of Client Audience:	The clients are the Chief Information Officers and Chief Technology Officers (CIOs/CTOs) of the agencies, their IT staff and end users.	
Number of Users:	There are approximately 45,000 end users of the environment in 20 participating agencies.	
# & Composition of Vendor Employees & Consultants Assigned:	IBM has a team of more than 500 full-time equivalents supporting the services. We partner with Dell for end user support, AT&T for network support, and Xerox for managed print services. All other services are provided directly by IBM. IBM has completed transition and is approximately 50 percent complete with transformation. Completion of transformation is targeted for 2014. Transformation includes standardization of e-mail systems, implementation of AD, file server and application server, and other activities. IBM supported or supports the legacy environment prior to its transformation and supports the transformed environment.	
Client Contact Information:	Note: The Georgia Technology Authority has requested that all reference request contacts be coordinated through their IBM account representative. Please contact one of the following individuals to facilitate a reference discussion with the Georgia Technology Authority. **Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** IBM Global Technology Services **Full Address:** 47 Trinity Ave., Atlanta, Georgia 30334 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Overall responsibility for the project and client relationship **Name:** [redacted] **Title:** [redacted] **Department:** IBM Global Technology Services **Full Address:** 47 Trinity Ave, Atlanta, Georgia 30334 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Business office management	

IBM Project Reference 3: State of Washington

Name of Client & Project Title	State of Washington, Automated Client Eligibility System (ACES) Maintenance and Operations
Contract Value	$20 million (annually)
Nature and Scope of Project:	**Project Description** The Automated Client Eligibility System (ACES) is a statewide application used to determine eligibility and issue benefits for social service (cash/food/ medical) recipients in the state of Washington. IBM developed and implemented ACES based on an existing system transferred from another state. ACES has been in production statewide since April of 1996. Since the initial install, ACES has had many enhancements and innovations. Web-based development was introduced in phases. Migrating to a Web-based approach has become a priority, and projects are being defined that will move existing legacy-based functions to the Web more quickly. A new client-facing portal was installed in 2010. It provides "am I eligible" preliminary calculations, applications, and access to a client benefit account with result details. IBM is responsible for three primary service areas covered by this contract. They are Application Development and Maintenance (ADM) for legacy systems, ADM for the ACES Web environment and Technical Support, which is responsible for the hardware and software infrastructure that support the ACES legacy components and the ACES online Web components. For both the core legacy system and the Web environment, IBM delivers 24x7 Production Control coverage for the ACES system running overnight batch jobs, coordinates printed output, and coordinates input/output to interfacing agencies, including Spell out first use EBT and EFT, The ACES system, supported by IBM, has a dedicated mainframe environment and a Web multi-server environment housed at the State of Washington Consolidated Technical Services (CTS) facility. The scope of this contract for the State of Washington is very similar to the scope desired by the Commonwealth of Pennsylvania, for example, both contracts include: • Mainframe support • Support of z/OS and Linux servers: • Life cycle management — acquisition, installation, de-installation, and disposal • Ongoing support: OS patching, hardware break/fix • Operating Systems supported include z/OS and, SUSE Linux. • Common ITIL-based systems management services including incident and problem management, performance management and capacity management. • Physical database support of IMS and DB2 • Support of RACF security and LDAP • Messaging software including MQ • Web middleware support including WAS, IBM HTTP Server, and ITCAMS for monitoring • High-availability cluster services • Server virtualization • Build and harden server security according to agreed-upon security standards and audit compliance posture

Name of Client & Project Title	State of Washington, Automated Client Eligibility System (ACES) Maintenance and Operations

- Manage backup recovery, tape (on/off site) and disaster recovery.
- Manage storage.
- Implement standard monitoring tools and provide monitoring.

Program Management Office and Service Management:

The IBM team is integrated with state teams to provide the technical focused skills of the development life cycle. Mature processes have been defined to manage the content of the quarterly release of the application. IBM also provides several Project Managers to oversee large work efforts and special projects. The base contract is performance based and includes Service Level Agreements (SLAs) for availability, response times, completion of batch jobs and attention to Sev1 Problems.

Technical Services

IBM supports a dedicated Mainframe environment for the account. Capacity reports and trending are provided on a monthly basis and IBM works with the customer to define and recommend architecture changes to meet future needs and strategy.

Facilities Management

The ACES Mainframe environment is located at a facility that is managed by a centralized state agency, Consolidated CTS. The IBM team works closely with CTS when environment changes are required. CTS also provides other hardware operations, including printer services and handling of any tape cartridges.

Managed Hosting Services

IBM manages the Mainframe, which includes a z/OS and z/VM Linux platform. The legacy functions of the application run in z/OS and Web-based functions run in Linux. Services include currency of all system software, installation and configuration. The operation environment is monitored and problems are diagnosed and resolved. The IBM team also manages infrastructure running in WINTEL, but the state is responsible for the hardware and base OS.

Capacity on Demand and Additional Services

This application has a dedicated environment and consistent growth patterns. IBM tracks system usage, plans future capacity, and makes recommendations around budget cycles. We have seen significant growth and need for Linux servers, but the virtual definition can be handled quickly to meet demand. Storage needs are also planned in advance and usage is tracked closely.

Although we recruit and build skills on the team, we have several recent instances where we have turned to Lab services for short-term demand and knowledge transfer. We recently adopted a new approach for data replication between IMS and DB2 that includes an ETL layer using Information Server DataStage. We brought in a replication and DataStage expert to assist the team. We have also turned to Lab Services to speed out adoption of Cognos for Business Intelligence needs and WODM (ILOG) for business rules management

Name of Client & Project Title	State of Washington, Automated Client Eligibility System (ACES) Maintenance and Operations
	Data Center Architecture The ACES Mainframe environment is integrated with a state Data Center managed by CTS. CTS also house the WINTEL server farm. The application support includes 24x7 support for a customer facing internet portal (Washington Connection) and will soon include the high availability demands for the Health Benefit Exchange (HBE) eligibility service. IBM and the ACES team participate in semi-annual disaster recovery test that are coordinated by CTS.
Project Duration:	**Start Date Year: 1993** (latest contract started 07/01/11) — **End Date Year:** Ongoing
Nature of the Client:	IBM partners with the IT Solutions unit of the Economic Services Administration to maintain and operate the ACES application. This administration is the largest in the Department of Social and Health Services (DSHS). This organization is responsible for administering benefits for multiple economic assistance programs, including Food Assistance, Cash and Medical Assistance.
Nature of Client Audience:	There are many stakeholders and business partners for this application, but the primary audience includes financial workers in field offices across the state and the citizens receiving benefits.
Number of Users:	5,000 Financial Workers
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** The initial project to transfer, modify and install the ACES application included several services that are not part of the ongoing steady-state services. The state did not have all the skills and infrastructure in place at that time, so IBM provided an off-site development environment, established the state network, and supported the help desk and testing. All of these functions have transitioned to the state. The current team provides PM, design, development and implementation as part of the development cycle. This is the focus for about 60 of the total 81 headcount provided in the base contract. This includes about a dozen Web (JAVA) developers, BI resources, and architects. The Technical Support team includes a dozen staff that support system software, middleware and DBAs. A third team of 5 staff provides 24x7 production control monitoring and batch cycle operations. The remaining positions are administrative in nature. At this time there are 20 additional staff that are augmenting the team to deliver the system and application changes required for the HBE eligibility service that is part of the federal Affordable Care Act.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** DSHS ESA IT Solutions **Full Address:** DSHS ESA PO Box 45893 Olympia, WA 98504-5893 **Telephone:** [redacted] **E-mail:** [redacted]

Name of Client & Project Title	State of Washington, Automated Client Eligibility System (ACES) Maintenance and Operations
	Relation/Role to Project: Overall responsibility for the project and contract administrator **Name:** [redacted] **Title:** [redacted] **Department:** DSHS ESA IT Solutions **Full Address:** DSHS ESA PO Box 45893 Olympia, WA 98504-5893 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Day-to-day administration of business and operations.

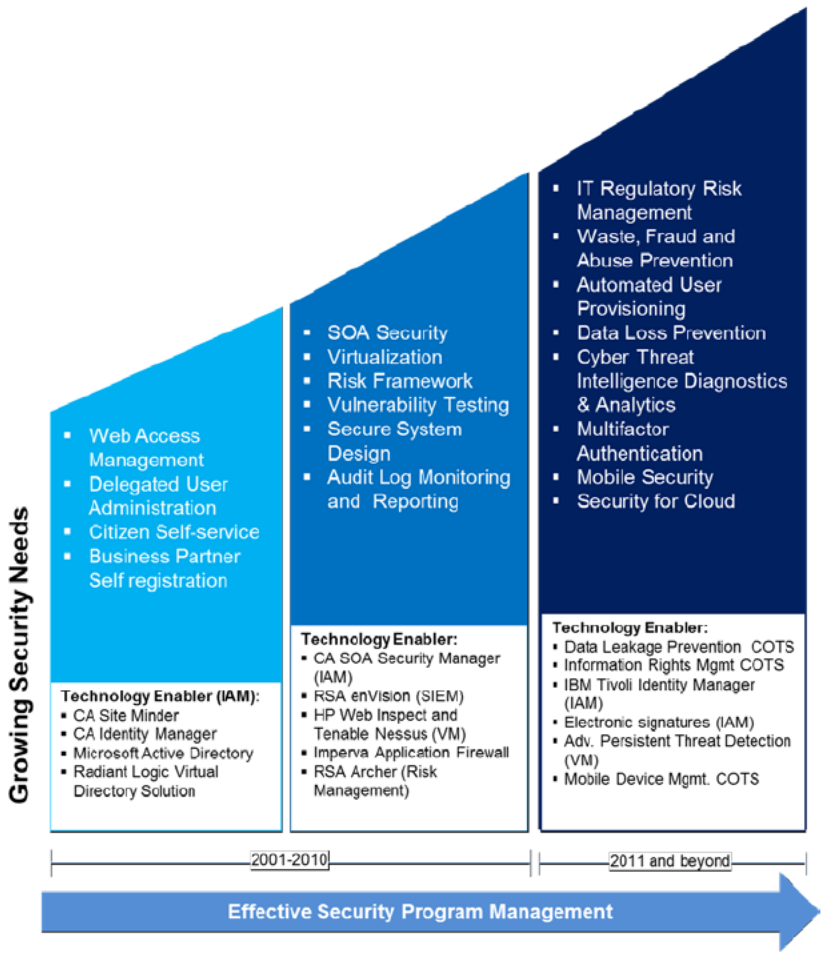
4.5.3 Deloitte LLP Project References

Deloitte Project Preference 1: Commonwealth of Pennsylvania Department of Public Welfare

Name of Client & Project Title	Commonwealth of Pennsylvania, Department of Public Welfare (DPW) – Project: Information Technology Shared Services (ITSS) – Security and Privacy
Contract Value	Part of a larger maintenance and enhancement contract
Nature and Scope of Project:	**Project Description** Security services – advisory and implementation services performed at the Commonwealth of Pennsylvania's largest agency. Deloitte has been providing a broad range of information security services to the Commonwealth for more than 10 years including strategy, design, build/deployment, and operations. This experience positions us to deliver the security services that are required as part of the Pennsylvania's data center project. Our qualifications demonstrate the close working relationships and familiarity with the business applications of key Pennsylvania agencies such as DPW, Office of Administration/Office for Information Technology (OA/OIT), PennDOT, and Labor &Industry (L&I). Deloitte's DPW qualification also demonstrates the ability to positively influence and enable the security program of the largest Commonwealth agency to effect continual improvements, to implement security tools, processes, and measures to stay abreast of a rapidly evolving threat landscape. In addition, Deloitte's knowledge of the Commonwealth security policies, standards–ITBs and certification programs like CA2– will be a key accelerator to help the Commonwealth effectively transition to the new data center operations model and a sustainable security program. Since the late 1990s, DPW has embarked on a program to modernize their enterprise application technologies, which entails a move from tightly controlled, highly isolated mainframe systems towards distributed, publically available and Web-based enterprise applications. While this change enhances the way public welfare programs are administered it also made it critical to provide adequate information security controls in accordance with regulations such as IRS 1075, HIPAA, and the Pennsylvania's Data Breach Notification Act. DPW's technology strategy is to progressively embrace the Services Oriented Architecture (SOA) model along with the appropriate security controls. **Security Services** Deloitte assisted DPW with its security program since 2001, helping DPW with regulatory compliance and keeping up with rapidly evolving security trends and technologies. Deloitte's support to DPW covers the following security and privacy services: 1. Identity and Access Management (IAM) 2. Security Risk Management and Compliance 3. Security Vulnerability Management (VM) 4. Audit Log Monitoring and Reporting using Security Information and Events Monitoring (SIEM) 5. Data Privacy 6. Security Program Management

Name of Client & Project Title	Commonwealth of Pennsylvania, Department of Public Welfare (DPW) – Project: Information Technology Shared Services (ITSS) – Security and Privacy

The following graphic illustrates Deloitte's history in DPW in establishing complex security foundational infrastructure. Some of these foundational security implementations at DPW became the model for many other Commonwealth agencies:



DPW's Security Program. *Deloitte has been an integral part of DPW's security program since 2001, helping DPW keep abreast of the latest security trends and technologies and effectively managing risks in a rapidly evolving threat landscape.*

Following is the summary of each of services delivered by Deloitte to DPW:

Data Center Architecture

Identity and Access Management – Deloitte initially conducted an assessment of DPW's need for a Web-based single sign-on solution. This included assisting DPW to define business requirements and facilitate product selection. In the later phases of the project, Deloitte assisted DPW to architect and implement the IAM system and services based on CA SiteMinder, CA Identity Manager, IBM Tivoli Identity Manager, Radiant Virtual Directory Services and Microsoft Active Directory. During the past ten years, the implementation has evolved into one of the most comprehensive public sector implementations, spanning multiple agencies and disparate users (employee, business partner and citizen users). This effort has enabled employees, citizens and business partners to have seamless and secure access to the services offered by DPW. The IAM fundamentals established at DPW

Name of Client & Project Title	Commonwealth of Pennsylvania, Department of Public Welfare (DPW) – Project: Information Technology Shared Services (ITSS) – Security and Privacy

have expanded to other large agencies, facilitated by OA/OIT. A recent example is the automation of the user provisioning project, facilitated by OA/OIT. DPW was part of the joint pilot with OA/OIT and Deloitte provided implementation services for this successful automation of more than 20 agencies and 50,000 state employees.

Capacity on Demand & Additional Services:

Key Statistics – Deloitte assists DPW's IAM program for over 45 business applications, serving more than 1,500,000 users and several Commonwealth agencies (L&I, PennDOT, Pennsylvania Insurance Department (PID) and the Department of Aging). The complexity of the infrastructure supporting the DPW IAM program is highlighted by more than 60,000 authentications and four million authorizations each business day.

Services Management

Security Risk Management and Compliance – Deloitte assisted DPW to streamline and manage regulatory audit/risk processes by implementing a unified security regulatory risk framework and automated IT Risk Management (ITRM) solution using the RSA Archer product. Deloitte leveraged its accelerator tool, the "Public Sector Security Risk Framework", and augmented it with relevant Commonwealth regulations and standards. Deloitte then used this customized security risk framework to perform a pilot risk assessment to identify potential gaps and suggest appropriate mitigation steps (one time assessment for several applicable regulations).

Deloitte supported DPW to operationalize and streamline their risk management processs using an automated risk management platform, the DPW ITRM solution using RSA Archer. The ITRM solution helps DPW to proactively determine their risk exposure to the department's security standards, Commonwealth policies, and relevant state and federal regulations such as:

- Internal Revenue Service (IRS) publication 1075
- Health Information Privacy and Accountability Act (HIPAA)
- Health Information Technology for Economic and Clinical Health (HITECH) Act
- United States Social Security Administration Act (SSA)

Key Statistics: Through this program, Deloitte supported DPW to support over 10 external audits including IRS, SSA and HIPAA. The ITRM solution's core integrates more than 4,000 applicable regulatory requirements into 350 unique requirements. In addition, OA nominated the DPW ITRM program for the 2012 NASCIO Risk Management Initiatives category. As an operations improvement area, it used to take DPW two months to respond to the IRS audit questionnaire; using the DPW ITRM solution, DPW was able to respond in three weeks. This questionnaire required responses to more than 350 questions from several functional areas within the department.

DPW's implementation of the ITRM processes and tool is being considered by OA/OIT for adoption as the preferred model for the other Commonwealth agencies to perform security assessments and manage the risks.

Security Vulnerability Management – Deloitte assisted DPW to establish secure development lifecycle principles through integration of application vulnerability testing as part of the project lifecycle. The testing was conducted in a lower test environment using automated tools and manual techniques to identify and remediate security vulnerabilities. The automated tools include HP WebInspect, HP SWFScan and HP DevInspect. A conservative estimate is that in just one year DPW has realized approximately $6.8 million in cost avoidance from credit monitoring fees. In addition, Deloitte supports DPW to

Name of Client & Project Title	Commonwealth of Pennsylvania, Department of Public Welfare (DPW) – Project: Information Technology Shared Services (ITSS) – Security and Privacy

perform periodic infrastructure vulnerability assessments and database security assessments. Keeping up with the evolving trends, in 2012 Deloitte conducted a Cyber Threat Intelligence (CTI) diagnostic assessment on selected DPW systems that helped DPW identify and swiftly mitigate presence of malware.

Key Statistics: In 2012 alone, as part of this program Deloitte performed more than 120 vulnerability scans on 20 Web application releases and infrastructure scans on more than 800 systems. In addition to over 15 Commonwealth Application Certification and Accreditation (CA)² submissions. Using CTI diagnostics, Deloitte analyzed up to one Terabyte of audit log data originating from 200 selected hosts for presence of advanced persistent threats within DPW.

Manage Hosting Services

Audit Log Monitoring and Reporting – Deloitte assisted DPW to design, implement and maintain the RSA envision SIEM solution. The DPW SIEM is an enterprise security audit log collection, processing, monitoring and reporting solution, which collects security information from security infrastructure - server and network devices, firewalls, and custom audit logs from several applications.

Key Statistics: On an average, DPW's SIEM solution processes more than 10,000 security events per second and 9.5 million events monthly from over 730 DPW systems.

Data Privacy – Deloitte assists DPW to help determine secure practices to collect and handle Personally Identifiable Information (PII) through the department's intake systems. Deloitte helps DPW to manage their PII catalog that tracks the presence of PII on reports, correspondences and notices. In addition, Deloitte coordinates with the privacy officers of DPW, the Department of Aging and PID to assist in incident response and standards and meet privacy regulatory requirements.

Key Statistics: DPW PII catalog maintains an inventory of PII present on more than 1,000 reports, mailed reports, correspondences and notices.

Information Security Program Management – As DPW continued to evolve their security and privacy program for the past 10 years, Deloitte played a crucial role in elevating and maturing the security program and governance. Deloitte assists in the facilitation of a security and privacy steering team that includes participation of the privacy officers of the DPW, Aging and Insurance agencies.

Awards and Recognition – The security initiatives have helped DPW realize the following recognitions:

- Computerworld Honors Laureate Recognition (IAM), 2007
- Award for "Best Agency Collaboration" at the Pennsylvania Digital Government Summit – for the Identity and Access Implementation that is shared between DPW and the Department of Labor and Industry, 2008
- National Association of State Chief Information Officers (NASCIO) Award for Enterprise Information Technology (IT) Management Initiatives, 2009
- Computerworld Honors Laureate Recognition (Security Vulnerability Testing Shared Service), 2010
- NASCIO Finalist in the Enterprise IT Management Category (OA/OIT Automated User Provisioning project), 2012.

Name of Client & Project Title	Commonwealth of Pennsylvania, Department of Public Welfare (DPW) – Project: Information Technology Shared Services (ITSS) – Security and Privacy
Project Duration:	**Start Date Year:** 2001 — **End Date Year:** On-going
Nature of the Client:	The Department of Public Welfare (DPW) is the largest of the Commonwealth of Pennsylvania's agencies. DPW is responsible for meeting the needs of over two million clients with the assistance of 15,000 support workers, 500,000 providers, and 300,000 employers.
Nature of Client Audience:	DPW: Chief Information Officer (CIO), Chief Technology Officer (CTO), Chief Information Security Officer (CISO), Privacy Officer(s) and the security team
Number of Users:	More than 300,000 users including DPW staff, contractors, business partners and citizen users. Combined DPW and L&I citizen user population exceeds 1.5 million users.
# & Composition of Vendor Employees & Consultants Assigned:	As DPW's program offerings and technology evolve, Deloitte leverages our large pool of highly qualified security professionals to bring the right skill set, in time, to meet DPW needs. Deloitte serves DPW with a team of highly experienced and certified security professionals. Deloitte's current DPW security team includes eight to ten full time practitioners led by Srini Subramanian, Principal, Deloitte & Touche LLP. The team's composition includes: • Senior Security Architect, • Security Architects, • IAM specialists, • VM specialists, and • Risk Management specialist.

Deloitte Project Preference 2: State of Utah

Name of Client & Project Title	State of Utah – Enterprise Security Assessment
Contract Value	Not available for public disclosure
Nature and Scope of Project:	**Project Description** Deloitte was engaged in May 2012 by the State of Utah to perform security assessments. Deloitte's role was to perform an enterprise-wide security assessment on the information systems and processes that comprise the State's IT security infrastructure services for those agencies managed by Department of Technology Services (DTS). **Security Services** As part of the project, Deloitte's security and privacy professionals worked with the state's Chief Information Officer and other stakeholders to assess security practices and controls of the state agencies against regulatory requirements and industry-standards. Additionally, Deloitte worked with the State to perform technical vulnerability assessments and cyber threat diagnostics for external and internal systems. Deloitte leveraged their accelerator tool, "Public Sector Security Risk Framework", which was augmented with relevant Utah's regulations and standards. The framework was used to assess each in-scope state agency's security policies, processes and controls. **Program Management Office and Service Management** Deloitte provided the state with reports for each in-scope state agency. These reports documented the agency's adherence to the security framework identifying potential risks with the current process or controls. Additionally, Deloitte submitted a statewide report that documented enterprise wide results and trends. Deloitte's reports provided detailed findings and recommendations to address both tactical and strategic security concerns while enhancing current capabilities, elevating maturity levels in protecting information assets and achieving compliance.
Project Duration:	**Start Date Year:** May 2012 | **End Date Year:** December 2012
Nature of the Client:	The State of Utah serves approximately 2.8 million citizens. The executive branch of Utah's government is made up of 35 separate agencies including the Department of Technology Services. In 2005, Governor Jon M. Huntsman Jr established the DTS in response to the Utah Technology Governance Act (H.B.109). Since that time, under the State's Chief Information Officer (CIO), DTS has embarked on an unprecedented transition to consolidate the state's IT resources and services for the State into one department to improve accountability, reduce costs, increase services to taxpayers, and more closely align IT with the business needs of the State. DTS is responsible to manage the State IT infrastructure that includes: • More than 500 servers • More than 20,000 desktops • More than 1,000 online services • More than 890 business applications and more than 250 application projects • More than 15,000 service requests per month • 24/7 continuity of operations for state, local and education entities at the Richfield Data Center

Name of Client & Project Title	State of Utah – Enterprise Security Assessment

Salt Lake City, UT 84116 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Project Manager **Name:** [redacted] **Title:** [redacted] **Department:** Department of Technology Services **Full Address:** 1 State Office Building Floor 6 Salt Lake City, UT 84114 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Steering Committee Member

Deloitte Project Preference 3: Commonwealth of Massachusetts

Name of Client & Project Title	Commonwealth of Massachusetts, Information Technology Division (ITD) – Commonwealth of Massachusetts Data Center Consolidation and MA - Department of Revenue, MASSTAX2
Contract Value	Not available for public disclosure
Nature and Scope of Project:	**Project 1: Commonwealth of Massachusetts Data Center Consolidation – Strategy, Planning, and Implementation assistance.** **Project Description** Deloitte was engaged in 2009/2010 to assist the Commonwealth of Massachusetts with the strategy, planning, road map and implementation assistance for their data center consolidation initiative. The Deloitte team assisted the Commonwealth to scope, plan and implement a statewide IT Consolidation Program for the Commonwealth's central IT Department (ITD) and eight Secretariats. As part of the engagement, Deloitte developed an overarching IT Consolidation vision, strategy, and approach, along with detailed consolidation plans for each of the 8 Secretariats covering 150+ agencies. In Phase 2 of the project, Deloitte provided implementation support that was targeted to result in the Commonwealth achieving 18 percent+ savings in IT operating costs **Program Management Office and Services Management** The Deloitte team assisted the Commonwealth to scope, plan and implement a statewide IT Consolidation Program for the Commonwealth's central IT Department (ITD) and eight Secretariats. As part of the engagement, Deloitte developed an overarching IT Consolidation vision, strategy, and approach, along with detailed consolidation plans for each of the 8 Secretariats covering more than 150 agencies. In Phase 2 of the project, Deloitte provided implementation support that was targeted to result in the Commonwealth achieving 18 percent+ savings in IT operating costs. Deloitte worked closely with the State CIO, Secretariats, and agency CIOs to develop a detailed consolidation plan as part of phase 1, followed by implementation support for Phase 2. The strategy and implementation roadmap developed as part of Phase 1 addressed constraints related to IT Governance, Financial Processes and Chargebacks, IT Workforce Redeployment and Training, and Change Management. In addition, it included the core consolidation activities related to infrastructure and applications. **Data Center Architecture** As part of the project, Deloitte's security and privacy experts helped the Commonwealth with the foundational security architecture and approach required for the future consolidated model. Deloitte's security and privacy professionals worked with the Commonwealth's Chief Information Security Officer and other stakeholders to help design enterprise security architecture for the consolidated data center. **Services Management and Technical Services** During the project's initial phase, the Deloitte team worked with IT leadership from ITD and the agencies to develop a detailed strategy and implementation roadmap to consolidate key IT services, such as Data Centers, Networks, E-mail, Help desk services, Desktop and LAN services, and Web site information architecture and Applications, under a federated model. For each of these threads, the Deloitte team worked collaboratively with

Name of Client & Project Title	Commonwealth of Massachusetts, Information Technology Division (ITD) – Commonwealth of Massachusetts Data Center Consolidation and MA - Department of Revenue, MASSTAX2

stakeholders in the shared services IT organization and at individual Secretariats and agencies to assemble consolidation plans, which included:

- Current state and gaps
- Security assessment to understand current challenges
- Key consolidation requirements
- Future-state vision and targets, including security architecture
- Timeline and activities

In a subsequent planning phase, the team worked to build a detailed executable plan for each area, adding:

- "Playbook" based strategies to perform technology consolidation
- Detailed timelines and consolidation sequencing
- Staffing and organizational impacts and estimates
- Infrastructure estimates
- Detailed dependency analysis

During the implementation phase, the Deloitte team worked with the Commonwealth to:

- Setup a PMO to manage the various threads in an integrated fashion
- Identify risks and manage them effectively to resolution
- Coordinate the activities of the various agencies to meet the overall milestones identified in the implementation roadmap
- Provide industry leading practices to jumpstart activities related to IT service delivery, pricing models and chargebacks, staff consolidation, change management, and communication

To support implementation efforts, the Deloitte team provided advisory services in a number of foundational areas, including security and privacy. In each area, Deloitte SMEs were key participants in client working groups and sub-committees, and helped achieve the outcomes described below:

- **IT Governance.** Implement processes and tools to track consolidation benefits and conduct case study analysis to quantify the benefits of IT consolidation
- **IT Finance –** Develop processes to effectively allocate costs across agencies and identify operational aspects related to federal fund/grant/trust funding
- **HR/Labor/Talent –** Develop processes and tools to plan and transition staff into a shared services model, and train workforce on the ITIL framework
- **Communications –** Provide regular updates and communications to IT employees to involve them in the consolidation process, prepare summary reports for the Governor and other Commonwealth leadership
- **Provide security advisory services –** The team performed an assessment of the state of security, and provided advisory services on the future security architecture in the consolidated data center model.

Name of Client & Project Title	Commonwealth of Massachusetts, Information Technology Division (ITD) – Commonwealth of Massachusetts Data Center Consolidation and MA - Department of Revenue, MASSTAX2	
	Project 2: MA – Department of Revenue, MASSTAX2 **Project Description** In 2011, the Commonwealth awarded a contract to Deloitte Consulting to implement a SAP based state tax and revenue solution. As part of this project, the Deloitte security and privacy team is delivering the following services: • Security risk assessment and compliance with Internal Revenue Service (IRS) publication 1075 requirements • Disaster recovery and business continuity plan development • Implementation of the following security controls: – SAP application security – SAP Governance, Risk, and Compliance (GRC) Access Control (AC) 10.0 – SAP User Experience Monitoring (UEM) – Identity and Access Management system – Data Leakage Prevention (DLP) – Database Activity Monitoring (DAM) – Security Information and Event Monitoring (SIEM) solution.	
Project Duration: (Data Center Consolidation)	**Start Date Year:** March 2009	**End Date Year:** June 2010
Project Duration: (MASSTAX2)	**Start Date Year:** January 2011	**End Date Year:** On-going
Nature of the Client:	**Commonwealth of Massachusetts Information Technology Division** The mission of the Information Technology Division is to support, enable and transform state government through the strategic use of technology to better serve constituents, businesses, and local government. The Information Technology Division (ITD) enables agencies to deliver high quality, efficient and effective services to their customers, by providing a range of centralized IT services; overseeing IT policies, standards and architecture; and promoting cross-agency collaboration and adoption of shared services. The Division is part of the Executive Office of Administration and Finance and is headed by the Commonwealth Chief Information Officer. While the agencies work directly with their customers, ITD works with the agencies as a service provider to ensure their customers' needs are met. Most services offered by ITD are processed through direct chargeback. ITD is structured around seven lines of business: • Applications • Print and Mail • Integration • Unified Communications • Hosting • Data Services • Security	
Nature of Client Audience:	Commonwealth of Massachusetts – CIO, CTO, CISO and agency stakeholders

4.5.5 American Personnel Managers and Consultants, Inc. Project References

APMC Project Preference 1: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) (Subcontractor to Unisys)
Contract Value	$8 million
Nature and Scope of Project:	**Project Description** Under a Directive from Governor Tom Ridge in 1997 to improve the delivery of public services through the strategic use of information technology, the Governor's Office of Administration initiated data center consolidation of Commonwealth agencies. Implementing the consolidation and outsourcing operations and technical support functions for 17 formerly separate state agency Data Centers. The Data PowerHouse (DPH), managed by a consortium of 10 companies, led by Pennsylvania-based Unisys, replaced these 17 separate state-run data centers. The services outsourced to Unisys include program management, mainframe and midrange operations systems management, tier-two help desk, related technical support services such as media services, console operations, disaster recovery, application development, and maintenance, desktop management, etc. American Personnel Managers and Consultants also provide: • Recruitment • Retention • Staffing • HR Management for media services, console operators; and administrative staff State agencies participating in the Data PowerHouse include: • Departments of Public Welfare • Revenue Aging • Corrections • Labor and Industry • Health • Transportation • Department of Education • Civil Service Commission • Pennsylvania State Police • Public School Employees' Retirement System • Public Utility Commission • Pennsylvania Game Commission • Liquor Control Board **Program Management Office and Services Management** American Personnel Managers and Consultants Inc. has the breadth and depth of concurrent proficiencies related to the DPH providing more than 13 years' experience as Human Resource/Staffing Managers in the Data Center, specific to overall Data Center Computing Service Staffing that includes media services, console operations, and administrative services. Our Pennsylvania local management team offers more than 90 years of Operations and Management capabilities, with current long-term tenured Management staff working on the DPH as a business partner for both Unisys and IBM.

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) (Subcontractor to Unisys)

Our entire team provides a depth of knowledge, understanding, and involvement in all phases of our designated scope of work at the DPH that has helped achieve our 13 years of success.

We staff and manage the DPH 365x24 hours, providing full coverage, staff backup and cross training to meet the needs and goals of the DPH project.

Project Management – The primary objective of our Project Manager at the Data Center is to achieve all of the project goals and objectives while adhering to preconceived constraints. The primary constraints are scope, time, quality, and budget. The secondary — and more ambitious — challenge is to optimize the allocation of necessary inputs and integrate them to meet pre-defined objectives as required in our DPH contract. Our team has been very successful in this aspect of the project, never experiencing an SLA in 13 years on the project.

Administrative Support staff (Unisys and IBM) – Project Office Administrator for the Project Office Management Team

Administrator tasks include – but are not limited to:

- Procedural setups (On boarding & Off boarding processing instructions and requests, Quarterly Evaluation Verifications (QEV), Weekly Extract of Linux AD Users Verifications, COPSEC Notes ID Database,
- Prepares and assemble monthly status reports
- Prepares and assemble weekly reports
- Assemble and maintain log of all Annual Renewal Request and Annual Trainings
- Prepare and Maintain Desk Procedures
- Assemble monthly deliverables
- Background & security administration
- Other Administrator tasks as necessary

Services – The following services are provided by APMC employees:

- Oversees tape management systems by operating a computer terminal, maintain control and security of computer tapes
- Verifies, corrects, updates, and deletes information on tape labels, and codes
- Labels and codes newly created tapes based upon content, system, user, creation date, retention date, and number of reels
- Generates media services reports
- Assists in developing, revising, documenting, and implementing media services procedures per client request and specifications
- Controls and coordinates tape flow between the library and security vault
- Maintains an adequate inventory of scratch tapes for the computer room
- Controls the checking of tapes in and out of the automated media services system
- Reviews daily data processing production reports and identifies tape-related production problems, master tapes created, jobs completed, tapes to be reissued, and tapes for vault storage
- Trains new employees in routine library tasks
- Stores tapes and maintains logs according to client classification and retention criteria
- Coordinates the quarterly inventory of the media services and maintenance of the security vault
- Reports processing problems caused by tape errors to supervisors

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) (Subcontractor to Unisys)

- Works with client to Schedule periodic evaluations of the condition of all tapes in the library and reissues or replaces worn or damaged tapes per client direction
- Orders replacement tapes and enters them into the automated library system
- Maintains records of all tapes issued, replaced, or damaged
- Performs related duties as assigned
- Performs duties related to a computer cataloging system
- Performs General data processing and data control procedures

Recruitment – APMC provides recruiting, interviewing, computerized testing, reference checking, clearance follow-up, and hiring of staff to the Unisys DPH project. We currently supply 22 people to the DPH project that support services in the areas of Media Services, Console Operations, and Administrative staffing. The stages of the recruitment process include: job analysis and developing a 'person' specification; candidate sourcing by networking, advertising, or other search methods; matching candidates to the specific job requirements of the DPH project, and screening individuals using testing (skills or personality assessment); assessment of candidates' motivations and their fit with organizational requirements. Testing tools include the use of interviewing, background checks, and drug testing. The recruitment process also includes the making and finalizing of offers and the induction and on boarding of new employees to the DPH.

Console Ops Recruits, Staffs, Manages, 365x–24hr operation, Console operations and monitoring, Help Desk 1, and Help Desk 2 – Level 2 Help Desk support where our staff interfaces with the Commonwealth's Level 1 Help Desk to provide effective problem communication and resolution. We provide console operators monitoring support for the monitoring centers, experienced, detail oriented staff that are promoted from our seasoned employees in the Media services. We have promoted 10 employees from the Media services to Console ops over the last 4 years, and during the life of the project have provided 50 staff members to IBM and Unisys for console ops positions.

Console operators functions include: On Site Physical staffing and monitoring of 22 Commonwealth agencies, following rigid Commonwealth and Console procedures to monitor and operate Unisys mainframes, Windows/UNIX/AIX servers in a 7x24/365 consolidated Data Center to meet high service delivery requirements for public sector. Staff are responsible for observing multiple monitor screens for alerts, alarms and indicators of abnormal processing for any mainframe or server systems included in the monitored group using manual and automated processes.

Retention – Our ability to retain our key employees has been a critical competitive advantage in today's economy. This has benefited the DPH, Unisys, and American Personnel Managers and Consultants. We have always practiced the belief that key employee retention was critical to the long-term health and success of the contract. Retaining the best employees ensures customer satisfaction, satisfied coworkers, effective succession planning, and deeply imbedded organizational knowledge and learning. Some of our employees have been on this project 10 or more years. Our turnover rate in the past 12 months is 1 percent and more than 2 percent over the past 13 years.

Scheduling – One of the most important tasks is scheduling employees. Creating work schedules to meet the needs of the Data Center, while satisfying the needs of the employees. The monthly schedule is created by our Staffing Manager. This schedule is created to make sure the exact number of employees is always in place to run the Media

services as needed on 24 hours per day, 7 days per week basis. This also entails

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH) (Subcontractor to Unisys)
	rescheduling as needed for employees illnesses, vacations, inclement weather etc. We are on call 24/7 if problems should occur after the normal business day.

APMC Project Preference 2: Parsons Corporation

Name of Client & Project Title	Parsons Corporation – Call Center Commonwealth of Pennsylvania Department of Transportation
Contract Value	$1.2 million (over 5 years)
Nature and Scope of Project:	**Project Description:** American Personnel Managers and Consultants, Inc. has established a centralized call center for Parsons Corporation, and the Commonwealth of Pennsylvania Department of Transportation. Our call center incorporates inbound teleservices with excellent staff communication and customer service skills including problem solving, pro actively providing the best customer service, continued follow up with customers as needed, providing e-mail response, escalation etc., "as needed". Our commitment to best practices, providing the highest levels of quality, standards of excellence and superior customer services includes working closely with Parsons to insure Commonwealth satisfaction. As call center Project Managers, we utilized our Management and overall business experience to review test, select the best software for this project to meet performance metrics used in the call center. The Commonwealth of Pennsylvania requirements are identical in scope but to a lesser degree or higher degree based on specifications designated by the Commonwealth agency. **Services Management and Staff Augmentation** APMC currently supports the Pennsylvania Drive Clean Emissions call center project Help Desk services. The responsibilities of Managing and Staffing the call center include confirming caller's questions are handled according to specified scope of work. APMC is responsible for Call Center software selection, project oversight and management, day to day operational and HR issues within our scope of work. APMC provides staff and on site project management to: supervise, manage, train, and effectively administer all aspects of the call center. Additionally, our team is responsible for answering calls in the queue within a very specific timeframe; provides responses to caller's questions per Commonwealth standards; and escalate calls if necessary. APMC also provides monthly reports documenting Help Desk activity as approved by the Commonwealth including operational minutes available, outage (or downtime) minutes, and customer wait time in the queue for the previous month. Monthly client meetings, pro-active client goals and objectives achieved, and overall customer satisfaction based on Six Sigma processes. Project scope of staffing is not as complex as Console Operations staffing, but similar in many areas such as project oversight and management; day-to-day operations, Human Resource (HR) issues within our scope of work, and staff training. **Transition Planning** Transition planning follows past project experiences related to HR and Staff Augmentation projects of 500 people transitioned to our team. Our project included staffing and technical services where the end result has met Project expectations. Our Transition Plan identifies all scope of work, out-of scope items, all affected areas and documents, and the overall strategy of transitioning staff. Our Transition Plan starts with a Due Diligence phase with the framework in place. It is very critical for the client to mutually agree on the Transition Plan to prevent any impact during the transition period. Our Transition Plan could have the following items in the Table of Content document – scope, transition strategy, transition schedule, governance covering client and the team along with roles and responsibilities, communication plan, escalation process, progress review meetings, status reporting, milestones clearly identified, risks, and mitigation plan. Our transition strategy includes

Name of Client & Project Title	Parsons Corporation – Call Center Commonwealth of Pennsylvania Department of Transportation	
	transition strategy for each functional area taking into consideration each line of business.	
Project Duration:	**Start Date Year:** Fall 2012	**End Date Year:** Ongoing
Nature of the Client:	Pennsylvania Emissions clean air program – Scope – Call Center/Help Desk APMC has established a state of the art call center at Parsons Corporation Call Center Commonwealth of Pennsylvania Department of Transportation. This call center incorporates inbound teleservices, e-mail response, etc. Our commitment to best practices provides the highest levels of quality, standards of excellence, and superior customer services. Includes software selection and performance metrics used in the call center.	
Nature of Client Audience:	Emissions program – Commonwealth Clean Air	
Number of Users:	Approximately 8000 centers throughout Pennsylvania	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Pat Gingrich, President/CEO – Operations Manager Nancy Griffin, Project Manager (On-site day to day operations) At project start up, American Personnel Managers & Consultants Inc. met regularly with the client preparing for transition from the Verizon contract with the Commonwealth to the Parsons contract award. Our Clear definition of project needs analysis, staff and project requirements; business operation processes, timeline, etc, were outlined and approved. Review , testing and selection of call center "best practices" business services product platforms was completed with approval from Parsons. Go live processes were planned, reviewed, and approved with staff selection and training completed and movement to "readiness" status. With project implementation and project started, calls swelled more than 10 times in the initial few days – technical telephonic system and staff pushed. American Personnel pro-actively addressed both technical teleservices and expansion with positive results adding more staff and telephonic capabilities. Ongoing efforts include continued staff training and system updates as needed, quality assurance goals and objectives, daily customer communication via e-mail or phones, quarterly in person client meetings projected, daily usage and performance reports to clients, and monthly usage and performance reports to client.	

Name of Client & Project Title	Parsons Corporation – Call Center Commonwealth of Pennsylvania Department of Transportation
Client Contact Information:	**Reference Contacts:** Parsons Environment & Infrastructure Group Inc. **Name:** [redacted] **Title:** [redacted] **Department:** Environmental & Infrastructure Group, Inc. **Full Address:** Parsons Corporation 979 East Park Drive Harrisburg, PA 17111 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Project Operations **Name:** [redacted] **Title:** [redacted] **Department:** Environmental & Infrastructure Group, Inc. **Full Address:** 401 Commerce Park Drive Cranberry Township, PA 16066 **Telephone:** [redacted] **E-mail** [redacted] **Relation/Role to Project:** Manager

APMC Project Preference 3: Pennsylvania Higher Education Assistance Agency

Name of Client & Project Title	Pennsylvania Higher Education Assistance Agency (PHEAA) – Data Domain Implementation
Contract Value	$1 million
Nature and Scope of Project:	**Project Description** APMC is an authorized EMC reseller of products and services and provided Project Management for all phases of the Pennsylvania Higher Education's Data Domain implementation with its subcontractor EMC. APMC's Project Management responsibilities included: regular client meetings; comprehensive understanding review and validation of client requirements, scope of work required, implementation process, services and guarantees needed, with a mutually agreed timeline and final quality review. Additional work was also performed upon completion of the Data Domain implementation project, with a physical move and support services of equipment etc., to an alternate location as designated by PHEAA. Both projects completed on time, and with an excellent quality rating. APMC manages subcontractor functions that are inherent to all contracts and monitors and management of prime and subcontract requirements. EMC's multi faceted experience provided an excellent cornerstone for project success. Project comparisons are based on our ability to independently manage a project thereby meeting overall operational requirements, including quality, cost containment, ongoing customer communication and satisfaction. We provide onsite assistance for day-to-day staff direction, training, supervision, management, and a course of action necessary to retain project success. Those characteristics are representative of this project where we have successfully contained cost, retained staff with less than a 1 percent turnover in the past 12 months, and provide ongoing management support to retain quality and project excellence. The Commonwealth of Pennsylvania requirements in the use of project management and contractor management are similar in function. The project is similar in function where APMC had overall responsibility for the PHEAA project working in a team effort with our subcontractor – EMC to manage the PHEAA project ensuring all facets of the project were delivered on time. Our team defined the scope of work requirements, necessary resources required to perform the project, participated in client communications, meetings, and collaborations to meet all required components of the PHEAA project for quality assurance throughout the project. **Program Management Office (PMO) and Service Management** APMC and the client both assigned a Project Manager to facilitate effective project management controls. Both parties submitted to the other in writing, the name, business address and telephone number of the individual who is designated as their Project Manager during the life cycle of the project. Each manager set up the process and procedures related to reports, measurements and new requirements with on-going communication, focus and project dedication. APMC worked with our management group, EMC technicians, members of the EMC management team and PHEAA managers to provide a requested solution to PHEAA's business needs. Our DeDup solution was selected to address PHEAA'S backup and long-term archive business requirements. We provided PHEAA with necessary information required to make a decision best meeting their solution needs. Additionally, detailed product and service pricing was given to assure requirements were met to fulfill the needs of PHEAA.

Name of Client & Project Title	Pennsylvania Higher Education Assistance Agency (PHEAA) – Data Domain Implementation
	Technical Services Technical Services were always managed by an experienced project manager to insure tasks and schedules were adhered to during the life of the PHEAA project. Such information was reported to the PHEAA project manager to ensure all tasks were met in a timely basis with no impact to the overall project. Management reporting was provided on a timely basis relative to each task. Our technical team worked continuously through project implementation and completion, providing a scalable, cost effective solution for high output and long-term data retention use. We provided the direction, implementation, supervision, management, and course of action for the DeDup solution through project end, with ongoing customer satisfaction requirements project scope
Project Duration:	**Start Date Year:** 2011 — **End Date Year:** 2011
Nature of the Client:	2 phases – Data Domain Implementation & Client equipment relocation, installation etc.
Nature of Client Audience:	Upgrade & New location building facilities
Number of Users:	Not applicable
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Pat Gingrich **Start up and ongoing level of APMC team efforts:** Project Employees Included 10 members of our Management team, technical staff, technical support staff, implementation staff, on-site Project Management, administrative support, etc. **Start up:** Initial client management and APMC team meetings were held with the PHEAA Technical Team, Contract Manager. Subsequently, meetings were held for ongoing PHEAA discussions, feedback, review, client applications, solution discussions, overview presentation, client Q&A discussions, APMC Project award, project and management team ramp up, team scope performance, Ongoing Team Performance Review, Ongoing Client review and approval, and Project completion.

APMC Project Preference 4: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania (CoPA) and Dell Computers – CoPA Desktop and Laptop Refresh	
Contract Value	$1 million (7 years)	
Nature and Scope of Project:	**Project Description:** American Personnel Managers and Consultants, Inc. was selected as a Dell Partner for the Commonwealth desktop and laptop refresh project more than 8 years ago. As a Team member and subcontractor, we are responsible for a specific SCOPE of work agreed to between Dell and the Commonwealth of Pa. The Dell Project manager designates Commonwealth agency project; Timeline; products; services; etc; with APMC completing all phases of the implementation process. That can include, but may not be limited to; Product confirmation with Agency; review of services, timeline, etc. with the Commonwealth agency. Follow product from Dell location to receiving at our warehouse for detailed internal process validating products etc. Determine agency installation per Dell and agency agreement; provide implementation as required. This Contract was rebid in 2009 **Program Management Office (PMO) and Service Management** APMC assumes all responsibilities of process and service delivery after Dell has provided Commonwealth approval. **Technical Services** Project start up more than 8 years ago was sporadic. Commonwealth agencies were moving from a fragmented system to a one-stop shop, allowing better agency focus and abilities to better use purchasing methods. American Personnel Managers and Consultants, Inc. pro-actively addressed both technical and HR needs as the project has a variety of peaks and valleys associated with Agency budgets, internal requirements and demands for specific software updates, etc. Efforts for 100% satisfaction by Commonwealth agencies remain our number one focus, providing us with a clear path of no SLAs over the last 9 yrs on the project.	
Project Duration:	**Start Date Year:** 2001	**End Date Year:** on-going
Nature of the Client:	2001: CoPA and Dell Corporation – Computer Manufacturer and Commonwealth of Pennsylvania 2009 Rebid: Dell Corporation APMC is responsible for working with Dell corporation to meet Commonwealth hardware requests for every Commonwealth agency under a centralized purchasing system. All Commonwealth agencies refurbish equipment per budget abilities, agency needs and requirements.	
Nature of Client Audience:	2001: Public Officials and Employees project users and audience of all Commonwealth of Pennsylvania agencies 2009 Rebid: Information Technology, Hardware/software updates	

Name of Client & Project Title	Commonwealth of Pennsylvania (CoPA) and Dell Computers – CoPA Desktop and Laptop Refresh
Number of Users:	2001: Number of users- more than 22 Agencies - unknown number of Commonwealth of Pennsylvania Public Employee users 2009 Rebid: All Commonwealth of Pennsylvania employees
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Pat Gingrich, President/CEO - Operations Manager Project Manager - Richard Beiber Manager on-site day to day operations 2001: One Project Manager and several staff members "as needed", and two support administrative staff members. This project fluctuates drastically based on Commonwealth Agency needs and requirements throughout the Commonwealth. Startup was somewhat sporadic as Commonwealth agencies changed their business model from a scattered approach to a focused one-stop-shop. Dedicated goal for overall cost savings. Once focus changed, projects moved forward quickly. APMC is responsible for working with Dell Corporation to meet Commonwealth hardware requests for every Commonwealth agency under a centralized purchasing system. All Commonwealth agencies refurbish equipment per budget, agency needs, and requirements. 2009 Rebid: Project start up more than 8 years ago was sporadic. Commonwealth agencies were moving from a fragmented system to a One-stop shop; allowing better agency focus and abilities to better use purchasing methods. American Personnel pro-actively addressed both technical and HR needs as the project has a variety of peaks and valleys associated with Agency budgets; internal requirements and demands for specific software updates, etc. Efforts for 100 percent satisfaction by Commonwealth agencies remain our number one focus, providing us with a clear path of no SLAs over the last 8 years on the project.

Credo Technologies Solutions, Inc. Reference 2: Pennsylvania Department of Transportation

Name of Client & Project Title	Pennsylvania Dept. of Transportation (PennDOT) – Video Architect Project	
Contract Value	$150,000 (annually)	
Nature and Scope of Project:	**Project Description** The scope was to architect a Video Surveillance Process for PennDOT on Highway Surveillance, managed by the PennDOT Server Farm team. It was Architected and Managed by our employee. This project covers a number of initiatives that include: • PennDOT Traffic Management System which encompasses 11 PennDOT districts • A New Statewide Traffic Management System which involves PennDOT, PEMA, other state agencies and neighboring states **Program Management Office (PMO) and Management Services** • Determine the current configuration and what could be reused for the next generation PennDOT Traffic Management System • Determine how much existing video bandwidth already exists and the associated costs • Determine requirements and Concept of Operations (ConOps) • Use identified requirements and ConOps to determine the delta for needed bandwidth and equipment • Research existing and new technology along with qualified vendors and document findings • Present these findings for best in class technology and vendors for PennDOT consideration and approval • Coordinate with PennDOT approved vendors, PennDOT Telecommunications, and IT services to oversee the successful installation and implementation of the video TMC system • Coordinate with and assist PEMA, PennDOT, and other agencies on the design and construction of the Statewide Traffic Management System (STMC) **Technical Services** Our employee worked with multiple user groups to gather information on the next generation of PennDOT Traffic Management system. The project entailed taking data from Help desk users on issues and requests to improve the system and determine how much usage and bandwidth was consumed in order to make the system more functional and easy to use. .	
Project Duration:	**Start Date Year:** 10/2011	**End Date Year:** 11/2012
Nature of the Client:	PennDOT is one of the Commonwealth's largest Agencies and they have a large Server Farm to service and administer the servers and project related components.	
Nature of Client Audience:	The users are mostly State Employees of PennDOT (Including some consultants)	
Number of Users:	All agency personnel and consultants	

Name of Client & Project Title	Pennsylvania Dept. of Transportation (PennDOT) – Video Architect Project
# & Composition of Vendor Employees & Consultants Assigned:	Scott Long-COO/David Bastarache In October 2011, David was brought into PDOT to Architect and Manage the Video Surveillance Project, which he worked with the Cisco Security team as well.

UNISYS

Credo Technologies Solutions, Inc. Reference 3: Unisys

Name of Client & Project Title	Unisys Corporation – Patch Management Consultant	
Contract Value	$98,000	
Nature and Scope of Project:	**Project Description** The scope of the project is for a senior Patch Management Consultant. It involved complex work on enterprise-wide servers at Enterprise Data Center (EDC). The various environments are in development, staging, and production. The role required strong experience with Microsoft System Center Configuration 2007 (SCCM) in a production server environment preferably a large environment. Credo had to ensure that we identified a senior consultant with strong understanding of the fundamentals of these technologies i.e. Active Directory, Domain Naming Services (DNS), Internet Information Services (IIS) (versions 6 & 7) & Windows server operations (server 2003 and 2008 R2). The additional skill set required includes experience in Linux, PKI/CA/SSL, VMware, Scripting/Development, SQL, .net framework, Citrix, BizTalk, and SharePoint. The core qualifications are strong knowledge and experience in: Microsoft SCCM 2007, IIS 5.0/6.0 and/or SQL 2000/2005 Administration, Active Directory 2000/2003 Administration, MCSE 2000/2003 certification, Microsoft Office SharePoint Server 2007, Microsoft Internet Security and Acceleration Server 2006, Oracle 9i/10G Database, BizTalk Server 2004, Microsoft Operations 2005 & Remedy. The role required for mobile support for infrequent after-hours support and escalations and be part of a 24x7 on-call rotation one week out of every eight weeks **Technical Services** This is an ongoing contract that Credo Technology Solutions has with Unisys. The consultant is a member of an operations team managing a large enterprise Web application hosting environment in Central Pennsylvania. His responsibilities include Patch Management and virus-related Disaster Prevention. This person monitors all relevant security sites for new vulnerabilities; reviews, recommends, and ensures all servers are patched in a timely manner using standard tools. He also handles support tickets and is responsible for troubleshooting Windows, IIS, SQL and application issues. The hosting environment comprises 2000 Wintel servers and 600 Web-facing applications and continues to grow. It is widely recognized for its innovative use of the latest technologies from Microsoft, Cisco, and other leading IT companies. The scope of the project is for a senior Patch Management Consultant. It involved complex work on enterprise-wide servers at Enterprise Data Center (EDC). The various environments are in development, staging, and production. The role required strong experience with Microsoft System Center Configuration 2007 (SCCM) in a production server environment preferably a large environment. Over a year, Credo's strong consultant supported well and was able to handle the role well. Through regular interactions with Unisys and the consultant, Credo managed the expectations and offered exceptional support to the process. This led to a great partnership with Unisys and we are excited about the opportunity.	
Project Duration:	**Start Date Year:** 1-2012	**End Date Year:** On-going
Nature of the Client:	Commonwealth of Pennsylvania, Office of Administration - Bureau of Infrastructure & Operations	

Name of Client & Project Title	Unisys Corporation – Patch Management Consultant
Nature of Client Audience:	Commonwealth's various departments
Number of Users:	All agency personnel and consultants
# & Composition of Vendor Employees & Consultants Assigned:	Scott Long-COO/Prasad Kalluri: In January 2011, Prasad was brought into Pennsylvania Office of Administration, Bureau of Infrastructure & Operations through Unisys to perform patch management.

4.5.7 Domino Technologies, Inc. Project References

Domino Technologies Reference 1: Pennsylvania Department of Transportation

Name of Client & Project Title	Pennsylvania Department of Transportation (PennDOT) - Bureau of Infrastructure and Operations – PennDOT Server Farm Operations Support through Department of Public Welfare Staff Augmentation Contract
Contract Value	$7.5+ million (since 2005)
Nature and Scope of Project:	**Project Description** Domino Technologies, Inc. employees have worked at PennDOT server farm through Pennsylvania Staff Augmentation contract providing wide range of Infrastructure and operations support services including • Servers administration • Workstation support • Database administration • Network management services • Application server support We have provided support services at PennDOT server farm including Core Network Infrastructure Support, VMware Infrastructure Support, Desktop Configuration Management, WebSphere Infrastructure Support, FileNet and EMC Infrastructure Support, SharePoint Infrastructure Support, and Infrastructure Architecture Design Services. **Program Management Office (PMO) and Service Management** Technical services are managed by Domino Tech project managers and technical leads with the focus on: • Increasing visibility into projects, programs and operations • Aligning business demand to resource capacity • Identifying early warning indicators to ensure scheduled project delivery **Technical Services** Desktop Configuration Management: • Responsible for System and software deployment across all the 6000+ desktops across PennDOT using Microsoft System Center Configuration Management (SCCM) tool • Designed and implemented Microsoft SCCM 2007 migration from existing SMS 2003 implementation across entire agency • Perform routine maintenance on SCCM servers installed throughout the agency • Develop and maintain collections, packages, advertisements, reports, queries, and site settings for entire SCCM site • Perform database maintenance and optimizations on MS SQL 2005 servers where SCCM databases are maintained FileNet and EMC Infrastructure Support: • The EMC Captiva solution encompasses 20 Production servers, which provide redundant, fail-over functionality. It is part of the Safety EDMS solution within dotcentric, giving Safety Administration users the ability to scan, store and retrieve

Name of Client & Project Title	Pennsylvania Department of Transportation (PennDOT) - Bureau of Infrastructure and Operations – PennDOT Server Farm Operations Support through Department of Public Welfare Staff Augmentation Contract

documents

- Scanning utilizes both OPEX and Web-based solutions, allowing users at DLCs and other state offices the ability to scan from almost any location.
- Scanning volumes range from 75,000 to 100,000 documents per day, with higher numbers at peak periods (This equates to approximately 35 million documents per year currently).
- For the storage of the captured documents, the system leverages existing EDMS FileNet architecture
- At this time, Safety FileNet Image Services is storing more than 12 terabytes of data, with an additional terabyte being added every 3-4 months. For document retrieval and exception correction, users utilize a load-balanced Web front-end
- Applications impacted: Safety EDMS: Scanning, storage, retrieval for Bureaus of Driver Licensing and Motor Vehicles

Manage Hosting Servers

Core Network Infrastructure Support – Troubleshooting of complex Network and Hardware problems on Cisco equipment. Network captures and trace file interpretation for both in house projects and business partners. TMC network design build out and installation of AXIS encoder platform providing video stills of traffic for presentation to the public via Web for situational awareness. Designed and implemented Cisco WAF (Wide Area File system) and WAAS at 30 sites throughout the state of Pennsylvania for PennDOT. PennDOT was experiencing bandwidth saturation at T1 sites and experiencing unsatisfactory response times when retrieving files across the T1s. Additional servers at the remotes sites caused PennDOT to incur additional costs because servers had to be deployed to any site that had a T1

VMware Infrastructure Support – Designed and implemented VMware environment at PennDOT. First ESX servers built in Sept 2006. Currently 600+ VMs on production platform (plus 41 VM workstations). Currently more than 20 hosts in production platform. Responsible for setting up the VM environment at OA ESF co-location facility. They migrated all the servers from Cameron street facility to OA ESF co-location facility

Infrastructure Architecture Design Services

WebSphere Infrastructure Support – Designed and implemented WebSphere 6 infrastructure for Highway administration applications – ECMS2, MPMS, BMS2, JPA, UREDMS, GCEDMS CRS and APRAS. Several of these are mission critical applications that have to be available 24 X 7. Upgraded the WebSphere infrastructure to version 7. Planned and coordinated the upgrade of existing version 6 infrastructures with all the application teams. Installed and managed the WebSphere servers used for eGov – Web-based drivers licensing and vehicle registration system. Total number of servers: 60.

SharePoint Infrastructure Support – Responsible for designing, deploying and operating SharePoint infrastructure at PennDOT. Play a major role in implementing several solutions for PennDOT using SharePoint. Involved in integrating SharePoint with the Commonwealth standard user authentication tool SiteMinder. Work with the application requirements group, application architects and infrastructure subject matter experts to design the infrastructure architecture for new applications at PennDOT. Consultants have designed solutions for PennDOT that are based on standards but at the same time modular, flexible and agile.

Name of Client & Project Title	Pennsylvania Department of Transportation (PennDOT) - Bureau of Infrastructure and Operations – PennDOT Server Farm Operations Support through Department of Public Welfare Staff Augmentation Contract
Project Duration:	**Start Date Year:** 2005 — **End Date Year:** On going
Nature of the Client:	PennDOT provides services to 8.7 million licensed drivers and 11.3 million registered vehicle owners of Pennsylvania. With an annual budget of more than $6 billion in state and federal funds, PennDOT oversees programs and policies affecting highways, urban and rural public transportation, airports, railroads, ports, and waterways
Nature of Client Audience:	PennDOT Server Farm consists of over 800 servers with servers in district offices. Applications running on these servers are used by public and by PennDOT employees in offices all over the state
Number of Users:	9,800
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** These consultants are involved in the entire life cycle of the implementation and in on-going support efforts • Desktop Configuration Management: Scott Setliff • FileNet and EMC Infrastructure Support: Steve Stutzman, Mohammed Subhani • Core Network Infrastructure Support: Greg Mummert, Greg Mauchamer, Scott LaPlantt • VMware Infrastructure Support: Joseph Seaman, Bryan Cunjak, Kenny Lafromboise • WebSphere Infrastructure Support: Lou Bellman, Venkat Valluru • SharePoint Infrastructure Support: Wann Harris • Infrastructure Architecture Design Services: Nathan Balagopal

Domino Technologies Reference 2: Pennsylvania Game Commission

Name of Client & Project Title	Pennsylvania Game Commission – Information Technology (IT) Operations Support	
Contract Value	$50,000	
Nature and Scope of Project:	**Project Description** Domino Technologies, Inc. employees work at Bureau of Automated Technology Services at Pennsylvania Game Commission providing wide range of Infrastructure and operations support services including: • Server Virtualization • Servers administration • Database Administration We have provided support services at the Pennsylvania Game Commission during past two years that include Server Virtualization Project and Server Administration Support. **Program Management Office and Service Management** Domino Tech project manager is responsible for the three critical tasks of successful project execution: Proper Planning, Smooth Execution, and Effective Project Management & Control. **Technical Services** **Server Virtualization Project –** Setup a new SQL Server environment using VMware guest and migrated databases from physical servers to the new environment. Virtualization improved the availability and IT infrastructure efficiency for Pennsylvania Game Commission. Virtualized environment provides them with flexibility to maintain the infrastructure and ease of management of server resources. Designed and implemented built in business continuity solutions using policy based service level management to avoid service disruptions. **Manage Hosting Services** **Server Administration Support –** Domino Tech consultants provide on-going infrastructure operations support to Bureau of Automated Technology Services. • Consultant upgraded all the servers to Windows Server 2008 R2 from Windows 2003 • Upgraded Microsoft SQL Server from version 2005 to 2008 **Data Center Architecture** **Server Virtualization Project –** Pennsylvania Game Commission had all physical server environments with aging equipment. Our consultants designed virtual server environments using VMware ESXi v5 and IBM hardware. All the servers we migrated from physical to virtual guests in a phased manner without any interruption to business.	
Project Duration:	**Start Date Year:** 2012	**End Date Year:** On-going

Name of Client & Project Title	Pennsylvania Game Commission – Information Technology (IT) Operations Support
Nature of the Client:	For more than 100 years, the Game Commission has managed the Commonwealth's wildlife resources for all Pennsylvanians. With the help of more than 700 full-time employees and thousands of part-timers and volunteers, the agency provides a host of benefits to wildlife, state residents, and visitors.
Nature of Client Audience:	Servers host applications that are used by Game Commission employees from locations all over the state.
Number of Users:	More than 500
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Project Manager: Nathan Balagopal Server Virtualization Project: Personnel: David Barlett Server Administration Support: David Barlett, Lou Bellman

e&e IT Consulting Services Project Reference 1: Pennsylvania Turnpike Commission

Name of Client & Project Title	Pennsylvania Turnpike Commission – SMS and Active Directory staffing resources	
Contract Value	$707,200	
Nature and Scope of Project:	**Project Description** e&e IT Consulting Services provided the Pennsylvania Turnpike Commission (PTC) with two Senior Network Engineers who were responsible for implementing SMS to manage over 1,200 desktops across 250 servers, including development of the implementation plan and the enterprise-wide plan rollout. **Technical Services** The technical skills required were experience managing technical rollouts, hands-on experience implementing and maintaining SMS, experience with Active Directory, experience with MOM, and a current MCSE certification.	
Project Duration:	**Start Date Year:** Jan 2007	**End Date Year:** Dec 2008
Nature of the Client:	PTC manages the Pennsylvania Turnpike	
Nature of Client Audience:	PTC employees across multiple sites in the Commonwealth of Pennsylvania	
Number of Users:	1,200	
# & Composition of Vendor Employees & Consultants Assigned:	e&e IT Consulting Services, Inc. was responsible for providing two Sr. Network Engineers to support SMS and Active Directory related projects and maintenance.	
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Infrastructure/Networking **Full Address:** 700 South Eisenhower Boulevard Middletown, PA 17057 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Direct manager **Name:** [redacted] **Title:** [redacted] **Department:** SAP/IT **Full Address:** 700 South Eisenhower Boulevard Middletown, PA 17057 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Direct manager for e&e consultants providing SQL support	

e&e IT Consulting Services Project Reference 2: Pennsylvania Department of Education

Name of Client & Project Title	Pennsylvania Department of Education – Systems Administrator and Desktop Support
Contract Value	$170,310
Nature and Scope of Project:	**Project Description** Maintain the project servers, files, print capacity, and make certain that backups are performed as appropriate. Perform as a front-line interface to users. Accepts trouble reports and dispatch them to appropriate system administrators. Our team writes scripts in a particular administrative language and has programming experience with applicable languages. Communicate accurate and useful status updates, manage and report time spent on all work activities, and follow quality standards. The e&e IT team is responsible for operating and system software upgrades and for keeping patches current, perform minor debugging, and program modifications. As required, we develop and execute the disaster recovery/back up procedures and archiving procedures, and manage server security. We conduct performance tuning, capacity planning, database administration, and fault management. We understand the design of consistent network-wide file system layouts and maintain strong relationships with employees and various tier two and three support groups. Support is provided for tier two support of the technical infrastructure, and we coordinate efforts with vendors if tier three support is required. Risks are mitigated by ensuring high priority issues are resolved in a timely manner and by identifying and reporting hardware problems. Identify and track issues, risks, and action items and resolve and/or assist in issue resolution **Program Management Office (PMO) and Management Services** Our System Administrator served as the Project Manager for the PDE infrastructure consolidation over to OAIT. He helped facilitate and lead the exercise. He also serves as one of the SMEs for the PDE team in terms of their entire Infrastructure as it presently stands in PDE. He also reviews, prioritizes, and researches service requests and may prepare purchase justifications. Experience permits him to anticipate and quickly resolve team specific issues. Additionally, he determines time estimates, schedules for the team's work, resolve issues that may arise in a timely manner, and manage the daily operations to make sure service levels are being met. Our Systems Administrator manages the systems management team's support issue and backlog, monitors the team's open backlog of support issues and re-assign issues as necessary to verify they are closed per agreed upon service levels. Expectations are managed at all levels—customers, end users, and executive sponsors—while implementing and following quality standards. Our systems administrator manages requirements for technical support and design in an application development environment. Work involves interface with various infrastructure teams and operations providers to identify the strategic direction of systems management activities. Other responsibilities include:

Name of Client & Project Title	Pennsylvania Department of Education – Systems Administrator and Desktop Support
	• Act as the first level of escalation for high priority support issues • Function as the liaison to the various support groups with whom the systems management team interfaces • Develop the technical infrastructure maintenance strategy • Manage the system management resources • Act as a system's management expert • Analyze, determine, and document requirements in terms of system management needs and implement them • Recommends policies on system use and services. **Technical Services** Support more than 90 in-house written Web apps. Deploy support for applications written in house. We provide network support, Cisco configuration, firewall support, network security, snort. network and service availability monitoring, and IBM DS3400 SAN EMC Celerra NAS EMC Avamar Backup with offsite replication node. We build/support/administer the Team Foundation Server, assist the development team with process and procedures to implement continuous integration practices, automated build deploy, IIS Admin, and DNS record management. Our team has a solid understanding of networking/distributed computing environment concepts, understands principles of routing client/server programming, and is responsible for keeping the environment up and running.
Project Duration:	**Start Date Year:** 2007 / **End Date Year:** Ongoing
Nature of the Client:	Executive Department of the state charged with K-12 and adult educational budgeting, management and guidelines.
Nature of Client Audience:	All PDE internal as well as external users logging into the site and using the programs.
Number of Users:	Internally 700 and externally millions.
# & Composition of Vendor Employees & Consultants Assigned:	Two Consultants: one System Administrator and one Desktop Technician
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Center for Data Quality **Full Address:** Pennsylvania Department of Education 333 Market Street Harrisburg, PA 17126-0333 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** In charge of our 2 Contractors working on site

Name of Client & Project Title	Pennsylvania Department of Education – Systems Administrator and Desktop Support
	Name: [redacted] **Title:** [redacted] **Department:** Center for Data Quality **Full Address:** Pennsylvania Department of Education 333 Market Street Harrisburg, PA 17126-0333 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Director of Division

e&e IT Consulting Services Project Reference 3: PLCB

Name of Client & Project Title	PLCB – Linux POS Support
Contract Value	$127,899.20
Nature and Scope of Project:	**Project Description** The PLCB has 1,500 registers running SUSE Linux Point-Of-Sale (SLEPOS) supporting its retail business. Ronald Meinsler has primarily been working on automating the configuration of these registers. These registers reside in approximately 615 stores across the state. Ron has also been working on automating the configuration of the SUSE Linux servers that run in each of these stores. These two tasks will provide a quicker deployment turn-around as well as more consistent setups for these devices. He has been a big asset in both of these ventures as well as providing a vast knowledge base for Linux in general. **Technical Services** Support the Point-of-Sale team on all operating system or hardware issues on the PLCB's SUSE Linux based registers • Create/update automated deployment scripts for the registers • Create/update register images • Patch the operating system on the registers on a regular basis • Assist the POS team on developing (scripting) application patches • Assist the POS team with register replacements (DNS, DHCP, LDAP changes) • Provide remote support for the SUSE Linux based (in-)store servers • Place and manage hardware calls for the store servers • Patch the operating system on the store servers on a regular basis • Create/update automated deployment scripts for the Point-of-Sale application on the store servers
Project Duration:	**Start Date Year:** 2012 / **End Date Year:** 2012
Nature of the Client:	Support for the Pennsylvania Liquor Control Board Retail System.
Nature of Client Audience:	Retail clients and users at the 615 Stores throughout Pennsylvania.
Number of Users:	1500 registers x numbers of users of these machines.
# & Composition of Vendor Employees & Consultants Assigned:	1 Vendor employee and 1 PLCB employee.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** Network Administrator 2 **Department:** Office of Information Technology Services Enterprise Infrastructure Division **Full Address:** 210 Northwest Office Bldg | Harrisburg, PA 17124-0001 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Server Support / Enterprise Infrastructure/ OITS

Name of Client & Project Title	PLCB – Linux POS Support

4.5.9 Info-Matrix Corporation Project References

Info-Matrix Corporation Project Reference 1: Pennsylvania Counties

Name of Client & Project Title	Pennsylvania Counties - Automated Children and Youth System (ACYS)
Contract Value	$1,800,000
Nature and Scope of Project:	**Project Description** The Commonwealth consists of 67 counties who are responsible for the administration of Child Welfare functions and policies as developed by the Commonwealth of Pennsylvania. Over the years each county had developed separate and independent in-house systems to support these functions and provide statistics to the Commonwealth. Over the last few years the Commonwealth has encouraged the counties to standardize on a software solution, which would facilitate the migration to a statewide system, which is planned for implementation in the future. To meet this requirement Info-Matrix developed the Automated Children and Youth System (ACYS). Development of the system commenced on January of 2003. **PMO and Services Management** Part of this effort includes operating a Project Management Office (PMO) to support the multiple projects under way. This includes a strong service management methodology to support the existing infrastructure, application, and business users. This project also entails a phased development and implementation across multiples counties as well as ongoing maintenance and support of the application and infrastructure. Info-Matrix also operates the Help Desk function as required. In addition, Info-Matrix subject matter experts work with county personnel to assist the counties in their decision in hosting their applications or going to a cloud offering. **Technology Services** Info-Matrix Corporation developed the Automated Children and Youth System (ACYS), a .NET/SQL Web-based Case Management System designed to support the administrative functions of Pennsylvania's County Youth Services Offices. ACYS features a complex SQL Server Database and knowledge of the Unisys ES7000. In addition to design and development, during implementation, we provided data mapping, cleansing, and conversion services from various disparate databases to SQL Server. We also have prior experience with index sequential, hierarchal and inverted list databases. The project included general system design, detail system design, development, testing, implementation, training and documentation. Info-Matrix performs installation, user testing as well as cleansing legacy data. This development effort made extensive use of RAD/JAD development techniques due to the compressed development cycle required by the counties. The project was initiated in June of 2003 and the initial system installation was done within 18 months by January of 2004. ACYS has since been deployed in multiple Commonwealth of Pennsylvania counties including Venango, Bucks, and Montgomery. ACYS as a total system includes approximately 70 function points, 70 tables and numerous programmed reports as well as an extensive ad hoc reporting capability. They system will be utilized by approximately 700 users and caseworkers. The platform utilized for this application was .NET with a SQL Server database. Functionality included in ACYS includes:

Name of Client & Project Title	Pennsylvania Counties - Automated Children and Youth System (ACYS)
	Intake, Allegations, Relationships Disposition, Case Management, Case Decision Case Open/Close, Worker Assignment, Contacts Risk Assessment, Placements, Caseload Tracking To Do List, AFCARS, Adoption Search Capabilities, Provider Maintenance, Worker Maintenance
Project Duration:	**Start Date Year:** 2003 — **End Date Year:** Ongoing
Nature of the Client:	Pennsylvania Counties – Venango, Bucks and Montgomery
Nature of Client Audience:	Office of Children, Family and Youth – Pennsylvania Counties – county users and case workers
Number of Users:	Over 700 county employees and case workers
# & Composition of Vendor Employees & Consultants Assigned:	Numerous Info-Matrix employees over the years
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Full Address:** Venango County Office of Children and Youth 1 Dale Avenue Franklin, PA **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Project initiator and sponsor **Name:** [redacted] **Title:** [redacted] **Department:** Bucks County Office of Children and Youth **Full Address:** Suite 200, 4259 W. Swamp Road Doylestown, PA 18902 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Bucks County Project initiator and sponsor

Info-Matrix Corporation Project Reference 2: Pennsylvania Game Commission

Name of Client & Project Title	Pennsylvania Game Commission – Mainframe Conversion Project
Contract Value	$2,500,000
Nature and Scope of Project:	**Project Description** The Pennsylvania Game Commission manages the Commonwealth's wildlife resources, which are considered by many to be a state treasure. Over the years, the Game Commission developed numerous mainframe applications to assist the citizens of Pennsylvania and to aid its employees and volunteers in conducting the business for the Pennsylvania Game Commission. This project included migration of their mainframe applications into a more modern technical platform, while enhancing business functionality and processes. **Program Management Office (PMO) and Service Management** Part of this effort includes operating a Project Management Office (PMO) to support the multiple projects under way. The PMO has a growing portfolio of projects supported by PMP certified project managers from Info-Matrix. The standardized methodology has led to a streamlined management of all projects within the Commission and the ability to track them at the task level and generate management reports. This includes a strong service management methodology to support the existing business applications deployed to the new distributed infrastructure. **Technical Services** At the end of 2011, the Commission selected Info-Matrix to architect and modernize the existing mainframe legacy applications. The modernization effort includes migrating over 17 mainframe applications to a Web-based, distributed environment. The effort includes architecting the solution(s), strong project management, business analysis and solutioning, data conversion, and full life cycle development / deployment. The project started in 2011, with a target completion date in December 2014. This complex project entails a phased development and implementation as well as ongoing maintenance and support of the application and infrastructure. Info-Matrix is skilled at large, complex multi- year projects. This requires a strong team with the ability to develop the new business applications as well as supporting those new applications implemented. **Data Center Architecture** The project entails architecting the technical platforms, transition management, technical support for the infrastructure on which the new applications are housed, data conversion and constant interface with the business users on the functionality of the new business applications. Info-Matrix has much experience with the Enterprise Data Center and the Data PowerHouse, which is critical to architecting and migrating the applications from the Data PowerHouse to the EDC environments. The Info-Matrix Team works closely with staff at the EDC to ensure procedures are followed and the required testing and QA takes place prior to deployment of any application. This includes capacity planning and load testing prior to deployment.

UNISYS

Name of Client & Project Title	Pennsylvania Game Commission – Mainframe Conversion Project	
Project Duration:	**Start Date Year:** 2011	**End Date Year:** Ongoing through 2014
Nature of the Client:	Pennsylvania Game Commission – IT Department (Office of the CIO) Executive Sponsor – Executive Director of the Commission.	
Nature of Client Audience:	The business applications being transformed will affect all of the business users and IT support personnel with the Game Commission and streamline operations for citizens and volunteers.	
Number of Users:	The new business applications will utilized by most of the Pennsylvania Game Commission and numerous volunteers and citizens of the Commonwealth.	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** The Info-Matrix project manager has been working with the Pennsylvania Game Commission Information Technology Staff since 2011. The initial project team consisted of three people who did the "as is" review of the applications and architected the plan and solution to move to the distributed environment (including business design, solutioning of infrastructure components. The team has ramped up to 6 full time developers during 2012. Additional personnel are brought in as required for specialized work.	
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted]) **Department:** Information Technology **Full Address:** Pennsylvania Game Commission 2001 Elmerton Avenue Harrisburg, PA 17110 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Project initiator and sponsor **Name:** [redacted] **Title:** [redacted] **Department:** Information Technology **Full Address:** Pennsylvania Game Commission 2001 Elmerton Avenue Harrisburg, PA 17110 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Game Commission IT Manager responsible for the mainframe migration	

Info-Matrix Corporation Project Reference 3: Pennsylvania Department of Public Welfare

Name of Client & Project Title	Pennsylvania Department of Public Welfare – Large Contract Support
Contract Value	$45,000,000 (estimated over the last 16 years)
Nature and Scope of Project:	**Project Description** Since 1996, Info-Matrix had been working with the Pennsylvania Department of Public Welfare in numerous support roles from application development, to database design / conversion and infrastructure support. Info-Matrix has performed in the capacity as prime vendor as well as a sub-contractor partnered with Deloitte since 2006. Those initiatives include critical projects and legacy mainframe support such as those outlined below (as well as others): **Low Income Home Energy Assistance Programs (LIHEAP) –** The Low-Income Home Energy Assistance Program, also known as LIHEAP, helps low-income families pay their heating bills. LIHEAP is an application that offers assistance in the form of a cash grant, sent directly to the utility company, or a crisis grant for households in immediate danger of being without heat. Info-Matrix was involved initially with the mainframe development of the application and later the development and conversion to a Web-based solution. The LIHEAP application is used across the Commonwealth to determine eligibility and support for our most vulnerable citizens. **Office of Mental Retardation (2001 – Present) –** The Home and Community Services Information System or "HCSIS" was conceptualized and designed as a Web-based application utilizing the .NET framework. The core system processes standardized Mental Retardation (MR) processes, centralized MR data and introduced quality monitoring and resource budgeting improvements to the mental retardation program. Info-Matrix provided over 38 technical experts to develop the statewide system. Info-Matrix began the development in 2001 and continues to provide quality development and operations support to the project today. Info-Matrix was also successful in transitioning the required skills to the DPW development staff through various methods including Web-based training, mentoring programs and formal training sessions. The overall project required extensive system and end user documentation as well. **Program Management Office (PMO) and Services Management** This effort required Info-Matrix to provide strong Project Management Office components in order to manage and support the multiple projects under way. This included defining the business requirements, development, testing, data conversion and implementation within a specific and defined timeline. This also includes a strong service management methodology to support the existing business processes while implementing the streamlined applications. **Technical Services and Manage Hosting Services** The initiatives above provided applications development support, mainframe migrations, data migrations and legacy mainframe support for mission critical applications for DPW. Info-Matrix provided development activities and support for the applications, which are used across the Commonwealth to provide citizen services. The core system standardized business processes, centralized data and introduced quality monitoring and resource budgeting improvements to DPW's various program offices. Info-

Name of Client & Project Title	Pennsylvania Department of Public Welfare – Large Contract Support	
	Matrix provided technical experts to help develop these statewide systems. The effort includes architecting the solution(s), strong project management, business analysis and solutioning, data conversion, and full life cycle development / deployment. Over the years, Info-Matrix has become quite familiar with the design and software requirements, development standards, procedures and development methodology defined by the Department of Public Welfare. Info-Matrix currently provides many talented and experienced individuals to the Department of Public Welfare for software development and maintenance. Our developers, programmers, project managers and consultants distinguish themselves from other candidates because they possess a great deal of Health and Human Services domain knowledge. The combination of domain knowledge and technical expertise is the hallmark of our consultant staff. Info-Matrix currently provides personnel whose mission is to provide analysis, development and maintenance support to DPW for mission critical applications. Info-Matrix has a history and background of mainframe applications and the Unisys platforms.	
Project Duration:	**Start Date Year:** 1996	**End Date Year:** Ongoing
Nature of the Client:	Pennsylvania Department of Public Welfare providing citizen services	
Nature of Client Audience:	Pennsylvania Department of Public Welfare. The business applications developed are used by DPW employees to streamline business processes and streamline services for Pennsylvania citizens.	
Number of Users:	Citizens requiring Pennsylvania Department of Public Welfare services	
# & Composition of Vendor Employees & Consultants Assigned:	Numerous Info-Matrix employees over the years as a sub to Deloitte – Described above

4.5.10 Innovative Business Concepts, Inc. Project References

Innovative Business Concepts, Inc. Reference 1: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania Data PowerHouse (DPH) Contract
Contract Value	$237,000 per year thru December 2014
Nature and Scope of Project:	**Project Description** Call volume/incident reports: Since 1999, IBC has been providing onsite FTE personnel to support all Unisys mainframe, midrange and technical support functions in accordance with the Commonwealth's Data PowerHouse contract. IBC's Operations Help Desk staff interfaces with the Commonwealth's existing Help Desk infrastructure and performs second level (Level 2) problem determination, resolution, and/or tracking for end users. IBC's staff provides these services on site at the Willow Oak facility in Harrisburg, PA. Service coverage is redundant during prime operating hours, for all Level 2 calls in support of user requirements. Specific IBC Help Desk Staff responsibilities include: • Answer phone, fax, or e-mail inquiries in a timely and professional manner • Utilize problem management tools to document and track status of all problems • Perform single-point-of-contact problem determination and problem source identification (PD/PSI) for all user problems within IBC's scope of responsibility • Resolve/correct problems in a timely manner providing high level of customer satisfaction with problem assistance • Escalating, according to procedures, all unresolved problems in a timely manner to the appropriate next level of support including vendor dispatching if needed • Document all service outage/interruption incidents and initiation of recovery procedures • Notify designated Unisys personnel of systems or equipment failures, or of an emergency, according to the Procedures Manual • Monitor system components (host and network availability, application components/deliverables, etc.) and initiate recovery procedures as appropriate • Monitor and control (start/stop/recycle) all system attached devices and telecommunications lines • Provide system/user id password reset control and assistance • Provide assistance with missing or incorrect reports and other application deliverables • Interface with other operations personnel, programmers, and users/customers as appropriate • Update problem documentation via appropriate problem management process; • Initiate appropriate escalation procedures when required • Follow/develop/maintain work procedures • Report on the status of batch jobs upon request • Manage and monitor daily data transmissions • Maintain and distribute an updated Help Desk telephone number listing as required • Dispatch local carrier for line problems. **Service Management** IBC has been on the Data PowerHouse Project since its inception. During that timeframe they have worked with Unisys, IBM and the Commonwealth of Pennsylvania (The Team) to create a Help Desk, which provides services to the Agencies that have enlisted its help. The Help Desk was created from scratch and has evolved over the years in order to

Name of Client & Project Title	Commonwealth of Pennsylvania Data PowerHouse (DPH) Contract	
	provide meaningful reports and provide data for the overall efficiencies of the service. The Help Desk Staff provides ongoing input in order to streamline functions, play watchdog to open incent tickets, and provide updates to the process and procedures in order to keep up with the changing times. IBC only provides Help Desk services. **Technical Services** Innovative Business Concepts (IBC) is a Pennsylvania IT ITQ-qualified technology vendor. IBC is pre-qualified to provide the following IT ITQ services: • Training • Software Development • IT Consulting Services • Outsourcing Services and Support • Network and Telecommunications Consulting Services • Staff Augmentation	
Project Duration:	**Start Date Year:** 1999	**End Date Year:** On-going through 2014
Nature of the Client:	Agencies of the Commonwealth which use the Data PowerHouse	
Nature of Client Audience:	Agencies of the Commonwealth	
Number of Users:	Agencies of the Commonwealth	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** IBC supplies 3.5 FTEs – Help Desk Analyst to support this project. Since the inception, IBC has worked with the Team in order to cover the ebbs and flows of the help desk staffing needs.

Innovative Business Concepts, Inc. Reference 2: Pennsylvania Department of Transportation

Name of Client & Project Title	PennDOT Computer Aided Drafting and Design (CADD) Support Services
Contract Value	$220,000 per year thru December 2014
Nature and Scope of Project:	**Project Description** **Call volume/incident reports –** For the PennDOT Computer Aided Drafting and Design (CADD) Project, Innovative Business Concepts, Inc. partnered with Intergraph to provide PennDOT with CADD Support Services. Specifically, IBC is supporting the project by providing Project Management, Reporting, and two (2) CADD Expert Level Resident Technicians. The PennDOT CADD project provides statewide expert technical support for the maintenance and development of PennDOT's Computer Aided Drafting and Design (CADD) and Geospatial Systems in fourteen (14) district offices and PennDOT locations throughout the state. Intergraph and IBC provide on-site support to assist PennDOT CADD Support personnel in maintaining the CADD/Geospatial sites in good operating condition and are responsive to the requirements of PennDOT. Support services include software and equipment troubleshooting that result in remedial action and routine site and system maintenance. This project entails the on-site placement of expert-level, technical staff within direct, real-time access of all PennDOT design and engineering locations and domains. As such, the eight-member, Resident Technician (RT) Team must command a high degree of knowledge and experience of the PennDOT CADD and GIS infrastructure; the specific operating procedures and policies used at PennDOT; and the short- and long-term objectives and requirements of the departments. In addition to possessing an in-depth knowledge of PennDOT's applicable CADD/GIS software, each RT must also be able to perform as a highly skilled and experienced troubleshooter of the specialized hardware in use at PennDOT, as well as be able to understand and reliably diagnose complex system and network-related issues. This approach is necessitated by the complexity of the technology used within the PennDOT design and engineering locations, as well as the geographic dispersion of the locations. Dedicated technicians co-located with the sites they support, and specialized in the support of the hardware and software technologies that make PennDOT's engineering team productive, are best able to prevent or quickly resolve productivity impacting IT issues. Proactive and responsive support rendered by technicians deeply invested in the environments they support helps to ensure that PennDOT continues to operate at peak efficiency and meet the goal of 100% on-time bid packages. **Program Management Office (PMO) and Service Management:** **Project Management and Coordination** • Daily – Act as the point of contact for all employees to use to notify of an unplanned absence. Ensure that the technical lead is informed. Using pre-determined criteria, decide whether to request backfill of the absent resource, and if so, send the request to the backfill resource. • Weekly – Track vacation plans for each of the technical resources assigned to the project. Identify when outages will occur and ensure backfill resources are identified and tasked to cover those outages. Identify any situations where multiple personnel are requesting time off at the same time and flag to the Technical Lead to resolve.

Name of Client & Project Title	PennDOT Computer Aided Drafting and Design (CADD) Support Services

- Monthly – Participate in monthly program/project reviews remotely via teleconference. Capture minutes and action items from the review and distribute to Intergraph and to the State.
- Monthly – Based on inputs from the technical team, create the consolidated monthly activity report and distribute to Intergraph and to the State after review and acceptance by the Technical lead. Report on trends of issues, locations and number of issues reported from Field Technicians.
- Monthly – Maintain the skills and certification matrix for the existing staff and also the planned training and certifications. Ensure that the technical lead updates the matrix on a quarterly basis or in response to significant technological changes at Penn DOT.
- Monthly – Maintain a consolidated record of system downtime and equipment failures across all supported sites, based on information provided by the Resident Technician supporting each site.
- Quarterly – Participate in the quarterly WebEx sessions with the State remotely via telecon/WebEx. Capture minutes and action items from the session and distribute to Intergraph and to the State.
- Annually – Prepare the contract activity and status report required by the Contract Administrator, either annually, or upon request of DGS.

Technical Services

IBC provides two CADD Expert Level Resident Technicians for statewide support/ Maintenance and development of PennDOT's CADD and Geospatial Systems in fourteen (14) district offices and PennDOT locations throughout the state.

This project entails the on-site placement of expert-level, technical staff within direct, real-time access of all PennDOT design and engineering locations and domains. As such, the eight-member, Resident Technician (RT) Team must command a high degree of knowledge and experience of the PennDOT CADD and GIS infrastructure; the specific operating procedures and policies used at PennDOT; and the short- and long-term objectives and requirements of the departments. In addition to possessing an in-depth knowledge of PennDOT's applicable CADD/GIS software, each RT must also be able to perform as a highly skilled and experienced troubleshooter of the specialized hardware in use at PennDOT, as well as be able to understand and reliably diagnose complex system and network-related issues.

This approach is necessitated by the complexity of the technology used within the PennDOT design and engineering locations, as well as the geographic dispersion of the locations. Dedicated technicians co-located with the sites they support, and specialized in the support of the hardware and software technologies that make PennDOT's engineering team productive, are best able to prevent or quickly resolve productivity impacting IT issues. Proactive and responsive support rendered by technicians deeply invested in the environments they support helps to ensure that PennDOT continues to operate at peak efficiency and meet the goal of 100% on-time bid packages.

Facilities Management

Provide software and equipment troubleshooting support that result in remedial action and routine site and system maintenance. IBC records issues/incents of the PennDOT IT equipment , tracks warranties , and upgrades and applies software patches as needed and repairs the printers to the 14 District Offices, the Photo Licensing Centers and the "ROC Building in Harrisburg.

Name of Client & Project Title	PennDOT Computer Aided Drafting and Design (CADD) Support Services
	Managed Hosting Services Provide on-site support to assist PennDOT CADD Support Personnel in maintaining operating condition and responsiveness of the CADD/Geospatial sites. **Capacity on Demand and Additional Services:** Proactive and responsive support rendered by technicians deeply invested in the environments they support helps to ensure that PennDOT continues to operate at peak efficiency and meet the goal of 100% on-time bid packages.
Project Duration:	**Start Date Year:** 2011 — **End Date Year:** On-going through 2014
Nature of the Client:	PennDOT's Computer Aided Drafting and Design (CADD) and Geospatial Systems
Nature of Client Audience:	The PennDOT CADD project provides statewide expert technical support for the maintenance and development of PennDOT's Computer Aided Drafting and Design (CADD) and Geospatial Systems in fourteen (14) district offices and PennDOT locations throughout the state.
Number of Users:	PennDOT employees statewide
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** IBC provides two CADD/Network Technicians and one Project Manager
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Department:** Security, Government & Infrastructure (SG&I) Division **Full Address:** Intergraph Corporation 218 Westinghouse Blvd., Suite 204 Charlotte, NC 28273 **Title:** [redacted] **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Contract Manager **Name:** [redacted] **Department:** Security, Government & Infrastructure (SG&I) Division **Full Address:** Intergraph Corporation Keystone Building, 400 North Street Harrisburg, PA 17120 **Title:** [redacted] **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Technical Consultant

Innovative Business Concepts, Inc. Reference 3: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania, External Quality Review Organization (EQRO) – Department of Public Welfare (DPW) Managed Healthcare	
Contract Value	$117,000 Per Year	
Nature and Scope of Project:	**Project Description** Business Concepts, Inc. has partnered with IPRO on the delivery of the EQRO External Quality Review Organization to deliver a successful project of the Commonwealth of Pennsylvania. Specifically IBC is providing IPRO with building, facilities, network, application development, and administrative assistance in support of the project. As Pennsylvania's EQRO, IPRO has worked with its Medicaid managed care programs that provide physical health (PH) services to mandatory and voluntary populations; behavioral health (BH) services to a mandatory population; Enhanced Primary Care Case Management (EPCCM) services; and Prepaid Inpatient Health Plans (PIHP) long-term care services. On the EQRO project, IPRO and its partners, including Innovative Business Concepts, are tasked by DPW with 20 objectives for assessing the performance of Pennsylvania's managed care entities. To an extent, the scope of work parallels past requirements for the implementation of the three mandatory EQRO protocols and several optional protocols for PHMCOs, BH-MCOs, and Long Term Living (LTL) PIHPs. The DPW and IPRO have partnered to apply the knowledge, practical knowhow, best practices and lessons learned from conducting EQRO and related quality assessment and improvement activities for other states and government agencies. The goal is to improve the quality of managed care in Pennsylvania. The EQRO bring new ideas, a fresh perspective, and creative solutions that have been successful elsewhere to the DPW and to determine their applicability in Pennsylvania. **Technical Services** IPRO and its partners, including Innovative Business Concepts, are tasked by DPW with 20 objectives for assessing the performance of Pennsylvania's managed care entities. To an extent, the scope of work parallels past requirements [How} for the implementation of the three mandatory EQRO protocols and several optional protocols for PHMCOs, BH-MCOs, and Long Term Living (LTL) PIHPs. **Facilities Management** IBC is providing IPRO with building, facilities, network, application development, and administrative assistance in support of the project. IBC has secured and leases a location within the capital region for IPRO to utilized for the state contract. IBC provides all utilities and management/upkeep for this location. IBC maintains all IT equipment and software, telephones, furniture and office supplies for this location.	
Project Duration:	**Start Date Year:** 2012	**End Date Year:** On-going through 2015
Nature of the Client:	Commonwealth of Pennsylvania Department of Public Welfare Managed Healthcare	
Nature of Client Audience:	The goal is to improve the quality of managed care in Pennsylvania. Therefore, potentially, all effected by managed health care in the Commonwealth of Pennsylvania	

Name of Client & Project Title	Commonwealth of Pennsylvania, External Quality Review Organization (EQRO) – Department of Public Welfare (DPW) Managed Healthcare
Number of Users:	This is Quality Management for all of the healthcare participates of the state of Pennsylvania to include but not limited to Medicaid recipients
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Two administrative assistants, one programmer and a facilities /project manager. IBC created and maintains and office in the capitol area for IPRO
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Managed Care **Full Address:** IPRO, 1979 Marcus Avenue Lake Success, NY 11042 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Contract Manager **Name:** [redacted] **Title:** [redacted] **Department:** Managed Care **Full Address:** 1979 Marcus Avenue Lake Success, NY 11042 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Manager

4.5.11 PC Network, Inc. Project References

PC Network, Inc. Reference 1: Verizon

Name of Client & Project Title	Verizon – Customer Satisfaction Surveys for the Commonwealth of Pennsylvania Telecommunications Contract	
Contract Value	$2,000,000	
Nature and Scope of Project:	**Project Description** To address a contractual requirement for end user feedback and customer satisfaction surveys, Verizon turned to PC Network, Inc. (PCN) to provide these services in support of the Commonwealth of Pennsylvania's quality management activities surrounding the state telecommunications contract. **Services Management** Feedback is solicited from Commonwealth end users of the Verizon CoPA Service Desk and related telecommunications support services through a survey that is generated for every closed service request in Remedy. In addition, Commonwealth agency stakeholders are surveyed on a quarterly basis to obtain feedback on Verizon's overall performance. Verizon obtains reports on a monthly and quarterly basis, with survey "alerts" set up to provide instantaneous feedback when survey responses exceed predetermined thresholds. Feedback is incorporated into Verizon's continual service improvement plans and subsequent actions. All survey data is accessible via a Web-based portal. Dashboards, views, reports and data queries can be customized to suit data access requirements. This project compares similarly in size, scope and complexity with the requirements for customer satisfaction surveys in the CoPA Data Center Computing Services RFP. Customer satisfaction surveys are a key component of the Commonwealth's overall quality management program. PCN's customer satisfaction surveys have helped Verizon continually improve their performance by identifying areas of improvement provided by Commonwealth end users. Satisfaction measurements have trended upward over time as Verizon continually seeks to raise their overall customer satisfaction scores. PCN currently sends out approximately 1,700 surveys per month, with an average return rate of nearly 10%. During an average month, PCN passes along approximately 15 service alerts to Verizon. A dedicated team quickly addresses each alert through direct customer contact, root cause analysis, corrective actions and other methods to ensure the problem is addressed and complete customer satisfaction attained. This is for customer satisfaction surveys only, which are a requirement of the RFP. The services below are not part of the deliverables associated with customer satisfaction surveys.	
Project Duration:	**Start Date Year:** 2010	**End Date Year:** On-going
Nature of the Client:	The end client included the Commonwealth of Pennsylvania's Office of Information Technology, Office of Administration (OA/OIT), who managed the Verizon contract on behalf of Commonwealth agencies and other organizations.	

Name of Client & Project Title	Verizon – Customer Satisfaction Surveys for the Commonwealth of Pennsylvania Telecommunications Contract
Nature of Client Audience:	The customer for this service included agency end users who opened a service request and received support from Verizon's service desk. In addition, agency IT leadership receives quarterly customer satisfaction surveys to solicit feedback on Verizon's overall contract performance.
Number of Users:	More than 56,000 lines transitioned to-date
# & Composition of Vendor Employees & Consultants Assigned:	PCN's Verizon Client Executive and Customer Satisfaction Survey Practice Manager, Frank Potter, was assigned to the start-up and ongoing maintenance of this project. The start-up period took approximately three months to complete, pending vendor activity that could be measured. Surveys are sent to end users and Commonwealth stakeholders on a monthly and quarterly basis, respectively. Reports are also generated on a monthly (End User Feedback) and quarterly (Customer Satisfaction Surveys) basis.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Verizon Enterprise Solutions – CoPA Account **Full Address:** 303 Walnut Street, 8th Floor Harrisburg, PA 17101 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Third party vendor management **Name:** [redacted] **Title:** [redacted] **Department:** Verizon Enterprise Solutions – CoPA Account **Full Address:** 303 Walnut Street, 8th Floor, Harrisburg, PA 17101 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Overall program management

PC Network, Inc. Reference 2: Verizon

Name of Client & Project Title	Verizon – DNS, DHCP and IP Address Management (DDI) Managed Services for Nissan	
Contract Value	More than $2,500,000	
Nature and Scope of Project:	**Project Description** PCN's end-to-end IPAM (DNS/DHCP/IP Address Management) Managed Services Solution was selected by Verizon to provide IPAM managed services under a multi-year network management contract for Nissan, a global Japanese automaker. **PMO and Services Management** PCN provided project management support and coordination of all activities from design through implementation. We utilized PMP certified project managers and followed PMBOK best practices to help ensure that the project completed on time and budget. Our project managers excel in complex, multi-vendor environments. **Manage Hosting Services** PCN designed, deployed and currently operates and manages a secure, high availability, highly resilient configuration of network appliances that provide centrally managed IP addressing as well as distributed Microsoft DNS & DHCP servers. PCN's IPAM Solution meets the customer's strict 7x24 SLAs and is delivered from our network operations center in Philadelphia, PA. PCN continuously monitors the customer's network environment for DDI service issues through the development and implementation of our proprietary DDI monitoring system. Strict change control processes have been developed with both Verizon and the end customer, and are followed for all MACDs to ensure accuracy and desired outcomes. In addition to DDI managed services, PCN also provides IPv6 consulting services to assist in IPv6 conversion and compatibility. The Commonwealth's Data Center Computing Services RFP requires vendors to provide an IPv6 enterprise migration plan and be able to support both IPv6 and IPv4 formats. DDI managed services may not be in the current scope of the proposed contract, but could easily be an add-on business opportunity should the Commonwealth wish to outsource this function. With the advent of IPv6, the need for DDI managed services in large enterprises will be mandatory, as managing expanding and more complex network environments cannot be accomplished any longer through manual methods. Properly managing DDI reduces the risk of service outages, improves network security, and enables network administrators to more easily manage the expanding number of IP devices. Expand on DDI, break into proper categories, We are only discussing past performance. It is our job to show through past performance how this supports and benefits the new contract	
Project Duration:	**Start Date Year:** 2010	**End Date Year:** On-going
Nature of the Client:	Nissan's IT network services group provides oversight to Verizon and PCN.	
Nature of Client Audience:	The client audience includes all Nissan users of IP-based technologies	

Name of Client & Project Title	Verizon – DNS, DHCP and IP Address Management (DDI) Managed Services for Nissan
Number of Users:	Thousands of global Nissan employees
# & Composition of Vendor Employees & Consultants Assigned:	PCN's IPAM Practice Manager, Dave Champagne, was the key consultant on the project team. Key Nissan and Verizon stakeholders also participated in the process, which included a takeover of the current environment prior to going live with PCN's DDI managed service.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Verizon Enterprise Solutions – Nissan Account **Full Address:** 610 North Morgan Street Tampa, FL 33602 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Responsible for overall program management **Name:** [redacted] **Title:** [redacted] **Department:** Verizon Enterprise Solutions – Nissan Account **Full Address:** 7000 Weston Parkway Cary, NC 27513 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Transition Project Manager

PC Network, Inc. Reference 3: Dell

Name of Client & Project Title	Dell – Commonwealth of Pennsylvania and City of Philadelphia Deployment Services
Contract Value	More than $1,000,000
Nature and Scope of Project:	**Project Description** PCN provides technical deployment services and project management services for Dell's customers, including the City of Philadelphia and the Commonwealth of Pennsylvania. PCN collaborates with Dell to schedule and project manage technology refreshes with City and Commonwealth agencies, to pilot technology roll outs, work with Dell in developing images, and to deploy hardware and manage reverse logistics. **Program Management Office (PMO) and Management Services** This project reference describes PCN's ability to successfully manage and implement projects for diverse state and local government entities. PCN also provides ad hoc staff augmentation for 49 technical labor categories. **Technical Services** As one of Dell's premier partners in the Commonwealth, PCN maintains a storage depot at its Philadelphia headquarters where Dell directly ships equipment for preparation prior to implementation. Services include operating system installations, standard image development and copying, network configuration, equipment delivery, installation and other services. PCN technicians provide delivery, installation and support directly at customer sites. PCN provides project management services to coordinate all activities across all involved parties, including Dell, PCN employees and end customers.
Project Duration:	**Start Date Year:** 2010 | **End Date Year:** On-going
Nature of the Client:	Clients served by this service include Commonwealth and City of Philadelphia agencies.
Nature of Client Audience:	The client audience served by PCN includes Commonwealth and City of Philadelphia agency users of Dell technologies.
Number of Users:	Thousands of Commonwealth and City of Philadelphia staff members
# & Composition of Vendor Employees & Consultants Assigned:	PCN deploys a project manager along with a deployment team large enough to handle varying workloads over time, as agency refresh schedules vary along with project implementation timeline windows.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** Manager **Department:** Service Delivery Management **Full Address:** 105 Davis Road Phoenixville, PA 19460 **Telephone:** [redacted] **E-mail:** J[redacted]

Name of Client & Project Title	Dell – Commonwealth of Pennsylvania and City of Philadelphia Deployment Services
	Relation/Role to Project: Client management and project oversight **Name:** [redacted] **Title:** [redacted] **Department:** Major Public Accounts **Full Address:** One Dell Way Round Rock, TX 78682 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted]

PC Network, Inc. Reference 4: Verizon

Name of Client & Project Title	Verizon – Project Management and Subject Matter Expert Augmentation for the Commonwealth of Pennsylvania Telecommunications Contract	
Contract Value	$7,000,000	
Nature and Scope of Project:	**Project Description** Upon the signing of Verizon's seven plus year, $7,000,000 contract to provide telecommunications, networking and security services for the Commonwealth of Pennsylvania, it became immediately clear that the local team was understaffed to transition from the prior vendor in the timeframes agreed to in the contract. PCN's project managers and technical specialists helped to drive a complex and aggressive transition to completion, while identifying and implementing improved processes for order entry, provisioning, dispatch and implementation. PCN also was able to bring technical expertise no longer available in Verizon's organization, which was specific to the Commonwealth's prior telecommunications environment. **Program Management Office (PMO) and Services Management** Verizon engaged PCN to provide project management and other subject matter experts to assist in the transition of voice, data and internet/security services. In addition to project managers, PCN provided more than security experts, order entry specialists, programmers and other technical experts who worked in short, medium and longer term capacities. **Technical Services** Verizon's contract with the Commonwealth required a complex transition of voice, data and internet/security services from the prior vendor over to Verizon in a very short time frame. Data transitions were completed in a timely fashion, while voice services underwent a transformation through the implementation of a new telecommunications Voice Over IP (VoIP) system. Through the Penn Connect project, Pennsylvania became one of the first states to implement a true Unified Communications (UC) telecommunications system, which integrates voice over IP telephony, instant messaging, video conferencing, e-mail and other information technology communication tools.	
Project Duration:	**Start Date Year:** 2010	**End Date Year:** On-going
Nature of the Client:	The end client included the Commonwealth of Pennsylvania's Office of Information Technology, Office of Administration (OA/OIT), who managed the Verizon contract on behalf of Commonwealth agencies and other organizations.	
Nature of Client Audience:	The customer for this service included agency telecommunications leadership and the agency end users they serve.	
Number of Users:	More than 56,000 lines transitioned to-date	
# & Composition of Vendor Employees & Consultants Assigned:	PCN's Verizon Client Executive Frank Potter managed a team of more than 20 concurrent PCN contractors in support of Verizon's transition over the prior three-year period.	

Name of Client & Project Title	Verizon – Project Management and Subject Matter Expert Augmentation for the Commonwealth of Pennsylvania Telecommunications Contract
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Verizon Enterprise Solutions – CoPA Account **Full Address:** 303 Walnut Street, 8th Floor, Harrisburg, PA 17101 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Overall program management **Name:** [redacted] **Title:** [redacted] **Department:** Verizon Enterprise Solutions – CoPA Account **Full Address:** 303 Walnut Street, 8th Floor Harrisburg, PA 17101 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** Third party vendor management

4.5.12 Pierson Computing Connection, Inc. Project References

Pierson Computing Connection, Inc. Reference 1: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania – IBM Server-Storage Contract	
Contract Value	$6 million	
Nature and Scope of Project:	**Project Description** Over the past eight years, PCCi has provided project management and implementation services for the IBM Commonwealth of Pennsylvania server and storage contract. Throughout this contract PCCi has managed the implementation of hundreds of IBM Series X, Series P, and Series I servers as well as hundreds of Storage Area Network (SAN) solutions in Commonwealth data centers across Harrisburg. In addition, PCCi has provided deployment of geographically dispersed servers at agency locations throughout the Commonwealth as part of this contract. Throughout the life of this contract, and the prior contract as well, PCCi's team is recognized by Commonwealth agencies for their integrity, customer service and technical knowledge regarding the IBM equipment being implemented. **Program Management Office (PMO) and Service Management** PCCi has managed the Server and Storage contract for services for eight years. PCCi's project managers have performed all customer scheduling, management of resources, and follow up for this contract. **Technical Service** Under this contract PCCi has provided transition management, capacity planning, architecture of agency data center server and SAN resources, backup management, capacity planning, and emergency preparedness planning. **Datacenter Architecture** PCCi has provided services to the agencies that include consulting on use of servers and SANs across multiple data centers, facilitating their use of IBM server and storage technology to perform mirroring, data transfer, data backup and other functions required to keep multiple data centers operating smoothly.	
Project Duration:	**Start Date Year:** 2004	**End Date Year:** On-going
Nature of the Client:	Commonwealth of Pennsylvania, Office of Administration	
Nature of Client Audience:	Commonwealth agencies, particularly IT organizations	
Number of Users:	80,000	

Name of Client & Project Title	Commonwealth of Pennsylvania – IBM Server-Storage Contract
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Debra Pierson, President, serves as Project Executive on this project. As the project developed multiple PCCI project managers have been engaged to make certain that client and agency satisfaction is met. Up to twenty technical resources have been available to this project, depending on peak times and agency requirements.
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** PA Office of Administration **Full Address:** 1 Technology Park Harrisburg, PA 17110 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted] **Name:** [redacted] **Title:** [redacted] **Department:** Server Farm Operations **Full Address:** 651 Boas Street Harrisburg, PA 17121 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted]

Pierson Computing Connection, Inc. Reference 2: Pennsylvania Department of Labor and Industry

Name of Client & Project Title	Pennsylvania Department of Labor and Industry – Unemployment Compensation Modernization Systems (UCMS)	
Contract Value	$3.1 million	
Nature and Scope of Project:	**Project Description** PCCi provided operational support to IBM and the Department of Labor and Industry for the implementation and operation of the IBM systems that support the Unemployment Compensation Modernization Systems (UCMS) application project development and systems. Responsibilities included building and configuring 45 VMware virtual servers, 42 Blade servers, and 7 System X 3650 servers spread across five different environments. Created server configuration and software installation documentation concerning all servers built for this project. Worked with the customer to optimize management software; supported and maintained servers, collaborated with developers to optimize their individual applications pertaining to this project. Maintained the developers PCs, also installed and troubleshot Rational software. Provide on-going PMO support including administrative staff and project work planner. **Program Management Office (PMO) and Service Management** PCCi manages and maintains the detailed project plan for this multiple release, multiple phase Web development project. PCCi develops, reviews, plans, consolidates and evaluates project plans from all releases and phases. PCCi also provides documentation and project tracking reporting. **Technical Service** PCCi and its subcontractor, the ATS Group, provided initial Technical Architecture and planning services for this project.	
Project Duration:	**Start Date Year:** 2006	**End Date Year:** On-going
Nature of the Client:	Pennsylvania Department of Labor and Industry, Bureau of Unemployment Compensation	
Nature of Client Audience:	Businesses and unemployed individuals throughout Pennsylvania	
Number of Users:	20,000	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Debra Pierson serves as Project Executive for this project. Rick Loffredo serves as Project Manager for PCCi. At its peak, PCCi provided ten resources providing technical support and PMO support for this project.	

Name of Client & Project Title	Pennsylvania Department of Labor and Industry – Unemployment Compensation Modernization Systems (UCMS)
Client Contact Information:	**Reference Contacts:** **Name:** [redacted] **Title:** [redacted] **Department:** Information Technology (IT) **Full Address:** 651 Boas Street Harrisburg, PA 17121 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted] **Name:** [redacted] **Title:** [redacted] **Department:** UC Division, OIT Bureau of Business Application Development **Full Address:** Department of Labor and Industry 651 Boas Street Harrisburg, PA. 17121 **Telephone:** [redacted] **E-mail:** [redacted] **Relation/Role to Project:** [redacted]

Pierson Computing Connection, Inc. Reference 3: Commonwealth of Pennsylvania

Name of Client & Project Title	Commonwealth of Pennsylvania – Data PowerHouse (DPH)	
Contract Value	$365,000	
Nature and Scope of Project:	**Project Description** We support the current Commonwealth of Pennsylvania (CoPA) Data PowerHouse (DPH) outsourcing contract by providing support for Availability Management, Change Management, Problem Management, Incident Management, Service Level Agreement Management, and Root Cause Analysis Management for the IBM agencies (PennDOT, DOR, L&I UC, DOC, AGING, L&I BOIS, SCSC) in the contract. We also provide monthly metric reporting for the IBM agencies in the contract, as well as SAS70/SSAE16 audit support. We have provided this support since 2008. **Program Management Office (PMO) and Service Management** Pierson Computing Connection, Inc. is providing this Commonwealth project with Change Management, Problem Management, Incident Management, Availability Management, Service Level Agreement Management, and Root Cause Analysis Management for the IBM agencies in the contract. We also provide monthly metric reporting for the IBM agencies in the contract, as well as SAS70/SAE16 audit support.	
Project Duration:	**Start Date Year:** 2009	**End Date Year:** On-Going
Nature of the Client:	Commonwealth of Pennsylvania	
Nature of Client Audience:	Information Technology (IT) staff of agencies	
Number of Users:	Commonwealth-wide	
# & Composition of Vendor Employees & Consultants Assigned:	**Vendor Project Manager/Key Consultant on Project Team:** Curtis Wilson, Availability Manager, provides the resources under this contract.

4.6 Subcontractors and Suppliers

4.6.1 Unisys Subcontractors and Suppliers Capabilities Table

The nature of the Commonwealth of Pennsylvania Data Center Computing Services Project encompasses aspects that make teaming with subcontractors and suppliers a critical program success factor. Section 4.6.1 provides a summary of key factors used to identify the need for our primary subcontractors and small subcontractors and the type of support they will provide for CoPA. Unisys and these subcontractors make up the "Unisys Team." In addition, key suppliers have been identified to provide resources to support the project. **Table 4-4** provides a summary of the level of support each of our subcontractor and supplier partners will provide the Commonwealth.

Table 4-4. List of Subcontractor and Supplier Capabilities

Data Center Computing Services

SCHEDULE L

APPROVED SUBCONTRACTORS

(Offeror to provide a list of Offeror's subcontractors within the Schedule)

APPROVED SUBCONTRACTORS

- IBM Corporation
- Deloitte LLP
- Acclaim Systems, Inc.
- American Personnel Managers & Consultants, Inc.
- Credo Technology Solutions, Inc.
- Domino Technologies, Inc.
- e&e IT Consulting Services, Inc.
- Info-Matrix Corporation
- Innovative Business Concepts, Inc.
- PC Network, Inc.

IBM Corporation

IBM Corporation is a globally integrated technology and consulting company headquartered in Armonk, New York. With operations in more than 170 countries, IBM attracts and retains some of the world's most talented people to help solve problems and provide an edge for businesses, governments and non-profits. Innovation is at the core of IBM's strategy. The company develops and sells software and systems hardware and a broad range of infrastructure, cloud, managed hosting services like those and consulting services many of which are very similar to the Commonwealth's requirements.

IBM is focusing on four growth initiatives - business analytics, cloud computing, growth markets, and Smarter Planet. IBM is working with customers around the world to apply the company's business consulting, technology and R&D expertise to build systems that enable dynamic and efficient organizations, better transportation, safer food, cleaner water and healthier populations.

IBM will be providing technology products and managed services for mainframe/mid-range based applications including disaster recovery and capacity on demand services to the project.

Deloitte LLP

In the United States, Deloitte LLP and its subsidiaries have 57,000 professionals with a single focus: serving their clients and helping them solve their toughest problems. They work in four key business areas including audit, financial advisory, tax, and Information Technology consulting. Deloitte has significant experience in supporting the Commonwealth of Pennsylvania with some of their most complex application projects and they perform most of the enterprise security work for the Commonwealth.

Deloitte provides technical security services and database management support services for the project.

Acclaim Systems, Inc.

Acclaim Systems is a leading software solution company offering a multitude of comprehensive and customized services. They are committed to maintaining client relationships by effectively aligning technology and consulting resources with clients' dynamic business requirements. They succeed by investing in the professional fulfillment of their employees, empowering them to deliver high quality solutions. Acclaim has significant experience supporting the Commonwealth and Unisys by providing experienced IT resources for critical development and managed services projects. They are a Pennsylvania verified Small Diverse Business.

Acclaim Systems will be providing technical resources in support of Microsoft and Linux operating systems, and the Microsoft Exchange system. In addition, Acclaim Systems will provide project management resources to the support the Transition plan of the project.

American Personnel Managers & Consultants, Inc.

American Personnel Managers & Consultants, Inc. is a superior Human Resource Management and Recruiting firm, Staffing and Project Management company with more than 70 years of experience in the Staffing arena and 13 years of experience with staffing the Pennsylvania Data PowerHouse project. APMC also has extensive experience in providing project work for many Commonwealth agencies. They are a Pennsylvania verified Small Diverse Business.

A leading innovator in work force staffing solutions, connecting “people potential” to the needs of today’s ever changing business requirements, they provide unparalleled experience, comprehensive capabilities across state & federal government lines, with a collaborative and customized focus on client needs through: On-Site Project Management; Staff Augmentation; outsourcing; short and long term staffing and management.

For this project, APMC will be providing operational support resources to monitor system consoles and will be staffing the media management operation to ensure computer tapes are available for critical data backup and restore operations, inventoried, and stored offsite for data protection in the event of a disaster.

Credo Technology Solutions, Inc.

Credo, a Minority Business Entity (MBE), has built a tight cadre of team members focused on consistently delivering services that help clients meet their IT challenges. By maintaining strong relationships with a variety of leading IT companies, Credo’s staff

and strategic partners are able to offer business and technology solutions, as well as project management offerings. They are a Pennsylvania verified Small Diverse Business.

Credo's portfolio of services includes, but is not limited to:

- Enterprise Resource Planning (ERP)
- PeopleSoft and Oracle Consulting
- Software Application Development
- IT Staffing
- Social Media Consulting
- Service Oriented Architecture

Credo Technology Solutions will be providing technical and project management support resources to the project.

Domino Technologies, Inc.

Since its founding in 1996, Domino Technologies, Inc. has built a solid record of performance working with clients in both the private sector and government. They have consistently delivered innovative solutions, using the latest technology to fulfill clients' goals. The result is an intense focus on resolving precise challenges, leading to a reduction in time required to complete the job and ultimately to increase your company's profits.

Domino Tech will be providing technical and project management support resources to the project. They are a Pennsylvania verified Small Diverse Business.

e&e IT Consulting Services, Inc.

e&e IT Consulting Services is a certified Woman Business Enterprise (WBE) technology services firm providing staffing solutions in Pennsylvania, Virginia, New Jersey, and the City of Philadelphia. e&e IT provides all levels of skilled IT professionals to clients in Central Pennsylvania and surrounding areas. They have been recognized, for the sixth consecutive year, as one of the Top 50 Fastest Growing Companies in Central Pennsylvania, making significant contributions to the growth, strength, and success of the Central Pennsylvania region.

e&e IT will be providing technical and project management support resources to the project. They are a Pennsylvania verified Small Diverse Business.

Info-Matrix Corporation

Info-Matrix is a private, woman-owned information technology consulting firm based in Lemoyne, Pennsylvania. Since 1996, Info-Matrix has focused largely on the government sector, with an emphasis in human services IT projects, including, for example, Medicaid eligibility, welfare case management and child support enforcement systems. From Texas to Alaska, Info-Matrix has broad experience at the federal, state, and local levels hiring experienced professionals with an average of 15 years of IT experience who have distinguished themselves by successfully implementing complex government IT projects.

Info-Matrix will be providing technical and project management support resources to the project. They are a Pennsylvania verified Small Diverse Business.

Innovative Business Concepts, Inc.

Since 1989, Innovative Business Concepts, Inc (IBC) has been a Pennsylvania Certified Woman-Owned Business empowering customers to maximize productivity, efficiency and cost savings by deploying the best people, practices and knowledge in the technology industry. They provide world-class IT personnel, products and services.

Innovative Business Concepts, Inc (IBC) will be providing technical and project management support resources to the project. They are a Pennsylvania verified Small Diverse Business.

PC Network, Inc.

PCN is a growing, woman-owned, IT services company based in Center City Philadelphia. They work with enterprises, prime contract partners, and the public sector to affordably solve the many complex problems facing business today. Their customers span the Commercial, Transportation, Defense, and Government sectors. PCN was founded in 1988; they have evolved from their traditional systems integrator roots to provide a broad range of IT consulting services. PCN has a strong focus on quality with ISO 9001 and TL9000 quality programs. PCN is ISO 27000 Compliant.

The PCN portfolio of services help their customers balance cost and productivity throughout your technology's lifecycle. They deliver technology solutions and skilled IT professionals that optimize your existing infrastructure and provide planning and design support to ensure systems continue to meet emerging business and technological needs. They are a Pennsylvania verified Small Diverse Business.

PCN will be providing the following services for the project:

- Customer Satisfaction Survey Support
- IPV6 Strategy Services
- Service Desk Staffing

""We understand the importance of providing you the right technology in your data center compute environment to enable your transition to the innovative business model of the future. More importantly, we know that it takes the right complement of expertise on our team to successfully work with you as one team to implement the solution. The team established to support the Commonwealth of Pennsylvania understands and respects the individuality of the agencies, each with its own unique team, priorities, needs and working style. Our team has a rich history of working with you to accomplishment your most critical Information Technology initiatives, and we are looking forward to continuing to be a part of your team building your 'new world' together."

[redacted] ***Unisys Engagement Executive***

".... I felt I needed to send a heartfelt "Thank You" for allowing [redacted Agency Account Manager] to continue supporting DOS. Unisys has always been a great partner to us in providing very competent team members that support us well. [redacted] holds customer service qualities that are second to none. We absolutely enjoy working with her and know she is a great advocate to keeping the Department's applications up and running 24x7. Her personality, knowledge, and skill are enjoyed by the entire DOS team. Thank you again."
—Tim Ruppert, Former Director, Pennsylvania Department of State, Bureau of Management Information Systems

"I will echo Tim's comments. [redacted] is exceptional at customer service and follow through. She not only keeps everything on track within Unisys, she also makes sure that nothing falls through the cracks on our end as well with the change requests. I appreciate [redacted] and her abilities! She is part of our team over here and the team is working well. Thank you very much for allowing her to continue to serve us! It means a lot to this agency!"
—Dave Burgess, Former Deputy Secretary for Planning and Service Delivery, Department of State

5. Personnel

RFP	*Requirement*
II-5	*Personnel. Include the number of executive and professional personnel, analysts, auditors, researchers, programmers, consultants, etc., who will be engaged in the work. Show where these personnel will be physically located during the time they are engaged in the Project.* ***Refer to Schedule G - Staffing Plan and Key Positions*** *for key personnel, include the employee's name and, through a resume or similar document, the Project personnel's education and experience in respective Account Role as defined within* ***Schedule G - Staffing Plan and Key Positions****. Indicate the responsibilities each individual will have in this Project and how long each has been with your company. Identify by name any subcontractors you intend to use and the services they will perform.*

As discussed in the Management Summary section of our proposal, given our commitment to the Commonwealth of Pennsylvania it should be noted that [redacted], Unisys Chairman and CEO, is this engagement's executive sponsor and will personally ensure our company's complete commitment to its success in the implementation of a new compute services model at the Commonwealth.

In addition to [redacted] role as Executive Sponsor, Unisys established an Executive Leadership Committee shown in **Figure 5-1** to support the efforts of our Harrisburg-based leadership team. We created this committee to provide direct visibility into senior leadership at Unisys to confirm we meet our commitments to the Commonwealth, during both transition and steady state operations, and to break down the inevitable barriers that arise during engagements of this magnitude.

"Our decades of experience in successfully implementing large, complex initiatives teaches us the importance of selecting the right delivery team and empowering them to make decisions locally based on the client's needs and expectations. [redacted] *are some of the very best in service delivery. They have my full support and are empowered to make the necessary decisions to help ensure success. Their team is complemented by a Unisys Executive Oversight Committee focused on providing whatever additional corporate resources and support are necessary."*

— [redacted]
Commonwealth Executive Sponsor
Chairman & CEO

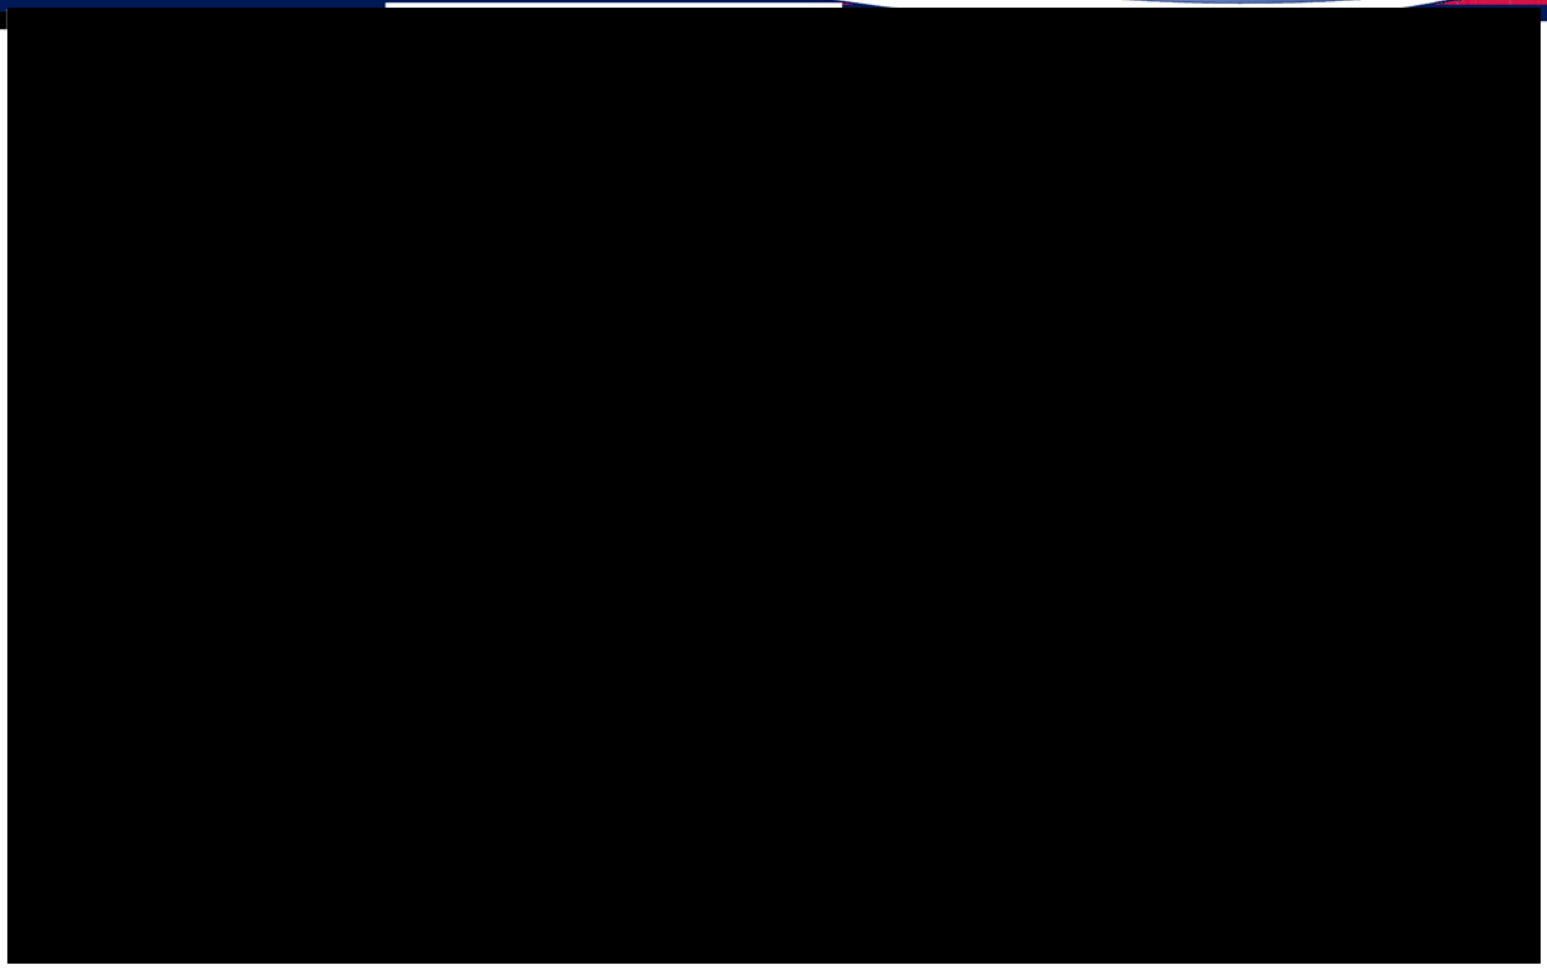

Figure 5-1. Unisys Executive Leadership Committee

Our **Executive Committee consists of:**

- [redacted], Unisys President of Global Service Delivery
- [redacted], Unisys Vice President of Global Service Delivery
- [redacted], IBM Vice President of Global Technology Services
- [redacted], Unisys Vice President of North America Service Delivery
- [redacted], Unisys Vice President and General Manager of North America Service Delivery
- [redacted], Unisys Chief Technology Officer, Technology and Innovation
- [redacted], Unisys Vice President, Commonwealth of Pennsylvania Region
- [redacted], Deloitte Principal, Security and Privacy Services

The Commonwealth's new compute services model will yield many efficiencies but requires a vast, sophisticated, multi-data center operation providing managed services to approximately 50 agencies across nearly 11,000 diverse systems, according to volumetrics data provided in Schedule I. To be successful, it must leverage disciplined processes aligned with ITIL best practices and provides accountability to deliver against stringent SLAs across more than 30 categories. That requires an experienced leader with an extensive background, not only with the associated technologies, tools, and methods, but familiarity with the Commonwealth agencies and their individual needs.

[redacted] will lead a team of 6 extremely capable Unisys executives (based in Harrisburg) who, in turn, will oversee a team of 278 professional, skilled resources to transition and implement the Compute Services Solution described in Section 3.0 of our proposal. Included in the 278 team members are 135 professionals from our subcontractors, IBM, Deloitte, and small diverse businesses.

With Unisys as your prime contractor, [redacted] will continue to be fully empowered and will manage the entire engagement with the Commonwealth. As with the managed services we provide today, [redacted] will take responsibility for all issues and concerns related to our team or infrastructure provided, regardless of the problem's original source. As demonstrated over the past 13 years, we will own and solve problems instead of engaging in the typical finger-pointing and blame game played by many other service providers.

Our Integrated Staffing (Organization) Plan described in this section defines how our new team members will join the transition. At the same time, during transition, we will bring the current data center contract to closure, allowing our skilled team to focus and support the new contract.

We selected a very experienced resource, [redacted], to lead the transition effort. Transition is one of the most important tests of this effort; we wanted a very skilled and experienced leader to help plan and execute the transition. With his experience on similar transitions while working for HP/EDS and Dell/Perot Systems, [redacted] is an excellent choice. We also took great care to select other senior members of our team as well. They are identified further in this section of our proposal.

Table 5-1 lists the location in our proposal where the solution components requested in Schedule G are discussed.

Table 5-1. Location of Solution Components in Proposal

Schedule G Requirement	Location of Discussion
Integrated Staffing Organizational Plan	Sections 5.1 – 5.12

Identification of key personnel on organization chart	Section 5.12
Summary of key personnel high level responsibilities	Section 5.12
Offeror Key Personnel Table	Section 5.10,
Subcontractor Key Personnel Table	Section 5.11
Staff Contingency Plan	Section 5.13.1
Staff Management	Section 5.13.2
Training Policies and Procedures	Section 5.13.3
Staff Retention	Section 5.13.4

The Unisys staffing strategy is a critical component of the success of the Commonwealth's Data Center Computing Services (DCCS) initiative. The architecture and technology solution provide a foundation to meet the Commonwealth compute requirements and overall goals. Selecting the right composition for the team to define and execute our strategic plans is paramount to the overall program's success.

The detailed subsections of Section 5 provide the specifics of our Integrated Staffing (Organization) Plan strategy. Because Unisys is the incumbent vendor, our discussion of the overall project organization and approach begins with an overview of the current organization structure, leading to a discussion that introduces the modified high-level organization structure to manage the new contract requirements.

We are in an uncommon position to provide many technology professionals with significant experience and who currently work with the Commonwealth to provide many of the services that will be part of the new contract. This will certainly facilitate a smoother transition because our team has deep knowledge of the existing Commonwealth infrastructure and a respect for how to meet agency expectations, both for the existing services and during the transition to new services.

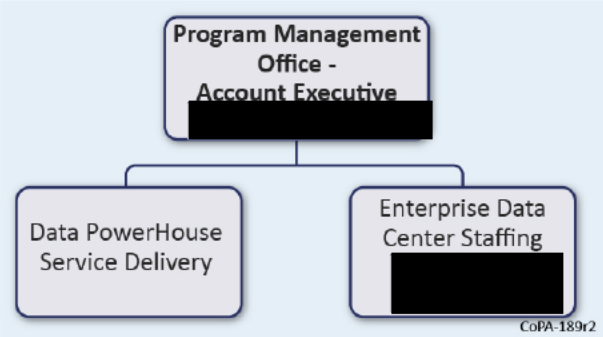
In this section, we introduce you to the key members of our team and provide details on why they were selected, the duties they will perform, and their experience supporting the Commonwealth or like engagements. This includes how we will structure the team, organize their skills, and implement the reporting hierarchy of our team. This includes an important component… how we interface with the Commonwealth team regularly. It also defines reasonable expectations for the assistance and availability of Commonwealth resources.

This discussion is important to help you understand how we will effectively transition from the requirements of the contract we support today to the organization that will enable realization of your vision, and for detailing changes required to facilitate the transformation.

5.1 Current Organizational Structure

A logical starting point for discussing the project organization plan is to review today's organization supporting our current engagements at the DPH and the Enterprise Data Center (EDC). As depicted to the right, the current structure consists of three basic organizations: the Program Management Office, the Data PowerHouse (DPH) Service Delivery Team, and the Enterprise Data Center Team.

This basic organization structure for our current contract has the right level of control to address the needs of the existing DPH contract, supporting managed services in three Service Level Agreement categories for 16 agencies and 1,200 systems from a single data center. Unisys also provides the EDC with staff augmentation in support of 48 agencies and nearly 4,000 systems.



With their historical knowledge and years of experience, the current team forms a strong foundation for the staffing plan of the new DCCS contract and a solid launching point for a number of innovative improvements to the staffing approach for the new contract. The critical enhancements necessary to support the DCCS are detailed throughout Section 5. They cover all the bases and will provide success as we transition to the new services model.

5.2 New Organizational Structure

This section presents a high-level overview of the DCCS future steady state organization structure. Later in this section, we focus on our transition staffing approach, which includes the transition of existing staff supporting the DPH and the EDC to the new organization, and how the new organization will be augmented by a transition team structure that focuses exclusively on mitigating risk and overlays the strong foundation provided by the steady state team. Our current DPH and EDC production staff will be important advisers to the transition team so the transition plan is based on reality that only comes from experience.

The figure below introduces the high-level organizational teams and the executive leaders in our PMO. Key personnel presented in **Figure 5-1** along with other key personnel introduced throughout Section 5 are defined in the abbreviated Key Personnel Table in Section 5.3, and the detailed Key Personnel Tables found in Sections 5.10 and 5.11. Short biographies of key personnel can be found throughout Section 5.12 Organizational Function Discussion.

Key Drivers of New Organizational Structure

- Sheer volume of infrastructure/agencies
- Prominent role in technology strategy
- Transparency of operations/pricing
- Centralized yet flexible communication/governance
- ITIL process alignment/discipline
- Focus on security/compliance
- Agency-centric staffing model

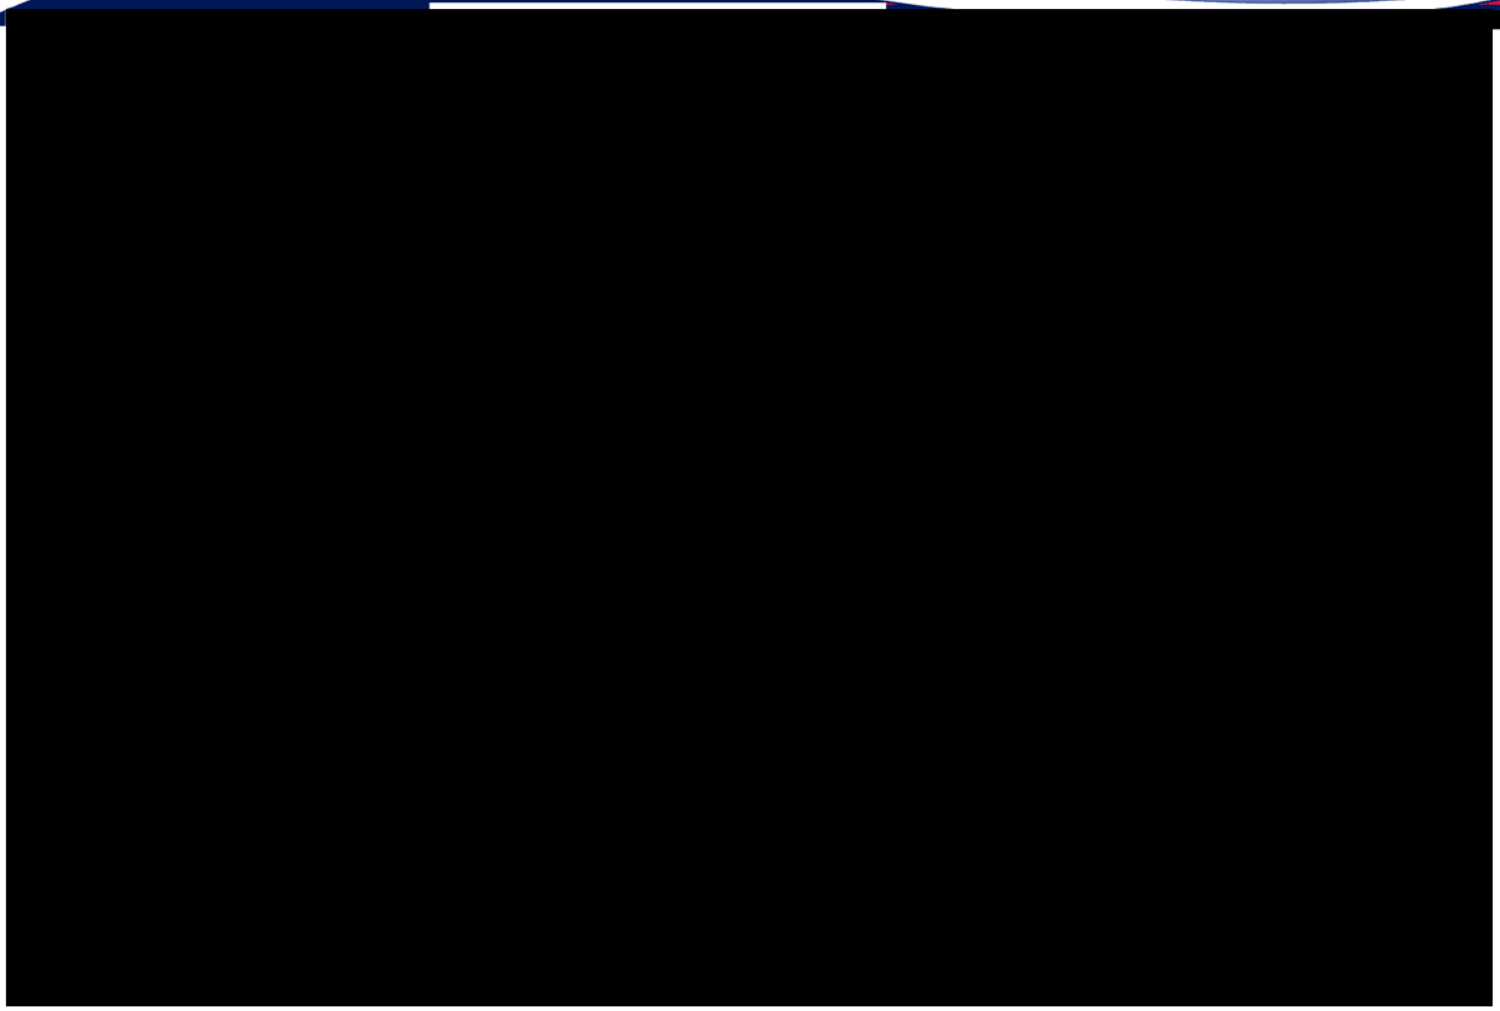


Figure 5-2. Data Center Computing Service Engagement

When contrasted with the current organization already described, the new organization is significantly enhanced by the addition of dedicated teams formed in response to new program goals and to facilitate the Commonwealth's transformation to the new model. **Figure 5-3** provides a high-level description of the functions of each of our seven core teams.

Figure 5-3. Functions of Seven Core Teams

How is the New Organization Different and What are the Benefits?

The paragraphs below highlight the differences and enhancements of the new organization compared with the current organization. A more comprehensive discussion of the overall functions of each of the seven core organizations is covered in Section 5.12.

The **Program Management Office** is an integral part of the current program and has been enhanced to manage the complexities of a much larger and very different DCCS program. This team governs and executes the overall program, projects, and contract elements, and provides ongoing direction and leadership supporting the contract and designated services for the contract's duration. Through the enhanced Financial Management function, this office provides accurate and cost-effective stewardship of IT assets and resources, providing a truly transparent analysis of the Commonwealth's spend on services. Other enhancements include a dedicated focus on subcontractor accountability for performance of services throughout the contract's term along with management of third-party software licensing and all maintenance agreements for hardware and software.

We will be leveraging a sophisticated suite of tools that will automate a number of functions that the **PMO** performs manually today including processing requests for service and approvals for contractual changes around services, hardware and software configurations, and SLAs. We will also automate processing agency level invoices with the level of detail needed to provide transparency, as well as chargeback to particular projects and general ledger codes to track federal funding spend.

The **Agency Account Management** team will be responsible and accountable for supporting each agency participating on this engagement. Unisys realizes that these roles are critical to maintaining a high level of satisfaction with the agencies and will form a dedicated team. Our Agency Account Managers will foster collaboration and are adept at building relationships and pulling teams into action to complete complex initiatives on time, within budget. Through a partnership with agency leadership, each agency account manager engenders a customer-focused culture on the service delivery teams, providing clarity on customer priorities and initiatives.

As with the current contract, **Service Delivery** continues to be at the core of our operation, providing all aspects of technology and infrastructure support to meet the day-to-day needs and to fulfill the contract's service obligations. We believe it is in the Commonwealth's best interest to deviate from an industry standard approach in which technical resources report to technology tower leaders who are typically at remote locations outside Harrisburg and implement a structure of six cross-functional teams supporting multiple technology disciplines (Windows, Network, Storage, and so forth) that report directly to a Harrisburg-based Service Delivery Manager who is directly aligned with an Agency Account Manager supporting a subset of Commonwealth agencies with similar technologies. Each Service Delivery Team led by a Service Delivery Manager has end-to-end responsibility and is fully accountable for providing services for specific agencies and all of their applications.

A significant change to **Service Delivery** relates to enhancement of the Service Desk function, which provides a central point of communication for all Commonwealth approved users and agency staff to report incidents, requests for information, and service requests for all of the services provided. This team also manages the new Knowledge Management Portal providing a central repository for processes and procedures, communication plans, and other documentation to be shared with the Commonwealth. Changes to the Service Desk will facilitate process discipline and consistency, with consistent flow of two-way communication inherent in the process.

The new **Service Excellence Office (SEO)** defines and oversees all ITIL process management and analysis functions, including management and oversight of all processes, maintaining accuracy of the CMDB, auditing process effectiveness to confirm that service delivery teams comply with proper execution of processes, and analyzing process trends for anomalies. This team verifies that all processes are accurately defined and documented in the Commonwealth Computing Procedures Manual (CCPM), and audited on a periodic basis. The SEO manages the Continuous Service Improvement and Innovation Program (CSIIP) and the Customer Satisfaction Program in collaboration with Commonwealth.

Enterprise Architecture is a new team responsible for the development and maintenance of all aspects of the Data Center Architecture Plan and Roadmap and owns the development and management of the technology management program for the compute services delivered. In partnership with Commonwealth agencies, Agency Account Managers, and the rest of the Unisys Team, this function provides leadership in the forecasting and

outlook for new technologies and compute services to be added during the program's term. This group guides IT operations in addition to performing planning, design, build, and transition support on all technical matters.

The **Transition Project Management Office (TPMO)** leverages proven Unisys methodologies to maintain a successful transition from the current Commonwealth Data Center Services model to the new model, and with the same discipline, maintains effective execution of ongoing steady state projects. This new function will include planning and execution of training required to successfully implement all of the program's aspects.

The **Information Security Office** oversees all aspects of the project to confirm compliance with security standards and requirements, develops policies, and performs periodic audits of processes and data to confirm compliance. Information security management's purpose is to align IT security with business security needs and verify that the confidentiality, integrity and availability of the assets, information, data and services match the Commonwealth's. While the current DPH program maintains a strong focus on information security, the new organization works with Commonwealth agencies to plan and implement strategies to bolster information security, taking compliance and protection to the next level.

Because of our past experience with Commonwealth agencies, Unisys believes we structured the new Compute Services Organization with sufficient power and flexibility to properly support the Commonwealth in this new venture. Other potential service providers that lack our level of knowledge and expertise with the Commonwealth may unknowingly significantly underestimate their program organization's size and scope. We did not.

5.3 Key Personnel Overview

Key Personnel

The core of this successful program is comprised of 28 key personnel. They are motivated, seasoned, ITIL V3 Foundations certified and well-educated professionals guided by an executive leader experienced with managing complex IT organizations and projects. The **key personnel** selected by Unisys provide targeted executive focus in key program areas, including program management, service delivery, service excellence and quality, enterprise architecture, transition and steady state project management, information security, and account management.

This organization's key personnel were selected not only for their experience with supporting large, complex customer environments and getting the job done with high success, but also for the collaborative style of their approach. This team of leaders can see the future of the Commonwealth DCCS model with all of its nuances and will create a vision with a roadmap guiding the delivery. They work proactively to prioritize and enable desired outcomes to be achieved to your satisfaction. The key personnel listed in **Table 5–2** have entrusted their faith to Unisys by providing us the exclusive right to represent them

in our proposal to the Commonwealth. Formal certification of that right to represent can be found in the tab behind the Key Personnel Resumes section.

5.4 Details of the New Organization

The Unisys staffing model consists of a diverse, multidiscipline team seeded with professionals experienced in supporting technology initiatives across all compute platforms used by the Commonwealth. Most of our team has specific experience with supporting the compute needs of the Commonwealth's applications developed over the 13 years that Unisys has served the Commonwealth in the DPH. In the aggregate, our team

accumulated more than 1,000 years of experience supporting compute environments for many of the 2,000 or more Commonwealth applications.

Our key leaders and executives introduced in the previous section know that they are only as strong as the team they assemble. The winning team assembled has the right levels of knowledge, experience, and certifications coupled with many years of Commonwealth experience. As we laid out our solution and defined the staffing requirements, we located and added new faces to our team to address the new requirements for certain skills not present among the current staff. This influx of new ideas and strength is a strong demonstration of our agility and commitment to delivery of the right skills for this contract, not just protection of our current employees.

But skills and knowledge quickly lose their advantage if we do not stay current with changes in technology and processes. Therefore, our leadership creates a learning organization that provides opportunities for team members to continually expand their technical and professional skills. In fact, we expect it (as outlined Section 5.13.3 Training Policies and Procedures). Last, and most important, the team of leaders you will see throughout Section 5 are well known for their fervent customer focus, passion for the highest levels of customer satisfaction, and a solid track record of achievement.

Table 5-3 and **Figure 5-4** below provide relevant information about Unisys.

Table 5-3. Facts about the Unisys Team

Topic	Relevance
65% of Our Team has supported the Commonwealth on other engagements	We know how to deliver systems and system change to the Commonwealth
278: The number of team members it takes for a successful program	We have prepared our team for change, added new members to obtain success with the new technology and service delivery concepts.
1000+: Number of years our team members have collectively supported the Commonwealth	Depth, built on successful projects brings assurance we are a low-risk choice.
6.8 years: Average employee tenure of our Harrisburg team	We have solid experience. We bring current skills and motivated people who know how to get things done in the Commonwealth culture.
315+: Number of professional certifications held by our team	Skill demonstrated and substantiated by external sources — some teams say they have skill, we certify the presence of skill.
100%: Percentage of employees with ITIL V3 Foundations Certification that will work on the DCCS team.	Knowing technology is good; knowing how to control the application of technology is better. In fact, it is a key element necessary for success in this contract.

Steady State Staffing

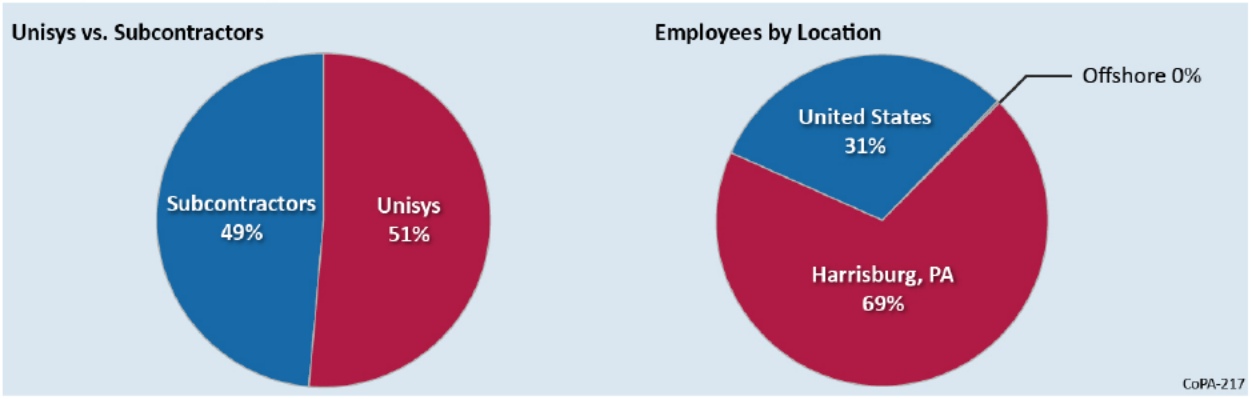

Figure 5-4. Steady State Staffing

5.5 Roles and Responsibility – High Level Steady State

Table 5-4 depicts staffing roles and quantities for each of the seven functional areas of the organization already discussed. This table also provides details on staffing type and quantity that will be provided by our subcontractors, including IBM, Deloitte, and our Small Diverse Business partners. The chart also indicates by staffing role the location of the team members. The Unisys Team will be staffed by a team located throughout the continental United States. Most of this team, including all management, will be located in Harrisburg.

5.6 Roles and Responsibility – High Level Transition (includes Architect, Build)

Table 5-5 depicts the staffing roles and quantities required to support transition activity. Staffing numbers and their fluctuations greatly depend on the timing of each application's migration. During the Transition Planning phase with the Commonwealth, application migration schedules will be established and these numbers will be refined. Many of the staff members will initially join the project to support the transition before supporting the steady state operations. A base of project staff is included in **Table 5-5;** the technical staff is included in the Data Center Architecture stand-up.

5.7 Agency Centric Staffing Approach

With our extensive experience supporting the Commonwealth through the DPH and the EDC, combined with a wealth of best practices experience from our national and global outsourcing practices, Unisys knows how to structure the organization that will best support Commonwealth agency needs. Unlike our competitors, we understand that each agency is a unique and distinct client of our compute services. Therefore, the key to success is putting the agency at our model's center. Our model allows the Commonwealth to realize savings from economy of scale without losing the personalized focus on the agencies that could be lost if a model aligned with technology domains were to be implemented. We give you the best of both worlds.

We understand that to an agency a particular compute component is more than just a server or a storage unit, and that outages to such devices can have a major impact to the functioning of an agency's application, and ultimately a negative effect on Commonwealth citizens. The alignment of our agency-centric model facilitates accountability at the agency and application level in contrast with many outsourcing providers that structure around technology components without regard for the customer and applications supported. In those models, you are just a number.

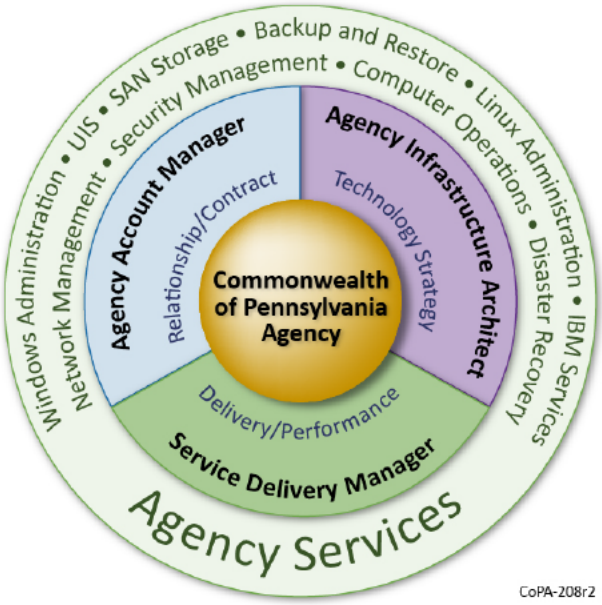
Our Staffing Plan proposes the use of six Service Delivery teams to cover the needs of all the in-scope agencies that will be supported under this contract. Each of the six teams will be directly responsible for providing services to a subset of these in-scope agencies. Determination of agencies to be aligned with each team will be accomplished by evaluating compute services required and the scope of work.

As depicted in **Figure 5-5**, each team has a dedicated management structure that includes an Agency Account Manager who manages the relationship with each agency supported and all aspects of the contract, an Agency Infrastructure Architect who manages the Technology Strategy for assigned agencies, and the Service Delivery Manager who is responsible for end-to-end delivery performance and directly oversees the management of all technicians aligned with the agencies supported by the team. The technical professionals managed by the Service Delivery Manager represent the technology disciplines necessary to provide comprehensive managed compute services to the Commonwealth.

Benefits of using this model include:

- Comprehensive accountability for availability and performance of Commonwealth application infrastructure supporting assigned agencies
- A single team with familiarity at an agency level to implement all projects associated with that agency
- Each team's realization of economy of scale through the support of approximately 1,800 systems per team
- The ability for Service Delivery Managers to leverage delivery resources across teams to cover peak activity.

Figure 5-5. Agency Centric Service Delivery Team Structure



Unisys also realizes there are benefits from a model that aligns staff with technology domains. To that end, we are creating a management role at the Service Excellence Office to function as a liaison between Service Delivery Managers supporting the Commonwealth, and the Unisys global technology domain leaders. This function enables the teams supporting Commonwealth agencies to have access to industry best practices and company standards developed within technology domains. This enables us to leverage supplemental resources throughout the United States that may be needed to support peak activity. This approach truly gives the Commonwealth the best of both worlds.

5.8 Interaction with the Commonwealth

Organized, frequent, and targeted communication is essential to the success of a program of this magnitude. Our team will be located mainly in Harrisburg, close to the locations of Commonwealth agencies that will be using the services to facilitate effective communication and collaboration.

Figure 5-6 provides a high-level graphical depiction of the flow of communication and interactions between our organizations. After working with the Commonwealth for many years, we understand that it is not as simple as one Unisys point of contact for a single Commonwealth counterpart. The Commonwealth organization is multidimensional; each agency has its own management structure and IT support team, and the Office of Administration manages the contract on behalf of the agencies.

In **Figure 5-6**, the Agency column represents the in-scope agencies and their unique roles and staff. Starting at the top, Executive Management level of the organization, the Unisys Engagement Executive who is accountable for the overall Commonwealth business relationship and the project's success interacts directly with agency Chief Information Officers (CIOs) and the CIO of the Office of Administration.

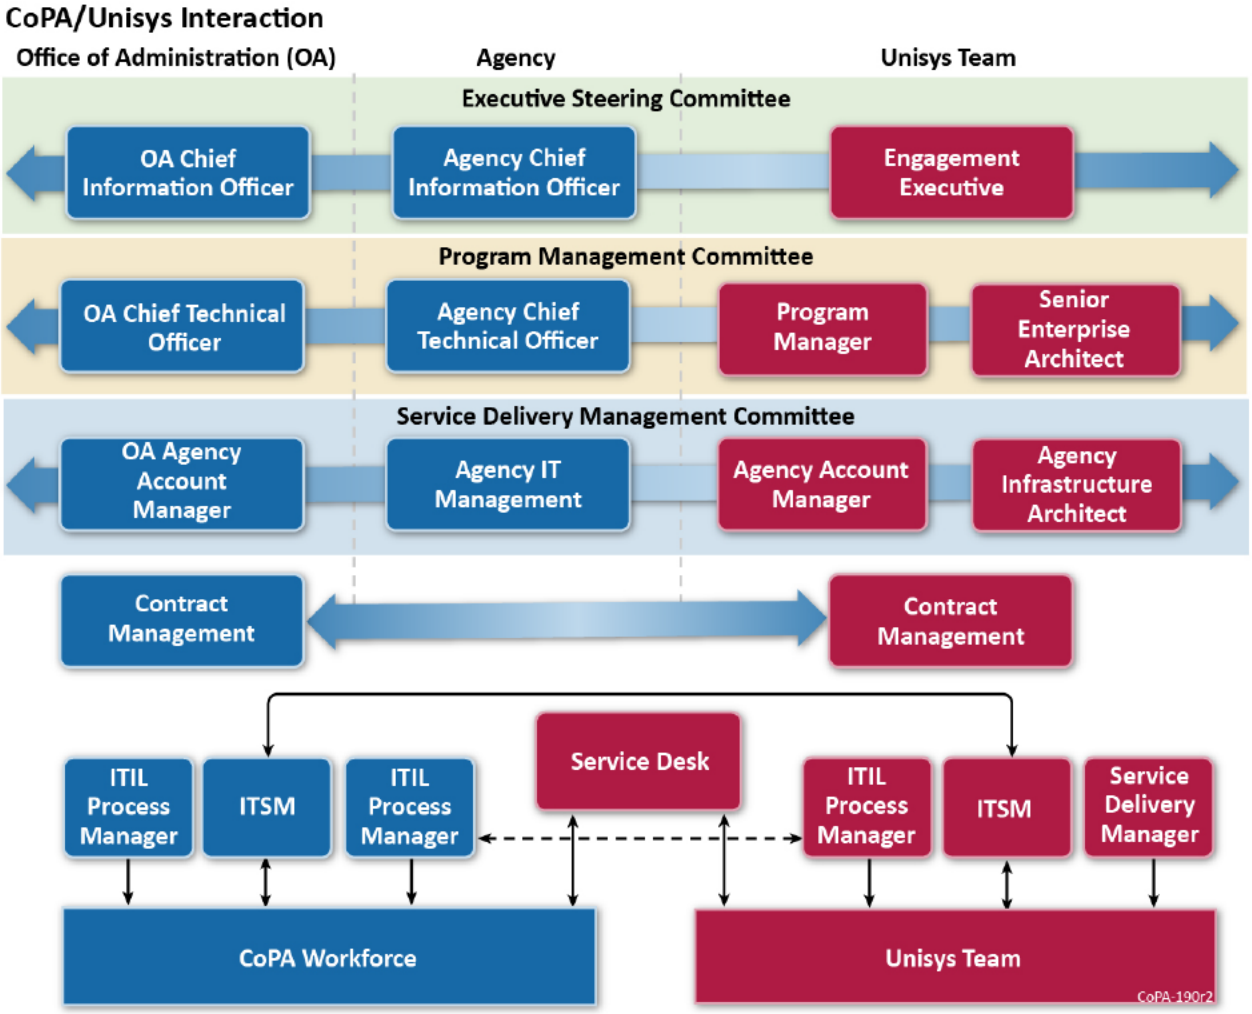


Figure 5-6. Interaction and Communication Flow Between Unisys and CoPA

Together, these individuals set the overall direction to steer the program, maintaining alignment with business objectives for each organization and monitoring the delivery of services to promote continued business value. This level of the organization comprises the Executive Steering Committee previously described in Schedule B, Governance.

At the Program Management level, the Unisys Program Manager and Agency Account Manager interact directly with the Chief Technology Officers and Technology Managers

from the agencies and the Office of Administration. These managers work together to provide the relationship's overall management and the program's delivery, enabling the program to be aligned with the objectives set forth by the Executive Steering Committee. This level of the organization comprises the Program Management Committee previously described in Schedule B, Governance.

At the service delivery level, the Unisys Agency Centric Management team consisting of our Agency Account Manager, our Agency Infrastructure Architect, and our Service Delivery Manager interacts directly with the agency IT management and the Office of Administration counterpart to the Agency Account Manager. This is the level responsible for management of all of the day-to-day delivery streams and confirming attainment of service delivery objectives. This team develops and implements continuous improvement initiatives together with the Service Excellence Office. This level of the organization comprises the Service Delivery Management Committee previously described in Schedule B, Governance.

This contract will be established between Unisys and the Commonwealth's Office of Administration. There will be strong interaction between Contract Management teams from both organizations, enabling communication to pass through the agency to keep it well informed of contractual concerns and changes.

In today's organization on the DPH contract, communication can flow to and from many directions, depending on the topic and the urgency. For the Compute Services contract, formalization and centralization of the flow of communication from the Commonwealth workforce to the Unisys Team through the Unisys Service Desk will greatly simplify interactions, documentation of requests, and tracking of issues in our connected ITSM systems. This quantum step forward will maintain ITIL process compliance with every request. Also, to further strengthen the effective use of communications channels, we are adding ITIL Process Managers who oversee and control key processes such as Change Management, Incident Management, and Service Request Management.

At the bottom of the interaction chart (the working level), the Commonwealth workforce has multiple options for communicating requests and reporting issues to the Unisys Team. They can call the Service Desk, which will receive requests from Commonwealth agencies, document them in the ITSM system, and assign requests to the Unisys Team. Alternatively, the Commonwealth Workforce can enter a request directly into the Commonwealth's ITSM system, and the request will be replicated in the Unisys ITSM system. The Service Desk monitors the queues and confirms that these requests are assigned to the Unisys Team.

Both of our organizations clearly see the benefits of aligning processes with ITIL best practices and made significant investments in the education of our teams. The Unisys process management team consists of key leaders and executives with advanced ITIL certification and education on Six Sigma methodologies. Our Process Managers will work directly with Commonwealth Process Managers to maintain compliance, proper documentation, timely approvals, and participation on joint Advisory Boards.

5.9 Transition Staffing Approach

As the incumbent vendor, Unisys has the singular ability to leverage our diverse, multidiscipline team already serving the Commonwealth in the Data PowerHouse (DPH) and Enterprise Data Center (EDC). We will leverage the talents of existing personnel with experience in supporting the compute needs of the Commonwealth's applications over the past 13 years.

Seeding the team with knowledgeable resources who understand the Commonwealth infrastructure will considerably reduce ramp-up time training staff on basic infrastructure support and each agency's priorities and nuances, enabling us to accelerate our focus on reforming our organizational structure to meet the new model's changing requirements. We will redeploy existing resources to the new contract as workload transitions out of the DPH and hire new Unisys resources as well as support the growth of our strategic partners and Small Diverse Businesses to provide the best complement of professionals and capabilities to the Commonwealth during transition and steady state.

A transition of this magnitude with its complexity and work effort requires extensive thought processes and adherence to the Unisys transition methodologies that have demonstrated proven success. As the incumbent, Unisys has the benefit of a large percentage of our staff already on the ground servicing the same workload that will be migrating to the new Compute Services model. A delicate balance must be maintained whereby staff from the current DPH contract is transitioned in a precise approach that upholds the imperative to provide outstanding service on the current DPH contract. We will work closely with the Commonwealth to verify all requirements of the current contract as well as a timely transition are achieved. The bottom line of our approach—having existing staff participate actively in planning the transition is a huge advantage and significantly reduces risk and project delays.

Our transition staffing approach consists of three main phases. During the first phase from Months 0 through 6, we will fully support the DPH and EDC while working to complete key deliverables before the migration of Data Center workload. The EDC will also transition to a Managed Services model during the first six months, and we will fully transition existing EDC staff to the new contract. During the second phase from Months 7 through 16, we will be migrating workloads from the DPH to the Unisys Data Center. At that time, we will fully transition existing DPH staff to the new contract. The third phase from Months 17 through 26 entails staffing changes to support the migration of outlying Agency Data Centers to the Unisys Data Center.

Figure 5-7 represents how staffing will be trending over time on both the new contract and the existing contract throughout the transition. The red line represents staffing decreasing on the current Computing Services Contract, and the blue line depicts staff increasing on the new contract as project phases progress.

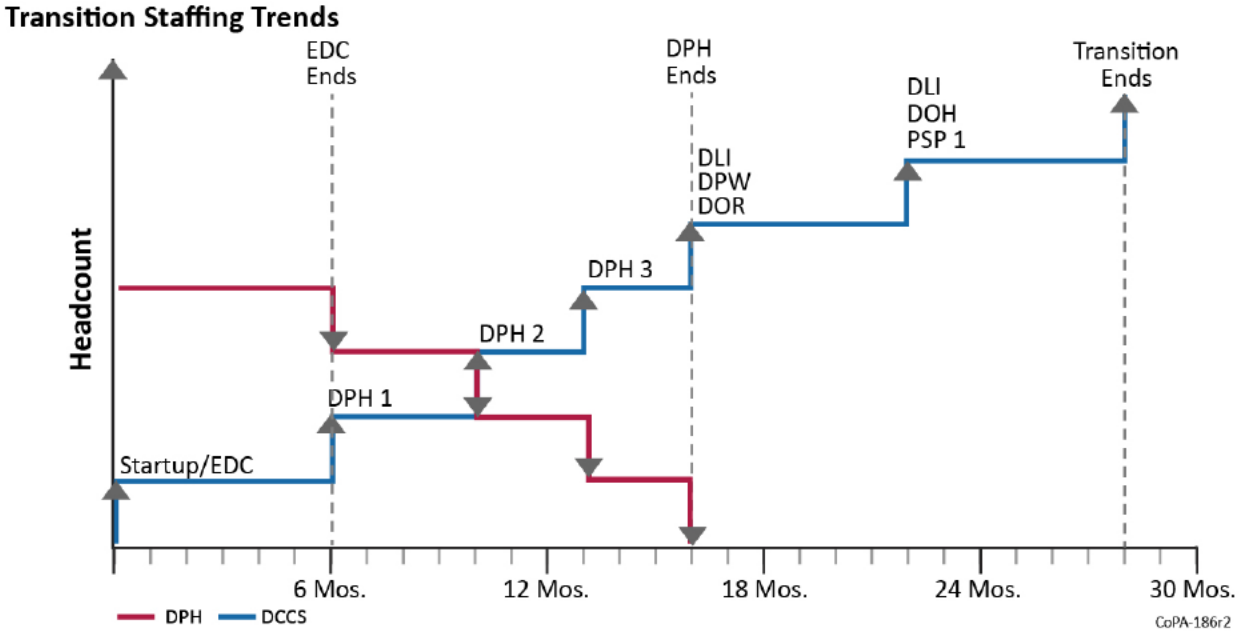

Figure 5-7. Transition Staffing Trends

Transition Phase 1. During Phase 1, we will be ramping up staff to support key deliverables that are prerequisite to workload migrations while maintaining the current quantity of staff on the DPH contract. At that time, we will be on-boarding key personnel who are not currently assigned to the DPH contract along with other personnel required to complete key deliverables. We will also bring on additional technical resources and orient them to Unisys processes and procedures as well as Commonwealth agencies and applications. At this time, we will begin to seed the team with members that are knowledgeable in Commonwealth agency compute environments and applications. The resources reallocated from the DPH contract will be backfilled by resources provided by our network of partners, including Small Diverse Businesses.

During Phase 1, we will establish the framework of our organization, standing up Facilities Management, the Service Excellence Office, the Enterprise Architecture function, and the Transition Project Management Office, and we will begin to restructure our PMO and Service Delivery teams. The EDC will also transition from the current staff augmentation model to a Managed Services model by the end of Month 6. The team of experienced resources working in the EDC will continue to work there and support the workload with further augmentation by additional staff required to effect the change to a managed services model.

Transition Phase 2. During Phase 2, we will be executing migrations of workload from the DPH agencies to the Unisys Data Center. Because agency applications will be moved in migration move packages or waves, you see resource allocation changing in a stair-step way. As agency applications are migrated from the DPH and relocated to the Unisys Data Center, the staff that supports the workload on the current contract will transition with the

work and then support the same application infrastructure under the new contract. As the incumbent, Unisys has the luxury of being able to transition support even at a server level to facilitate stability in Commonwealth services. This capability will be a huge benefit to the Commonwealth during this complex transition because a resource on our team could split time to effectively support his or her current workload regardless of location.

By month 16 at the end of Phase 2, all staff from the current DPH and EDC contracts will have seamlessly transitioned to the new Compute Services contract.

Transition Phase 3. During Phase 3, the outlying Agency Data Center workloads will be migrated to the Unisys Data Center. This is when the Commonwealth will really see the benefits of economy of scale. Unisys will continue to augment staff as workload increases throughout this phase. At this point, augmentation will solely involve the addition of technical staff because our management structure will have been fully established during Phase 2 and the transition. Transition Project Managers who facilitated the Phase 2 migrations will be redeployed to focus on Agency Data Center migrations.

The Commonwealth's participation in the transition process is critical to the project's success. We recommend that the Commonwealth name a counterpart to our Transition Program Manager and that Project Managers at the Commonwealth be aligned with Unisys Transition Project Managers to facilitate agency communication and data gathering to develop an effective plan to transition each agency. In addition to those resources, we recommend that IT staff at the agencies participate in sessions to share information about each application and its infrastructure and to identify agency priorities. We recommend that each agency assess and validate the transition approach proposed by Unisys, including the development and execution of test plans to confirm proper relocation of applications as the transition proceeds.

5.10 Key Personnel Table

The Unisys Team members who were identified to fill key personnel roles will be dedicated to performing that role on the account 100 percent of the time, as required in the RFP. We also plan to fill key personnel positions full time throughout the contract's duration, except for the second PMO Transition Manager that Schedule G clearly specifies. This key staff member will work on the project through the transition's duration. When the transition is complete, support for this key role will no longer be needed. All team members working as key personnel will provide services from the Unisys Harrisburg area office.

The individuals who will perform these functions are project's linchpins. Their performance in the assigned roles will be a determining factor in the program's success.

The key personnel are briefly introduced to you in **Table 5-6**, which is followed by a short summary of each of their responsibilities. Their resumes, including their qualifications for performing their respective roles, are included under the Key Resume tab in Section 5 of our proposal. Key personnel provided by our subcontractors are detailed in **Table 5-7** in Section 5.11.

Table 5-6. Key Personnel

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
[redacted]	Engagement Executive	Engagement Executive	15 years
• Unisys, DPH Engagement Executive (2 years) DPH Service Delivery Director (2 years) DPH Chief Technologist (1 year) • Cegedigm-Dendrite, Vice President, Technical Services (10 years) • Electronic Data Systems, Operations Manager (11 years)		• 15 years managing high-quality, large-scale outsourcing programs with extremely high SLA achievement and customer satisfaction • ITIL V3 Foundation Certified • Established Commonwealth leader with 5 years of experience managing the DPH contract, including the 2008 Transformation • 26 years managing programs with complex Data Center Services transitions, including data center facility design, consolidations, and physical and logical data center migrations • Laser focused on driving organizations to continually improve service level performance and customer satisfaction	
[redacted]	PMO Transition Manager 1	Transition Director	5 years
• Unisys, Transition Director (1 year) • Dell Services, Transition Management (1 year of responsibility for *all* healthcare transitions and 4 years as a consultant) • Electronic Data Systems, Client Delivery Executive (8 years)		• Provided stellar leadership managing four large-scale data center transitions, migrations, and system upgrades for Dell Services • Exceptional experience with managing accounts, project requirements, and building and leading technical teams • Certifications: ITIL V3 Foundation, Project Management Professional	
[redacted]	Program Manager (Service Delivery Executive)	Program Manager (Service Delivery Executive) as of July 1, 2013	14 Years
• Unisys, DPH Service Delivery Director, effective July 1, 2013 • CSC, Service Delivery Executive (14 years) • Powercom-2000, Global IT Manager (4 years)		• 28 years of experience in senior IT leadership roles, with specialization in large outsourcing engagements • Energetic leader adept at motivating large teams to accomplish goals in fast paced environments • Managed Service Delivery organizations of more than 400 employees through extensive data center consolidation and migration initiatives	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
		• Solid track record of process re-engineering to achieve exceptional SLA performance and customer satisfaction • Great communicator with strong emphasis on customer executive relationships	
[redacted]	Service Excellence Officer	Director of Operations, North America	2 years
• Unisys, Operations Management for North America Global Managed Services organization (2 years) • Unisys, Account Process Optimization for DPH and the Commonwealth (2012) • Unisys, ITSM7 Transition Kaizen Workshop for DPH and the Commonwealth (2009)		• More than 30 years of experience in service delivery, with focus on operations, quality, service improvement, and finance • Demonstrated leadership in service excellence, with extensive training and experience in Six Sigma Lean (Black Belt), ITIL, Kaizen facilitation, project and program management • In-depth knowledge of the DPH project, account process, and ITSM7 • Certifications: Six Sigma Lean Black Belt, ITIL V3 Foundation (with ITIL Intermediate Practitioner Service Transition/Change Management certification in progress)	
[redacted]	Senior Enterprise Infrastructure Architect	North American Lead Architect	7 years
• Unisys, Lead Architect (2 years) • IBM, Transformation Integration Architect for the State of Georgia (2 years) • IBM, Transformation Integration Architect for Virgin Mobile (20 months)		• Demonstrated experience and success in leading a large team of architects to develop technical components (server, storage, network, security) to build a multitenant data center to support the State of Georgia's strategic and consolidation plans • Domain expertise in managed hosting services, capacity on demand, data center architecture, system architecture, servers, virtualization, security, and networking • Certifications: IBM IT architect (infrastructure), Open Group Master IT Architect, and ITIL V3 Foundation	
[redacted]	Incident Management Manager	Account Relationship and Service Delivery Manager	6 years
• Unisys, Account Relationship Manager		• More than 6 years of proven ability to direct and deliver new client implementations and steady state	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
for a Microsoft Retail store environment (not permitted to name) (1 year) • Unisys, Account Relationship Manager for NEC/7-11 (2 years) • Unisys, Service Delivery Manager, General Growth Properties (2 years)		operations • Skills: Incident, change and problem management; SLA/KPI management; quality improvement program implementation and management; continuous improvement; and new process development and implementation • Training: ITIL V3, Six Sigma Lean Green Belt	
[redacted]	Change Manager	Service Delivery Manager	9 years
• Unisys, IT Service Delivery Manager at the DPH project (7.6 years) • Unisys, IT Resource and Asst. Technical Support Manager at the DPH project (1.6 years) • Endress+Hauser, Advanced Systems Group Manager and LAN Manager (2 years) • U.S. Air Force (22 years); encompassed several Change Management positions		• More than 30 years of IT experience • More than 9 years of experience on the DPH project, largely as a service delivery manager with deep knowledge of all service delivery processes, particularly change management • Proven change management expertise, having led process creation for 13 Commonwealth agencies, focusing on providing change management resource allocation performance reporting, capacity planning, contractual requirements, and incident reporting for data centers. • Demonstrated expertise in delivering advanced technical support to government agencies and meeting their technology needs by monitoring security, updating systems, and troubleshooting. • Certifications: ITIL V3 Foundation (with ITIL Intermediate Practitioner Service Transition/Change Management certification in progress)	
[redacted]	Change Analyst	Change Analyst	10 years
• Unisys, Data Center Analyst for the DPH project (10 years) • Unisys, Computer Operations Supervisor for the DPH project (4 years) • Lockheed Martin, Operations Manager (3 years)		• 27 years of experience providing data center analysis, change analysis, and support • Extensive experience with Remedy IT Services Management, with certifications in change management and resource tracking software • Certification: ITIL V3 Foundation	
[redacted]	Service Level Management Analyst	Service Level Management Analyst (as of July 2013)	11 years
• Unisys, Service Level Management		• 20 years of IT industry experience with primary focus	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
Analyst, (as of July 2013) • Comcast, Data Center Services Manager and Data Center Management Tools Program Manager (6 years) • Yellow Book USA, Senior Data Center Operations Manager (11 years)		on data center services, tools and reporting • Built a comprehensive model for capacity metrics and consolidation reporting • Implemented executive reporting summarizing daily processing metrics and current problem status to provide complete transparency; • Defined and negotiated service-level agreements with customers and service partners to improve customer satisfaction	
[redacted]	Finance Manager	Financial Analysis Manager	25 years
• Unisys, Manager, Financial Analysis for the DPH project (14 years) • Unisys, Manager, Business Operations Data Center (7 years) • Unisys, Financial & Asset Control Government Systems (6 years)		• 14 years as a finance manager supporting the DPH project in Harrisburg • In-depth understanding of the DPH billing processes • Designed and implemented many process improvements for the DPH project • Recipient of Unisys Excellence Award • Certification: ITIL V3 Foundation	
[redacted]	Finance Analyst	Senior Project Controller and Financial Analyst	36 years
• Unisys, Project Controller and Financial Analyst for the DPH project (14 years) • AMP, Financial Analyst (2 years) • AMP, Pricing Accountant (14 years)		• 14 years as project controller and financial analyst supporting the DPH project in Harrisburg • Extensive experience with billing and accounts receivables • Supported the creation and improvement of consolidated billing process • Recipient of the Unisys Excellence Award and Silver Recognition Award for Unwavering Customer Commitment • Certification: ITIL V3 Foundation	
[redacted]	Lead Agency Account Manager	Project Manager and Client Service Manager	5 years
• Unisys, Project Manager and Client Service Manager, Pennsylvania Commonwealth Technology Center (5 years) • Unisys, Project Manager and Resource		• More than 10 years of experience working in project management and client service roles in the Commonwealth Technology Center • Proven project management and communications skills and a reputation for bringing commitment and

[redacted]		Manager	
• Unisys, Service Delivery Manager (5 years) • Affiliated Computer Services, Account Manager, (9 years) • Foundation Health, Program Director (2 years)		• 5 years in account and service delivery management supporting the DPH project • In-depth knowledge of business and service needs for many agencies, including State Police, Department of Environmental Protection, Department of State, and Department of Health • Excellent interpersonal, customer service and general communication skills • Extensive project and program management experience • Certification: ITIL V3 Foundation	
[redacted]	Agency Infrastructure Architect	Client Architect	4 years
• Unisys, Client Architect at the DPH (4 years) • Cegedigm Dendrite, Technical Account Manager and Project Manager (3 years) • Dendrite International, Director of Hardware Services (2 years)		• More than 18 years in technical management and architect roles for government and commercial enterprises • In-depth knowledge of the DPH; worked as key member of the data center transformation project team to transition to a shared enterprise infrastructure model • Proven technical expertise, designing detailed technical data center solutions to support 17 Commonwealth agencies covering mainframe, server, storage, networking, software, and facility components • Strong record of success with data center architecture, management, and relocations • Certification: ITIL V3 Foundation	
[redacted]	Agency Infrastructure Architect	IT Manager	9 years
• Unisys, Manager, OA EDC (3 years) • Unisys, Deployment Consultant, OA EDC (6 years) • Citibank, Consultant (3 months) • Unisys, Consultant, Pennsylvania Department of Public Welfare (2 years)		• More than 14 years of IT experience • 9 years of service and technical excellence at the OA EDC • Proven expertise with TCP/IP Networking, DNS and Name Services; joining Active Directory domains; COM+ applications; IIS Web server and its configuration, administration, and troubleshooting; Access Control; Public Key Infrastructure; CA	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		Qualifications for Proposed Role	
		SiteMinder; Virtual Directory (RadiantOne); VPN; and Portal Technologies • Broad experience implementing high availability solutions using CSS (Cisco Content Switches), Microsoft Windows Clustering, NLB, and Application Center; hands-on experience with designing and implementing Web publishing solutions using Microsoft ISA Server. • Certifications: CISSP, ITIL V3 Foundation, Windows MCSE	
[redacted]	Agency Infrastructure Architect	Systems Analyst and Project Leader	9 years
• Unisys, Systems Analyst and Project Leader, at the DPH (5 years) • Business Information Group, Network Engineering Consultant (1 year) • Rite Aid Corporation, Systems Administrator and Development (3 years)		• 5 years of experience as a systems analyst at the DPH managing regular upgrades, security enhancements, virtualization deployments, data center consolidations and migrations, and DR design • Through his ingenuity, has implemented a number of Windows and backup technology innovations to gain process efficiencies at the DPH • Expansive knowledge in the following areas: VMware vSphere ESX/ESXi 3.x, 4.x, & 5.x; Windows 2003, 2008, & 2012; Powershell & VB Script; Active Directory; Security Policies; IIS; DHCP; DNS; FTP; IBM Blade Center Servers; Dell and IBM x86 systems; Enterprise Backup/Replication & Disaster Recovery technologies, including Symantec NetBackup, EMC Data Domain, EMC Avamar, Microsoft Failover Clustering, Network Load Balancing, and Microsoft DFS & DFS-R • Certifications: VMware VCP4, VMware VCP5, Microsoft Windows 2008 MCITP: SA, Microsoft Windows 2008 MCA: Virtualization, MCSA: Windows 2012, and ITIL V3 Foundation	
[redacted]	Chief Information Security Officer	Senior Security Architect	4 years
• Unisys, Security Architect and effective Unisys CISO at the Pennsylvania State Police (4 years) • Unisys, Security Architect at the Michigan Department of Human		• 38 years of technical, business, and management experience in the IT and manufacturing automation industries • 6 years supporting the Commonwealth of Pennsylvania, including 4 acting as the Unisys CISO for PSP's CLEAN Services Project	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		Qualifications for Proposed Role	
Services (2 years) • Unisys, Security Architect at the U.S. Department of Justice (1 year)		• Experienced with security policy and design, consulting, technology assessment, project management, automation, and distributed network architecture • Broad experience with overseeing large, complex projects to verify compliance with both security requirements and security policies and standards • Excellent technical, leadership, and communication skills • Certifications: CISSP (ISC2), GSEC (SANS/GIAC)	

5.11 Subcontractor Key Personnel Table

The Unisys Team subcontractor members who were identified to fill key personnel roles will be dedicated to performing those roles on the account 100 percent of the time with one exception to the benefit of the Commonwealth. The individual who serves as IBM Mainframe Agency Infrastructure Architect will do so on a 50 percent dedicated basis. Because minimal changes are required to the mainframe architecture, the role will be shared by another architect possessing extensive experience with IBM AIX and Windows platforms who also will serve in that role on a 50 percent dedicated basis. This will provide a better blend of skills to support the project's requirements.

Table 5-7. Subcontractor Key Personnel

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		Qualifications for Proposed Role	
[redacted]	PMO Transition Manager 2	Senior Project Manager	3 years
• IBM, DPH Service Delivery Manager (3 years) • IBM, IES Service Delivery Manager (5 years) • IBM, Network Support Project Leader at the Pennsylvania Department of Labor & Industry (7 years)		• Extensive experience in transition leadership, project management, IT infrastructure implementations and IT operations, and services management • Demonstrated performance in leading transition teams comprised of clients, subcontractors, and vendors for implementing data center operations services for mainframe and distributed technologies • More than 14 years of Commonwealth experience • Certifications: Cisco Certified Network Associate, ITIL V3 Foundation, Project Management Professional	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		Qualifications for Proposed Role	
[redacted]	Availability Manager	Availability Manager	10 years
• IBM, Availability Manager for DPH (3 years) • IBM, Availability and Change Manager for IES (7 years) • IBM, Microsoft Exchange Administrator for Lucent Technologies (1 year)		• 10 years of experience supporting the Commonwealth availability and change process management roles • ITIL V3 Foundations Certification • Adept at process improvement, streamlining, and process control metrics • Team leader for the Remedy ITSM7 and ITIL process implementation	
[redacted]	Agency Account Manager	Service Delivery Manager	11 years
• IBM, Service Delivery Manager for DPH (11 years) • IBM, Disaster Recovery Coordinator Manager for DPH (3 years) • IBM, AS/400 Marketing Specialist (7 years)		• 14 years of service excellence on the DPH project • In-depth knowledge of business and service needs for many agencies, including the Department of Transportation, Department of Labor & Industry, and Department of Corrections • Proven communications skills and ability to build and manage teams • Demonstrated knowledge of IBM platforms and disaster recovery • Extensive experience in managing IT projects	
[redacted]	Agency Infrastructure Architect	Senior Certified IT Architect	17 years
• IBM, IT Architect for Unemployment Compensation Management System and Data Center for Pennsylvania Department of Labor & Industry • IBM, IT Architect for EDC at Commonwealth of Pennsylvania • IBM, IT Architect for Integrated Enterprise System (SAP) for Commonwealth of Pennsylvania		• More than 17 years of IT experience with the Commonwealth of Pennsylvania • More than 34 years of IT experience overall • Proven expertise with the design and implementation of complex infrastructure solutions, including the SAP and Unemployment Compensation infrastructure environments • Certifications: IBM Senior Certified Architect – Infrastructure; ITIL V3 Foundation	
[redacted]	Agency Infrastructure Architect 2	Senior IT Architect	14 years
• IBM, IT Architect, DPH (14 years) • IBM, Systems Engineer (13 years)		• 39 years of IT experience supporting the Commonwealth of Pennsylvania	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		**Qualifications for Proposed Role**	
• IBM, Operating System Programmer (2 years)		• More than 14 years with the DPH, designing, implementing, and maintaining highly available data center systems and subsystems • Proven expertise in designing and implementing technology infrastructure for complex information systems, including large enterprise systems and mid-range systems	
[redacted]	Agency Infrastructure Architect	Infrastructure Data Center Technical Architect	15 years
• PCN, Solution Architect (5 years) • Business owner and software developer (2 years) • DHL Logistics, Manager IT Architecture (10 years)		• Senior architect with more than 15 years of experience in designing, building, consolidating, and managing data centers and infrastructure • Experience includes consolidating 25 data centers to centralized mega-data centers, building three new data centers, designing six SANs in six data centers, and developing multiple DR solutions • Demonstrated ability to work in a team environment, solid negotiator, quickly learn new data center technologies and embrace change; driven and dedicated person with a passion for information technologies and solutions • Certifications: ITIL, MCP, CheckPoint administration, project management	
[redacted]	IBM Project Executive	IBM Project Executive	15 years
• IBM Project Executive, Unisys DPH contract, Commonwealth of Pennsylvania (6 months) • IBM Deputy Project Executive, Unisys DPH contract, Commonwealth of Pennsylvania (5 years) • IBM Project Executive supporting multiple public sector clients to address governance and contract stabilization (18 months) • IBM Project Executive supporting the MTA New York City Transit Data Center Services contract (5 years)		• More than 30 years of experience in leadership positions at IBM, with the last 15 years focused mainly on providing data center services to multiple large computing service contracts in state and local government, healthcare, insurance, and telecommunications industries • Proven project executive skills and experience with a strong track record for delivery, innovation, and value • Certification: Project Management Professional	

Name	Proposed Account Role	Position in Organization	Experience in Proposed Role (Years)
Role on last 3 projects		Qualifications for Proposed Role	
[redacted]	IBM Delivery Project Executive	IBM Delivery Project Executive	10 years
• IBM Delivery Project Executive, Unisys DPH contract, Commonwealth of Pennsylvania (10 years) • IBM Sr. Delivery Manager/Delivery Project Executive responsible for high-quality delivery of Wintel, UNIX desktop support, UNIX and NT server services, and hardware maintenance for 700 servers and 5,000 end users for a large telecommunications customer (3 years) • IBM Service Delivery Manager managing services to multiple locations for a large telecommunications customer (3 years)		• More than 30 years of experience with IBM demonstrating leadership across a range of positions in quality control, engineering, and management delivering high-quality service and solutions to large IBM accounts • 10+ years of experience and expertise in leading teams to achieve consistent delivery results, providing leadership, experience, and innovation in working through solutions for the Commonwealth • Certification: ITIL V3 Foundation, Project Management Professional	

5.12 Organizational Function Discussion

This section describes the high-level functions performed by each of the seven workgroups. An organizational diagram is provided for each of the workgroups in our organization that depicts all of the functions as rectangular boxes with rounded corners. The role names and quantities of staff that provide that function are listed below each function box. Key personnel are listed in the workgroup and noted by names in red with a key to left of the name. Indentation of roles shows subordinate relationships to the positions above. At the top of each chart, you will see the executive leader and the staffing numbers required for that organization.

Figure 5-8 once again depicts the seven organizations with their basic function, noting key personnel in red. Each of those seven functions is detailed as the following pages.

Figure 5-8. Seven Organizations Staffing Requirements

Program Management Office (PMO)

The PMO serves as a central point of management for the overall program. The Program Management Office is led by the Engagement Executive, [redacted]. All executives responsible for the seven aspects of the program report directly to [redacted] Through the PMO, Unisys will manage continuous cross-organizational collaboration to achieve strategic business goals for the Commonwealth. The PMO organization serves to:

- Provide centralized and coordinated management of all initiatives and projects undertaken to support the data center compute services contract.
- Work in conjunction with Commonwealth leadership to establish a program governance structure.
- Focus on the coordinated planning, prioritization and execution of projects and subprojects that are tied to the Commonwealth's overall business objectives.
- Conduct activity ranging from providing supporting functions such as development of standardized policies and procedures to the direct management

responsibility for achieving business objectives through day-to-day service delivery.

- Act as an integral stakeholder and key decision-maker along with the Commonwealth during the initiation stage of each project/initiative.
- Coordinate effective use of resources and capacity management across all projects and contract activities.
- Provide central point of communication management across projects and throughout agencies.
- Enforce the use of best practices, process standards and project methodology.

Support for the Commonwealth far exceeds the boundaries of the team defined in Section 5. Unisys executives are committed to the Commonwealth's success all the way up to our Chief Executive Officer, [redacted], who serves as the Executive Sponsor for the Commonwealth of Pennsylvania. [redacted] reports directly to [redacted], Regional Vice President who has served the Commonwealth for the past 29 years building long-lasting executive relationships through 5 Commonwealth administrations. The Unisys Executive Leadership Committee discussed at the beginning of Section 5.0 provides far-reaching support for the Harrisburg-based team.

As shown in **Figure 5-9,** the PMO also has supporting staff responsible for the three major functions of Financial Management, Contract Management, and Vendor and Subcontractor Management.

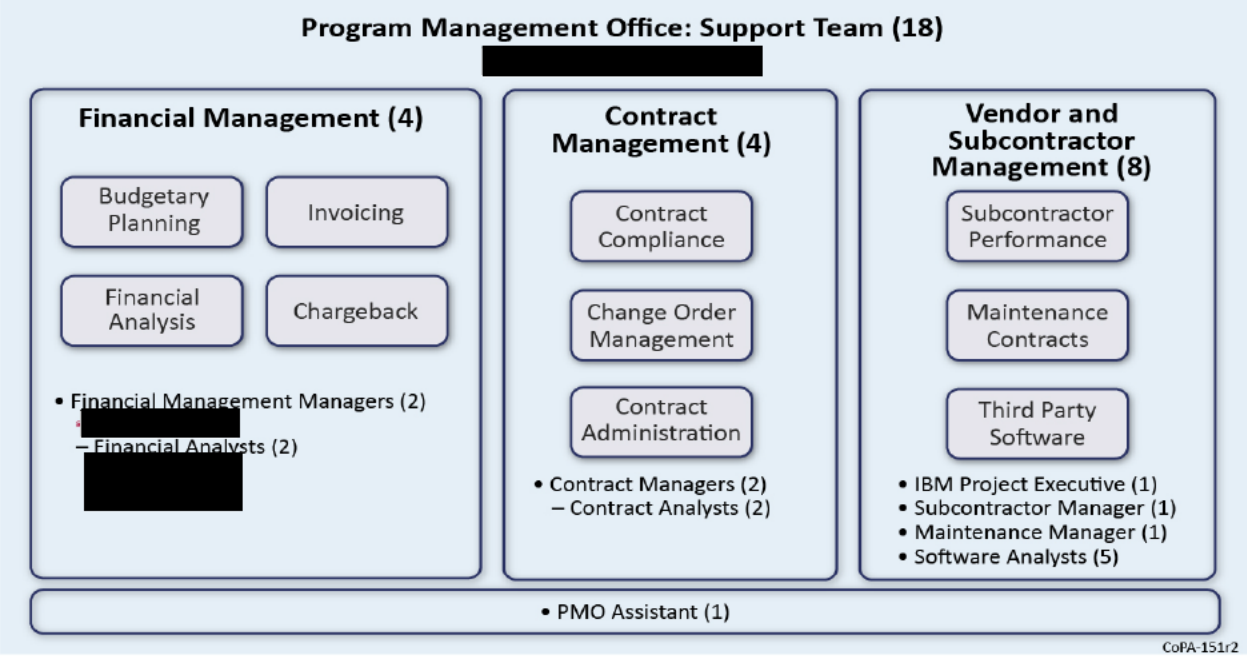

Figure 5-9. Project Management Office Duties and Staffing Requirements

Through the **Financial Management** function, the PMO provides accurate and cost-effective stewardship of IT assets and resources. The PMO plans, controls, and recovers costs expended in providing the services, offering a truly transparent analysis of the Commonwealth's spend on services. Areas of responsibility under Financial Management include:

- **Budgetary Planning:** this function works with the Commonwealth to identify major investments as part of the budgetary planning process.
- **Invoicing:** this function provides clear and transparent invoicing, both for the Commonwealth and for individual agencies, and verifies integrity and accountability of all invoices.
- **Financial Analysis:** this function analyzes efficiency that will be used to create intelligent, metric-based cost reduction strategies.
- **Chargeback**: this function confirms the accurate capture and provision of information on monthly volumes of work, counts, and utilization of specific infrastructure areas to provide the necessary transparency.

Through the **Contract Management** function, the PMO provides the governance and execution of the overall program, projects, and contract elements through its active working relationship with the Commonwealth project team. The Contract Management function provides ongoing direction and leadership supporting the contract and designated services for the contract's duration. Areas of responsibility under Contract Management include:

- **Contract Compliance:** this function confirms that the services provided comply with the requirements outlined by the contract.
- **Change Management:** this function oversees the change control process by which changes to services and approved schedules are requested, confirming that authorized personnel review and approve contract changes.
- **Contract Administration:** this function creates and maintains all contract and change documentation for the contract's duration, confirming that copies are appropriately provided to parties.

The PMO provides overall direction to the Unisys Team, holding subcontractors accountable for performance of services throughout the contract's term. Areas of responsibility under **Subcontractor Management** include:

- **Subcontractor Performance:** managing subcontractor performance is the responsibility of the prime provider of Commonwealth services, enabling high-quality value-added services to be provided and contractual commitments to be met.
- **Maintenance Contracts:** this function confirms that all hardware and software products used in providing the services to the Commonwealth have current and comprehensive maintenance contracts.

- **Third Party Software:** this function confirms accurate inventory and licensing compliance for all Unisys provided infrastructure software products.

The key personnel in the PMO introduced below include the **Engagement Executive,** [redacted]; the **Finance Manager,** [redacted], and the **Finance Analyst,** [redacted] Other key executives are introduced in the section, detailing their area of responsibility.

Engagement Executive Responsibilities and Introduction

- Overall responsibility and accountability for the Commonwealth business relationship and the engagement's success
- Works with Commonwealth executive leadership to set direction on the Unisys Team to meet strategic imperatives of the Commonwealth's executive leadership
- Serves as the primary contact for the management of the Compute Services Contract, assisting Commonwealth executives with all facets of services, promoting delivery of the highest customer service and satisfaction.

The Program Management Office will confirm that the Unisys Team meets all of our requirements for the new contract under the leadership of [redacted] **(based in Harrisburg)**, who has worked closely with Commonwealth executives to manage many aspects of the current DPH Program over the past 5 years. On joining Unisys, [redacted] oversaw the contract, managing commitments and expectations for the major transformation and infrastructure consolidation initiative with the contract's extension in 2008.

During her tenure with Unisys, [redacted] spearheaded a number of innovative technology solutions that reduced cost for the Commonwealth, including server virtualization and the implementation of a shared infrastructure strategy. She also fostered the evolution of the DPH architecture to new technology concepts, including disk-based backup solutions and flexible service offerings. [redacted] has also demonstrated vigilance in customer satisfaction by implementing a number of in-depth survey processes designed to take the customer's pulse at many different levels on all aspects of service. She has held the team accountable to document issues and follow-up actions in collaboration with the agencies. These activities significantly improved customer satisfaction across the board.

[redacted] has 26 years of experience with managing large-scale outsourcing contracts, leading teams of more than 500 staff members to achieve service excellence. She thoroughly **understands the Commonwealth's goals for the Data Center Computing Services engagement and has achieved success with managing similar consolidation and Data Center migration initiatives** as the Vice President, Technical Services at Cegedigm-Dendrite. During her 10 years at the company, [redacted] implemented global data center standards, attained the highest customer satisfaction ratings ever achieved, and grew the operation's scope by more than 900 percent

Under [redacted] direction, her team had many successes, including designing and building a world-class data center from the ground up, then migrating dozens of customers to the

center without disruption. **She provided a vision that led to the adoption of new technologies designed to reduce operational costs and provide customers with increased flexibility.** She established a winning culture and a team that always stepped up to the plate regardless of time pressures or the complexity of projects undertaken. Under her leadership, the reputation of the company's support services was dramatically enhanced.

Finance Manager Responsibilities and Introduction

- Works with Commonwealth financial counterparts to establish procedures to appropriately track funding streams as required by the Commonwealth to secure federal funding.
- Serves as the focal point for pricing of specialized contract changes that are procured outside the Service Catalog.
- Develops a consumption-based pricing model and chargeback mechanism to be deployed for the Commonwealth and develops transparent invoicing that meets Commonwealth needs.

Gary Hoopes will be serving the Commonwealth as the Finance Manager as the Data Center Services contract. He is a tenured Unisys employee who has held various financial management positions for more than 25 years, most recently the past 13 years as the Finance Manager on the Commonwealth of Pennsylvania DPH contract. Gary delivers financial management and billing oversight for several Unisys internal organizations and subcontractors.

Because of his experience with the Commonwealth, Gary has a clear understanding of the Commonwealth's financial processes and requirements for invoicing at the agency level and the tracking of federal funds against grants by project. He has supported restructuring of billing reports into a single Commonwealth invoice with agency-level detail. He is a motivated, conscientious, and diligent professional who takes a meticulous approach to the management of all aspects of finance, including development of financial plans, invoicing and billing activities, change order pricing and processing, and Service Level Agreement tracking.

Finance Analyst Responsibilities and Introduction

- Provides support to the Finance Manager to perform processes associated with documenting and submitting monthly invoicing.
- Develops specific fee schedules for Commonwealth change order processing.
- Responsible for Unisys Controller activities interacting with corporate financial organizations.

[redacted] will be serving the Commonwealth as a Financial Analyst on the Data Center Services contract. He has worked in a variety of financial and accounting roles over the past 30 years, with the past 13 years working for Unisys on the Commonwealth of Pennsylvania DPH contract as the Financial Analyst and Project Controller. In his current

role, [redacted] provides financial reporting and analysis for Unisys management, internal auditors, and external auditors and oversees a wide range of activities, including journal entries, internal billing, external billing, revenue recognition, cash collection, receivables, and asset database entries.

[redacted] has extensive experience with preparing amendments to Commonwealth agency fee schedules together with contract change orders. He developed internal processes to confirm the change order impacts agree with timing used in Commonwealth invoicing programs. [redacted] continually has an eye on process improvement and was recognized with Unisys Excellence and Silver Recognition Awards for his unwavering customer commitment.

Agency Account Management

Agency Account Management is the organization to which all Agency Account Managers report. These six managers serve the critical purpose of providing agencies with a single point of contact to the Unisys Team. These leaders are highly organized, resourceful, and adept at bringing the right resources together to meet customer needs. Each individual selected has extensive experience with managing customer relationships on outsourced data center services engagements with outstanding customer satisfaction.

Each of these team members (**Figure 5-10**) has supported the Commonwealth of Pennsylvania on various engagements for years, understands the importance of dedicated agency focus, and works to accomplish business objectives at the agency level. Their role is essential to confirming that agency leadership understands how to leverage the contract to their benefit, and these leaders act as the agency's advocate on the Unisys Team. Agency Account Management is led by Agency Account Manager, [redacted] who reports directly to [redacted]. The Agency Account Managers are responsible for the four major functions of Contract Liaison, Agency Advocate, Agency IT Planning Sessions, and Monthly Status Reporting. They all have achieved ITIL V3 Foundation certification, and most are PMP certified.

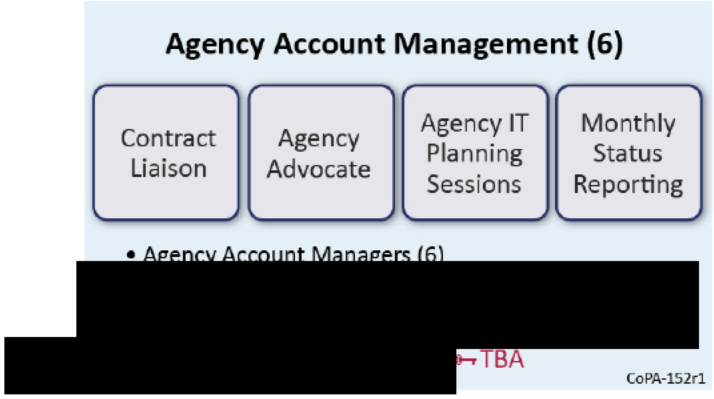

Figure 5-10. Agency Account Management Duties and Staffing Requirements

The **Contract Liaison** function owns the relationship at the agency level, acting as a liaison between agency information technology staff and the Unisys Team. Agency Account Managers are responsible for understanding all Unisys services and guiding the agencies in understanding how to leverage the contract to meet their Data Center needs. They maintain overall responsibility for sales, support, and operations, confirming that all parties finalize and sign agreements.

The **Agency Advocate** function confirms that the Unisys Team understands agencies' needs and requirements and advocates for agency and Commonwealth interests. This function provides the agencies with assistance needed to quickly navigate all facets of the Data Center Services support team.

The **Agency IT Planning Sessions** function, together with Enterprise Architecture, briefs the Commonwealth on new services and technology and is a key function of the agency's planning team.

The **Monthly Status Reporting** function keeps contacts at the agency informed of service level performance. This function meets monthly with the agencies to address problems and provide continuous service improvements. This function creates monthly operational summaries that will address all operational events and issues that occurred during the month that would have affected service level attainments, problems, incidents, and recommendations for changes needed to provide continuous, secure computing services.

The key personnel of the Agency Account Management team consist of five **Agency Account Managers** introduced below: [redacted]

Agency Account Managers' Responsibilities and Introductions

- Overall responsibility and accountability for the Commonwealth agency relationship and meeting agency commitments.
- Serve as the advocate for the agencies on the Unisys Team.
- Understand all of the services provided by the Unisys Team, guide the agencies, and understand their data center business needs.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He is a 23-year Unisys employee who has worked for the Commonwealth of Pennsylvania since 2002 in a variety of project management and client services management roles supporting numerous Commonwealth organizations. Since 2005, he has worked on site at the Commonwealth Technology Center in very close collaboration with the CTO, CISO, Client Management, EDC, Enterprise Networking and Security, Enterprise Services, GIS, PMO, and many agencies.

[redacted] developed and introduced a customer satisfaction program for the EDC that continues today under the Enterprise Services as an important component of OIT's process for continuous improvement and building strategic relationships. Under this program, he

facilitated regular communications and acted as a liaison for OIT with the CIOs for half of the agencies, describing the center's managed services programs, facility services, and benefits.

Communications, customer service and satisfaction, facilitation, infrastructure, project and program management, and strategic relationship building are common threads for more than a decade working with the Commonwealth and more than 20 years working at Unisys.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He is a 7-year Unisys employee who has worked for the Commonwealth of Pennsylvania for more than 15 years, providing technology solutions, consulting, and complex project management services. For the past 7 years, [redacted] has served the Commonwealth on the Unisys DPH contract in various Service Delivery and Business Management roles acting as a liaison to the Office of Administration and agencies receiving service.

[redacted] provided exceptional leadership to the DPH team through the alignment with ITIL best practices and the migration to the new ITSM Remedy system. With a service-centric approach, he directed the service delivery organization to support complex solution/design implementation, managed services functions, quality improvement, and cost management activities. He is skilled at contract management and managing vendors and subcontractors, ensuring shared accountability for outcomes.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. She has worked in the IT industry for 14 years and is a 5-year Unisys employee supporting the Commonwealth of Pennsylvania as a Service Delivery Manager on the DPH contract. [redacted] has worked with numerous Commonwealth agencies to develop strong partnerships with agency leadership while aligning Unisys service delivery teams with executing policies and procedures as outlined in the contract with a focus on agency priorities and outstanding customer service.

[redacted] adroitly oversees subcontractors to maintain top-notch service delivery across environments deployed at the DPH. She has managed numerous successful initiatives, including implementations of new systems for the Pennsylvania Liquor Control Board and the Department of Health, along with hardware upgrades for the Department of State. [redacted] is a superb communicator who keeps agency management informed of initiative statuses, and she received numerous accolades from Commonwealth management for her unwavering professionalism and skilled leadership.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He has held a variety of IT leadership positions since joining IBM in 1976 and has worked with many Commonwealth agencies in the role of Service Delivery Manager for the past 12 years. He has a strong background and proven expertise in many IBM technologies, including zSeries and iSeries technical management, support of the Disaster Recovery process, and relationship management. [redacted] possesses

strong working knowledge of many Commonwealth agencies' business priorities, aligning cost-effective Data Center solutions to meet agency needs.

[redacted] has extensive experience with managing Commonwealth agencies through planning and smooth execution of system migrations and upgrades to new hardware and software product upgrades. He possesses superior knowledge of disaster recovery and business continuity planning demonstrated by creation of the disaster recovery plans supporting all IBM mainframe customers of the DPH and coordination of all disaster recovery tests. [redacted] is highly regarded as an expert in the field and for his knowledge of the Commonwealth, as evidenced by commendable ratings in customer satisfaction surveys during his tenure.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as an Agency Account Manager under the new contract. He has more than 15 years of experience working in the IT industry and has supported the Commonwealth of Pennsylvania since 2000, holding positions of progressive responsibility, including his current role as the Service Delivery Manager at the Commonwealth's EDC. In this role, [redacted] actively collaborates with many Commonwealth agency IT managers to form technology solutions to address business needs with long-term operational strategies that enable real value to be delivered to the Commonwealth. He is well versed with the Commonwealth standards and ITBs and has personally contributed to developing a few of the ITBs.

[redacted] understands the importance of agency participation in major consolidation and migration projects because he played a large role in architecting the e-Government server farm for the Commonwealth to host Web applications for various agencies. On this project, [redacted] leveraged excellent leadership and communication skills to direct a team of technical consultants and to collaborate with more than 40 agencies in their successful application deployment and operation, functioning as a liaison, and moving ideas between the development community and the customer community to confirm the needs of the Commonwealth were represented in the server farm's design and delivery.

Service Delivery Management

Under the direction of the **Service Delivery Executive (Program Manager),** [redacted] who reports to [redacted], the Service Delivery team (**Figure 5-11**)is the heart of the Data Center Compute Services operation, providing all technology and service support functions required to fulfill the contract's service obligations. The six Agency Centric Service Delivery teams previously discussed reside in this organization. In addition to the Service Delivery teams, there are four centralized organizations supporting Facilities Management, Automation Services, IBM Services, and the Service Desk. The major functions of each of these teams are discussed below.

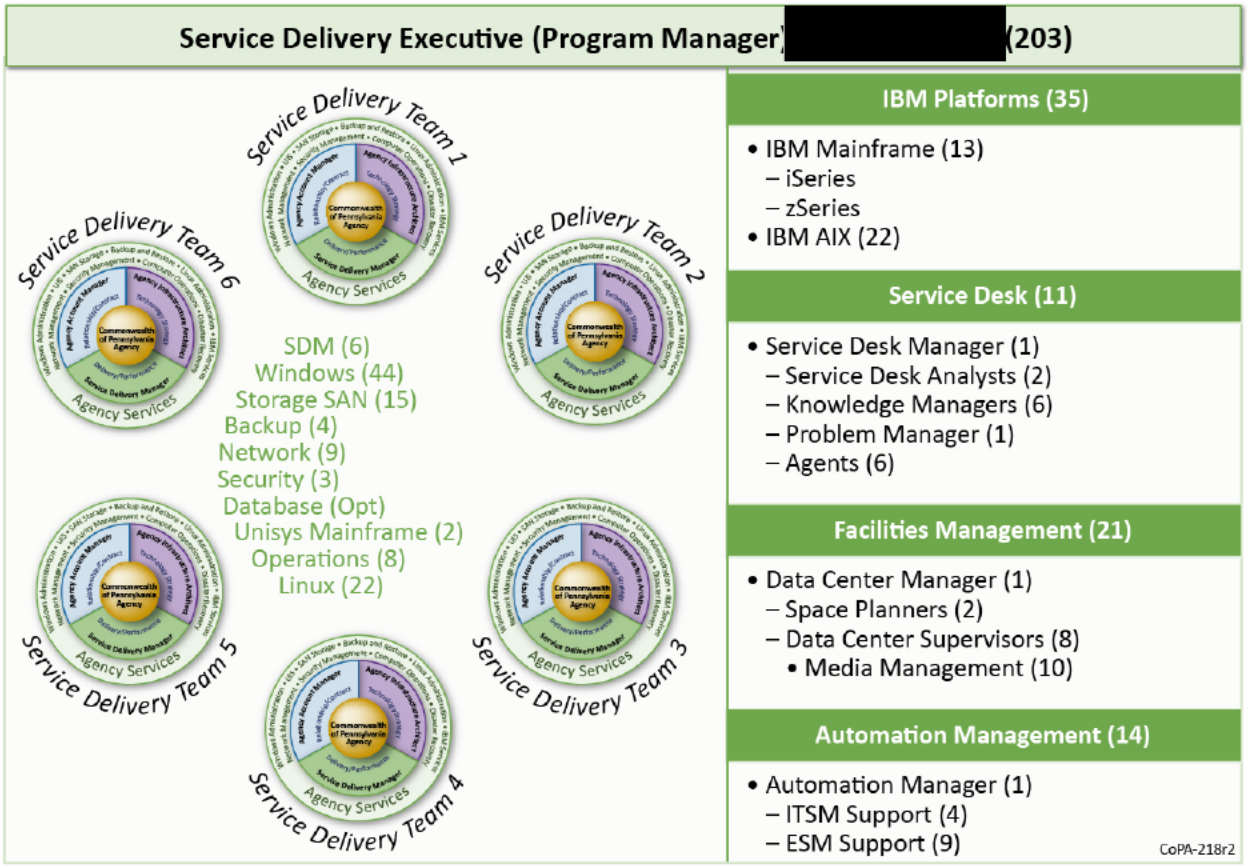

Figure 5-11. Service Delivery Team

We discuss the functions of each of the Service Delivery organizations, starting with cross-functional teams. The major functions of the **Facilities Management** team include Facility Management, Media Management, and Infrastructure Support.

Through the **Facility Management** function, all aspects of providing and managing the physical environment, including power and power distribution, cooling and ventilation, fire detection and suppression, building security and access control, and environmental monitoring, are provided.

The **Media Management** function provides a structured tape management approach for all systems that use tape backup services. This function manages and maintains the tape backup system and services, rotating designated tapes to and from approved off-site storage locations and tracking all tape movement on a detailed audit log.

The **Infrastructure Support** function provides a support team that is on site 24x7 in all of our data centers. This team is responsible for all aspects of data center support that require physical hands-on support in the data center. This team also

coordinates the escorting of vendors performing preventive maintenance tasks and remediating infrastructure components.

Automation Services is a key enabler to the successful implementation of the Commonwealth Data Center Services model. This function manages technologies that facilitate the transformation of resources to valuable services by exploiting the organization's capabilities and toolsets through the automation of repeatable tasks. Through automation, the Unisys Team expands our capabilities to consistently manage higher volumes of work with fewer restrictions than the use of human resources. The major functions of the Automation Services team include IT Service Management (ITSM)/Enterprise System Management (ESM) and Utility Product Support.

The **ITSM/ESM** function provides technology support for the ITSM system and the Enterprise System Management tools. This function configures and manages the ITSM system that serves as a common repository for all process requests supported on the Data Center Compute Services contract. This function also manages customization of ESM tools across all platforms to enable thousands of error messages and anomalous conditions to be trapped by automation and analyzed to prevent issues or escalate impact and notification to appropriate resolvers in real time.

The **Utility Product Support** function manages all other supporting automation products and tools. This function will customize and configure utility products such as the Reports Portal, the Executive Dashboard, the Service Catalog, and the Knowledge Management Portal.

The **IBM Services** team provides hosting and operational support services for platforms supported by our partner, IBM, including IBM zSeries Mainframe and zLinux, IBM iSeries, IBM pSeries, and their associated operating systems.

The **IBM Mainframe** function will support IBM zSeries mainframe systems with senior IBM mainframe engineers who have provided stability and seamless technology migrations to the z10 and z196 processors over the past 5 years. IBM provides our mainframe support on the z/OS and z/VSE platforms, giving us direct access to system programmers who wrote the operating system code and the hardware engineers who designed the hardware in the event of an impact.

The **IBM iSeries** function will support IBM iSeries midrange systems with senior level IBM midrange engineers with expertise on the i/OS platform provided by IBM. Our partner has managed this platform for the Department of Aging, the Department of Labor & Industry, the Civil Service Commission, and the Department of Insurance.

The **IBM pSeries and zLinux** function provides hosting and operational support services for all AIX and zLinux systems. This team is comprised of a blend of industry-certified resources from Unisys and IBM Global Services who possess a

wealth of in-depth platform knowledge and years of experience in supporting critical Commonwealth applications, including ERP systems that are hosted on behalf of the Integrated Enterprise System, the Department of Revenue, and the Pennsylvania Liquor Control Board. This team has a proven track record of success with implementing and migrating these critical environments to new data centers, upgrading hardware platforms, and maintaining a stable operating environment.

The **Database Management** team supports the optional managed database service that includes the database platform hardware and software as well as the ongoing database management administration services. This team is comprised of a mixture of resources from IBM Global Services, Unisys, and Deloitte who are well versed in Oracle, Microsoft SQL, IMS, Sybase, and DB2 database technologies.

The **Service Desk** team provides a central point of communication for all authorized Commonwealth agency staff to report incidents, requests for information, and service requests for all of the services provided in the Catalog of Services. This functional team also manages the Knowledge Management Portal, a central repository for processes and procedures, communications plans, and other documentation to be shared with the Commonwealth.

Six **Service Delivery Teams** are at the core of the Service Delivery organization. Each of the six teams provides end-to-end infrastructure management services to the subset of Commonwealth agencies they are assigned to support. This team is wholly accountable for maintaining application infrastructure availability for all applications needed to support the business of assigned agencies. Many functions are provided by the Service Delivery Team detailed below.

The **Computer Operations and Monitoring** function provides data center operations staff and management to operate and monitor the IT compute equipment and services being provided. This function leverages automated monitoring tools responding to anomalous conditions detected across all infrastructure components.

The **Batch Services** function delivers batch scheduling, execution, and monitoring services. Using a cross-platform system for automated scheduling of batch work and processes, this function processes scheduled batch jobs in the Commonwealth agency-defined windows to achieve maximum performance, enabling required batch completion times to be met.

The **Network Management** function maintains secure and robust, redundant network connections throughout the Data Center architecture. The Network Management team implements and maintains core switching infrastructure comprised of enterprise-level technology designed in a highly redundant configuration.

The **SAN/Storage Management** function provides hosting and operational support services for storage management systems in the data center, including maintaining

system maintenance at current support levels for optimal performance, recoverability, and secure operations.

The **Backup and Restore** functions conduct all system and data backup and restore processing, a key component of the IT Service Continuity Architecture and Plan. This function supports many different technologies that provide disk-based and tape-based backup approaches.

The **Unisys Mainframe** function will continue to be supported by senior Unisys engineers with more than 25 years supporting the Commonwealth systems with specialty in the OS 2200 and MCP operating systems. [redacted] and [redacted] have performed a number of technology refreshes and upgrades over the years, including the most recent migrations to Dorado and Libra technologies with the 2008 Data PowerHouse Transformation project.

The **Windows and Virtualization Platforms** function provides support for both physical and virtual servers across various hardware systems and versions of the Microsoft operating systems and support service software. The Unisys Team has supported virtual and physical Windows environments for the Commonwealth for several years on the DPH contract and implemented the Commonwealth virtualization strategy, using VMware and Microsoft Hyper-V technologies.

The **Linux Support** function provides hosting and operational support services for all Linux systems operating on an x86 platform.

The key personnel of the Service Delivery team include the Service Delivery Executive (Program Manager), [redacted], who reports directly to [redacted].

Service Delivery Executive (Program Manager) Responsibilities and Introduction

- Directly accountable for the success of all aspects and functions of the Service Delivery organization, enabling achievement of contracted Service Levels and meeting all obligations for deliverables under the contract.
- Guides and sets direction for delivery of service to centralized Service Delivery function managers and the six Service Delivery Managers who manage the agency-centric Service Delivery teams.
- Maintains relationships with agency and OA CTOs and actively participates in the Program Management Committee governing body that sets direction for services of the contract.
- Formally reports on the entire program's delivery performance each month.

[redacted] **(based in Harrisburg, PA)** will be serving the Commonwealth as the Service Delivery Executive (Program Manager) under the data center compute services contract. He will be joining the Unisys Team on July 1, 2013. He brings 14 years of experience leading several large Service Delivery organizations supporting outsourced engagements

for Computer Sciences Corporation (CSC). [redacted] will leverage his experience leading a number of large-scale data center delivery teams, including the Textron account where he directed the consolidation of 10 sites with multiple mainframes and over 800 open systems servers, and then managed an ongoing Service Delivery team of 500 employees.

[redacted] is a charismatic, service-driven leader who builds strong performing teams and a winning culture. He has specific management experience with all technologies in use by the Commonwealth. [redacted] has attained ITIL V3 Foundations certification and has a demonstrated track record of success with establishing process discipline and sound metrics that have facilitated performance improvements. For example, his attention to process discipline resulted in improving a 60%-70% SLA achievement to consistently realizing 99.5% or better in two separate major CSC clients in less than a year.

Service Excellence Office

Under the direction of [redacted], who reports to [redacted], the Service Excellence Office (SEO) oversees the execution and performance of the team against all ITIL operational processes with additional focus on continuous improvement and customer satisfaction for the Commonwealth. The SEO (**Figure 5-2**) will monitor and analyze each process in the Unisys service delivery model. The major functions of the SEO include ITIL Process Management, SEO Analysis, Technical Writing, Customer Satisfaction Program Management, and Continuous Improvement.

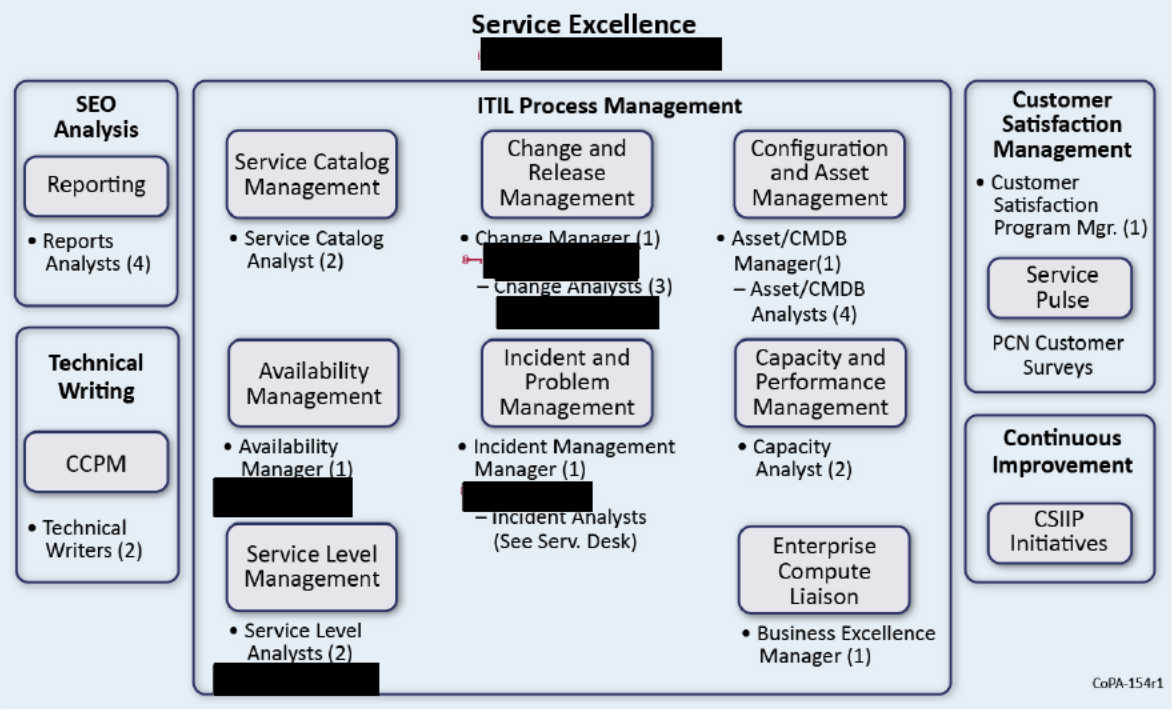

Figure 5-12. Service Excellence Office

The **ITIL Process Management** function is at the core of Service Excellence. This function effectively designs the management practices, processes, functions, roles, knowledge, and skills that the Unisys Team will use to enable us to deliver services that create value to the Commonwealth. Through IT Service Management, processes are developed and executed to facilitate the implementation and management of high-quality IT services that meet the Commonwealth's needs. This discipline is essential to confirm that we consistently produce high-quality services in a timely and cost-effective way. The processes managed by the SEO are listed below.

- **Service Request Management:** this function manages the service catalog containing all current service offerings and those that are planned to deploy soon. This function works closely with Enterprise Architecture to maintain currency of service catalog items and to proactively anticipate the Commonwealth's needs for future Service Catalog offerings.
- **Capacity/Performance Management:** this function conducts the infrastructure Capacity Management planning process to assist the Unisys Team and the Commonwealth in determining current and future capacity requirements, including the elements of hardware, software, environmental systems, and processes as well as the human resources required for successful delivery.
- **Change Management:** across this contract's life cycle phases, significant changes will be required to systems, processes, and infrastructure in response to changing business needs. This functional organization's purpose is to enable these changes to be performed to maximize the benefit to the Commonwealth while minimizing adverse impact on the services delivered.
- **Release Management:** this function is tightly coupled with Change Management. Release and deployment management is the function that delivers new functionality required while protecting the integrity of existing services.
- **Incident Management:** this function's purpose is to restore normal service operation as quickly as possible to minimize any adverse impact on business operations, maintaining agreed levels of service quality. This function defines and oversees the execution of the standardized methods and procedures used for efficient and prompt response, analysis, documentation, ongoing management, and reporting of incidents.
- **Problem Management:** this function focuses on preventing problems and resulting incidents, eliminating recurring incidents, and minimizing the impact of unavoidable incidents by diagnosing the root cause of problems, implementing resolutions with appropriate control processes, and making information on problems, resolutions, and workarounds available in a known error database.
- **Configuration/Asset Management:** this process enables the engagement's service assets (resources and capabilities) to be available and properly controlled, and that accurate, reliable information on the assets to be available when and where it is needed. This function manages every configuration item (including hardware, software, buildings, people, and formal documentation such as SLAs and process documentation) through its complete life cycle, using the CMDB as a repository.

- **Availability Management:** this function's purpose is to perform reactive activities (monitoring and analyzing incidents and events involving unavailability) as well as proactive activities (planning and designing) that improve the availability, reliability, maintainability, and serviceability of the infrastructure provided under this contract.
- **Service Level Management:** achievement of agreed targets for all current and planned services is this function's purpose. It defines, agrees, monitors, and reviews the level of services provided and initiates corrective measures when the service level falls below targeted levels. This function will work closely with Customer Satisfaction Management to improve the overall level of service to the Commonwealth.

The **SEO Analysis** function evaluates available information, placing it in the context of patterns and their implications. This function uses these patterns to give a high level of predictability and reliability on how the data will change over time. This function achieves the reporting of deliverable requirements across all ITIL process areas, technical areas, and the PMO.

The **Technical Writing** function creates and maintains the Commonwealth Computing Procedures Manual (CCPM) as well as all other Standard Operating Procedures (SOPs) and Work Instruction (WI) documentation.

The **Customer Satisfaction Management Program** consistently takes the organization's and customer's service pulse and commissions action plans as needed to improve customer satisfaction and exceed customer expectations.

The **Continuous Improvement** function provides proactive continuous improvement of all processes and functions of service delivery in the Continuous Service Improvement & Innovation Program (CSIIP) methodology.

The key personnel of the Service Excellence Office team include the Service Excellence Officer, [redacted]; the Change Manager, [redacted]; the Incident Management Manager, [redacted]; the Availability Manager, [redacted] **(IBM);** the Change Analyst, [redacted]; and the Service Level Management Analyst, [redacted].

Service Excellence Officer Responsibilities and Introduction

- Has overall responsibility for the quality management functions for the entire Data Center Services program.
- Sets the direction for implementing ITIL best practices throughout the organization to facilitate continuous service improvement programs.
- Is accountable for the creation and timely updates to the Commonwealth Computing Procedures Manual (CCPM) and verifying with the Service Delivery Executive that processes are executed with the discipline defined.

- Has direct responsibility for all ITIL Process Managers, CSIIP initiatives, the Customer Satisfaction Management Program, and all contractually required service level reporting.

[redacted] will serve the Commonwealth as the Service Excellence Officer under the new contract. He is a 32-year Unisys employee who has held a variety of Operations and Quality Management leadership roles supporting numerous Unisys and customer organizations. [redacted] achieved Six Sigma Lean Black Belt Certification and is well versed in Six Sigma and Lean quality principles. He is ITIL V3 2011 Foundation certified. Leveraging this background, [redacted] has facilitated numerous client business planning and continual service improvement workshops for Unisys key accounts. Through his leadership, many Unisys teams reengineered operational processes streamlining operations by 30 percent

[redacted] has conducted multiple Kaizen Process Optimization workshops with the Unisys Team supporting the Commonwealth of Pennsylvania. One of these workshops laid the groundwork to transition the DPH contract from an antiquated Remedy system to the current ITSM 7.6 Remedy system. [redacted] led the team in the identification of process gaps that needed to be addressed to align local processes with ITIL-aligned industry best practices. He will be leveraging an optimized approach refined from numerous past successes with continuous improvement and process management and confirm that metrics and controls are established, analyzed, improved, and maintained to drive Service Excellence and Continuous Improvement.

Change Manager Responsibilities and Introduction

- Sets the direction for the Change Management process for the entire program, enabling changes to be controlled to deliver early realization of benefits with minimum risk and adverse impact.
- Works with the Commonwealth to establish the change management and approval procedures that facilitate processing of requests for change in a formal way with change records that detail configuration items that are affected by the change, implementation procedures, and back out plans.
- Oversees change analysts, enforcing proper staff adherence to the Change Management procedures, including proper documentation in change records.
- Leads the Change Advisory Board (CAB) that is convened to support the authorization of changes and to assist in the assessment, prioritization, and scheduling of changes.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Change Manager under the new contract. He is a thorough and results-oriented information technology professional with more than 30 years of experience in delivering advanced technical support to government agencies. [redacted] is a 9-year Unisys employee who has worked for the Commonwealth of Pennsylvania as a Service Delivery Manager on the DPH

contract. In this role, he has worked with numerous Commonwealth agencies, enabling data center needs and services to be met, including managing large-scale technology refresh projects, the capacity planning process, and all details of agency change and incident management processes.

[redacted] is well-known for his ability to achieve results and effectively manage projects as well as his process management diligence. His orientation to detail has effectively confirmed that Commonwealth changes are scheduled and executed by the most qualified resources wherever possible without incident. [redacted] has extensive experience with managing organizations through significant periods of change, including leading the DPH ERP implementations for the Integrated Enterprise System (IES) and the Department of Revenue (DOR).

Incident Management Manager Responsibilities and Introduction

- Sets the direction for the Incident Management process for the entire program, which manages the life cycle of all incidents focusing on restoration of normal service operation as quickly as possible and minimizing the adverse impact on business operations caused by an incident.
- Provides technical and operational escalations, management, and resolution by working with the Service Desk and Service Delivery to oversee escalations.
- Facilitates chronic issue management and resolution; provides resolutions and root cause analyses.
- Manages major incidents and oversees process activities for incident identification, logging and categorization.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Incident Management Manager under the new contract. He is an 8-year Unisys employee who has contributed to a number of Unisys outsourcing engagements across multiple service lines, including data center services, managed service desks, and field services. [redacted] is a versatile, results-driven service delivery professional with a proven ability to develop strong client relationships, build teams, and deliver on commitments with a solid emphasis on quality and continuous improvement.

[redacted] has held a number of leadership and process management roles, including oversight of problem, incident, and change management processes for many Unisys clients supported in our multi-client service center in [redacted]. He also monitored and managed services as well as maintained consistent delivery to contracted service level agreements. [redacted] is well-versed in Six Sigma Lean Green Belt and ITIL V3 Foundation methodologies that he consistently applies in the performance of his duties. He will move to Harrisburg at the beginning of the data center services contract.

Availability Manager Responsibilities and Introduction

- Defines and manages the ongoing process of Availability Management covering the design, implementation, measurement, management, and improvement of IT service and component availability.
- Confirms that the level of availability delivered meets the Commonwealth's agreed availability needs in a cost-effective and timely way.
- Works closely with the Incident Management Manager, the Problem Manager, and the Capacity Manager to provide reliability, maintainability, serviceability, performance, and security of configurable items.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Availability Manager under the new contract. He is a 13-year IBM employee who has worked in operational leadership roles, including Availability and Change Manager and Data Center Operations Team Lead. Over the past 10 years, [redacted] has served as an IBM Availability and Change Manager for the Commonwealth of Pennsylvania Data PowerHouse project, and for 7 years he managed Data Center Operations for the Commonwealth's Integrated Enterprise System.

[redacted] brings expertise in overseeing processes, including availability management, trend analysis, change control, project planning, implementation, and reporting. He is adept at evaluating processes and applying process improvements, as evidenced by his contributions during our recent implementation of ITIL process standards and the new Remedy ITSM tool. He is well regarded by the Commonwealth and the DPH team for his expertise in the process management area.

Change Analyst Responsibilities and Introduction

- Confirms that information documented on change records is comprehensive and that details such as configuration items affected, procedures for implementing the change, and back out if necessary are included.
- Acts as the steward of the process coordinating and confirming that all change records effectively move through the approval process according to established process timeframes.
- Works closely with the Unisys Team members who create and update change records and with change analysts from the Commonwealth that perform the same function for the Commonwealth workforce.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as a Change Analyst under the new contract. She is a 30-year Unisys employee who has worked to support the Commonwealth for the past 16 years in operational leadership positions, including Change Manager, Help Desk Manager, and Agency Liaison to Data Center Operations.

In her role as Change Manager, [redacted] works with DPH technical teams to process more than 300 data center infrastructure changes per month on average, confirming that all change

requests include required information such as detailed tasks and back out plans. As a true leader, a collaborative approach comes naturally to her when working with the DPH team, and she is diligent in equipping team with process and ITSM product training to successfully execute the change management process.

Service Level Management Analyst Responsibilities and Introduction

- Confirms that all IT service management processes, operational level agreements, and underpinning contracts are appropriate for the agreed service level targets.
- Monitors and reports on service levels, holds regular service reviews with customers, and identifies required improvements.
- Acts as a point of regular contact and communication about service levels to the Commonwealth and Unisys Team managers of the organization.

[redacted] **(based in Harrisburg, PA)** will be serving the Commonwealth as a Service Level Management Analyst under the new contract. She has worked in the IT industry and specifically in large data centers for over 11 years, and will be joining Unisys in July 2013. [redacted] utilizes strong interpersonal skills and a keen attention to detail in order to successfully deliver high-quality, detailed analysis and reporting, which drive cost-effective, quality, IT solutions and continuous service improvement to her clients.

[redacted] has detailed knowledge of IT Service Management and in managing ITIL IT processes: service level management, change management, capacity management, and business continuity management. While working in the IT Industry, [redacted] responsibilities have included: building a comprehensive model for capacity metrics and consolidation reporting; implementing executive reporting summarizing daily processing metrics and current problem status to provide complete transparency; defining and negotiating service-level agreements with customers and service partners to improve customer satisfaction; and managing facility availability activities to 99.99% availability. [redacted] extensive experience, knowledge, and communication skills will confirm that SLAs are effectively managed, analyzed, and communicated to the Commonwealth.

Enterprise Architecture

The Enterprise Architecture organization (**Figure 5-43**) owns the development and management of the technology management program for the Data Center Services delivered. Unisys will establish and maintain this architecture office led by our Senior Enterprise Infrastructure Architect, [redacted] **(based in Harrisburg),** who reports to [redacted]. Reporting to [redacted] will be six dedicated Agency Infrastructure Architects. This organization has direct responsibility for the fulfillment of all architectural requirements of the program. The functions that fall under Enterprise Architecture include meeting Architectural Deliverables, Agency Infrastructure Architecture, Solution Delivery, Innovation Workshops, and Additional Planning Services.

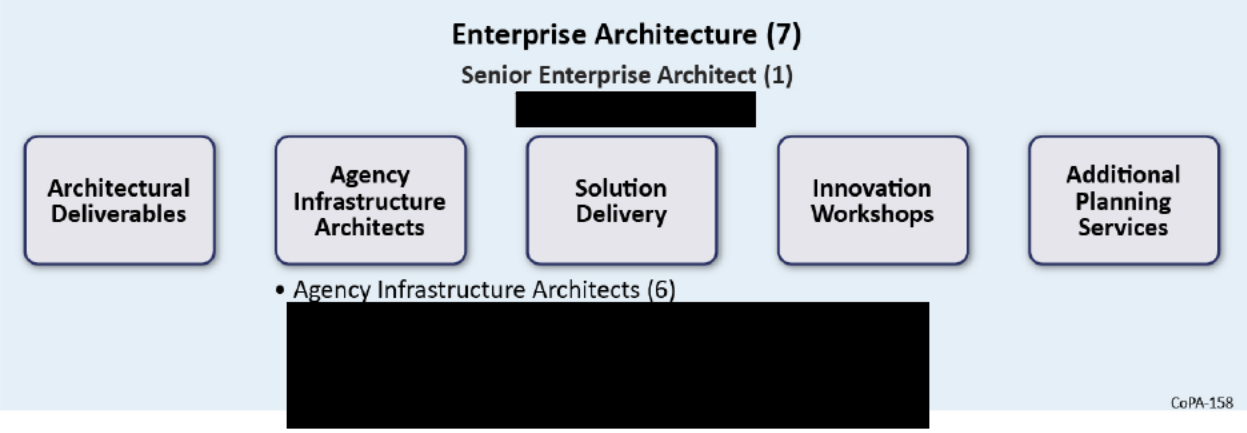

Figure 5-4. Enterprise Architecture Organization

This team is responsible for meeting **Architectural Deliverables,** including:

- **Data Center Architecture Plan and Roadmap,** which includes the 2+ Data Center Architecture, the Data Center Network Architecture, and the Data Center Security Architecture
- **Technology Architecture and Refresh Approach,** which addresses Data Center Technology Refresh and Infrastructure Architecture strategy.

Agency Infrastructure Architecture is comprised of technology architects who bring a wide set of skills and experience that collectively cross all platforms and technologies supported under the Data Center Compute Services contract. Several of our Agency Infrastructure Architects—including [redacted] have provided support to the Commonwealth for as long as 30 years. The architects are aligned with specific agencies and work hand in hand with the Agency Account Managers to enable agency technology needs to be fulfilled. They are responsible for the detailed design engineering of the Commonwealth's specific data center services, design quotes, and coordination of Commonwealth-related requests.

Solution Delivery is responsible for all aspects of the solution delivery, including conducting the requirements definition process with the agencies requesting service, developing a detailed technical solution, quantifying solution costs, and delivering a viable proposal to the Commonwealth within established time frames.

Innovation Workshops are essential to provide the opportunity for collaboration, technical information exchanges, and forums that will address issues, needs, and interests of the Commonwealth team. These Innovation Workshops are a key component of our overall continuous improvement program.

Additional Planning Services provide the Commonwealth with different or additional methods for requesting technical information and support. Depending on the type of request, those methods could include:

- Statement of Objectives (SOO)
- Work Orders
- Service Requests
- Request for Technical Analysis
  - Cost Benefit Analysis
  - Conceptualization
  - High Level Estimate (HLE)
- Technical Opinions.

The **key personnel** of the Enterprise Architecture team include the Senior Enterprise Infrastructure Architect, [redacted], and six Agency Infrastructure Architects, [redacted]

Senior Enterprise Infrastructure Architect Responsibilities and Introduction

- Has overall responsibility and accountability for the fulfillment of all architectural requirements of the contract.
- Works with Commonwealth technology leaders to set overall technology direction and strategy for the program.
- Confirms the engagement of an architecture team focused on agency technology needs that are balanced with the right technical expertise needed to meet the agency's needs.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as the Senior Enterprise Architect under the new contract. He has 16 years of IT industry experience working for IBM in a number of architect roles before joining Unisys in 2011 as the Lead Client Architect managing the North American Client Architect team, which included overseeing the Client Architects supporting the Commonwealth. While working for IBM, [redacted] served as Transformation Integration Architect leading a large team of architects to develop technical components to build a multi-tenant data center to support the State of Georgia's strategic consolidation plans.

[redacted] has served in roles providing strategic technical advice to account directors and state agency CIOs and CISOs, developing consumption-based managed hosting service models, and developing business continuity system architectures to support recovery of critical business applications. Having supported numerous agencies for the State of Georgia, he is well versed on the importance of regulatory compliance and has led architecture teams to integrate federal regulatory guidelines and requirements into technology solutions. [redacted] is an accomplished technologist and excellent communicator who keeps stakeholders informed through a rigorous architecture review process and periodic technology briefings.

Agency Infrastructure Architect Responsibilities and Introductions

- Fully accountable for the end-to-end solution delivery process and the deliverables of all architecture-related requirements.
- Works with the Commonwealth through Innovation Workshops to keep agency leadership abreast of industry and technology trends.
- Provides additional planning services as needed by the Commonwealth to aid in its budgeting and technology planning processes.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. She has worked in various roles supporting the Commonwealth over the past 12 years, starting as a long-term consultant to the Department of Public Welfare providing network security expertise for the installation, configuration, and maintenance of the department's extranet. In her current role, [redacted] provides architecture services and manages the implementation teams supporting the secure integration of agency applications into the EDC.

[redacted] has worked with numerous agencies establishing positive customer relationships and confirming that solutions developed fulfill agency business needs. She has demonstrated superior knowledge across various data center technologies, including Windows server, virtualization, and network. She also attained CISSP certification acknowledging her expertise in security. [redacted] is a strong leader who has skillfully led her team through the implementation of several solutions over the 9 years she has worked in the EDC. This experience enables her to implement solutions that are well thought with successful implementation in mind.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. He has more than 18 years of experience in the IT industry working in data center technical management and architecture roles; for the past 4 years, he has worked as a Client Architect supporting the Commonwealth on the DPH contract. In his role at the DPH, [redacted] designed detailed technical data center solutions for 17 Commonwealth agencies across all technology platforms supported at the DPH.

[redacted] routinely provides guidance and recommendations to Commonwealth agencies on emerging technologies to increase performance, gain functionality, and reduce cost. He has a solid track record of developing highly accurate solutions that are subsequently implemented successfully because of his attention to detail. With a strong background in data center technical management, [redacted] understands the importance of having technical team members participate in the solution development and takes a collaborative approach to fostering accountability on the team, promoting a successful implementation.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. He has more than 39 years of experience in the information technology field supporting the Commonwealth in various positions

demonstrating superb skills in IBM mainframe technologies. [redacted] has supported the Commonwealth for 27 years, the past 14 years as an IT Architect on the DPH contract, and before that spending several years in various systems support roles at the Pennsylvania Department of Transportation.

Throughout his tenure on the DPH contract, [redacted] has continuously developed innovative solutions that improved the IBM mainframe platform performance and resiliency for agencies supported at the DPH. With the DPH transformation in 2008, he consolidated several disparate mainframe platforms onto a single z10 frame that exploited group capacity and sub-capacity software to allow the Commonwealth workloads to gain access to available MIPS beyond their allocated capacity and at the same time not exceeding software licensing limits. This innovation saved the Commonwealth millions of dollars by providing additional capacity to agencies experiencing extraordinary processing requirements for short periods.

[redacted] **(based in Harrisburg)** from our partner IBM will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. [redacted] has more than 34 years of information technology experience and has been assigned to the IBM Commonwealth of Pennsylvania team since 1996, when she led the design and implementation of multiple complex IBM infrastructure solutions, including the SAP and Unemployment Compensation infrastructure environments.

[redacted] has supported Commonwealth agencies for the past 17 years, designing and implementing highly available IT systems and subsystems. Using a consultative approach, she works closely with agency IT technical and operations stakeholders to gather their requirements to develop systems management solutions that address needs of the business. Through her solutioning efforts, [redacted] has been instrumental in assisting the Commonwealth with the realization of goals to reduce the number of data centers and servers and to significantly increase server virtualization at the Commonwealth.

[redacted] **(based in Harrisburg)** from PCN will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. [redacted] has worked on a variety of assignments crossing diverse technologies and industries, including government agencies and military contracts. He has performed as a Data Center Infrastructure Architect for large organizations for which he has focused on introducing emerging technologies and solutions to the company's vision and leveraging them to enhance capabilities and reduce cost.

Throughout his career, [redacted] has consolidated more than 25 data centers to centralized mega-data centers, built three new data centers, designed six SANs across six data centers, and developed multiple Disaster Recovery solutions including the use of SunGard as well as in house Disaster Recovery solutions using internal infrastructure and data centers. He is skilled in a broad spectrum of data center infrastructure technologies we will be using for the Commonwealth solution.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as one of our Agency Infrastructure Architects under the new contract. He has worked for Unisys supporting many Commonwealth agencies in the DPH over the past 5 years. While at the DPH, [redacted] spearheaded several initiatives that advanced our architecture and support capabilities in Windows and backup technologies, including consolidation of the DPH NetBackup infrastructure that significantly reduced compute and media resources consumed by the backup process.

[redacted] has worked closely with many DPH agencies and took the lead in developing and executing the migration of the Integrated Enterprise Systems Windows platform to the DPH. [redacted] also determined a strategy for using the virtual infrastructure to replicate backup master servers to the disaster recovery site, expediting this component's recovery time from 2.5 hours to 30 minutes. He has consistently applied ingenuity and creativity to developing solutions that solve agency and DPH technology challenges.

Transition and Project Management Office

This office (**Figure 5-5**) is responsible for the deployment of a rigorous project management framework to be used to promote successful agency transitions, data center migrations, and steady state projects. Enabling all aspects of training to be managed consistently is the responsibility of the trainer on this team. Functions of this office include Transition Management, Steady State Project Management, and Training.

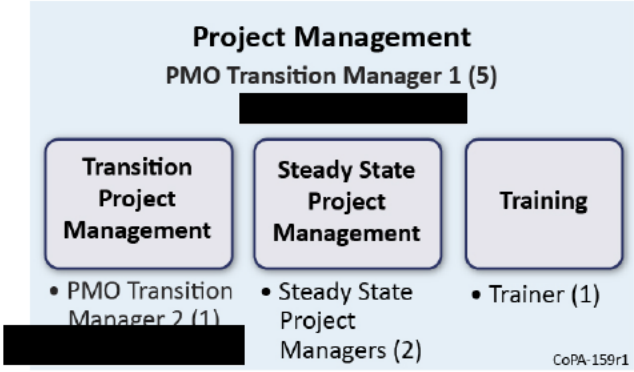

Figure 5-5. Transition and Project Management Office

On the steady state organization chart, there are two key positions for PMO Transition Manager based in Harrisburg. PMO transition Manager 1, [redacted], will lead all of the project management and transition efforts. PMO Transition Manager 2, [redacted] from IBM, will be filling the role of the second transition manager through to the end of transition, when he will be assigned to another service delivery role on the team.

The **Transition Management** function for the Commonwealth will be responsible for all aspects of delivering the transition, including milestones, communications, and the identification and assignment of transition resources. The Transition Managers will

represent the Unisys Team as the single point of contact for agencies supported during the transition, provide oversight and direction, and monitor the transition's overall status.

[redacted] were selected to lead the transition because they are results-driven Transition Managers with many years of experience in managing transitions, transformations, steady state programs, and turnaround initiatives. They are skilled communicators and are diligent about tracking and resolving issues as they arise. They are proficient at managing, designing, and delivering on long-term sustainable complex projects.

For this contract, we plan to have a dedicated **Steady State Project Management** function that confirms that changes to existing Data Center Services are managed using the same procedures and successful methodology used for transition. Having supported the Commonwealth on the DPH contract for the past 14 years, Unisys understands that agencies need to continue to enhance and modify their data center compute environments regularly for several reasons, including changes to legislation, adjusting to volume fluctuations, and refreshing antiquated technology. Two Project Managers will be dedicated for this function, and Unisys will leverage our North American Project Management Organization to support periods of peak activity.

PMO Transition Managers Responsibilities and Introductions

- Provides technical expertise and leadership during the transition of the current state data center services to steady state managed data center services.
- Provides continuing engineering support through the rest of the term for any future transition and transformation needs.
- Develops plans including detailed schedules for the implementation and transition of the Commonwealth from its current contract; obtaining approval and acceptance of the Transition Plan; and identifying the Transition Plan roles, responsibilities, and performance contingencies.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as PMO Transition Manager 1 under the new contract. He brings 27 years of IT delivery experience working for large IT outsourcing firms before joining Unisys at the beginning of this year. As a Transition Management Consultant working for Dell Services/Perot Systems, [redacted] led four large-scale data center transitions, migrations, and system upgrades during his 5-year tenure.

[redacted] has achieved ITIL Foundations V3 and Project Management Professional certifications and applies the strengths of these methodologies to his approach to transition management. He has a long track record of success with building and leading technology teams on new business development initiatives and transformational programs for existing clients. [redacted] is a well-organized, communicative business professional who is proficient at establishing fruitful relationships with clients and Unisys technical teams to create synergistic transition support units.

[redacted] **(based in Harrisburg)** will serve the Commonwealth as PMO Transition Manager 2 under the new contract. He has spent more than 14 years on the IBM Commonwealth delivery team, gaining extensive experience in transition leadership, project management, IT infrastructure implementations, and IT operations and services management. [redacted] has held various leadership roles supporting the DPH, supporting the Integrated Enterprise System ERP contract, and as a project leader with the Department of Labor & Industry.

In October 2005, [redacted] led the transition of the Commonwealth's ERP systems from legacy providers to upgraded systems and network infrastructure on schedule and with no interruption to customer operations or applications. He has been successful on several similar large-scale transitions and projects by designing consistent transition plans with clear team member roles, responsibilities, and deliverables to enable every team member to understand his or her part of the transition. He understands that success relies on working together with the Commonwealth agencies to reach firm agreements on milestones and schedule.

Information Security

The Information Security organization (**Figure 5-6**) oversees all aspects of the project to confirm compliance with security standards and requirements. The main functions that fall under Information Security include IT Risk Management, Security Strategy, and Security Operations.

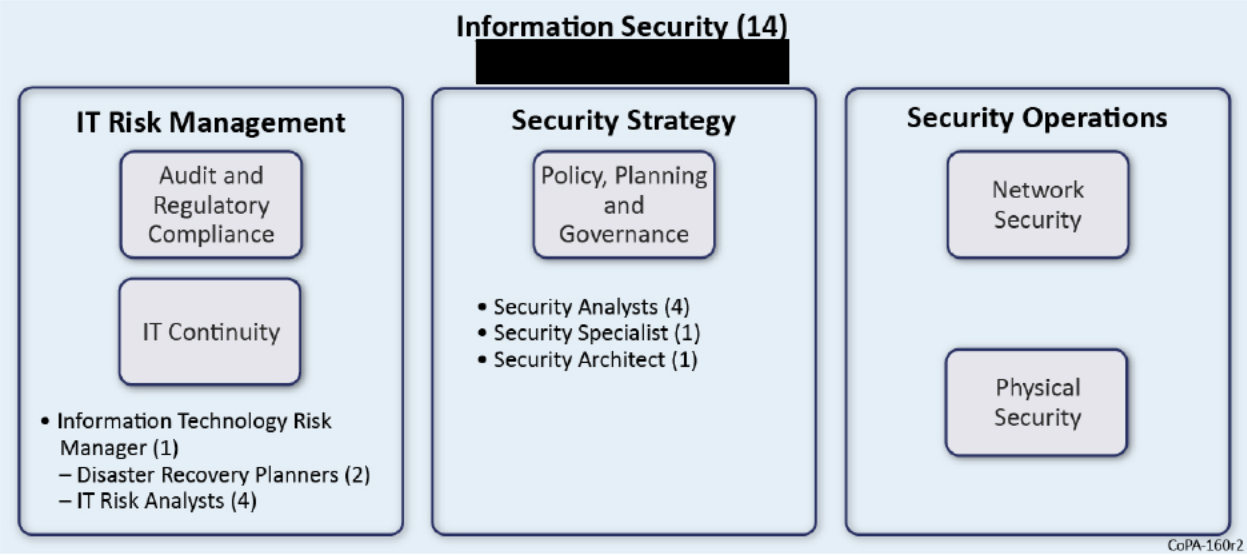

Figure 5-6. Information Security Organization

The **IT Risk Management** function leads efforts associated with continuity of IT business. This function also confirms that all required audits are conducted each year and that the Unisys Team participates as needed in Commonwealth audits.

The **Audit and Regulatory Compliance** function has full accountability for the Unisys Team's compliance with Commonwealth IT policies and directives as well as federal and Commonwealth laws, regulations, and policies. This function works with each agency to understand and confirms compliance with laws, regulations, and policies that pertain to each agency. The responsibility for conducting contractually required audits or arranging for participation in agency audits falls under this function.

The **IT Continuity** function is responsible for strategy and planning associated with continuity of the business as well as disaster recovery. This function leverages a disaster recovery planning tool that is shared with the Commonwealth to document disaster recovery and business continuity plans.

The **Security Strategy** function collaborates with Commonwealth agencies to develop the security plan and roadmap in collaboration with Commonwealth agencies. The **Security Policy, Planning and Governance** function will meet with the Commonwealth's Security teams (OA & agency) to participate in creating a comprehensive Security Program strategy.

The **Security Operations** function oversees all operational security functions including physical security and operational network security. The **Network Security** function provides hosting and operational support services for security products and firewalls at the data centers. The **Physical Security** function provides robust physical security, including biometric access control, video surveillance, and routine security officer patrols, protecting Commonwealth and vendor assets at all times.

The Unisys Information Security team is led by the Security Manager, [redacted], who reports directly to [redacted]. [redacted] is a results-oriented leader with more than 15 years of experience in supporting security product implementations and developing security strategy with Commonwealth CIOs.

Reporting to the Security Manager, [redacted] **IT Risk Manager** oversees all IT continuity functions that include business continuity planning and disaster recovery, including coordinating required staff and resources to execute regular Business Continuity and Disaster Recovery tests and improvements. [redacted] has worked in this role on the DPH contract for the past 4 years, identifying risk areas and establishing plans to mitigate them.

Security Manager Responsibilities and Introduction

- Oversees all aspects of the project to confirm compliance with all security standards and requirements.
- Oversees Network Security, Physical Security, and IT Risk Management operational areas.
- Confirms Commonwealth regulatory compliance on this engagement and leads client projects by developing workable plans, limiting risk, and managing resources.

[redacted] will serve the Commonwealth as the Security Manager under the new contract. He brings more than 38 years of senior technical and management experience, including 6 years with the Commonwealth covering security design, consulting, project management, technology assessment, automation, and distributed network architecture. [redacted] has specialized security expertise throughout a broad range of product sets, including identity management, identification and credentialing, access control, and confirming compliance with security standards.

[redacted] has worked with several federal and state agencies, including the Pennsylvania State Police, where he managed security for the new Commonwealth Law Enforcement Assistance Network (CLEAN) upgrade encompassing security policy; access control by CA SiteMinder; and integration with PSP's RSA Adaptive Authentication using a RadiantOne Virtual Directory Server (VDS) as the user repository. He also collaborated with JNET to most efficiently provide access to CLEAN by JNET users without requiring additional authentication and assisted Commonwealth leadership creating Security ITBs. [redacted] efforts enabled deployment of the new Megan's Law application to its full user base much faster than would have been achievable otherwise, enabling PSP to meet its legislatively mandated deadline.

5.13 HR Discussion

5.13.1 Staff Contingency Plan

RFP	*Requirement*
	The Offeror must provide a contingency plan that shows the ability to add more staff if needed to ensure meeting the Project's due date(s) and milestones as outlined in the Offeror's proposal.

As a global employer and service provider with the processes and capabilities that place the right people, in the right place, at the right time through its various recruiting and staffing functions, including Global Recruiting staff (external candidate sourcing) and Resource Management (internal sourcing), Unisys has the requisite processes in place to support contingent staffing models.

The Unisys dedicated Resource Management and Global Recruiting team's comprehensive staffing approach leverages effective forecasting tools (resource database by skills competencies used as a measure of available internal resources and as a prompt for external recruiting actions) to proactively address staffing needs, including key resources, dedicated and staff augmentation requirement staffing categories, duties and responsibilities, development and training, and succession planning to maximize sourcing for fully qualified staff availability as required throughout the engagement.

Sourcing is comprehensive and includes: evaluating current Unisys employees and service partner resources, using our global Resource Management and internal and external job posting systems; evaluating the current program employees and Unisys preapproved contractors for the engagement during the transition period; employee referrals; the Internet job boards; advertising; job fairs, and agency referrals.

Unisys developed a human resources staffing plan solution that is based on our understanding of the requirements provided. Our proposed contingency plan to address staffing risks includes the following key items:

- Early warning of staffing shortages through continuous review of the project plan to identify late completion of tasks
- Communicating staffing risks and impact to the Commonwealth project manager
- Establishing a standby labor pool of resources with appropriate skills to support the project
- Completing criminal background check for standby resources.

The Unisys contingency staffing approach leverages the use of our internal resources as well as those of our partners and staff augmentation firms. We have employees assigned at

our other U.S.-based data and service centers that can support short-term emergency client support requirements as needed. Our approach enables us to effectively respond to emergencies and special events, extreme weather conditions, and natural disasters, and IT continuity events.

Our Staffing Contingency Plan provides for the injection of additional resources to support transitions, emergencies, and staffing with specialty skills or any other effort in which additional support is required. Proactive planning from our program management leaders, resource management, and global recruiting teams shortens the time to fill by providing dedicated resources focused on the skills required for qualified delivery resource needs supporting the Commonwealth. Enhancing our focus on immediate response to the Commonwealth's needs is our approach to expediting required background investigations as described in the terms and conditions (Appendix A).

Important factors that augment our ability to effectively respond to staffing requirements are (1) keeping teaming partners informed of staffing requirements, (2) keeping ongoing contingency staffing vendors engaged, and (3) maintaining effective communication. This set of adaptable processes are used individually or in any combination to respond to the Commonwealth's staffing needs of varying durations, skills, certifications, and skill levels.

5.13.2 Staff Management

RFP	*Requirement*
	Describe internal standards, policies and procedures regarding hiring, professional development and human resource management.

Unisys is a global employer and service provider with the processes and capabilities that place the right people in the right places at the right time.

Recruiting and Hiring

The first step in the process, and one of the most important, is clearly defining the position's requirements. The detail and clarity of the requirements determine where we will source, and how we will screen and select the final candidates. Unisys uses a Targeted Selection methodology that defines the technical skills, experience, professional competencies, behavioral attributes required.

The Unisys sourcing process is comprehensive and includes:

- Evaluating current Unisys employees and contractors, using our global Resource Management and job posting systems for internal Unisys resources

- Assessing current employees and contractors of the client, service provider, or both for the engagement (if applicable) during the transition period
- Pursuing external candidates from employee referrals, the Internet, candidate sourcing, applicant market research, advertising, job fairs, and agencies.

The screening and selection processes involve our Targeted Selection methodology by evaluating the skills, competencies, and attributes of candidates against the requirements of the roles. We select the candidates, negotiate the salaries, and offer employment to the final candidate.

Internal Standards for Employee Selection

Unisys conducts background checks for all new hires as a condition of employment. Our standard checks include a criminal background check, employment verification, education verification and verification of the right to work in the United States. We accomplish all security procedures required by client service agreements. We also enforce Unisys policies and procedures for a drug-free workplace, security, and client and employee data protection during our recruiting and hiring process.

Professional Development

Professional certifications in the IT services industry demonstrate high standards and validated levels of expertise by the individuals who hold them. As a global service provider, Unisys establishes standards and requirements for our employees to earn, maintain, and add certifications when needed for supporting products and applications as well as for fields of knowledge and proficiency.

Unisys maintains technical and professional certifications and affiliations in many areas. We pursue employees with certifications such as ITIL, Six Sigma, Microsoft (MCSE and so forth), Dell, HP, Cisco, Nortel, Sun, IBM, SSPA, COPC, and HDI. We also pursue employees with technical certifications such as Dell, HP/Compaq, IBM, Unisys, and the industry standard recognized CompTIA A+ Certification.

When applicable, our technical resources attend at least 3 weeks of training a year, much of which leads to certifications. We strive for all Unisys technical resources to have at least one industry certification such as Microsoft MCP NT, Novell CNE, Nortel, Certified Unicenter Engineer (CUE), Microsoft Certified Systems Engineer (MCSE), and Cisco Certified Systems Engineer (CCNA).

Resource Management

Sound human resource management practices are based on mutual respect and trust, shared commitments and following through on them; recognition of each other's abilities and contributions to success, active support for career development, professional behavior, and an openness that invites an exchange of diverse ideas and approaches for delivering

customer and employee satisfaction. Successful working relationships depend on a work environment free from unlawful harassment or coercion.

Internal Standards of Behavior

To build and strengthen those working relationships and improve our chances of business success, we follow simple key practices that define the shared responsibilities between employees and managers:

- Preserve and enhance Unisys reputation
- Know the business and serve your client
- Set work objectives and keep plans on track
- Seek and give feedback and recognition
- Build capable teams
- Develop skills and coach one another
- Discuss accomplishments and rewards.

Getting our human resource management relationships right increases our ability to serve clients, develop the full potential of employees, and build our reputation. Those three elements are essential ingredients for company growth and delivery success to our clients.

5.13.3 Training Policies and Procedures

RFP	*Requirement*
	Describe Offeror's policies and processes for training and ongoing education of its personnel.

Policies and Plans

Unisys formed a partnership with Harrisburg University for Science and Technology (HU) to add real power to our training program. We previously worked together to support of the Government Technology Institute (GTI), which is a joint venture between HU and the Commonwealth that provides technology learning and innovation opportunities for the public sector. Unisys Executive leadership has delivered training and facilitated discussions designed to prepare Commonwealth leaders with information to make informed decisions on the most pertinent information technology challenges plaguing today's technology leaders.

All Unisys Team personnel are trained, competent, and skilled in the performance of their assigned tasks as required for effective performance in service delivery. We provide the Commonwealth with employee training plans, identifying both initial and recurring training. This plan includes any required program or Unisys mandatory training, role-

related technical certifications, and individual (self-directed) development to keep all personnel current in their areas of responsibility. The plan complies with all Privacy Act and other regulations governing personal and private information. All contractor personnel are trained, competent, and skilled in the performance of their assigned work required for effective performance in service support. Our flexible, proactive approach to training uses a variety of training methods.

Unisys created Unisys University (UU) as an internal education and training program. UU offers a range of training, technical certification, and professional development, including about 1,000 computer-based training applications and 2,500 instructor-led courses. UU's rich curriculum covers a variety of subjects, from program management to networking infrastructure and communications. We reimburse employees up to $5,000 a year to acquire career skills and certifications, such as Microsoft Certified Systems Engineer and Project Management Institute PMP, outside the UU network. Leveraging this capability further enhances the experience of our personnel who, in turn, increase their performance for service support to the Commonwealth.

Unisys and our service partners have similar programs to accomplish the goal of providing certified, trained staff that maintain service levels and meet deliverables.

Ongoing Education

Unisys developed a learning approach and methodology to ease the transition for Commonwealth staff from the current model to the new model. Our training approach brings employees substantial benefit that includes three basic pillars:

- Provides rapid access to procedural information relevant to the new contract
- Tailors curricula designed to address specific training needs of individual agency personnel
- Provides a roadmap for the Unisys Team to verify that the team supporting the Commonwealth's new contract is nurturing the skills and knowledge required to be successful from day one.

The Unisys Training program was designed with the following goals:

- Provide professionals who are certified in all aspects of infrastructure technologies supported for the Commonwealth with a subset of advance certifications achieved by the most senior team members
- Deliver annual training to enable our team to understand its responsibility to conduct Unisys business with integrity, to protect confidential information, and to follow security awareness best practices
- Enable 100 percent of the Unisys Team to obtain ITIL Foundation Certification with advanced ITIL certifications for members of the Service Excellence Office
- Provide training for all supporting staff on products and tools used in the data center environment

- Formalize transition preparation, quality assurance, debriefing, and compilation and communication of lessons learned
- Facilitate training on operational procedures and supporting products and tools designed to maintain process compliance.

Table 5-8 provides a high-level view of the training topics for Unisys and subcontractor personnel.

Table 5-8. Training Topics for Unisys and Subcontractor Personnel

Unisys Training Topic	High Level Curriculum Content
Ethics Awareness	Business ethics and public sector requirements
ITIL Process Training	ITIL Foundation certification for all employees, advanced certification for process managers, and detailed procedure training for all employees
Industry Technology and PMP Certifications	Vendor-provided curricula associated with staff technology certifications, as well as basic and advanced project management
Technology Product Training	Training in the installation, configuration, and use of all products and tools used to provide the services
Service Desk Agent Training	Service Desk orientation, operations, customer-specific requirements, and the Knowledge Management Portal
Security and PHI	Security policy awareness and employee responsibilities for protecting of confidential information
Transition Training	Orientation, planning, debriefings, lessons learned, and development of improvement plans

5.13.4 Staff Retention

RFP	Requirement
	Please describe Offeror's process and methodology for retaining Offeror personnel.

Unisys commits to comply with the terms and conditions that key personnel cannot be moved off the program without specific agreement from the Commonwealth on a suitable replacement. This provision enables the Commonwealth to have a solid staffing framework on which to depend to provide program stability and high performance.

Unisys strives to employ and promote the best-qualified person for each position for service delivery to the Commonwealth while valuing and promoting diversity in our workforce. We work hard to provide our employees with an environment that enhances their opportunity to achieve personal, professional, and financial well-being. We believe in providing opportunities that enable our employees to develop to their fullest potential, recognizing they play a key role in their own development. We encourage our employees to take advantage of all training opportunities available to them.

Unisys strives to align compensation to attract and retain individuals who are capable of exceptional performance, dedicated to supporting our company's strategic imperatives, and our delivery objectives to support of the Commonwealth. We maintain a performance-based compensation program. The components of compensation include base pay and depending on the position, short- and long-term incentives and recognition awards.

Hiring and retaining the talented, motivated people the Commonwealth expects requires a total compensation package that competes with those offered by our competitors. The Unisys performance management process includes our total rewards strategy to build a business environment that rewards employees for business and performance success and for the demonstration and development of skills and behaviors needed for effective service delivery to the Commonwealth and business success.

Unisys and our service delivery team employ programs that include a variety of retention incentives and frequent evaluations of employee performance. Because of our previous experience, we know that motivated employees have lower turnover rates and generate higher client satisfaction.

In 2012, the Unisys overall retention rate was 87 percent. This rate compares very favorably with other service providers in the IT Services industry evidencing similar rates. We employ competitive benefit and compensation programs, referral bonuses, extended effort pay, computer-based training, multiple career paths, mentoring, and leadership excellence acceleration programs. As demonstrated today, our excellent retention rate

helps us to minimize service interruption to the Commonwealth by avoiding unnecessary retraining of unskilled staff or constantly introducing new staff unfamiliar with the Commonwealth's agency environments.

Unisys also offers a program of comprehensive benefits including health insurance, income protection for illness, injury, and pregnancy; life insurance, short- and long-term disability insurance, holiday pay; vacation pay; a 401(k) plan, employee discount programs; and other programs that vary on our team.

Each year, Unisys formally evaluates performance of our staff members with a formal midyear review incorporating input gathered from managers, projects, and the Commonwealth. The interim review is structured to provide employees with a sense of how they are doing. Midyear ratings are on track or not on track. They are an overall check on progress against performance, education, and training goals. It is very important for managers to make employees aware of their performance level continually throughout the year. The timing of these reviews varies among team members.

Performance management is an ongoing cycle of planning, implementing, improving, evaluating, and rewarding performance—with continuous coaching and feedback from managers. Effective performance management begins with an understanding of established goals and their connection to individual contributions. Managers assist employees in planning their performance, education, and training by sharing their organizational goals and any role-specific performance expectations that underpin performance. Employees then create performance and education plans. The plans are then reviewed, edited if appropriate, and approved.

Throughout the year, performance and education plans are kept relevant through: (1) ongoing coaching and feedback, (2) performance improvement plans, (3) targeted performance improvement actions to elevate the contributions of low performers, (4) midyear performance discussions to gauge progress and update plans, and (5) project feedback.

As already discussed, the Unisys staffing model consists of a diverse, multi-disciplined team seeded with professionals experienced in supporting technology initiatives across all compute platforms used by the Commonwealth. Most of our team has specific experience with supporting the infrastructure needs of the Commonwealth's applications developed over the 14 years that Unisys has served the Commonwealth in the DPH. In the aggregate, our team accumulated more than 1,000 years of experience supporting infrastructure for many of the Commonwealth's 2,000 applications.

As the incumbent vendor, Unisys has the uncommon ability to leverage our diverse, multi-disciplined team already saving the Commonwealth in the Data PowerHouse and the Enterprise Data Center. We will leverage the talents of existing personnel with experience in supporting the infrastructure needs for the Commonwealth's applications over the past 13 years.

Seeding our team with knowledgeable resources who understand the Commonwealth infrastructure will considerably reduce ramp-up time to train staff on basic infrastructure support and each agency's priorities and, enabling us to accelerate our focus on reforming our organizational structure to meet the new model's changing requirements. We will redeploy existing resources to the new contract as workload transitions out of the DPH and hire as necessary from Unisys and our strategic partners to provide the Commonwealth with the best complement of professionals and capabilities during transition and steady state.

Just as we have over the past 50 years, our Pennsylvania-based team continues to be committed to your goals, and as your long-term partner, we look forward to taking this transitional journey with you that culminates in the realization of your innovative Computing Services vision.

UNISYS

Skills Summary

A dynamic accomplished Program Manager with five years of Commonwealth experience; passionate about service delivery, successful customer relationships, development of high performance operations, and complex project management. Strong track record of reinventing fast-paced organizations and managing them through significant periods of growth and change. Adept at managing financials, quality improvement programs, technology consulting, strategic planning, and performance metrics; well respected by peers and subordinates, sought out by senior vice presidents for the 'tough jobs'.

Employment History and Related Experience

Unisys Client Account Executive

Public Sector, Commonwealth of Pennsylvania 2008 – Present

Client Account Executive, Service Delivery Director and Chief Technologist for the Data PowerHouse (DPH)hosting services contract (based in Harrisburg PA) for the Commonwealth of Pennsylvania's most mission-critical applications since 2008. Delivered full time support for this contract managing client relationships and ensured contract compliance; successfully restructured management of this key program resulting in the highest customer satisfaction levels and Service Level Agreement (SLA) performance in the history of the program.

> [redacted] *goes without saying…but I'll say it anyway…you are doing an excellent job leading: highly communicative, client focused, results driven";*
>
> Bill Bancroft, VP and General Manager, Unisys Global Managed Services

Transformation Solution and Project Management

As Chief Technologist, validated an extensive and highly complicated technology solution, engaged with the Program Management Office supporting the oversight of contract managing commitments, requirements, and expectations; and provided management sponsorship for major transformation and infrastructure consolidation initiative with the contract extension in 2008.

Innovative Service Offering Implementations

Since 2008, spearheaded a number of innovative technology solutions that resulted in cost savings for the Commonwealth of Pennsylvania including server virtualization and the implementation of a shared infrastructure strategy with the 2008 transformation; fostered the evolution of the Data PowerHouse architecture to newer technology concepts including disk-based backup solutions and flexible service offerings.

Worked with subcontractor and Commonwealth leadership to develop an innovative strategy to control unplanned growth and contain cost for IBM mainframe environments; engaged the Program Management Office (PMO) in daily oversight of the effort to contain cost through careful analysis of progress reports, schedule, quality reports, and budget. The implementation of a technology platform upgrade resulted in savings for software licensing costs and creative redeployment of a business class processor. Relocating the Department of Corrections to the business class processor provided remaining mainframe agencies with much-needed capacity to grow their environments. The overall strategy saved the Commonwealth millions of dollars by negating the need for an unplanned capacity upgrade on the mainframe platform.

ERP System Environment Hosting and Migration

Developed the technology solution required to support the Oracle ERP system environment for the Pennsylvania Liquor Control Board, and oversaw the migration of the Oracle ERP system environments from the Northwest Office Building into the Data PowerHouse in 2008. Tracked ERP deliverables; confirmed our team met the project commitments, contract requirements, and customer expectations. The solution provided a solid platform on current technology deployed in a high availability configuration hosted in the hardened Data PowerHouse facility increasing the reliability of the infrastructure supporting this critical Commonwealth business.

Managed the SAP Integrated Enterprise System implementation of a disk to disk backup solution, proactively addressed problems with rapidly growing data requirements, and resolved the massive Commonwealth data backup process that involved as many as 34 tape volumes over several hours. Mitigated the risk associated with reliability of tape media through the implementation of a disk to disk backup configuration. This configuration now supports backup of nearly twice the amount of data than

previously backed up under the tape solution in little more than three hours.

Customer Satisfaction Programs

Developed Customer Service Programs tailored to meet agency needs. Revamped the annual Agency Survey to elicit actionable feedback; shared feedback across the Commonwealth with every Commonwealth Agency; instituted an intensive Service Assessment Process that included a detailed written survey, follow-up analysis, agency interview, and Action Plan to address satisfaction issues. Managed relationship with the Commonwealth, established commitments, requirements, expectations for the Service Assessment process, tracked the required survey deliverables – confirmed that survey events occurred on schedule. Changes to Customer Satisfaction Programs have resulted in higher levels of agency satisfaction through better methods of communication and follow-up on issues impacting the agencies.

Quality Improvement Initiatives

Led the assessment and reengineering of security practices and procedures resulting in achievement of ISO 27001 certification in 2009. Recognizing the importance of alignment to ITIL best practices and completed an initiative to obtain ITIL V3 2011 Foundations certification for all team members supporting the Commonwealth of Pennsylvania. Invested in upgraded Remedy ITSM 7.6 platform with new modules and adopted Unisys global standard processes that facilitate our process alignment to ITIL best practices.

Non-Unisys Project Experience

Dendrite International (Cegedim), Vice President of Technical Services 1996 – 2006

Founded in 1986, Dendrite International now known as Cegedim provides diversified sales, marketing, clinical and compliance solutions to the global life sciences and pharmaceutical industry. As the Vice President of Technical Services and Corporate Officer, leveraged detailed understanding of billing formats, hierarchies, credits, and business structure to strengthen the logistics operations process. Defined organizational standards, Service Levels structure, credits, and service metrics for all outsourced service management organizations including Data Center, Technical Customer Service Center, and Hardware Break fix Logistics Operation providing exceptional service through a staff of more than 500 technicians.

> The Cegedim Chief Technology Officer reported:
>
> *"Ann is an exceptional technology leader. She and her team had many successes including: building a world-class Data Center from the ground up and then migrating dozens of our customers to the center with zero disruption; rapidly expanding our Virginia technical support center supporting thousands of pharmaceutical sales reps; adopting new technologies designed to reduce cost, improve margins and provide our customers with increased flexibility; achieving industry-leading quality standards, and continuously raising the bar on customer satisfaction. Equally important, Ann was able to create a winning culture in Virginia. Her team always stepped up to the plate regardless of time pressures or the complexity of the projects undertaken. Under her leadership the reputation of the company's support services were dramatically enhanced. She was an indispensable part of my senior leadership team and a critical asset to the company."*
>
> Garry Johnson, EVP, Chief Technology Officer at Dendrite International, Inc.

Data Center Design, Consolidation and Migration of United States Data Centers

As a result of strategic acquisitions, Cegedim had multiple data centers in the United States that were not large enough to support the full compute capacity required by the rapidly growing company. Worked with the Hampton Roads Economic Development to negotiate financial incentives and build a new data center in Chesapeake, Virginia. Developed strategy to relocate 50 percent of staff from New Jersey and Pennsylvania, and to recruit the best talent in Virginia to staff the new center. This approach significantly reduced the risk of migrating customer data center workloads by seeding the team with staff experienced in supporting the business that moved with the customer systems.

Designed operational flow and Tier 3 compliant infrastructure architecture, and oversaw construction of 50,000 ft.² data center facility to provide infrastructure hosting of mission critical Sales Force Automation Software Infrastructure for over 40 of the top U.S. pharmaceutical companies. This was one of two facilities within several miles that were able to remain operational during Category 5 Hurricane Isabel.

Worked with customers to collaboratively plan and execute seamless migrations of infrastructure for over 40 pharmaceutical customers in a 17 week period, successfully consolidating all U.S. data center locations into one facility without impact.

Quality Improvement Initiatives

Founding member of Continuous Improvement Council formed to steer company's quality improvement initiative. Developed and implemented Key Performance Indicators for service functions. Established global data center standards and strategy across nine multinational data centers providing hosting services to

many of the world's largest pharmaceutical sales forces. Building this foundation was critical to establishing Cegedim's credibility as the top provider of sales force effectiveness solutions. This strategy was the keystone of success through Cegedim's exponential growth from 1997 through 2006.

Business Continuity During Category 5 Hurricane

Created and invoked Data Center and Customer Service Center Disaster Recovery and Business Continuity plans and led the recovery teams during Hurricane Isabel, a Category 5 hurricane that hit southeastern Virginia resulting in wide-scale power outages in the area for several days. The Data Center's Tier 3 infrastructure sustained business operations for the duration of the storm, and Customer Service Center operations were moved to Norcross, Georgia without impact to pharmaceutical customers.

Service Excellence Grows Business

Streamlined service offerings that leveraged automation technologies; implemented disciplined processes resulting in customer efficiency gains, high customer satisfaction, and competitive pricing of service offerings; grew the company's outsourced technical services business from annual revenues of $2 million per year to over $150 million per year over a nine-year period.

Electronic Data Systems (HP), Operations Manager 1986 – 1996

Provided a broad portfolio of business and technology solutions to help clients worldwide; raised the overall operational tempo and business performance of Electronic Data Systems (EDS) Operations teams. Progressed from computer operations positions to the management of a multi-platform operational team of 60 technicians – developed recurring training to improve quality of operations. Completed numerous strategic initiatives for quality implementation, organizational reengineering, and data center migrations; improved the operational work flow of data centers (improving adherence to scheduled events) in support of several outsourced customer compute environments across many industries including Healthcare Telecomm, Insurance, Financial, and Manufacturing.

Operational Turnaround of High Visibility Data Center Operation

Relocated to Rochelle Park, New Jersey to manage a troubled Data Center Operation that processed critical ATM transactions for over 4,000 financial institutions; standardized multi-platform operational procedures reducing infrastructure management training time by 50percent, and improving operational proficiency and service. Optimized staffing model ensuring skilled resources in key roles and additional training where deficiencies existed. Service turnaround resulted in a 75percent increase in customer satisfaction based upon feedback from client account management surveys, and an employee satisfaction rating that was the second highest of any of the 500 managers in North America.

New Customer Data Center Migrations

Worked on numerous Data Center Migrations to standardize new customers to EDS' processes and tools, and seamlessly migrate their business applications into the shared data center hosting environment. New customers included Meritor Savings Bank, Bethlehem Steel, NASCO and many others Developed several best practices that engaged the migration customer ahead of the start date; ensured the customer was part of the decision process, briefed on status, and involved in the acceptance process as the migration proceeded to closure.

Quality Improvement Initiatives

Designed the Quality Improvement Program for the Camp Hill Information Processing Center and trained 275 employees on Quality Improvement Process concepts based on quality philosophies and practices of Crosby and Deming. Benefits of this initiative included design and automated data collection of Key Performance Indicators, and reengineering and streamlining of batch scheduling and batch execution functions resulting in a 35percent cost savings to the company. Was recognized as a leader in implementing quality improvement programs and worked with numerous EDS' organizations to present our strategy and consult with them on the best approach to their implementation.

Skills Summary

IT professional located in Harrisburg with 27 years of exceptional delivery experience improving operations and profitability for well-known companies in diverse industries including Healthcare, Retail, Manufacturing, Communications, Chemical, Gaming/Entertainment, Publishing, Inspection and Testing, Hospitality and Direct Marketing.

Five years of transition experience with a successful record of building and leading technology teams in new business development initiatives and support of an existing base.

Employment History and Related Experience

Unisys Corporation, Transition Director 2012 – Present

Transition Director for the Commonwealth of Pennsylvania located in Harrisburg, Pennsylvania. Provides experience in large transition and migration programs to the solution development team developing schedules and fine tuning processes that will be utilized during the transition and migrations activities.

Dell Services Transition Management Consultant 2008 – 2012

Provided stellar leadership for Dell Services transitions, data center migrations and large scale system upgrades.

Healthcare Data Center Transition

Managed $5,500,000 Data Center Transition Program from data centers in Salt Lake City, Utah to Plano Texas. Provided oversight and leadership of a matrixed team consisting of members from Dell, Intermountain Healthcare Infrastructure and Intermountain Healthcare Applications. This team planned, scheduled, coordinated, and executed legacy upgrade transition of more than 600 servers to Plano, Texas on a very tight schedule. During transition planning, accomplished transition risk assessment forming performance contingencies to address potential issues. The transition was successfully achieved with a robust set of processes, carefully defined roles and responsibilities for the transition team, focused training for the user community, and adherence to strong project management practices.

Data Center Migration

Managed $6,000,000 Data Center Migration Program from data centers in and around Baltimore, Maryland to Plano Texas. Provided oversight and leadership for a team of 30 subject matter experts in disciplines such as Intel Servers, Unix Servers, Storage, Network, Citrix and applications. This team planned, scheduled, and moved more than 500 servers and 50 TB of storage ahead of schedule. Transition planning included, risk assessments, contingency planning, training for transition team member roles and responsibilities, detailed schedule assessments, and daily status meetings. Extensive coordination of transition activities with client eased the operational impacts preparing the user community for the change.

Transition and Data Center Migration Portfolio Oversight

Managed Perot Systems Healthcare Business Unit's portfolio of Transitions and Data Center Migrations (DCM); provided leadership and management oversight to a team of eight Transition Leaders and DCM Project Managers. Guided concurrent projects and programs transitioning operational legacy support of accounts with over $1 billion in total contract value using master schedules and Transition Program Management Office (PMO) processes, and extensive coordination with client during transition planning. Led several Data Center Migrations from client sites to centralized data centers. Delivered all migrations on schedule with successful data conversions, systems ready to support operations, and staff fully trained on new functions. Post transition surveys indicated satisfaction from user community for the seamless transitions for business functions.

Healthcare Transition Portfolio

Managed $7,500,000 Transition of Services Program from an Account based to a Global Leveraged team for the Catholic Healthcare West (CHW) account. Provided oversight and leadership of 14 projects including globalizing a 70 person service desk, a 45 person security provisioning team as well as various other disciplines such as Intel, Unix, Network, and Telecom. This globalization effort enhanced CHWs support by increasing the available staff by approximately 30percent across three additional geographical regions.

EDS Corporation Account Manager – Systems Engineer Manager, 1993 – 2008

Oversaw accounts and system engineering teams in support of Electronic Data Systems (EDS) projects.

SAP Outsourcing Project

Directed a $56,000,000 SAP Hosting outsourcing engagement with client J.Crew, retailer of women's, men's, and children's clothing, shoes and accessories. Led the on-site IT staff at multiple client locations, significantly improved operations and client satisfaction through reengineered legacy processes and better systems communications resulting in a seven year contract extension with a significant increase in scope.

Churchill Downs Implementation

Led sales effort resulting in an outsourcing agreement with Churchill Downs Incorporated worth $6,000,000. Directed account startup activities and on-going support to include hiring and staffing technical delivery team and starting implementation within 30 days of contract signing. Developed and executed plan to implement Customer Relationship Management (CRM) development and production environments within four months allowing Churchill Downs to go-live and benefit from improved CRM activities and marketing for the upcoming Kentucky Derby.

Bethlehem Steel Corporation – Senior Programmer, Programmer 1986 – 1993

Directed $250,000,000 application maintenance and development (AD&M) outsourcing contract with Bethlehem Steel.

Team Leadership

Managed and provided leadership EDS Bethlehem Steel account Information Technology (IT) staff at multiple locations and teams to include advanced technologies, data resource management, human resources, law, finance, and accounting support teams.

Application Enhancements

Delivered wide range of application enhancements that continuously improved client satisfaction resulting in five year contract renewal worth an additional $200,000,000. Significantly increased client employee satisfaction and retention through carefully applied software development and implementation principles. Reduced the anxiety felt by the user community for each software release.

Computer Aid, Inc., –Programmer 1985 – 1986

Provided Application Development and Maintenance support across such platforms as MVS, OS2, Unix, and Windows using COBOL, SAS, Focus, Assembler, C++, and Java programming languages.

- Audit support
- Security focal point.

Skills Summary

Senior Project Manager, located in Harrisburg, Pennsylvania, in the Public Sector Strategic Outsourcing organization of IBM Global Technology Services with more than 14 years of Commonwealth experience. Extensive experience in transition leadership, Project Management, Information Technology (IT) infrastructure implementations and IT operations and services management, and has successfully led transition teams comprised of subcontractors, clients, and IBM resources implementing data center operations services for mainframe and distributed technologies.

Employment History and Related Experience

IBM Corporation – Harrisburg, Pennsylvania 2010 – Present

Data PowerHouse Service Delivery Manager

Manages IT service delivery for the Data PowerHouse outsourcing contract with the Commonwealth of Pennsylvania, overseeing services in the mainframe and distributed systems environments. Successfully managed the transition of the pSeries/AIX systems supporting ERP at agency locations into the Data PowerHouse; developed the transition plan, schedule, contingency options, and coordinated with the Commonwealth; built clearly defined roles and responsibilities for each transition team member to ensure no tasks were overlooked. The project successfully migrated the legacy workloads to new production hardware, physically moved the non-production systems, and was accomplished on schedule.

Effectively maintains customer relationships at the recipient agencies while ensuring positive customer satisfaction; manages service delivery to contract performance standards; supports continuous improvement.

Leads project reviews of compliance process, procedures, and documentation (IBM account security focal point).Manages responses to audit requests and oversees required remediation efforts; leads monthly compliance meetings with to evaluate compliance posture and document security related activities; develops detail project plans and schedules to support biannual multi-agency disaster recovery exercises improving planning, execution, and evaluation for these tests.

IBM Corporation – Harrisburg, Pennsylvania 2005 – 2010

Data PowerHouse Services and Facilities Manager

Led the transition of the Commonwealth's ERP systems from legacy providers to upgraded systems and network infrastructure on schedule with no interruption to customer operations or applications. Designed transition plan with clear team member roles, responsibilities, and deliverables to ensure every team member understood their part of the transition. Developed and coordinated the transition schedule with the Commonwealth to reach firm agreement on dates and to define the points where the Commonwealth would support the transition. The new ERP-SAP environment is critical to the Commonwealth's ability to manage their financial and human resource functions across 53 agencies state-wide. The entire transition was completed on schedule with no unplanned interruption to services.

Managed team of 20+ IT professionals from various technological disciplines to successfully establish service levels, associated system monitoring, disaster recovery plans, and annual testing without financial penalties.

IBM Corporation – Harrisburg, Pennsylvania 1999 – 2005

Commonwealth of Pennsylvania Department of Labor and Industry
Network Support Project Leader

Project Leader for a network support engagement with a large state government agency; support included directing transition activities to upgrade the network infrastructure. He coordinated the transition plan and schedule with Commonwealth stakeholders to ensure the transition workflow integrated properly with the Commonwealth business flow. Mr. DeCecco verified that each transition team member understood their role and responsibility to support the transition. He performed regular transition risk assessments, supported contingency planning, and held regular transition status meetings. The Commonwealth was regularly updated on progress. Project results included decreased system down time, expanded systems management capabilities, and increased throughput.

Mr. DeCecco was responsible for maintaining high network availability and performance for the central office and over 150 remote field office locations.

Mr. DeCecco successfully completed a number of other significant initiatives, including Dynamic Host Configuration Protocol (DHCP) rollout to over 5,000 users, implementation of wireless (802.11 technology) at a Commonwealth-run educational facility and large-scale refresh of network infrastructure for customer local and remote locations. Positive project results and customer satisfaction resulted in multiple contract renewals from the initial one year term.

Directed transition activities to upgrade network infrastructure to decrease system down time, expand management capabilities, and increase throughput; coordinated transition plan schedule between Commonwealth business and work flow; insured each team member understood and performed assigned roles and responsibilities during transition. Performed regular transition risk assessments, supported contingency planning, and held regular transition status meetings while maintaining project status updates with Commonwealth

IBM Software Support Practice – Northeastern U.S. 1995 – 1998

Team Lead Data Networking

Team leader of networking professionals supporting northeastern United States region; provided software support and configuration assistance for IBM Networking products division customers; defined team roles, responsibilities, and processes successfully in order to in order to manage aggressive service level agreements between IBM Networking and customers.

Skills Summary

Currently serving as IBM Availability and Change Manager for the Commonwealth of Pennsylvania (DPH Project); primary responsibilities include providing oversight for change control, project planning, implementation, and reporting; additional responsibilities include monthly measurement and incident reporting, root cause analysis, trend reporting, and process improvement; serves as focal point for internal and customer adults; manages account asset and primary process control metrics; focal lead for ITSM7 tool and ITIL process controls related to incident/problem/change and asset.

Employment History and Related Experience

IDM, Harrisburg, Pennsylvania — September 2010 - Present

Availability/Change Manager

Provides oversight for change control, project planning, implementation and reporting in addition to monthly measurement and incident/RCA, trend reporting and process improvement; IBM focal for all Commonwealth audits; project focal for IBM internal executive processes including CWP (process controls), CHIP (account financial health), GACDW (internal Asset database), and Service Activation/Deactivation process (SA&D); project focal for ITSM7 and ITIL related processes. Managed audit readiness of problem, change, and asset management resulting in zero defects during tenure.

IBM, Harrisburg, Pennsylvania — November 2003 – September 2010

Data Center Operations Team Lead & Availability/Change Manager

Managed Data Center Operations for Commonwealth of Pennsylvania (IES); developed and implemented web based process and procedures specific to costumer computing environment; managed problem and change activity resulting in zero financial penalties during tenure as change coordinator; managed audit readiness of problem, change, and asset management resulting in zero defects during tenure; successfully managed business activity through high turnover of operations staff.

IBM, Allentown, Pennsylvania — November 2002 – November 2003

Microsoft Exchange Administrator

Served as Exchange Administrator supporting Lucent Technologies Global workforce including end user support and exchange server administrative tasks.

IBM, Allentown, Pennsylvania — January 2000 – November 2002

Operations Team Lead

Developed and implemented complete Data Center operation runbooks including processes and procedures specific to the customer's (lucent Technologies) data center environment; supported 1000+ mid-range Wintel and Unix (Solaris) systems; led development and deployment of customized monitoring system (HP Owner) for Data Center operations

Skills Summary

An accomplished and innovative professional with hands-on experience in service level agreements, infrastructure management, process improvement, project management, program development, IT Service Management, process/workflow design, new technology review, capacity planning, negotiations, executive reporting, and quality assurance. Strong advocate of business processes, develop service operations process manual to integrate divergent operations concepts into singular flow. Possesses proven leadership strengths in personnel development and team building. Utilizes strong interpersonal skills and keen attention to detail in order to ensure successful delivery of high-quality, cost-effective solutions. A dynamic and dedicated leader with an unwavering commitment to excellence.

Employment History and Related Experience

COMCAST, Senior Manager, Data Center Services, West Chester PA, 2010-2013

Directed data center infrastructure management program, including requirement identification, technical design, service deployment and implementation, project management, and highly customized executive analysis; delivered operational reports, application support, development, data analysis, and quality assurance. Conducted monthly coaching sessions and semi-annual performance reviews and maintained individual development plans for each team member. Designed and implemented end-to-end workflow, documented workflow in an enterprise service operations process manual, minimizing manual data input and employing business and user requirements to reduce process time by more than 30%.

- Evaluated new technology, assessed business justification, and prepared supporting recommendation documents and return-on-investment calculations.
- Collaborated with cross-functional teams to introduce RFID technology into national data centers, automating inventory audits and increasing reporting efficiency by 60%. Analyzed data center audit findings using Microsoft Access to manage large data and queries to identify trends.
- Produced operations reports, departmental productivity metrics, enterprise portfolio capacity metrics, and team performance metrics for customer satisfaction, incident resolution, performance against committed Service Level Agreements, and application availability. Accountable for reporting monthly metrics to senior management, along with explanation of anomalies and significant changes.
- Coordinated project activities and schedules as well as assessed and maintained project plans as appropriate to reflect changing needs and requirements.
- Defined and negotiated service-level agreements with customers and other service-related partners. Maintained adherence to ITIL processes relating to Change Management, Service Level Management, and Problem Management.
- Provided direction and guidance toward identification, development, and delivery of all documentation necessary for related processes and supported applications.
- Managed all aspects of vendor relationships, including contract negotiation, leveraging company buying power to achieve most competitive pricing on purchase agreements, professional services, and annual maintenance.

COMCAST, Program Manager, Data Center Services, West Chester PA, 2008 - 2010

Provided overall program management for national data center computer-aided facilities management initiatives, including oversight of all project management activities from project scope and planning through delivery and acceptance. Presented program status, issues arising, and actionable details regarding future requirements to executive management. Conducted ongoing training for users, ensuring comprehensive understanding and maximizing return on investment for all applications. Built comprehensive model for capacity metrics reporting, reducing completion time by 25%.

YELLOW BOOK USA, Senior Manager, Data Center Operations, King of Prussia, Pennsylvania 2003 - 2008

Led all design, planning, implementation, security, power, cabling, monitoring, capacity planning, migration, forecasting, documentation, vendor management, project management, and change management activities in data centers and LAN rooms company-wide. Built 24/7, geographically dispersed data center support team responsible for racking, cabling, inventory, production processing, enterprise monitoring, systems backups, offsite storage, and tape library management. Evaluated, recommended, implemented, and supported all new data center technology and applications. Maintained all standards, policies, and procedures to ensure 100% compliance with Sarbanes-Oxley.

- Scheduled and tracked maintenance activities for all UPS, diesel generator, HVAC, and fire suppression equipment, resulting in 99.99% uptime.
- Partnered with multiple information technology, real estate, and facilities teams to meet business demands, accomplish project goals, and resolve problems.
- Coordinated multiple engineering and consulting groups to design new 10,000-square-foot, 500KW data center. Managed 250KW critical infrastructure upgrade. Completed upgrade on time, within budget, and with no unplanned downtime.
- Authored comprehensive data center operations manual, standardizing procedures for all production processing, operator monitoring, and support functions and greatly reducing error rates.
- Spearheaded major transition of responsibility for all equipment procurement, racking, cabling, inventory, and documentation to operations, significantly expanding role of team. Implemented flash reporting targeted to senior management summarizing daily processing accomplishments and current problem status, creating complete transparency.
- Earned associate business continuity planner certification while participating in development, implementation, and maintenance of company-wide business continuity and disaster recovery plan

YELLOW BOOK USA, Computer Operator, Data Center Operations, King of Prussia, Pennsylvania 2002

Managed day-to-day offsite data storage program, ensuring disaster recovery capabilities. Monitored technical environment to detect and escalate problems as required. Set up and executed computer processes and procedures as defined by daily, weekly, and monthly schedules. Provided information to data center management and other IT groups relative to normal and abnormal processing activities.

YELLOW BOOK USA, Account Representative, Data Center Operations, York, Pennsylvania 1998 -1994

Managed customer advertising accounts. Developed and presented proposals for directory and internet advertising. Completed corporate sales training program receiving top achievement award for highest dollars sold during training, selling more than 200 new accounts.

Skills Summary

Over 16 years of experience with the Information Technology Outsourcing industry focused on Datacenter support. Led a large team of architects to develop technical components (server, storage, and network security) to build a multi-tenant data center to support the State of Georgia's strategic and consolidation plans.

Employment History and Related Experience

Unisys, Lead Client Architect, November 2011 – Present

Realigned strategic Client Architect role; interacted with the client Information Technology (IT) leadership to align technical solutions with the client's current business requirements; reviewed the current technology and services, current business requirements, and future business needs to develop and maintain strategic technical roadmap; provided architectural oversight for services and projects that support the client. Managed North America Client Architect team for the Unisys account teams; nurtured relationships with key client contacts to identify and develop technical solutions to support evolving business requirements for existing Unisys customers; led a business development team to create a strategic technical solution; organized and mapped the technologies and support models to support a consumption based Managed Hosting Services model. Developed a server image rate structure that included hardware, software, and support during the Unisys Self-Provisioning pilot for the Commonwealth; developed a solution architecture document standard to improve Client technical solutions in a consistent manner to include requirements, decisions, technical overview, service components, and associated costs significantly reducing client costs through creative deployment of system components and connectivity elements.

IBM, State of Georgia, January 2010 – November 2011

Transformation Integration Architect

Key technical advisor for the IBM account director; client's director of services, client's director of operations, chief architect and architecture team, agency CIOs and CISOs, and IBM project management team; delivered oversight for on ongoing architecture activity. Implemented problem resolution approach to manage changes within the overall solution; identified additional requirements; developed associated solutions to meet changing business needs during the transition program.

Improved the architecture review process by reviewing current practice with client chief architect and IBM account chief architect; changed the order of the design reviews to enable support staff to review and approve solutions before presentation to client's chief architect and domain team members; changed review process to improve overall quality of solutions presented to client and reduced the review cycle by 5-7 days. Improved architecture review process by separating initial security and regulatory review; created new milestone event as part of architecture review process to enable solution assessments to focus on security concerns while also ensuring regulatory requirements were adequately covered.

Led architecture team to design, document; planed Managed Hosting Services implementations for overall infrastructure transition program to include upgrade; controlled the migration of fourteen agencies to shared enterprise services for Active Directory, Exchange, McAfee Antivirus, IBM Tivoli Storage Manager, IBM Servers, IBM Disk Storage, VMware virtualization, IBM Tivoli Service Management tools, F5 Load Balancers, and Juniper Data Center network. Program comprised data center architecture supporting fourteen agencies with common infrastructure while maintaining separate environments for each agency and introduced a new data center architecture and technology containing shared VMware infrastructure, tape encryption, shared Network Attached Storage, and multi-tenant firewalls

Developed Business Continuity system architecture to support recovery of critical applications at a remote facility; interviewed client chief architect, client architect team, and account manager to interpret requirements; based the application continuity architecture on overall datacenter architecture but the actual components were adjusted to support the smaller application environment for the business continuity tiers each agency requested. Led architecture team to develop branch office common services hosting architecture to replace Netware directory and file servers in Agency branch offices with VMware and Network Attached Storage in order to host Active Directory and File Services with remote backups and disk

encryption to standardized the installation of new servers and storage.

Led architect team to integrate Federal Regulatory guidelines and requirements into technical solutions during the initial architecture activities reducing review time and need to plan and deploy one-off solutions while improving overall solution quality. Established requirements management and architectural decisions reviews with customer's chief architect and IBM architect team; reviewed project plans with agency CIOs and CISOs, IBM project management team, and client architecture team to validate schedules, project dependencies, critical operation time windows, and resource requirements.

IBM, Virgin Mobile, March 2009 – December 2010

Transformation Integration Architect

Introduced and designed a Virtual Desktop Infrastructure (VDI) using VMware virtualization software, Microsoft Windows, Red Hat Linux, IBM Servers, and IBM Disk Storage to support IBM Application Development resources managing and developing mobile services in order to enabled IBM application team to use software development and support team members globally while meeting the client's software licensing obligations in a flexible and cost effective manner. Led architect team to design, document and plan implementation of a new Data Center Architecture to support relocating and consolidating client's business (Active Directory, Exchange, and File Servers) and mobile service applications (SMS, IVR, mobile phone billing, and setup); designed and documented the required infrastructure including a technology hardware refresh to support transition of client application infrastructure using Sun Servers, IBM servers, VMware, and IBM disk storage; designed and documented the data center architecture and provided technical oversight for overall infrastructure deployments including servers, major applications, service management tools, networks, and support functions during the transformation and server relocation programs communicated with technical resources to provide required information and access to meet project requirements and schedules; identified and documented project and technical solution gaps including required changes, associated business requirements, and supported customer technical leads and account management as a technical focal point.

IBM, Hess Corporation September 2008 – March 2009

Transformation Integration Architect

Proposed and designed a standardized VMware virtualization infrastructure using IBM servers and SAN disk storage to support global technology refresh program and new requests for service; communicated with technical resources to provide required information and access to meet project requirements and schedules; designed, documented, and provided technical oversight for overall infrastructure deployment during transformation project including IBM service management tools and support teams; supported customer technical leads and account management as a technical focal point; identified and documented project and technical solution gaps including required changes and associated business requirements.

IBM, Welch Allyn, March 2006 – September 2008

Transformation Integration Architect

Proposed, designed, documented, planned, and implemented a global network upgrade and standardized network architecture using Cisco and Aruba networks technology; developed and deployed a standardized Guest Wireless service for all sites using Aruba networks hardware; proposed, designed, and led the installation of an Infoblox based DNS and DHCP service globally; designed, implemented, and supported a data center network to support email, Active Directory, and a SAP application infrastructure.

IBM, Sandler and Travis' Trade Management System for GM January 2000 – May 2006

Senior Network Architect

Designed a Cisco firewall upgrade to replace end of life IPSEC router; designed, implemented. and managed a Cisco Gigabit network to improve performance, capacity and support updated application requirements; designed, implemented, and managed a Cisco network to replace an end of life Token Ring network and prepare for new servers and application upgrades; trained network support team on new technologies and processes.

IBM, Varian Semiconductor, March 2000 – December 2003

Senior Network Architect,

Designed, implemented, and managed a Cisco Gigabit Ethernet network to replace the IBM ATM network after twenty-four months due to increased performance and management requirements; designed, implemented, and managed an IBM ATM Local Area Network (LAN) to support a SAP application and infrastructure; led network support team to integrate customer's corporate site network with IBM's data center and wide area network (WAN) implementation.

IBM, Senior Network Architect May 1999 – August 2006

Designed, documented, planned, and implemented Cisco Ethernet for a corporate office and data center to replace end of life Token Ring network; designed, documented, planned, and implemented Cisco wireless infrastructure for a corporate office and as testing environment for global standardization; led a national team to support complex projects and problems at all U.S. corporate offices and data centers; developed training presentations and trained the network support team to use new tools, technologies, and processes; developed and documented network support procedures based on contractual requirements.

IBM, Eastman Kodak, August 1996 – May 2006

Senior Network Architect

Designed and implemented new Cisco Gigabit Ethernet Core Network for manufacturing plant to replace an end of life FDDI based core network, improve overall performance, and increase capacity; designed and implemented Cisco router based network using Serial Tunneling to replace obsolete remote Front End processors; evaluated, tested, and deployed new wired and wireless Cisco network technologies in customer production networks to support changing customer and business requirements; evaluated, tested, planned, and managed deployment of two-factor authentication using Cisco ACS with RSA Secure-ID for corporate wireless network. Developed network architectures and project estimates based on Requests for Service and customer requirements; managed and planned projects with network components to ensure proper completion within customer requirements, service level agreements, and approved plans; developed training presentations and trained the network support team to use new tools, technologies, and processes.

Skills Summary

Versatile, results driven and accomplished service delivery professional with the proven ability to direct and deliver new client implementations, steady state IT services including Incident/Change and Problem Management. Strong proven skill with escalation management, incident resolution oversight for technical and operational concerns; delivers ongoing client account management on time, within scope, and with the highest emphasis on meeting the customer's needs.

Project Experience

Microsoft Retail, Unisys Account Relationship Manager, 2012 - Present

Account Relationship Manager for a growing and highly competitive retail store environment. Delivered 24X7X365 Service Desk, Incident Management, and Alert Management Services to manage over 4K contacts per month.

- Provides management for all deliverables agreed to in the Scope of Work as wells as managing financials to ensure we are meeting appropriate margins; facilitates clear linkage and communication between help desks and operations during incident escalation.
- Facilitated progress for this client during their nationwide growth; supported operations increased the supported store count from 17 to over 40 to implementing an Alert monitoring team for data center towers that are supporting the store environment.
- Grew the team from 17 agents to over 40 agents, have been able to meet, and exceed, all deliverables.
- Delivers stable backup support for the Program Manager in areas of incident management, escalation oversight, and resolution tracking.

NEC/7-11, Unisys Account Relationship Manager, 2010 - 2012

Account Relationship Manager responsible for delivering Level 1 and Level 2 Service Desk services, a Level 2 Application support group, and a Level 2 Software/Application/Change Management team to a retail customer operating 7X24X365 with over 7K stores nationwide.

- Processed over 22K inbound calls, 15K outbound calls, and the creation and management of over 16K incidents per month. Our application support team managed real-time issues that preventing the store from selling product, opening/closing related issues, business ownership changes, and issues where store servers failed and needed to be reinstalled and rebuilt to support store operations.
- Identified root causes of chronic problems, worked diligently with Operations to track issues and oversee resolution. Developed improved reviews of SLA performance, confirming delivery compliance with well-defined metrics that clearly demonstrate actual performance, implemented SLA management principles to ensure strong oversight.
- Maneuvered an underperforming account to a well performing account, both in SLA's and financial management; increased the revenue opportunity by identifying an area where a Vendor management service was required.

General Growth Properties, Unisys Service Delivery Manager, 2009 - 2010

Service Delivery Manager responsible for delivering Infrastructure services, Service Desk, and Field Services support; managed all aspects of Problem, Change, Incident, and Release management.

- Implemented new processes to allow for better Incident Management tracking and issue analysis which decreased the resolution times of incidents, which decreased the amount of time user's had to wait for resolution of their issues.
- Implemented a new Change Management process to increase the success of changes while also reducing the number of incidents related to performance of change activities; implemented a Problem Management solution to help quickly drill down to root causes, manage problem areas, and reduce the recurrence of issues. This process led to infrastructure changes being made to reduce failure rates, as well as Service Desk processes being updated to enable better data capture to feed into the process.

Diversey Inc. (JDI), Unisys Service Delivery Manager, – 2007 - 2010

Service Delivery Manager responsible for delivering Service Desk and Field Service support to a global company supporting over 100 countries and 12 languages. Telephone support was provided from 6 different Managed Service Centers located in Brazil, China, India, Netherlands, Hungry, and Columbia. Field Services were provided locally by both dispatched incidents and dedicated onsite support.

- Ensured all SLA's/KPI's are being met, ensuring incidents were being managed to closure, ensuring field services techs had the parts they required to meet the needs, that stocking locations had required inventory, reporting was delivered as per the SOW, and financials were managed to ensure the project's success.
- Implemented new processes that streamlined incident resolution while also ensuring quality was still being delivered. Implemented Incident Management team process to ensure high priority incidents were being managed to resolution while also ensuring the business was receiving communications/updates/statuses.

Quality Improvement Initiatives

Implemented Quality Improvement Programs for NEC/7-11 and Microsoft Retail customers; trained over 100 agents on requirements and proper quality practices. Implementation of this program enabled a better quality product to be delivered both to the end users reporting issues and the groups resolving incidents.

Additional Employment History

- 2005 – 2007 Unisys Corporation

Skills Summary

Results-oriented, thorough Information Technology (IT) professional with30+ years of experience spearheading multifaceted technical business units to meet internal company and client needs. Demonstrated expertise in delivering advanced technical support to government agencies and meeting their technology needs by monitoring security, updating systems, and troubleshooting. Known for delivering projects on time and under budget while leading diverse teams to success.

Employment History and Related Experience

Unisys, Harrisburg, Pennsylvania 2004 – Present

Global provider of consulting, systems integrations, and outsourcing for multiple vertical markets.

Information Technology (IT) Service Delivery Manager 2005 – Present

Support data center technology needs of Commonwealth agencies in project exceeding $1 billion. Allocate and verify delivery of data center resources, including change management, facility services, physical security, hardware services, operational support, software support, disaster recovery, problem management, transitioning, database management, and project management.

Met with agency representatives and multiple internal departments to confirm data center needs and services are met. Used Project Management Professional processes to effectively lead data center projects; developed change management strategies for data centers; accomplished change management planning to implement processes; initiated all agency change management processes from products and services; addressed any agency-supported incidents. Supervised all project personnel; conducted annual disaster recovery tests and lead annual capacity management processes to include items such as budgeting and forecasting for the needs of multiple state agencies. Developed service level agreement (SLA) strategies, co-authored service level agreements, and service level objectives. Managed successful Data PowerHouse (DPH) migration of major Commonwealth agency from legacy system to new system as Project Leader for nine months; spearheaded 20 person team in replacing an outdated agency IBM SAN and correcting a longstanding outage history; led team of 25 employees in replacing multiple open system environments, by moving quickly to replace an average of 14 systems per environment with no impact to current operations; upgraded Commonwealth agencies to Windows 2003, including 16 enterprise servers; provided training to user community, conducted risk assessment of each agency, implemented migration to prevent implementation impacts, and conducted an incident free upgrade; resolved communications gap; confirmed all parties involved in the 2006 – 2008 DPH Capacity Planning initiative received required information and updated processes to make sure that information flow continued for all future planning activities. Directed and championed the effort to sign the first Commonwealth agency, among 21, to add a security baseline of 30+ servers; conducted several successful meetings to tailor security processes to the agency culture; followed up after implementation to gather lessons learned and document best practices for the remaining agencies; shortened the implementation timeline by 15 percent; honored with the 2006 Silver Recognition Quarterly Award for outstanding customer service.

IT Resource Manager 2004 – 2005

Led process creation for 13 Commonwealth agencies, focused on providing change management resource allocation performance reporting, capacity planning, contractual requirements, and incident reporting for data centers. Managed daily technical support team operations, including problem tracking and resolutions. Used Remedy Action Request System Enterprise and HP Open View Management; periodically supervised over 20 employees; recorded baseline data to verify accurate data center service level agreements and objectives; handled contractual obligations, conducted analysis, created problem management procedures, and maintained customer relations;

Improved response times by 25 percent and determined processing deficiencies by conducting agency transaction response time analysis; helped Unisys to pass annual SAS70 inspection by enhancing three SAS70 control objectives; created more shared responsibility and accountability for 23 Commonwealth agencies by revamping a deficient change management system.

ENDRESS+HAUSER, Alexandria, Virginia 2001 – 2003

Supplier of measuring instruments and automation solutions for industrial engineering industry.

Advanced Systems Group Manager and LAN Manager

Delivered advanced technical support for multiple interfacing DESC fuel databases that supported global

fuel transactions; spearheaded team of 12 senior analysts to troubleshoot fuel transactions and process customer issues; coordinated with government officials and provided team guidance; Employed Oracle and Microsoft SQL to troubleshoot and resolve transaction issues; served as Microsoft LAN administrator and supported 15 office personnel and one worldwide training center; provided in-depth analysis while heading the Washington, D.C. office and provided support to government Fuels Automated System clients.

Solved 90percent of advanced technical issue and fielded more than 100 per month; improved services to 15 employees by 40percent by incorporating LAN and private branch exchange telephone system infrastructures; transitioned 10 percent% of unresolved technical issues to software development for resolution.

Upgraded 30 training center desktops from Windows 2K to 2003; chosen as the 2002 subject matter expert from among a team of 20 advanced analysts.

United States Air Force, Various Worldwide Locations 1979-2001

Worldwide military operations – Positions Held

Managed information technology departments; handled software development, maintenance, transaction and batch processing, and scheduled and reports processing; confirmed data security, created and updated databases, and originated corporate systems; programmed in business-oriented language and mainframe proprietary languages; handled multi-domain LAN/WAN. Charged with acquisitions, policy writing, quality assessments, storage and distribution, item management, and asset accounting; verified inventory control, maintained records, and monitored inventory levels; supervised up to 1,200 people; led diverse teams and managed wide-ranging projects.

Served in multiple positions in the ranks of E1-E8, including Logistics Group Computer Support Manager, Squadron First Sergeant, Chief Management and Systems Flight and Chief Computer Operations Element; elected as 1 of 4 1995 NCO Academy Speech Presentation finalists among a field of 150 graduates; received numerous awards, including an Air Force Achievement Medal, two Air Force Commendation Medals, two Air Force Meritorious Service Medals and more.

Career Note

Additional current employment includes 14+ years as an Adjunct Professor (course concentration: Java and C++ programming and introductory computer curriculum) with the University of Maryland University College, Asia Division. Full details available on request.

Education

- Master of Arts in Administrative Management
  - Bowie State University, Mildenhall Air Force Base, England
- Bachelor of Science in Computer Information Systems
  - Chapman University, Orange, California
- Associate of Applied Science in Logistics Management
  - Community College of Air Force, March Air Force Base, California
- Associate of Applied Science in Information Systems Technology
  - Community College of Air Force, Mildenhall Air Force Base, England

Certifications

ITIL V3 Foundations Examination

UNISYS

[redacted]
Change Analyst

Key Skills and Knowledge

- ITIL Foundation Certification (2012)
- Help desk supervisor, customer liaison, change manager, and lead analyst
- Computer Operations for multiple shifts
- Project budget oversight
- Supported the Pennsylvania Child Support Enforcement System
- Generate daily/weekly/monthly operations reports
- Relayed day to day activities of Operations during meeting to senior management
- Prepared work schedules
- Performance reviews for the staff.

Skills Summary

Over 27 years of experience providing data center analysis, change analysis, and support for senior leaders; strong experience with Remedy Information Technology (IT) Services Management, Windows Office suite, Excel, and PowerPoint. Numerous certifications for change management software and resource tracking software; versed in time management and personnel management; ITIL Foundation Certification (2012); multiple certifications and training in job specific computer related skills.

Employment History and Related Experience

Unisys, Harrisburg Pennsylvania 2003 – Present

Data Center Analyst

Data center analyst supporting several projects such as help desk supervisor, customer liaison, change manager, and lead analyst.

Oversaw day to day activities of the Help Desk staff liaison between Unisys and IBC help desk staff while Help Desk Supervisor. Managed active change issues for services; supported change process procedures and updates; provided all training for help desk staff; provided decisions on day to day issues that arise with regards to Help Desk issues; set up reporting procedures to accurately track change processes through closure to make sure the Commonwealth is informed on the status of their changes.

Worked in partnership with agencies to understand and anticipate their business needs as customer/agency liaison; worked closely with the customers to make sure all product concerns and problems are addressed and all daily batch procedures are completed; confirmed operations are informed of all changes of customer product schedules, maintained oversight of change issues, coordinated deployments, and special requests. Held weekly teleconferences with each customer/agency to go over scheduled events, changes, and concerns; examined future plans and coordinated changes with affected parties to mitigate impacts; gathered status on changes that had issues; worked with technical staff and management to resolve issues within 60 days resulting in improved coordination of change and increased accuracy of products; provided configuration and training (including products and services) for members of the Data PowerHouse (DPH) and responsible for and Unisys Global Change Management Process while ITSM7 Change Manager.

Coordinated and recorded all production support staff availability as Lead Analyst; evaluated impact of staffing availability on future production, established mitigations, and coordinated staffing changes with affected organizations; maintained Staff Agency assignments within the Data PowerHouse contract; provided back up to Lead Analyst and agencies for support and expertise as resource management support within Data PowerHouse; maintained reports, conducted meetings, and supported Data PowerHouse Service Delivery Manager.

Unisys Corporation, Harrisburg, Pennsylvania 1999 – 2003

Computer Operations Supervisor,

Supervised computer operations, data control and operations support functions for multiple shifts and planned, coordinated and evaluated the production of staff members

- Responsible for problem/change management as related to Computer Operations procedures and control mechanisms
- Evaluated service and product issues for change implications and oversaw the administration of change issues to confirm coordination of change strategies and change planning
- Monitored Commonwealth systems to verify their processes were running smoothly on their systems. Notified appropriate personnel to investigate the issues that arose to eliminate any down time to the agency
- In charge of advising and coordinating change issues with senior level management for topics such as services provided or products generated
- Work in collaboration with other work units to coordinate work activities, collaborated on procedures, and controlled the implementation of changes to daily operations and services.

Lockheed Martin, Harrisburg Pennsylvania 1997 – 1999

Operations Manager

Responsible for Computer Operations for multiple shifts, maintained the budget for the project, and managed 15 staff members

- Supported the Pennsylvania Child Support Enforcement System implementation team that started the Child Support Enforcement System within the Commonwealth Data PowerHouse.
- Created all documentation needed to verify the system was monitored accurately and efficiently
- Provided daily/weekly/monthly reports of operations to management
- Coordinated day to day plans and activities for operations during meetings with senior management
- Collaborated on business strategies to implement change
- Prepared work schedules and performance reviews for the staff supervised by Ms. Villarreal.

Unisys Corporation, Harrisburg Pennsylvania 1985 – 1999

Order Entry Specialist,

Generated sales orders of equipment for customers, received customer orders from Sales Staff, and reviewed customer orders for pricing accuracy

- Verified orders were received from agencies via tracking shipment and delivery
- Provided daily/weekly/monthly reports of customer orders.

Unisys Corporation, Harrisburg Pennsylvania, 1980 – 1985

Administrative Secretary,

Secretary for customer engineering branch manager; processed and paid department expenses, and balanced financial books for billing.

- Processed local CEs (106) travel expenses (weekly)
- Submitted paychecks to CEs
- Dispatched CEs to service locations
- Ordered Office Supplies
- Supported other miscellaneous duties as assigned

Skills Summary

Since 2002, working with the Commonwealth Pennsylvania Office of Administration, Office of Information Technology, in Harrisburg, Pennsylvania. Since 2005, working on site at the Commonwealth Technology Center as a project manager and client services manager, often delivering on both roles simultaneously in very close collaboration with the CTO, CISO, Client Management, Enterprise Data Center, Enterprise Networking and Security, Enterprise Services, GIS, PMO, and many agencies. Developed and introduced customer satisfaction program for the Enterprise Data Center that continues today under Enterprise Services as an important component of OIT's process for continuous improvement and building strategic relationships while facilitating regular communications and acted as a liaison for OIT with the CIOs for half of the agencies, including AG, DLI, DOR, and PSP through describing the center's managed services programs, facility services, and benefits.

Worked at Unisys world headquarters in Blue Bell, Pennsylvania, delivering under a range of roles, including corporate communications, marketing, public relations, and sales; directly supported the president of Unisys global customer services division; joined Unisys in 1989 upon graduation from Temple University with Master's degree in Journalism.

Communications, customer service and satisfaction, facilitation, infrastructure, project and program management, and strategic relationship building are common threads for more than a decade working with the Commonwealth and more than 20 years working for Unisys.

Employment History and Related Experience

Commonwealth of Pennsylvania Technology Center. March 2012 – Present

Project Manager

A member of the Commonwealth's Program Management Office (PMO), responsibilities include project management for Enterprise Services, web hosting environment, networking and security, and coordination and stakeholder communications for operational and project activity for select state agencies. All project deliverables and objectives were achieved with high customer satisfaction, one project yielded Commonwealth CIO recognition and an award for leadership (the Ollie award), and other projects culminated with accolades from an agency CIO and other Information Technology (IT) managers.

Commonwealth of Pennsylvania Technology Center Web Hosting June 2008 – March 2012

Client Service Manager

Project responsibilities included management of the client service management program, service management for assigned state agencies, management of assigned projects, and development of monthly reports for the Commonwealth's CTO. Mr. Cavanaugh's work included creating a client satisfaction program – a first for the data center – including establishment of metrics and processes, introduction to agencies, delivery and continued refinement of processes and services. The program has been successful in improving relationships between the data center and agencies, identifying and resolving isolated and programmatic issues, and opening a new line of communications between the Office of Administration Office of Information Technology and the agencies it serves.

Commonwealth of Pennsylvania, Pennsylvania State Police, CLEAN March 2008 – June 2008

Project Coordinator and Documentation Specialist

Project responsibilities were focused primarily on project initiation and execution. Activities included setting up team room and related processes, drafting many of the project documents, including the project management plan and subsidiary plans, and coordinating schedules and resources for testing. The work was instrumental in helping the lead project manager quickly initiate this large and complex project across project teams and resources from Unisys, the customer, and several vendors.

Commonwealth of Pennsylvania, Office of Administration,
Showcase October 2008 – October 2009

Project Manager

Project management responsibilities included project initiating, planning, executing, monitoring, controlling, and closing. Project scope included setting up and executing a media relations program to increase awareness of the Commonwealth's IT initiatives and successes to create a positive public image. The activity resulted in widespread recognition for the Commonwealth, including articles in prominent industry publications and a prestigious award for the Commonwealth's CIO.

Commonwealth of Pennsylvania, Department of Revenue (DOR), Customer Service Planning October 2008 – December 2008

Project Manager

Project management responsibilities included project initiating, planning, executing, monitoring, controlling, and closing. Project scope included the analysis of DOR's customer interaction points with the objective of identifying issues and recommending ways to improve customer service. The project was completed on time with the intended results, providing DOR with visibility on how it can improve customer service.

Commonwealth of Pennsylvania, DLI UCMS Portal
Implementation June 2007 – October 2008

Project Manager

Project management responsibilities included monitoring and controlling project work, managing communications, documenting issues, and coordinating activities between the Office of Administration and OA and Department of Labor and Industry. Project scope included the implementation of a portal (staging and production environments) in OA's Enterprise Server Farm for DLI's new application for unemployment compensation. All project deliverables and objectives were achieved with high customer satisfaction.

Commonwealth of Pennsylvania, Microsoft Exchange 2007
Migration March 2008 – September 2008

Project Manager

Project management responsibilities included monitoring and controlling project work, administering the project plan, and managing stakeholder communications for IT managers at 47 Commonwealth agencies. Project scope included migration of 80,000 mailboxes to a new Microsoft Exchange 2007 messaging infrastructure, the largest such migration in North America at the time. All project deliverables and objectives were achieved with high customer satisfaction.

Unisys Corporation, Bid Capture April 2007 – March 2008

Project Manager

Project management responsibilities included project initiating, planning, executing, monitoring, controlling, and closing relevant to human resource demand planning and responding to client solicitations. The work resulted in producing quality proposals on time and within established budgets.

Commonwealth of Pennsylvania, Enterprise Server Farm, Public Sector, Web Application Hosting and Messaging September/2002 – March 2007

Project and Performance Manager

Project management responsibilities included cost, scope, human resource, and procurement management for 26 full-time resources. The Enterprise Server Farm consisted of more than 600 servers and 200 Web-facing applications. It also included Microsoft Exchange and Active Directory for email and directory services to 80,000 Commonwealth employees and contractors.

Commonwealth of Pennsylvania, Keystone Building Project, Public Sector, Infrastructure Management, April 2004 – March 2007

Project and Performance Manager

Project management responsibilities included project initiating, planning, executing, monitoring, and controlling, with emphasis on integration, scope, cost, quality, human resource, communications, and procurement management. The Keystone Building project included management of a complex switched campus network infrastructure supporting five Commonwealth agencies. The infrastructure included Nortel switches, Cisco routers, Checkpoint/Nokia firewalls, and servers from several manufacturers. The project was transitioned and managed as required by the contract.

Commonwealth of Pennsylvania, State Police, Public Sector, Security Assessment, May 2005 – July 2005

Project Manager

Project management responsibilities included project initiating, planning, executing, monitoring, controlling, and closing with emphasis on integration, scope, time, cost, quality, risk, and communications management. Unisys used manual methods and automated tools to identify known vulnerabilities in the Commonwealth's Police networked environment and recommended strategies to transfer, minimize, accept, and eliminate risk associated with those vulnerabilities. Due to rules associated with federal funding the team was under considerable pressure to complete the project by the end of the fiscal year. Unisys compressed the schedule and added resources to meet the client's deadline. Unisys response to this challenge was recognized at the highest levels of the agency.

Telcove, CP/CPS for Pennsylvania. Office of Administration

Public Sector, Consulting May 2005 – September 2005

Project Manager

Project management responsibilities included project initiating, planning, executing, monitoring, and controlling with emphasis on integration, scope, time, cost, quality, risk, and communications management. Working as a subcontractor to Telcove, the Commonwealth's primary telecommunications supplier, Unisys led a project to develop a Certificate Policy (CP) and Certification Practice Statement (CPS) for the issuance of Verisign Certificates supporting an enterprise VPN solution for Commonwealth employees and contractors.

Unisys, Managed Voting, Public Sector, Managed Voting Services for Pennsylvania Counties March 2005 – November 2005

Program Development Contributor

Unisys developed a services program to assist Pennsylvania counties with compliance to the U.S. Help America Vote Act, which requires a complete replacement of most voting technology in the U.S. by April 2006. Unisys' program included consulting, deployment, outreach, and training services as well as new voting technology solutions from AccuPoll Systems. Responsibilities included the definition of communications and training requirements and development of related solutions, pricing and proposals.

Telcove, VPN Pilot for Pa. Office of Administration

Public Sector, VPN Consulting January 2005 – June 2005

Project Manager

Project management responsibilities included project initiating, planning, executing, monitoring, controlling, and closing with emphasis on integration, scope, time, cost, quality, risk, and communications management. Working as a subcontractor to Telcove, the Commonwealth's primary telecommunications supplier, Unisys provided a suite of services for the implementation of a VPN pilot using Verisign certificates for Pennsylvania's Office of Administration and State Police. The project entailed the configuration and installation of Cisco VPN technology and integration with Commonwealth and Verisign systems for the issuance of certificates for the Pennsylvania State Police VPN users.

Unisys, Commercial, Sales April 1997 – August 2002

Portfolio Sales Executive

Responsibilities included identification, qualification, and winning of new business in the corporate network and desktop services marketplace. Targeted national and multinational companies with 3,000 to 50,000 employees. Leveraged competitive differentiators and industry partnerships to gain competitive advantage. Exceeded annual quotas for revenue, margin, and customer satisfaction.

- 1998 North American Salesman of the Year
- Achieved quota for four consecutive years
- Exceeded 200 percent of quota in 2000

Unisys, Corporate, Marketing June 1994 – March 1997

Manager of Public Relations

Managed U.S. public relations efforts for $2 billion customer services division, supporting new product offerings, customer meetings, and executive communications.

Unisys, Corporate, Marketing October 1989-May 1994

Editor of Marketing Communications

Develop communications plans and create brochures and other marketing materials for

Unisys customer services division. Create, edit, and publish Unisys NewsNet, a daily internal employee newsletter.

- Remedy ITSM7.6

Skills Summary

Over 28 years of experience in Fortune 500 business process outsourcing arrangements for both technical and non-technical solutions for the Commonwealth of Pennsylvania; extensive experience in program management, project management, change management, incident and release management, and large scale infrastructure Information Technology (IT) management systems including ITSM; d demonstrated ability to build strong technical alliances with application support teams for various levels of software solutions; Skilled with impact and GAP analysis and risk and time management.

Employment History and Related Experience

Unisys Corporation

Commonwealth of Pennsylvania – Data PowerHouse Project, Harrisburg, Pennsylvania

Provide liaison support to Commonwealth IT Departments as a Service Delivery Manager (SDM) for the following Data PowerHouse (DPH) Agencies: Pennsylvania State Police, Department of Environmental Protection. Department of Health, Pennsylvania Game Commission, Department of State, Pennsylvania Liquor Control Board and the Public Utility Commission. Provide secondary coverage for the following DPH Agencies: Department of Public Welfare, Department of Aging, Department of Insurance, Integrated Enterprise System, and the Department of Revenue – Integrated Tax System.

As a liaison between the DPH and the agency providing data center support for all infrastructure changes, service requests, post release management discussions and incident management resolution. Developed strong partnership with the agency leadership to meet business needs of the agency and balance them with business objectives. Assist organizational units with executing policies and procedures as outlined in the contract, manage policies and procedures through coordination with the Project Management Office.

Identified change order sales opportunities during Business Collaboration Meetings held with the agency; managed the business statement, solution objective, change order presentation, final review, and signing of documentation. Administered change orders sales for the current DPH engagement to include:

- Calendar year 2008 change order sales - $138,500
- Calendar year 2009 change order sales - $6.4 million
- Calendar year 2010 change order sales - $8.6 million
- Calendar year 2011 change order sales - $1.096 million
- Calendar year 2012 change order sales - $570,000.

Currently providing subcontractor oversight for an environment deployed at the DPH. Deployed an Open Systems platform for the Pennsylvania Liquor Control Board, Department of Health, and other hardware upgrades for the Department of State; improved flexibility for application upgrades.

Provide project management coordination to ensure successful planning and implementation of assigned activities; actively collaborates with agency; ensures cost, schedule, and performance metrics are collected, analyzed, and reported.

Special assignments include the management and oversight of the ITSM7.6 application for the DPH. As the liaison for the DPH to the NAEC Team off-shore, coordinate all incident, change, and global modifications to the project team.

Non-Unisys Experience

Affiliated Computer Services, Inc.

Government Health Services Outsourcing

Account Manager for ACS, Inc. contracted with the Department of Public Works (Harrisburg, Pennsylvania) to provide Medicaid Managed Care health maintenance organization enrollment services implemented of the following savings:

- Consolidated Mailroom services with other ACS accounts in the area, realizing a savings $75,000 a year

- Reformatted the Enrollment Broker notification card from a flat rate postage and printing to a post card, realizing a printing and postage savings of over $800,000 per year
- Consolidated the telephone system with a regional Avaya investment, realizing savings in maintenance costs.

Director of Implementation/Special Project for ACS, Inc. (d.b.a.: Texas Medicaid Healthcare Partnership; Austin, TX); contracted with Texas Department of Health and Human Services to provide Medicaid Management Information Systems (MMIS) program management.

- Delivered savings of $1.5 million per year over a five year fixed fee contract, to provide all Texas Medicaid providers with an Explanation of Benefits via a secure website and all Texas Medicaid payments via electronic funds transfer, thus eliminating all printing, envelope, postage, and UPS costs for mailing to over 85,000 providers
- Migrated electronic publications for Texas Medicaid to a secure website; saved the project millions in printing and postage. Accelerated updates of Federal programming information from annual to semi-annual; provided updated information to Texas Medicaid providers in a timely manner
- Improved business processes with the Ambulance, Dental, and Durable Medical Equipment and improved staffing efficiencies and improved relations with these active provider organizations.

Foundation Health, A Texas Health Plan

Government Services

Director of Medicaid and Program Compliance contracted with the Texas Department of Health and Human Services. Supplied a contracted provider network for Medicaid managed care enrollees with primary care providers, specialists, and a viable hospital network.

Austin/Travis County Health and Human Services Department – FQHC

Public Health Department

Business Services Coordinator; integrated public health (W.I.C., V. F.C.) with the Federally Qualified Health Center delivery model; included full service pharmacy, radiology, and basic specialty services.

Skills Summary

A diverse Information Technology (IT) manager and leader with proven consulting, technical, and business development experience who achieves quality results and delivers business value. A certified consultant, project manager, and business professional who consistently accomplishes objectives by leveraging skills in business administration, continuity planning, consultative analysis, enterprise networking, security, systems management and technology infrastructure. Based in Harrisburg, Pennsylvania, Brian has been supporting the Commonwealth of Pennsylvania for over 15 years providing technology solutions, consulting, and complex project management services.

Employment History and Related Experience

Unisys Corporation, Harrisburg, Pennsylvania — May 2006 – Present

Account Management/Service Delivery

Actively supporting a complex IT infrastructure managed services project for the Commonwealth of Pennsylvania government customer in several service delivery and business management roles since 2006, acting as a liaison to the Office of Administration and agencies receiving service. Leverages significant contract management, technical sales, and customer relationship management (CRM) experience to provide high levels of account management support.

Focused on exceptional customer service by leading teams through implementation and practice of ITIL processes and ITSM7 system. Demonstrated experience in new technology solution development and deployment by leveraging design methodologies and project management best practices to support project change orders. Provided direction and leadership for service delivery organization in support of complex solution design, implementation, managed service functions, quality improvement, and cost management activities. Continues to play a leadership role in supporting business development, contract management, and service delivery for the Program Management Office (PMO).

Computer Aid, Inc., Harrisburg, Pennsylvania — 2002 – 2006

Senior Consultant

Developed IT Strategic Plan for a 6000 person government transportation agency to align IT support of the business by focusing on process initiatives, systems and best practices. Created Business Continuity/Disaster Recovery plans for three state government agencies providing over $750K in services revenue.

IBM Global Services, Mt. Laurel, New Jersey/Mechanicsburg, Pennsylvania — 1997 – 2002

Principal Consultant

Led marketing and sales initiatives for professional services offerings through focus on relationship management, solution design, and pricing. Managed staffing, delivery, profitability, and customer satisfaction for $15 million portfolio of IT service contracts for application development, consulting, and systems integration offerings.

Directed team of eight consultants, architects, and IT specialists through full life cycle of complex TCP/IP enterprise network design and implementation for a large Commonwealth of Pennsylvania government agency. Engagement exceeded client expectations and resulted in over $1.6 million of IBM services revenue.

GBC/Globelle, Inc., Berlin, New Jersey — 1995 – 1996

Director of Operations

Supervised five person product management staff in selecting, purchasing, marketing, and managing $4 million networking and midrange computer product inventory. Increased revenue from $6 million to $15 million in nine months by designing and implementing effective asset management, marketing, and sales programs.

Comdisco, Inc., Woodcliff Lake, New Jersey — 1995

Network Consultant

Installed, configured, and tested multi-vendor internetworking infrastructure enhancing campus and enterprise connectivity for a large regional telecommunications carrier.

IBM Corporation, New York, New York 1981 – 1994

Marketing Operations Consultant 1992 – 1994: Conducted market analysis of customer IT expenditures and contributed to development of targeted $5 billion annual business plans for Northeastern region.

Systems Engineering Manager 1990 – 1991: Managed eight person technical team providing quality technical/sales support of IBM products to satisfy the needs of a regional telecommunications carrier, increasing revenues by 10 percent to $35 million.

Lead Systems Engineer 1987 – 1990: Directed technical and marketing activities of 12 systems engineers providing account support for a global financial services company. Developed plan and led team in the installation of $9 million mainframe/storage complex providing 25 percent system capacity growth for application deployment.

Sales Representative 1985 – 1986: Developed and executed sales strategies for midrange, workstation, and communications products resulting in 15 percent increase in revenues and improved customer awareness of product capabilities.

Account Systems Engineer 1981 – 1984 - Led implementation of SNA network protocol conversion project for an international financial services firm reducing line costs by 75 percent while improving transaction response time by 10 percent.

McDonnell Douglas Automation Company, St. Louis, Missouri 1979 – 1981

Network Analyst

Completed installation and testing of IBM terminal and data communications hardware/software systems for national network of 30 communications controllers and 10,000 workstations for aerospace firm.

Agency Account Manager

Key Skills and Knowledge

- Project Management for IT projects
- IBM z Series and iSeries technical skills
- Support of Disaster Recovery processes
- 14 years of experience providing services to the Commonwealth of Pennsylvania
- Agency knowledge

Skills Summary

Proven Information Technology (IT) Manager with 14+ years experience with the Commonwealth of Pennsylvania located in Harrisburg, Pennsylvania area. Expertise include z Series and iSeries technical management; support of the Disaster Recovery (DR) process, including the development of DR plans and the coordination of DR exercises and relationship management.

Employment History and Related Experience

IBM Corporation - Harrisburg, Pennsylvania 2002 – Present

Data PowerHouse Service Delivery Manager

Service Delivery Manger on the Data PowerHouse (DPH) contract in Harrisburg worked with agencies of the Commonwealth of Pennsylvania for the past 12 years managing projects to include developing the technical plans, working with major stakeholders to develop time lines and communications plans, coordinating agency and IBM resources in implementing such plans, and performing post-project follow-up and communications.

- Created the disaster recovery plan for IBM-supported agencies at the DPH data center. During the past 12 years, coordinated all of the disaster recovery tests, was responsible for all phases of disaster recovery at PennDot, L&I UC, Department of Revenue, SWIF, L&I BOIS, DOI–MCARE, DOC, and zVM/VSE Liquor Control Board which demonstrated that the systems were recoverable and that the restore point objectives and the recovery time objectives were met in each test.
- Managed system migrations and upgrades to new hardware at PennDot, L&I UC, Department of Health, SWIF, Liquor Control Board, Department of Corrections, L&I BOIS, State Civil Service Commission, and the Department of Aging by creating plans that minimized down time and impact to the agencies. Migrations and upgrades were completed on time, within budget, and with high levels of stakeholder satisfaction.
- Managed resolution of technical issues and software upgrades for zOS, DB/2., CICS, IMS, iOS, zVM, VSE for PennDot, L&I UC, State Workers Insurance Fund, Department of Health, Department of Education, State Civil Service Commission, Department of Aging, and L&I BOIS. Changes were completed successfully within the change window.
- Worked with PennDot in the implementation of a zLINUX environment on their mainframe by developing requirements, providing change orders to acquire appropriate software/hardware/services, and coordinating the IBM technical resources to support the zLINUX environment. At the end of the project, the customer was able to migrate to the new technical environment without incident. The environment has afforded the agency a very stable environment. There have been no service outages since going live with production and has provided a stable platform for additional applications.

Performed as Service Delivery Manager and DPH agency liaison to PennDot, L&I UC, SWIF, Department of Health, Department of Corrections, Department of Education, Liquor Control Board, Department of Aging, State Civil Service Commission, L&I BOIS.

- Provided overall support of the DPH contract and managed the delivery of services to the agencies, which included understanding agency business and technical environments and delivered the appropriate contracted service. Yearly customer satisfaction surveys for agencies managed have exceeded assigned satisfaction targets.
- Worked with agency CIOs to identify opportunities for cost savings or improved agency efficiencies using IBM's latest technology. Projects and solutions included: L&I UC migration from CNT to IP printing solution, Department of Insurance iSeries DR solution, L&I UC contract extension, DOC contract extension, and SWIF contract extension.
- Assisted the agencies with problem management, created solutions to problems, and drove to successful resolution. Over the years, these agencies have in total attained service level commitments.
- Worked with agencies to develop business solutions, created contract change orders, and implemented changes into the technical environment.
- Developed capacity plans to identify requirements, provided hardware solutions for such requirements,

created the contract change order, and implemented the solutions once the contract change order was signed.

IBM Corporation 1976 – 2002

Various Positions

- Disaster Recovery Coordinator Manager for Commonwealth of Pennsylvania DPH contract – Harrisburg, Pennsylvania 1999 – 2002

Skills Summary

Over 15 years experience as an Information Technology (IT) professional with experience in project management, project coordination, system study, design, development, and Implementation; held numerous positions of progressive responsibility including programmer and senior technical lead; has a broad understanding of the service catalog offered for the Data Center Modernization contract. Joined Unisys as a consultant in October 2000 with current position as Service Delivery Manager which involves managerial and technical leadership of consulting staff at the Commonwealth of Pennsylvania, including system engineers, network engineer, and developers.

Employment History and Related Experience

Unisys, GMS, Service Delivery Manager 2007 –-Present

Manages all aspects of Enterprise Data Center (EDC) portion of the Commonwealth of Pennsylvania Contract – including Client Relations Management (CRM) (liaison role) and P&L for account valued at over $6 million per year.

- Strong advocate and champion for the use of services as a technology solution. Works with IT and business to form the best approach when selecting services to resolve a business need; responds to Commonwealth strategies with design and architecture solutions to achieve commonwealth objectives.
- Leads and manages Unisys employees and contractors supporting the Data Center projects.
- Designed and implemented the infrastructure for the Pennsylvania State Police Megan's Law application that provides the public information on sexual offenders. Unlike other state's that launched the website earlier, Pennsylvania's public launch by the governor was very successful and the infrastructure was able to support the extremely high load during the initial days of the launch.
- Designed and implemented the infrastructure for the migration of the Pennsylvania Lottery website from an external hosting location resulting in highly reliable hosting with considerable cost savings for the Commonwealth of Pennsylvania.
- Built strong collaborative relationships and idea exchanges to maintain strategic alliances with key members of the Commonwealth.
- Delivered regular briefings for new services and technologies to the Commonwealth to confirm awareness of emerging ideas.
- Reviewed and briefed the Commonwealth of Pennsylvania on managed PKI solutions by Entrust. Implementation resulting in cost savings to the Commonwealth and reduction of manual effort.
- Coordinated with Unisys account team to conduct presentations on BMC ITSM and Secure Private Cloud.
- Key contributor to the success and development of processes and services for the Commonwealth. These processes streamlined and standardized operations and made sure that there was consistent service delivery, proactive problem prevention, and timely incident resolution.
- Gathers together the best of Unisys engineers to develop cost assessments for recommended solutions, define the support required, and develop the long term operational strategies to insure that real value is delivered to the Commonwealth.
- Design and implement data center deployment process that standardized the new applications integration process.
- Design and implement managed services Lite-hosting model. This met and exceeded the customer's expectation of a hosting model where they have control and at the same time benefit from EDC's standard services.
- Track contract adjustments and work orders to verify that agreements are supported, progress, reviewed, discussed, and finalized as all parties come on board and confirms that signatures are in place to solidify the agreement.
- Processed change orders to provide additional resources to meet the Commonwealth of Pennsylvania's staffing requirements for Disaster Recovery project.
- Process change orders to provide skilled resources for the implementation of BMC products procured by the Commonwealth of Pennsylvania.

Pennsylvania

Public Sector, Commonwealth of Pennsylvania, Data Center Hosting 2007 to Present

Operation architect, project manager, customer liaison for Pennsylvania's Enterprise Data Center. Supported strategic relationships and straightforward exchanges of ideas and innovations for the good of the Commonwealth.

- Played a large role in architecting an E-Government data center server farm for the Commonwealth to host web applications for the various agencies. Managed a team of 34+ consultants and collaborated with 40+ agencies in their successful application deployment and operation. Infrastructure data center scope includes more than 4,000 servers and 800 applications and provides a wide range of solutions from various vendors including Microsoft, Linux, Cisco, IBM, and VMware.
- Functioned as liaison, moving ideas between the development community and the customer community to verify the needs of the Commonwealth were represented in the design and delivery of the server farm. The project was a huge success as the data center grew over the years. The Commonwealth of Pennsylvania agencies were able to leverage a centralized team of skilled resources that resulted in reduced duplication and increased cost savings.
- Oversaw the data center's operations and architecture, developed solutions for agency requirements, assisted the client with strategy development, budget management, license management, coordinated deployments of new data center applications, and supervised technical personnel. Daily tasks included managing client, agency, vendor, and team interactions, service deployments, Commonwealth collaboration and liaison activities, and project assignments.
- Accomplished costing estimates to address the value and impact of recommendations for change to existing systems. Developed the entire package including infrastructure, maintenance requirements, implementation tasks, staffing, and then benefit assessment of the project to confirm a strong value for the Commonwealth.
- Implemented various processes including incident management, release management, and change management. Developed Standard Operating Procedures and Rules of Engagement for the various infrastructure service offerings in the server farm. This experience provided a broad base of understanding for the use of services and how they can bring positive impacts to organizations. The processes provided consistent, standard, and reliable delivery of services. The team supports the highest number of exchange mailboxes with the smallest number of staff, while delivering a confirmed high percentage of system availability.
- Actively participated and contributed to the development and enforcement of various IT data center product and process standards of the Commonwealth. Designed a DR solution for critical applications in the data center. Confirmed high availability of all applications running within the data center and achieved a high level of client satisfaction.
- Significant contributor to multi-million dollar contract extension and expansion.
- Key contributor to the success of the client as a pioneer of various IT initiatives in the public sector including standardization, consolidation, and virtualization. The consolidation initiative constituted the consolidation of the IT services of multiple Commonwealth agencies into the data center. This consolidation eliminated duplication, increased consistency, and security and resulted in cost savings. The virtualization of server hardware using VMware increased system availability and flexibility, reduced the server foot print and power utilization and also resulted in quicker deployments and overall cost savings. The customer satisfaction based on periodic customer surveys was consistently greater than 90 percent.

Public Sector, Commonwealth of Pennsylvania, Data Center Hosting 2000 – 2001

Team leader and Commonwealth liaison for the operations team of Pennsylvania E-Government/Enterprise Data Center Server Farm.

- Role involved data center infrastructure design, implementation, and support of the server farm including database and web server administration. Responsible for brief services recommendations and implementation of new technologies in the Commonwealth. Regularly coordinated and collaborated with third parties and vendors to achieve successful data center results
- Architected and implemented Microsoft Active Directory, Application Center 2000, Biztalk Server 2000, and SQL Server 2000

Public Sector, Commonwealth of Pennsylvania, Application Development 1999 – 2000

Lead developer for the Commonwealth Connect project that allowed migrating all Commonwealth's Government agencies to a centralized NT Domain and MS Exchange mail system.

- Designed and developed work flow systems and scripts to automate administration of NT–and later Windows 2000–and Exchange servers using VB, VB Script, COM, CDO, ADSI, and LDAP

Commercial, Goldwire SoftWeb, Application Development, Chennai, India 1997 – 1998

Technical lead for the Software Design and Development team. Responsible for design and development of various Migration tools and products. Flash 2VB was one of the major products developed that converts FoxPro code to a Visual Basic Project. Successfully acted as project manager for many turnkey client projects. Participated in pre-sales that included demonstrating the product in various Microsoft events in India. Responsibilities included requirements analysis, architectural design, development, and implementation of projects.

Skills Summary

Over 18 years of experience as a technical manager and technology architect in global sales force effectiveness solutions for State government, local government, and pharmaceutical organizations. Four years of experience with the Commonwealth and provided leadership for large technical organizations including data center and hardware service groups. Support the production of new cost effective technology products and business offerings; managed multiple facility acquisitions, migrations, and plant consolidations; strong record of success building and maintaining strategic vendor partnerships to generate repeat business.; participant in strategic planning sessions, team building, and extensive interaction with both internal and external customers; currently providing solutions and infrastructure design for the Commonwealth of Pennsylvania.

Employment History and Related Experience

UNISYS

Client Architect 2009-present

- Worked as part of Data Center Transformation team for the Commonwealth of Pennsylvania in moving to a Shared Enterprise infrastructure model.
- Design detailed technical data center solutions in support of seventeen the Commonwealth of Pennsylvania agencies for the last four years. Solution technologies include server, mainframe, storage, networking, software, and facilities components; introduced new components to system that improved operational reliability of critical functions.
- Provide guidance and recommendation to the Commonwealth of Pennsylvania agencies on emerging technologies to increase performance, gain functionality, and reduce cost; proven track record of solution implementation success and accuracy.
- Develop and maintain business relationships with key strategic partners, including strategic planning; drive solutions to support the overall portfolio and areas of strength.
- Lead and drive results across cross-functional teams; consults with customers to gather technical and business requirements and facilitate the development of cost saving technology solutions involving multi-vendor products and systems.
- Provide technical support in the solution design; facilitate the design leading edge infrastructure solutions to satisfy requirements by leading cross-functional teams of subject matter experts; improved maintainability of data center systems.
- Manage vendor partners in the design process to obtain solution options with feature detail and costing information.

CEGEDIM DENDRITE 2007 – 2009

Technical Account Manager 2008 – 2009

- Organized and managed customer requirements for multiple accounts and main point of contact for customers.
- Facilitated custom software configuration for each customer for handheld device, web portal, and backoffice database; delivered implementation of new CRM software and upgrades ahead of schedule.

Project Manager IS 2007 – 2008

Responsible for enterprise-wide Oracle projects implementation; overall Project Manager for implementation of software to five business lines and led senior management in Steering Committee meetings. Also responsible for P &L, resources, and project plan delivery.

DENDRITE International 1997 – 2007

Director of Hardware Services 2005-2007

Managed Dendrite's $14 million hardware service operation, supported 16 pharmaceutical and biotech customers (17,000 sales force users), and managed 90 support personnel with six direct reports.

- Developed customer focused metrics to exceed customer service level agreements.
- Facilitated ISO 9001:2000 Certification; engineered facility closure and migration to new facility operations; developed and executed business plan that reduced costs by 20 percent of operating budget.

Technical Project Manager, Data Center Services 1999 – 2004

Provided project management for pricing tasks, new customer implementation tasks, and customer expansion initiatives; built project plans, schedules, and control systems to make sure the work was completed on time and under budget.

- Managed all resources and P & L for all assigned projects; created custom technology solutions for both internal and external customer; tasked by senior leadership with presenting new technology opportunities to reduce cost, increase efficiency, and increase expandability.
- Developed, positioned, and introduced remote backup business offering in partnership with third party software vendor; created cost effective shared server environment offering for small to mid-tier customers and for internal quality assurance and development environments.
- Managed multiple data center consolidation and migration projects to new facility with minimal disruption to business operations; managed day to day operations for both internal and external customers and acted as main liaison between customer and technical teams for ongoing technology projects.

Senior Systems Engineer 1997 – 1999

Oversaw Microsoft Windows and Communication groups; managed customer hosted Windows environments; gathered customer requirements and developed system architecture (Windows Server, Exchange, Novell, Unix, Cisco, SQL Server, Oracle, and NetIQ) for hosted systems; managed communications platforms (USR Total Control, Xcellenet) for customers.

CORNET International 1995 – 1997

Windows and Xcellenet Administrator

Delivered administration of customer Windows and Xcellenet environments; maintained and managed customer Xcellenet server systems and communications; created and maintained Xcellenet communications scripts for customers; managed Microsoft Windows server environments for customers.

Skills Summary

Over 14 years of experience as a Manager of the data center, systems engineering, and networking; more than seven of these last years has been in assessment and implementation of Service Catalogs, applications, servers, and security infrastructure; Microsoft Certified Systems Engineer in windows NT/2000/2003; over three years experience in managing the team and client interaction.

In depth knowledge and hands of experience on TCP/IP networking, DNS and Name Services, Active Directory-Joining Domains COM+ applications, IIS as web server and its configuration, administration and troubleshooting. Wide experience implementing high availability solutions using CSS (Cisco Content Switches), Microsoft Windows Clustering, NLB, and application center with hands on experience in designing and implementing web publishing solutions using MS ISA Server.

Insured that network security corporate policies, security service level agreements, and "best practices" standards were followed during design, installation, and configuration of ISA firewall, NAT server, and Intranet, Extranet, and Internet connections.

Project management experience in gathering the requirements, analyzing and documenting the application requirements, establishing costing for projects, coordinating projects requirements with clients, designing and prototyping the applications in an enterprise environment.

Employment History and Related Experience

UNISYS/ Office of Administration, Commonwealth of Pennsylvania March 2004 –Present

Deployment manager/architect for the data center in Harrisburg, Pennsylvania. Designs and provides solutions for integrating applications securely within the data center; guides team of experts in implementing application on the enterprise infrastructure and providing technical and non-technical assistance when required by the team members; initiates coordination and meetings with clients to discuss the application and infrastructure requirements for deploying applications at the hosting facility; works with clients and provides them with solutions to problems, builds positive client relationships, and delivers effective costing estimates for projects.

- Project – Disaster Recovery (DR)/secondary site for data center (BCDRP): Leader for team of experts and management executives to establish the secondary site for the enterprise data center; provided suggestions related to application designs for secondary site in conjunction with the primary site; delivered the network design document with details on application deployment scenarios and impact of failure of different components.
- Project Single Sign On (SSO) for Commonwealth Portal 2006 (Access Control): Designed and implemented the SSO for the Commonwealth data center portals to leverage CA SiteMinder; designed and supported the costing of the solution to implement SSO among various implementations of SiteMinder at various agency locations; led team of experts for ongoing support including enterprise-wide product upgrades. By leveraging this solution the Commonwealth employees do not have to login multiple times to access various applications and content.
- Project – User provisioning for the Commonwealth of Pennsylvania (Access Control): Technical lead during the requirement, costing, design, and implementation phases for user the provisioning project. IBM Tivoli manager product is leveraged to provide account management and user registration capabilities. This solution provides automatic provisioning of employees per the defined standards and policies.
- Project – PSP CLEAN (Access Control): Supported the project lead during the design phase of security component for CLEAN project. CLEAN is the system that is leveraged by many crime and justice related agencies. Guided a team of experts to provide ongoing support for the CLEAN security components such as SSO and virtual directory services. The support for security components is critical as the CLEAN system is highly secure and processes confidential data.
- Project – PennDOT NDES (Cryptography): Lead engineer, participated in design for certificate enrollment by network and handheld devices using Public Key infrastructure components including network device enrollment services (NDES) and online certificate status protocol (OCSP). PennDOT successfully leveraged the solution for enrolling the certificates for approximately 500 handheld devices initially.

- Project – VPN for mobile users (Telecommunications and Network Security): Supported the design of the VPN solution for Commonwealth mobile users to access internal data center applications. The solution leveraged Netmotion mobility servers and Radius servers for VPN services, PKI, and Active Directory for dual authentication. Commonwealth agencies, like the Game Commission, leverage this solution for mobile users to allow secure access to agency internal applications.
- Other projects – Deployed proxy services to publish internal applications to Internet users by leveraging MS ISA servers and TMG servers. Approximately 150 applications were made available securely to Internet users.
- Other responsibilities – Oversaw team of security experts, coordinated with many other groups involved in all security related projects, cost benefits assessments, and client collaboration events; addressed various security concerns such as data at rest and in transit, user registration, access management, network and infrastructure security.

CitiBank New York, Consultant September 2003 – December 2003

Installed, configured, and managed the Windows 2000 Servers for a data center. Coordinated with application and business groups, Implemented and performance tuning of the applications including IIS based application. Developed and implemented service level agreements to define requirements and required actions related to network performance. Implemented backup servers and created/implemented backup plans for servers. Installed SQL servers and helped DBAs troubleshooting data center system related problems. Create/execute backup of SQL databases using SQL server backup. Troubleshoot Tier-3/Tier-4 Windows 2000/NT server environment and implemented web trends server for logging. Routine troubleshooting and system administration involving application teams, business groups, and network group. Provided ideas and recommendations for better support of the existing environment.

Unisys/Department of Public Welfare, Consultant April 2001 – July 2003

DPW Extranet (Network Security): Responsible for installing, configuring, and maintaining the Department's Extranet by leveraging ISA/Microsoft Proxy Services. Designed and implemented solution to publish secure applications to Internet using MS Internet Security and Acceleration Server/Proxy 2.0 and SSL. Implemented the solution for publishing applications with confidential data using secure socket layer protocol; coordinated with application teams, network infrastructure personnel, and with other offices to fully understand the architecture. Established service agreements with client for system performance. Troubleshooting and managing Tier-3 server problems, LAN, and WAN support management in a complex data center environment including coordination with outside vendors and application vendors like Verizon to meet service agreements.

- Monitored, optimized, administered, supported, and configured security for all enterprise web servers. Support for WINS and DNS servers. Administer Exchange 5.5 environment, troubleshoot email flow problems in an enterprise environment including escalation of problems with other organizations and departments within the same organization. Assist co-workers understand the email flow and hardware/software involved for the entire process. Assisted in design and plan for migration from Exchange 5.5 to Exchange 2000. Helped troubleshoot issues that involved application availability, Network inconsistencies, routine data center issues with user/account management, and policies. Provided support for network infrastructure, publishing applications and their availability, troubleshoot procedures for network, email, web servers, and Internet facing Firewall servers (ISA and proxy servers).
- Project -Active Directory Implementation (Access Control): Designed and implemented Active Directory in an enterprise data center environment, including security policies, service level agreements, delegated administration to user per their role for user and group accounts management. Created the support document and trained the administrators to manage the active directory per their role. Troubleshoot the issues related to active directory policies and authentication problems that involved coordination with various departments.
- Developed and implemented NETIQ performance-monitoring procedures on Windows 2000 enterprise servers. Performance monitoring procedures details the process for monitoring each individual server's health and send alerts in case one of the monitored resources became bottlenecked, modified the scripts per the organization requirement, created reports for resource consumption when required. The servers monitored with NetIQ were Windows 2000 servers supporting the role of web servers, application servers, and database servers.
- Application Center Implementation (Access Control): Designed and executed the phased implementation of application center clusters to load balance the applications running on Windows 2000 enterprise web servers. Created the procedures for application deployment and trained the developers to help them understand the new data center environment. Troubleshoot the problems related to

application deployment, network inconsistencies, and application synchronization. Maintenance of the cluster by taking the node offline alternatively without affecting the end users.

- Implemented unified security solution including deployment and configuration of SiteMinder components on enterprise servers. Integrated Netegrity with active directory for authentication and authorization of resources, configuring policy servers to for multiple active directories for authentication, and for authorization of resources. Troubleshoot the problems with the slow response or unsuccessful authorizations for the application using the Netegrity for single sign on, DNS problems, and network issues in an enterprise environment, escalating the problems with third party software/application vendors whenever required and worked as coordinator.
- Implemented a Windows NT/ 2000-based VPN solution to provide administrator's access to public web servers for upgrades and for monitoring and maintenance. Analyze complex network environment and resolve any security issues. Coordinate with multiple offices and third party hardware/software vendors.

IBM, Arkansas June 2000 – August 2000

NT Administrator

Designed and Implemented the NT Enterprise Network which comprised of NT4.0 Enterprise Version Server, CISCO Routers, 3Com Switches, RAID5 Disk Arrays, and IBM Netfinity Server. Implemented the Backup Policy using DLT4000 tape drives and Backup Exec. NT administration and troubleshooting on Netfinity servers. Troubleshoot disk related problems and tape drive problems. Worked with utilities to flash BIOS settings and change BIOS settings. Configured the RAID hardware. Configured load balancing on network cards. Worked with disaster recovery NT resource kit tools to modify with NT registry.

Northfield Savings Bank, New York(Short Term) February 2000 – May 2000

Network Administrator

Project Firewall Implementation (Network Security) - Studied network design to predict problems before configuring/implementing security policies. Analyzed, designed, implemented, and configured various elements of the network from switches, CISCO Routers to servers, and application Software. Installed and configured NT Servers. Installed and Configured Checkpoint 4.1 (Firewall) on NT 4.0 servers. Configured and integrated of E-Safe content scanning server to work with Checkpoint 4.1. Created policies and rules to define security for the organization.

Interactive Communications Inc. May 1999 – January 2000

NT Administrator/Architect

Designed and reconfigured the network that had multiple subnets for different departments of the company. Installed and configured Checkpoint 4.1 (Firewall) on NT 4.0. Configured and integrated of E-Safe content scanning server to scan for viruses with Checkpoint 4.1.

- Created policies and rules to define security for the organization. Implemented Internet security using MS Proxy Server 2.0. Configured Exchange Server 5.0 including IMS. Implemented VPN using MS PPTP (Point to Point Tunneling Protocol) technology and RAS server technology. Data transfer was secured by enabling the MS CHAP protocol and data encryption at both the server and client levels
- Evaluated the Windows 2000 server (Beta) compatibility with existing devices and tested the product services and new features in the test environment. Created customized packages using custom installation tools and distributed using Windows 2000 group policies. Upgraded from Windows NT server to Windows 2000. Configuring RIS (Remote Installation Server) to remotely install Windows 2000. Configured Terminal Servers in Windows 2000. Configured networking services like DHCP, DNS, etc.

NIIT Limited, India July 1995 – January 1999

Network administration: Comprised of Windows NT Servers, Novell NetWare 3.12, and SCO-UNIX. Administration of users and group accounts, security policies, print servers, implemented, administered, and troubleshoot Exchange environment, configure mail clients, and performance tuning. Implemented migration from Novell to NT Support DNS/Wins/DHCP study and design network. Conducted training on Windows NT 3.51/4.0, Windows 95, UNIX, TCP/IP, SQL Server, MS Exchange Server, and PowerBuilder for corporate clients, Unicenter TNG (Computer Associates).

Education

- Bachelor of Science, University of Delhi, India
- Diploma in Systems Management (NIIT, India)

Professional Certification

- Windows MCSE 2003
- CA SiteMinder
- CISSP
- ITIL Foundation 3.0

Professional Development

- CISSP

UNISYS

[redacted]

Agency Infrastructure Architect

Key Skills and Knowledge

- VMWare vSphere 4/5 and ESX/ESXi
- Windows
- Active Directory
- EMC Avamar
- Symantec NetBackup
- Disaster Recovery Planning
- Powershell Scripting
- Physical Server to Virtual server restore
- Bare Metal restore to dissimilar hardware
- VMware backup/restores
- Avamar backup/restores
- NetBackup Tape backup/restores
- DataDomain Oracle restores
- MS SQL 2000, 2005, and 2008 restores
- Windows 2003, and 2008 Cluster restores to a single and multi-nodes
- SQL 2008 Cluster used for Multiple application management
- DFS deployments
- Incident and Change Management control
- Technical Documentation
- Blade Logic Patch Management
- Systems Builds/Deploys
- Linux administration support (SUSE & Red Hat).

Skills Summary

Five years experience as a data center analyst with Unisys dealing with regular upgrades, security enhancements, virtualization deployments, datacenter consolidations, and migrations, as well as Disaster Recover (DR) design. Routinely lead the architect and design teams as a subject matter expert with multiple projects. Also a regular project leader on about a dozen projects at both the Data PowerHouse (DPH) data center as well as our DR Facility.

Expansive knowledge in the following areas: VMware vSphere ESX/ESXi 3.x, 4.x, & 5.x, Windows 2003, 2008, 2012, Powershell and Visual Basic (VB) script, active directory, security policies, IIS, DHCP, DNS, FTP, IBM Blade center servers, Dell and IBM x86 systems, EMC Data Domain, EMC Avamar, Microsoft Failover Clustering, Network Load Balancing, and Microsoft DFS and DFS-R.

Capable in the following server software: BMC Blade Logic, MS Exchange 2000, 2003, 2007, Microsoft SQL 2005/2008 management, Symantec NetBackup 6.x, and 7.x, Backup Exec system recovery, Symantec AV, McAfee w/EPO, Symantec Ghost, WSUS, IBM Tivoli Endpoint Manager, Microsoft System Center operations manager 2007 and 2012, VMware Capacity Planner, and vCenter operations manager.

Employment History and Related Experience

Unisys Corporation, Harrisburg, Pennsylvania 2008 – Present

Systems Analyst, Project Leader

Responsible for multiple government agencies' central Pennsylvania data centers; principle troubleshooter for systems, virtualization, active directory, and patch management.

- Windows/VMware team lead responsible for maintaining about 800 Servers in the data center. VMware administrator of over 350 VMs (approximately 60 ESX/ESXi hosts in five virtual centers, including Disaster Recovery site).
- Data center active directory and DNS administrator for ESM domain, backup administration including NetBackup, DataDomain, and Avamar; familiar with scripting for server automation using Powershell, VBScript, and PowerCLI (VMware); designed and executed 11 Disaster Recovery tests across four Commonwealth of Pennsylvania agencies.
- Consolidated DPH NetBackup infrastructure. Collaborated with the Commonwealth to establish requirements. Designed and consolidated six isolated backup environments to a single, large, dynamic, highly available backup infrastructure. The data center project design delivered for faster backup and restore times, higher reliability and resiliency, and save costs by using fewer tapes, backup servers, and network equipment. When the data center project was finished in late 2011, the infrastructure moved from about 80 percent utilization to about 50 percent utilization. This reduction was due to the wealth of techniques that were designed into the project such as multiplexing, dynamic tape allocation, and simplifying tape pools. All was done without purchasing any equipment, but rather better utilization of the equipment that was already purchased.
- Upgraded data center Windows 2000 active directory to 2008 R2 active directory with Kerberos Trust to the Commonwealth of Pennsylvania. Supported the development of the cost estimate. Communicated questions to the Commonwealth and interpreted their answers for the Unisys Engineers. The design allowed for faster site-to-site replication speed, enhanced accidental user/object deletion recovery, as well as bringing single sign on (SSO) to all Commonwealth agencies. Using SSO removed the need for multiple usernames for each customer, as well as eliminating overhead associated with multiple user management by DPH staff. Customers may now view performance metrics, systems properties, backup statuses, run reports, etc., all with their existing domain username.
- Migrate the Commonwealth of Pennsylvania data center file share (about 2TB of data) from single node 2003 file server to 2 node 2008 distributed file server with replication (DFS and DFSR). Worked with the Commonwealth to refine the requirements for this project. This project design not only added redundancy with zero downtime in the event of file server failure, power outage, etc., but also simplified the backup solution and allows users to recover their own files when needed, thus reducing management overhead.
- Remote Desktop Manager Consolidation project. Complexities in the Commonwealth data center resulted in a wide range of management consoles, remote desktops, custom applications, and web console that were difficult to updated and manage. Provided support to the cost estimate for this

project. This new design brought a single pane of glass for the operations and DPH server staff. Through the combination of remote desktop manager and a highly available remote desktop services “RemoteApp” farm, served up all operational consoles, and remote desktop connections in a single pane of glass, while enhancing the security behind each connection with two factor authentication. Updates are now handled in house for each application, accomplished in the background with minimal impact to staff and customers.

- Multi-Site HA DNS. This data center project resolved many issues preventing the DPH management systems from growing. Delivered key elements of the estimate for the senior architects. Once completed, using GLOBALNAMES zone as a replacement to WINS and removing hosts files, it aligned the management systems with best practices and prepared us for the rapid growth from about 350 systems to over 1,000 over a four year period without extensive hosts file management.
- VMware host separation. Proposed splitting up each two Node hosts into two single node hosts, as well as doubling the memory in each. This design resulted in over a 200 percent increase in capacity at a fraction of the cost for purchasing new hosts entirely. This design also reduced wasted reserve (failover) capacity from 33 percent to only 12.5 percent.
- DR virtual machine replication of master Net backup servers. This project design simplified the restore process of the database master backup server during a DR. It reduced the overall time to restore readiness from 2.5 hours to .5 hours.
- Integrated enterprise systems data center relocation. Principle Windows SME, designed the cutover process for the WINTEL team, implemented successful move for one of the larger data centers.

Non-Unisys Project Experience

Business Information Group, , York, Pennsylvania 2008 to 2008

Network Engineering Consultant

Administered almost 30 AD domains during the contract (users counts ranging from 10 to over 200). Installed numerous servers including Windows 2003 and 2008, SBS 2003, SQL Server, VMware, and Terminal Server.

- Installed servers from HP, IBM, and Dell
- Multiple small office setups and relocation

Rite Aid Corporation, Harrisburg, Pennsylvania 2004 to 2007

Systems Administrator and Development

Support servers (Both Windows NT4, 2000, 2003 and SCO5 Unix), Cisco routers, Support PCs, setup and repair of HP and Lexmark printers, Network wiring of 29 Rite Aid Pharmacy stores.

Education

- Penn State University Hazleton, Pennsylvania, Associate Degree in Information Sciences and Technology, 2000 - 2002

Certifications

- VMware VCP4
- VMware VCP5
- Microsoft Windows 2008 MCITP: SA
- Microsoft Windows 2008 MCA: Virtualization
- ITILv3.

- EMC Clariion Class Storage
- FC, FCoIP, and FcoE
- Brocade SAN Directors and switches
- WAN/LAN Networks

Skills Summary

Infrastructure Data Center Technical Architect for large corporations, introduce new technologies and solutions, set the vision and technical direction for the entire company. Moves in the forefront of emerging Information Technology (IT), provides liaison and collaboration between clients and providers, prototypes new solutions, and fosters the business adoption of data center technologies and solutions.

- Understands the process of gaining business approval through presentations to the business including business justification with detailed cost models
- Project technical lead on major initiatives for data centers, provides leadership for data center sales, operations, and support, delivers project success including installation, testing, quality control, acceptance testing as well as transition training of new technologies to internal support and help desk staff
- Possesses a broad spectrum of products and technologies, consolidated over twenty-five data centers into centralized mega-data centers, built three new data centers, designed six SAN's in six data centers, developed multiple Disaster Recovery (DR) solutions including the use of SunGard as well as in house Disaster Recovery solutions using internal Infrastructure and data centers
- Designed the WAN data center architecture spanning eight countries and over 500 nodes, worked in a global team to design the global WAN encompassing over 120 countries and 3,000 nodes. Designed the WAN architecture in response to the data center strategy
- Introduced automated desktop and server security patch installation to all desktops and servers, reducing the risk of system and data lose
- Designed and implemented many Server High Availability solutions using HP Service Guard, IBM HACMP, Microsoft Clustering, and Oracle RAC
- Consolidated over 350 Intel-servers using VMware ESX and blade centers, used Citrix to centrally host applications for users located worldwide
- Strong ability to work in a team environment, solid negotiator, quickly learn new data center technologies and embrace change; driven and dedicated person with a passion for Information technologies and solutions.

Employment History and Related Experience

Unisys, Solution Architect, Harrisburg, Pennsylvania 2011 – 2012

Contract for a military institution in the greater Harrisburg Area, created the business case for application centralization, generated design interpretation of the business case, and implemented solutions based on those recommendations. Advised clients, nurtured the strategic operational relationship with the military client, designed, tested, and delivered data center support solutions for centralized applications that were distributed throughout the United States. Used VMware Technologies to reduce costs and improve service levels.

- Presented briefing outlining business justification for centralizing distributed applications; advised client on how to exploit current data center capabilities and recommended strategic adjustments to data center architecture that would enhance operations
- Used VMware allowing the customer to better use existing and future hardware and to better leverage existing IT support staff in reducing maintenance costs
- Provided Disaster Recovery solution for applications distribution. Improved application availability service level and reduced risk of lost data
- Collaborated with client to reduce new application provisioning times and costs
- Primary Unisys liaison for data center issues, moved information and ideas between vendor and client
- Supported sales and support, delivered capability briefings, presented service costs and timelines for the initial data center centralized infrastructure build out
- Collaborated with client to define costing strategies, produced cost saving and service improvement estimates capable through a new centralized data center application hosting environment

- Cisco Catalyst 6500 series router
- Cisco 2900 series edge routers
- Cisco IOS firewall
- F5 BigIP, and GTM
- Check Point Firewalls
- IDSs
- IPSs.

- Used existing technical staff to build and develop environment using Blade server hardware, VMware's vSphere running ESX on server hardware was used to host multiple Windows Server and Linux operating systems and was managed via VCenter administration tools. The training of existing staff on the new technologies from VMware reduced the need for outside engineers and enabled the client to support the new infrastructure once it went into production
- Achieved operations capacity planning and management using VMware's DSR with clustered groups. VSphere servers were automatically load balanced within a cluster group. Fault tolerance and DR was achieved using VMotion. Legacy applications that did not have any redundancy in the past gained fault tolerance and DR by being pooled into the new virtualized infrastructure. This reduced labor costs when failures occurred by making normal hardware failures a non-critical repair that is handled during normal business hours. This improved service levels by ensuring non-disruptive application service during normal hardware failures. After initial testing was successfully completed in the development environment, the production environment was built and delivered for operational use

Unisys, Solution Architect, Harrisburg, Pennsylvania 2009 – 2010

Contract for a Pennsylvania government agency to deliver a centralized application to view hundreds of video cameras located across the commonwealth over the Internet using existing and new infrastructure. Supported collaboration between Unisys and the agency, principal liaison and champion for technology change, analyzed the existing network infrastructure and made recommendations to upgrade, replace or modify the infrastructure as necessary to facilitate the new application. Included operational support costs as part of the presented package.

- During the data gathering phase, refined the client strategy to make sure that the Wide Area Network provider was able to provide circuit utilization and performance reports for most of the WAN circuits
- Developed utilization strategies with the client to build visual networks data probes to ascertain availability and reliability performance data; briefed the results of the studies to the agency
- Presented embedded Visio diagrams outlining analysis and recommendations to project stakeholders. Conducted meetings with the project team to address concerns and revisions until a workable set of recommendations were achieved
- Reduced timeline to administer network, introduced several new tools to the infrastructure; Microsoft performance monitor was used for Wintel systems. Tivoli was used for the Unix and Linux systems; operations support staff was trained and prepared to use the applications

Bise LLC, Owner, Harrisburg, Pennsylvania 2008 – Current

Created an automated software product allowing robotic trading trade on financial markets of financial assets. Provided sales briefings; responded to requests for pricing data. Negotiated agreements from conception to signature. Developed and nurtured a customer base using the software product in a controlled (Black Box) environment hosted via VMware at a local facility. After installation, provided operations support and periodic maintenance.

DHL Logistics, Manager IT Architecture 1998 – 2008

Responsible for the technical direction and delivery of new products that reduce costs, improve productivity, and enable new business opportunities to the client. Negotiated the technical portions of subcontract agreements from conception to signature. Managed several employees, guided their engineering careers using human resources tools such as goals, objectives, and performance evaluations.

- Responsible for all new technologies introduced into the company. Prototyping and creating proof of concepts of new solutions, developed design architectures, and ultimately delivered these new technologies into the data center production environments
- Liaised directly with clients to develop IT solutions to enable the client to outsource their logistics to DHL. This resulted in DHL winning new business opportunities
- Delivered documented solutions to the business and support teams and facilitated in the transition of the new data center solutions into the helpdesk and support teams
- Oversaw a Level 3 support team throughout the solutions life cycle
- Instrumental in the introduction of ITIL practices within the IT organization; introduced Remedy for incident management, and instituted configuration management database - CMDB, and certification all of technicians in ITIL foundation
- Managed data center, network, security, server, application, and support teams to deliver new products to the business; used MS Office, created all solution designs and cost estimates; briefed the designs and estimates to DHL upper management for business approval

- Liaison directly with project managers to develop detailed project plans using MS-Project. Responsible for all project budgets and delivery times
- Built three new data centers to facilitate the company's vision of a centralized computing environment
- Generated six Storage Area Networks (SANs) and used them to deliver local and site level DR for data centers. The introduction on SAN technologies such as Business Continuance Volumes (BCVs) - and data snap shots - Snaps enable DHL to improve data backup times and reduce time to recover data. Symmetrix Remote Data Facility (SRDF) - enabled near real time data and application recovery. Improved application availability and enabled DHL to win new business
- Designed and built enterprise level data center security infrastructures using Checkpoint and Cisco firewalls, F5 BigIP and GTM, IDS's, IPS's, proxies and gateways to enable user access to the Internet, application hosting, and Business-to-Business (B2B) capabilities
- Designed and generated an Enterprise Application Integration (EAI) infrastructure using IBM MQ Series, Mercator, Cyclone and proprietary EDI translators to enable B2B with hundreds of our internal and external applications and data center customers
- Designed and built a global active directory Forest with over 5,000 servers and 40,000 users
- Enabled network, server, and application monitoring and management using HP Openview suite of products. This allowed customers to view IT as a service and management to better manage incidents, technicians used the tools as day to day support activities improving time to recover failures
- Designed and created a desktop management system to deliver automated application and security patch installation
- Built server consolidation infrastructures using IBM and HP blades and VMware suite of products to consolidate hundreds of Intel servers, improve server hardware utilization, reduce server provisioning times and costs, reduce administration costs, and deliver DR capabilities
- Used IBM PowerPC/AIX OS and HPUX VPARs and LPAR's to consolidate midrange UNIX systems Improving server hardware utilization and reducing server provisioning times and costs
- Generated dozens of High Availability (HA) applications using HP's Service Guard, IBM's HACMP, Microsoft Clustering, NLB Network load balancing, Oracle RAC - Real Application Clusters. MS-SQL database servers including multi-node Clustered SQL servers

Solution Technologies Incorporated – STI, Systems Consultant 1997 – 1998

Design and build LANs, file and print systems, Email systems, database servers, and desktops for customers. Provide ongoing system support to customers.

YIS Consulting, Systems Consultant 1995 – 1997

Two year project for Exxon Corporation; Designed and implemented WAN/LAN's, file and print systems, Email systems, database servers, and desktops for customers. Provide ongoing system support to customer.

Enviro-Test, Systems Consultant 1994 – 1995

Lead in the development of a 57 node WAN and 57 new LANs for a Commonwealth of Pennsylvania contract for emissions testing. Developed integration between proprietary emissions testing equipment and industry standard computing platforms. Developed integration between PennDOT systems and proprietary in-house systems, provided Level 3 support and maintenance of all statewide computing systems.

Scranton Corporation, Regional Service Manager 1986 – 1994

Responsible for one quarter of the companies services revenue with complete Profit and loss and budgetary responsibility. Work closely with sales teams to increase profitability through new sales and new service products. Developed a service delivery team in 10 branch offices in the Northeastern United States.

Education

- Christopher Newport College, BS Engineering and Computer Science, 1982 – 1986
- Laurel Highland High School, 1982

Certifications

- Microsoft Certified Professional - MCP; Checkpoint Firewall Administrator
- Project Management DePICT (DHLs version of PMP); HP-RADIA Administrator
- ITIL – Foundation

UNISYS

IBM

[redacted]

Agency Infrastructure Architect

Key Skills and Knowledge

- Over 39 years of experience supporting the Commonwealth of Pennsylvania in various capacities
- Designed, implemented, and maintained highly available set of data center systems and sub-systems
- Architected complex solutions to meet the dynamic business requirements of the Commonwealth agencies.

Skills Summary

Over 39 years experience in the Information Technology (IT) field and is located in Harrisburg, Pennsylvania. Proven record in designing and implementing technology infrastructure for complex information systems including large enterprise systems (System z) and mid-range environments (System i).

Employment History and Related Experience

IBM Corporation, IT Architect 1999 Present

Performed as an IT Architect, supporting the Commonwealth of Pennsylvania agencies in an outsourced business relationship for the past 12 years. Accomplishments include designing, implementing, and maintaining a highly available set of data center systems and sub-systems. Consulted with agency stakeholders to gather their requirements and worked with SMEs to size and design solutions that exploit the functions and feature of the hardware and software in the proposed solution.

- Designed and implemented a consolidated and optimized System z solution that migrated workload from multiple mainframe platforms onto one. In addition, functions such as Group Capacity and Sub-Capacity software were exploited to allow the Commonwealth workloads to gain access to available MIPS in excess of their allocated capacity while at the same time not exceeding software pricing limits
- Designed and implemented a Virtual Tape Server and Automated Tape Library (VTS/ATL) in a peer-to peer environment that provided improved batch throughput, improved availability of tape operations, and optimized the libraries which are shared among multiple different operating systems
- Worked with PennDOT stakeholders to design and implement a virtual Linux environment on the System z mainframe (zLinux). The environment includes multiple LPARs (production, test, and monitor). The zLinux environment provides PennDOT with the capability to move distributed (Unix) workloads onto the same system as traditional mainframe applications to improve throughput and business system resiliency
- Implemented a System z Integrated Information Processor (zIIP). This was a new capability introduced to enable PennDOT and the Department of Revenue to decrease general purpose processor MIPS by offloading select DB2 workload.

IBM Corporation, Systems Engineer 1986 – 1999

Served as a Large System Specialist supporting multiple Commonwealth of Pennsylvania agencies with the planning and installation of mainframe processors, peripherals, and software; assisted agency staff with performance and capacity management activities; served as a project manager and team lead, and successfully managed numerous mainframe, storage subsystem (DASD, tape), and front-end communications processor installations and upgrades.

IBM Corporation, Operating System Programmer 1985 – 1986

Upgraded and maintained MVS operating systems, subsystems, and program products running on multiple mainframe processor complexes (Operating Systems Manager). Managed system configurations and performed system generation activities, identified and resolved problems, and managed capacity and tuned system performance.

Pennsylvania Department of Transportation 1973 – 1986

Held various positions within the IT organization of this Commonwealth agency, including computer operations, database administration, MVS systems programming, and operating systems programming supervisor.

Education

- School of Computer Technology, Pittsburgh, Pennsylvania
- Continuous Technical Education

[redacted]

Agency Infrastructure Architect

Key Skills and Knowledge

- Over 17 years IT experience with the Commonwealth of Pennsylvania
- Consultative requirements gathering
- Infrastructure architecture design
- Agency application knowledge
- Team leadership
- Systems management.

Skills Summary

Over 34 years of Information Technology (IT) experience, has been assigned to IBM Commonwealth of Pennsylvania team since 1996, and resides in the Harrisburg, Pennsylvania area. Led the design and implementation of multiple complex IBM infrastructure solutions for the Commonwealth, including the SAP and Unemployment Compensation infrastructure environments.

Employment History and Related Experience

IBM Corporation, IT Architect 1996 – Present

Supported Commonwealth agencies for 17 years, designing and implementing highly available IT systems and sub-systems. Consulted with business stakeholders and IT technical and operations staff to gather requirements and develop highly available infrastructures and systems management solutions. These solutions reduced the number of data centers and servers and significantly increased server virtualization within the Commonwealth.

Unemployment Compensation Management System Project

Performed as the lead infrastructure architect on the more than $100 million contract with Department of Labor and Industry's Unemployment Compensation Management System (UCMS) stakeholders to design and implement a highly available infrastructure in 2006. This infrastructure supported a major rewrite of their wage, tax, and benefits application to replace a 30 year old mainframe system. Supported change, incident/problem, performance, and availability management, provided infrastructure architecture support and supported daily operational management since 2006 with a high level of customer satisfaction.

Enterprise Datacenter Migration

Served as lead infrastructure architect on the more than $100 million contract for the design, build, and installation of the SAP-ERP environment for the Commonwealth's IES project. Provided infrastructure design consulting with agency stakeholders and managed implementation and migration to the new ERP system for the Commonwealth's Enterprise Data Center (EDC). Managed an eight member team responsible for implementing service levels of the ERP application during the early years of the implementation. Implementation consistently met or exceeded service levels with a high level of customer satisfaction.

Department of Labor Datacenter Migration

Lead infrastructure architect for design of systems infrastructure to support complex, statewide network design and implementation at Department of Labor and Industry. Developed high level design and systems management strategy for systems management pilot. Led Department's data center consolidation analysis and oversaw migration to centralized storage management and backup strategy. As part of the project, multiple data centers (SWIF, BWC, and OVR) were successfully migrated to a single central data center at Harrisburg's Boas Street location, eliminating duplication of operational functionality.

Bureau of Workers' Compensation Project

Team leader for distributed systems management architecture of new infrastructure to support mission-critical application set at the Bureau of Workers' Compensation. Team leader for ongoing integration and architectural support for infrastructure expansion including migration and server consolidation to new platforms. The project was completed on time with a high level of customer satisfaction.

Vocational Rehabilitation Project

Lead architect at Office of Vocational Rehabilitation for statewide, distributed system and application architecture. Performed as deputy Project Manager and provided ongoing architectural support. The solution was implemented on time with a high level of customer satisfaction.

IBM Corporation, various positions 1981 – 1996

Held various positions at IBM including System Engineer, Systems Engineering Manager, Brand Manager, and Critical Situation Manager, and Sales Manager.

Education

B.S., Math and Business Administration, Westminster College – New Wilmington, Pennsylvania

Certifications

IBM Senior Certified Architect – Infrastructure

- Sniffer/Wireshark

Skills Summary

Over 38 years of senior technical, management, and business development experience, including six years with the Commonwealth, covering security, design, consulting, project management, technology assessment, automation, and distributed network architecture. Specialized security expertise with identity, including directory, Identification and credentialing, access control, and identity management.

Capable leader with deep experience overseeing large contracts that ensure compliance with all security standards and requirements and provide strong experience in planning, designing, and implementing complex, large scale networking projects; excellent technical leadership, and hands-on skills.

Effective communication and leadership experience with project teams, clients, and pre-sales engagements. Key client technical interface for multiple large security and identity management planning and implementation projects for critical Unisys clients.

Employment History and Related Experience

Selected Unisys Senior Security Architect Project Experience

Unisys Presales Support 8/2006 – Present

Technical security and infrastructure lead on numerous proposals for the Commonwealth, as well as other proposals for both public and private sector organizations in the U.S. and abroad. Provides technical and delivery risk assessment for numerous proposals and provides input to management for approval to submit bids; used our risk management tools to focus Request for Proposals (RFPs) pursuit decisions on contracts that properly fit the Unisys business model.

Prepared HSPD-12 solution demonstrating FIPS-201 compliance and integration with Enterprise Digital Rights Management and integrating Identity Management solution for demonstration to key DoD prospects. Met their demo requirements within a few short weeks thus enabling Unisys to bid for the work. Worked on large government outsourcing proposal, prepared and completed the SOC, Security Portal, and Incident Management, and Response sections, and successfully transitioned the completed sections to the late-addition security subcontractor.

Pennsylvania State Police 3/2009 – Present

Managed security for new Commonwealth Law Enforcement Assistance Network (CLEAN) upgrade (includes Law Enforcement Message Switch and associated applications), encompassing security policy, access control via CA SiteMinder, and integration with PSP's RSA Adaptive Authentication using a RadiantOne Virtual Directory Server (VDS) as the user repository. Collaborated with JNET technical resources to provide access into CLEAN by JNET users through their Novell Access Manager without additional authentication, opening first-hand access to a whole set of users who previously only had second-hand access. This has enabled deployment of the new Megan's Law application (PA SORT) to its full user base much faster than would have been achievable otherwise, enabling PSP to meet its legislatively mandated deadline.

Upon completion of the implementation project: provide security support for the new CLEAN environment for user access issues (SiteMinder, RSA Adaptive Authentication, and RadiantOne VDS), and more often including a full range of technical and security support. Assist PSP with integrating new applications and access modes to the new CLEAN environment. Collaborated with PSP's Megan's Law section to integrate new Pennsylvania SORT into the CLEAN security infrastructure, since their user bases have extensive overlap; provided the team with general networking support (redundancy and load balancing) enabling their on-time deployment to production.

Michigan DHS May 2011 – Present

Managed security for new Child Welfare System project; guided the resolution of security issues by the project team (including the Unisys Team, DHS, and the State's central Information Technology (IT) organization) and the Office of Enterprise Security (now MCS, Michigan Cyber Security). Confirmed the solution met the security laws, regulations, policies, and standards of DHS, the State, and the relevant Federal agencies or could be put on a path to meet those requirements that were outside of DHS' initial planned scope and budget. Identified appropriate integration between the application's access management and the State's Tivoli-based Single Sign On (SSO) infrastructure; worked with the design team and the SSO team to accomplish goals. Documented the resulting system and user access security models, permitting

- Microsoft Windows NT/2000 /2003/2008 Networking
- Banyan VINES
- SNA.

Databases
- dBase-III/Clipper
- Microsoft Access.

Hardware
- Various Intel Servers
- Sun/HP/IBM RISC Servers
- Proprietary Hosts (DEC, Gould/SEL, Honeywell, Burroughs, ACA/32000).

Operating Systems
- VMware ESX/Workstation
- Windows 95/98/2000/XP/7 Clients
- Windows NT/2000/2003/2008 Servers
- Sun Solaris
- HP/UX
- Red Hat Linux
- IBM AIX
- MS/PC DOS
- DEC VMS
- SEL/MPX-32.

Programming Languages and Tools
- HTML/VBScript/JavaScript
- ALGOL/PASCAL
- Fortran
- APL.

Security Clearance

Interim DOJ - MBI (Minimum Background Investigation), Level 5

Security Certifications

CISSP

GSEC (GIAC Security Essentials Certified – SANS Advisory Board)

the MCS team to more easily document its review and audit of the system's security.

U.S. Department of Justice — December 2008 – August 2009

Provided guidance and assistance to a development group that needed to add single authentication technology to their web site, including requirements definition, architecture, product selection, Proof of Concept, and leading to production. Influenced the development team with a suggestion that would save time, effort, and money while gaining functionality and improving maintainability by deploying a customizable COTS SSO product rather than attempting to code their own single authentication into all of their applications.

Minnesota Office of Enterprise Technology — March 2008 – June 2008

Led team that created a secure state-wide Identity and Access Management plan working through the cross-agency steering team. Ran discovery workshops and created the initial high level conceptual architecture to meet the state's needs; managed final technical and ROI deliverables to the state.

Pennsylvania Governor's Office of Administration — March 2006 – December 2007

Created and documented enterprise Identity and Access Management architecture to enable application of HSPD-12 and FIPS-201 to provide identity credentials for the Commonwealth's employees and first responders, and then to other constituencies, working with the IPAM architecture board. Authored and co-authored several Security ITBs to define the policy framework for a shared infrastructure to facilitate that architecture. With the joint OA/OIT-JNET team updated the Commonwealth's digital certificate policies, especially the Certification Practice Statement, for the Commonwealth of Pennsylvania's Public Key Infrastructure; pushed for guidelines to use internally generated Microsoft certificates when possible to minimize spending on commercial certificates from VeriSign and Entrust.

Investment Management Firm — January 2006 – February 2006

Documented SiteMinder policy administration process and trained Security Administrators to maintain policies. Also reviewed security and access control policies and provided general security recommendations on how to better leverage the in-house access control tools.

Massachusetts Information Technology Division — January 2005 – December 2005

Performed discovery (requirements/environment analysis, architecture, scope definition, and product selection), design, and prototype implementation for a planned shared Identity and Access Management infrastructure for all Commonwealth agencies; documented a recommended governance framework.

Software Manufacturer — April 2005 – May 2005

Analyzed Web Access Management marketplace capabilities; helped client identify capability gaps in its product offerings; presented recommendations and approach to correct the gaps.

Delta Dental — December 2004 – July 2005

Analyzed client's web registration and access management solution, determined how to integrate it with the National Association's portal, recommended a solution acceptable to both the client and the Association; designed, implemented, and tested a Proof of Concept to validate the solution.

Building Materials Manufacturer — July 2004 – August 2004

Helped the client determine how to maximize the use of identity and access management software that had already been purchased but didn't correlate with their requirements or environment (platforms and versions). Enabled new ERP system to go into production on time by meeting their requirements to create and manage user identities and passwords.

Retailer — June 2004 – July 2004

With Microsoft Consulting, reviewed client's in-store technology and recommended migration path using Windows Server 2003 and Windows XP. Also analyzed client's network and recommended future Active Directory design for the store network.

National Television Network — April 2004 – June 2004

Architected and designed semi-custom Identity Management solution for this client that: managed their feed from the corporate employee directory to their internal Active Directory and email; updated the corporate directory with current identity information, including processes and workflows for managing, on-boarding and off-boarding of contractors; managed passwords; managed supervisors' assistants (for delegating workflow approval authorization); created users and managed workstation accounts.

Storage Technology Manufacturer — March 2004 – April 2004

Analyzed proposed use of Microsoft's MIIS meta-directory to manage both internal and extranet identities from client's HR system through their full knowledge management portal; oversaw Unisys consultant's designs for portal directory and MIIS to meet my recommendations.

New Jersey Administrative Office of the Courts December 2003 – February 2004

Performed discovery (requirements/environment analysis, architecture, and scope definition) and design for large meta-directory project, enabled client to begin to coordinate and integrate several user data stores. Identified and documented identity management requirements addressed in future projects.

US Treasury Department March 2003 – August 2003

Supported the client and several application teams; integrated customer-facing Internet applications into a Netegrity SiteMinder and Waveset Lighthouse-based security infrastructure. Recommended and designed upgrades to the security infrastructure to meet the integration requirements of those application teams.

Financial Outsourcer July 2001 – September 2001; September 2002 – October 2002

Collaborated with client application teams (marketing, customer service, and development); integrated customer-facing Internet applications into a SiteMinder security infrastructure. Recommended and designed upgrades to the security infrastructure to meet several application integration requirements.

Delivered operational support for client's security infrastructure and application integrations; accomplished initial load testing and analysis to identify possible bottlenecks as the infrastructure scaled, and recommended enhancements to mitigate those bottlenecks.

Employment History

- Banyan Systems/ePresence/Unisys (via name change and acquisition) .....1992 – Present
- Advanced Computer Applications.....1987 – 1992
- Macro Corporation .....1982 – 1987
- Scott Paper Company.....1976 – 1981
- Westinghouse Electric Company .....1974 – 1976

Education

- BS, Engineering and Applied Science, Yale University, 1974
- MSE, Systems Engineering, University of Pennsylvania, 1980

Professional Certifications

- CISSP, ISC2, Issued 10/2008, #317949
- GSEC (SANS/GIAC Security Essentials Certification), 10/2005 and 10/2009, #550097

Professional Development

- Directory Services, including iPanet and OctetString (now Oracle), Microsoft, IBM (Tivoli), and Radiant Logic; building on Banyan's StreetTalk Directory Service to become proficient with other LDAP-based directories and virtual directories for design, installation, and appropriate usage, 1997-2010
- Metadirectory Services from ISOCOR (included in products by Critical Path, iPlanet, and Sun) and Zoomit (purchased by Microsoft and now part of Forefront Identity Manager), design, installation, and appropriate usage of these tools for integrating disparate directory services, 1999-2004
- Web Access Management tools from Netegrity (now CA SiteMinder) and IBM (Tivoli Access Manager), design, installation, and appropriate usage of these tools for providing Single Sign-On while protecting web sites, 1998-2004
- Identity Management tools from Netegrity (now CA IdentityMinder), Sun, IBM Tivoli, Microsoft, and Novell; design, installation, and appropriate usage of these tools for managing user accounts across multiple user repositories with both administrator control and self-service, 2002-2008
- IBM Rational tools and processes, to understand and follow the project lifecycle methodology, 2005-2006
- SANS Security training, in-depth and pre-certification training, 2005-2010
- Sestus Virtual Token Multi-Factor Authentication, design, installation, and integration of this tool with Web Access Management tools, 2009
- RSAM, design, installation, and appropriate usage of this tool for managing Risk and Compliance, 2009
- Ounce Labs (IBM) Static Application Security Testing Suite, now part of IBM AppScan, design, installation, and appropriate usage, 2009
- Unisys Stealth Solution for Networks, design, installation, and appropriate usage of this tool for protecting network traffic by Community of Interest, 2010.

Other Accomplishments

- SANS Advisory Board
- GIAC Test Author
- SecureWorld Philadelphia Steering Council
- IJIS (Integrated Justice Information Systems) Institute Security Advisory Committee
- Presented Master's Thesis ("Real-Time Algorithms for Multiple Missile Evasion: A Game Theoretic Approach) at the 1979 Pittsburgh Conference on Modeling and Simulation and the 1979 International Conference on Information Sciences and Systems in Patras, Greece.

UNISYS

[redacted]
Financial Manager

Key Skills and Knowledge

- Clear understanding if the billing process including accounts receivable and accounts payable
- Diligently supported consolidation of billing reports into a single invoice
- Designed and implemented many process improvements for the oversight of billing
- Recipient of a Unisys Excellence Award.

Skills Summary

Over 25 years of financial management experience using analytical, goal oriented, profit driven skills; supported the Commonwealth for 13 years at Harrisburg. Consistently achieved financial objectives set forth by directors; extensive experience overseeing billing activities; single invoicing processes, and consolidation of the billing process to reduce steps and cost of processing. Diverse range of managerial responsibilities in both field and corporate job functions. Demonstrated managerial proficiency with a proven ability to develop and train staff.

Employment History and Related Experience

Manager, Commonwealth of Pennsylvania, Harrisburg, Pennsylvania 1999– Present

Financial Analysis

Provides financial management support for the outsourcing contract with the Commonwealth of Pennsylvania; delivers financial management and billing oversight for several Unisys internal organizations and subcontractors (including IBM and Bell Atlantic) in accordance with the financial plan; improved the support provided to retained staff at Commonwealth of Pennsylvania for planning, change orders, and pricing of new scope proposal.

Coordinates financial analysis, report consolidation, new business pricing analysis, billing, cash collections, receivables, inventory control, and facilities; Reduced costs involved in inventory control by improving the collection methods and unifying the various sources of data.

Extensive experience delivering consolidated single invoice reports to the Commonwealth, improved the delivery model to remove redundant information bringing increased accuracy for last minute edits; improved packaging tools providing positive confirmation all components were present before transmission to the Commonwealth.

Business Operations Data Center, Cherry Hill, New Jersey 1992 – 1999

Manager

Delivered financial management and invoicing for the Unisys Cherry Hill Outsourcing Service Center including; financial analysis, reporting, new business pricing analysis, billing, cash collections, receivables, inventory control, and facilities; supported migration of clients to [redacted] MN data center as part of Unisys data center consolidation.

Key executive in transition process of migrating clients to and from the data center; expanded outsourcing revenue four-fold during the period 1992 through 1996; and increased client base from one client in 1992 to 10 clients in 1996.

Financial and Asset Control Government Systems, McLean, Virginia 1986 – 1992

Manager

Managed the Department of Defense income statements and balance sheets for the Unisys Government Systems Division; managed billing, invoicing, and processing of financial statements; directed activities of the billing and accounts receivable organizations to improve cash collections and maximize balance sheet impact.

Financial Strategy Customer Services Division, Blue Bell, Pennsylvania 1982 – 1986

Manager

Responsible for the establishment and analysis of software, service, and maintenance profit plans and actual reporting for a $1.1 billion division. Improved system analyst productivity trends, eliminated deficiencies, and identified opportunities to increase revenue.

Employment History

- Manager, Business Operations / Commonwealth of Pennsylvania, Harrisburg, Pennsylvania 1999– Present
- Manager, Business Operations Data Center, Cherry Hill, New Jersey 1992 – 1999
- Manager, Financial & Asset Control Government Systems, McLean, Virginia 1986 – 1992
- Manager, Financial Strategy Customer Services Division, Blue Bell, Pennsylvania 1982 – 1986
- Various Financial Analyst positions, Blue Bell, Pennsylvania 1972 – 1982

Education

- Masters of Business Administration, Temple University, Philadelphia, Pennsylvania, International Business, 1978
- Bachelor of Science, LaSalle University, Philadelphia, Pennsylvania, Accounting, 1971

Certifications

- ITIL V3 September 2012

UNISYS

[redacted]

Financial Analyst

Key Skills and Knowledge

- Wide range of billing experience and accounts receivable experience
- Supported the creation and improvement of consolidated billing processes for clients
- Solid background in single invoice processing for large clients.

Awards

Recipient of the Unisys Excellence Award and Silver Recognition Award for Unwavering Customer Commitment.

Skills Summary

Worked in Finance and Accounting since 1977, supported the Commonwealth for 14 years; committed to accountability, accuracy, communication and timelines. Provided extensive billing support for customers, has contributed immensely to the improvement of billing processes and procedures.

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania, Harrisburg, Pennsylvania 1999–Present

Project Controller / Financial Analyst

Provides project control (financial) and all financial reporting related to the $100 million per year outsourcing contract with the Commonwealth of Pennsylvania. Delivers financial reporting and analysis for corporate, local management, internal auditors, and external auditors; accomplishes a wide range of activities including; journal entries, internal billing, external billing, revenue recognition, cash collection, receivables, and asset database entries.

Prepares price impacts for the 21.01A Fee Schedule to support RFS and change order process. Developed internal processes to confirm the change order impacts agree with the timing used in the Commonwealth Invoicing Program. Confirmed the 21.01A Fees Schedule was revised after customer signature of change order.

Took positive steps to accomplish change orders in Unisys system and support ordering of any equipment or software related to signed change order. At time of invoice, established processes to use current fees schedule when producing an integrated 'single invoice' for the Commonwealth. Additionally, these processes maintained alignment of internal Unisys invoices with the invoice sent to the Commonwealth.

AMP, Inc., Harrisburg, Pennsylvania 1997 – 1999

Financial Analyst

Created the consolidated version of the P&L reports and the Fixed Asset reports; maintained an asset pricing and management tool used enterprise-wide. Used Visual Basic to revise the Fixed Asset tool, incorporated corporate investment and profitability targets, improve efficiency of data entry, and extended management utility of the tool for the user community.

AMP, Inc., Valley Forge / Harrisburg, Pennsylvania 1983 – 1997

Pricing Accountant

Coordinated with internal and external users to generate pricing product packages; oversaw the run stream of all price books – both online and in print.

Researched and generated pricing on bulk and packaged items based on costs retrieved from various internal and external sources. Developed processes to organize and identify the customer specific items with unique packaging, labeling, or pricing structures. Reached out and forged professional relationships to accelerate the coordination of everything from pulling pricing from different internal divisions, to working with internal and external print shops, to verification, to large-scale mailings to customer database. Developed and published customer segment price books one to two annually.

Philadelphia Gear Corporation, King of Prussia, Pennsylvania 1977 – 1983

Accountant

Supported all assigned accounting activities including general ledger, cash, and P&L reporting. Maintained data content in various manual general ledgers including cash, investments, assets, liabilities and profit and loss accounts. Confirmed accuracy of cash transactions with banks, resolved numerous errors; submitted all monthly Balance Sheet and Profit and Loss analysis.

Employment History

Skills Summary

Operations Management: Driving excellence in service delivery, account management, resource management, transition resource management and profit optimization through best in class Leadership, governance, collaboration, and innovation.

Certified Six Sigma Lean Black Belt: Providing leadership, Six Sigma principles, Lean principles and project management skills in determining process waste, root causes analysis, process improvement opportunities, improvement implementation through standard work processes, and making sure metrics and controls are established and maintained through leader standard work. Program savings are driven and supported through extensive financial experience and skills.

Employment History and Related Experience

Operations Management, Global Managed Services, North America 2011 - Present

Provided Leadership and Management for over $650 million Information Technology (IT) Managed Services organization. Directly responsible for over $20 million annual profit improvement in 2011 and 2012 through extensive workshops and best in class governance. Provided operations management for account management organization with more than 100 clients, while driving 98 percent achievement of over 1,000 SLAs and over 40 KPIs. Customer CSAT is at the highest level in four years. Facilitated client business planning and Continual Service Improvement workshops for key accounts. Provided resource management and leadership for 5,100 employees onshore and offshore, including requisition approval, contractor furlough, extensions, and conversions. Reengineered numerous operational processes, and leveraged offshore resources to streamline operations by more than30 percent. Key leader/contributor in driving overall NA profitability to all-time highs in 2012 in a highly leveraged and matrixed outsourcing organization.

Quality Project Management Experience

Commonwealth of Pennsylvania, Account Process Optimization Workshop 2012

Provided senior leadership and Kaizen facilitation in 2012 Commonwealth of Pennsylvania Process Optimization workshop. Analyzed client business objectives, identified opportunities to meet client expectations, reviewed contractual billing requirements, delivery processes, and implementation schedules. Identified server technology, discovery and mapping tools, security architecture, and VMware opportunities. Reviewed and implemented process efficiencies in ITSM7 implementation, c-RIM ADDM tool implementation, and ITIL data center processes. Specific outputs and deliverables were: improved client satisfaction, enhanced process and tool functionality, and streamlined ITIL delivery processes.

Commonwealth of Pennsylvania, ITSM7 Transition Kaizen Workshop 2009

Managed and facilitated Kaizen workshops to transition Commonwealth of Pennsylvania from Remedy 6.3 to ITSM7. Specifically conducted a gap analysis for c-RIM, incident management, problem management, and change management. Gaps existed in 66 percent of the standard ITIL processes. Created detailed implementation plan to identify Unisys Roles and Responsibilities, Commonwealth responsibilities and dependencies, Partner dependencies, and associated risks. ITIL process improvements were identified in the configuration management database, change management CAB improvements, incident severity definitions, and Incident ticket creation policies. Clearly defined specific impacts, risks, associations, and interrelationships/touch-points for each ITIL process. The results were a detailed implementation plan which allowed for the smooth transition of the Commonwealth from a Remedy 6.3 to the ITSM7 infrastructure. This implementation significantly enhanced the service management capabilities while implementing an ITIL best practice framework for service management.

Billing Improvement Lean Kaizen and Leader Standard Work 2009

Facilitated the NA Billing Kaizen workshop. Process mapped current processes, identified waste, process mapped improvements, implemented improvements and appropriate controls. Driving six sub-teams to address the entire end to end billing improvement processes. Working collaboratively with Field operations and off shore GOIS maintenance administration. Identified $530 thousand, year to date, in additional revenue by assigning $100 thousand quotas to the CSMs. Implementing U-ACT changes to simplify maintenance proposals and verify that maintenance is always proposed and contracted for if there is a maintenance Price. Implemented over 15 standard work processes and over six leader standard work processes to drive cultural change and continuous improvement. Improved the maintenance price increase process and the contract expiration, warranty only expiration, and warranty upgrade expiration reporting.

- Knowledge Management: SharePoint
- Service Delivery Scheduling
- Business Objects Reporting
- Hyperion Reporting.

Piloting three party Purchase Order process improvements to validate Kaizen improvements identified. Improving retroactive cancellations and improving the billing cycle time through collaborative standard work processes and leader standard work. Built significant rapport and working relationship with key stakeholders and driving leader standard work within the GOIS service delivery management structure. Working to coordinate the end to end billing process and the GMA/TPC integration process to confirm that all key metrics and processes are addressed and there is no overlap. Implementing the billing improvement findings within ITO and INTL.

Forecasting Accuracy Kaizen 2008

Forecasting was significantly improved from a ten percent adverse revenue impact in 3Q08 to a positive revenue impact of 4 percent. This was a significant increase in revenue forecasting accuracy. Proactively interfaced with the Kaizen Team to establish the quick win goals, specific actions, timelines, deliverables, and controls. Innovative ideas were immediately implemented. Removed escalations and internal meetings from the CSM's role in order to transform their responsibilities to include client account management. Discipline was evident through extensive communication sessions to confirm all objectives and actions were understood clearly and timelines kept. The results were the beginning steps in transforming the CSMs from a purely service delivery role back into a client facing service manager who is proactively working with their clients in managing the business. Forecasting accuracy has been maintained within three percent throughout each month in 2009.

Infrastructure Support Services Account Profitability Improvement 2008

Worked aggressively with the core WW ISS team to analyze the current state, determine the go forward strategy, provide a governance process to manage the change, Implemented specific action plans for over 20 accounts to generate API profit improvement. Achieved $2.1 million of P&L savings on a $1.8 million target for multi-vendor services accounts. Conducted extensive work on the burden allocation model. Refined the model to be more accurate for Field operations. Worked directly with each theatre and API lead to verify accuracy and effective utilization of the model in resetting full year targets. Developed program governance, program improvements, lessons learned, to provide continuous controls and improvements to the API process.

NYC Transit Appointment Booking and Scheduling Software 2008

Conducted extensive analysis with NYCT management to identify ways to improve client satisfaction, provide greater visibility to SLAs and Call types, Improve management of customer service technicians and identify resource efficiencies to improve client P&Ls. Used Six Sigma Lean principles to reduce backlog, improve SLAs, increase CIR efficiencies, and standardize process and tools. Developed process maps and metrics to measure backlog, call volumes, closed calls per technician, and Average technician time. Analyzed monthly data to determine effectiveness within the campus environments, busses, subways, and normal replacement processes. Analyzed the bid model vs. the current 1Q08 actuals. Implemented click scheduling on the campus environment, a new management structure to manage CIRs, implemented CIR tools: PDAs, service console, paging, electronic CSOs, and Bomgar remote support. Implemented significant control reports to manage processes on a daily basis: Daily CIR IPC reports, weekly reports, trending reports for closed calls per day, backlog, incomplete calls, missed calls, and average technician time per CIR. A significant finding was that staffing needed to be based on the third busiest day versus the overall average to cover the variability in daily call volumes. This level of staffing would allow for peak periods and in maintaining a very low backlog of open calls. Increasing the average calls closed per day to above six would account for the five HC targeted. Finally average technician time was analyzed to determine additional opportunities to improve CIR productivity, establishing best practices and using creative resourcing for high volume days.

Amgen Appointment Booking & Scheduling Software 2007

By applying SSL principles along with strong leadership and communication skills, successfully reducing the Amgen headcount from 34 to 19, thus improving the account profitability by $780 thousand annually and streamlining the service delivery processes. The reduction in headcount and increased service delivery efficiencies has been successfully maintained while continuing to receive high client satisfaction ratings. The success of this project demonstrated to the GOIS service delivery management that the appointment booking processes and click software can be successfully implemented in an Information Technology Outsourcing (ITO) account, with dedicated CIRs vs. a shared resource pool serving multiple accounts. Driving change and creating value was demonstrated through strong leadership and communication. Communicating the facts, showing the inefficiencies and opportunities, through process maps and data analysis allowed the Amgen team to focus on problem resolution. Working collaboratively with the Amgen team to overcome barriers built much needed trust. Effective use of control reports convinced the team of the proven value and effectiveness of the appointment booking process, the click software, and SSL

principles being applied.

Divestiture Project 2007

Drove significant change, created a result that was extremely valuable, and demonstrated extensive creativity and leadership in applying SSL and 3D-blueprinting processes and methodologies. I was able to complete the functional responsibilities of the Finance Director for a divestiture and proactively leverage my SSL knowledge and skills to create a detailed documented Divestiture Process. The finished document provided corporate treasury with the following results: documented divestiture goals and hierarchies, documented divestiture rules and dependencies, defined specific implementation actions, documented accurate process maps - Finance, identified specific issues and risks, Established standards and controls for future divestitures, improved negotiations and forecasting, a framework for increased profits from repeatable and consistent, documented divestiture methodologies. Provided a Communication Plan by creating a SharePoint portal for corporate development/treasury where all of the divestiture documentation resides. Also developed links to specific divestiture SharePoint sites for greater Program specific details. Provided a 100 page divestiture book to corporate treasury/development: Outlined the contents; how to use it for future divestitures; and leverage the knowledge learned to create efficiencies in future divestiture processes.

EMC Mean Time to Repair 2006

By using SSL tools and processes we accomplished the project's goal to reduce the Mean Time To Repair (MTTR) in Asia from 3.2 hours in 2005 to 2.3 in 2006 and in Europe from 2.4 in 2005 to 2.1. This resulted in $500 thousand per year in productivity improvements and savings. More importantly the SSL methodology drove extensive changes and created value within EMC and UIS by: listening to the voice of the customer; looking at process changes based on data driven results vs. assumptions; improving communications and collaboration. EMC and UIS changed multiple processes and methodologies in improving service delivery and client satisfaction: targets were established for MTTR that are measured and tracked; process changes within EMC's Help Desks were implemented; improvements into EMC's tools and diagnostic were launched; UIS service delivery processes were improved; and UIS marketing and sales to EMC are leveraging SSL by demonstrating Unisys' commitment to quality through the use of SSL. These changes and value are a direct result of strong Leadership and excellent communication skills in driving Unisys operating principles and SSL culture within the EMC project.

Director of Finance 2005

Managed enterprise maintenance pricing for $1billion Global Service line. Used Industry data in setting competitive pricing. Developed and implemented a transaction based client profitability tool that provided clear easy to use reporting to understand client profitability, product profitability, average technician time productivity reporting and process controls. Developed Risk Management analysis and confirmed that the Enterprise Service Delivery processes and P&Ls were Sarbanes Oxley Compliant.

Delivery Project Executive

Key Skills and Knowledge

- Leadership
- Communication
- Over 10 years Commonwealth experience
- PMI Certified
- ITIL Certified

Skills Summary

Experienced leader with strong professional, interpersonal and communication skills. Adept at leading teams to adapt technology tools to address problems. Known for achieving results in situations involving large, matrix-based organizations to meet client objectives. Over 10 years supporting the Commonwealth of Pennsylvania agencies.

Employment History and Related Experience

IBM Global Technology Services, Harrisburg, Pennsylvania 2002 – Present

Commonwealth Delivery Project Executive

Managed the delivery of service using 60 Full-Time Equivalents from 30 departments in support of the Commonwealth's IBM operating system platforms (z/OS, z/VM, z/VSE, Linux on System z, iSeries, and AIX) included in the IBM scope of the Unisys Data PowerHouse (DPH) contract.

- Managed the team supporting multiple Commonwealth agencies, which included systems management, and operations support to achieve outstanding service level and customer satisfaction results
- Managed contracts of ISVs and monitored progress with monthly reviews to ensure billing accuracy
- Implemented successful continuity planning and testing processes, leveraging success as a model for test scenarios on other contracts.

IBM Global Services, Allentown, Pennsylvania 1999 – 2002

Senior Delivery Manager Agere Systems

Managed high quality delivery of Windows and Unix desktop support, Windows NT and Unix server services and hardware maintenance for 5000 end users and 700 servers located across the United States.

- Directed nine departments and over 200 staff members. Implemented TCO review that identified over $2 million in customer cost savings
- Supported development of new contract proposals, included a new event-based model for EUS service delivery
- Developed strong team of subcontractors to effectively deliver support required by the contract.

IBM Global Services, Reading, Pennsylvania 1997 – 1999

Service Delivery Manager

Managed desktop and Windows NT/Unix server support department at three different customer locations.

- Recognized for nurturing the professional relationships necessary to confirm the successful delivery of technical infrastructure to support the Lucent Microelectronics division global Oracle application suite deployment
- Implemented local metrics and peer reviews for managing desktop installation processes, owned compliance audit responsibilities and maintained consistently low past-due ticket counts.

Additional Employment

- IBM, Quality Engineer, Research Triangle Park, North Carolina, 1994 – 1997
- IBM, Industrial and Quality Engineer, Poughkeepsie, New York 1986 – 1994
- IBM, Resource Planning Manufacturing Engineer, Lexington, Kentucky 1982 – 1986

Education

- M.S. Mechanical Engineering, Penn State University, 1982
- B.S. Mechanical Engineering, Penn State University, 1981

Certifications

- Project Management Professional, Project Management Institute #03217, 1994
- ITIL V3 Foundations Certification, 2012; IBM Certified Delivery Project Executive, 2012

IBM Project Executive

Key Skills and Knowledge

- Experienced Project Executive
- Contract governance and customer satisfaction
- Transition and tranformation management
- Certified Project Management professional
- Over 15 years experience managing multi-tower IT outsourcing agreements
- Over five years experience supporting the Commonwealth of Pennsylvania.

Skills Summary

A seasoned IBM Project Executive located in the Harrisburg, PA area with over 30 years of experience in leadership positions, contract governance, project management, customer satisfaction, and new business growth in IBM.

For over 15 years, career focus has been in Strategic Outsourcing (SO) delivery and project management supporting multiple tower Information Technology (IT) outsourcing agreements that included:

- Data center operations, mainframe server management and print servers
- Midrange server management, service desk, and end-user support
- Network services and application maintenance services
- State and local government, and healthcare, insurance, and telecommunications industries

Employment History and Related Experience

IBM Corporation, Harrisburg, Pennsylvania 2012 – Present

Project Executive

Manage the IBM scope of the Unisys Data PowerHouse (DPH) contract, which includes service delivery for data center services: mainframe (z/OS, Linux on System z), iSeries, AIX and disaster recovery for multiple agencies within the Commonwealth.

- Successfully improved the quality of deliverables, operations compliance and overall contract performance to meet customer requirements and service levels
- Considered to be the leading developer of new business to meet business goals and changing objectives of the Commonwealth.

IBM Corporation, Multiple Locations 2011 – 2012

Project Executive,

Short-term/interim Project Executive for five Public Sector, healthcare accounts.

- Focused on contract governance, delivery of services, and transformation activities
- Successfully transitioned responsibilities to replacement Project Executives

IBM Corporation, MTA-New York City Transit, New York, New York 2005 – 2011

Project Executive

Managed delivery of data center services including mainframe, midrange, network, help desk, and disaster recovery. Responsibilities successfully performed included contract startup, development of consumption-based billing model, transition of six agencies into the IBM data center, and transformation activities post-data center migration.

- Transitioned into the scope of services a newly formed agency that used Linux virtual machines in support of a PeopleSoft ERP system as a shared service for its customers
- Negotiated an extension to the existing contract in 2010 for an additional three years, which included a new methodology to track and bill midrange services, which provided savings to the customer over the new term.
- Improved overall service level attainment throughout the life of the contract
- Implemented a tape encryption solution to address the State of New York mandate for securing portable media.

IBM Global Technology Services, Harrisburg, Pennsylvania 2000 – 2005

Deputy Project Executive

Provided direction to project office staff and the delivery organization in support of data center services to the Commonwealth of Pennsylvania agencies.

- Effectively performed gathering customer requirements, proposal development, and project planning with responsibilities associated with delivery of services and new business growth
- Managed the transition of services for two of the seven agencies migrating into the Data PowerHouse.

IBM Global Services, Philadelphia, Pennsylvania 1999 – 2000

Delivery Project Executive

Accountable for the overall delivery and fulfillment of the contract deliverables, including the transition of services for support of the help desk, desk-side services, network, and data center operations. Developed the transition and transformation plans to support the ACE-INA move to IBM, and set up the initial program office support structure.

IBM Global Services, Allentown, Pennsylvania 1996 – 1999

Senior Delivery Manager,

As a senior manager, led a team of 300 staff, including 12 managers, to support the Lucent Technologies IT services agreement in Allentown and Reading, Pennsylvania, and Berkley Heights, New Jersey.

- Led the transition of services for the Microelectronics division from Lucent to IBM, which included on-boarding of the Lucent employees hired by IBM as part of the contract
- Managed the Y2K project for Microelectronics.

IBM Software Solutions, Pennsylvania and Colorado 1981 – 1995

Multiple Positions,

Held multiple positions, including management positions, in IBM Software Manufacturing Solutions (a division of IBM to support the manufacturing of software media and publication materials).

Education

- Attended Regis University, Denver, Colorado

Certifications

- IBM Certified Project Executive since 2007
- IBM Certified Project Manager – Executive since 2001
- Project Management Professional (PMP) since 1997

Annually, IBM employees are required to certify that they have read, understood and will comply with the IBM Business Conduct Guidelines (BCG). An excerpt of the section concerning conflicts of interest, assisting a competitor and competing against IBM follows:

> Conflicts of Interest
>
> A conflict of interest occurs when you advance a personal interest at the expense of IBM's interests. Some conflicts of interest can be avoided through careful foresight and planning. Others are unavoidable. In some cases, the mere potential for or perception of a conflict can be problematic. It is up to you to avoid situations in which your loyalty may become divided. Some common conflicts are addressed below.
>
> Assisting a Competitor
>
> An obvious conflict of interest is providing assistance to an organization that markets products and services in competition with IBM's current or potential product or service offerings. You may not, without IBM's consent, work for such an organization in any capacity, such as an employee, a consultant or as a member of its board of directors.
>
> Competing against IBM
>
> Also prohibited are individual pursuits that could conflict with IBM's current or future business interests.

A violation of any IBM guideline can result in disciplinary action, including dismissal.

The IBM employees whose resumes have been included in this submission have:

- Been reminded of their obligations under the IBM BCG; and
- Approved of the inclusion of their resumes.

IBM Project Executive

Representative Resumes

This tab contains all of the Representative Resumes that were requested in sections of Schedule F. The table below is organized in alphabetical order by project role. The table lists requested roles first followed by additional positions for Commonwealth consideration. In each project role, the named individual representative resumes are listed in alphabetical order. All resumes under this tab are organized in alphabetical order by last name providing you easy access to the specific resumes you wish to view.

AIX Administrator

Key Skills and Knowledge

Operating Systems

- IBM AIX 4.3.3
- 5L, 5.2, 6.4
- SunOS 5.X
- Solaris, Windows/NT 2000
- 2000 Server
- 2003 Server
- IBM/MVS Mainframe
- Novell 4.11
- Cisco

Hardware

- IBM RS6000 PSeries and ESeries P615,P6C3, P6E3, S80, M80, H80, P610, PC1, P6E1, P620, P630, P690 via HMC console
- ESeries 7017, 7025, 7026, 7028
- servers HP ProLiant servers
- Compaq NT servers
- Sun
- Cisco 8500's switch
- DLT tape jukebox
- Sun UltraSparc
- Sun V120, V240, V490, V890, Sun 6800, T2000

Software

- Windows NT 4sp5
- Novell
- Cisco Catalyst
- Apache Web server
- IBM including Tivoli
- TSM
- running 3rd party SW such as ESM, SSH,
- MS Office
- Backup SW Veritas
- NETBACKUP
- LEXANDRIA
- CA
- MacAfee Anti-Virus
- Oracle v7 - v8
- Hummingbird
- Lotus Notes
- DNS/NIS+

Professional Summary

A seasoned Systems Administrator specializing in UNIX / AIX environments. Has experience with backup/recovery, networking, and a number of server architectures. Has been responsible for the planning and installation of complex multi-vendor environments. A versatile Information Technology (IT) Specialist who has also been responsible for data center operations.

Employment History and Related Experience

Aqua America, Systems TSM Administrator, 2011 – 2012

Responsibilities included TSM administration for disaster recovery planning, vault rotation, AIX administration that includes upgrades, hardware and software updates (third party installs).

- Provided user management and security management.

Bank of America, Systems Administration, Production Control, and Engineering, 2007 – 2010

Responsibilities ranged from Tivoli maestro scheduling to correcting failures in an AIX environment which required root access.

- This position was developed to have a continual problem determination operation.
- Had access to maestro user which ran as root.
- The decision was made not to Sudo the ID.
- Responsible for IBM PSeries servers.
- Responsible for AIX. Additionally, I was responsible for Tivoli Suite running Maestro scheduling with WEBADMIN on AIX servers with clients consisting of, HACMP, LPAR with HMC console control, Standalones, Blades, SAN, EMC assistance, Oracle, DB2, SAS, Abinitio, and Veritas Netback.
- Managed the operating systems Maestro file systems/TSM.
- Developed and planned File space utilization for the software.
- Handled all account ID and group IDs.

Lancaster General, System Administrator, 2006 – 2007

Provided basic AIX system maintenance and performance monitoring utilizing home grown tools at that location.

- Supported Docitweb and Work Load Manager which included on-call rotation every other week

IBM

Resource 1

AIX Administrator

- Abinitio
- SAS
- ORACLE
- DB2

- Responsible for the resolution of performance issues caused by application runaway processes, file system maintenance, disk replacements, and TSM issues
- Supported HW such as M80, H80, P610, PC1, P6E1, P620, 7026 2028, LPAR, and HACMP failovers

IBM, Sr. System Administrator, 2006 – 2006

Supported the installation and administration of a multi-platform environment.

- Responsible for daily upgrades.
- Responsible for file system creation, performance issues, and third-party installations. Hardware included P615, P6C3, P6E3, S80, M80, H80, P610, PC1, P6E1, P620, P630, P690 via HMC console, ESeries 7017, 7025, 7026, and 7028.

JP Morgan, Sr. System Administrator, 1988 – 2006

As a systems administrator, assisted with the ordering the hardware with the project manager in accordance with the client's requirements.

- Responsible for capacity planning and SSA/external SAN conversions
- Installed operating system, configured the network, and set up file systems accordingly along with all applications and Backup solutions (Tivoli Storage Management)
- Maintained and utilized Kornshell scripts
- Supported the development / QA / Production environments. Hardware included P615, P6C3, P6E3, S80, M80, H80, P610, PC1, P6E1, P620, P630, and P690 Eseries 7017, 7025, 7026, and 7028
- Responsible for the installation and maintenance (LPAR via HMC Console)
- Responsible for all 3rd installations including SAP, running with Oracle 9I
- Responsible for backups and disaster recovery architect utilizing Alexandria, NetBackup, and Veritas software
- Worked closely with the DBAs for backup solutions and restores
- Reported Performance Monitoring and Disk / Memory Utilization
- Responsible for capacity and memory vs. CPU utilization. This was significant considering the disk farm utilized was over 400 Terabytes of data shared by many lines of business
- Responsible for reporting the following on a weekly basis:
  - Multi-resource monitoring and tuning including capacity planning
  - CPU-related performance (vmstat, iostat, topas, and sar)
  - Memory-related performance(vmstat, topas, ps,and lsps)
  - Disk I/O-related performance (iostat, lvmstat, lsps, lsattr, and lsdev)
  - Network-related performance (netstat, iostat, topas, enstat, and ifconfig)
  - Performance tracing when required (ps, pstat, and topas)

Resource 1

AIX Administrator

- Workload Manager installation and modifications when applicable (wlm)
- Transmissions across a multi-platform environment

- Responsible for handling transmission issues between UNIX, Mainframe, Windows, and Sun hardware and software
- Monitored production support.
- Responsible for cause and analysis.

Chilton Company, Shift Supervisor/Data Center Manager, 1985 – 1989

Supervised five Computer Operators. Became the Shift Leader and ultimately was promoted to Shift Supervisor.

- Maintained throughput of the mainframe
- Coordinated new and existing systems between operators and programmers
- Solved mechanical problems with prints, tape driver and printers

Pennsylvania Manufactures Association of Pennsylvania, Computer Operator, 1980 – 1985

- Maintained throughput of all systems.

Education

- Southern Methodist University, Dallas, TX
- Pierce Junior College, Philadelphia, PA

AIX Administrator

Key Skills and Knowledge

- AIX
- HACMP
- Virtualization
- VIOS
- SEA
- Etherchannel
- HMC
- TCP/IP
- Power7
- LPARs
- Ksh
- Perl
- Nagios
- HTML
- WebSphere
- Wily
- NetView

Professional Summary

20 years of systems administration experience delivering network engineering, administration, and development. Skilful engineer, considered to be a subject matter expert for AIX issues. Develops tests and maintains business recovery plans, plans and implements tape-less Tier-1 recovery systems. Implements automated system configuration documentation, implements SNMP server monitoring, provides clear technical documentation and written procedures for operations. Skills include:

- Troubleshot and perform root cause analysis of server hardware, software, and network issues using tools such as nmon, topas, tcpdump, iptrace, errpt, and system diagnostics
- Plan and implement SAN storage for AIX servers, including sizing of LUNs, HBA redundancy, load balancing, and elimination of SPFs; accomplish capacity planning, performance monitoring, and tuning
- System architecture design of complete TSM solution including servers, networks, ProtecTier/VTL, IBM 3500, and Brocade switches
- Teach public and private CNME, NetView, and Nways courses throughout the USA and abroad, including China, India, Australia, England, Canada, Puerto Rico, Jamaica, Brazil, and Israel
- Certified network management consultants and administrators worldwide.

Employment History and Related Experience

Unisys Corporation, Systems Administrator-1,
Harrisburg, PA 2011 – Present

Responsible for more than 100 P7 servers in a multi-tiered highly available, redundant environment.

- Install, configure, and administer:
  - P7 LPARs, HMC, VIO, SEA, LHEA, and paging spaces
  - AIX PowerHA in a active/standby configuration
  - NFS, DNS, Kerberos, and SNMP
  - Network redundancy using Etherchannel and 802.11q, tagged VLANS
  - MQ monitoring with custom scripts.
- Develop, test, and maintain business recovery plans using NIM and Shadow Copied storage for tapeless recovery of Tier 1 systems.
- Implement automated system configuration documentation with cfg2html for audit and compliance.
- Implement SNMP server monitoring through custom scripting.
- Provide clear technical documentation and written procedures.

UNISYS

Resource 2

AIX Administrator

- Upgrade the firmware of power frames, HMCs, and PCI cards.
- Provide 24/7/365 on-call support.

First Citizens Bank, Systems Engineer Consultant,
Raleigh, NC 2001 – 2011

Senior AIX system administrator and engineer responsible for more than 100 P4 through P7 servers in a multi-tiered highly available, redundant environment.

- Accomplished installation, configuration, and administration of:
  - AIX HA-CMP in a multiserver mutual takeover configuration
  - P5, P6, and P7 LPARs, HMC, VIO, SEA, LHEA, and paging spaces
  - NFS, DNS, SNMP, and Advanced Shell scripting using ksh, and Perl
  - Hitachi and IBM (N and XIV) SAN storage with multipath software
  - High availability networks using Etherchannel and 802.11qand tagged VLANS
  - Tivoli Storage Manager (TSM) 6.2 server
  - MQ, WebSphere, WAS, and Apache Web servers
  - Tivoli Key Lifecycle Manager (TKLM) for IBM tape library encryption.
- Troubleshot and performed root cause analysis of server hardware, software, and network issues using tools such as nmon, topas, tcpdump, iptrace, errpt, and system diagnostics.
- Planned and implemented SAN storage for AIX servers, including sizing of LUNs, HBA redundancy, load balancing and elimination of SPFs; accomplish capacity planning, performance monitoring, and tuning.
- Designed the system architecture of a complete TSM solution, including servers, networks, ProtecTier/VTL, IBM 3500, and Brocade switches.
- Developed, implemented, maintained, and documented backup procedures and business recovery plans for AIX systems; provide clear technical documentation and written procedures.
- Implemented automated system configuration documentation to address audit requirements.
- Implemented automated backups of VIO server configuration using ssh keys, nfs, and crontab.
- Created scripted HMC builds for adding LPARs on new systems, eliminating the need for a GUI.
- Used SNMP for server, Brocade switch, network infrastructure availability and performance monitoring, and documentation. Used this data to check thresholds and alert support personnel.
- Gained experience with racking servers, cabling, hardware support and troubleshooting, firmware upgrades, PCI-X and PCI-e network cards, and expansion drawers.
- Implemented AS/400 (I-series) on Power5 and Power6 LPARs.
- Provided 24/7/365 on-call support.

UNISYS

Resource 2

AIX Administrator

Alliance of Professionals and Consultants, Inc.,
Tivoli Certified Consultant, Raleigh, NC 1995 – 2001

Integrated of Tivoli NetView and IBM Nways into enterprise management solutions. Developed and implemented custom solutions for customer management and automation needs. Worked with IGS to provide after-hours on-call support for NetView for a leading telecommunications company that provides 24x7, outsourced network management.

- Troubleshot software and hardware by telephone and in person.
- Developed courseware and taught the following courses:
  - Tivoli NetView for UNIX and NT
  - IBM Nways Suite (Element Managers) for UNIX and NT
  - IBM Certified Network Management Engineer (CNME certification).
- Taught public and private CNME, NetView, and Nways courses throughout the USA and abroad, including China, India, Australia, England, Canada, Puerto Rico, Jamaica, Brazil, and Israel.
- Certified network management consultants and administrators worldwide.

Additional Employment History

Pennsylvania Blue Shield, Camp Hill, PA	1992 – 1995
AMP Incorporated, Harrisburg, PA	1981 – 1992
Olivetti Corporation of America, Harrisburg, PA	1976 – 1981

Education

- 33 credits in Electronic Engineering Technology, Harrisburg Area Community College

Professional Certifications

- EXIN: ITIL Foundation v3
- IBM: Power HA for AIX II – Problem Determination
- IBM: AIX pSeries Administrator
- AIX HACMP Administration
- IBM/APC: Advisory – Certified Network Management Engineer (A-CNME)
- Tivoli: Certified Network Management Consultant
- Tivoli: Certified NetView Instructor

Resource 3

AIX Administrator

Key Skills and Knowledge

- IBM Power VM, Virtual I/O Server, NPIV/vSCSI, Share processor pools, Share storage pools, Thin provisioning, Active memory sharing, Active memory extension, LPM, AIX, PowerHA, WPAR, Solaris, HPUX, BladeLogic

Operating Systems

- IBM AIX 5.3, 6.1 and 7.1, Sun Solaris 9/10,11, HP-UX 10/11i, RHEL 4.x/5.x, SUSE Linux 9/10

Hardware

- IBM Power7, power6 , IBM System x, HMC, IBM DS4K Storage, EMC DMX-4, SUNFIRE 25K/15K,v240 and HP 9000 Servers, Qlogic Infiniband Technologies

Networking

- TCP/IP, NIM, NFS v3 and v4, DHCP

System Software/Tools

- PowerHA 7.1.1/6.1/5.5, HACMP 5.x, Veritas Cluster Server, Veritas Storage Foundation, EMC powerpath Tools, Oracle cluster with ASM, BladeLogic Server Automation

Backup and Recovery Tools

- NBU, TSM, NIM, Sysback, CBMR, Ignite, Jumpstart and Kickstart

Professional Summary

More than 9 years of proven systems project experience including infrastructure administration on IBM AIX 5.x, 6.1, 7.1, RHEL, Solaris (9, 10 and 11), Windows Server, and EMC. Extensive experience with Server Virtualization with IBM PowerVM. Extensive experience in planning, designing, installing, configuring, implementing and supporting IBM AIX 5.3/6.1/7.1, RHEL 4.x/5.x, and Solaris 9/10/11. Experience in EMC SAN configuration with EMC NaviSphere, PowerPath, Access Logix, Replication Manager, Analyzer, EMC Control Center,Snapview, Mirrorview, and Sancopy.

- Experience in system tuning, security, backup, recovery and upgrades of IBM AIX, RHEL Solaris, and HP-UX
- Experience using Advance power Virtualization to virtualize production environment
- Experience using HMC to create VIO Server and Clients (LPAR)
- Configure virtualized network and storage using HMC and VIO server
- Experience Installing operating system onto VIO servers and LPARs
- Backup and restore VIO Server and LPARS using HMC, NIM, DVD, sysback, and CBMR
- Expertise in Planning, Installing, configuring IBM HACMP v 5.x and PowerHA 7.1/6.1
- Configured HACMP version 5.x, PowerHA 7.1/6.1 to monitor, disaster recovery, detect and react to failure events, allow the system to stay available during random and unexpected software problems, and also configured to react to hundreds of system events
- Extensive experience in installing, upgrading, removing, verifying packages using installp/rpm/yum utilities on AIX and RHEL
- Extensive experience in Tivoli Storage Management (TSM) and NetBackup
- Experience in managing LVM and file systems and paging space management in both AIX and RHEL
- Experience in monitoring System/Network Performance and Sendmail administration
- Experience in NFS, Send mail, ftp, remote access, security management, TCP/IP, and system troubleshooting skills
- Experience in Veritas File System, Veritas Volume Manager, and Veritas Cluster Server
- 24X7 on-call production support and troubleshooting problems related to IBM AIX P series servers, Solaris, and HP-UX servers
- Skilled in replacement/repair/upgrade of software, hardware, and firmware
- Excellent skills in Shell Scripts
- Experienced in managing LPAR on SAN (Storage Area Networks)

UNISYS

Resource 3

AIX Administrator

- Good Knowledge of EMC Symmetrix SRDF, Symmetrix DMX 1000/2000/3000 and latest DMX-4 Series, and Timefinder Operations.

Employment History and Related Experience

Unisys Corporation, System Administrator,
Harrisburg, PA 2011 – Present

Works in a large IBM PowerVM environment. Install new power7 frames according to project requirements. Designed a network to support the new virtualized environment. Migrated an AIX 5.3 environment to AIX 7.1. Migrated HACMP from version 5.x to PowerHA 6.1 and 7.1. Install backup and recovery systems such as sysback, NIM, and CBMR.

- Implement and support extensive security and monitoring facilities as mandated by the security agreement with the client. Worked on a new security baseline document for the client.
- Manage SAN storage such as IBM DS4k Series.
- Troubleshoot and fix performance problems.
- Provide on-call support for mission-critical systems.
- Participate in planned disaster recovery exercises for the client.

For the Commonwealth of Pennsylvania:

- Installed IBM Power Systems for the Production environment at DOR.
- Installed VIO servers at DOR.
- Installed AIX on IES and DOR LPARs.
- Designed and installed PowerHA for DOR and IES.
- Supported AIX for IES and DOR.
- Performed backup and recovery testing for IEs and DOR.

Target, AIX Administrator, Harrisburg, PA 2006 – 2007

Worked as an UNIX engineer to support RS/6000, and IBM pSeries systems. Worked on heterogeneous environments that had IBM AIX and Red Hat Enterprise Servers (AS 2.1, RHEL 3, and RHEL 4). Installed and upgraded operating systems for AIX 4.3.3, 5.1, 5.2, and 5.3. Setup and configured network TCP/IP on AIX servers and Linux

- Installed Solaris servers with the jumpstart method.
- Installed and configured HMC, LPAR, and VIO Server on pSeries servers (p590, p550, p520, p670, and p630).
- Managed user accounts and groups.
- Created and restored the backups in AIX 5L and Solaris.
- Planned and configured a SAN environment for TSM and ESS shark storage servers.
- Automated the Virtual I/O Server and HMC backups.

UNISYS

Resource 3

AIX Administrator

- Installed and configured Logical Partitions (LPARS) technology.
- Installed, configured, and troubleshot HACMP 5.3.
- Installed and administered TCP/IP, NIS/NIS+, NFS, DNS, NTP, automounts, Sendmail, and print servers.
- Worked independently and with offshore teams to accomplish the tasks on time according to the client's SLA.
- IBM AIX 5.3, 5.2, 5.1, and 4.3.3); pSeries servers (p590, p550, p520, p670, and p630); Sun Solaris 8 and 10; Red Hat Linux (AS 2 and RHEL 3/4); RS/6000 F50; Blade server JS20 and HS20; Apache Web Server; NIM; nPar; vPar; HP-UX Superdome; Tivoli Performance Viewer; Oracle; UDB DB2; EMC CLARiiON; Tivoli Storage Manager; DS 4300 storage server; tape libraries (STK 9470, STK 9310, TS 3580, TS3200, and TS3310); Veritas Net Backup; HP System Management tools; and Windows 2000 and 2003 Server.

Complete Care Technologies, System Administrator,
Atlanta, GA 2004 – 2006

Supported an internal UNIX/Linux environment. Configured and supported Windows, Linux, and UNIX environments on Intel and System p servers. Managed a virtualized environment that included VIOS and LPARS. Installed IBM DS4300, configured array, created logical volume, and mapped storage to servers.

- Upgraded and migrated AIX to version 5.3 using NIM.
- Performed Logical Volume Management (LVM) for Linux and UNIX.
- Patched AIX to the current ML level using NIM.
- Patched RHEL using the YUM facility.
- Backed up and restored the production environment using TSM, Sysback, and NIM.
- Supported ID administration.
- Provided on-call support for mission-critical systems.

Education

- Bachelor's degree in Electrical Engineering, University of Guyana, 1995

Professional Certifications

- IBM Certified Systems Expert – High availability for AIX technical support, and administration – v2
- IBM Certified System Administrator AIX 7
- BMC Certified Administrator: BMC BladeLogic Server Automation 8.1

UNISYS

INFO-MATRIX CORPORATION

Resource 4

AIX Administrator

Key Skills and Knowledge

- AIX administration
- SAN administration
- Oracle Database administration
- Linux administration

Professional Summary

10 years of AIX experience, exceptional hands-on technical experience with administering AIX 4.3 and 5L, production support, installations, upgrades, performance and tuning, backup and recovery, disaster recovery planning and execution, system documentation, security administration, and SAN.

- Administer, install, and upgrade AIX operating systems on IBM RS 6000. Use versions 4.3.3 and AIX 5L on IBM pSeries
- Developed backup and recovery procedures in mksysb
- Developed system-level documentation; Implemented Secure Shell (ssh)
- Designed and established AIX security hardening standards and operational standards to comply with Sarbanes-Oxley, and HIPAA regulations
- Because proficient in performance monitoring and tuning using iostat, vmstat, netstat, sar, topas, snap, svmon, and other performance packages
- Manage AIX security hardening at the operating system level by customizing AIXPERT for high-level security to meet DHS ICE standards
- Implemented and maintained an IBM High Availability Cluster Multiprocessing (HACMP) environment on IBM P570s with AIX 5L
- Planned and implemented disaster recovery at the SunGard recovery center
- IBM pSeries Power5 Advanced Virtualization and Virtual I/O Server – LPAR
- Installed, upgraded, and managed on IBM pSeries Hardware Management Console
- Used Shell Scripting and experienced in provided 24X7 support on production AIX systems
- Installed third-party applications on AIX
- Set up batch jobs using cron
- Set up Name Server (DNS)
- Used vi editor
- Installed and configured sudo for security hardening
- Configured Network Time Protocol for synchronizing clocks on AIX servers with atomic clock
- Monitored AIX servers using NetView and Big Brother
- Installed and configured NetView and Big Brother
- Installed, configured, and managed the General Parallel File System (GPFS)
- Installed and configured the NIM master, clients
- Created NIM resources
- Performed upgrades in NIM.

AIX Administrator

Employment History and Related Experience

SAIC – DHS Immigration and Customs Enforcement,
AIX Administrator, Columbia, MD 2007 – Present

Accomplished installs, upgrades, and user administration of AIX 5L on P570s, manage DS4700 storage, install, manage, and upgrade HMC consoles, create LPARS, shuffle resources around LPARS using DLPAR. Set up security auditing on each LPAR, set up AIX security hardening using aixpert as the base line, and manage an HACMP environment. Manage GPFS file systems, manage a NIM master and clients, and install and administer Informatica.

- Install and administer Hyperion.
- Set up NIM mksysb backups.
- Install and configure SUDO.
- Performance monitoring using various tools such as topas, iostat, vmstat, and nmon.
- Tune kernel parameters
- Write Shell scripts to automate the environment.
- Write system-level documentation.
- Perform TSM backups and recovery.
- Set up tsm schedules.
- Manage the Hitachi Tagma storage USP1100.
- Create Oracle databases in Test environments.

Weis Markets, Inc, AIX Administrator, Sunbury, PA 2000 – 2007

AIX administrator for 13 production AIX servers – IBM RS600 H80, B80, P520, P630, and P570. Used AIX versions 4.3.3 and 5L). Managed an enterprise storage server – IBM 2105 F20. Set up AIX security for compliance with the Sarbanes-Oxley Act. Administered HACMP on IBM H80 and AIX 5L.

- Security Administrator for AIX and Oracle environments.
- SAN Administrator 2109 B32, DNS configuration and setup.
- Disaster recovery planning and implementation, participated in 48 hour test at SunGard recovery center.
- TSM Administrator using TSM version 5.1.5 on AIX 5L, IBM RS6000 P5.
- Backed up and recovered 140 servers.
- Managed mid-range application support.
- Mentored Information Technology (IT) associates on AIX, Oracle technical training, and system assurance procedures.
- Planned a strategy and introduced of Oracle database solutions to the Weis Markets enterprise.
- Led Oracle DB administrator for 12 production Oracle databases, Used Oracle 8i, 9i, and 10g on AIX platforms.

- Installed, configured, and set up RMAN scripts for hot and cold backups.
- Set up test environments and cloneD databases.
- Performance and tuning of applications using statspack, sql tracing, tkprof, and quest software where applicable; upgraded Oracle from version 8i to version 9i; performed Oracle patch upgrades from version 9.2.0.0 to version 9.2.0.8; and set up Oracle DB security for compliance with the Sarbanes-Oxley Act.
- Developed many interface programs in pro*c, managed a JSP/Java database development group; and developed programming standards and version control for a database development group.
- Developed a 4690 POS TLOG processing environment for data analysis for the Weis Markets enterprise solutions.
- Developed new applications and reengineered critical business applications infrastructure to maintain and promote expansion of the business plan and long-term corporate strategy.
- Developed and maintained technical procedures to meet regulatory requirements for HIPAA and Sarbanes-Oxley; developed and supported several interface programs in C, pro*c, shell, and Perl scripting; developed and supported SQLplus and PL/SQL programs.
- Installed and configured ETL tools such as VIA SERV to send and retrieve data from the mainframe VSAM to Oracle.
- Critical applications supported: IBM EM/EME electronic customer club programs – OLTP database and Oracle 9i on AIX; VRMS customer relationship marketing – data warehouse and Oracle 9i on AIX; retail expert loss prevention system – data warehouse and Oracle 10g on AIX; scan-based trading development – Data warehouse and Oracle 9i on AIX; human resource self-service development – Oracle 9i; Kronos time and attendance application – OLTP and Oracle 9i on AIX; Triceps warehouse system – C-tree database on AIX; and Pdx – pharmacy system on AIX, and many others.

Environment: Oracle 10gR2, Oracle 9i, Oracle 8i, Toad, SQL, PL/SQL, RMAN scripts, Oracle Enterprise Manager, pro*C, Shell Scripts, IBM RS 6000 (B80, H80, P520, P570, and P630), IBM ESS 2105 F20, SAN 2109 32-port switches, AIX 5L, TSM 5.1.5, HMC console, and Dynamic LPAR micro-partitioning.

Foot Locker, Oracle Database Analyst, Camp Hill, PA 1998 – 2000

Database administrator for a merchandise Planning system – Oracle 8i on AIX 4.3.3; database administrator for a PeopleSoft HRMS system – Oracle 8i on AIX 4.3.3; database administrator for a decision support system – Oracle 8i on AIX 4.3.3; responsible for performance and tuning of Oracle environments; responsible for RMAN backup and recovery.

- Upgraded databases and Applications.

- Developed shell scripts, Sqlplus, and PL/SQL programs.

Environment: Oracle 7.3, 8i, SQL, PL/SQL, RMAN scripts, Oracle Enterprise Manager, Shell Scripts, IBM RS 6000 - AIX 4.3.3, PeopleSoft HRMS.

Rite Aid Corporation, Database Administrator,
Camp Hill, PA 1997 – 1998

Introduced Oracle Database solution to Rite Aid retail store systems; developed a pricing system in Oracle Database and pro*c; and performed backups anD recovery with RMAN.

Environment: Oracle 7.3, SQL, PL/SQL, RMAN scripts, pro*c, Shell Scripts, UNIX operating system, C programming, and c-tree database.

Rite Aid Corporation, Systems Engineer, Camp Hill, PA 1994 - 1997

Developed a Point of Sale application for Rite Aid retail store systems in c and c-tree; maintained a store pricing system; developed several interface programs to send data to the host system; and performed system analysis, design, and implementation of store conversions during acquisitions.

Environment: Shell Scripts, C programming, c-tree database support, and UNIX.

Education

- B.S., Physics, Osmania University, India, 1981
- M.S., Physics, Osmania University. India, 1983
- M.S., Computer and Information Science, New Jersey Institute of Technology, Newark, NJ, 1991

UNISYS

IBM

Resource 5

AIX Administrator

Key Skills and Knowledge

- AIX/pSeries
- Systems administration
- UNIX
- Hardware and software maintenance
- VMware ESX 3, 4, 5; 540 VM
- HA and DRS clusters
- Oracle and Oracle applications on AIX

Professional Summary

Design, implement, and document UNIX and AIX complex solutions and environments, including analysis of current and projected server and storage requirements as well as integration of emerging storage technologies.

- Receive exceptional reviews from the client and IBM account and project teams
- Consultant for AIX and VMware environments, troubleshooting and providing health checks to promote continuous improvement of existing environments.

Employment History and Related Experience

Systems Engineer, Syniverse Technologies, Campbell, CA 2011 – Present

Provides consultative support for AIX/pSeries and virtualized (VMware) server environments in Tampa, Chicago, Dallas, and Sunnyvale.

- Directly interacts with senior management on IBM and AIX related issues.
- Maintained and upgraded hardware and software; resolved problems for hosts running VMware ESX 3, 4, and 5; supported 540 virtual machines across 10 separate hosts in two highly available (HA and DRS) clusters.
- Directly interacts with applications and systems architects to manage increasing demand for resources and bandwidth in a highly competitive and fast-moving business climate.
- Support database administrators and database/applications architects to resolve performance issues with Oracle and Oracle applications on AIX.

University of California, AIX Systems Administrator, San Francisco, CA 2008 – 2009

Supported operating systems for PeopleSoft Financials for the University's academic research community of approximately 500 users campus wide.

- Installed hardware consisted of pSeries managed systems (p520s, p560s, and p570s) using virtualized I/O, SAN, and local storage.
- Planned for future hardware refreshes and upgrades to operating system code (operating system and VIOS) in addition to periodic troubleshooting and problem resolution.

Longs Drugs Inc, Systems Consultant, Walnut Creek, CA 2007 – 2007

On-site contract consultant for the Longs Drugs Accounts Payable Development and Enterprise Server Group.

- Provided a recommendation to development and system engineering staff for the migration of Accounts Payable/PeopleSoft Application Tier servers from the legacy hardware and operating system.

Resource 5

AIX Administrator

- Delivered the recommendation to Longs Drugs corporate staff and upper management.
- Wrote documentation.

Digital Insight Corporation, Systems Engineer,
Westlake Village, CA 2006 – 2006

Supported AIX, Linux, Solaris and various applications in a Financial ASP (Application Service Provider) environment. Supported hardware on Network Appliance and EMC hardware platforms.

Jacobs Engineering Group, UNIX Systems Administrator,
Pasadena, CA 2003 – 2006

Performed general system and storage administration tasks in a global 24/7 environment for IBM pSeries 690/570 and Enterprise Storage Systems.

- Directly managed an operating system migration project for all AIX-based environments and used a partitioned configuration (DLPAR).
- Controlled direct interface support of database administration and application development and functional management teams.
- Managed storage allocation, backup strategy, performance tuning, capacity planning and resolving accessibility issues with databases and applications.

First Horizon Home Loans, Senior Systems Engineer,
Irving, TX 2001 – 2003

Performed general system administration tasks in a 24/7 environment for a 25-node RS6000 p690 (Regatta) plus various standalone RS6000 (MCA/PCI) and Sun Solaris servers in a team-centered IT environment.

- Worked with database administrators to manage storage allocation, back up the solution, and resolve accessibility issues with the databases and application.
- Managed a direct interface with and support of database administration, application development, and accounting groups.

AIX Administrator

Key Skills and Knowledge

- AIX 4, 5, 6, 7
- Power Systems
- VIO
- HMC
- Red Hat Enterprise Linux
- Oracle Enterprise Linux
- SUSE Linux
- Windows
- Scripting
- Networking
- Supervision
- Project Management

Professional Summary

Skillful system administrator with a wide range of experience on Commonwealth projects. 13 years of system analysis experience with 7 years of Commonwealth experience. Skilled in data recovery, migrations, implementations, maintenance, and network management

- Operating systems: AIX 4, 5, 6, and 7; Red Hat Enterprise Linux; Oracle Enterprise Linux; SUSE Linux; Windows NT, 2000, 2003, and 2008; and all Windows desktop operating systems
- Hardware: IBM standalone and IBM p-Series servers; IBM Hardware Management Consoles
- Software: Apache, Samba, VMware, Perl, Vbscript, PowerShell, UNIX/Linux Shell scripting, Oracle RAC clustering, and PowerHA clustering.

Employment History and Related Experience

Unisys Corporation, Senior UNIX Administrator,
Harrisburg, PA 2005 – Present

Responsible for the day to day management of all AIX and Linux systems in the Data PowerHouse (DPH) for various Commonwealth agencies. This includes server deployments through various processes, PowerHA configuration, user requests, and operating system-level migrations and patching.

- Managed a BladeLogic repository for Linux patching across various Linux platforms, including RHEL, SLES, and OEL.
- Developed scripts as needed to maintain a consistent environment across the entire data center
- Participate in all disaster recovery planning and testing. This includes:
  - Gathering customer requirements for recovery of various application and database servers
  - Developing the best recovery method of rootvg and non-rootvg as well as customer data
  - Executing recovery exercises and ensuring consistent support of the client as it proceeds with testing the recovered systems.
- Unemployment Compensation Management System
  - Built the new operating system image on the updated platforms
  - Worked with IBM experts on performance tuning, installed all IBM Power hardware including SAN and network cable (Ethernet and Fibre)
  - Frame mapped physical devices to ensure redundancy, stability, and performance of the systems.
- Collaborated with IBM experts to install VIO servers and PowerHA clusters, verifying the application and files were available with the shortest downtime for a smooth transition.

UNISYS

Resource 35

AIX Administrator

- Supported various business partners: DBAs, application developers, network, SAN/TSM, and Windows administrators for performance testing, and process flow, and so forth.
- Tivoli Monitoring/Network Support – Built a RHEL 5.X image to support application requirements for virtualization, security, and stability from virtual machines and Intel X86 physical servers.
- Red Hat Network Satellite (RHN Satellite) – Developed a RHN Satellite product for patching and maintaining a baseline platform for any RHEL system.
- Configured the central satellite server, set up the database, and registered and connected all clients to their appropriate patching cycle. Worked with the owners of the various RHEL clients.
- Established the most effective patching cycle for systems and ensured all systems were current and met the standards needed as set forth by the Office of Administration.
- Bureau of Workers Compensation – Upgraded field office servers from AIX 5.3 to AIX 6.1 and PowerHA to the most current supported levels in PowerHA 6.1.
- State Workers Insurance Fund – Supported the installation and upgrade maintenance of Dollar Universe application.
- Integrated Enterprise System AIX 5.3 to an AIX 7.1 migration – Developed and executed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the shortest downtime possible for the customer.
- Streamlined mksysb implementation – Generated a new mksysb creation/storage process to confirm redundancy of the backup images and to further enhance the availability of these images for disaster recovery.
- Department of Revenue AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to provide the shortest downtime possible for the customer, scheduled all of the systems in various maintenance windows to verify accurate time for testing and meeting the requirement for a phased implementation.
- Disaster recovery testing – Performed annual disaster recovery testing to ascertain the application's availability in a disaster; built, restored, and configured more than 30 AIX LPARs to fit the current production environment
- Maintenance window management – For an agency with monthly maintenance outage windows
  - Coordinate all events in each maintenance window, including communications between other departments at Unisys as well as Department of Revenue staff.
- Pennsylvania Liquor Control Board Integrated Business Management System (IBMS) Project –Develop a stable 5.X RHEL operating system image and deploy servers to the agency as needed according to the given build requirements using virtual machines with the required level of security, performed day-to-day maintenance of systems, processed change requests

UNISYS

Resource 35

AIX Administrator

related to systems, and responded to incidents.

- Department of Environmental Projection Oracle Enterprise Linux – Performed day-to-day work, including file system expansion, security monitoring and tuning, and storage and performance monitoring.
- Department of Public Welfare Oracle Enterprise Linux – Built and maintained a repository, maintained other OEL servers, and created new OEL servers as the agency sought to expand its environment.

Other Work Experience

EarthLink, UNIX Web Hosting Administrator	2000 – 2004
Global Management Services, Chief Technical Officer	2003 – 2005

Batch Administrator

Key Skills and Knowledge

- z/operating system
- Tivoli Workload Scheduler (TWS)
- Linux on System z
- JCL
- Rexx
- RACF

Professional Summary

Product support specialist for Tivoli Workload Scheduler (TWS) for z/operating system support distributed installations, customizations, and problem determination. Additional advanced TWS function expertise includes Dynamic Critical Path (Workload Service Assurance), z-centric agents, restart, and cleanup automation. Other areas of expertise include the use of z/operating system and Linux on System z system commands, RACF, TWS security and Tivoli Dynamic Workload Console (TDWC) interface. Also consult on TWS and related products and applications interfacing directly with commercial clients.

Employment History and Related Experience

IBM, TWS Subsystem Support Programmer, 1994 – Present

Supports TWS for z/operating system: product installation, customization, problem determination, consultation, Rexx programming, and TWS security for various customer accounts.

IBM, CLEAR Library Management Administrator, 1992 – 1994

Provide support for the CLEAR Library Management tool to house the programs for the z/operating system product development lab.

IBM, Application Programmer, 1989 – 1992

Develop Rexx programs for pricing and contract proposal support for two IBM business units.

IBM, Information Center Consultant, 1986 – 1989

Provide consultation on tools for the IBM Sterling Forest, New York location for development and graphics.

IBM, Application Programmer, 1984 – 1986

Develop Rexx programs for the IBM Poughkeepsie, New York location.

IBM, Information Centre Consultant, 1982 – 1984

Provide consultation on tools for the IBM Poughkeepsie, New York location for development and graphics.

Professional Summary

25 years of Commonwealth experience. Strong ability to operate, trouble shoot, correct, and escalate issues on Unisys mainframe systems, Microsoft Windows, and UNIX-based servers.

- Supervise day-shift operations staff of the Commonwealth of Pennsylvania (Commonwealth of Pennsylvania) Data PowerHouse (DPH)
- Interface as needed with various Commonwealth agencies, technical support personnel, and management personnel
- Maintain operations documentation
- Maintain various operations reports.

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania,
Data Center Supervisor, Harrisburg, PA 2011 – Present

Supervise day-to-day operations of first shift operations staff at the Data PowerHouse. Plan, coordinate, and evaluate the work of staff in computer operations and operations support functions. Assign personnel, direct their work, and evaluate operational performance.

- Manage problem and change management of computer operations procedures and control mechanisms.
- Deliver quality assurance and security.
- Advise higher level managers on work problems of own unit and the impact of broader problem.
- Collaborate with other units to coordinate work changes.
- Plan, coordinate, and evaluate the work of staff in computer operations and operations support functions.

Unisys Corporation, Commonwealth of Pennsylvania,
Lead Computer Operator 1, Harrisburg, PA 1999 – 2011

Led the day-to-day operations of first-shift operations staff at the Data PowerHouse. This included monitoring Unisys mainframe systems, Microsoft Windows servers, and UNIX-based servers; monitoring and running backup jobs for multiple agencies; and escalating problems to appropriate management and tech support.

- Interfaced with mainframe and open systems-based customers on job and system problems.
- Represented operations during the PROMISE implementation of several Microsoft Windows, Sun-based servers.
- Worked with the customer and tech support to create operations documentation for this customer.

UNISYS

Resource 8

Batch Administrator

- Updated operations documentation as system enhancements were made.
- Participated in change meetings and other various customer meetings.
- Supervised first-shift operators, assisted with system problems, and coordinated operators' workload and assignments.
- Verified that change requests were started and completed as outlined on the change request.
- Updated daily system status, turnover, and various other reports (MOMS) for management.

Unisys Corporation, Commonwealth of Pennsylvania,
Computer Operator, Harrisburg, PA 1997 – 1999

Operated and monitored operating system 2200 mainframe systems and peripherals. Responsible for the tape library activity. Monitored and ran backups on the mainframes and open systems.

Unisys Corporation, Commonwealth of Pennsylvania,
Logistics Manager, Harrisburg, PA 1994 – 1997

Managed the warehousing, inventory, and ordering of computer parts and replacement peripheral equipment for the Unisys Customer Service Departments in Harrisburg and Pittsburgh. Prepared weekly usage and inventory reports for management.

Unisys Corporation, Commonwealth of Pennsylvania,
Financial Administration, Harrisburg, PA

Prepared weekly, monthly, quarterly, and annual financial projection plans and budgets. Prepared weekly overtime and travel expense reports for more than 90 employees for management. Prepared monthly and annual salary review reports for management. Submitted salary increases to personnel as determined by management.

Unisys Corporation, Commonwealth of Pennsylvania,
Customer Service Engineer, Harrisburg, PA 1980 – 1982

Maintained various hardware including 1,100 systems and peripherals and desktop equipment for multiple clients in the Harrisburg area. Provided reports on hardware problems, ordered replacement parts, and updated of hardware documentation.

Unisys Corporation, Commonwealth of Pennsylvania,
Lead Secretary, Harrisburg, PA 1987 – 1980

Provided administrative support to the Customer Service Branch Manager, six field service managers, and 85 customer service engineers.

More than 20y years of experience in information technology, specializing in the design, implementation, maintenance, and technical support of database systems. Experience includes programming, database administration and management, and systems programming.

Employment History and Related Experience

IBM, Oracle Database Administrator Harrisburg, PA 2008 – Present

Install, maintain, administer, and support Oracle databases on Linux on System Z, UNIX, and AIX.

- Upgrade and maintain databases.
- Performs logical and physical backup and recovery.
- Performs schema management and security health checking.
- Facilitates problem resolution, patch management, and technical support.
- Provides primary Oracle support for the Commonwealth of Pennsylvania, Department of Transportation.

IBM, Oracle z/Operating System Database Administrator, Harrisburg, PA 2006 – 2008

Delivered technical services, including installation, maintenance, administration, and support of Oracle and related products on the z/operating system platform.

- Upgrades and maintains servers.
- Facilitated logical and physical backup and recovery support.
- Managed database schemas.
- Performed security health checking, problem resolution, patch management, and technical support.

IBM, IMS DB/DC Systems Programmer, Harrisburg, PA 2000 – 2006

Performed systems management Integration, including installation, maintenance, and systems administration.

- Supported IMS DB/DC and related products (including IBM and BMC database tools and Omegamon/IMS).
- Provided primary IMS systems software support for the Commonwealth of Pennsylvania account.
- Supported the Department of Transportation, Department of Revenue, Department Labor and Industry, Department of Health, and the State Workers Insurance Fund.

- TSO/ISPF
- Disaster Recovery
- MS Office
- SAS

Skills Summary

IMS Systems Programmer responsible for the installation and maintenance of IMS and IBM and third-party IMS related products. Have excellent communications skills and acted as the IBM Global Technology Services US IMS Team Lead.

Employment History and Related Experience

IBM, IMS Support, 2001 - 2013

Responsible for the installation and maintenance of IMS and IMS related products from IBM and third parties.

- Responsible for debugging, problem and change management, root cause analysis, and development of installation/upgrade plans.
- Acted as the IBM Global Technology Services US IMS team lead.
- Supported disaster recovery, IMS sysgens and SMP/E.
- Trained junior staff.

AstraZeneca, Technical and Operations Support, 1987 - 2001

Installed third party products, maintained IMS, performance analysis and capacity planning, chargeback accounting, and budgeting.

Computer Task Group, Entry Level Systems Support, 1984 - 1987

Maintained CICS system software, developed help desk procedures, performed COBOL programming.

Education

- Goldey Beacom College, Wilmington, DE
  BS in Business Information Systems, 1980 - 1984
- United States Navy, USS Pargo (SSN-650)
  E-6 Machinist's Mate and qualified Submariner, 1974 - 1980

Resource 11

Database Analyst

Key Skills and Knowledge

- SQL Server 2008R2, 2008, 2005, and 2000/7
- Migration from SQL Server 2000 to 2005 and 2000 or 2005 to 2008 by using in-place/side-by-side upgrades
- Documented the upgrade process
- SQL Server Integration Services (SSIS) packages, analysis services (SSAS) cubes, and reporting services (SSRS) reports and models
- Designing, creating, and processing cubes using SSAS and MDX queries
- Data warehouse modeling (designing star schemas and snowflake schemas with identifying facts and dimensions)
- Detect and troubleshoot SQL Server-related CPU, memory bottlenecks, I/O, disk space, and other resource contention
- Backups and restores with SQL Server 2005 tools like SQL Server Management Studio, SQL Server Profiler, SQL Server Agent, and Database Engine Tuning Advisor
- SQL logins, roles and authentication modes as a part of security policies for various categories of users
- Rebuilding indexes with the Idera tool if fragmentation is higher than 30 percent

Professional Summary

6 years of experience in database design, development, and administration for very large and complex databases in SQL Server 2008R2, 2008, 2005, 2000, and 2007. Experience implementing Disaster Recovery and High Availability systems, Native Log shipping, Custom Log shipping, mirroring and replication (snap shot and transactional with updatable subscriptions), clustering (active/passive). Proficient in performance tuning, query optimization, Client/Server connectivity, and database consistency checks using DBCC utilities, DMVs and DMFs.

- Expertise in database administration on production servers with server configuration, performance tuning, and maintenance with outstanding troubleshooting capabilities
- Experience in analyzing the locks, dead locks, and handling the Isolation level and concurrency effects outstanding experience in SQL Enterprises Manager and SSMS – creating and scheduling jobs, alert, and operators with SQL Server Agent, backup/recovery databases
- Implemented the new SQL Server 2005 concepts like data partitioning, snap shot isolation, database snapshot, online indexing, mail setup, jobs and alerts, DTA, SQLCMD, and dedicated administration connection
- Extensively used tools like SQL Profiler, Index Tuning Wizard, and Windows Performance Monitor for tuning and monitoring SQL Server performance
- Good at SQL Server 2008 new features like Policy Based Management, Data Compression, Resource Governor, Performance Data Collector and Transparent Data Encryption (TDE)
- Good at SQL Server 2008R2 new features like Parallel Data Warehouse, Master Data Services, Data-Tier Application, Power Pivot for Excel and SharePoint, and Unicode Compression
- Migration from SQL server 2000 to 2005 and 2000/2005 to 2008 by using In-Place/side-by-side upgrades process, and documented the upgrade process
- Develop and tune SQL Server Integration Services (SSIS) packages, analysis services (SSAS) cubes and reporting services (SSRS) reports and models
- Experience in designing, creating, processing of Cubes using SSAS, and using MDX Queries
- Expert in data warehouse modeling (designing Star Schema, snowflake schemas with identifying Facts and Dimensions)
- Experienced in moving system database and configure tempdb
- Ability to detect and troubleshoot SQL Server related CPU, memory bottlenecks, I/O, disk space, and other resource contention.

Domino Technologies Inc.

Resource 11

Database Analyst

Employment History and Related Experience

Pennsylvania Department of Transportation,
SQL Server DBA, Harrisburg, PA 2012 – Present

The Pennsylvania Department of Transportation (PennDOT) oversees transportation issues in Pennsylvania. PennDOT supports more than 40,500 miles of state roads and highways, about 25,000 bridges, and new roadway construction, except for the Pennsylvania Turnpike Commission, which only follows PennDOT policies and procedures.

- Worked on issues after upgrading a server from SQL 2000, 2005, and 2008.
- Configured database mail in SQL Server 2008.
- Performed daily routine DBA tasks like handling users' permissions and space issues on Production servers and handling maintenance jobs, backups, and restores.
- Implemented SQL logins, roles, and authentication modes as a part of security policies for various categories of users.
- Worked on an active-passive cluster, moving the resources to the passive node and restarting the servers every month.
- Deployed data from the Production server to the Development, System, and Sandbox servers, depending on the SRS, by using backup and restore.
- Solved the SRS, depending on the priority; monitored Production servers.
- Restore the database from the Production server to Development, Sandbox, Test, and System servers.
- Extensively worked on implementation and release to production every month.
- Created SSIS packages for data flows from Oracle to SQL Server by using Oracle.
- Provided and used data conversion data flow tasks, deployed the packages to the server, and scheduled jobs to run.
- Detected and resolved locks and deadlocks using trace flags and native tools like Profiler and the Activity Monitor.
- Worked on 24x7 on call-support.

Buchanan Ingersoll and Rooney P.C, SQL Server DBA,
Pittsburgh, PA 2011 – 2012

Buchanan, Ingersoll & Rooney has the largest state-government lobbying practice in Pennsylvania and is one of the top 20 federal lobbying practices nationwide. The firm also has practices in labor and employment law, immigration law, bankruptcy and creditors' rights, corporate finance, energy, Marcellus shale

rights, tax law, real estate, family law, government contracts, health law, financial institutions, and intellectual property.

- Migrated databases from SQL Server 2000 to SQL Server 2008; documented the process with pre-migration and post-migration steps.
- Applied patches and service packs to update different versions of MS SQL Server in clustered and standalone environments.
- Fixed the failed principals (logins), user permissions and security in Active Directory and SQL Server.
- Scheduled regular backup jobs using the Idera Admin Tool backup tool; tracked database by receiving e-mail on Alerts.
- Extensively used the Idera Admin tool for login copies, database movers, job movers, job editors, serverc , database configuration, partition generator, linked server copy configured database mail in SQL Server 2008.
- Used Idera tools for monitoring blocking, deadlocks, long-running jobs, space issues, and Windows-level performance.
- Extensively used the Lightspeed tool for backups and restores of the database from one server to another for month-end procedures.
- Created logins and mapped users to roles by assigning permissions.
- Used the new features of SQL Server 2008 such as TCE, EKM, Merge Statement, and compressed backups.
- Worked on issues after upgrading the server from SQL 2000, 2005, and 2008 like configuring the database mail in SQL Server 2008.
- Performed daily tasks, including backups and restores, by using SQL Server 2005 tools like SQL Server Management Studio, SQL Server Profiler, SQL Server Agent, and Database Engine Tuning Advisor.
- Implemented SQL logins, roles, and authentication modes as a part of security policies for various categories of users.
- Extensively used the Idera tool for rebuilding the indexes when fragmentation was higher than 30 percent.
- Extensively worked on migrating DTS to SSIS packages.
- Performed daily routine DBA tasks like handling users' permissions and space issues on Production servers and handling maintenance as well as jobs, backups, and restores of databases.
- Extensively worked on month-end outages like shutting down the servers and applying Windows patches; worked on 24/7 on-call support.

Environment: SQL Server 2000 and 2008 with clustering, replication, T-SQL, Windows 2003 64-bit, and Diagnostic Manager.

Bank of New York Mellon, SQL DBA/Developer, PA 2010 – 2011

Established in 2007 from the merger of Mellon Financial Corporation and The Bank of New York Company, Inc., BNY Mellon is a leading asset management

and securities services company uniquely focused to help clients manage and move their financial assets and succeed in the rapidly changing global marketplace.

- Worked in SQL Server 2000 with 2TB of data and SAN infrastructure of a 60 server 2-node cluster of active/active and active/passive on Microsoft Windows Server 2003 R2 Enterprise Edition SP2 in a SAN environment.
- Migrated DTS packages from SQL Server 2000 to SSIS SQL Server 2005.
- Migrated and documented SQL Server 2000 to 2005.
- Created documentation for steps needed to be taken while upgrading SQL Server 2000 to SQL Server 2005.
- Performed BCP, extracting the zip file, and used the xp_cmdc shell for the bulk operation.
- Used Foglight for monitoring deadlocks, blockings, and Windows-level performance.
- Analyzed the consistency of database and fragmentation on the indexes.
- Worked with transactional replication to achieve load balancing.
- Used the DTS Xchange tool for migrating DTS packages to SSIS.
- Troubleshot SSIS packages that failed to execute in the scheduled jobs.
- Created ad hoc reports using SSRS in BIDS.
- Reviewed store procedures and queries; fine-tuned slow running queries.
- Implemented Maintenance Plan tasks like history cleanup and rebuilding indexes in SSIS.
- Detected and resolved locks and deadlocks using trace flags and native tools like Profiler and the Activity Monitor.
- Effectively used Send Mail Task in SSIS.
- Created logins and mapped users to roles by assigning permissions.
- Configured protection levels for the SSIS packages while moving from staging to production.
- Developed reports in SSRS using BIDS studio.
- Pumped the data into the data warehouse using the SSIS packages.
- Retrieved data from partitioning the cube from the data warehouse (OLAP) using BIDS.
- Interacted with the test team to fix the bugs.
- Involved in 24x7 production support.

Environment: TSQL, MS SQL Server 2000, 2005, SSRS, Query Analyser, Visual Studio 2005, VB.Net, C#, Winnows Server 2008, IIS, and SSAS.

Verint Systems Inc, SQL DBA, Atlanta, GA 2010 – 2010

Verint Systems Inc. is a leading provider of actionable intelligence solutions and services for enterprise and security intelligence. These solutions help

organizations make timely, effective decisions for improving enterprise performance and making the world a safer place.

- Created SSIS 2008 release 2 packages from DTS Packages 2000.
- Applied patches and service packs to update different versions of MS SQL Server in clustered and Standalone environments.
- Configured database mail, alerts, and operators in SQL Server 2008.
- Created a new instance in SQL server 2008R2.
- Deployed data from the Development server to the Main, QA, and Production servers every week.
- Implemented SQL logins, roles, and authentication modes as a part of security policies for various categories of users.
- Performed daily tasks, including backups and restores, by using SQL Server 2005 tools like SQL Server Management Studio, SQL Server Profiler, SQL Server Agent, and Database Engine Tuning Advisor.
- Created rebuild indexes; updated and scheduled statistics jobs to run every week.
- Migrated the data from the Production server to the Main, QA, and Development servers.
- Created SSIS packages for data flow from Oracle to SQL Server by using Oracle provider and data conversion data flow task; deployed the packages to server and scheduled jobs to run.
- Performed daily routine DBA tasks like handling users' permissions and space issues on Production servers and handling maintenance jobs, backups, and restores the databases.
- Worked on an active-passive cluster, moving the resources to the passive node and restarting the servers every month.
- Worked on transaction replication, in which data was replicated from the Production to the Main server and the Main server to the QA and Development servers; dropped and recreated the replication during deployment.
- Monitored SQL Server performance using Profiler to measure performance and find deadlocks.
- Solved tickets, depending on the priority.
- Worked on 24/7 on-call support.

Environments: SQL Server 2008 and 2005, T-SQL, Excel, Advanced Windows 2000 Server, Visual Source Safe 6.0 (Version Control Management), and TFS (Team Foundation Server).

Domino Technologies Inc.

Resource 11

Database Analyst

Trustco Bank, SQL Server DBA, New York, NY 2008 – 2010

Trustco Bank is the low-cost provider of high-quality services to customers in the communities it serves and returns to its owners an above-average return on their investment. Through changing times, Trustee's commitment to careful financial management, and high-quality lending standards, and following prudent investment practices has never wavered. The bank's focus has always been to provide its customers with community banking solutions that offer superior convenience, value, and security.

- Worked on client/server tools like SQL Server Management Studio (2005), SQL Server Enterprise Manager (2000), and Query Analyze.
- Migrated SQL Server 2000 databases to SQL Server 2005 databases with an in-place upgrade process; used the Upgrade Advisor tool for upgrades.
- Migrated DTS packages to SSIS packages.
- Handled up to 2TB databases in Clustered and Standalone environments.
- Configured transactional replication on migrated servers.
- Created stored procedures, triggers, views, and functions for the application.
- Extensively worked on Dynamic Management Views (DMVs) and Dynamic Management Functions (DMFs).
- Effectively used the Query Analyzer for Interacting with the databases.
- Developed, deployed, and monitored SSIS packages including upgrading DTS to SSIS.
- Implemented SQL principle, securable, permission, roles, and authentication modes as a part of security policies for various categories of users.
- Maintained a SQL script for creation of database objects in VSS (Visual Source Safe).
- Created a database maintenance planner for the performance of SQL Server that covers database integrity checks.
- Implemented conditional split and merge tasks for data transformation in SSIS.
- Used Configuration files for dynamic connection of SSIS packages.
- Extensively used the Execute utility package to execute packages.
- Used DTS packages to move logins and jobs from one server to another server.
- Acquired good experience in data modeling and metadata services.
- Monitored SQL Server performance using Profiler to measure performance and find deadlocks.
- Worked on a DB2 and Oracle team for handling a linked server.

Environment: TSQL, MS SQL Server 2000 and 2005, SSRS, Query Analyser, and Visual Studio. 2005, VB.NET, C#, Windows Server 2008, IIS, SSAS, DB2, and Oracle 9i.

Domino Technologies Inc.

Resource 11

Database Analyst

SQL DBA/Developer, LIC Insurance, India Insurance Management System 2006 – 2008

LIC Insurance Company provides a wide range of insurance policies such as life insurance, health insurance, overseas travel insurance, student health insurance, fire insurance, motor vehicle insurance, aviation insurance, general insurance, marine insurance, shopkeeper policies, transportation policies, and accident insurance. This project was developed as a process for automation for insurance policy management, which includes policy proposals, claims, accounts, and reports.

- Implemented SQL logins, roles, and authentication modes as a part of security policies for various categories of users.
- Acquired a sound knowledge of stored procedures, indexed views, user-defined functions (UDL), triggers, distributed queries, and common table expressions.
- Wrote stored user-defined data types, procedures, triggers, and functions to rebuild the indexes at regular intervals for better performance.
- Designed and implemented a comprehensive backup plan and disaster recovery strategies.
- Implemented and scheduled replication process for updating our parallel servers.
- Monitored and troubleshot existing DTS packages.
- Troubleshot and fine-tuned databases for performance and concurrency.

Environment: TSQL, MS SQL Server 2000, Enterprise Manager, VB.NET, Windows Server 2003, and IIS.

Education

- Bachelor's degree in Computer Science, JNTU, India

Professional Certifications

- MCTS – SQL Server 2005

Professional Summary

Experienced in Information Technology (IT) using MS SQL Server 7.0, 2000, 2005 2008, 2008 R2, dBaseIII+, FoxPro, Microsoft Access, Visual Basic 6.0, Visual Basic .NET, Crystal Reports, Recital, Microsoft Windows, and UNIX. Experienced in Installation and Configuration of MS SQL 2000, SQL 2005, SQL 2008, and SQL 2008 R2.

- Experienced in MS SQL Server High Availability using SQL Server instance clustering, database mirroring, and database replication
- Backup and restore databases using MS SQL Server, SQL Quest LiteSpeed, and Networker
- Experienced in SQL Server Reporting Services, MS SQL Server Integration Services, and Data Transformation Services
- Maintain and support MS SQL Server
- Develop and maintain applications in MS SQL Server, Visual Basic 6.0, Visual Basic .NET, FoxPro, dBaseIII+, and Crystal Reports
- Work in groups and independently with minimal supervision.

Employment History and Related Experience

Unisys Corporation, Database Administrator, 2009 – Present

- Install and configure MS SQL Server.
- Backup and recovery MS SQL Server.
- Maintain and administer MS SQL Server.
- Assist end users with MS SQL Server.
- Participate in reviewing database policies and procedures provide input as requested.
- Monitor the availability of MS SQL Server and Oracle database servers.

Diverse Technologies Corporation, Database Administrator, 2008 – 2009

- Backed up and recovered SQL Server.
- Maintained and administered SQL Server.
- Supported SQL Server database clients.
- Helped develop SQL Integration Services.

Systems and Services Technologies, SQL Server Developer/DBA, 2007 – 2008

- Wrote MS SQL queries and Data Transformation Services using MS SQL Server.
- Worked on a data warehouse using MS SQL Server.
- Tuned and optimized MS SQL queries.

UNISYS

Resource 12

Database Analyst

- Administered and configured development MS SQL Server.
- Monitored MS SQL Server performance.

AMA Computer University, Information Technology Director, 1999 – 2007

- Managed the overall operation of Information Technology–Campus Information.
- Administered MS SQL 2000 and 7.0 databases.
- Installed and configured MS SQL 2000 and 7.0.
- Created database replication using snapshot and transaction replication.
- Installed and configured Windows 2000 and 2003.
- Created databases, indexes, stored procedures, views, and triggers using MS SQL Server 2000.
- Created DTS package in MS SQL Server 2000.
- Designed systems based on user requirements and specifications in Visual Basic and MS SQL Server 2000 and 7.0.
- Performed programming, unit, and module testing.
- Tested, debugged, installed, and maintained programs.
- Outlined requirement specifications, system design specifications, and implementation specification.
- Conducted user and technical training and user acceptance testing.
- Assisted in system documentation.
- Assisted in implementing the system.

Republic Asahi Glass Corporation, Systems Analyst/Programmer, 1997 – 1999

- Designed and developed applications in Recital Database under UNIX, MS SQL, and Crystal Reports.
- Developed and implemented database designs in Recital Database and MS SQL.
- Participated in analysis, design, development, implementation, testing, documentation, and maintenance of client/server applications.
- Supervised database backup and recovery.
- Participated in unit testing of the application.
- Outlined requirement specifications and technical training.
- Performed user acceptance testing.
- Created system documentation.

Country Export Philippines, Incorporated, Network Administrator, 1994 – 1997

- Developed applications in Visual Basic, FoxPro, MS Access, and Crystal Reports.

UNISYS

Resource 12

Database Analyst

- Maintained a local area network.

ExL Worldwide Express, Assistant Systems Analyst, 1993 – 1994

- Assisted in developing applications in FoxPro.

INFO-MATRIX CORPORATION

Resource 13

Database Architect

Key Skills and Knowledge

- More than 10 years of database architect experience
- Mainframe development
- Systems programming
- Capacity planning
- Database design
- System architect administration and BI architect positions.
- BI access to unstructured data with DW access into ESB/SOA and MDM systems
- Design using ERD BPM and BMM models for policy feedback
- Conduct architecture research
- Publish white papers
- Create standards for SSD HDD and distributed OORDBMS key integration

Professional Summary

Principal architect skilled in development efforts that standardize workflows, data warehouse federation, and virtualization.

- Developed department and group dictionaries needed for SOA; generated data scorecards
- Developed data models with enterprise-level conformed dimensions as well as taxonomy and grain specifications
- Formed data management strategy for mixing unstructured data with semi and fully structured data
- Supported the generation of specifications for near-real time ODS, departmental governance, and business rules needed for an ESB
- Published author of a teaser article in *Information Management* magazine on how to devise a data strategy
- Skillful with engineering and design best practices, industry research, and project management
- Experience with database management systems includes Oracle, DB2/UDB, SAS and SQL Server, DDL, and DML
- Data modeling support includes Star for OLAP and ERD tools along with OLTP for dimensional modeling and data mart design with ETL support, All Fusion (7 years), Rational System Architect, Microsoft Visio, and Bachman ERD design tools
- Developed data modeling and standards for enterprise-level ESB/SOA structures
- Established and operated a R&D lab to facilitate on-site benchmarking of various configurations. This included Windows and Sun operating systems with Oracle and DB2 database management systems
- Installed and administered new software and tested the interfaces to the existing system, including firewalls and SAN network storage; integrate COTS packages; and facilitate JAD sessions for gathering business requirements
- Designed data flows, service level agreements, capacity reporting requirements, dashboards, and operational monitoring reports.

Employment History and Related Experience

Major Telecommunications Company, Principal Architect,
New York, NY 2011 – Present

Conduct architecture research, publish white papers, generate standards for SSD HDD, and integrated distributed OORDBMS key

- Produced Data Warehouse (DW) designs, reviews, and roadmaps of harmonization, and virtualization efforts.

- Generated workflows and a Netezza conversion analysis enterprise domain; reviewed data quality.
- Resolved data grain and lexicon issues, conflicting optimization goals, MDM & ESB/SOA configurations, data-driven dimensions, data and architecture measures, and cloud deployment and use.
- Composed industry-standard data models with departmental data stores.
- Install, analyze, test, and test virtual data warehouses.
- Wrote a white paper on integrating hub-and-spoke architecture with point-to-point architecture.
- Evaluate vendor software; review project architecture.
- Created architecture and information roadmap and data ownership plans.
- Planned, supported, and tuned capacity.
- Installed IBM Rational System Architect.

CA, Enterprise Architect DBA, New York, NY 2009 – 2011

For the enterprise architecture group, designed data warehouses, created MDM roadmaps and integrated projects from a data standpoint.

- Consolidated two data warehousing teams into one model change control and data dictionary reporting method.
- Merged models and resolved conflicts across two teams of consultants to produce a single unified model.
- Conformed the data models to the in-scope attribute lists.
- Verified data dictionary entries and other standards were followed.
- Established change control procedures and reports.
- Produced an OLTP and an OLAP star data warehouse design.
- Reverse engineered existing systems for generation of an as-is distributed enterprise ESB/SOA data model.
- Monitored and shaped project development meetings to better integrate data designs across projects.
- Reviewed and analyzed a project portfolio for strategic interfaces to master data management, developed a roadmap for its implementation.
- Mined metadata to uncover de facto standards and tuning objectives.

Environment: Microsoft and Sun servers running Oracle, SAP, SFDC, and Microsoft software.

1-800flowers.com, Architect Modeler, New York, NY 2007 – 2009

For the Business Intelligence group, designed a data warehouse, created a SAS data mart, and worked on bridge migration projects.

- Benchmarked and sized hardware for managing software licenses.
- Created management reports in Microsoft Project, Visio, and PowerPoint.
- Documented a SAS client installation procedure in BPMN.
- Evaluated and assessed the existing ETL and ODS design.

- Designed a logical, fully normalized ODS and mapped to the existing physical system.
- Designed a snowflake dimensional data warehouse for MDM and SOA.
- Interviewed experts in data harmonization and data design generation.
- Created a DFD, BMM, ERD, and business process model of a VB, Access, and Crystal Reports system.
- Migrated that system's business logic to Oracle 10 SQL and data structures.
- Migrated that system's reporting and wrapper functions to SAS on a WAS.

Environment: Microsoft and Sun servers running Oracle, ERwin, SAS, and Microsoft software.

Metropolitan Washington Airports Authority, System Architect, Washington, DC 2006 – 2007

Supported an ERP BPR project as a subcontractor for Booz Allen Hamilton at Washington Ronald [redacted] National Airport.

- Evaluated Rational System Architect software; performed gap analysis.
- Upgraded, customized, and configured the Rational System Architect product.
- Developed BPMN modeling procedures and tutorials for business analysts.
- Generated of process modeling standards and change control conventions.
- Converted diagrams from Visio to SA BPMN for as-is a process model.
- Analyzed installed hardware and software systems.
- Assessed the governance of project scope, generated progress measures.
- Trained process modelers in the use of SA and generation of management reports.

Environment: Microsoft SQL Server, Telelogic System Architect and Doors, and Microsoft Office.

U.S. Department of Health and Human Services – Lockheed Martin Family Parent Locator Service Contract, System Architect, Baltimore, MD 2005 – 2006

Supported Family Parent Locator Service, which runs in the Social Security Administration National Computer Center.

- Authored a GAO capacity report that evaluated system costs.
- Modeled and reported on the administration of the System Architect Zachman framework.
- Discovered requirements and analyzed existing gaps and concerns.
- Reviewed COTS software for non-mission critical tasks.

- Reviewed and enhanced the CMM system.
- Designed and specified ETL PSQL procedures to support changes in the database design; organized and facilitated JAD sessions for data homogenization mappings.
- Assessed and mapped systems using DFD, DD, and ERD in SA.

Environment: DB2 and VSAM on z/operating system; Oracle 9; MS SQL Server; and MySQL on XP, 2000, and Sun platforms with Microsoft Office and Telelogic System Architect.

Social Security Administration – Lockheed Martin,
DB2 Capacity Planner, Baltimore, MD 2004 – 2005

Support for systems that run in the National Computer Center in Baltimore.

- Created hardware maps for the rollout of a ESCON/FICON channel.
- Set and scheduled the implementation of DB2 RLF operational.
- Tuned DB2 buffer pools; planned application locking.
- Mined and warehoused MICS data using customized SAS code.
- Designed a capacity planning performance database based on SMF/RMF.
- Recommended data designs for enhancing system performance.
- Mapped business KVI drivers to a BMM for measurement, forecasting.

Environment: Z99 mainframe, DB2 7 and 8, SQL, SAS, MXG, and MICS Visualizer.

TEK Systems, ICARZ, Systems and Data Architect &
Consultant, Newton, NJ 2003 – 2004

- Performed iterative prototyping for a business process redesign.
- Created ERwin ERD, DD, and Process Modeler DFDs.
- Implemented referential integrity without forcing program changes.
- Mapped all Fusion insert update and delete processes for OLTP security.
- Planned the conversion for 2-tier to 3-tier client server implementation.
- Integrated application with DDL conversion scripts and triggers.
- Tuned DB2 and UDB instances and configurations for locking, paging, and CPU.

Health Management Systems, Senior Database
Administrator & Data Modeler, New York, NY 1998 – 2003

Supported DB2and UDB for Chicago subsidiary H.S.A. In resource management, provides project manager-level support and modeled data.

- Reported on capacity planning using SFM/RMF data and SAS on a Merril system.
- Converted PeopleSoft application systems from mainframe to UDB on NT.

- Created the physical design and implemented applications on DB2 and UDB.
- Produced ERwin logical and physical models for OLTP and OLAP data designs.
- Supported data warehousing tuning as well as tuning and optimization of data mining queries for all application areas and departments.
- Implemented distributed cross platform designs; supported prototype debugging.

Various Companies, Part -Time Positions, New York, NY 1989 – 2003

- Adjunct Instructor for the Pace University Information Systems Department.
- Delivered instruction in systems analysis design, operating systems, and DBMS.

Dean Witter, Database Administration Group,
New York, NY 1997 – 1998

Maintained and updated the Bachman model, Migrated DB2/RACF security and indexes, stored procedures, and column constraints. System managed referential integrity with data mart creation and synchronization.

Federal Reserve Bank of New York, Database
Administration Group, New York, NY 1996 – 1997

Migrated systems from the New York district to the New Jersey national system, Created and standardized utility jobs and new naming conventions. Supported disaster recovery and contingency testing.

Automatic Data Processing, Brokerage Services Division,
Database Administration Group, Jersey City, NJ 1995 – 1996

Applied the full project life cycle (SDLC) to database support requests. Supported the following applications: Proxy Edge Voting, Name and Address, System Service Request, Proxy Investor Track System, and a Brokerage Client Processing Option System. Warehoused data and designed OLTP using the Bachman modeling tool and XDB.

Home Insurance Company, Technical Services,
New York, NY 1989 – 1995

Installed systems and administered various vendor software packages, capacity planning using SAS and MICS, system accounting, and chargeback data warehousing.

Resource 14, PMP

Database Architect

Key Skills and Knowledge

- PMP (Project Management Professional) – PMI
- Teradata Certified Professional
- Oracle Certified DBA (OCP)
- Certified Data Warehouse Architect – Wipro, India

Technologies

- Teradata, SQL, Dataflux, ERwin, Oracle 10g DB, Informatica, PL/SQL
- Oracle Warehouse Builder (OWB) Discoverer, Designer, Developer, Workflow, Application Serve, Application Foundation, and Toad
- Business Objects, Java, Shell script, HTML, XML, PC SAS, and CA Harvest
- UNIX, ClearQuest
- EDI X12 transactions, HL7, OpenSource DI Talend
- Rational Unified Process (RUP)

Methodologies

- Roadmaps and strategies for Building and Adopting Enterprise Data Warehouse, data modeling, and Architecture
- Data warehousing – Kimball, Inmon methodologies, Data Quality, MDM, and SOA
- Project Management & SDLC

Professional Summary

- Expertise in architecture, design, and implementation of data warehouse and data marts, data quality, and MDM solutions
- Providing technical leadership, architectural direction, and roadmaps for data warehouse initiatives for data modeling, data integration, data access and security, technology acquisition, and application performance
- Data governance – documenting standards and operating procedures; suggesting best practices for confirming data integrity, satisfying regulatory and audit requirements
- Project management, SDLC, and mentoring.

Supported the following data warehouse projects:

- Enterprise Data Warehouse (EDW), healthcare company – Business Intelligence Architect
- Enterprise Data Warehouse (EDW), Highmark Insurance – Data Architect
- Global Hygiene and Match, Dun & Bradstreet – data analysis; design and implementation of customer data integration (CDI) solution
- Metadata Framework (MDF) and Cisco Data Library, Cisco Systems – data architect for Enterprise vocabulary integration and Operational Data Store
- Global Contact Database, Oracle – designed and implemented a customer data integration solution

Employment History and Related Experience

Enterprise Data Warehouse – Healthcare Client, BI Architect — 2010 – Present

The BI Solutions group hosts Enterprise Data Warehouse (EDW) and legacy reporting systems, housing corporate health insurance data that supports analytic reporting, clinical programs, master data, departmental data marts, and third party data feeds.

- Designed systems for EDW foundation to process Medical/Rx/Dental/Vision claims data including provider, product, member, group customer, and care management.
- Developed databases for member data marts, actuarial, individual business, and provider incentives, etc., are built on top of EDW foundation.
- Roadmap and migration strategies from Legacy Systems to EDW.
- Reference architecture, future state definition, architecture governance and quality review.
- Data analysis to identify data anomalies and propose data quality solution.
- Data validation for fitment of use.

- Data governance support.

- Data architecture support for managing Metadata/Master Data/Reference Data.
- Solution architecture/EDW SME support for DW projects.
- Process improvements to enhance data quality, performance, and data access.
- Audit/Balance strategies/Design for EDW with operational systems and data marts.
- ETL process / Mappings design, Implement Change Data Capture (CDC).
- Requirement analysis and Data modeling for EDW and related Data marts using 3NF and Dimensional models.
- Database planning (Oracle), performance tuning, volumetric estimates, environment planning and setup, DB load job setup.

Toolset: Oracle 10g, ERwin, Informatica, Pl/SQL, XML, SAS, Sql*Server, UNIX, EDI X12, Healthcare Solutions: ICD-10; HIPAA 5010; Benchmarks – BHI, Milliman; Ingenix – Health Record, Chronic conditions; Medicare Advantage; Nasco Claims processing; HL7 Lab data.

Enterprise Data Warehouse – Highmark Insurance,
Data Architect/Lead, 2006 – 2010

The Enterprise Data Warehouse (EDW) hosts corporate health insurance data that supports Highmark's operational reporting and analytical needs. It includes data for major medical and dental claims, subject including provider, product, member, client, and enrollment subject areas.

- Requirement analysis and data modeling for main / supporting subject areas for EDW and related data marts using 3NF and dimensional models, data analysis and data profiling.
- Data governance – Plan, Standardize, metadata discovery and publish, data retention policies, Software Operating Process (SOP) setup.
- Roadmap and migration strategies from Legacy Systems to EDW.
- ETL process / Mappings design, implement Change Data Capture (CDC.)
- Security layer design and data access setup.
- Complex SQL/SAS reporting from EDW including EDI X12 reporting.
- Database planning (Teradata and Oracle), performance tuning, volumetric estimates, environment planning and setup, DB load job setup.
- Analysis / design of integrating MDM (Initiate) solution with EDW.
- Project Management activities and technical mentoring.
- Point of contact on Open Source data integration and data quality technologies (Talend).

Toolset: Teradata (BTEQ, TPT (Parallel Transporter), MLOAD, OLELoad, Fast Export), ERwin , Informatica, Oracle 10g, Pl/SQL, XML, SAS , CA

Harvest, Rational RUP, UNIX, EDI X12, Healthcare Solution: HIPAA 5010, and DxcG Risk categories.

Wipro Technologies, Technical Lead 2003 – 2006

Global Hygiene and Match (GHM) – a Dun & Bradstreet project. Customer data integration system channels manage and track customer data from various disparate applications, identify data quality issues, and provide enhanced data. From the cleansed data, GHM generates customer match identifiers based on specific match rules. Data quality and matching modules are exposed as a Web Service to consuming applications.

- Data analysis and profiling; designed and implemented data quality and match rules as a Web Service.
- Dataflux administration.
- Project management.
- Extraction, transformation, and formatting of data; data modeling; database design, and performance tuning.

Toolset: SAS Dataflux, ERwin, Informatica, Oracle 10g, Java, SOA, and WSDL.

GMAC, Discounting and Validation Engine (DAVE),

Data Modeler 2003-2003

DAVE is a credit contract origination and acquisition project for automotive financing, including reengineering of the existing contract acquisitions application to a dynamic configuration engine. The New Acquisition configuration includes processing of e-Contracts originating from the RouteOne® industry-standard application and processing of across-the-counter contracts in a new Discounting Automation Mechanism application.

- Data analysis, design capture, and reengineering.
- Data modeling and database design.

Toolset: ERwin, Oracle Designer, PL/SQL, Oracle 8i DB, Enterprise Manager (OEM), and Toad.

Cisco, Enterprise Architecture Group, Data Architect

Metadata Reporting 2003-2003

MDF End 2 End (E2E) a Reporting is reporting repository (data warehouse) for Metadata Framework (MDF). It is an operational data store (ODS) with consolidation of data from MDF and various content management systems. Data integrated together in the de-normalized ODS structures is further used by downstream reporting applications like Clickstream.

- Requirement analysis, data modeling, and design.
- Designed and developed Extract Transfer Load (ETL) procedures.
- Project management.
- Database administration.
- Performance tuning, design capture, database design, and database audits.
- Evaluated and recommended new database features.

Toolset: Oracle Designer, Pl/Sql, Oracle 8i DB, Enterprise Manager (OEM), and Toad.

Wipro DWH practice, Center of Excellence (CoE) activities

- Proof-of-concept for product features and technologies.
- Approached notes and best practices.
- Data model templates – STAR (automotive retail) and regulatory compliance.
- Created training content on the new feature of Oracle data warehouse and data modeling.
- Mentored staff on data warehouse concepts, data modeling, data warehouse, and business intelligence technologies.

Oracle Corporation, Technical Lead, India 2002 – 2003

Maintained data content for the Global Contact Database (GCD), a data warehouse comprising details on customers and their activity. It was the infrastructure for enterprise marketing applications, helping marketing, and sales to understand customer needs and identify opportunities.

- Data analysis, Data profiling, and Data modeling.
- Implement data quality and match rules.
- Designed and developed Extract Transfer Load (ETL).
- Administered Discoverer; developed business intelligence reports.

Toolset: PL/SQL, Oracle 9i DB, Oracle Warehouse Builder, Discoverer, and Enterprise Manager (OEM).

Knowledge Repository, Technical Lead

The Knowledge Repository is a data-driven application developed with to provide up-to-date information on user support issues affecting e-Marketing application users. It is based on a content management model that goes through various life cycles in document management.

- Designed dashboard reports for e-Marketing applications.
- Administered the database.
- Provided e-Marketing application users with support and guidance.

Toolset: PL/SQL, HTML, Oracle 9i DB, Oracle 9iAS, Oracle Ultra Search, and

Microsoft Project.

Oracle Corporation, Technical Lead - Electronic Services Group, India 1998 – 2002

- Provided technical leadership, especially for resolving complex issues.
- Coordinated on critical issues with the development team.
- Contributed to Oracle knowledgebase by documenting and reporting technical issues.
- Developed tools for enhancing the support process.
- Established and maintained operating policies.
- Sett the support process and SLA guidelines.
- Created analyst utilization plans, allocated work, and maintained adherence to processes.

Toolset: Oracle Designer, Oracle Database, Oracle Developer, and Oracle Application Server (Oracle 9iAS).

Education

Bachelor of Engineering

Professional Certifications

- PMP (Project Management Professional) – PMI
- Teradata Certified Professional
- Oracle Certified DBA (OCP)
- Certified Data Warehouse Architect – Wipro, India
- Professional, Academy for Healthcare Management (PAHM)
- Certified Software Consultant – Wipro ,India
- Certified in Software Process Management – C-DAC, India

UNISYS e&e IT Consulting Services, Inc.

Resource 15

Database Architect

Key Skills and Knowledge

- MCITP, MCSE, MCP
- PA Commonwealth experience
- SSIS, SSRS, Access, Oracle

Skills Summary

- Databases - MS SQL 6.0 - 2012, MS Analysis Services, SQL Server Reporting Services, SQL Server Integration Services, Oracle 7.x, 8i,9i,10g, 11, MS Access
- Networking – Windows Active Directory Services, TCP-IP, Intranet/Internet, .NET
- Operating Systems – Windows XP, Windows 2003/2008 Server, Windows 2000 Server/Advanced Server/Datacenter, Windows NT, UNIX, and AIX, Virtual PC, virtual Server, Hyper-V
- Languages – VB 6/VB.NET, ASP/ASP.NET , Java Script, Access VBA 2, 95, 97,2000, MS SQL stored procedures, HTML, VB Script, MS Excel VBA, T-SQL,PL/SQL,XML, CodeSmith – code generator
- Project management – Director of MIS, Project Leader, Data Architect, and Client Server Architect.
- OLAP Technologies – Proclarity (Knowsys), Wired for OLAP, OLAP@Work, MS Analysis Services, MS EXCEL Pivot tables.
- Misc. OOP, Web Services, XML, .Net, N-Tier Client-Server, ER-Win, PVCS, Visual Source Safe, S-Designer, ODBC, SQL*NET, CGI-programming, MS Transaction Server, COM/DCOM, ActiveX, Client Access (AS/400), FX-Cop, Continuous build environment – Cruise Control, Code Smith Code Generation.

Employment History and Related Experience

Unisys – PA State Police (Part time) 6/2012 –Present

Lead Sr. DBA

- Manage numerous MS SQL Server database servers from MS SQL 2000 to MS SQL 2008, including clusters, virtual servers, and dedicated hardware. Tasks include troubleshooting deadlocks, performance tuning T-SQL, indexes, databases, SAN network, managing production systems and lower environments, creating and maintaining DTS and SSIS packages, SSRS reports, database design, application design reviews, code walkthroughs, data archiving, disaster recovery and any database related tasks that may present. Databases managed are in the 2 to 10 terabyte range. Designed and implemented automated sliding window / archiving for large tables (over 3 TB).
- Technical Skills utilized: MS SQL Server 2000 – 2008, MS SQL Server Integration Services, MS SQL Server Reporting Services, MS SQL Server Analysis Services, Windows Clustering, log shipping, SAN, C#.net, Vb.net, ERWin, Windows Server 2003, Windows Performance Monitor, SQL Profiler.

PA Department of Labor and Industry UCMS project. 7/2011 –11/30/2012

Sr. Architect

Support for a large Oracle database environment, including data modeling, performance tuning, technical and business process analysis. Directly support data related activities for the development team including SQL tuning, writing PL/SQL procedures, and model changes. Create and/or review data hot fixes. Provide general overall Oracle expert support, specializing in ETL and development efforts. Monitor database and application performance with in-depth analysis across all tiers of the application. The UCMS application is a $130 million joint project with IBM to rewrite and expand Pennsylvania's Unemployment Compensation System to allow employers to file online, claimants to file claims and inquiry status of account, reports to be generated, as well as personal and public information to be displayed. UCMS utilizes an Oracle database while WebSphere Application Server and WebSphere Process server utilize java code written by over 130 developers. UCMS currently contains over 3.6 million lines of code, operating on 399 severs across five environments, databases in the terabytes and thousands of tables.

- Technical Skills utilized: Oracle, PL/SQL, Clustering, SAN, Websphere, IBM SOA, Java, Crystal Reports, performance tuning, SQL & PL/SQL, ERWin, Rational Clear Quest, Ration ClearQuest, Requisite Pro, Data Stage Rational Architect.

EZData2Go.com - Harrisburg, PA (Part time) 2/2010 – 6/2012

Sr. DBA, Data Modeler, ETL developer.

- Performs all MS SQL Server related activities. Activities include analyzing public domain data sources and loading into MS SQL Server and supporting production. Data models produced in Visio and MS SQL Server tools with extensive use of extended properties. ETL developed in a combination of T-SQL, SQL, and Integration services packages with numerous parts written in .net custom scripts within SQL Server Integration Service to load 100,000+ shape files into to SQL Server tables including geometry and geography data types. Develop and support MS SQL Server Analysis Services cubes. Fully loaded all 2010 US Census Summary Files 1 & 2 data including TIGER/LF shape files for 2010 and 2011 into SQL Server 2008 database representing well over 1 TB of data, nearing 2 TB with applied indexes. Heavy indexes and data file management including both data files and data file groups used to manage databases. Writing and tuning of T-SQL stored procedure, triggers, and user defined functions. Created and maintained 100's of databases in excess of 30 TB.

  Created SSRS reports for both end users and support staff, reports on data modeling rules adherence, table statics beyond the SQL Server values supplied. Managed Windows servers, Windows clusters, SAN, MS Virtual Server Hyper-V, and numerous database and development VMs. Experience in Dell servers, RAID cards, SAN, high performance solid state drive arrays.

- Technical Skills utilized: MS SQL Server 2005, 2008, 2012 including Relational engine, Reporting Service and Integration Services. MS Visio, MS Office, Visual

Studio, VB.net, ASP.net, MS Windows Server, Hyper-V Virtual Machine Server, Windows Clustering, SAN, and Power Shell.

Maximus; Harrisburg, PA 5/2006 – 6/2011

Sr. MS SQL Server DBA – Oversight / IV&V
PA Department of Labor and Industry UCMS / CWDS projects.

- Performed Independent Verification & Validation (IV&V) function of all data related activities for 2 large projects at the PA Dept. of Labor and Industry. Conducts assessments of all deliverables on behalf of the Commonwealth; reporting to senior management including CIO, Steering Committees, and Project management staff. Evaluates project activities to Statements of Work, Proposals, industry best practices, and Commonwealth standards. Provides weekly project status reports, monthly in depth assessment reports documenting findings and recommendations.
- Technical Skills utilized: MS SQL Server 2005, Reporting Services 2005, SQL Server Integration Services, Crystal Reports, performance tuning, T-SQL, ADO.NET, ERWin, VS 2005, Visual Source Safe, Rational Clear Quest, Ration ClearQuest, RequisitPro. Oracle RDMS, and Data Stage.

e.magination; Baltimore, MD 4/2005 – 5/2006
DBA – Developer
Anne E. Casey Foundation

- Performed all DBA and developer activities for small IT department supporting a large non-profit foundation. Created and supported numerous reports, web applications, windows services, and Active Directory integration with most of the applications.
- Technical Skills utilized: MS SQL Server 2005, MS SQL Analysis Services (cubes), Reporting Services 2005, SQL Server log shipping, Windows clusters, Crystal Reports, Share Point Portal Services, SQL Lite Speed, performance tuning, T-SQL, ADO.NET, Visio, VS 2005, Visual Source Safe, Active Directory API, LDAP.

National Drug Intelligence Center – RAID

- Performed all DBA and database developer activities for custom developed data intensive client-server application for a government law enforcement agency. Personally created over 1,000 stored procedures totaling more than 250,000 lines of T-SQL code, 100's of triggers, advanced self configuring indexing. Note: This project failed 2 times previously and was blamed on poor database performance. This project is considered a tremendous success and is now in use all over the world by various law enforcement agencies in numerous languages.
- Technical Skills utilized: MS SQL Server, Reporting Services, Crystal Reports, general admin, performance tuning, T-SQL, ADO.NET, Visio, VS 2003, Visual Source Safe, Cruise Control, Nant, CodeSmith – code generation.
- Conducted internal training for developers on MS SQL Server 2005 new features and best practices.

Technical Sales support

- Provided technical support during sales activities for database related solutions. As a Microsoft Gold Partner specializing in MS SQL Server solutions, met with many organizations to perform assessments of current operations and future business plans to identify technology road maps Designed and implemented many technology proof-of-concepts, including documenting technical proposals, findings and recommendations.

Independent Database Reviews

Developed consulting specialty at e.magination targeting independent review of competitors database models and codebase. Reviews ranged from simple data model reviews to database operations and procedure reviews or assistance in targeted performance tunings.

PA Turnpike Commission 11/2004 – 4/2005
DBA Developer / Web Developer

Electronic Bidding System

- Performed all DBA and Database developer activities for medium sized public web site. General duties include database administration, data modeling (logical and physical), stored procedure / user defined function creation, performance tuning, mentoring developers on SQL Server best practices with ADO.NET, VB.NET, ASP.NET.
- Technical Skills Utilized: MS SQL Server, Disaster recovery, general admin, performance tuning, T-SQL, DTS, ADO.NET, VB.NET, ASP.NET, Visio, VS 2003, Visual Source Safe, CodeSmith – code generation.

Keane, Inc. August 2003 – November 2004
Sr. Consultant - Database Developer / Web Developer

Tyco Electronics – Field Engineer Automation

- Consulted with existing development team on data model changes, and adaptation of best practices with regards to Oracle 9i.
- Technical Skills Utilized: Oracle 9i, PL/SQL, ADO.NET, VB.NET, ASP.NET, Visio 2000

Tyco Electronics – EHS – Environmental Health and Safety application

- As lead developer implemented changes to data sources from a proprietary application to the Tyco Electronics Data Warehouse. Changes made to asp pages, stored procedures, data model and VB 6 COM classes.
- Technical Skills Utilized: MS Windows 2000 Server, VB 6.0, ASP, Visio 2000, Oracle 9i, PL/SQL, Visual Source Safe

Tyco Electronics – Power Channel System

- Lead analyst for large international, multi-currency, multi-language E-commerce web application. Communicated with users around the world developing requirements for enhancements, creating modification specifications then implementing those

changes. System was truly an enterprise solution incorporating no less than 6 databases, numerous feeds in and out and thousands of users worldwide. Emphasis on performance tuning multiple SQL Server databases used for reporting and OLTP.

- Technical Skills Utilized: MS SQL 2000, MS Windows 2000 Server, VB 6.0, VB.NET, ASP, ASP.NET, Office 2000/XP, Visio 2000, MS Project, Oracle 8i., 9i, ETL, UNIX – Korn Shell scripts, MS Terminal Services, DTS, T-SQL, PL/SQL, PC-Anywhere , Visual Source Safe

Tyco Electronics – General Information Management application

- Implemented enhancements to existing application including adding a number of additional fields to reports.
- Technical Skills Utilized: MS Windows 2000 Server, VB 6.0, ASP, Oracle 9i, PL/SQL, Visual Source Safe, COM/DCOM

Tyco Electronics – Quality Non-conformance and Eng. Audit Tracking System

- Implemented enhancements to an existing application including automatic generation of emails for audits that are overdue for various phases and implementation of additional data feeds from SAP and other systems.
- Technical Skills Utilized: MS Windows 2000 Server, VB 6.0, ASP, Oracle 9i, UNIX – Korn Shell scripts, PL/SQL, ETL, Visual Source Safe

Tyco Electronics – SAP Customer Price List

- Performance tuning of an existing web application. Denormalized fields onto driving tables, created indexes and modified VB.NET components to handle data more efficiently.
- Technical Skills Utilized: MS Windows 2000 Server, VB.NET, ASP.NET, Oracle 9i, PL/SQL, , Visual Source Safe

Tyco Electronics – Quality Information and Communication Network application

- Lead developer/analyst for world wide application. Performed numerous enhancements, production support, analysis, proposal writing and functional specifications writing. Also met with end users to determine requirements.
- Technical Skills Utilized: VB.NET, ASP.NET, COM/DCOM, MS Windows 2000 Server, Windows XP, VB 6.0/.net, Office XP, Visio 2000, Oracle 9i, UNIX shell scripts, PL/SQL , Visual Source Safe, ETL

Tyco Electronics – Data Acquisition Framework

- Designed and developed new ETL components in PL/SQL and UNIX supporting enterprise data processing. Production support of existing ETL components.
- Technical Skills Utilized: Visio 2000, Oracle 9i, TOAD,UNIX – Korn Shell scripts, PL/SQL , Visual Source Safe

USTAAD Systems, Inc. September 1999 – June 2003
Data Warehouse DBA Manager / Sr. Technical Architect / Company Onsite Representative

Wells Fargo Structured Analytical Reporting

- Lead technical Architect and DBA manager for very large data warehouse (over 1 terabyte) solution. Architected technical solution based on meta data driven approach. Responsible for logical and physical data models, physical database, ETL, recovery models, data retention/archiving, OLAP modeling, Physical Cubes, cube management, flat file exports, flat reports and multidimensional reports. Company onsite representative supervising up to 10 others and managing client relations.
- Technical Skills Utilized: MS SQL 2000, MS Windows 2000 Advanced Server, MS Data Transformation Services (DTS), MS Analytical Services (OLAP), Proclarity, Erwin, VB 6.0/.net, Office 2000, PVCS, Visio 2000, MS Project, Oracle 8i., 9i, TOAD, UNIX, MS Terminal Services, T-SQL

Data Warehouse Product Manager

- Developed a Multi-dimensional (OLAP) data warehouse for electrical distribution vertical market.
- Technical Skills Utilized: MS SQL 7.0 / 2000 Beta, MS Windows 2000 Advanced Server, MS Data Transformation Services, MS Analytical Services (OLAP), AS/400, DB2/400, Essbase, Wired For OLAP, OLAP@Work, Knoyis Proclarity, Alpha Blocks, Erwin, AppsMart, MS Access, VB 6.0, Office 2000, Visio 2000, MS Project, Oracle 7 / 8i.

School Technology Management, Inc. June 2002 – February 2003
Data Warehouse DBA Manager / DBA

- Developed a full OLAP solution template for school districts. Met with numerous district and school level personal from various districts from NY to MD to develop requirements for a reporting and business intelligence solution. Developed technical architecture, managed development, and delivery.
- Technical Skills Utilized: MS SQL 2000, MS Windows 2000 Advanced Server, MS Data Transformation Services (DTS), MS Analytical Services (OLAP), Proclarity, Erwin, VB 6.0/.net, Office 2000, Visio 2000, MS Project, Oracle 8i., 9i, UNIX, MS Terminal Services, T-SQL

U.S. LifeLine, Inc. February 1999 – September 1999
Director Information Technologies (MS SQL DBA)

- Managed a team of Internet developers in support of custom Internet Information Server 4.0 Active Server Pages. Directed the conversion from a MS Access 2.0 backend to a MS SQL Server 7.0 database backend.
- Transformed internal MS Access 2.0 application to a MS Access 2000 Client Server Application utilizing MS SQL Server 7.0. Transformation included modifications to take advantage of MS SQL Server's new features to enhance existing functionality of the custom MS Access application.
- Technical Skills Utilized: MS SQL Server 7.0, Replication, remote administration, database design, Windows NT 4.0 Server Administration, cable plant administration, project management, personnel management, broad band communications, TCP/IP,

Office 2000, Access 2000 VBA, VB 6.0, Visual Interdev 1 / 6, IIS 4.0, Proxy 2.0, I-Mail, Enterprise Monitor, PC Anywhere, Carbon Copy.

Ajilon May 1995 – February 1999
Senior Consultant - DBA / Client-Server Technologies

Ajilon Offsite:

- Directed a team of network administrators and end user support specialists providing support to over 50 sales and delivery personal.
- Technical Skills Utilized: Windows NT 4.0 Server Administration, cable plant administration, project management, personnel management, T-1 connections, ISDN, RAS, Virtual Private Networks, video conferencing, MS Project, MS Visio.

Harley Davidson Motor Company, Inc.

- Client Server DBA responsible for database management of six MS SQL servers, data modeling, creating MS SQL Server stored procedures and Windows NT network administration. Also assisted in the development of Power Builder applications.
- Technical Skills Utilized: Data modeling using S-Designor, MS SQL server database management, database server tuning, MS SQL server database programming stored procedures. Administered Windows NT network, transfer of decision support tables to IBM AS/400 for further enterprise utilization.

NBC

- Designed and developed a year 2000 repository to track non-IS developed products and/or applications for Century Date Change compliance, verification, and resolution.
- Technical Skills Utilized: MS Windows NT 4.0 Server, MS Windows 95, MS SQL Server, RAS, MS Access, MS Visual Basic 5.0, database replication.

Book-of-the-Month Club, Inc.

- Developed a data warehouse environment, replacing an existing VM APL environment. Conducted business analysis for entire project by interviewing over 200 users from VP's and editors to end-users. Provided technical support to senior management liaisons, helping managers learn the new system and mentoring in relational database navigation and query writing.
- Technical Skills Utilized: Project management, Oracle 7.x, SQL-Net, ODBC, MS Access, Visual Basic, RS600 /AIX, Outbound data transfer utility.

AMP, Inc.

- Responsible for the analysis of business requirements in the reporting of business group performance against a variety of measures. Completed technical specifications for complete project, assisted in formulating proposal and implemented project by leading a team of programmer / analysts. .
- Technical Skills Utilized: Data modeling using ER-Win, MS SQL server database programming stored procedures. Applications developed in MS Access, Harvard Graphics, OLE automation, and ODBC connectivity. Data transfer from mainframe to

Windows NT server using Outbound product.

Tren Tech, Inc. March 1993 – April 1995
System Integrator

- Responsible for installation, maintenance and repairs of bar-code related equipment including thermal transfer printers, laser scanners, bar-code wand readers, magnetic strip card readers, remote data terminals, time and attendance equipment as well as general PC equipment.
- Technical Skills Utilized: Visual Basic Professional 3.0 / Visual Basic Professional 4.0 Beta, Access Jet Database. MS Windows API in a Novel, Windows NT, Windows for Workgroups network environment.

Certifications

MCITP, MCSE,
MCDBA, MCSD,
MCP, MCT,
OCP (Currently updating to 2008 versions of MS certifications.)

Certified Microsoft Instructor for MS SQL Server since MS SQL Server classes began (1996).

UNISYS

Resource 16

Database Architect

Key Skills and Knowledge

Databases

- Oracle 9i, 10g, and 11g
- RAC (Real Application Clusters)
- Oracle 9i; SQL Server 2005, 2008, 2008 R2, and 2012
- SQL Server 2000 and 7.0; OLAP (Analysis Server)
- Microsoft Access Turbo Image XL (HP proprietary database)
- MySQL

Hardware

- Compaq ProLiant servers
- Dell Power Edge servers
- IBM X series and VMware
- Oracle Virtual Server

Operating Systems

- Windows 95, NT 4.0, 2000, 2003, and 2008 R2
- UNIX and Linux
- Oracle Enterprise
- Linux and SuSE Enterprise Linux
- Red Hat Enterprise Linux (RHEL)
- Solaris and Oracle Solaris
- VMware
- Windows Virtual Server

Software/System Architecture

- SQL Enterprise Manager and MSCS Clustering
- ASM (Automated Storage Management)
- DTS, SQL Profiler, Query Analyzer, and SQL Setup
- Security Manager, Service Manager, and ODBC
- BMC PATROL, Control-M, Entegra, and NetIQ
- Quest SQL Litespeed, ERwin, and Veritas I3
- IDERA SQL Diagnostic Manager and Legato Backup Modular

Professional Summary

More than 13 years of experience in Information Technology (IT), database administration, and Oracle high availability technologies like Oracle RAC, Oracle Failsafe Manager, Streams Replication, and Active Data Guard. Experience with Microsoft high availability technologies like Microsoft Cluster servers, database mirroring, and replication. Experience in working with MS SQL Server and upgrades. Extensive database administration experience with Oracle 9i, 10g, and 11g.

- Installed, configured, and implemented 2-node Oracle 10g RAC and 11g RAC (Real Application Clusters) on Windows Server 2003 and 2008 (x64) and Solaris, Oracle Solaris, SLES, and RHEL
- Acquired experience with automated storage management (ASM) on IBM SVC/XIV-type enterprise-class storage systems
- Migrate and upgrade Oracle environments (VLDBs of more than 10 TB in RMAN/Transportable Table space)
- Implement Oracle Enterprise Manager 11g and 12c
- Administer Windows 2008 R2, 2003, 2000, and NT
- Acquired experience with UNIX and Linux environment and administration (Solaris, Oracle Solaris, SLES, and RHEL)
- Acquired experience in MS SQL Server installation, configuration, client/server connectivity, query optimization, backup, recovery, clustering, replication, log shipping, running database consistency checks using DBCC, and troubleshooting large databases.

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania,
Sr. DBA, Harrisburg, PA 2006 – Present

Administered databases hosted in Oracle 10g and 11g RAC and Oracle 9i Fail-safe in Windows and Linux environments (Solaris, Oracle Solaris, SLES, and RHEL).

- Database sizes vary from a few MBs to a VLDB.
- Manage the entire software development lifecycle, planning for hardware/software procurement/design, SQL Server responsibilities.
- Administered multiple servers with SQL Server 2000, SQL Server 2005, and SQL Server 2008/SQL Server 2008 R2 Enterprise.
- Support more than 2,000 databases spread all over the environments mentioned above; sizes vary from a few MBs to a VLDB.
- Administer development, testing, production, and disaster recovery environments.

UNISYS

Resource 16

Database Architect

- Veritas NetBackup
- Oracle Fail Safe Manager and RMAN
- Crystal Reports (versions 10 and XIR2)
- Quest TOAD DBA Suite for Oracle

Programming Languages & Tools

- C, C++, C#, UNIX, Linux, and VB.Net

ASAP Software, DBA, IL 2005 – 2006

Administered development, testing, production, and disaster recovery environments.

- Delivered database support of various vendor-based applications and custom applications developed in house.
- Maintained high availability SQL server environment using Microsoft Clustering technologies (4 servers).

QualComm, DBA, CA 2004 – 2005

Administered 30 production and 20 test servers with SQL Server 2000 Enterprise; delivered database support for 60 applications.

- Supported a high availability SQL Server environment using Microsoft Clustering technologies (6 servers).
- Created and maintained a standby environment for business-critical applications and consolidation of servers.
- Extracted, translated, and loaded data using DTS packages. Cleansed and formatted data according to the database requirements before loading. Scheduled packages to run automatically daily or weekly. Set up a test environment to maintain the accuracy of data.

T-Mobile USA, DBA, NJ 2003 – 2003

Lead DBA for the SQL Server group. Managed multiple environments for development, testing, and production.

- Administered 7 production and 4 test servers with SQL Server 2000 Enterprise.
- Maintained database performance; resolved capacity issues.
- Worked closely with NT administrators to develop and maintain a solid backup strategy.

Cooper Health System, DBA, NJ 2001 – 2003

Administered 6 servers with 6.5, 7.0, and SQL Server 2000 Enterprise; systems; implemented and rolled the system out to production.

- Performed project management for the finance, legal, business intelligence, and accounts departments.
- Managed change control and project documentation.
- Controlled the support of Internet and intranet back-end databases.

UNISYS

Resource 16

Database Architect

HSBC, Bank USA, DBA, NY 1999 – 2001

Administered 9 servers: 5 in New York and 4 in California. Used replication mainly for replicating data for reporting departments and for archiving and warehousing.

- Moved the data from staging to testing and from testing to production.
- Worked with client/server tools like SQL Server Enterprise Manager and Query Analyzer to administer SQL Server.
- Planned complete backups of databases; restored databases from disaster recovery.
- Planned and modified permission issues on the server.

Education

- Bachelor of Technology degree, Nagarjuna University, India, 1999

Professional Certification

- Oracle 9i/10g/11g Certified Professional (OCP: DBA 9i, 10g, and 11g)
- Oracle 10g RAC Certified Expert
- Oracle Enterprise Manager 11g/12c Certified Implementation Specialist
- Certified SQL Server DBA 2000 (MCDBA)
- Certified Microsoft Certified Technology Specialist (MCTS: SQL Server 2005)
- Certified Microsoft Certified IT Professional: DBA (MCITP: DBA - SQL Server 2005)
- Certified Microsoft Certified IT Professional: DBA (MCITP: DBA - SQL Server 2008)
- Oracle 9i Forms Developer-Oracle9i PL/SQL Developer OCA (Oracle Certified Associate).
- Certificate course in C, C++, and UNIX

Professional Development

- Oracle Database 11g: Performance Tuning Release 2, 2012

UNISYS

Resource 17

Database Architect

Key Skills and Knowledge

- Sybase Products: ASE, Replication Server, Oracle Replication Options, Direct Connect, Open Client, Power Designer
- Oracle Products: SQLPlus, SQL Loader, Job Scheduler, and Data Pump
- Languages: BASIC, FORTRAN, COBOL, C, C++, Java, and UNIX Shell
- Operating systems: UNIX (Solaris, Linux, AIX, and DEC)
- Databases: Sybase ASE, Oracle, MySQL, Unify, Access, and SQL

Clearance

TS/SCI with Polygraph (with lifestyle).

Skills Summary

Mrs. Reinhart has 27 years of experience in the Information Technology (IT) Industry. Skilled in multiple computing languages (including UNIX shell script) and has significant experience in writing Sybase, Oracle, and MySQL Stored Procedures, database design, replication, and implementation. Developed and delivered Sybase courses, briefed Sybase and Oracle users groups, and spoken at Sybase International conferences; authored multiple technical documents.

Employment History and Related Experience

Innovative Engineering Solutions, Inc. (IESI) 2011 – Presen

Principal Database Engineer

Gathered requirements, designed database objects, and programmed stored procedures for multiple Oracle based projects for the National Security Agency (NSA).

Accomplished data transformations and imports using SQL Loader, Oracle Job Scheduler, and Oracle data pump for import/export; provided multiple projects with database related assistance using MySQL and Microsoft SQL Server; accomplished SQL tuning database configuration, backup, and recovery

Provided mentoring and troubleshooting assistance to several co-workers programming in various languages; co-lead for mentoring program. Helped start a mentoring program and conducted workshops to train the mentors; project Manager for the system integration and Cyber/Networks divisions, interacted with the prime contract representatives, and dealing with personnel issues.

SYBASE, Inc., Enterprise Solutions Division, Federal Group 1996 – 2011

Principal Consultant

Sybase Intel practice expert on heterogeneous replication, specializing in Oracle to Oracle replication using Sybase products for National Security Agency.

Wrote technical document on Sybase to Oracle two-way replication; technical expert for the Sybase ASE version 15 database service portion of a project to standardize the installation and configuration of Sybase database software across the enterprise. Partnered with multiple vendors and integrators. IBM prime.; received Sybase Gold Star Award.

Provided programming and documentation support. Reviewed and provided input for requirements documents for agency standardization project. Researched and provided input for the best practices and installation and configuration documents. Wrote the sections on archive databases, row level access, and auditing; presenter at 1997, 2002, and 2004 Sybase International User Group conferences; Extensive experience optimizing stored procedures, receipt of government letter of appreciation for work done in optimizing procedures in the wake of the September 11th attacks.

National Security Agency 1986 – 1996

Program Manager for Database Applications and User Interfaces for the Director and Executive Elements of the Agency.

- Developed a correspondence tracking aystem that became an Agency standard
- Taught Fast Track to Sybase and Introduction to C Programming at the National Cryptologic School
- Chairperson of Agency Gain Users Group.

Education

B.S. Towson University, Towson Maryland, 1974

Certifications

- Certified Sybase Professional
- Database Administrator Versions 10, 11, 12, and 15
- Replication Server Professional Version 12.5, 1.

Firewall Administrator

Key Skills and Knowledge

- Cisco routing
- Cisco switching
- CheckPoint
- Large enterprise Internet connectivity
- Highly redundant networking
- Large enterprise 802.11a, b, g, and n wireless networking
- Resolution of complex problems

Professional Summary

Architect, implement, and support global highly available Cisco-based WAN, LAN, and wireless network solutions for converged voice, video, and data using the following technologies:

- MPLS, DMVPN, BGP, EIGRP, IOS Zone firewall, QoS (queuing, WRED, DSCP, shaping, and policing)
- Cisco 6500 (Supervisor 720-3C), VSS 1440, 4910R+E (Supervisor 7E), 3750, 3750E, 3750X, 3560, 2960, 2960S, 2950, and 2900
- Cisco ISR and ISR2 router series 3900, 2900, and 2800 routers; ASR 1000 routers
- Cisco ASA firewall and VPN appliances
- Cisco 6500 ACE load-balancing modules
- Cisco 5508 wireless LAN controllers, Cisco Aironet 3500 and 1260 series lightweight access points, and autonomous Cisco 1200 series wireless access points
- CiscoWorks LMS 3.2, Cisco ACS 4.2, RADIUS, and TACACS+
- Upgrade CheckPoint Provider-1 firewall.
- Support R65 through R75.40 SecurePlatform, IPSO, and GAIA
- Strong Level 2 and Level 3 switching skills, including MST spanning tree, LACP Etherchannel, VTP, VLAN, DHCP snooping, frame storm control, port security, port-level ACLs, and switching QoS (various models)
- Effective, in-depth troubleshooting and resolution of complex routing and switching problems
- Excellent development and support of QoS LAN, WAN, and Wireless edge-to-edge using the DIFFSERV model
- Particularly adept at engineering issues out of network systems to avoid problem
- Use tools such as Perl, regular expressions (REGEX), script development, EEM, and C programming language to broaden ability to solve problems and provide solutions.

Employment History and Related Experience

Unisys Corporation, Data PowerHouse Project,
Network Design Engineer 1 – Team Lead, Harrisburg, PA 2011 – Present

Engineer network designs; support, optimize, and monitor redundant Data PowerHouse network infrastructure.

- Provide ongoing support for the DPW Managed Security Services contract, including CheckPoint firewalls, high availability Provider-1 firewalls, and Proventia IPS.

UNISYS

Resource 18

Firewall Administrator

- Resolve complex multiagency problems.
- Coordinate resources and set priorities as necessary.

The Hershey Company, Hershey, PA	2001 – 2011
Senior Network Specialist, Network Architect	2007 –2011
Senior Network Analyst	2005 – 2007
Network Contractor	2001 – 2005

Designed, configured, deployed, and maintained a raised floor switching environment with Cisco VSS 1440 at the core and 3750E stacks at the server edge.

- Provided complete redundancy throughout the environment, using LACP Etherchannel to the Solaris and Windows servers and LACP cross-stack Etherchannel trunks from the VSS to the 3750E switch stacks.
- Improved performance and reliability and made deployments simpler, faster, and less error prone by introducing a more methodical switching design.
- Designed, configured, and maintained a redundant gigabit campus internetwork connecting 10 campus buildings spread across several square miles, providing a seamless voice, video, and data network experience for approximately 4,000 users.
- Developed a proven conceptual WAN model, the Hershey WAN Cloud, consisting of a set of rules by which the WAN was scaled and upgraded over time without jeopardizing its reliability or key features such as full mesh, dynamic recovery, and redundant connectivity.
- Migrated a WAN from hub-and-spoke Frame Relay and a dial backup topology to Sprint MPLS with Internet DMVPN-based redundant paths. Changing the topology to full mesh, stabilizing and reducing routes with BGP in place of EIGRP, introducing QoS, and adding DMVPN path redundancy nearly eliminated WAN-related network trouble calls by eliminating known and predicted problems.
- Upgraded a Sprint MPLS to an AT&T MPLS, providing a fully converged and properly scaled voice, video, and data network with QoS LAN and WAN policy that enabled voice and video deployments throughout the enterprise.
- Designed, configured, and managed 802.11b, g, and n wireless networks on Cisco autonomous Aironet 1200 access points and Cisco 5508 controller platforms using 1260/3500 series lightweight access points for 14 plants, 3 warehouses, and various offices and campus environments.
- Introduced VLANs, MST, access port policies, and Layer 3 switching to Hershey network deployments, improving performance, stability, and security throughout the enterprise.
- Installed and maintained CiscoWorks for more than 9 years to manage more than 1,500 Cisco devices, including routers, switches, and wireless access points.

UNISYS

Resource 18

Firewall Administrator

Tyco Electronics MA/COM, Senior Network Engineer,
Harrisburg, PA 2000 – 2001

Troubleshot and configured Cisco routers on 3640s and 3620s. Provided specifications for LAN/WAN performance improvements using Cisco equipment and Compaq servers.

- Developed software to initiate a dialup-networking connection between a wireless radio and a PC in Microsoft Visual C++ for the Windows platform.
- Installed and configured a demonstration wide area radio system consisting of three Sun Ultra 10s running Solaris.
- Developed test plans for factory acceptance testing of wireless radio products in a WAN environment.
- Configured proprietary radio equipment.
- Conducted beta tests and error reporting on radio, base station, and Sun Solaris-based proprietary software.

Harsco Gas & Fluid Control Group, Network Manager, Harrisburg, PA
1998 – 2000

Managed the implementation and maintenance of a Cisco router-based WAN for the entire division. Supported a mixed protocol network using RIP (IPX), OSPF, and NLSP routing protocols on Cisco 2600 and Cisco 2500 routers.

- Worked with SNA tunneling, bridging, and APPN on a Cisco-based WAN with AS/400s.
- Transitioned a Cisco multiprotocol WAN from an IP/IPX network to an all-IP network.
- Provided technical specifications and implementation guidelines for a Cisco PIX, router, and switch-based Internet connection to Harsco corporate headquarters.
- Managed a Cisco-based dial backup for factory sites to provide failover ISDN/PRI dial-on-demand connection when the Frame Relay circuit fails.
- Managed Cisco-based ISDN PPP dialup networking for analog and ISDN callers.
- Used a Cisco IOS firewall in house behind Harsco's primary firewall to refine control over traffic to Harsco's Web sites, AS400s, e-mail, and other systems.
- Completed VoIP pilot project using Cisco 3640 and 2610 routers connected to Lucent phone switches between two locations.
- Hired two highly qualified network technicians.
- Hired a telecommunications coordinator.
- Conducted formal annual reviews of employees.
- Trained employees to be high-quality support personnel.

Morgan Distribution, Systems/Analyst 1993 –1998

Fulfilled a need for and expandable flexible multiprotocol WAN supporting TCP/IP (OSPF), IPX, APPN, SNA, and bridging over Frame Relay, dialup, and point-to-

UNISYS

Resource 18

Firewall Administrator

point networks using Cisco 4700s, Cisco 2521s, and a 2512 16-port Token Ring serial router for dialup. Migrated the enterprise to IP only from IPX, APPN, SNA, and bridging

Education

- 3 years toward B.S., Information Science, Kutztown University

Professional Certifications

- Cisco CCNP, CCNA, and CCDA

UNISYS

e&e IT Consulting Services, Inc.

Resource 19

Firewall Administrator

Key Skills and Knowledge

- Top Secret clearance
- Security +
- CISSP and CCSPA
- Firewall setup and installation
- CCSPA & CISSP certs
- Cisco switch configuration
- UNIX and Windows platforms for workstations and servers
- Configure Cisco switch
- eEye Retina Vulnerability scanner
- Familiarity with Ethernet and FDDI protocols used in LAW/WAN operations
- Knowledgeable of security policies for Air Force, Department of Defense Directives, Public Key Infrastructure/Environment (PKI/PKE), and Common Criteria
- National Security Agency (NSA) Evaluation and Validation program
- Federal Information Processing Standards (FIPS)
- Network vulnerability assessment, including penetration and vulnerability analysis of security technologies
- Implement and maintain computer security plans
- Implement a Security Education Program to ensure facility compliance
- Managed the military base Communications Security (COMSEC) program

Professional Summary

Extremely experienced firewall security administrator with 15 years of experience. Ensures all network users completed the network user's licensing course and received a security clearance or background investigation. Maintain a formal Information System Security Program; ensured compliance with local procedures for clearing, purging, declassifying, and releasing systems, including memory, media, and output. Reviewed and conducts investigations for security incidents.

- Assisted with network vulnerability assessment, including penetration and vulnerability analysis of security technologies
- Ensure compliance with Department of Defense policies, regulations and guidelines
- Configure Cisco switch to run monthly scans on live network using eEye Retina Vulnerability scanner
- Familiarity with Ethernet and FDDI protocols used in LAW/WAN operations
- Reviewed the security on new and existing Information Systems for the Air Force Weather Weapons System Program Office
- Tested and evaluated the security of information systems using various scanning/vulnerability/penetration tools (Nessus, Nmap, Retina, and Wireshark sniffer)
- Performed Certification Testing on new systems using eEye Retina vulnerability scanner and DISA Gold Disk
- Prepared for Annual Federal Information Security Management Act (FISMA) Review Audits by the Air Force Audit Agency.

Employment History and Related Experience

e&e IT Consulting Services Inc., Network Security Engineer, New Cumberland, PA 2011 – Present

Oversee and monitor 36 computer networks worldwide. Lead a third-tier firewall support help desk. Setup and install firewalls, MRVs, IDSs, and WAN optimization appliances.

- Track equipment at all 36 locations.
- Implement, monitor, and update Enterasys Network Access Control (NAC) appliances.
- Retire or replace old equipment.

Quantum Dynamics Inc. Information System Security Officer (ISSO), Otis Air Base, MA 2009 – 2011

Oversaw computer security for a military unit; ensure compliance with Department of Defense policies, regulations, and guidelines.

e&e IT Consulting Services, Inc.

Resource 19

Firewall Administrator

- Configured Cisco switch to run monthly scans on a live network using eEye Retina Vulnerability scanner.
- Became familiar with Ethernet and FDDI protocols used in LAW/WAN operations.
- Evaluated and resolved Information Assurance Vulnerability Alerts (IAVAs).
- Created accounts for new users using LDAP.
- Analyzed audit logs and reported anomalies.
- Reviewed and archived server and workstation audit logs.
- Ensured virus definitions were less than 30 days old and the scan engine was up to date on UNIX/Solaris and Windows platforms (workstations and servers).

Jacobs Technologies Corp, Senior Network Security Engineer,
Hanscom Air Base, MA 2008 – 2009

Reviewed the security for new and existing information systems for the Air Force Weather Weapons System Program Office. Performed certification testing on new systems using eEye Retina vulnerability scanner and DISA Gold Disk.

- Prepared for Annual Federal Information Security Management Act (FISMA) Review Audits by the Air Force Audit Agency.
- Prepared documentation of systems for Army and Air Force approvals: Interim Authorities to Test (IATT), Authorities to Connect (IATC/ATC)/Operate (IATO/ATO), and Certificates of Networthiness (CoN) using the DIACAP format.
- Prepared System Identification Profiles (SIPs) and registered new programs.
- Created new versions and entered information assurance controls (DoD 8500.2) using the Security, Interoperability, Supportability, Sustainability and Usability (SISSU)/IT Lean process in the Enterprise Information Technology Data Repository (EITDR).
- Tracked the progress of a dozen information systems using Gantt charts in Microsoft Project.

Lockheed Martin Corp., Senior Systems Security Analyst,
Hanscom Air Base, MA 2006 – 2008

Worked with development teams on new information systems for the Combat Information Transport System (CITS) Program Management Office.

- Wrote System Security Authorization Agreements/System Security Plans (SSAAs/SSPs) for accreditation in the DITSCAP and DIACAP formats.
- Developed test plans for Certification Test and Evaluation (CT&E).
- Tested and evaluated the security of information systems using various scanning, vulnerability, and penetration tools (Nessus, Nmap, Retina, and Wireshark sniffer).

e&e IT Consulting Services, Inc.

Resource 19

Firewall Administrator

- Ensured system components complied with Air Force Instructions, Department of Defense Directives, Public Key Infrastructure/Environment (PKI/PKE), Common Criteria, the NSA/NIST/NIAP Evaluation and Validation program, and Federal Information Processing Standards (FIPS), in accordance with NSTISSP 11.

Maryland Air National Guard, Information Technology Specialist, Warfield Air Base, MD 1988 – 2006

Team lead for the certification and accreditation of a local area network in the DITSCAP format. Reviewed accreditation to ensure compliance with Air Force and DoD regulations. Reviewed and performed Security Tests and Evaluations (ST&E) of the network. Performed risk assessment and risk analysis; made recommendations

- Ensured all network users completed the network user's licensing course and received a security clearance or background investigation.
- Maintained a formal Information System Security Program.
- Ensured compliance with local procedures for clearing, purging, declassifying, and releasing systems, including memory, media, and output.
- Reviewed and assisted in the investigation of security incidents.
- Assisted with network vulnerability assessment, including penetration and vulnerability analysis of security technologies.
- Implemented and maintained computer security plans.
- Documented and presented a security education program to ensure facility compliance.
- Managed the base Communications Security (COMSEC) program.
- Reviewed server event logs.

Education

- B.S., Management Information Systems, Syracuse University, School of Management

Certifications

- CheckPoint Certified Security Principles Associate (CCSPA), 2011
- Certified Information Systems Security Professional (CISSP), 2010
- Security +, 2009
- Current Top Secret (TS/SCI) clearance

e&e IT Consulting Services, Inc.

Resource 20

Firewall Administrator

Key Skills and Knowledge

- Commonwealth experience
- CheckPoint security engineer
- Offshore VPN firewall installtion
- Server farm firewall upgrades
- VMware ESX
- CheckPoint Connectra R62
- Mobile Access
- R75.20 Smart-1 appliances in HA model
- Filtered Internet access via WebSense
- Productivity, reliability, and accessibility improvements
- Diagnose and troubleshoot a broad scope of technical problems
- Disaster recovery
- HP, 3Com, and H3C core technologies
- Cisco ASA and legacy Nortel network equipment
- HP EVA SAN
- Barracuda networks
- BlueCoat Web filtering products

Professional Summary

Highly efficient IT professional qualified by more than 12 years of combined experience in network design, configuration, implementation, and maintenance. Visionary who is skilled at deploying business-class to mid-range networks and provides foundations for advanced network, voice, and security solutions.

- Strong analytical, troubleshooting, and technical acumen enhanced by exceptional organizational and communication skills
- Noted ability to communicate technical concepts to nontechnical users
- Recognized agency-wide as a go-to-guy for resolution of problems
- Particular expertise in network monitoring; HP, 3Com, and H3C core technologies; Cisco ASA; and legacy Nortel network equipment
- Further experience in CheckPoint R75.20 and Connectra R66, VMware ESX Server2, HP EVA SAN, Barracuda networks, and BlueCoat Web filtering products.

Employment History and Related Experience

Bluecross Blueshield, Senior Network Security Engineer, MA 2011 – Present

Member of a design and implementation team. Deploy R75.20 for SecurePlatform on Power-1 appliances using ClutsterXL HA.

- Update Connectra R62 to Mobile Access R75.20.
- Perform day-to-day management of firewall policy and IPS profiles.
- Upgrade management and logging servers to R75.20 on Smart-1 appliances in High Availability mode.
- Install offshore VPN firewalls.
- Upgraded a firewall for a 10 GB server farm.

Dauphin County, LAN/WAN Administrator, PA 2006 – 2011

Network Group analyst and liaison to server and desktop groups in the IT department.

Administered configuration change orders on Cisco ASA firewall access and NAT rules for mail and Web services Maintained ASA backups.

- Deployed and monitored Tippingpoint IPS and firewall profiles as well as VPN support.
- Configured, evaluated, and monitored network performance on HP and 3Com 7500 series core locations as well as all switches and edge devices.
- Built and deployed departmental CheckPoint Connectra portals.
- Continually diagnosed and troubleshot a broad scope of technical problems at site locations.

- Recommended new hardware to meet the County's growing needs.
- Engineered and installed HP and 3Com core data infrastructure for Dauphin County's 911 Center.
- Deployed public safety portals using CheckPoint Connectra R66.

Delaware County, Pennsylvania, Network Administrator, PA 1996 – 2006

Team and project leader challenged to manage, monitor. and support a 46-site Frame Relay-based wide area network with connectivity to all county departments. Processed change orders for the Nokia-based CheckPointNG. Managed and coordinated projects through the entire development cycle together with service providers such as ESRI and Info Systems.

- Standardized local networks on an extensive Microsoft Windows NT and 2000 platform, using Exchange, SMS, SQL7.0-2000, and IIS.
- Implemented network security protocols.
- Evaluated and monitored system and network performance.
- Configured and maintained all servers.
- Tested and recommended new hardware and software to meet the County's growing needs.
- We continually on call to diagnose and troubleshoot a broad scope of technical problems at site locations; played a key role in disaster recovery.
- Supported judicial network project securely connecting all municipalities to the county network architecture and the consolidation of T1s to DS3.
- Participated in launching a countywide Web page (www.co.delaware.pa.us) that allows public and internal access to government departments and schools. The site averaged more than 17,000 hits a day in the fourth quarter of 2003.
- Organized the Real Estate Assessment Web page to consolidate information from three databases into a data warehouse presented with ArcIMS (http://w01.co.delaware.pa.us/pa/publicaccess.asp).
- Developed the CommerceCenter Web page (www.delcopa.org).
- Introduced filtered Internet access to all public libraries with WebSense.
- Captured significant cost savings plus productivity, reliability, and accessibility improvements resulting from service convergence.

Emergency Services Training Center, Computer Support Specialist 1997 – 2006

Designed and implemented a sophisticated network connecting various Delaware County agencies to this $1 million emergency services training facility. Ensured continuity of service to critical fire and police departments with little to no interruption in service. Since 1993, more than 78,000 emergency services personnel were trained at the facility.

e&e
IT Consulting Services, Inc.

Resource 20

Firewall Administrator

- Played a lead role in implementing a secure wireless network connecting the Emergency Services Training Center and Pennsylvania State University, which partnered to create CERT, a citizens emergency response-training program certified by the Board of Fire, Life & Safety.
- Directly after implementation, achieved and continued to maintain up-time support of 99.9 percent.
- Set up and supported wireless mobile labs in various locations.

Neumann College, Computer Lab Assistant/
Teaching Assistant, Aston, PA 1992 – 1996

Capitalized on a wide range of knowledge of AppleTalk, IPX/SPX, and TCP/IP to connect all computers in the Intel and Macintosh labs to a Novell-based network.

- Provided students and staff with technical support and training.
- Conducted nightly ColoradoTrakker system backups.
- Responded to help desk calls.
- Facilitated PC rollouts with minimal downtime.
- Developed and wrote technical resource manuals for the college.

Education

B.A., Liberal Studies, Neumann University, Aston, Pennsylvania 2001

Minor: Computer Information Management

UNISYS

Firewall Administrator

Key Skills and Knowledge

- Project and Program Management
- Communication and networking
- Hardware
- Operating systems
- Software/system architecture
- Office productivity tools
- Technical documentation
- Facilities management
- Cisco infrastructure
- 76xx border routers, 65xx series Core Layer 3 switching
- BGP peering to 3 upstream providers
- OSPF as local routing protocol
- Configuration, migration, documentation, and support requirements
- Content switching, high availability switching , routing, and firewall zone management
- Drafted a Quality of Service (QoS) standard to support VoIP, videoconferencing, and ERP
- Produced capital budgets for key business revenue – generating services in 7 separate facilities
- Developed operation figures to maintain and support the capital investments
- Managed multiple successful business acquisitions
- Convert networks

Professional Summary

More than 20 years of building highly resilient secured networks to meet business capacity needs and availability. Ability to lead during changes and maintain sustained performance.

- Detailed problem analysis ability to analyze detailed problems
- Multitasking of time-sensitive projects
- Security structured by the Common Body of Knowledge
- Proficiency with administering with firewall security policy
- Orientation to customer service and results
- Development of integrated organization structure.

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania, Network Security Engineer, Harrisburg, PA 2007 – Present

Responsible for Commonwealth of Pennsylvania server farm network & hardware operations, security access & firewall configuration, performance & high availability designs and development.

- Configuration, migration, documentation and support requirements maintaining content switching, high available switching, routing and firewall zone management.
- Detailed technical reviews of all network and security changes proposed to support agency business requirements.
- Detail packet analysis supporting application, network, and security operations.

Harsco Security, Network Engineer, Harrisburg, PA 2006 – 2007

Consultant for a local business as a networking WAN engineer. Reviewed core infrastructure, implemented HSRP, and configured Multi Home BGP access. Diverse MPLS connections interconnected the enterprise campus core hardware.

- Drafted the corporation's Quality of Service (QoS) standardi to support VoIP, videoconferencing, ERP, and other critical business applications.

Susquehanna Communications, Director of Network Engineering 2003 – 2006

Developed, designed, structured, and managed an organizational strategy for voice, video, and high-speed data, providing support and security over a geographically diverse multiple cable service operation.

UNISYS

Firewall Administrator

- Implemented a Cisco infrastructure using 76xx border routers, 65xx series Core Layer 3 switching, BGP peering to three upstream providers, and OSPF as the local routing protocol.
- Directed the overall operations of seven large public network infrastructures providing high bandwidth and availability.
- Managed the conversion of a high-speed data product and infrastructure at a newly acquired cable market supporting more than 14,500 HSD subscribers under complex conditions and a tight timeline.
- Supported interactive video data network operations for this conversion.
- Produced capital budgets for key business revenue-generating services in seven separate facilities along with operation figures to maintain and support capital investments.

BlazeNet (Subsidiary of Susquehanna Media Corporation)
Team Lead Network Engineer 1997 – 2003

Designed networking business product offerings that provided a competitive edge over the competition, driving record sales, using Frame Relay, ATM, point-to-point T1 or fraction T1, DSL, cable modems, wireless, and SONET technology. Designed, implemented, and managed a large Web hosting server farm network using Foundry load balancers and a 802.1Q strategy.

- Maximized business sales opportunity by interacting with commercial customers and finding designs and partnerships that generated their highest ROI, which positioned BlazeNet as the preferred vendor.
- Implemented diverse Internet access points for small business by using EIGRP, which provided dynamic bandwidth failover.
- Managed multiple successful business acquisitions for the network conversion, which secured a stronger local community presence and increased revenue potential on capital investments.
- Influenced early adoption of virtual private networking, leveraging the technology in the commercial product offering and providing businesses with an opportunity to reduce or eliminate dedicated telecommunication lines.
- Led the business in network security for internal application access, commercial resale, and product development, which increased uptime and reduced repairs, providing higher efficiency.

- Recommend products and specify parts to upper management and customers
- Configured Cisco wireless access points for office user connectivity

Professional Summary

Cisco Certified Network/Design Professional with 5 years of experience in designing, configuring, and troubleshooting Cisco and CheckPoint solutions. Able to perform as a key contributor in a team-oriented environment through a diverse technical background. Well-spoken with expertise to effectively communicate ideas and recommendations to facilitate positive change.

Employment History and Related Experience

Unisys Corporation, Network Design Engineer 2007 – Present

Provided network engineering for Commonwealth systems. Implemented Cisco VSS to maximize overall network uptime to 99.999 percent. Used VRFs to leverage common infrastructure for multiple customers with stringent security requirements. Implementing and manage firewall rule bases on CheckPoint and Cisco platforms. Building CheckPoint SPLAT/IPSO boxes from scratch.

- Manage and support Cisco Application Control Engine appliances.
- Enterprise-class devices include Cisco Nexus, 6500 and 4500 series switches and 3800 series routers.
- Use 10 Gbps technologies to reduce port density and overall solution costs.
- Designed and managed a structured cabling project to update a site to data center compliancy standards.
- Manage and configure IBM Proventia and McAfee Network Security Platform intrusion prevention systems.
- Proficient with Cisco CSM, ANM, and MARS management tools.
- Contributed to data center redesign to reduce footprint and leverage virtualization technologies.
- Configure and troubleshot SolarWinds Orion Network Performance Monitor and eEye Retina products.
- Key contributor to recommending product and specifying parts to upper management and customers.
- Use the Cisco Pricing tool and Dynamic Configuration tool.
- Configured Cisco wireless access points for office user connectivity.

Rite Aid Corporation, Merchandise Coordinator 2004 – 2007

Supported business operations by creating store distributions for the seasonal item process so that each store had the appropriate inventory levels to maximize sales at the beginning of each event.

- Reviewed individual store allocations for a seasonal item process to ensure the accuracy of information.
- Created exception reports for management's review; made changes to report items as a result of these reviews.

UNISYS

Resource 22

Firewall Administrator

- Coordinated and monitored the distribution of seasonal item merchandise from the warehouse to the stores to ensure timely receipt of products before the start of each event.
- Prepared preliminary reviews of item allocation for use by department managers.
- Interacted with store personnel on inventory discrepancy issues; corrected errors that occurred.

Circuit City, Network Advisor 2002 – 2004

Designed and installed computer systems, networking components, and related products.

- Went to customers' residences; installed and configured networking components for proper connectivity.
- Sold and installed hardware devices, peripherals, and software.
- Consistently exceeded sales quotas for product and service upgrades.
- Lead staff associate in technical knowledge of hardware devices, networking, peripherals, and software.

NetComm Solutions, Inc., Lead Support Technician 2000 – 2002

Troubleshot, installed, and configured equipment for government contracts; served as a group leader of the statewide thin client rollout for the Administrative Office of Pennsylvania Courts.

- Installed Cisco 1720 routers with U.S. Robotics 56K dial backup modems and Cisco 2900XL switches in each District Justice Court House.
- Extensive work troubleshooting Compaq's complete line of desktop and server products.
- Provided technical support to the Pennsylvania State House of Representatives, Democratic Caucus.
- Installed, configured, and administered Microsoft Terminal Services and Citrix MetaFrame XP.
- Instructed new technicians on configuring and implementing thin clients, desktops, and servers.
- Help desk work involved interacting and supporting users from large accounts such as the Pennsylvania State House of Representatives, Democratic Caucus and the Administrative Office of Pennsylvania Courts.

Education

McAfee Network Security Platform Administration Training – McAfee Education (June 2012)

- Deploy McAfee NSP
- Build Policy
- Manage and administer NSP to defend against attacks

UNISYS

Resource 22

Firewall Administrator

CCSA Training – Fishnet Security (January 2012)

- Secure communications across the Internet
- Defend against network threats
- Configure security policies
- Protect e-mail and messaging content
- Manage user access to corporate LANs

Cisco ACE Bootcamp – Firefly (November 2011)

- Install, configure, and troubleshoot the Cisco Application Control Engine
- Design and configure integration of the ACE into the network topology
- Design and configure multiple ACE contexts to virtualize network services
- Manage allocation of resources to virtual contexts
- Use the Cisco Modular Policy CLI to configure ACE features
- Configure IP application-based security
- Configure Layer 4-7 load balancing
- Configure health monitoring
- Configure Layer 7 protocol processing options
- Configure SSL protocol processing
- Configure the Web application acceleration features on the ACE appliance
- Configure the ACE module or appliance for high availability

Cisco Certified Security Professional – CCBOOTCAMP (September 2010)

- 642-504 Securing Networks with Cisco Routers and Switches (SNRS)
- 642-524 Securing Networks with ASA Foundation (SNAF)
- 642-515 Securing Networks with ASA Advanced (SNAA)
- 642-533 Implementing Cisco Intrusion Prevention System (IPS)

Cisco Certified Network Professional – CCBOOTCAMP (January 2009)

- 652-901 Building Scalable Cisco Internetworks (BSCI)
- 642-812 Building Converged Cisco Multilayer Switched Networks (BCMSN)
- 642-825 Implementing Secure Converged Wide Area Networks (ISCW)
- 642-845 Optimizing Converged Cisco Networks (ONT)

Microsystems Technology – CLN (May 2000)

- Implement and troubleshoot network technologies, Microsoft Windows NT Server, Windows 2000 Server, and cabling in a lab environment
- Work with services such as DNS, WINS, and DHCP
- Configure and use the advanced features of Microsoft Office applications

UNISYS

Resource 23

Hyper V VMware Certified Administrator

Key Skills and Knowledge

- Server Administration
- Infrastructure management and problem resolution
- Data center migration
- VMware ESX/ESXi 3.x thru 5.x
- All Windows Server Operating Systems
- All Windows Desktop Operating Systems
- Symantec Endpoint Protection
- McAfee Security Products
- BMC BladeLogic
- Disaster Recovery Testing
- Server script maintenance
- Remote monitoring and support of Backup Power units
- Inventory and manage system security
- Maintain System Configuration
- Monitor servers and alert the team of hardware failures

Professional Summary

- Operating Systems: All Windows Server Operating Systems, all Windows Desktop Operating Systems
- Hardware: HP, IBM, Dell, and Unisys servers, EMC CLARiiON SAN, APC Power, Racks and Remote Monitoring, Raritan IP KVM Switches
- Software: VMware ESX and ESXi Server 3.5 – 5.0, Microsoft Exchange, Symantec Endpoint Protection 11, McAfee VirusScan Enterprise, Host Intrusion Prevention and ePolicy Orchestrator, HP Insight Manager, SolarWinds IP Monitor, APC Infrastructure Manager

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania, Systems Analyst II, Harrisburg, PA — 2010 – Present

- One of the primary resources for VMware Infrastructure management and problem resolution.
- Migrated internal management VM environment from ESX 4.x to 5.x.
- Deployed health check script to check VM stability each night.
- Currently developing and managing VMware View Proof-of-Concept.
- Primary resource supporting McAfee VirusScan environment.
- Migrated entire data center from VSE 8.7i and before to VSE 8.8.
- Moved ePolicy Orchestrator from 4.0 to 4.6.x.
- Conduct Disaster Recovery testing 3 times a year for two different state agencies.
- BMC BladeLogic Patch Management.
- Windows Server 2003 and 2008 Builds.

Commonwealth of Pennsylvania – PSP

- Lead Server Administrator for CLEAN, CCHRI, PATCH, and Megan's Law servers
- Handled all aspects of the CCHRI Tech Refresh in early 2012
- Delivered Megan's Law servers in time for roll-out and testing prior to Go Live in late December
- Currently working on PATCH Server refresh
- Responsible for semi-annual DR Tests for CLEAN and CCHRI environments
- Continual monthly maintenance to keep the servers running at their peak performance and security

UNISYS

Resource 23

Hyper V VMware Certified Administrator

Commonwealth of Pennsylvania – DOR

- Primary Server Administrator for all Wintel DOR servers since they moved to the DPH
- Continued support for agency as they move toward their migration date in the middle of 2013
- Continual monthly maintenance to keep the servers running at their peak performance and security

Commonwealth of Pennsylvania – IES

- Since hired at Unisys in 2010, have been assigned as Secondary Administrator for all Wintel servers in the IES environment
- Assist the agency with frequent builds and decommissions of servers
- Rolled out VMware Capacity IQ to monitor the virtual resource allocation to the VMs
- Upgraded VMware Capacity IQ to the newest version of VMware vCenter Operations Manager
- Configured a health check script in their VM environment that runs each morning to check for problems or errors that could cause issues or outages

Commonwealth of Pennsylvania – DOS

- Secondary Server Administrator for Wintel Environment

Commonwealth of Pennsylvania – PSERS

- Secondary Server Administrator for Wintel Environment

Commonwealth of Pennsylvania – PUC

- Secondary Server Administrator for Wintel Environment

Holy Spirit Hospital, Network Specialist II, Camp Hill, PA 2007 – 2010

- Primary resource on the following:
  - VMware ESX Infrastructure
  - Exchange 2003
  - BlackBerry Enterprise Server
  - Symantec Endpoint Protection (AntiVirus)
- Created database to track inventory and configurations of all servers
- Provide primary support of 275 on-site servers along with other members of Server Team
- Setup, configure, troubleshoot and administer 8 nodes in an HP Blade environment
- Setup HP Insight Manager to monitor the servers and alert the team of any hardware failures

UNISYS

Resource 23

Hyper V VMware Certified Administrator

- Project Lead on migration from McAfee AntiVirus Enterprise to Symantec Endpoint Protection 11
- Migrated Microsoft Exchange 2003 cluster from direct-attached storage to EMC CLARiiON SAN
- Implemented remote surveillance and temperature monitoring system in Server Room
- Developed and carried out project to upgrade existing McAfee VirusScan Enterprise clients from 8.0i to 8.7i
- Perform proactive remote monitoring and support of APC Backup Power units throughout enterprise
- Suggested and implemented Solarwinds IP Monitor to perform up/down and other resource monitoring on Windows Servers
- Planning, designing and migrating from Exchange 2003 to Exchange 2010.

NTN-BCA, Network Support Analyst, Lititz, PA 2006 – 2007

- Disaster recovery for LAN-based systems using HP OpenView
- Administer Windows servers running Lotus Domino, Kronos timekeeping, DHCP, Fax Server, HTTP, and PHP
- Administer Linux servers supporting DNS and NTP
- Support Microsoft Windows (English and Japanese) personal computers running Microsoft Office, AutoCAD, Lotus Notes, Oracle Applications 11i
- Apply technology for improved office and plant efficiency

Exel, Systems Administrator, Palmyra, PA 2001 – 2006

- Responsible for 92 workstations, 6 servers, and the entire building network
- Managed all aspects of complete rollout of 92 brand new Dell desktops and laptops throughout the building as well as migration to new Windows XP operating system
- Maintain over 100 user accounts on a Windows 2003 Domain, and over 80 mailboxes on an Exchange 2003 Server
- Project Manager on Windows NT to Windows 2003 Server Migration as well as Exchange 5.5 to Exchange 2003 migration
- Responsible for inventory accuracy of all the computer equipment in the building
- Manage and maintain all Web-based applications (SharePoint, Intranet, Web-Based Forms, etc.)
- Create documentation for the end-user and system administration processes
- Maintain high availability of file, print, database, and other critical business applications

Resource 25

Hyper-V VMWare Certified Administrator

Key Skills and Knowledge

- VMware Certified Professional – VCP in VI3

Skills Summary

VMWare/Vsphere certified professional. Senior Windows engineer for over 10 years' experience. Responsible for disaster recovery and continuity of business operations.

Employment History and Related Experience

Susquehanna Bancshares, Lititz, Pa, August 2010 – Current

Network Support Specialist II

- Responsible for the overall configuration settings of the VMWare\Vsphere environment which, includes but is not limited to: V-Motion settings, Host Cluster settings, Affinity rule settings, DNS Configuration settings, DRS, and HA.
- Responsible for ensuring that the disaster recovery solution associated with the VMWare\Vsphere environment is documented, regularly tested, and available.

HP Enterprise Services, Camp Hill, Pa, November 2009 – August 2010

Technology Consultant III

- Windows Engineer providing hardware and software support to over 200 Microsoft Windows servers utilizing both physical hardware and VMware virtualization.
- Also utilizing Windows Server Update Server for patch management.

Hudson Advisors, East Hanover, NJ, December 2008 – May 2009

Consultant

- Successfully implemented an entire new infrastructure utilizing both Windows 2008 Server and EMC Clariion technologies, which consisted of two EMC CX-320's containing over 8TB of data.
- Implemented a new Backup, Recovery and DR system utilizing Microsoft's Data Protection Manager 2007, which will provide continuous data protection of the entire infrastructure.

CIT, Livingston, NJ, May 2000 – November 2008

AVP, Network Engineering

Technology Implementation and Delivery

- As a Senior Windows Engineer at CIT, was responsible for maintaining High Availability using Microsoft Cluster Services. Installed and maintained Windows server Clusters using both Windows 2000 and Windows 2003 Operating systems combined with using an EMC SAN Infrastructure on both Symmetrix and Clariion systems.

- Also installed and maintained Windows Clusters with an EMC Clariion backend in our Europe, China, Chicago, and Oklahoma City offices.
- Led a server consolidation and virtual infrastructure project using VMware ESX VI3 virtual server technology to reduce our physical servers by 60%. Participated in the business planning, budget creation and technology platform development. Was also tasked with being the VM administrator, responsible for the build, troubleshooting and backup / recovery of current and proposed virtual servers.
- Took part in the conversion of our entire VMware Infrastructure from ESX Server 2.5x to VMware Infrastructure 3 using Vizioncore's vMigrator, consisting of 10 ESX servers with over 200 VMs.
- Took part of a company-wide server consolidation effort. This on-going project included planning, implementation and testing of an enterprise-scale Storage Area Network solution. During this project, extensive experience was gained utilizing EMC products including Powerpath, Navisphere, Snapview, Solutions Enabler, Timefinder, Replication Manager and both Clariion (CX3 /CX series) and Symmetrix (DMX3 / DMX4) platforms. Details of this project included the establishment of 15 active / active Microsoft Windows SQL Cluster incorporating Veritas Media Servers entwined with EMC Timefinder SQL Integration Module enabling us to mirror production data and back it up.
- Environment included support of 500 physical servers.

Customer Service/Support and Maintenance

- Windows Engineer providing hardware and software support to over 400 Microsoft Windows servers at corporate headquarters. Implemented Microsoft Clustering and Load Balance Designs. Broad knowledge of WINS, DNS, DHCP and TCP/IP protocols.
- Worked closely with the Information Security Group to constantly monitor potential threats and develop mitigation policies and procedures. Member of the incident first response team performing root cause analysis of outages.
- Member of the disaster recovery team, developing and documenting procedures for business continuity and planning for disaster recovery. Participated in many large scale disaster recovery tests at the corporate hot site.
- Assisted all Technology Support Groups throughout CIT in both national and global offices. Took part in projects consisting of deploying new workstations using both Ghost imaging and Altiris deployment software.
- Managed and executed an Antivirus software deployment project which was companywide (6000 nodes) on all desktops and servers using Computer Associated Etrust Integrated Threat Management software

Hamburg-SUD (formerly Columbusline INC), Morristown, NJ, August 1999 – May 2000

Technical Support Representative

Senior level position providing support for all personal computer, server, and hardware/software related problems for all nationwide locations serving over 500 end users. Responsibilities include administration of all Novell and Windows servers, desktop support of all workstations both internal and external locations, provide support for laptops, remote access, and tape backups using Computer Associates Arcserve.

United Parcel Service, Mahwah, NJ, September 1994 - August 1999

Network Administrator / Analyst

Senior level position providing third level support for all personal computer, client-server, and hardware/software related problems for all four corporate locations serving 3000 end users. Responsibilities included administration of Novell and Windows servers, network printers, disaster recovery, and tape backups using Computer Associates Arcserve.

PC Support and Server Administration

Technical resource for a major project that involved migrating users and data from multiple legacy NT domains to a new Global Domain Architecture

Designed and performed an analysis of the department's performance in relation to individual and team goals that dramatically improved technicians' cooperative efforts to attain a significant service level

Education

Hyper V VMware Certified Administrator

Key Skills and Knowledge

- VMware vSphere 4/5 & ESX/ESXi
- Windows
- Active Directory
- EMC Avamar
- Symantec NetBackup
- Disaster Recovery Planning
- PowerShell Scripting

Professional Summary

Knowledge in the following: VMware vSphere ESX/ESXi 3.x, & 4.x, & 5.x, Windows 2003/2008, PowerShell & VB Script, Active Directory, Security Policies, IIS, DHCP, DNS, FTP, IBM Blade Center Servers, Dell Commodity Servers, EMC Data Domain, EMC Avamar, Microsoft Failover Clustering, Network Load Balancing, Microsoft DFS & DFS-R.

Capable in the following Server software: BMC BladeLogic, MS Exchange 2000, 2003, 2007, Microsoft SQL 2005/2008 management, Symantec NetBackup 6.x, & 7.x, Backup Exec System Recovery, Symantec AV, McAfee w/EPO, Symantec Ghost, WSUS, IBM Tivoli Endpoint Manager, Microsoft System Center Ops Manager 2007 & 2012.

Employment History and Related Experience

Unisys Corporation, Systems Analyst, Harrisburg, PA 2008 – Present

Responsible for multiple government agencies at central PA Data Center. Responsible for troubleshooting systems, Active Directory, Patch Management, AntiVirus. Windows/VMware Team Lead responsible for maintaining ~800 Servers in the data center. Roles include:

- VMware Administrator of 350+ VMs (approx 50 ESX/ESXi hosts in 5 virtual centers, including Disaster Recovery site)
- Two site Active Directory & DNS Administrator
- Backup Administration including NetBackup, DataDomain, Avamar
- Scripting for server automation using mostly PowerShell, VBScript, & PowerCLI (VMware).
- Disaster Recovery testing multiple times annually
- Maintain Large 2 Instance SQL 2008 Cluster used for Multiple application management
- Maintain 3 DFS deployments
- Incident & Change Management control
- Technical Documentation using tools like Word & Visio
- BladeLogic Patch Management
- Systems Builds/Deploys
- Basic Linux administration support (SUSE & Redhat)
- Migrate, Update & maintain Windows 2000 Active Directory migration to Active Directory 2008 R2. Migrate COPA file share from single node 2003 file server to 2 node 2008 Distributed File Server with Replication (DFS & DFSR).
- Build Terminal Services & RemoteApp for central application control & updating for DPH Operations Staff.

UNISYS

Resource 26

Hyper V VMware Certified Administrator

- Migrate the DPH management infrastructure from hosts file management to fully integrated DNS including multi-site Active Directory replication & implement GLOBALNAMES zone as a replacement to WINS
- Established a one-way trust with CWOPA domain and internal management domain (ESM) to allow State employees single sign-on to DPH resources managed by Unisys such as performance metrics, or backup reporting, etc.
- Built/assist with managing DPH Shared VMware virtual Infrastructure (8 host cluster & virtual center)
- Built/manage IES Virtual VMware Infrastructure (28 host 2 Blade Center cluster, and 4 hosts in 2 other clusters & Virtual Center)
- Migrate 70+ Physical servers from IES data center to DPH data center as Virtual using Avamar backup & restore
- VM Convert many physical servers to virtual once servers come end of life
- Installed or assisted installs and upgrade EMC Avamar 5.x & 6.x & EMC DataDomain systems
- Built or upgraded multiple Symantec NetBackup systems versions 5.1, 6.0, 6.5, 7.0, 7.1 & 7.5.
- Consolidate & upgrade DPH NetBackup infrastructure from 6 isolated backup environments to a large dynamic redundant Backup infrastructure allowing for faster backup & restore times, higher reliability & resiliency, and save costs by utilizing fewer tapes and backup servers, and network equipment.
- Perform multiple disaster recovery tests for PSP, DPW-CAPS, IES including
  - Physical Server to Virtual server restore
  - Bare Metal restore from NetBackup Tape & Avamar
  - VMware restores
  - Avamar restores
  - NetBackup Tape restores
  - DataDomain Oracle restores
  - MS SQL 2000, 2005, & 2008 restores
  - Windows 2003, & 2008 Cluster restores to a single nodes
- Written many VB & PowerShell scripts for use in Backup & restores, Server subnet IP changes, regular scheduled tasks, VMware tasks with PowerCLI, and software installations/tweaks

Business Information Group, Network Engineer, York, PA 2008 – 2008

Installed numerous servers including Windows 2003 & 2008, SBS 2003, SQL Server, VMware, and Terminal Server. Installed servers from HP, IBM, and Dell.

- Partially or Fully administered almost 30 AD domains during the contract (Users counts ranging from 10-200+)
- Multiple Small Office Setups & relocation.

UNISYS

Hyper-V VMWare Certified Administrator

Key Skills and Knowledge

- Commonwealth of PA – experience – multiple agencies
- VMware Certified Professional 4 (VCP4)
- Operations Center experience

Skills Summary

Technical Manager with notable success directing the delivery of a broad range of comprehensive Information Technology Services and Information Management initiatives while collaborating with clients, staff, and IT consultants in planning and implementing IT Services Solutions, with an emphasis on server virtualization and virtual infrastructure services.

Core Competencies: VMware vSphere 3.x/4.x/5.x, VMware Site Recovery Manager 4.x, Network and Systems Administration; Storage Area Network (SAN) implementation, deployment, and management; Regulatory and Policy Adherence; Data Integrity and Recovery; Research and Development; Risk Assessment; Cost and Impact Analysis.

Platforms: VMware vSphere 5.x, vSphere 4.x, and vSphere 3.x; VMware Site Recovery Manager 4.x; Microsoft Windows operating systems (95 to Server 2003 R2); IBM DS3200, IBM FastT600 (DS4300), NTDS (Naval Tactical Data Systems); J.O.T.S (Joint Operations Tactical System)

Services: Microsoft Windows Cluster and Network Load Balance Technologies.

Networking: TCP/IP (DHCP, WINS, DNS), Ethernet.

Tools: VMware vSphere Client, Microsoft Operations Manager, Microsoft SharePoint Portal Server 2003, Microsoft Project Server 2003, Microsoft Systems Management Server 2003, Microsoft Office Professional 2003 (including Infopath), IBM DS4300 Storage Manager 9.10 (FastT600), McAfee ePO (Enterprise Policy Orchestrator), CommVault Galaxy QuiNetix 6.1/Simpana 7, IBM Director 5.1, SurfControl 5.5, Reflex DiskNet Pro 4, Checkpoint NG FP-2/NGX Firewall, McAfee/Norton Virus Protection utilities, ArcServ2000 Advance Edition, Microsoft Biztalk Server 2004 (initial installation and setup), Microsoft SQL Server Reporting Services (initial installation and setup).

Employment History and Related Experience

Commonwealth of Pennsylvania, Harrisburg PA, August 2009 – Present

Office of Administration, Office of Information Technology,

Bureau of Infrastructure and Operations, Server Operations Division

Network Administrator 1

- Primarily responsible for managing and providing technical support for all servers located within the central data centers (Enterprise Data Center, PA State

Police Data Centers, and Disaster Recovery Site).

- Responsible for managing and upgrading VMWare environment, including daily management, troubleshooting, installing, configuring, and deploying hosts and virtual machines.
- Responsible for installing, deploying, and managing IBM Systems Director to monitor server hardware.
- Responsible for performing system and infrastructure maintenance in accordance with Commonwealth ITB-NET-015. Performing maintenance during non-business Commonwealth designated maintenance periods.
- Provide direction to Commonwealth agencies in identifying operational problems related to hardware components; software (both client and server level); network servers, network operating system software and related networking components such as hubs, routers, switches, etc.; and messaging system servers and software; and remedying these problems expeditiously to minimize lost of productivity.
- Performs other related duties as assigned, including those outlined in the Commonwealth's CoG (Continuity of Government) Plan when the plan is activated.

Commonwealth of Pennsylvania, July 2000 – August 2009

Department of State, Bureau of Management Information Systems

Harrisburg, PA.

Network Administrator 1

- Responsible for the implementation, deployment, and configuration the Department's mid-level disk storage system; Storage Area Network (SAN). Responsible for managing a complex distributed network of Microsoft Windows Server 2003 supporting the SAN, web server farm, Network File Shares, and a business process management system. Additional responsibilities include, but not limited to deployment assistance and modification of the Department's internal applications supported within the Storage Area Network (SAN) infrastructures.
- As directed, facilitate the planning, implementation and support of the LAN (Local Area Network) and client systems and other related peripherals. Recover and reconstruct client and server configurations due to system failures. Analyze systems activity trends for preventive maintenance procedures and prepare reports. Coordinate the installation of computer hardware and software for client-end users. Provide technical and administrative support for both bureau and departmental staff.
- Accountable for the planning, implementation, and deployment of the Department's IT security requirements. Principally responsible for managing a multifaceted IT security solution with the implementation SurfControl Webfilter, DisknetPro Desktop, McAfee ePO (Enterprise Policy Orchestrator), and the

Commonwealth's ESA (Enterprise Security Agent) security solution: Preventia SiteProtector. Additional security responsibilities include the essential point of contact for managing the Department's Check Point Firewall solution.

- Other responsibilities include analyzing systems activity trends for preventive maintenance procedures. Provide additional computer hardware and software assistance for client-end user support staff.

Commonwealth of Pennsylvania, November 1998 – July 2000

Department of General Services, Bureau of Management Information Systems

Harrisburg, PA.

Distributed Systems Specialist 1

- Coordinated the installation of computer hardware and software for client-end users. Provided technical and administrative support for network and electronic mail servers. Analyzed systems activity trends for preventive maintenance procedures and prepared reports. Recovered and reconstructed personal computer configurations due to system failures. Managed departmental systems and peripheral equipment inventory. Ensured that equipment warranty and software licensing were in compliance with applicable policies.
- Functioned as liaison between departmental information technology coordinators and the Technical Support Division.

Commonwealth of Pennsylvania, December 1996 – November 1998

Department of General Services, Bureau of Purchases, Harrisburg, PA.

Clerk Typist 3

- Responsible for the assignment and management of commodity codes for state contracts issued by the Department of General Services. Ensured contract information was accurately entered into the purchasing system.
- Functioned as information technology coordinator between the Bureau of Purchases and the Bureau of Management Information Services. Performed tier 1 technical support for the Bureau of Purchases' purchasing systems and processes. Supported the Information Technology Contract tracking system.
- Contributed technical and administrative support to the development of the Summary Documents for the Procurement Reform Initiative presented to Commonwealth Executives as a Procurement Reform Initiative RFI Committee Member.

Pennsylvania High Education Assistance Agency, June 1995 – November 1996

Student Loan Servicing Center, Harrisburg, PA.

Customer Services Representative/Research Specialist

- Responsible for the research of financial discrepancies of assigned client accounts. Completed coding and research for manual payment of client accounts.
- Advised clients of repayment options, research and resolve account discrepancies via direct communications with client borrowers.

Cush Automotive Group, Inc., October 1993 to March 1995

Escondido, CA.

Accounts Specialist

- Responsible for the Collection, verification and deposit of revenue for the Sales, Parts and Service, and Finance Departments. Ensured the appropriated ledgers and accounts are properly and accurately credited and/or debited daily. Prepared monthly accounting reports for corporate comptroller and auditors. Responsible for accuracy of the acquisition of vehicles for the Cush and Mike Smith Honda Motors Division.
- Functioned as assistant to Finance Director and Managers and resolved client disputes as Customer Relation Manager.

U.S. Navy, September 1986 to October 1992

San Diego, CA.

Operations Specialist

(Combat Information Center Supervisor/Watch Officer).

- Supervised a team of one hundred personnel during various warfare conditions. Controlled fighter aircraft utilizing various computer and telecommunications systems as a Junior Air Intercept Controller. In addition to providing warfare tactical analysis assistance and weapons planning, assigned as one of four Search and Rescue Specialists and Communications and Navigation Specialists.
- As Information Systems Manager, managed the Joint Operational Tactical Systems Database. Responsible for the collection, evaluation and dissemination of intelligence data and ensured the proper enforcement of the security of sensitive information.
- As a Data Systems Supervisor, trained and supervised subordinate personnel using the Naval Tactical Data System. Enforced Department of Defense automated communications systems and publications security policies.
- As the Operations Department Administrative Assistant, managed departmental and public correspondence, office information systems and provided technical support to various command centers throughout the U.S. Navy Pacific Surface

Employment History and Related Experience

Choice Technologies Inc., Data Center Administrator,
Hunt Valley, MD 2006 – Present

Server and network administration providing hosted services as well as maintaining co-located servers. Create and manage client accounts on hosted Exchange services. Create and manage accounts on Egnyte cloud file server. Manage domains and SSL certificates via GoDaddy and GlobalSign.

- Responsible for configuring and maintaining Fortinet firewalls, PowerLink WAN aggregators, Barracuda spam and Web filters, Linux e-mail clusters, Linux DNS, Linux based Ahsay remote backup and replication servers, co-located Linux and MS 2003 and 2008 (32 and 64bit) servers, Exchange 2003 to 2010, BlackBerry Enterprise, Linux Web servers, Synology and

Buffalo NAS devices, Backup Exec server, GFI A/V server, Linux FTP and webDAV servers

- Create and manage accounts on GFI MaxMail spam filtering services.
- Provide support to field technicians and helpdesk in resolving issues at customer locations.
- Provide support to sales in recommending appropriate hardware and software solutions for customers.
- Maintain and create documentation.
- Perform training sessions to helpdesk and field technicians.
- Take great pride and effort in maintaining a high level of support and communication with customers, co-workers, and superiors.

Capital Blue Cross, Support Center Analyst,
Harrisburg, PA 2003 – 2006

Performed both phone and desktop support duties in a Win2000/XP environment, supported both internal and external customers on a broad range of applications, including Citrix based applications.

- Supported and maintained Dell hardware and all HP printers including the administration of a Web JetAdmin server.
- Performed system builds and software installs using Altiris.
- Assisted with projects such as VoIP, laptop and PDA encryption, and data destruction for privacy compliance.
- Responsible for various administrative duties on mainframe, Avaya audix voicemail, and Citrix Metaframe servers.

R.R. Donnelley and Sons, Lancaster, Financial
Application Support Specialist, PA 2001 – 2003

Supported multiple proprietary time-sensitive applications used by employees and clients.

- Performed global LAN/WAN monitoring and administration via HP OpenView. Provided Windows 2000, Novell, and VAX support and administration.
- Interfaced with applications developers and network engineers to solve issues.

D&E Networks Inc. (PennDOT), Windows Administrator,
Harrisburg, PA 2000 – 2001

Administered Windows NT and 2000 domains, performed SMS administration and provided SMS and general IT support to all PennDOT facilities, including district offices.

Resource 29

Linux Administrator

- Created, distributed, and maintained software packages and documentation.
- Performed Exchange 2000 and Active Directory administration and provided Tier 2 MS Office support.
- Performed both physical hardware installations of servers, as well as performing server operating system installs and RAID configurations.

R.R. Donnelley and Sons, Financial Application Support Specialist, Lancaster, PA 2000 – 2000

Supported multiple proprietary applications used by employees and clients.

- Performed VAX/VMS administration and support. Performed LAN/WAN monitoring and administration.
- Interfaced with applications developers and network engineers to solve issues.

Harley-Davidson Motor Co., IT Help Desk Specialist, York, PA 1998 – 2000

Provided desktop support to end-users, performed PC imaging and roll-outs.

- Maintained hardware inventories via a database that I developed.
- Performed AS/400 administration and support.
- Created and maintained documentation and reports.

Education

- York College of Pennyslvania, Dec 1999

- Cisco IOS

Professional Summary

Over 10 years of Linux server administration, 5 years of Windows Client/Server administration, and 3 years of virtualization experience in enterprise environments such as; healthcare and Military data centers; supported clients through telephone, helpdesk/e-mail including analysis and escalations.

- Strong understanding of Linux Web, Database, DNS, and SMTP services; Many hypervisor and guest operating systems interactions, particularly in P2V situations.
- System and Network Intrusion Prevention and Detection; DdoS Mitigation; Cisco Catalyst, PIX and ASA Firewalls; OpenLDAP/Microsoft Windows Servers (Active Directory, Exchange); Server/Client Based Anti-virus, Spyware, and E-mail Clients
- IP Telephony Systems; Rapid Server/Desktop Deployment, Updates, Restoration, and Imaging.

Employment History and Related Experience

Dell, Enterprise High Complexity Senior-Level Systems Analyst, Oklahoma City, OK — 2010 – 2012

- Provided enterprise level systems analysis for Dell operating systems and applications.
- Promoted to senior-level high complexity analyst by self-studying and quickly obtaining required certifications
- Voluntarily worked many hours of overtime to provide primary PM Support in North America for all alternate operating system and applications issues ranging from drive replacements to mission-critical recovery assistance of virtualized environments
- #8 YTD in Analyst monthly measurements gauging highest-productivity and fastest-resolutions

HostGator.COM, Linux/Windows System Administrator, Houston, TX — 2011 – 2012

Provided Linux administration assistance and customer support via helpd esk and telephone for a very large Web hosting company with 30,000 customers serviced by over 500 Linux and Windows Servers.

- Monitor server and network utilization and performance in real time through various software such as; Nagios/MOM in a team of administrators to ensure quality of service
- Support internal level 1 technicians and representatives while consecutively working in a team to resolve complex, mixed operating system environment application issues for customers

- Installation, configuration, and maintenance of Linux/Windows services such as Apache, MySQL, Exim; and IIS, MS SQL, FTP
- Perform simultaneous server imaging, roll-outs, and back up procedures daily in a high paced, rapidly changing environment.

Advanced Systems Technology, Inc., Network Administrator, Lawton, OK 2006 – 2007

- Recruited to reconstruct and administer Linux/Windows servers, improve bandwidth usage, create performance metrics; analyze complex network and server issues with remote Administrators, troubleshoot simple day-to-day end user problems of over 400 employees in local and remote offices.
- Complete, seamless migration of 400+ users in three locations from separate Linux-based MTA's to a single, redundant Exchange 2003 with Linux Gateway's for Anti-Virus and Spam
- Integrated corporate Web site with load balanced Windows and Linux Web servers after migrating from older technologies
- Remotely administered virtual environment consisting of Red Hat, CentOS Linux and Microsoft Windows 2003 servers through policy-based VPN tunnels in four different locations
- Created company policies and procedures governing corporate security, e-mail and Internet usage, access control, and incident response

McKesson Provider Technologies, Business Development, Lawton, OK 2003 – 2006

Part of a team of five System Administrators and five System Analysts to perform daily tasks required for supporting an enterprise Hospital Network with more than 1,500 users, 150 servers, and 10 remote Clinics.

- Maintained 10 Linux Servers which provided security and services for other Windows machines on the network such as: DNS, NAT, Anti-Virus/Spam, and Firewall via iptables
- Managed backups for Windows, Linux, PACS, and File Servers to EMC Clarion SAN device
- Provisioned, audited, and administered; server logs, backups, and Active Directory objects including remote forests
- Researched and procured BlackBerry Enterprise Server. Assisted with migration from Juniper based core and wireless network to 100% Cisco-based

- Skilled Linux Admin.
- Skilled in numerous technologies
- Windows: NT 4.0, 2000, 2003, 2008
- UNIX: Solaris, IRIX, HPUX, AIX
- Linux: Red Hat, Centos, Debian
- Windows Server platforms: HP, Dell, Compaq
- UNIX Server/Workstations: Solaris, SGI, IBM, HPUX
- NAS/SAN Platforms: Network Appliance, EMC, MTI, Andataco
- Windows Domain Applications: Exchange Server 2003 and 2007, SMS server
- Replication Server, Apache, Active Directory, DHCP, DNS, Wins
- Windows Server Applications: MS SQL, IIS, VM Ware, MS Virtual Server, Citrix
- MS SharePoint, MYSQL, Trend Micro AV server
- Networking: Cisco 5500 and 5600 switches, Cisco 2600 series routers
- Fault tolerant servers, Veritas Storage Foundation, Veritas NetBackup
- EMC NetWorker, NetVault
- Data Domain Disk to disk backup systems, Spectra Logic Tape libraries, Heat, Remedy, Samba, Perl, OnTap
- TCP/IP, NIS, CIFS, NFS, SSH, FTP, SFTP, CUPS, ghost, Acronis, VNC, Cygwin, Putty, Exceed, Nagios
- Brocade fiber switches, Emulex fiber cards
- Raid controllers, Octel Voice Mail systems and Nortel switches.

Professional Summary

IT Professional with 15 years of Infrastructure management, Operations Management, Data security and Data Center operations, Windows system integration, UNIX/Linux servers, storage systems and facility management. Strong leadership skills with data center operations, systems administration infrastructure, and technology project management.

Employment History and Related Experience

Web Entertainment Technologies, Infrastructure Manager, Oakland, NJ — 2009 – Present

Advise the CTO and COO on Data center operations in Oakland, NJ and Smithtown, NY. Focus on company infrastructure, Data center, and Web hosting operations. Maintain and support corporate infrastructure including cabling, hubs, routers, the LAN at each facility, the WAN between the two facilities and providing internal support as needed.

- Deliver data centers operations for storage and backup, server maintenance and configuration, applications and new product offerings and level 3 customer support issues
- Coordinate and negotiate with vendors for hardware, software and communications services
- Maintained an Apache server farm consisting of Red Hat Enterprise 4/5 servers
- Managed file systems and security access in addition to backing up the servers
- Managed the BIND DNS server with upgrades, additions, deletions as needed
- Maintained Linux systems operating system and software with RPM/YUM when available or compile from source code as needed for required software
- Created CRON jobs as required to automate systems tasks
- Managed file system access via NFS shares and permissions and SAMBA SMB shares as required
- Installed and configured Apache Web servers
- Installed and configured MYSQL server

Electronics for Imaging, Site Infrastructure Manager Parsippany, NJ — 1998 – 2008

Administrator responsible for the IT infrastructure in the EFI New Jersey facility consisting of Windows AD and NIS domains with multiple Windows and UNIX/Linux servers and storage systems.

Resource 31

Linux Administrator

- Deliver systems administration of all components of the infrastructure encompassing Windows AD services administration, Systems Engineering, Infrastructure Management, Storage Management, Backup Administration, Windows and UNIX Server Administration.
- Engineered and administered multiple Windows and UNIX/Linux servers in addition to AD administration and management.
- Administered several generations of Microsoft servers from NT 4.0 to 2008 with services such as Active Directory, DNS, DHCP, WINS, File and Print services, Exchange, IIS and MYSQL
- Project lead to standardize and document Remote site facility configurations and best practices for facility management standards within the EFI Remote sites and documenting on a SharePoint server
- Ensured capacity in the New Jersey facility on all network components and developed a hardware refresh plan for the facility systems to ensure systems availability and to keep pace with user needs.
- Administered file systems on several SAN's from various vendors and several Network Appliance (NAS) filers via CIFS, NFS and Veritas Volume Manager.
- Managed the backup architecture on several vendor products starting with Networker running under Solaris and a locally attached Sun tape library
- Migrated through several Enterprise backup solutions and hardware platforms most recently on a Veritas/Symantec NetBackup backup architecture running disk-to-disk to a Data Domain and offline to a Spectra logic tape library.
- Systems administrator on several generations of Solaris, Linux, AIX, IRIX, Red Hat and HPUX servers
- Provided engineering support for product development efforts by engineering teams to include desktop support, server support, Clear Case system and networking
- Supported engineering groups in automating software releases within the intranet by designed and implemented a Microsoft IIS server with an MS SQL system backend to track bug reports and daily build histories and distribute drivers and interpreters to the corporate units via the corporate intranet.
- Upgraded the system to more capable platform running Red Hat, Apache and MySQL
- Performed all SMS administration activities including installing, configuring, upgrading, creating collections and managed software updates for all Applications servers.
- Performed all installation, maintenance and support functions on telephone system, fax and printers within the facility
- Created and maintained systems images on Ghost and Acronis for rapid cloning of developers' workstations.
- Administered several generations of Microsoft Exchange server
- Installed, configured and, maintained all storage hardware consisting of multiple NAS and SAN systems serving Windows and UNIX systems.

- Built and administered multiple Red Hat Linux Enterprise servers used by the developers for their Clear Case version control system.

Air Express International, NT Administrator (Contract),
Darien, CT 1998

Responsible for migration of server platforms from Novell to a Windows NT based architecture. The project consisted of building, configuring and testing servers.

- Designed the domain security model to meet corporate requirements.
- Designed and implemented the backup strategy and procedures documentation for domain servers.
- Managed the migration of users from Novell to Window servers.
- Developed the disaster recovery procedures for the enterprise.

NBC Production Systems, Operations Specialist/Project Manager, New York, NY 1988 – 1997

Primary duties consisted of supporting data center operations, maintenance and upgrading the core components of the News division's data center and managed multiple high profile News Division remote operations nationally and internationally.

- Provided data communication, software and hardware support for the News division global network.
- Managed vendors and contract staff in migrating and upgrading of core systems.
- Manager on-site operations of computer and communication resources for live NBC News events throughout the world.
- Setup the news bureau in Dhahran Saudi Arabia that was the hub for NBC news computer operations for Desert Shield and Desert Storm.
- Supported the interim daily operations on the CNBC Asia systems in Hong Kong and trained a local hire for local support.
- Setup the facilities (network and software systems) for the translation system by Guangzhou TV from Cantonese to Mandarin.
- Trained CNBC Asia system administrators in daily operations, networking hardware and NBC systems and procedures.

Education

Montclair State University
BS, Computer Science, Minor in Mathematics

UNISYS

e&e IT Consulting Services, Inc.

Resource 32

Linux Administrator

Key Skills and Knowledge

- Linux Team Lead
- Set up and maintenance of Linux and Windows servers
- Task automation and trouble ticketing with use of Linux apps
- Build and administered servers and tools for task automation
- Ttrouble ticketing and documentation
- Linux, AIX, PHP, MYSQL
- Open source applications
- Maintained Debian Linux servers.
- Plan and manage all IT projects
- Maintenance and upgrades of existing systems
- implementing new technologies
- Research and purchase network components
- Support IT budget process.

Professional Summary

15 years of systems administration experience delivering Linux systems, coordinating data and voice network communications. Outstanding planning and management skills for maintenance and upgrades of existing systems and implementing new technologies

- Created and implemented nationwide internal Network Operations Center processes and procedures.
- Identified inefficient policies and repaired or replaced them to accommodate rapidly expanding demand and new systems.
- Instrumental in the design, build and then supervision of a world class operation that installs casino management systems in all of Pennsylvania's new casinos and collects all financial data in a central control system for revenue and tax purposes.
- Accomplish setup and maintenance of Windows, Linux and HP-UX servers
- Develop scripts and automate procedures for back-up, data mining and other server related tasks
- Install and configure tools for server/network uptime and performance monitoring such as Nagios, MRTG, Munin, Ntop and others
- Resolve communications issues for a twelve office/300 employee MPLS/VoIP network

Employment History and Related Experience

AAA Central Penn, IT Manager 2008 – Present

Coordinate all data and voice network communications. Plan and manage all IT projects including maintenance and upgrades of existing systems and implementing new technologies, Research and purchase everything IT related, assist with the IT budget process.

- Provide training for IT employees and end users
- Handle salary and performance reviews for IT staff. Responsible for day to day IT operations
- Create IT policies and procedures. Communicate with other business lines, assessing needs and recommending solution
- Accomplish setup and maintenance of Windows, Linux and HP-UX servers
- Develop scripts and automate procedures for back-up, data mining and other server related tasks
- Install and configure tools for server/network uptime and performance monitoring such as Nagios, MRTG, Munin, Ntop and others
- Resolve communications issues for a twelve office/300 employee MPLS/VoIP network

e&e IT Consulting Services, Inc.

Resource 32

Linux Administrator

Gtech Corporation, Technology Section Supervisor 2006 – 2008

Instrumental in the design, build and then supervision of a world class operation that installs casino management systems in all of Pennsylvania's new casinos and collects all financial data in a central control system for revenue and tax purposes.

- Selected, interviewed and hired the entire operations staff. Provide staff training, motivation and performance evaluation.
- Build and administered servers and tools for task automation, trouble ticketing and documentation using Linux, AIX, PHP, MYSQL and several open source applications
- Maintained 60+ Debian Linux servers.
- Develop process and procedures for all operations planned and unplanned events, daily operational procedures, postmortem procedures, notification procedures, service level agreements
- Project team leader for annual SAS 70 audits

EDS - Sun Microsystems Project, Team Leader Linux/Solaris Support, 2005 – 2006

Linux Team Leader and Tier 2 Technical Support Engineer for Sun Microsystems supporting Solaris/UNIX and Linux.

- Supported private industry as well as all government contracts including DOD, NASA, & FBI
- Provided guidance and technical expertise to system administrators to diagnose and resolve hardware, operating system, networking and storage problems.

FeatherweightLinux.org, Owner Operator 2003 – 2005

Created, developed, maintained, marketed and sold a custom Linux distribution. Featherweight Linux was a live-CD/installable distribution which was built on Debian Linux using Knoppix technology.

- Supported Editor in Chief of Linux World Magazine and EVP of Marketing for EMU Software
- Created and maintain a boot-able demo CD for EMU Software's NetDirector server management software.

Network Operations Center (NOC) – EarthLink, Senior Project Manager 2001 – 2003

Created and implemented nationwide internal Network Operations Center processes and procedures. Identified inefficient policies and repaired or replaced

them to accommodate rapidly expanding demand and new systems.

- Liaison with other departments and with external partners and vendors on all NOC related company projects to determine and communicate project requirements, resolutions and priorities
- Trained the NOC management staff and tracked performance of all departmental managers and supervisors

Network Operations Center - EarthLink, Site Manager 2000 – 2001

Site Manager, responsible for all facilities related issues and administrative oversight for the department.

Assisted Senior Managers in creating policies and procedures and implemented those policies and procedures

- Accomplished team building, people & resources scheduling and insured that training was useful and timely
- Addressed salary and performance reviews and owned the role of employee advocate for Techs/Engineers, worked with NOC Systems for delivery of tools needed by Tech/Engineers.

MindSpring/EarthLink, Bridge Supervisor and Training Coordinator 1998 – 2000

Supported division of technical support, was instrumental in creating, to perform first level network troubleshooting and alerting, and act as a communications bridge between network operations and technical support.

- Accomplished salary and performance reviews, people & resources scheduling, was responsible for managing team spirit, personnel issues, and overall team function
- Resolved escalations beyond normal means, worked with other departments to ensure tools were working properly and made sure issues were being resolved in a timely manner
- Traveled to our call centers nationwide providing first level network troubleshooting training to our technical support staff. This division ultimately became the nerve center for network monitoring and front line troubleshooting for the Network Operations Center, employing a group of about 15 people.

MindSpring/EarthLink, Team Manager – Tech Support 1998 –1998

Provided support, training and supervision to a team of 12-15 support representatives, assisted representatives with technical and customer issues, maintained overall performance of my team and ensured each member of my team

e&e IT Consulting Services, Inc.

- NetBackup
- BladeLogic

Professional Summary

Manages operations of AIX and Linux systems in the Data PowerHouse data center for the Commonwealth. This included server deployments through various processes, PowerHA configuration, user requests, operating system level migrations and patching. This also includes management of VIO servers, HMCs and VMware Virtual Center as it pertains to VM Linux systems.

- Managed BladeLogic repository for Linux patching across various Linux platforms including RHEL, SLES, and OEL
- Developed scripts as needed to maintain a consistent environment across the entire data center.
- Participate in all Disaster Recovery planning and testing.
- Gathering customer requirements for recovery of various application and database servers
- Developing the best recovery method of rootvg and non-rootvg as well as customer data
- Execute recovery exercises and ensured consistent support to the customer as they proceed with their testing of the recovered systems.

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania, Data PowerHouse Project, Harrisburg, PA — 2011 – Present

UNIX Administrator responsible for the management and maintenance of all AIX and Linux servers. Active ITIL v3 certification, Participant in successful disaster recovery testing.

Department of Labor and Industry – DLI Project

- Unemployment Compensation Management System (UCMS) – Integral part of the System Administration refresh team for AIX support. Built the new operating system image on the updated platforms, worked with IBM experts on performance tuning, ground up installation of all IBM Power hardware including SAN and Network cable installation (Ethernet and fiber), frame mapping of physical devices to ensure redundancy, stability, and performance, of the systems. Worked with IBM experts on installing the most advanced VIO servers built for solid redundancy (tested and confirmed) as well as PowerHA clusters that would ensure the application and files were available with the least amount of downtime for a smooth transition. Worked with the various business partners: DBAs, Application Developers, Network, SAN/TSM, Windows Administrators for performance testing, process flow, etc.
- Tivoli Monitoring/Network Support – These two particular groups of business partners wanted to dive into RedHat Enterprise Linux servers as the

UNISYS

[redacted]

Linux Administrator

hosting operating system for their applications. Worked exclusively on building a solid RHEL 5.X image that would meet/exceed the application requirements for virtualization, security, and stability. The systems were primarily Virtual Machines (VM) however there were a few that ran on Intel X86 physical servers.

- RedHat Network Satellite (RHN Satellite) – As part of a growing RHEL environment it was critical to develop and maintain a central management point. An investment was made in the RHN Satellite product for patching and maintaining a base line platform for any RHEL system. As part of the install team, I set up the central satellite server, setup the database and register/connected all clients to their appropriate patching cycle. Working with the owners of the various RHEL clients, we established the most effective patching cycle for their systems and ensured all systems were current and met the standards needed as set forth by OA.
- BWC – Bureau of Workers Compensation – Directly involved in upgrade field office servers from AIX 5.3 to AIX 6.1, PowerHA to the most current supported levels in PowerHA 6.1, and worked with the extended AIX support team to execute the disaster recovery plan when an upgrade did not go as planned. This involved restoring the server image from a sysback image on tape.
- SWIF – State Workers Insurance Fund – Deeply involved in supporting their PowerHA systems were solid and the customer had a level of confidence in the failover of the clusters. Solely supported the installation and upgrade maintenance of Dollar Universe application. Although there was an application team dedicated to the day to day work of Dollar U, the team did not have the AIX experience and administrator access needed to perform much of their work.

Integrated Enterprise System – IES Project

- AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer. Alt-disk install was the method chosen. I was responsible for scheduling all of the systems in various maintenance windows to ensure accurate time for testing and meeting the requirement for a phased approach of implementation.
- Device Driver upgrade – to ensure accurate connections to Avamar, the backup solution for IES, worked with the application team to upgrade the driver packages.
- Streamlined mksysb implementation – The system mksysb process was antiquated at best. Based on past experience and the need for an extra layer of protection, a new mksysb creation/storage process was created to ensure redundancy of the backup images and to further enhance the availability of these images for Disaster Recovery.

UNISYS

[redacted]

Linux Administrator

- Disaster Recovery Testing – Yearly disaster recovery testing is done to ensure the application's availability should a disaster occur. As part of the DR team, I worked extreme hours to build, restore and configure 30+ AIX LPARs to meet the current production environment as well as worked with the customer to correct minor issues during their database restores and testing process.

Department of Revenue – DOR Project

- AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer. Alt-disk install was the method chosen. I was responsible for scheduling all of the systems in various maintenance windows to ensure accurate time for testing and meeting the requirement for a phased approach of implementation.
- Device Driver upgrade – to ensure accurate connections to Avamar, the backup solution for IES, worked with the application team to upgrade the driver packages.
- Streamlined mksysb implementation – The system mksysb process was antiquated at best. Based on past experience and the need for an extra layer of protection, a new mksysb creation/storage process was created to ensure redundancy of the backup images and to further enhance the availability of these images for Disaster Recovery.
- Disaster Recovery Testing – Yearly disaster recovery testing is done to ensure the application's availability should a disaster occur. As part of the DR team, I worked extreme hours to build, restore and configure 30+ AIX LPARs to meet the current production environment as well as worked with the customer to correct minor issues during their database restores and testing process.

Pennsylvania Liquor Control Board – PLCB Project

- Integrated Business Management System (IBMS) Project – The agency was refreshing their application and took the opportunity to change operating systems in the process. RedHat Enterprise Linux (RHEL) was chosen as the platform. My role in the project has been to develop a stable 5.X RHEL operating system image and deploy servers to the agency as needed based on the given build requirements. These systems are all Virtual Machines (VM) and maintain the required level of security, with room to grow as the environment changes.
- BladeLogic - The current patching option for the RHEL systems is BladeLogic. I have developed the needed channels to connect the servers to

UNISYS

[redacted]

Linux Administrator

the appropriate patches based on operating system level. Patch cycles are being established based on environment level (UAT, PRD) to ensure testing between cycles and make sure production stability.

Department of Environmental Projection – DEP Project

- Oracle Enterprise Linux – OEL – This environment is comprised of approximately five Oracle Enterprise Linux (OEL) systems with the opportunity for expansion. The environment was a migration from Solaris to Linux and we continue to support this environment on a day to day business as they work through the growing pains of supporting their application(s) on a new operating system. Day to day work includes file system expansion, security monitoring and tuning, and storage and performance monitoring.

Professional Summary

Senior-level IT specialist and information technology expert with an established track record in providing mission critical, enterprise level infrastructure and application architectures. A passion for delivering efficient, cost effective solutions to complex business and application requirements, utilizing best of breed commercial and open source software and solutions. Expert at problem determination, performance analysis, and tuning. Extensive experience in designing and implementing solutions requiring integration of multiple platforms, operating systems, network topologies, and applications in both business application and high performance computing environments.

Employment History and Related Experience

IBM, Sr. IT Specialist, Linux Architect, Hartford, CT 2005 – Present

Supported a major credit card company on a series of engagements; initially provided staff augmentation and identification and documentation of acquired systems; provided assistance with data center relocation and implementing previously recommended architectural changes and best practices.

- Designed, installed and supported large SoFS and SoNAS Linux based storage implementations (Samba/CIFS, NFS, GPFS) using either LDAP/NIS or Active Directory for authentication. Designed and implemented Kerberos/NFS solution to satisfy customer requirements.
- Led customer team in testing, collecting and analyzing system performance and customer application benchmark data for high availability Oracle database on Linux. Recommended solutions to resolve identified system bottlenecks to meet critical business capacity and performance requirements.
- Identified and recommended remediation to resolve performance issues in a customer's strategic Java application, allowing for on-time implementation of the application.
- Installed, and provided customer education and support of Linux and Bladecenter hardware for several New England Universities and Colleges. Implemented boot from SAN configurations to provide maximum flexibility and recovery capabilities for the customers.
- Provided onsite subject matter expertise for Linux and Bladecenter hardware, firmware and software support for a major pharmaceutical company. Developed custom single pass firmware upgrade facility to meet customer requirements.
- Developed, implemented and supported HPC environments for several major pharmaceutical companies utilizing both local and cloud based computer resources as well as high density SMP nodes (96-128 cores). Installed and integrated various scheduling systems including Platform LSF, Sun Grid Engine as well as Torque/Maui.

Enterprise Architecture Consultant, Enterprise Architect, Hartford, CT 2004–2005

Provided contract consulting services in all aspects of WebSphere architecture, installation, upgrades, clustering and application deployment. Recommended and developed proof of concept implementations for Linux/WebSphere on Intel alternatives to existing Sun/Solaris implementations.

Director, Information Technology, Director Information Technology, Hartford, CT 1984 – 2004

Proposed, developed and implemented corporate wide file/print services, e-mail, antivirus, firewall, proxy and intrusion detection systems based on Linux, open source projects and commercial solutions. Implementing corporate LDAP directory infrastructure for encrypted Single Source authentication, authorization and centralized administration. Significantly reducing administration complexity and support costs.

- Designed and developed Web-based application architecture built around Linux based IBM WebSphere Application Servers, running in a highly available clustered configuration, on IBM Blade servers. Provided architectural, security, problem determination and migration / upgrade support for the production and development infrastructure and applications. Focused on providing access to current technology offerings, while maintaining maximum stability, performance, security and availability of the production and development environments.
- Designed, deployed and supported a nationwide TCPIP Frame-Relay and MPLS network covering over 50 Branch and Home Office locations. Focusing on ensuring the maximum affordable capacity, redundancy and fail over capabilities while providing secure, managed access to corporate and Internet applications and services.
- Provided technical architecture, design and support of all mainframe, RISC and Intel based servers, desktops and networks. Budget development, presentation and management. Vendor negotiation and management.
- Manager, Systems Programming: Responsible for Systems programming staff supporting MVS/SP/XA, CICS, VTAM, NCP, JES2 and other applications on IBM 3090 processors.
- Sr. Systems Programmer: Responsible for the installation maintenance and tuning of MVS and related subsystem. Implemented UCC1 (CA1) Tape management and UCC7 (CA7) Job Scheduling software and procedures.

Professional Certifications

- Red Hat Certified System Administrator
- Red Hat Certified Technician

UNISYS

- VIO
- HMC
- Red Hat Enterprise Linux
- Oracle Enterprise Linux
- SuSE Linux
- Windows
- Scripting
- Networking
- Supervision
- Project Management

Professional Summary

Skillful system administrator with a wide range of experience with Commonwealth projects. He has a total of 13 years system analysis experience with 7 years of Commonwealth experience. He is skilled in data recovery, migrations, implementations, maintenance, and network management.

- Operating Systems: AIX4, 5, 6, 7. Red Hat Enterprise Linux. Oracle Enterprise Linux. SuSE Linux. Windows NT/2000/2003/2008. All Windows Desktop Operating Systems.
- Hardware: IBM stand-alone and IBM P-series servers. IBM Hardware Management Consoles.
- Software: Apache, Samba, VMware, Perl, VBscript, PowerShell, UNIX/Linux Shell Scripting, Oracle RAC clustering. PowerHA clustering.

Employment History and Related Experience

Unisys Corporation, Senior UNIX Administrator,
Harrisburg, PA 2005 – Current

Responsible for the day to day management of all AIX and Linux systems in the Data PowerHouse data center for various Commonwealth agencies. This included server deployments through various processes, PowerHA configuration, user requests, operating system level migrations and patching.

- Managed BladeLogic repository for Linux patching across various Linux platforms including RHEL, SLES, and OEL.
- Developed scripts as needed to maintain a consistent environment across the entire data center.
- Participate in all Disaster Recovery planning and testing. This included gathering customer requirements for recovery of various application and database servers, developing the best recovery method of rootvg and non-rootvg as well as customer data, execute recovery exercises and ensured consistent support to the customer as they proceed with their testing of the recovered systems.
- Unemployment Compensation Management System – Built the new operating system image on the updated platforms, worked with IBM experts on performance tuning, ground up installation of all IBM Power hardware including SAN and Network cable installation (Ethernet and fiber), frame mapping of physical devices to ensure redundancy, stability, and performance, of the systems
- Collaborated with IBM experts to install VIO servers and PowerHA clusters ensuring the application and files were available with the least amount of downtime for a smooth transition

UNISYS

Resource 35

Linux Administrator

- Supported various business partners: DBAs, Application Developers, Network, SAN/TSM, Windows Administrators for performance testing, process flow, etc
- Tivoli Monitoring/Network Support –Built a RHEL 5.X image to support application requirements for virtualization, security, and stability from Virtual Machines (VM) and Intel X86 physical servers
- RedHat Network Satellite (RHN Satellite) – Developed RHN Satellite product for patching and maintaining a base line platform for any RHEL system.
- Configured the central satellite server, setup the database and register/connected all clients to their appropriate patching cycle. Working with the owners of the various RHEL clients
- Established the most effective patching cycle for their systems and ensured all systems were current and met the standards needed as set forth by OA
- Bureau of Workers Compensation – Upgraded field office servers from AIX 5.3 to AIX 6.1, PowerHA to the most current supported levels in PowerHA 6.1
- State Workers Insurance Fund – Supported the installation and upgrade maintenance of Dollar Universe application
- Integrated Enterprise System AIX 5.3 to AIX 7.1 migration – Developed and executed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer.
- Streamlined mksysb implementation – Generated a new mksysb creation/storage process to ensure redundancy of the backup images and to further enhance the availability of these images for Disaster Recovery.
- Department of Revenue AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer; scheduled all of the systems in various maintenance windows to ensure accurate time for testing and meeting the requirement for a phased approach of implementation.
- Disaster Recovery Testing – Accomplished annual disaster recovery testing to ensure the application's availability should a disaster occur; built, restored and configured 30+ AIX LPARs to meet the current production environment
- Maintenance Window Management – This agency has monthly maintenance outage windows. I am responsible for coordinating all of the events in the maintenance window, including communications between other departments within Unisys as well as DOR agency staff
- Pennsylvania Liquor Control Board Integrated Business Management System (IBMS) Project –Develop a stable 5.X RHEL operating system image and deploy servers to the agency as needed based on the given build requirements using Virtual Machines (VM) with the required level of security; accomplished day-to-day maintenance of systems, processing of change requests related to systems, and responding to incidents.
- Department of Environmental Projection Oracle Enterprise Linux – Accomplished day to day work includes file system expansion, security monitoring and tuning, and storage and performance monitoring.

UNISYS

Resource 35

Linux Administrator

- Department of Public Welfare Oracle Enterprise Linux – Built and maintained repository, maintenance of other OEL servers and creating new OEL servers as the agency seeks to expand its environment.

Additional Employment History

Earthlink, UNIX Web Hosting Administrator	2000 – 2004
Global Management Services, Chief Technical Officer	2003 – 2005
Cross Connect Technologies, Network Engineer	2002 – 2003
Keystone Programming, Linux Administrator	1999 – 2000

Education

- Dauphin County Technical School, Information Technology, 2000

Training

- New Horizons: 1999, 2000
- Microsoft Certified Systems Engineer Training

Certifications

- IBM Certified System Administrator – AIX7

Professional Summary

Highly experienced and well-grounded infrastructure system architect, capacity planner, performance analyst who believes in fully using what you have before asking for anything more. Strong technical architecture expertise, solid understanding of core business functions, and a broad knowledge of hardware/software products and platforms. Demonstrated capacity planning and performance tuning expertise in complex, high transaction volume environments. Ability to work autonomously or as a team contributor with demonstrated strengths in leadership and consensus building. Keen problem-solving, performance troubleshooting, and risk analysis skills. Easily adaptable to change with an eagerness to learn and expand capabilities.

Holding a Public Trust – High; Security Clearance. (FMS – Dept. of the Treasury)

Employment History and Related Experience

Onpoint Corporation, Lead Technical Architect/Project Leader, Hyattsville, MD 2009 – 2011

Assigned to U.S. Dept. of the Treasury FMS -Financial Management Service – as Lead Technical Architect / Project Manager – for the project to deploy (1) IBM DataStage (-an ETL), (2) zLinux, (3) WebFocus and (4) zVM on System Z. This is the first production Linux application on zSeries architecture for FMS, and the first Linux application placed into production for FMS. The team was a combination of IBM consultants, FMS (Dept of Treasury – Financial Management Services) and FRB (Federal Reserve Bank of San Francisco) employees. Received a letter of commendation from the Dept. Assistant Secretary. As a direct result of the successfully completion of this project, Onpoint received its highest customer satisfaction rating for 2011 from FMS of all the Onpoint federal agencies contracting with Onpoint for services.

- Assisted in administering multiple ETL tools including IBM DataStage; iWAY ETL Manager, within the project scope.
- Provided support for activities such as upgrades and implementations.
- Performed defect analysis; PMR (Problem Management Record) research and problem data collection.
- Reviewed design and architecture documents and provide ETL development teams with input on sound architecture and design principles (such as restart, purging, parallel execution, etc.).
- Performed code migrations according to System Change Management policies.
- Identified risk areas and implemented preventative measures.
- Recognized and implemented performance internal enhancements and optimizations (i.e. Automation, scripting, etc.).

IBM

Resource 36

Mainframe Infrastructure Architect/Engineer

Telecommunications

- TCP/IP
- HiperSockets
- vLAN
- vRouter
- LU6.2
- Cisco
- SNA

Hardware

- IBM z Series – Z10, Z9, 990; 9021 G5 Servers, and 9672 class mainframes
- IBM Power p5/p6 series servers (AIX)
- IBM SHARK
- IBM DS8100
- HDS Lightning and HDS TagmaStore
- EMC Symmetrix and CLARiiON storage arrays

- Conceived and developed process automation/job scheduling using the Autosys scheduler.
- Monitored, measured, and optimized application performance.
- Proactively tracked and addressed capacity management issues.
- Worked with remote Application Support teams to resolve issues that may impact optimal performance of the application.
- Developed and implemented problem management practices that focus on root cause analysis and prevention of future problems.
- Technical environment: (2) z10s (two data centers) , (7200 MIPs in IFLs in each); z/operating system 1.9, DB2 (v8), 18 LPARS, IP based, z/VM 5.3/ 6.2 running Linux SLES10/SLES 11, IBM DS8100, InfoSphere DataStage 8.1, InfoSphere Federated Server 9.1, WebFocus 7.6

PT Global Ltd, Senior Technical Consultant 2009

Collected, extracted and assembled needed data from SMF and RMF, reviewed areas that appeared promising for tuning opportunities, and collected and reviewed setting for IPT, WLM, MQ, CICS and SysPlex. This position required becoming quickly acclimated and oriented to the new site and structure of the customer's IT configuration.

- Determined and tracked time-of-day usage and determined four hour rolling average peak usage, by LPAR, CEC, service (i.e. CICS).
- Utilized monitors and tools (RMF/SMF, Spreadsheet Reporter, SAS/MXG, DB2 Query tool, CICS, DB2 Omegamon) to measure resulting performance.
- Identified the worse performing SQL queries / application programs, within the production workload set of programs. Also determined the most frequently used subroutines and those with highest CPU and I/O usage.
- Reviewed other possible contributors to poor performance, (z/operating system, MVS/JES JCL, CICS parameters, etc.).
- Pinpointed execution delays by type of delay.
- Identified root-cause(s) for suboptimal performance of critical mainframe applications from detailed delay and execution metrics.
- Tracked historical trends and variations for comparative analysis of applications performance to determine effect of volume and code changes.
- Verified if subsystem (CICS, IMS, DBS, VSAM) or and language support (USS, LE) parameter settings are contributing to high CPU.

Lockheed Martin, Systems Infrastructure Architect,
Baltimore, MD 2007 – 2008

Acted as the Senior IT hardware/software mainframe planner for the Centers for Medicare/Medicaid Services (CMS) (Dept. of Health and Human Services) enterprise infrastructure. Advised the CTO and the management team on mainframe technological strategies, development methods, tools, and overall technical direction in support of the customer's requirements. Provided a strong

technical architecture expertise, solid understanding of core business functions, and a broad knowledge of hardware/software products and platforms to deliver and maintain systems solutions to meet CMS business needs.

- Consolidated 2+1 CECs into 1+1 CEC without any service disruption to the customer. This resolved a two year running capacity problem.
- Proposed/implemented hyper sockets to link LPARs for VTAM traffic (and later ETL traffic).
- Consolidated two CEC footprints into one larger, cheaper mainframe.
- Campaigned for Catalog Recovery software when I discovered there was none available. Recommended storage group practice a catalog recovery off hours.
- Joined two mainframe IOCDFs without any major HMC address changes, onto one CEC.
- Revised how CA, BMC, Compuware software was (contracted for) retained – contract review and negotiation lowering yearly charges by using LPAR pricing.
- Proposed zero-based yearly budgeting and justification of ISP software to rationalize the ISP software costs.
- Performed the implementation of two CECs into one CEC without fault or incident, much to the accolades of the CMS senior management.
- Started discussion with Adabas to move toward LPAR based pricing, to be able to eliminate a z890 that was out of support.
- Evangelized the usage of 'jumbo packets' to speed transfer of data external to the z9 CEC. Tried to persuade for a 'private' exclusive SAN network for connection from the z9. Installed DS8100 on a private NAS using jumbo packet.
- Utilized skills in a wide range of functional areas including; mainframe architect, pre/post implementation systems engineer, systems programming, knowledge of data center automation, data center system & application migration/consolidation.
- Utilized expertise in server capacity assessment and consolidation, storage architecture and optimization, network enterprise connectivity, high-performance data management, business continuity, hardware planning, and installation/configuration.
- Consulted on development and delivery of major technology initiatives. Brought external information, ideas and expertise back to the team from various sources and presented information to all levels of the contract and customers organization.
- Advised senior management on mainframe technical architecture strategy.
- Led and influenced cross functional teams.

Resource 36

Mainframe Infrastructure Architect/Engineer

Blue Cross of Florida, Capacity Planner/Performance Analyst 2004 – 2006

Collected and presented data regarding an upgrade requirement for the Z990 that had failed twice before to be accepted by upper management. Prior presentations were poorly received by upper management as prior attempts were too technical and did not have a clear call to action.

- Obtained approval for the upgrade through the use of IBM's RMF SpreadSheet Reporter tool.
- Revised SMF/RMF processing and data retention policy as prior procedures lacked credibility with upper management due to data collection and data retention problems.
- Installed and implemented a new WLM Policy and developed new reporting classes that matched business Key Business Indicators (KBI) to system metrics.
- Reinstalled and upgraded the Merrill MXG installation.
- Re-implemented BMC Best1 MainView mainframe Analyze, Predict, Perceive, enabling the creation of a mainframe usage model to evaluate model changes and upgrades offered by IBM to facilitate the move to a new data center. Verified configuration offered by IBM would sustain the SLAs as the data center workload was moved.
- Modeled TSM (Tivoli Storage Manager) running on z/operating system to resolve performance problems of TSM running on the utility Z900 CEC.
- Installed and implemented data collection for AIX, and Intel servers, using BMC Visualizer ITIL CDB (Capacity Data Base) including modification for SLPAR virtualization in Power p5 servers in support of Blue Cross' initiating a move toward ITIL Service Delivery compliance.
- Re-implemented the BMC Best1 mid-range distributed server to analyze, perceive, and predict to give visibility to mid-range capacity. Initiated a project to wring saving out of AIX servers farm using consolidation, exploitation of AIX Power p5 virtualization, and by achieving greater efficiency in the use of AIX resources.
- Deployed Web-based daily reporting of mainframe, AIX and Intel server metrics and opened this to business owners and system administrators.
- Interfaced with developers to analyze and resolve performance issues.
- Technical environment: z9 and z990 (5000 MIPS), z/operating system 1.5, IMS (v9) and DB2 (v8), and z/VM, 5 LPARS, IP based, 3790 tape robotic library subsystems, three EMC Symmetrix Storage subsystems. 113 Power p5 CECs, running AIX 5.3 (240 LPARs), 26 Hewlett Packard model 380 and 580 servers virtualized running via VM software running 932 Microsoft images.

IBM

Resource 36

Mainframe Infrastructure Architect/Engineer

GlaxoSmithKline, Capacity Planner 2004 – 2004

Served as a Capacity Planner for a z/operating system client server system running SAP R3/DB2 in a z/operating system parallel Sysplex environment.

- Developed the capacity planning and performance reporting functions for this worldwide regulated, ERP SAP 4.6d implementation.
- Evaluated and assessed the capacity and performance issues. Validated IBM and SAP developed capacity forecasts.
- Performed general health check of system operation, and reviewed infrastructure uplift requirements against current usage. Reviewed SMF settings.
- Developed capacity reporting for the ongoing demands of the ERP SAP implementation effort.

Environment: SAP implementation on multiple 9672-Z8Z CECs, across two data centers connected by XRC (eXtended Remote Copy), z/operating system 1.4, four SYSPLEX environments, 14 LPARS, UNIX System Services, IP based, DB2 v.7.1, 3790 tape robotic library subsystems, three ESS Model 800 SHARK TotalStorage DASD/Cache subsystems, (one servicing the middleware P-Series application layer.)

Charles Schwab & Co., Capacity Planner 1997 – 2003

Tasked with establishing a capacity planning methodology that would allow Schwab to grow from 8,000 trades per day via the Internet to over 280,000 trades. Growing the e-trading infrastructure, eight Netscape content servers and ten middleware servers, accessing three legacy mainframes to 100 Netscape content serves, 250+ middleware servers and eight+ Legacy mainframe servers.

COMPASS America, Project Leader 1992-1996

West Coast representative of a European based consulting firm that used benchmarking to provide CoO (Cost of Operation), and 'Gap' analysis of the Information Technology (IT) infrastructures (i.e. -mainframe operation, client/server, and data network) for client companies and communicated best practices in these areas. With detailed metrics gathered from the client about capacity, availability, capacity utilized, cost to provide the capacity, and quality of the delivered service, recommendation were prepared, prioritized by cost savings, and best practices used by other companies were explained.

Nationwide Bank, System Architect/Technology Planning 1987-1992

Installed sufficient capacity just-in-time on the bank's mainframes (Tandem and IBM), data network, and DASD subsystems as the bank replaced all component of its deposit, loan origination, and loan servicing systems and transitioned from a UNISYS/Sperry based onto IBM/Tandem architectures while maintaining and

improve service levels as the bank expanded nationwide thru acquisitions, growing from $11 billion to $47 billion in assets.

Professional Summary

Technically sophisticated professional with a career that indicates reinforced leadership along with a business savvy and "hands-on" IT and networking skillfulness. Maintain focus on implementing the best advanced technology and business solutions while still succeeding at bottom line results. Excellent record for implementing large scale projects on time and budget. Team player who shows excellent interpersonal, leadership and communication skills.

Employment History and Related Experience

Leading Management Consultancy Firm, Managing Consultant, Marlton, NJ — 2008 – Present

Large Multi-National Retailer, Performed as mainframe architect and trusted adviser for a data center relocation from Massachusetts to Ohio for a major multinational retailer. Since the total data center migration was taking place over an extended period of time, extensive analysis was performed on mainframe and distributed server relationships. An asset discovery process which included developing an asset matrix was created. The asset matrix categorized the applications to be migrated by complexity as well as whether they were tightly coupled or loosely coupled to the mainframe.

- The various 1000 plus applications were assigned to application move events. The distributed servers which were defined as tightly coupled to the mainframe had to be identified and migrated at the same time as the mainframe move event.
- These applications were also assigned to the mainframe move event. Latency tests were performed to identify which servers were truly tightly coupled to the mainframe. SMF 118 records were analyzed to categorize the 5000 plus FTP steps into standard FTP, SSL FTP, and PGP FTP. The SMF 119 records were also analyzed for all of the internal and external IP connections.
- After identifying the external connections, the business partners were notified of the mainframe move event as well as actions needed to communicate with the new data center. Client utilized IBM methodology for the migration process.
- Worked side by side with client project managers so that all migration activities could be managed, tracked and reported for client C level management. This migration also included a client's customer for whom they were providing mainframe IT services.
- It was crucial to have the client's customer involved in the migration planning process. Migration included consolidation of 2 mainframes onto a single z196 at the new data center. Global Copy data replication was performed via TPC-R during the migration process. Physical tape (3592 and 3590), Virtual

- Packeteer

tape (CA-VTape on DS8100) were consolidated onto an EMC DLm virtual tape subsystem and then replicated to the new data center.

- The EMC DLm was later replicated to Sungard for disaster recovery purposes. Attended client disaster recovery test as well as made recommendations for their IT methodologies. Created the move day time line and back out project plans as well as tracked and managed their 3 Dry Run testing processes and product mainframe move event.

Large Multi-National Financial Institution, Brazil Stabilization Program, A data center z/operating system Health Check and application SDLC (Software Development Lifecycle) assessment were performed after the data center was relocated from Mexico to Columbus OH. This assessment was prompted by problems when the data center was in Mexico. GRB (Global Resource Banking) batch, which was considered unreliable and often at risk and IT processes were the targets for review.

- Adabas production and development databases were reviewed and evaluated. This analysis included use of best practices, administration, monitoring, backup, recovery, optimization, availability, data protection and compliance.
- Adabas parameters were reviewed as being setup for attaining peak performance. Disk and tape hardware (EMC VMAX using SRDF/A replication and TS7740 grid) and software were reviewed. This included analysis of DCOLLECT data for DFSMS configuration, data set usage, use of disk archival products, and tape management software.
- SMF data was analyzed to identify long batch production jobs and where improvements could be made using different methodologies or tools. UNIX System Services (USS) parameters and USS file structures were examined for use of best practices.
- The master catalogs and user catalogs were reviewed for performance and best practices. The areas of concern were identified and recommendations were prioritized for each area and were included in the assessment report for the client.

Leading Management Consultancy Firm, Network Virtualization for zBX, Created intellectual capital materials so that IBM could make a new product offering (6948-M35 Network Virtualization for zBX) to their z Series clients. It would be offered to clients who wanted to deploy virtual networks in their zBX Ensemble environment.

- Created a Statement of Work, Perform Guide, which would be used by the IBM z Series delivery teams, and 3 training modules. These training modules included materials for configuration of virtual networks, virtual servers, hosts and adding storage to the x Blades, p Blades, and special Optimizer Blades in the zBX. It also included the enablement of the z/operating system and z/VM LPARS for the Ensemble on the zBX.

- MS Office Suite (Word, Excel, PowerPoint, Visio, Outlook)

Qualifications

- Provided training to IBM World Wide audience:
- IBM System z - Network Virtualization for zBX

Technical Training

- IBM
- System z Technology University
- zEnterprise and Unified Resource Manager Workshop
- z196 and zBX and zManager
- Engagement Leadership Workshop
- Core Consulting: Deep Blue C
- Core Consulting: Global Blue Consulting
- Server Time Protocol (STP)
- Technical Solution Owner (TSO)
- S/390 Web enabling Workshop Using Java Connectors
- Assembler Language Coding SMP/E
- MVS System Internals MVS Dump Debugging
- Harris Disaster Recovery Associates, Advanced Business Disaster Recovery & Prevention
- Metropolitan Institute of Network Technology, Ethernet TCP/IP Interconnect for the Internet Cisco Router Configuration
- New York University, Management of Technical People
- IEEE Computer Society Member, Learning Java Scripts
- Guide/Share Conference Attendee
- Past Member of DPMA

- Conducted training sessions were given to IBM internal world wide z Series delivery teams that encompassed North America, Latin America, Europe, Asia and Pacific regions. This training would supply these teams with the knowledge to engage the clients who needed this work to be performed.

Large Health Care Insurer, Dual Sysplex Work Stream 2, Performed as the mainframe architect and technical lead of 11 SMEs; Created architectural documents for business and technical requirements, architectural recommendations and solution design documents including data discovery templates, mainframe hardware equipment specifications, data center requirements, network requirements, and workload migration strategies.

- Migrated 2 mainframe workloads (7 z/operating system LPARS and 1 VM LPAR) from an IBM SO managed data center in Staten Island NY to client owned and IBM SO managed data center in St Louis, MO.
- Installed a z196 with zBX for z/operating system and z/10 for workloads. Workloads were replicated to St Louis using Global Copy (PPRC/XD) over OC12 high speed lines. There were over 200 midrange servers which need to be included in the migration from Staten Island, Brooklyn, and Albany NY with the mainframe. The midrange servers also utilized the same OC12 replication network. The mainframe strategy used the same successful 5 replication method which was used in Dual Sysplex Work Stream 1.
- Created architectural documents for business and technical requirements, architectural recommendations and solution design documents including work products for data discovery templates, mainframe hardware equipment specifications, data center requirements, network requirements, and workload migration strategies.
- Migrated 2 mainframe workloads (6 LPARS) from outsourcer location in Dallas to client data center in St Louis. This included new hardware installation in St Louis, install of DS8300 on ACS data center for EMC to TDMF conversion to allow Global Copy replication, OC12 installation for data replication from Dallas to St Louis. Also a TS7720 was installed on outsourcer floor to cover growth in B20 ZORO (zSeries Optical Replacement Option) unit until migration was complete. TS7720 was GRIDed to TS7720 in St Louis. Old tape technology was replaced in St Louis with TS3500/TS7740 ATL/VTS. Global Copy (PPRC/XD) was used for 5 replications (system test, 2 application user tests, dry run, and prod cutover, and customer signoffs). Migration of outsourcer Pittsburgh location (5 LPARS) to St Louis was performed shortly thereafter using same methodology with exception of not needing to perform. TS7720 for ZORO. Both migrations were completed on time to meet contractual agreements had with leaving outsourcer data centers.

Large Outsourcer and supported large greeting card client, Global Mirror, Worked on team that was engaged to convert the greeting card client data center, managed by outsourcer from EMC Symmetrix DASD to IBM DS8300

DASD. After DS8300 was installed and configured, provided ACS with a methodology with samples for converting EMC TimeFinder backup scripts to a replacement using the IBM FlashCopy method.

- Provided a presentation to outsourcer Storage Admin staff in Kansas City, Dallas and Mexico, and client DB2 admins which showed concepts for FlashCopy, FlashCopy Space Efficient, and how DB2 Backup Restore System Utility would use DFHSM Fast Replication through DFSMS.
- Created initial SMS DB2 data base copy pools and log copy pools under SMS for Hallmark DB2 admins and outsourcer storage admins.
- Created documentation for ACS and DB2 admins for the FlashCopy and DB2 Backup Restore System Utility.

Large Health Care Insurer, Mainframe Optimization, Performed as the TSO (Technical Solution Owner) on the Large Health Care Insurer project which is a complex deal involving 7 different SOWs (Statements of Work) across several SPLs with internal IBM SO (Strategic Outsourcing) being the ITS Delivery client. The mainframe component involves consolidating 18 z/operating system and 1 z/VM workload from 2 IT services (outsourcer) locations and 1 IBM SO managed location into an newly SO managed data center in St Louis.

- Current 5 mainframes at the existing SO Richmond managed data center would first be placed into a larger aggregated Parallel Sysplex in the Richmond data center. This included a Production Sysplex and a Sandbox Sysplex.
- Consolidated workloads from 4 St Louis z/operating system mainframes would later be joined into an aggregated Parallel Sysplex.
- Create a Production Sysplex and Sandbox Sysplex environment. The end result allows the client to save on outsourcing charges to the IT services firm as well as on IBM software license charges via the PSLC (Parallel Sysplex License Charge methodology.
- Many iterations of technical solutions (SOWs, WBSs, and RACIs) were created for the client so they would have the flexibility to consolidate the workloads into one or two different data centers and whether to include the currently under contract IT services firm workloads in those consolidations.

Large Regional Supermarket Chain, Dual Data Center Operations, Performed as the Mainframe Architect for the design of a dual data center that provides an environment for high availability servers as well as a disaster recovery location for the primary data center. This included collecting data, documenting the current baseline capabilities, and performing requirements analysis.

- Created Framing documents as well as Detail Solution Design, and Failover and Fallback documents.
- Created a design so that mainframe applications that interacted with other components on distributed platforms could be certified for disaster fail over at the 2nd data center.

- Designed the mainframe at the 2nd data center to use Capacity on Demand CBU feature on z10 CPU to save on software costs. The environment consists of a zSeries with several LPARS and approximately 90 UNIX (AIX, Solaris, and Linux) and 128 Windows servers. Identified the cross-platform inter dependencies for the various applications by using Tivoli application discovery tools DLA on the Mainframe and TADDM on the Open Systems severs.
- Identified the current System Management processes that are in place. Made recommendations for best practices as well as identify potential problem areas. The primary data center is designed to run asynchronous Global Mirror on the DS8000s between the 2 data center which are approximately 170 miles apart and Netapp Snap mirror for the Windows servers. Windows servers are being virtualized as much as possible at the 2nd Data Center via VMware and the PSeries will run as additional LPARS on larger PSeries servers.

Large Outsourcer and IT Services Company, Created and documented a strategy which they could deploy on their newly installed DS8300 disk subsystem for taking a Point-in-Time Copy (FlashCopy) on their client's global 24/7 12 Terabyte DB2 data base. This procedure would include creating an instant Point-in-Time copy of the DB2 data base using DFSMS Copy Pools in conjunction with DFHSM Fast Replication and DB2 Backup System Utility. These instantly created volumes would be dumped with DFDSS and used and tested at the disaster recovery hot site.

State Agency, Upgraded zSeries environment from z/operating system 1.4 to z/operating system 1.9 along with software upgrades to many out of support ISV program products (CA1, CA7, CA11, Ca-Datacom, CA-ACF2, CA-ACF2/CICS, CA-ENF, CA- Common Services, Compuware FileAid, Xpediter, Common Shared Services, and Syncsort across 3 LPARS. This was orchestrated alongside version upgrades to DB2 and CICS/TS.

Large Pharmacy Benefits Managing Company, Insourced 2 existing business units from 2 different outsource vendors onto a z10-EC 2097-710. The environment included 10 LPARs in a Sysplex environment including a zIIP, Crypto and IFL engines for DB2 and z/VM/Linux. This included working with outsourcing vendors and customers.

- Performed HCD and created IODFs dynamically. EMC SRDF replication was used to relocate data from remote outsource data center locations. Once EMC virtual tape (DLm) and disk data was on site, it was replicated via SRDF again to corporate remote site for D/R testing.
- Successfully performed D/R test as a post migration task. Customized SNA and TCP/IP network for new environment.
- Provided RMF workload analysis of new z10-EC combined environment for customer. Provided tuning recommendations for the new combined data center environment.

Resource 37

Mainframe Infrastructure Architect/Engineer

Independent Consultant, IT Consultant, Chalfont, PA 1998 – 2006

Provided software support for z/operating system, Linux for System z, disaster recovery, and network support.

Companies included: Software Developer, Print Publications, Life Insurance, Retail Clothing, Car Insurance and Services and Direct Mail Advertising.

Large National Distributor of Magazines, Assistant IT Director Technical Services, Pennsauken, NJ 1986 – 2008

Managed a group of systems programmers in z z/operating system, z/VM and Linux for System z environment. Supported all aspects of the data center including hardware and software, UPS/Backup Generator, Disaster Recovery. Voice and Data networks, PBX and VoIP phone systems.

Major Financial Publishing Company, Manager Host Systems, Princeton, NJ 1984 – 1986

Managed a group of 6 system programmers in an IBM multi-CPU and multi-operating system environment. Responsible for the ongoing support and maintenance of MVS, VSE and VM, vendor products, system performance and tuning. Instrumental in the planning and implementation of the VSE to MVS conversion.

Major Service Company, Senior Systems Programmer, Philadelphia, PA 1983 – 1984

MVS and VS1 systems programmer. Completed a VS1 to MVS migration that required an upgrade to VS1 so that MVS, VM and VS1 could all coexist on the same Mainframe during the migration. Designed, implemented and tested a VS1 disaster recovery plan (Sungard).

Major Electronics, Media and Govt Services Corp., Senior Systems Programmer, Cherry Hill, NJ 1980 – 1983

MVS Systems Programmer in a multi data center environment.

Major Insurance Company, Systems Programmer, Roseland, NJ 1968 – 1980

MVS Systems Programmer, Operations and Production Support, and Computer Operator

Professional Summary

Resource 38has over thirty years of experience in the data processing profession with the Unisys Corporation. He has a proven track record in installing and supporting large mainframe computer systems.

- Strong technical expertise, problem solving abilities, and leadership skills have been displayed in his support of major clients such as United Airlines, IRS, Pennsylvania Department of Public Welfare, Pennsylvania Game Commission and State Police
- Stellar system knowledge, attended numerous internal software, hardware, and management courses providing his background computer knowledge.
- Tracks Emerging Technology attending workshops and seminars dealing with Unisys Clearpath Architecture and Open Systems environments.

Employment History and Related Experience

Unisys Corporation, Global Managed Services, Systems Analyst, Harrisburg, PA — 2000 – Present

Delivers Technical Support for several PA State Agency's which include PADPW, PA State Police, and PA Game Commission.

- Technology studies and analysis for large Mainframe Systems as well as Open System Server environments
- Integration of disaster recovery environments and maintaining Client Satisfaction to avoid SLA penalties.

Unisys Corporation, Computer Systems Group, Project Manager, Harrisburg, PA — 1988 – 2000

Technical Project Manager for the Unisys Computer Systems Group, managed a staff of Computer Systems 2200 Architecture Specialists at a $30 million data processing center servicing the PA Department of Public Welfare.

- Managed migrations for of mainframe, peripheral, and software environments
- Maintained nearly one hundred percent system availability.

Unisys Corporation, Professional Services Systems Analyst/Consultant, Harrisburg, PA — 1982 – 1988

Supported Unisys Contract for Department of Public Welfare as a Systems Analyst. Provided Operating System, telecommunications, and MAPPER support on this multiple mainframe customer site.

UNISYS

Resource 53

Mainframe Infrastructure Architect/Engineer

Unisys Corporation, Professional Services Systems Analyst, Martinsburg, WV 1981 – 1982

Professional Services Analyst assigned to support a major 2200 mainframe installation project at the IRS Service Center in Martinsburg, WV.

Unisys Corp., Professional Services Systems Analyst, Chicago, IL 1979-1981

Provided Operating Systems analysis, supported 2200 mainframe upgrade project at United Airlines in Chicago, IL.

Education

- B.A., Mathematics, Lycoming College, Williamsport, PA, 1978

Training

- 2200 Mainframe Operating System; transaction processing concepts and internals
- Programming languages COBOL, MASM, and 4GL
- Communication concepts and programming
- Management courses for creative problem solving
- Interactive communications, and time management, Clearpath workshops

Professional Certifications

- ITIL V3 Foundations
- Yearly Renewal - Ethics Awareness and Information Security Awareness

UNISYS

IBM

Resource 39

Mainframe Infrastructure Architect/Engineer

Key Skills and Knowledge

- z/VM – z/Linux, z/VSE, MVS, operating system/390, z/operating system Systems Programming
- JES2
- z/operating system UNIX System Services
- WebSphere MQ Series
- Lotus Domino (on z/Series)
- Tivoli Storage Manager (z/operating system and z/Linux)
- Tivoli Monitoring under z/Linux
- TADDM Installation under SLES Linux
- z/Linux Infrastructure Support under z/VM
- RACF/VM
- CSE on z/VM
- Linux High Availability on System z
- Velocity Software - z/VIEW - z/TUNE (z/VM - z/Linux Suite)

Professional Summary

Over 20 years of diverse experience. Expert in installing and maintaining z/Series operating systems and mainframe OEM products. Project lead experience in z/VM-z/Linux, z/VSE and MQ Series on the z/Series systems. Designed a z/VM-Linux system running WebSphere from proof-of-concept through a running production z/Linux system. Worked with TSM on z/operating system for a backup solution for Lotus Domino (TDP) and z/Linux under z/VM. Performed a WebSphere MQ Series health-check and help implement conversion from an older bisynchronous network protocols to running under WebSphere MQ on z/operating system. Implemented z/Linux solution with SOA Components (WebSphere Application Server and WebSphere Message Broker). Main technical lead on a z/VSE to z/operating system Conversion. Implementation of RACF/VM in a z/VM-z/Linux environment. Lead z/Linux SME on a large distributed server to z/Linux Conversion project (+500 servers).

Employment History and Related Experience

IBM, Senior IT Specialist, Jacksonville, FL 2006 – Present

- Assisted with health check for WebSphere MQ Series on z/operating system. Installed new z/VM-z/Linux Production environment and helped install z/operating system Production environments (WebSphere MQ and MQ Series Message Broker).
- Assisted with z/VSE to z/operating system conversion.
- Leading a large distributed server environment project moving to z/LINXUX.

Wachovia Bank, System z Consultant, Jacksonville, FL 2005 – 2006

- Documented and assisted in the implementation of security audit requirements for z/operating system UNIX System Services.

Blue Cross/Blue Shield of Florida, System z Systems Programmer, Jacksonville, FL 2004 – 2005

- Assisted with the conversion of z/operating system 1.4 to z/operating system 1.7 Support and install new releases of z/VM.

Supervalu Inc., Senior Systems Programmer (System z)
Eden Prairie, MN 1993 – 2004

- Supported, installed, and maintained VM/ESA and z/VM for both production and z/Linux environments.
- Supported and maintained operating system/390 and z/operating system for development and production environments.

IBM

Resource 39

Mainframe Infrastructure Architect/Engineer

- Installed and maintained MQ Series for operating system/390 and z/operating system.
- Supported and maintained UNIX System Services and Lotus Domino on System z.
- Helped support Tivoli Storage Manager under UNIX System Services for System z.

Education

- B.S., Computer Science, Moorhead State University

UNISYS

IBM

Mainframe Infrastructure Architect/Engineer

Key Skills and Knowledge

- Hardware configuration management
- Storage Management
- Operating System concepts
- Written communication (Technical & Non-technical)
- Oral communication
- Interpersonal
- Project Management
- Project leadership
- IBM project methodology
- Problem analysis/resolution
- Data replication
- Change Management
- Disaster Recovery
- Business Continuance
- Vendor Management
- Virtualization

Professional Summary

Over thirty-three years experience including enterprise level IT systems management, storage management, Disaster Recovery/Business Continuity and IT project leader experience. Dedicated, hard-working professional with excellent leadership, project management, organizational, analytical, problem solving, communication and people skills. Recognized for quality, integrity, and proven success.

Employment History and Related Experience

IBM, WellPoint Client Data Center Relocation Project, Consultant — 2011 – Present

Developed and successfully executed innovative ISV Product Authorization Management technique to ensure all Client-licensed ISV software availability through transition period and final data and workload (production) cutover as a lead Project Manager. Participated in the integration of DR/BCP team project plans with migration team project plans.Identified overlaps, touch points, hand-offs, dependencies and milestones.

- Gleaned client ISV software product, vendor sales, and vendor support data in a contentious outsourcing company managed environment where minimal accurate information was available or given freely. Consolidated critical material into a comprehensive ISV Product Authorization Management document crucial to many WellPoint data and workload migration activities.
- Identified two major classifications of ISV Product Management: daily management of software product authorization and the complete installation of all product authorizations at major project data synchronization events. Developed procedures to properly install ISV product authorization for each.
- Executed procedures to efficiently and quickly install product authorization and validate product function on multiple data and workload cutover tests, dry run tests, and production cutovers. Provided on-site support at client's Data Center location for major project events.
- Developed Knowledge Transfer training for IBM steady-state team designated to acquire management responsibilities from outsourcing company. This included creation of the "ISV Product License Key Knowledge Transfer" document used as a model for all Transition Team knowledge transfer. Presented multiple large-group sessions to communicate experience and knowledge. Provided all developed documentation and procedures to IBM steady-state team. Provided assistance to IBM steady-state individuals after Production Cutover.
- Performed audit of client's Computer Associates (CA) licensed products and enabled elimination of many unused products. Reviewed WellPoint's CA agreement Addendum, installed product inventory, IBM Steady-state license installation procedures, and products active in production to identify

discrepancies. Documented and presented findings to WellPoint Management, WellPoint Procurement, and IBM Contract Management.

- Developed essential vendor communications and relationships communication to secure temporary product authorization during transition period, permanent authorization when permitted, and special technical support consideration during the Production data and workload cutovers.
- Provided z/operating system technical support to client user community and transition team during transition period testing. This included problem analysis and resolution and, when appropriate, working with vendors.

Allstate Insurance Company, Technical Consultant –
Service Delivery Platform Services, Northbrook, IL 2002 – 2010

Served as Business Continuity Planning Coordinator responsible for design, distribution and awareness, testing, and maintenance of plan. Managed the Disaster Recovery Plan updates made by technical areas into Living Disaster Recovery Planning System (LDRPS). Planned and coordinated HDS involvement in Data Center workload and data migrations and consolidations using TrueCopy, reviewed and modified SOWs to ensure completeness and accuracy.

- Sized, planned, coordinated activities for z/operating system storage platform and I/O connectivity in preparation for numerous Data Center workload and data migrations, data consolidations, Data center builds, and Data Center re-designs.
- Evaluated IBM, EMC, and HDS disk storage arrays in "Best and Final" selection process of primary disk vendor to enhance storage disk hardware reliability, availability, scalability, consolidate data, and simplify storage management; led data migration activities to new platform.
- Reviewed and modified disk storage vendor master agreements, developed contract addendums and numerous SOWs to ensure company goals and data protection.
- Evaluated disk storage vendor performance and rated vendor on key objectives to ensure adherence to contractual obligations; produced management summaries, led evaluation meetings, developed and managed corrective actions.
- Designed z/operating system I/O infrastructure and connectivity for over 80TB z/operating system data and associated tape and virtual tape to ensure proper performance and growth.
- Planned and guided z/operating system storage hardware activities and storage-related projects to ensure data availability, performance, protection, and accommodate growth.
- Developed philosophy to ensure system storage platform stability and minimize all management requirements including I/O configurations changes, HCD updates, data migrations, and firmware upgrades.
- Led Disk Storage Process Refinement team 6-month project to implement

ITIL management techniques, minimize storage FTE requirements, and improve provisioning time; prepared and presented final recommendations to management.

- Served as Change Advisory Board (CAB) member with Change Coordinator duties to review daily storage-related change records for adherence to standards, provide storage team representation at weekly department Change meetings, ensure management knowledge and approval of all changes, communicate and describe major storage-related changes to others, and communicate change-related policy updates, restrictions, and freezes to storage team members.

Allstate Insurance Company, Technical Consultant, Northbrook, IL 1995 – 2002

Chosen by IBM as a member of the z/operating system eBusiness Leaders Council (zBLC, formerly known as S/390 eBusiness Leaders Council – SBLC and Parallel SYSPLEX Leaders Council - PSLC) to guide IBM product development and promote my company's interests. Assumed Hardware Configuration Management team project leadership role. Planned and implemented the configuration change into the Field environment comprised of multiple IBM processors in multiple Data Center locations

- Achieved 100% success rate in significant operating system updates – 450 changes annually.
- Completed 100% of all required I/O configuration changes accurately and on schedule.
- Restored Field Data Center satisfaction and confidence in my unit's ability to manage their hardware environment.
- Facilitated several vendor and Allstate team meetings and conferences during major hardware outages to guide vendor activities and minimize disruption.
- Assumed Storage Management team project leadership role.
- Coordinated Allstate participation in annual IBM International Storage Systems Symposium Events.
- Planned, coordinated, and facilitated the annual Allstate Storage Conference; modified its purpose to include hardware topics; solicited vendor and Allstate participation; negotiated vendor training for Allstate employees at these events.
- Performed critical application and critical system 24-hour "SWAT" performance problem analysis and resolution duties for my unit for an extended length of time.

Allstate Insurance Company, Senior Staff Systems Programmer, Northbrook, IL 1986-1995

Planned and coordinated the consolidation of 12 Regional Office Centers, including the Allstate Motor Club, into 3 new data centers. Prepared and

executed instructions for relocation; guided field data center staff activities. Developed and presented IBM PR/SM hardware and operating system training to data center staff and management on all 3 shifts in each of the new data centers.

- Chosen to lead group of representatives from each technical support area to explore ways to eliminate software migration errors and system outages.
- Planned and coordinated, led discussions, and wrote final document that analyzed an integrated approach to software testing and migration and recommended the solution adopted as the "Preproduction"(Pre-pro) system.
- Chosen to lead "DEC" project: responsible for new Digital Equipment Corporation operating system and subsystem software installation and maintenance to host the Investments critical application data and workload.
- Developed DR plans for the backup and recovery of critical operating system environment, formalized plans in LDRPS, led recovery test efforts and presented test results.
- Prepared and presented a technical overview of the DEC platform and its components to my entire department.
- Prepared and presented monthly DEC project updates to my Director.
- Assumed all IBM VM/ESA system management responsibilities: VM/ESA software installation and support, configuration, VM guest definition and administration, etc.
- Prepared and conducted VM/ESA Test Environment technical presentation to IBM developers on campus for the Allstate/IBM Joint Case Study, later to become the HPTS (Highly Parallel Transactions System) Project.
- Worked with IBM developers to install new HPTS operating system, VTAM, JES2, etc. software and perform testing and verification.
- Led O/S Development Team efforts to implement HPTS in our environment: scheduled and facilitated weekly team meetings, developed team assignments, tracked progress, maintained HPTS-related documentation and published results.
- Participated in the implementation of Parallel SYSPLEX in the Field Data Centers.

Allstate Insurance Company, Senior Software Programmer,
Northbrook, IL 1985 – 1986

Performed NCP gens, network problem analysis.

Allstate Insurance Company, Software, Northbrook, IL 1983 – 1985

Acted as the project leader for IBM 8100 DPCX and DPPX Operating System and subsystem software installation, testing migration.

- Prepared, tested, and migrated software, hardware configuration, and

storage configuration packages and instructions for all local and remote data center installations.

- Prepared and presented Field Staff Specialist training classes.

Allstate Insurance Company, Production Analyst,
Northbrook, IL 1982 – 1983

Wrote several assembler language modules as part of a report distribution monitoring tool. Resolved production batch schedule amends, minor system problems.

Allstate Insurance Company, Computer Scheduler,
Northbrook, IL 1981 – 1982

Scheduled and monitored many critical application schedules.

Allstate Insurance Company, Computer Operator,
Northbrook, IL 1979 – 1981

Trusted with operation of remote, unsupervised, complex equipment and systems: "COM" area to produce micro fiche and "TRAN" area to run and monitor batch production schedule on IBM System.

Allstate Insurance Company, Record Clerk, Northbrook, IL 1978 – 1979

Handled report processing and distribution.

Professional Summary

Senior Information Technology Specialist in IBM Global Services. Highly skilled IT information system professional specializing in z/operating system Migrations and new z/operating system implementations including extensive skills in z/operating system UNIX System Services (USS), z/operating system WLM, WebSphere Application Server V6.x/V7.x for z/operating system and zVM-zLinux. Over 40 years experience encompassing all phases of IBM System Services, Maintenance and Implementation Services, including large system Hardware Service System Support & Maintenance, and IBM Software Delivery Services on z/operating system, with a focus in new IBM Product implementations for z/operating system, z/operating system Performance & Tuning including WebSphere V6.x/V7.x & ITCAMs, RACF Security definitions and new z/operating system Proof of Concepts. Extensive background performing z/operating system Parallel Sysplex WLM Merges, z/operating system LPAR and Data Center Migrations. Proficient in all areas of Performance and Tuning, Problem Determination (PD/PSI) and Project Management for z/operating system Enterprise customers.

Employment History and Related Experience

IBM Corporation, Senior IT Specialist, Los Angeles, CA 1996 – Present

Healthcare Provider, Senior IT Specialist/Architect, 2011

z/operating system Parallel Sysplex WLM Policy Merge:

- Provided WLM based Performance and Tuning Services to a large health-care enterprise customer, helping with the WLM-merge of six separate sysplex WLM environments.
- Successfully merged 278 combined Service Classes down to less than the architectural limit of WLM; utilized available IBM WLM Tools to successfully process, validate and test the new merged WLM policy onto the final production sysplex.

Automobile Manufacturer, Senior IT Specialist/Architect, 2010

Provide z/operating system Mainframe Architecture support to a global Automobile Manufacturer to help develop a new mainframe Reference Architecture Roadmap for the next 5 years.

- Provided global documentation support using an IBM Document Repository, creating technical support documentation during the term of the contract.
- Provided leadership to the global IBM Team creating reference documents used for technical content input to highly visible customer presentations. At the conclusion of the project, we had a very happy customer, with a resultant high level of future business for IBM Global Services.

IBM

Resource 41

Mainframe Infrastructure Architect/Engineer

Global Financial Enterprise Customer, Senior IT Specialist/Architect, 2009 – 2010

Assigned as Technical z/operating system – z/VM Consultant to a large z/operating system, z/VM – z/Linux enterprise customer to provide assistance with on-demand provisioning for z/VM -- z/Linux images using proven IBM IGS methodologies including high availability and failover processing.

- Provided onsite provisioning assistance with z/VM – z/Linux imaging, PD/PSI and problem resolution & change management on z/VM – z/Linux LPARs.
- Provided assistance with z/VM – z/Linux LPAR & application performance and tuning, based on IBM IGS best practices.
- Provided assistance with a mainframe reference architecture project, defining and identifying existing Service Oriented Architecture (SOA) based enterprise applications.

Global Transportation Enterprise Customer, Senior IT Specialist/Architect, 2009

Assigned as Technical z/operating system Consultant to a large z/operating system Global Transportation enterprise customer to provide a technical assessment of the technical support processes and procedures used in support of mainframe z/operating system hardware, z/operating system software and z/operating system applications.

- Conducted onsite review of technical support staff and reviewed the existing technical support processes and procedures including, PD/PSI and z/operating system problem resolution for z/operating system hardware and software LPAR requirements, solution testing and validation.
- Created a z/operating system hardware & software documentation repository with their existing documented technical support procedures used by the Technical Support staff to support their mainframe production environments; z/operating system hardware, z/operating system software and z/operating system global applications.

Pharmaceutical Enterprise customer, Senior IT Specialist/Architect, 2008

Assigned as Technical z/operating system Consultant to a large z/operating system enterprise customer to provide assistance with a large Data Center Migration and Consolidation Project.

- Provided onsite diagnostic assistance, PD/PSI and problem resolution on z/operating system LPAR bring-up, testing and validation.
- Reviewed z/operating system Performance and Tuning on all migrated LPARs and provided recommendations to customer technical staff, based on IBM best practices.

IBM

Resource 41

Mainframe Infrastructure Architect/Engineer

Midwest Government IT Installation, Senior Consulting IT Specialist/ Architect, 2008

Performed a 'z Server Health Check Assessment' for a Midwest Government IT Installation on a z Server running four separate LPARs and an Integrated Coupling Facility. Two LPARs were running z/operating system V1R8 and another was running z/VM V5.2 - z/Linux (SLESx).

- Provided immediate remediation for an urgent z/operating system Performance issue and then provided a 'z Server Health Check Requirements document' with Observations and Recommendations for consideration.
- Offered our Services to implement our recommendations, based on our findings.

Midwest government installation, Senior Consulting IT Specialist, 2008

Assist a government customer update zLinux, running under zVM (5.3), from SLES9 to SLES10.1 (SP1), updating & migrating TSM (5.4) and IBM Tapes to the new SLES10.1 environment and also with installation of WebSphere Application Server (Dist) V6.1 along with UDB-DB2 (V8.2).

West Coast Government installation, Senior Consulting IT Specialist, 2008

Assist a government customer with z/VM (v5.2) implementation & helped customize and tailor the z/VM LPAR to run z/operating system (V1R7) under z/VM.

- Provide specialized training to the customer staff and assist with changes to Operational procedures for updates to z/VM, to support & maintain z/operating system running under z/VM.

Health Care provider company in Chicago, Senior Consulting IT Specialist, 2007

zOS Consulting - NEW implementation of WAS for zOS V6

- Provided zOS Consulting Services for onsite support on a new WebSphere for zOS V6.1 implementation, including Performance and Tuning, Security and USS Capacity Planning.
- Provided Implementation support services associated with USS daemons & zOS Security definitions.
- Assisted with Application Deployment & coordination of new required HFS File Systems (capacity sizing and HFS size validations).
- Provided Skills Transfer sessions for the technical staff on related zOS & USS facilities.
- Provided analysis, validation and optimization of WAS V6.1 Performance & Tuning using z/operating system WLM.

- During application testing, finalized Performance & Tuning review and tailored to meet the zOS resource needs of deployed applications and validated results with the customer zOS staff.

West Coast Software Development Co, Senior Consulting IT Specialist, 2006 – 2007

Provide z/operating system V1R4 & V1R6 Consulting Services for a West Coast Software Development Company (IBM Business Partner), running separate z/operating system images in their West Coast Laboratory facility and a separate set of z/operating system LAPR images on an IBM CPC under z/VM (Dallas DR/BP Lab systems).

- Provided z/operating system Consultative Services onsite and remotely, to resolve ISV to IBM architecture issues and validate z/operating system compatibility and functionality associated with their ISV Encryption Product. Performance and Tuning Services were provided during the Benchmark Testing and made necessary changes to WLM and validated same.
- Provided long term System Programmer assistance and 24/7 support for the successful beta testing of their ISV Encryption Product.

Large Clothing Manufacturer, Senior Consulting I/T Specialist, 2006

zOS Performance and Tuning:

- Successfully analyzed, validated and optimized Performance & Tuning requirements for a zSeries installation running WAS V6 in production (June 2006) using z/operating system WLM Performance & Tuning methods; applied and validated WLM definitions.
- Reviewed performance results with the Technical Support Staff and provided customized instructions on implementation methods of WLM changes.

Large government installation in the West coast, Senior Consulting IT Specialist, 2004 – 2005

- Coordinated a Hardware & Software migration from a G4 CMOS Processor to a new zSeries z890 Processor for a large government installation in the West coast. Implementation Services included defining a new Integrated Coupling Facility and migration of three existing LPARs, installation of a new z/operating system SystemPac, Project coordination & long term project planning, and Skills Transfer to technical staff on usage of CHPID Mapping Tool and IOCP/HCD tailoring for z/VM & zLinux, including CHPID Definitions for Hipersockets and new FCP & OSD Channel communications.

Successfully analyzed, validated and optimized the new zSeries processor performance using z/operating system WLM Performance & Tuning methods, applied and validated with the customer's Technical Support Staff after the Hardware and Software migration.

IBM

Resource 41

Mainframe Infrastructure Architect/Engineer

Insurance Company in the West coast, Senior Consulting IT Specialist, 2004 – 2005

Successfully implemented new operating system/390 Firewall Technologies for Insurance Company in the West coast in order to use new VPN (Manual & Dynamic) Tunnels for secure FTP transfers.

- Responsibilities included the implementation of the Proof of Concept designed to allow for replacement of expensive Leased Lines to conduct secure FTP data transfers (via new VPN Tunnels) using IPSec.
- Successfully tested from a local MVS LPAR to operating system/400 and to AIX Firewalls
- Through Implementation Services, provided skills transfer to the system programming staff on USS and VPN implementation & maintenance, RACF equivalent definitions for their OEM SAF product (ACF2), project management, project planning, and the development and design of custom IBM Firewall Technology Scripts for user controlled modification processes and customized training for Firewall usage and commands.

Large government installation in the West coast, IT Specialist, 2004

Coordinated a migration from two older CMOS Processors to a new zSeries Processor including merging four LPARs into three, for a large government installation in the West coast.

- Responsible for implementation services which included project leadership and coordination, long term project planning, IOCP/HCD and implementation of new procedures, coordination of change management and migration testing.
- Analyzed and validated the new zSeries performance with customer's operating system Technical Staff after migration.

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- z/VM
- z/VSE
- VSAM
- Assembler
- Cobol
- TCP/IP
- VTAM
- CICS

Professional Summary

Responsible for z/VSE installation and maintenance, debugging, dump reading, problem and change management, programming and root cause analysis. Developed detailed implementation plans for the installation of new products. Additional responsibilities include development and implementation of Disaster Recovery plans and tests.

Employment History and Related Experience

Artech Information Systems, VSE Systems Programmer 2011 – Present

Install and maintain z/VSE system software, using IBM standard procedures, and VSE-related software, including Explore/CICS, Explore/VSE, FAQS/ASO & PCS, Via-Serv LDS, and EPIC.

Contract VSE Systems Programmer 2006 – 2010

Installed and maintained z/VSE & z/VM system software, using client standard procedures, and VSE-related software.

VM/VSE Systems Programmer, Systems Management, Specialist 1994 – 2006

Installed and maintained z/VSE & z/VM system software, using client standard procedures, and VSE-related software at multiple client locations. Document and implement Disaster Recovery plans.

Education

Certificate in Data Processing from West Coast trade school, 1969

This page intentionally left blank.

Resource 43

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- z/VM
- Rexx
- IOCDS
- HCD
- RSCS
- TCPIP
- RACFVM
- DIRMAINT
- Performance Toolkit
- z/VSE
- z/Linux

Professional Summary

Responsible for installation, ongoing support, service and maintenance, problem resolution (debugging and dump reading), support of problem and change management processes, root cause analysis and programming of z/VM systems, subsystems and related products. Develop detailed implementation plans for the installation of new products and other changes. Maintain documentation. Directly interact with client personnel.

Employment History and Related Experience

IBM, z/VM Support Specialist — 2007 – Present

Responsible for maintaining multiple customer environments running z/VM, z/VSE and z/Linux systems as a member of the z/VM team.

- Support customer accounts using standard processes.
- Involved in the day-to-day activities of running the system.
- Troubleshoot problems and issues.

IBM, Resource Configuration Manager — 1997 – 2007

Designed, implemented, and maintained several different environments that used ESCON and FICON technology. Extensive experience in z9, z990 and z900 and other IBM processors.

IBM, z/VM Support Specialist — 1985 – 1997

Responsible for the VM environment at the Poughkeepsie, NY; Kingston, NY; and Lexington, KY IBM locations.

- Installed and maintained the systems at the then currently available levels of the product.
- Supported tools for customer and system support staff use.
- Participated in the VM/ESA Release 2 field test.

IBM, 3081 Final Systems Test Technician — 1982 – 1985

Performed the final system test of 3081 and 3084 processors. Ensured a fully functional and quality product was ready for shipment to the customer.

Education

- Nashville State Technical Institute, Nashville, TN
- Associate of Electronic Engineering Technology, 1982

INFO-MATRIX CORPORATION

Resource 44

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- 20 years Commonwealth of Pennsylvania experience
- PSP CHRI experience

Professional Summary

Skilled professional with more than 20 years' experience in mainframe system programming and experience with the Pennsylvania State Police.

Employment History and Related Experience

Commonwealth of Pennsylvania (PSP), Application Developer 2, Harrisburg, PA 2002 – 2011

My responsibilities for this position were to support and maintain various systems within the computerized Criminal History Record Information System. I used COBOL, SQL, and .NET. I also have had training in HTML. I would meet with the users to discuss changes to the existing programs. I would then write specifications detailing the changes. Once the specifications were reviewed and approved by the users I would start making the coding changes. After this process was completed I would then test the programs. After the programs were working correctly the programs would be placed into production. I would then monitor the programs to make sure everything was working properly.

Commonwealth of Pennsylvania (DPW), Application Developer 2, Harrisburg, PA 1993 – 2002

I was responsible for the maintenance and development of automated systems that support the Medical Assistance Management Information System using COBOL. I would meet with the users to discuss modifications to the existing programs. Once the modifications were determined, I would then write the specifications detailing the changes to the programs. These specifications would then be assigned to the programming staff. I would meet with the programmer assigned to make the code changes to go over the specifications for clarification. Once the programmer had the modifications made to the program and the changes were tested by the programmer I would review the testing results. Once I felt the modifications were working correctly I would have the users look over the results. Once the users agreed that the programs were working properly I would then have the programs moved into production. The programs would then be monitored to make sure they were working correctly.

Mansfield University, Computer Trainer Mansfield, PA 1993 – 1993

I taught adults who were attempting to get their GED how to use a computer using software that allowed them to do their studies on a computer.

Education

- B.S., Information Systems, Mansfield University, Mansfield, Pennsylvania, 1991
- High School Diploma, Wellsboro Senior High, Wellsboro, Pennsylvania, 1970

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- CICS
- Assembler
- COBOL
- SMP/E
- TSO / ISPF
- IDCAMS
- JCL

Professional Summary

Responsible for CICS installation and maintenance, debugging, dump reading, problem and change management, programming, root cause analysis, developing detailed implementation plans, backups, training of staff and maintaining documentation. Works well in team and individual environment; interacts in a courteous and professional manner with customers, colleagues and vendors.

Employment History and Related Experience

CDI Inc., CICS Systems Programmer 2008 – Present

Installed and maintained CICS system software, using IBM standard procedures, and CICS-related software, including Xpediter/CICS, Jars/CICS, MIMCICS and Install/1.

Ajilon Consulting, CICS Systems Programmer 1995 –2007

Installed and maintained CICS system software, using client standard procedures, and CICS-related software, including Xpediter/CICS, SmartTest, Jars/CICS and MIMCICS.

- Clients include:
  - IBM Global Technology Services
  - Pennsylvania Department of Revenue
  - Armstrong World Industries
  - RiteAid
  - Pennsylvania National Insurance

AMP Incorporated, CICS Systems Programmer 1979 – 1995

Installed and maintained CICS and CICS related products.

- Developed utilities to aid in problem determination and increase productivity.
- Support ad-hoc SLR reporting for CICS.
- Developed and taught part of the in-house CICS Command Level Class and a CICS Environment class. Proficient in Assembler and COBOL.

McCrory Stores, Application Programmer and Systems Programmer 1975 – 1979

Coded program modifications.

- Coded new programs as a member of a team that implemented a new Order System.
- Installed and maintained CICS and CICS related products supported TOTAL Database Software.

Resource 45

Mainframe System Programmer (IBM)

Education

- B.S., Computer Science, Pennsylvania State University

Certifications

- Certificate of Completion, ComputerTraining.com
- MCP certifications for Windows 2000 Professional and Windows 2000 Server

- CA SMF Director

Professional Summary

IBM zSeries z/operating system systems programmer promoting strategic business objectives by preserving a stable mainframe computing environment, meeting service level requirements, and expediting problem resolution.

Core competencies are:

- Installation and configuration of operating system software
- Performance, tuning, capacity planning and resource analysis
- Problem determination and resolution
- Implementation of new technology initiatives
- Mentoring and training other team members

Enterprise computing experience in the investment banking healthcare, software and data communications industries.

Employment History and Related Experience

CA Technologies (formerly Computer Associates), 1999 – 2010

Infrastructure Engineer, 2008 – 2010

Provided technical leadership to the systems programming and software development staffs. The level of engineering support was not routine. Research, planning, implementation and knowledge sharing was required. Evaluated new operating system and program product features. Defined and documented installation strategies and procedures. Built complex prototype environments. Provided expert technical subject matter support.

- Implemented z/operating system UNIX System Services (USS) Shared File Systems. Built sysplex test beds to verify basic configuration parameters, defined and tested standards, supported software development's QA integration testing and CA-Mainframe Software Manager r3 (CA-MSM) product development. Project was a subtask for CA's "May Mainframe Madness", a major marketing effort occurring during spring 2010.
- Prepared BPXPRMxx file sharing parameters for production implementation. Published new HFS, zFS standards and provided technical briefs for the systems programming and software development staffs.
- Researched, planned and tested SMF MVS Logger recording with existing SMF collection procedures. Published standards and procedures to the systems programming staff. Eliminated intermittent loss of SMF data.
- Wrote SMF logstream queries to identify excessive CPU users during given time slices. Analysis helped with tuning and calibrating WLM parameters. Increased system responsiveness by more evenly distributing resources.
- Prepared internal documentation for our systems programming staff and software developers. Among the titles: Installing WebSphere Application

Resource 46

- Coupling Facility
- IFL
- zAAP
- zIIP

Server 5.1, Installing CICS Transaction Gateway 7.0, CA-Mainframe Software Manager Usage. Portions of the latter were adapted by the marketing staff for presentation at CA-World. Assisted staff by teaching a class, BASIC RMF MONITOR PROCEDURES.

Systems Programmer, 1999 – 2008

Served as a senior member of a world-class systems programming team providing global IT mainframe services from two geographically remote data centers. Supported z/operating system operating systems (BCP) and program products across 16 LPARs, 5 sysplexes and 3 IBM zSeries processors.

- Supported z/operating system Releases 1.1 through 1.11, installed z/operating system Release 1.4, 1.11, WebSphere Application Server Releases 5.1 through 7.0, CICS Transaction Gateway Releases 4.0 through 7.2 and IMS Releases 5.1 through 7.1.
- Provided 24/7 pager support, resolving Level 2 and 3 escalation contacts for IPL failures, operating system outages and examining SVC dumps. Opened ETRs on IBMLink, APPLY'ed APARs and PTFs.
- Diagnosed z/operating system performance problems in real time, recommended Workload Manager (WLM) changes.
- Built MIMplexes, assisted Level 2 staff with resolving cross system enqueue conflicts as they were occurring.
- Developed and delivered Resource Accounting Management Summaries to trend processor and memory utilization, extracting data from CA-MICS and MXG SAS databases.
- Installed new CA Technologies product releases and maintenance levels, assisted development with debugging and problem determination. These post-QA efforts were part of our final testing on R&D systems before GA release dates.
- Built z/operating system images, parallel sysplexes and merged the images and sysplexes into CA-MIMplexes across shared DASD farms, defined coupling facility structures, completed necessary system and PR/SM configuration parameter changes.

Office Depot, Systems Programmer II, 1997 – 1999

Provided operating system, parallel sysplex, coupling facility, performance and tuning support.

- Installed operating system/390 operating systems, APPLY'ed CBPDO maintenance levels, provided Hardware Configuration Definition (HCD) support for processor and coupling facility (CF) upgrades, including disruptive microcode CF updates in a DB2 data sharing environment.
- Collaborated with IBM Consulting Services, converting SRM IPS/ICS based performance management to WLM workload management.
- Solely and successfully restored the operating system/390 production operating systems and parallel sysplex during a declared disaster. The data

center was in the potential track area of Georges, a category 4 hurricane. Our Disaster Recovery plan (DR) was executed at SunGuard Availability Services in Philadelphia, Pennsylvania.

Rascal-Datacom (formerly Racal-Milgo), Technical Consultant/ Lead Systems Programmer, 1985 – 1996

Supervised and trained three entry-level systems programmers. Provided installation, configuration, customization, maintenance and administration of operating system software.

- Installed MVS/ESA, MVS/XA operating systems, IBM 3090 and Amdahl 6380 Processors.
- Wrote key 0 supervisor state reentrant S/390 Assembler code for SMF exits IEFACTRT, IEFUSI and RACF's ICHRCX01. Programs included SVC99, ENQ, VSAM OPEN, CLOSE, PUT, MODCB usage.
- Measured and presented system and application performance service levels, tuned SRM IPS/ICS parameters, designed and delivered processor capacity studies to management.

Memorial Sloan-Kettering Cancer Center, Senior Technical Specialist/ Lead Systems Programmer, 1983 – 1985

Managed a three member Operating Systems Services group providing MVS/SP and IBM processor support. Installed an IBM 4381 processor, built additional MVS/SP images to run the increasing production workload.

Salomon Brothers, Systems Programmer, 1980 – 1983

Installed, I/O genned and maintained MVS/SP operating systems and provided software support for IBM 3081 and 4341 processor installations

Education

- Queens College - Arts / Physics-Mathematics
- New York University School of Continuing Education

Certification

- ITIL Certified

IBM

Resource 47

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- V6R1 operating system
- BRMS
- CL Programming
- WWTS Applications

Professional Summary

Twenty-eight years of experience with iSeries, AS/400 and System/38 as a Systems Administrator.

Employment History and Related Experience

IBM, iSeries System Administrator/Focal Point,
Harrisburg, PA 1999 – Present

Responsible for system health of iSeries systems for the Commonwealth of Pennsylvania: storage, backup and recovery, device configuration, communication, networking, performance, database administration, journaling and selected elements of security.

- Responded to customer questions and issues.
- Assisted with the successful System i installation in 2009.
- Responsible for monitoring system message queues, and logs and operation and monitoring of the backup processes and alerts.
- Applied PTFs as necessary.
- Maintained technical, operations and customer support documentation.

Rite-Aid, Camp Hill, PA 1997 – 1999

Experienced in Vision Solutions HA software and BRMS. Linked AS/400 to mainframe systems for user access and data transfer.

Quaker City Paper Company, York, PA 1997

Experienced in training users for new software application and supporting hardware migration.

Harrisburg Paper Company, Harrisburg, PA 1969 – 1997

Experience in hardware and software migration and network administration as a COBOL Programmer and S/38 and AS/400 System Administrator.

Education

- Harrisburg Area Community College – COBOL programming (basic and advanced); multiple assorted PC courses; accounting; basic data networking

This page intentionally left blank.

e&e IT Consulting Services, Inc.

Resource 48

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- DB2, CA-Datacom, IDMS, and native VSAM
- CICS TS V2.2 to CICS TS V2.3, TCP/IP stack
- Design and debugging support to the CICS application areas

Professional Summary

Network Administrator and Team leader. Delivers oversight of operation and tailoring of VTAM, installation and maintenance of NetView, NCP, TPX, VPS, NDM, ANET, and TCP/IP. Provided IT support for the 24 hour National Maritime Operations watch on various UNIX and Microsoft based systems; received the Navy/Marine Corps Achievement Medal for superior performance (IT work).

Employment History and Related Experience

Department of Defense; Navy Depot – Mechanicsburg 2005 – Present

Providing daily support of CICS regions and MQ subsystems, performing CICS/MQ and 3rd party software upgrades/maintenance, and performing application debugging and performance tuning

First Data Merchant Services, Senior Systems Lead Technician 2000 – 2005

Install and maintain 125+ CICS region environment across 11 MVS LPAR's.

- Installation and support for CICS, CICSPlex, and MQ Series.
- Conversion from CICS V4.1 to CICS TS V1.3
- Conversion from CICS TS V1.3 to CICS TS V2.3.
- Support for CICS 3rd party products
- Standardization of CICS and its supporting products.
- Using CICSPlex to monitoring CICS, WLM, and provide batch interfaces.
- Migration of our largest single region into an MRO environment to enhance capacity and availability.
- Migration of 11 additional CICS regions on 2 LPAR's and 2 MP3000's to the FDMS environment.

United States Navy, Office of Naval Intelligence, Washington, DC 2002 – 2003

Served on Active Duty in support of operations Noble Eagle and Enduring Freedom, provided IT support for the 24 hour National Maritime Operations watch on various UNIX and Microsoft based systems; received the Navy/Marine Corps Achievement Medal for superior performance (IT work).

United States Naval Reserve, Intelligence Specialist, Washington, DC 1998 – 2002

Intelligence Operations - Stationed at the Office of Naval Intelligence, Washington D.C. -- Classified Mission.

e&e IT Consulting Services, Inc.

Resource 48

Mainframe System Programmer (IBM)

Rite Aid Inc., Network Team Leader, Camphill, PA 1998 – 2000

Team leader, installed and maintained CICS, CICSPlex, and most of the CICS supporting products; 80+ regions that are interconnected using MRO to support almost 4000 stores.

- Migration to CICSPlex V1.3 and CICS TS V1.2.
- Implemented the CICS Web interface and created our first CICS Web application. Our primary database system was DB2 along with some native VSAM.
- Installation and maintenance of SYSM E-mail product.

Pennsylvania Blue Shield, Network/Communications, Camphill, PA

1994 – 1998

Network Administrator, operation and tailoring of VTAM, installation and maintenance of NetView, NCP, TPX, VPS, NDM, ANET, and TCP/IP using the following servers: TN3270, FTP, LPD, NFS, NPF, SMTP, and GUPTA for DB2.

- Maintained NetView 6000, CiscoWorks, Nways Campus Manager, and network monitoring on the AIX platform.
- Beta testing and setting of standards for Windows 95 & Windows NT 4.0 and in the rollout of DHCP.
- Design and rollout of the Tivoli Enterprise Management system for our Client/Server environment that consisted of AIX, NT & Novell.

Additional Employment History

- Pennsylvania Blue Shield - CICS / Medicare Database., 1988 - 1994
- GIANT Food Stores, System programming, Application programming, 1985 – 1988
- York Bank and Trust, Application programming, 1984 – 1985
- Hedstrom Co, Application programming, Operation, 1981 - 1984

Professional Summary

Senior level MVS Systems Programmer with a BS in mathematics and 19 years of IT experience on the mainframe platform. Proven ability to plan and implement IT solutions.

Employment History and Related Experience

IBM Corporation, Senior I/T Specialist, Greenville, South Carolina, 2006–To Date

- z/operating system (MVS) Systems Programmer
- Systems Availability Leader

Financial Services Company, Network Specialist, 2011–2012

Provided day-to-day support for various mainframe network components such as VTAM, TCP/IP, TELNET, and FTP.

- Supported the client's disaster recovery exercises.

Financial Institution, z/operating system Systems Programmer, 2011–2011

Reviewed all of the major z/operating system subsystems and active address spaces, PROCS, PARMLIB members, PARMLIB concatenations, system page and storage configuration, IEASYSxx and LOADxx parameters, IPL startup, z/operating system SMP/E environment and general performance.

- Provided recommendations and best practices for the major z/operating system subsystems.
- Offered suggestions for z/operating system maintenance strategies and SYSPLEX configuration to prevent system outages.
- Provided options, advantages and hardware/software requirements for the proper planning/implementation of a Multiple LPAR/SYSPLEX environment.
- Recommended best practice scenarios for sharing and isolation of production and development LPARS and data.
- Reviewed current XCF policies, CF structures, GRS constructs and overall SYSPLEX health.
- Reviewed the current TCPIP stack(s), device configuration, IP profiles/parmlib members, associated IP address spaces and general configuration.
- Provided recommendations to optimize and tune the mainframe IP environment as appropriate, as well as outline the changes required to support VIPA, DVIPA and high SYSPLEX availability.
- Reviewed the current USS environment, HFS/ZFS files systems, BPXPRMxx settings and general application usage.
- Provided recommendations and best practices for maintenance, security, end user and application/subsystem support pertaining to UNIX System

Services.

- Provided a detailed overview of USS support and maintenance in a SYSPLEX environment.
- Reviewed ACS routines and ISMF constructs currently in use and provided an analysis of all system and application dataset qualifiers pertaining to SMS and non-SMS management.
- Reviewed current storage configuration by pool, volume naming convention and space management practices.
- Provided suggestions and best practice recommendations to optimize storage management where appropriate, as well as options for utilizing an SMSPLEX in either a SYSPLEX or non-SYSPLEX configuration.

Financial Institution, z/operating system Systems Programmer, 2010–2010

Performed a review of JPMC's z/operating system environment and analyzed its capabilities and architecture.

- Reviewed the utilization of JPMC's z/operating system assets and resources.
- Analyzed the zSeries operating system, the sub-systems, and the ISV software maintenance methodologies and processes for best practices.
- Produced a final report which listed recommendations and suggestions for improving the maintenance & upgrades processes and methodologies.

Telecommunications Company, Sr. I/T Specialist, 2010–2010

Analyzed coupling facility hardware for best practices.

- Recommended software configuration and Parallel Sysplex strategies in-line with IBM best practices.
- Recommended preventive and corrective actions on the Parallel Sysplex technology.
- Identified performance risks and exposures based on IBM observations and recommended avoidance strategies.
- Reviewed Sysplex maintenance strategy.
- Provided report that detailed findings, recommendations, and an improvement roadmap.

Hospital, Sr. I/T Specialist, 2010–2010

Reviewed the WLM constructs for best practices.

- Analyzed batch and on-line workloads.
- Conducted a performance review of the WLM classes to ensure performance objectives were being met.

Insurance Company, Sr. I/T Specialist, 2010–2010

Assessed processor utilization and latent demand, central storage utilization, workload utilization of system resources, response time analysis, and I/O device

utilization.

- Reviewed and analyzed the coupling facilities and FICON switches for best practices.
- Evaluated system performance.
- Conducted a performance review of the Workload Manager (WLM) constructs.
- Reviewed current z/operating system production system configuration for compliance with capacity, availability and performance.
- Conducted a review of the non-IBM Software products and provided software alternatives.
- Reviewed the current toolset / utilities used in the z/operating system environment and made recommendations for alternatives.
- Evaluated current z/operating system staffing and support levels.

Hospital, Sr. I/T Specialist, 2009–2009

Reviewed, analyzed all z/operating system third party (non-IBM) software products.

- Provided upgrade, migration and replacement recommendations for all third party z/operating system software.
- Evaluated the z/operating system software and offered recommendations on utilities that would provide benefits and increase staff productivity.
- Evaluated client's z/operating system tape environment and provided a hardware migration path that would lead to an increase in tape capacity.
- Evaluated the z/operating system and Operations staffs.
- Provided recommendations for staffing and support levels relating to z/operating system and Operations.

Insurance Company, Senior I/T Specialist, 2009 – 2009

Reviewed DFSMShsm Migration and Retention Rules in an effort to reduce data movement between primary and migration volumes.

- Reviewed RMF data to determine the performance impact DFSMShsm was having on the z/operating system system.
- Provided a list of recommendations for reducing the volume of data managed by DFSMShsm and for reducing data movement between primary and DFSMShsm managed migration volumes.
- The recommendations also included comments on best practices for reducing or eliminating thrashing.
- Assisted with the implementation of a number of the recommendations.

Manufacturing, Sr. I/T Specialist, 2008–2008

Defined the SMP/E environment and utilized SMP/E to install a number of third party software products.

- Based upon a set of client requirements, conducted research to determine the best method of cataloging tape data once the tape data set is closed. The solution required the use of the assembler programming language to create the 'File End on Volume' system exit (IFG055FE).

Manufacturing Company, I/T Specialist, 2008–2008

Conducted interviews to determine the duties and responsibilities for all members of the z/operating system staff.

- Determined the z/operating system software components and subsystems in the client's environment.
- Determined the z/operating system related hardware in the client's environment.
- Submitted a report detailing the IT environment. In addition, the report included statistics regarding the z/operating system staff.

Retail Company, Senior I/T Specialist, 2007 – 2007

Documented all system EXITS and USERMODS installed.

- Determined if EXITS and USERMODS can be migrated (either to v1.7 or to v1.9) or eliminated.
- Determined work effort involved to migrate EXITS / USERMODS to z/operating system V1.9.
- Reviewed migration requirements for major subsystems.
- Reviewed Independent Software Vendor (ISV) software migration requirements.
- Performed a high level analysis of the current zOS v1.4 environment for a migration to zOS v1.9.
- Defined roadmap for upgrade from zOS v1.4 to zOS v1.9 which included high level initiatives to accomplish the migration.
- Provided a technical document to client which summarized the z/operating system V1.4 assessment. In addition, the report contained recommendations for a migration roadmap. It also identified areas that required additional investigation.

Clinic / Hospital, Senior I/T Specialist, 2007–2007

Assisted with the upgrade of z/operating system V1.7.

- Installed a significant number of ISV products.
- Utilized FDR software to erase all data on old IBM RAMAC II devices.

Banking Client, Senior I/T Specialist, 2007–2007

Assisted with VSE-to-MVS SAS migration project.

- Reviewed SAS source and JCL.
- Implemented changes as necessary.

- Tested SAS applications in a batch environment.

Power Company, Senior I/T Specialist, 2007–2007

Performed z/operating system V1.4 healthcheck.

- Provided client with a technical report denoting all deviations from 'best practices' regarding z/operating system settings and configurations.

Power Company, Senior I/T Specialist, 2007–2007

Led z/operating system V1.4 to V1.7 migration project.

- Installed all ISV products.

Health Care Company, Systems Availability Leader, 2006–2006

Filled the role of Systems Availability Leader for a large client.

- Advised management of hardware/software availability issues.
- Worked with IBM support to quickly resolve IT related problems.

Clinic / Hospital, Senior I/T Specialist 2006–2006

Assisted with z/operating system V1.4 upgrade.

- Installed all ISV products.
- Assisted with testing of the ISV products and with z/operating system V1.4.

Manufacturing Firm, Senior I/T Specialist, 2006–2006

Generated performance reports using RMF & Omegamon.

- Evaluated performance issues in regard to z/operating system and related hardware.
- Provided client with a technical document denoting all hardware and software performance issues.

National Insurance Company, Senior I/T Specialist, 02/2006-02/2006

Generated performance reports using RMF & Omegamon.

- Evaluated performance issues in regard to z/operating system and related hardware.
- Provided client with technical a document denoting all hardware and software performance issues

Grocery Retailer Located in the South East, Senior MVS Systems Programmer, Greenville, South Carolina, 2005–2006

Installed, maintained and tested various MVS system software components and utilities. This includes IBM and third party products. Maintained the I/O configuration for the MVS system via HCD.

Resource 49

Mainframe System Programmer (IBM)

- Engaged in various MVS storage management related support activities.
- Assisted with the planning and execution of the disaster recover exercises.
- Provided management with periodic risk analysis.
- Worked with operations and with the user community to resolve hardware and software issue.

Grocery Retailer Throughout the South East, Lead Systems Software Specialist, Greenville, South Carolina, 2000–2005

Installed, maintained and tested various MVS system software components and utilities. This includes IBM and third party products.

- Using the assembler language, developed, tested, and installed various system and user exits.
- Assisted with operating system upgrades from operating system/390 V2R8 to z/operating system V1R1 and from z/operating system V1R1 to z/operating system V1R4.
- Maintained various operating systems such as z/operating system and operating system/390.
- Supported components and structures within a Parallel Sysplex environment.
- Supported disaster recovery.

A South Carolina Public University, Lead MVS Systems Programmer, Clemson, South Carolina, 1990–2000

- Responsible for the installation and maintenance of all MVS system software and utilities. This includes both IBM and third party software products.
- Supported various versions/releases of MVS/ESA and operating system/390.
- Provided software support and user assistance for all Advanced Function Printing (AFP) printers.
- Responsible for MVS storage management. This included both tape and DASD.
- Examined hardware/software issues and made recommendations to management.
- Organized and managed all upgrade projects.
- Kept management informed of all ongoing tasks and projects.
- Provided management with risk analysis. Responsible for MVS disaster recovery.
- Assisted as needed with software development and level 2 support of Expert Library Manager (ExLM). Extensive use of Hardware Configuration Definition (HCD) to define and maintain the MVS I/O configurations.

National Insurance Company, Programmer Analyst, Greenville, South Carolina, 1989–1990

Using formal written specifications, developed, tested, and installed new COBOL based medical statistical reporting systems.

Resource 49

Mainframe System Programmer (IBM)

- Maintained existing reporting systems.
- Handled client requests for special custom reports and data files.

Major Metals Manufacturer, Junior / Associate MVS Systems Programmer, Richmond, Virginia, 1988–1989

Installed, tested, and maintained MVS software. Resolved software issues. Assisted the user community as needed.

Education

BS in Mathematics, Clemson University

AA in General, Glendale Community College

Resource 50

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- Assembler Language Coding
- COBOL
- zOS Operating Systems Support
- JES2 Support and Exits
- SMP/E
- ACF2
- SDSF
- ISPF
- FDR
- FDRABR
- FDRPAS
- MSWord
- PowerPoint
- Excel
- Outlook

Professional Summary

Performed systems programming support for z/operating system, OS390 and zVM operating systems through research and development of system level software. Supported z/operating system R1.6/7, JES2 Exits, GDPS, XRC, TWS, DFSMS, FDR and CA products and various other vendor software products as an IT Specialist. Has experience as chief of a major government agency systems programming branch.

Employment History and Related Experience

IBM, Senior IT Specialist Jacksonville, Florida, 2008–To Date

Provides systems programmer z/operating system operating system support on various contracts. This support includes z/operating system, JES2, MVS and JES2 Exits, RACF, GDPS, XRC, TWS, SMP/E, HCM, HCD and IOCP, DFSMS, IBM Utilities, Assembler Language Coding, COBOL, FDR, FDRPAS and various other vendor software products.

- Has in depth experience in IBM programming languages.
- Is experienced in IBM processors, both large and medium, with some knowledge of server technology.

IBM, IT Specialist, Bethesda, Maryland, 2005–2008

As a Senior Systems Programmer, provided operating system support on contract to U.S. Department of Defense. This support includes z/operating system R1.6/1.7, JES2, MVS and JES2 Exits, RACF, GDPS, XRC, TWS, SMP/E, HCD and IOCP, DFSMS, IBM Utilities, Assembler Language Coding, COBOL and various other vendor software products.

- Provided customer support with reports, project planning and change coordination through use of many office tools, such as, MSWord, PowerPoint, Excel and Outlook. Has in depth experience in IBM programming languages and superficial knowledge of scripting languages.
- Is experienced in IBM processors, both large and medium, with some knowledge of server technology.

U.S. Department of Defense, IT Specialist, 2005 – 2008

- Provided zOS Operating System Programming to the customer. Includes SMP/E installation of the operating system and other IBM and vendor software products.
- Provided support for customer problems and issues within the scope of the contract.

TekSystems Inc., Senior Systems Programmer, Hanover, Maryland, 2003–2005

As a Senior Systems Programmer, provided sub-contractor services to IBM, Inc. on contract to the U.S. Department of Defense.

Resource 50

Mainframe System Programmer (IBM)

Imperial Systems Group LLC, Senior Systems Programmer/Owner, Silver Spring, MD, US, 1999 –2003

Provided sub-contractor services to Raytheon, Inc. on contract to the U.S. Department of Defense as a Senior Programmer and owner of Imperial Systems Group, LLC.

- Led the planning and installation of the operating system/390 Release 2 Version 10 Operating System.
- Provided technical expertise for the planning and installation of the Agency's mainframe upgrade to an IBM CMOS and a RAMAC Virtual Array Disk Subsystem.
- Experienced in SMP/E, JES2, ACF2, SDSF, ISPF, FDR/ABR, IXFP, SNAPSHOT and other IBM and other vendor software.

QSI, Inc., Senior Systems Analyst, Rockville, MD, US 1998 – 1999

Responsible for Year 2000 assessment of Montgomery County Permit System.

- Analyzed an application system coded in COBOL, IMSADF and SAS.
- Acted as the Systems Programmer for the TIS P390.
- Responsible for installation and maintenance of the operating system/390 System and various IBM and other vendor software products (e.g. CICS, SAS, and FDR).

U.S. Government, Federal Employee, Washington, DC, 1969–1997

Assigned as a Computer Programmer, Systems Programmer, Branch Chief, Systems Analyst, Project Manager, Senior Technical Officer at various U.S. Government Agencies.

Education

MS in Information Resource Management

Syracuse University, Syracuse, NY

Certification

- Certified General Services Administration "1000 by 2000", 1995
- Certified National Defense University, Advanced Management Program, 1995

UNISYS

e&e IT Consulting Services, Inc.

Resource 51

Mainframe System Programmer (IBM)

Key Skills and Knowledge

- Secret Clearance
- CICS, CICSPlex, MQSeries, DB2
- ADABAS DBMS (exits, internals and utilities)
- PLATINUM/BMC tools for DB2,
- RRDF/Log Apply disaster recovery tool
- S/370
- RACF, Top-Secret, Mac-Kinney Batch, assembler
- PL/I, COBOL, TSO/ISPF, CLISTS, SAS

Professional Summary

Skillful Subject Matter Expert for DBMS /BMC/Platinum software upgrades with SMP/E, performed BMC and Platinum installations and evaluations for proposed software, and developed software to automate routine database functions. Knowledgeable of Z/operating system, MVS/XA, operating system/390, RX3, PCs, etc.

Employment History and Related Experience

Navy Depot, CICS/MQ Systems Programmer, Mechanicsburg, 2001 – Present

Provide daily support of CICS regions and MQ subsystem, perform CICS/MQ and 3rd party software upgrades/maintenance, and perform application debugging and performance tuning

First Data Merchant Systems, CICS Senior Systems Engineer, 2001 – 2007

Provided daily support of 134 CICS regions, Performed CICS and CICSPlex software upgrades and maintenance with SMP/E, and Installed/maintained MQ Series subsystems

- Exploited CICSPlex by using its MRO monitoring and batch interface features
- Developed software to automate routine CICS functions
- Performed application debugging and performance tuning
- Interfaced CICS with DB2, CA-Datacom, and IDMS databases
- Migrated to CICS TS 1.3 and TS 2.3
- Installed MRO capabilities using CICSPlex and WLM
- Developed Web presentation of daily CICS shutdown statistics
- Developed a process to report transaction issues

Rite Aid Corporation, Database Administration/Systems Programmer, 1995 to 2001

Performed DBMS /BMC/Platinum software upgrades with SMP/E, performed BMC and Platinum installations and evaluations for proposed software, and developed software to automate routine database functions.

- Performed administration activities in support of database maintenance (PTFs)
- Conducted application performance tuning
- Migrated and maintained DB2 V4.1, V5.1 V6.1 subsystems
- Implemented UDB for NT, JDBC, and Net.Data
- Implemented a production DB2 data sharing environment

e&e IT Consulting Services, Inc.

Resource 51

Mainframe System Programmer (IBM)

CITIBANK, Senior Systems Programmer, South Dakota, 1985 to1995

Upgraded, installed, and evaluated DBMS proposed software, conducted DBMS performance and tuning, and developed in-house tools and automated database functions.

- Administered activities necessary for supporting application projects
- Provided direction and status of key projects to upper management
- Participated in group/department planning
- Assisted coworker with technical solutions for production issues
- Designed and developed multi-site ADABAS and DB2 backup and recovery
- Developed code to dynamically designate ADABAS file(s) to read-only status systems
- Developed code for capturing historical ADABAS command information

Additional Employment

- University of South Dakota, Vermillion, SD, Senior Data Processing Unit Manager, 1981 to 1985
- St. Paul CO., St. Paul MN, Programmer/Analyst, 1980 to 1981

Education

B.A., University of South Dakota, May 1980, Computer Science, minors in Business and Mathematics

Professional Summary

Senior computer Analyst and Programmer with 30+ years experience in the design, development, implementation and maintenance of technology solutions for business and government. Areas of expertise include

- Implementation and maintenance of hardware and software
- Strong emphasis on operating system configuration and support routines
- Applying fixes and updates to the operating system programs
- Converting and updating user programs to utilize new environments
- Generating new applications in response to emerging requirements

Employment History and Related Experience

DPH and PSP systems at DPW, System Analyst 2 – Harrisburg, Pennsylvania, 2011-Present

Deliver systems support to the Commonwealth of Pennsylvania and Pennsylvania State Police Facility in Harrisburg, Pennsylvania for the Unisys Dorado 350 systems.

- Performed software generations to apply corrections and updates as needed
- Configured and installed third party software including STAR 2200
- Monitored daily system operations and identify and correct problems
- Installed CP12.1 release of the Unisys operating system 2200 suite of software on all DPW systems

County of Los Angeles, Unisys Operating System Specialist – Los Angeles, California, 2006-2011

Working at the County of Los Angeles Facility in Downey, California, provided support for the Unisys Dorado 280 system, generated MASM and COBOL programs to provide information and statistics about the Operating System usage and performance

- developed and installed fixes and local code for the Operating System
- Configured and installed third party software including STAR 2200, CSC and Control-M
- Provided user file maintenance using FAS to assist users in retrieving files which have been archived or to restore a file to a previous version
- Monitored daily system operations and identify and correct problems.

SITA Corporation, FORTRAN Programmer – Atlanta, Georgia, 2005-2005

Working at the SITA Facility in Atlanta, Georgia, participated in updating SITA's airline reservation system which generates and maintains e-tickets for SITA customer Airlines, modified existing FORTRAN programs to provide the new functionality.

Unisys Corporation, Principal Systems Analyst – Niceville, Florida, 1991-2004

Working at the Unisys Support Facility in Niceville, Florida, participated in numerous system updates and conversions

UNISYS

Resource 52

Mainframe System Programmer (Unisys)

- Accomplished operating system configurations and generations, provided site computer operation support.
- Developed and executed test procedures for new software and wrote numerous subroutines and functions for various software written at the Niceville facility
- Reviewed, generated, installed, tested, and implemented new releases of Unisys system software including OS2200, UCOB, UFTN, UC, DMS1100, CMS1100, MCB1100 and many others
- Helped debug problems in the system software and found and installed fixes to correct these problems

Systems Analyst – Hickam Air Force Base, Hawaii, 1990-1991

Supported the U. S. Weather station on Hickam AFB in Honolulu, migrated Sperry 1108 to the new 1100/70 machine; provided system configurations and generations, provided site computer operation support and training.

- Accomplished communications configurations and generated the communication management system
- Provided backup capabilities for the operating system, aided site Air Force personnel in writing programs to analyze weather data and prepare forecast and weather history reports
- Setup and maintained the technical library and interfaced with the Unisys support facility in Texas to identify and correct deficiencies and discrepancies in the system software and communication network.

Systems Analyst – Montgomery, Alabama, 1984-1990

Provided analysis for Unisys Support Facility in Montgomery, Alabama, participated in the migration and implementation of the Air Force Phase IV program.

- Generated numerous utilities, subroutines and functions to aid the Air Force personnel in the support of the Air Force Base Supply System, financial system and world wide data bases
- Debugging DMS programs, implementing and installing the shared tape library system, converting the Air Force data base files to the new system format when UDS was introduced
- Developed utilities to aid Air Force personnel in the maintenance of disk files and in the reading of tape files received from other bases.

Professional Summary

Resource 38has over thirty years of experience in the data processing profession with the Unisys Corporation. He has a proven track record in installing and supporting large mainframe computer systems.

- Strong technical expertise, problem solving abilities, and leadership skills have been displayed in his support of major clients such as United Airlines, IRS, Pennsylvania Department of Public Welfare, Pennsylvania Game Commission and State Police
- Stellar system knowledge, attended numerous internal software, hardware, and management courses providing his background computer knowledge
- Tracks Emerging Technology attending workshops and seminars dealing with Unisys Clearpath Architecture and Open Systems environments

Employment History and Related Experience

Unisys Corp. ,Global Managed Services, Systems Analyst, Harrisburg, PA 2000-Present

Delivers Technical Support for several PA State Agency's which include PADPW, PA State Police, and PA Game Commission.

- Technology studies and analysis for large Mainframe Systems as well as Open System Server environments
- Integration of disaster recovery environments and maintaining Client Satisfaction to avoid SLA penalties

Unisys Corp., Computer Systems Group Project Manager, Harrisburg, PA 1988-2000

Technical Project Manager for the Unisys Computer Systems Group, managed a staff of Computer Systems 2200 Architecture Specialists at a $30 million data processing center servicing the PA Department of Public Welfare.

- Managed migrations for of mainframe, peripheral, and software environments
- Maintained nearly one hundred percent system availability

Unisys Corp., Professional Services Systems Analyst/Consultant, Harrisburg, PA 1982-1988

Supported Unisys Contract for Department of Public Welfare as a Systems Analyst. Provided Operating System, telecommunications, and MAPPER support on this multiple mainframe customer site.

UNISYS

Resource 53

Mainframe System Programmer (Unisys)

Unisys Corp., Professional Services Systems Analyst, Martinsburg, WV 1981-1982

Professional Services Analyst assigned to support a major 2200 mainframe installation project at the IRS Service Center in Martinsburg, WV.

Unisys Corp., Professional Services Systems Analyst, Chicago, IL 1979-1981

Provided Operating Systems analysis, supported 2200 mainframe upgrade project at United Airlines in Chicago, IL.

Education

- B.A. – Mathematics, Lycoming College, Williamsport, PA 1978

Training

- 2200 Mainframe Operating System; transaction processing concepts and internals
- Programming languages COBOL, MASM, and 4GL
- Communication concepts and programming
- Management courses for creative problem solving
- Interactive communications, and time management, Clearpath workshops

Certifications

- ITIL V3 Foundations
- Yearly Renewal - Ethics Awareness and Information Security Awareness

- Exchange E-mail Consulting Services
- Operating Systems
- Software/System Architecture
- Technical Documentation

Professional Summary

Expertise and significant hands-on experience in Server Technologies such as:

- Windows 2003 advanced server.
- Windows Server 2008 R2 Server.
- Active Directory, DNS, DHCP installation, configuration, administration and troubleshooting.
- Exchange 2007 implementation, configuration, administration and troubleshooting.
- BlackBerry Enterprise server implementation, configuration, administration and troubleshooting.
- Experience in monitoring and tuning Windows server performance.
- Basic troubleshooting for hardware problems.

Employment History and Related Experience

Unisys, System Analyst (Messaging Consultant), Harrisburg PA, 2012 - Present

Provides systems analysis support for the Commonwealth Roles including tasks such as:

- Tier 2 support for Enterprise active directory domain, DNS, DHCP, GPO (Windows 2008 R2)
- Tier 2 support for Enterprise Exchange 2007, Enterprise BlackBerry Servers, and Good for Enterprise Servers
- Tier 2 support for Enterprise Exchange 2007, Enterprise BlackBerry Servers, and Good for Enterprise Servers

US Tech Solutions, System Analyst, Harrisburg PA, 2011- 2012

Provides systems analysis support for the Commonwealth Roles including tasks such as:

- Tier 2 support for Enterprise active directory domain, DNS, DHCP, GPO (Windows 2008 R2).
- Tier 2 support for Enterprise Exchange 2007, Enterprise BlackBerry Servers, and Good for Enterprise Servers
- Support for Cisco Ironport E-mail Encryption, Postini Anti-spam, and Commvault backup system

Additional Employment

- Good Shepherd Medical Care 01/2011 - 05/2011
- Summit Technology Solutions 01/2004 - 08/2010
- Orascom Technology Solutions 10/1997 - 01/2004

- Windows Domain & Exchange Server

Call Center and Help Desk

Professional Summary

Over 15 years of experience in System Administration & Network Administration, led and managed technical teams. Extensive experience planning & implementing backup and recovery procedures, Solid experience with Exchange 2000 / 2003 / 2007 in a large corporate environment (103,000+ employees), strong transition experience migrating Exchange from 5.5 to 2003, 2000 to 2007.

- Experience in Windows 2008 / 2003 domain administration, SPAM and Virus Control
- Having knowledge of principles of administration of ISA server
- Installing, configuring and maintaining Windows servers operating system like Windows 2008 R2, Windows 2003/ XP.
- Windows Active Directory implementation, Active Directory & Sysvol directory replication issues
- Group Policy implementation
- Disaster recovery of database, troubleshooting A.D replication issues
- Configuring DNS, DHCP & Wins server
- Installation and configuration of McAfee Groupshield for Exchange Servers
- Disaster recovery of Exchange servers / databases
- Testing Hot fixes, rollups & service packs and applying them in production
- Root Cause Analysis of Exchange server issues
- Galaxy Commvault software (SIMPANA 7.0 with SP3) backup Technology
- Have working knowledge of Data Protection Manager 2010
- Analyzing the output of Exchange tools like Exmerge / MpsReports / EXBPA / EXPTA
- Document all incidents related to servers and applications
- Managing Dell server class rack mounted systems, Desktops and laptops

Employment History and Related Experience

Commonwealth, Office of Administration, Exchange Consultant, 2007 - Present

Supports a six member "Exchange Management Team" (EMT) which currently manages Windows 2008 Active Directory domain, Exchange 2007 e-mail servers, BlackBerry Servers for the 45 agencies of the Commonwealth of Pennsylvania including, Governor's Office, State Police, Corrections, Dept. of State etc.

- Active Directory Domain: Commonwealth of Pennsylvania Active Directory consists of a single forest with two domains in it. There are approximately 100K user accounts, 300 domain controllers spread across more than 240 active directory sites throughout the PENN state.
- E-mail servers: Exchange 2007 servers in cluster environment on 64bit Windows 2008 servers. We have around 90K mailboxes spread across ten servers. Each server has around 25 databases and in total & we manage

Resource 55

Microsoft Product Specialist (Windows & Exchange Administrator)

- Managing Call center / Help Desk Project

Technical Documentation

- Technical SOP Documents for Patch Management/Groupshield/ Disaster recovery of Exchange databases.

250 mailbox databases; supports a disaster recovery site and exchange servers handling 4.8M messages a day.

- BlackBerry: Supports the needs of around 4000 BlackBerry users.
- Supports Anti-Virus, Anti-Spam, E-mail Encryption as well as Backups / Restores of Active directory servers & Exchange databases
- Provides Tier 2 technical support to Commonwealth of Pennsylvania Agency IT Admins
- Server builds – Install and configure agency windows 2008/2003 DC's, Global Catalog servers, exchange servers 2007, BlackBerry, Commvault QiNetix backup servers, ListServ, MOM Servers
- Installed and deployed Windows 2008 R2 Servers
- Responsible for issues related to Active Directory, WINS & DNS Servers.
- Monitor and troubleshoot AD database problems with NtdsUtil, NetDiag and DCDiag tools
- Providing technical support to the end users (Agency IT admins) for Exchange 2007, DNS, SMTP, LDAP, BlackBerry, ListServ and user accounts
- Restoring AD databases in the Development and Staging labs
- Responsible for server backups and restores using Commvault Simpana Backup Application.
- Tape backup and library maintenance - Monitoring and reviewing all the successful and failed backup jobs, perform makeup jobs, Automated the cleaning of drives once every month.
- Responsible for Disaster Recovery of Exchange servers like restoring exchange databases from backup tapes & rebuilding new servers
- Identify and troubleshoot exchange information store and directory database problems
- Monitor and troubleshoot replication problems between intrasite and intersite replication issues.
- Monitoring of all our Windows 2008 servers, Exchange 2007 using SCOM.
- Carrying out Mailbox recoveries for IT Admins
- Carrying out upgrades and maintenance for Commvault Server& Media Agents
- Responsible for Service pack & patch upgrades on all servers.
- Administering day to day BlackBerry tasks.
- E-mail Account Management
- Managing, deploying and administering McAfee enterprise virus scan and ePolicy agents through ePolicy Orchestrator 4.6 Console
- Migrated the Users, Groups and the Security Translation of Workstations and Servers using ADMT tool.
- Installed, Configured and managing the different server roles of Exchange server 2007.

Microsoft CERTIFIED Technology Specialist

Resource 55

Microsoft Product Specialist (Windows & Exchange Administrator)

- Installed, Configured and managing the Exchange 2007 forefront servers as part of Exchange AntiVirus
- Installed, Configured and managing the SCR (Standby Continuous Replication) between production and DR site.
- Installed, Configured and managing the McAfee 8.5i on all the enterprise DC (289) and McAfee Group Shield on Exchange 2007 Servers.
- Responsible for testing Cloud based Google E-mail Archiving solution as part of "Proof of concept"
- Responsible for Testing on site full blown Symantec Enterprise Vault Archiving solution as part of "Proof of Concept"

Hewlett-Packard, Sr. Systems Engineer, 2005 to 2007

Delivers high level troubleshooting Exchange server 5.5, E2k & E2k3 which includes Performance related issues, disaster recovery & connectors. Maintains Windows 2000 / 2003 domains and troubleshooting issues related to Active directory maintenances, replication, group policies and DNS

- Assisting in installation and configuration of Exchange servers
- Respond to Break Fix issues by working On Call rotation after office hours
- Testing Hot fixes, rollups & service packs and applying them in production
- Deep Level Trouble Shooting of below issues
- Failure setups, Failure migrations, Disaster recoveries of Database and Servers
- Recipient policies, Rus., Mail flow issues (Internal and External)
- DNS issues, Active Directory & Sysvol directory replication
- Active directory issues related to Exchange server
- Exchange services related issues, Server performance problems.
- Anti-Virus issues and Spam Control, Replacing the exchange hardware
- System policies, Single mailbox recovery, Public folder replication
- Offline address book generation, Outlook Client Connectivity issues
- OWA issues, Root cause analysis, GAL synchronization issues
- Connectivity issues with GC (Ds Access issues)
- Configuring Connectors

Microsoft Technologies, Tech Consultant, 2002 to 2005

Provides troubleshooting Exchange server 5.5, E2k & E2k3 issues along with windows 2000 / 2003 Active directory and DNS

- Failure setups, Failure migrations, Disaster recoveries of Exchange servers and Databases
- Installation, configuration and maintenance of Active Directory domains
- Outlook / OWA connectivity issues, Recipient policies, RUS
- Mail flow issues (Internal Mail flow Only), DNS issues related to mail flow
- Active Directory issues related to Exchange server, Exchange services related issues
- Replacing the exchange hardware
- Applying Hot fixes, rollups & service packs

Microsoft CERTIFIED Technology Specialist

Resource 55

Microsoft Product Specialist (Windows & Exchange Administrator)

- System policies, Single mailbox recovery, Offline address book generation
- Public folder replication
- Performance related issues

General Electric, Team Lead, 2000 to 2002

Delivered Facilities Management Service for GE Capital International Services site consisting of about 4000 users and about 60 servers; provided System Administration of Windows NT Server, NT & 2000 clients; and installed and configured NAV server and clients.

- Installed and configured Network Print servers.
- Implementing Fault tolerance methods like Raid 1 & Raid 5.
- Configuring DNS, WINS and DHCP Services of Windows NT & 2000
- Taking care of escalation calls in providing Level 2 support
- Support and administrate Application Software like Mainframe Applications (EPC, Citrix, Clarify), Terminal server clients, etc., Network file/print services and Client applications.
- Configuring & Maintaining Outlook clients; troubleshooting user problems related to Internet/Intranet
- Performing software installations, upgrades, and patches and evaluates Existing technologies and recommending new technologies.
- Configuring and providing support to LAPTOP users on VPN connectivity.
- Exposure to repairing Dell PCs such as Dell Optiplex GX –1, GX-110, GX – 150, GX-60, Dell Laptops such as Latitude 510 / 610, Latitude L-400 & IMB Lap Tops such as ThinkPad R40 Series and also co-coordinating with Vendor for Hardware Problems if any.
- Exposure to troubleshooting and repairing of Computer Peripherals.
- Manage, coach and mentor the Support engineers in the delivery of appropriate Service Levels to the client community, proper problem solving, crisis/escalation management & manage resources accordingly.
- Perform personnel administration tasks as necessary, including resource management, time tracking, time sheet administration, interviewing, and staffing. Set service level targets for the Production Support team.
- Oversee the review of alert/escalation levels within the products.
- Continually review and improve call escalation process, incident management process, problem management process, proactive monitoring process, Exchange change control process

Adroit Info Systems Ltd., System Administrator, 1999 to 2000

As a system administrator, was responsible for installation, configuration and maintenance of all servers and workstation machines.

- Installation, configuration & maintenance of Exchange server 5.5
- Created mail boxes for 45 user accounts, configured the limits for the mailbox.
- Configured Mail box manager Policy
- Backup and restoration of database
- Single mail box recovery and disaster recovery
- Implemented Directory Replication in WINDOWS NT 4.0.

Resource 55

Microsoft Product Specialist (Windows & Exchange Administrator)

- Responsible for installation & configuration of Network consisting Network of 27 nodes with an NT SERVER 4.0, 2 NT -BDC AND 24 Clients inclusive of NT WORKSTATIONS & Windows 98.
- Configured DHCP, DNS & WINS Servers.
- Installed local & Network Printers. Printer pool and auditing of Printers.
- Applied hot fixes, rollups & service packs as and when needed

Vision Computers (A Training Institute). Technical Administrator, 1997 to 1999
Delivered daily Systems Administration for Win NT 4.0, Win 98, and Win 95. Installed, configured, and maintained Windows NT servers for development purpose locally. Responsible for updating the Operating System & Anti-Virus patches; provided troubleshooting Hardware/Software and network connectivity issues.

Education

- Bachelor in Engineering (B.E)

Certifications & Achievements

- Microsoft Certified Technology Specialist in Configuring Exchange Server 2010 (70-662)
- Microsoft Certified Technology Specialist in Configuring Exchange Server 2007 (70-236)
- ITIL Certified in May 2012
- Certified MCSE in Windows 2003
- Certified MCSE in Windows NT 4.0
- Bagged a prestigious Hewlett Packard Award for resolving a high impact issue at the client end.

Employment History and Related Experience

Domino Technologies, Commonwealth, Network Engineer, Harrisburg, PA, 2006-Present

Daily maintenance of IBM and Dell server hardware in a 24/7 environment that included disk space management, CheckPoint Firewall backups, security patch deployment, virus updates, and monitoring of hardware status and server uptime

- Server building which consisted of racking servers, cabling, Windows 2000/2003/2008 installation and configuration, hard drive installation and array configuration, software setup and configuration, updating inventory, and also documenting the entire process
- Installed and administered Microsoft SharePoint server used by several applications at PennDOT
- Assistance in various tasks which included the use of tools such as Microsoft SMS, Avocent DSView and RDP to manage servers and workstations in remote locations

- Working on various projects which include Active Directory account management, 2003 Terminal Services, SAP, and Access database updates
- Managing, maintaining and setting up printers and print servers, including IP address management and assignment, driver installation, print queue configuration and troubleshooting daily issues
- Responsible for troubleshooting failed server hardware on IBM System X and Dell Power Edge servers and also the applications running on these servers to resolution

Cilicon Solutions, Engineer, Harrisburg, PA, 2006-Present

Installation, configuration and troubleshooting of Cisco 2800 series routers; installation and configuration of POS systems at client sites; and Site survey and rollout, surveying all equipment on site, such as computers, routers, printers, and possibly remote terminals and then installing replacement equipment of the same type

- Repair of drawers and console such as the McKesson Accudose Rx Machines and other emergency room Rx machines

Sentinel, Network Administrator, Harrisburg, PA, 2006 - 2006

Maintained, upgraded and configured an 802.11g wireless network at multiple sites, including over 200 Cisco Aironet 1200 access points, and over 500 wireless clients secured using Cisco Secure ACS software running on Windows 2000 Server.

- Patched and upgraded servers and clients
- Upgraded Cisco IOS firmware on all Cisco products
- Handled helpdesk calls related to the wireless network
- Client rollout and configuration on a Novell network
- Performed network monitoring and data analysis across the entire network composed of Cisco Catalyst 2900, 3500, 4500 and 6500 series switches

Coffee Time, Systems Administrator, Harrisburg, PA, 2005 - 2005

Manage workstations and servers within the domain, including domain controllers, application servers, an e-mail server running MS Exchange 2003, and a database server running MySQL.

- Complete design and implementation of a secure Windows Server 2003 Active Directory network environment
- Developed a new network infrastructure to interface with Pocket PC computers

Resource 56

Microsoft Product Specialist (SharePoint)

- Network security design and implementation, which included workstation and server security, and CheckPoint firewall setup

JFC Staffing Associates, Consultant, Harrisburg, PA, 2004-2005

Supported clients with hardware and software issues, over the phone and in-house

- Performed workstation configuration, which included, network configuration, hardware installation/configuration and software installation/configuration.
- Hardware included Dell and Compaq workstations, Cisco Catalyst 3500 series switches and 802.11b Avaya access points

Education

- The Pennsylvania State University, Bachelor of Information Science and Technology, In progress

Key Skills and Knowledge

- Excellent and Knowledge skills in the following:
- Windows 2008/2003/XP, Exchange 2010/2007/2000, CommVault, Legato 6.x, MOM 2005/2000, Altiris, Novell 4.x, BlackBerry, Good for Enterprise, ListServ, McAfee Enterprise Virus Scan, ePolicy Orchestrator, Symantec EVault, Google E-mail Archiving

Domain Expertise & Solutions

- Commonwealth of Pennsylvania, Implemented the backup and recovery procedures for the enterprise with Commvault

Management Consulting Services

Project and Program Management

Communication and Networking

- TCP/IP, WINS, DHCP, DNS,
- IPX/SPX, FTP, SMTP, POP3, IMAP,
- NetBEUI, NetBIOS, IIS Server, LPD, IPX Print Servers

Databases

- SQL Database, Exchange Databases

Hardware

- All Dell Servers, IBM Servers, EMC CX700

Professional Summary

15 years of experience as a System Engineer and System Administrator. Possesses strong experience with Microsoft network technologies such as MCTS (Windows 2008), MCTS, and MCITP (Exchange 2010/2007); ITIL V3 Certified, MCSE 2003, MCSE 2000, MCSE NT4.0, MCSA 2003 Messaging, MCP Exchange 2000/5.5. Strong experience with the installation, configuration management, performance tuning, and security maintenance of Windows Domain Controllers. Subject Matter Expert for Exchange Servers 2007/2000, Commvault QiNetix Backup Server (9.0 SP7b), Commvault QiNetix Media Agents, BlackBerry, Good for Enterprise, Altiris 6.8, Microsoft DPM (Data Protection Manager), EMC Legato, McAfee Enterprise Virus Scan, EPO management and ListServ in the large and medium size enterprise level.

- Hands on experience in managing users, computers, sites, domains, and organizational units (OU) in the Active Directory.
- Intensely used the Active directory tools for troubleshooting such as NTDSUtil, ReplMon, NetDiag, DcDiag, RepAdmin, SONAR etc.
- Strong experience in implementation and administration of DNS, DHCP, WINS and TCP/IP
- Strong experience in implementing and managing the SAN backups both for Legato and Commvault Backups.
- Strong experience in implementing, administration and recovering of Exchange2007
- Strong experience in recovering Windows operating system, System States, Exchange Database Servers 2007 and Mailbox recoveries
- Experience in managing server resources, Hard disks, Raids, Data SAN Storage EMC CX700 and disaster recovery.
- Strong experience in deploying McAfee enterprise virus scan and ePolicy agents through ePolicy Orchestrator 3.6.0 Console
- Excellent Hardware and Software troubleshooting skills
- Migrated Users, Groups and the security translation of Workstation and Servers using ADMT tool
- Successfully tested and deployed the beta version of DPM (Data Protection Manager) in the lab
- Installed and Configured the different server roles of Exchange server 2007 SP3
- Hands on experience on MSCS. Configured and Managed the Exchange 2007 A/A/P clusters.
- Configured the Exchange 2007 SCR between the staging and DR site and production and DR site.
- Deployed and Configured Google E-mail Archiving Solution
- Responsible for testing Cloud based Google E-mail Archiving solution as part of “Proof of concept”

UNISYS

Resource 57

Microsoft Product Specialist

- Responsible for Testing on site full blown Symantec Enterprise Vault Archiving solution as part of "Proof of Concept"

Employment History and Related Experience

Commonwealth of Pennsylvania (Governor's Office of Administration), Exchange Consultant, 2002 - Current

Supports the migration of different mail systems being used by 45 agencies of the Commonwealth into a Single Enterprise wide Exchange Mail system. Its main goals are to provide consistent, reliable and secure platform for communication for around 100K users and also to have centralized administration from a single site.

- Active Directory Domain: Commonwealth of Pennsylvania Active Directory consists of a single forest with two domains in it. There are approximately 100K user accounts, 300 domain controllers spread across more than 240 active directory sites throughout the PENN state.
- E-mail servers: Exchange 2007 servers in cluster environment on 64bit Windows 2003 servers. We have around 90K mailboxes spread across ten servers
- BlackBerry: Support around 4000 BlackBerry users; provide Anti-Virus, Anti-Spam, E-mail Encryption as well as Backups / Restores of Active directory servers & Exchange databases.
- Providing Tier 2 technical support to Commonwealth of Pennsylvania Agency IT Admins
- Server builds – Install and configure agency windows 2008/2003 DC's, Global Catalog servers, exchange servers 2007, BlackBerry, Commvault QiNetix backup servers, ListServ, MOM Servers
- Installed and deployed Windows 2008 Domain controllers
- Prepared the document and tested the schema upgrade for Windows 2008 in the lab that need to be deployed in the production
- Providing operational support of Active Directory, WINS, DNS, LDAP, SMTP, POP3/IMAP, FTP and AD enabled applications
- Monitor and troubleshoot AD database problems with NtdsUtil, NetDiag and DCDiag tools
- Actively monitor the EMC CX700 SAN Storage. Troubleshoot the problem whenever a drive fails.
- Providing technical support to the end users (Agency IT admins) for Exchange 2007, DNS, SMTP, LDAP, BlackBerry, ListServ and user accounts
- Restoring AD databases in the Development and Staging labs
- Intensely used CommVault QiNetix for server backups and restores
- Tape backup and library maintenance - Monitoring and reviewing all the successful and failed backup jobs, perform makeup jobs, Automated the cleaning of drives once every month.

UNISYS

Resource 57

Microsoft Product Specialist

- Taking care of restoring file systems and exchange databases on the production servers
- Identify and troubleshoot exchange information store and directory database problems
- Monitor and troubleshoot replication problems between intrasite and intersite replication with the help of ReplMon and SONAR tools
- Monitoring of all our Windows 2008 servers, Exchange 2007 using SCOM.
- Carrying out Mailbox recoveries for IT Admins
- Resolving Database issues for Exchange servers
- Carrying out upgrades and maintenance for Commvault QiNetix Server, Media Agents and Client iDataAgents (Backup software)
- Carrying out software upgrades, maintenance and troubleshooting for Windows 2008 and Exchange Servers 2007
- Administering and troubleshooting the BlackBerry issues, adding users etc.
- E-mail Account Management
- Prepared the lab mirror to production data with the Microsoft Virtual Server and installed about 10 virtual machines and tested the upgrades and security patches before applying to the production servers
- Managing, deploying and administering McAfee enterprise virus scan and ePolicy agents through ePolicy Orchestrator 4.6 Console
- Tested and upgraded the Altiris Deployment Server 6.0 to Altiris 6.8 SP1.
- Successfully tested and deployed the beta version of DPM (Data Protection Manager)
- Migrated the Users, Groups and the Security Translation of Workstations and Servers using ADMT tool.
- Deployed Ultrasound tool in an enterprise in order to monitor the file replication in AD and to troubleshoot the issues arising due to Morphed directories
- Installed, Configured and managing the different server roles of Exchange server 2007.
- Installed, Configured and managing the Exchange 2007 forefront servers as part of Exchange AntiVirus
- Installed, Configured and managing the SCR (Standby Continuous Replication) between production and DR site.
- Installed, Configured and managing the McAfee 8.5i on all the enterprise DC (289) and McAfee Group Shield on Exchange 2007 Servers.
- Deployed and configured Google E-mail Archiving solution during this project
- Currently working on deploying Symantec eVault archiving solution at Commonwealth of Pennsylvania

UNISYS

Resource 57

Microsoft Product Specialist

Tek Systems Inc., Consultant, State Government and Exchange project, 2001-2002

- Same project s above, different employer.

COMPAQ IT Solutions Inc., GAP, System Administration, 2000-2001

Supported 900 high-end Compaq servers with more than 200,000 users globally with mixed environment of Sun Solaris, Windows NT 4.0 and Novell (4.x, 5.0). Systems monitoring for production servers within Novell, Lotus Notes and Windows NT 4.0 environments.

- Supporting TRC with level two services for help desk questions and other IT groups.
- Supporting Hardware and Software services (includes operating system patches and Upgrades) for Novell, Lotus Notes and Windows NT.
- Maintenance of Servers (Includes Server Disk Drives, Server Memory and Data Migration) under different environments.
- Implementing and deployment of services for systems configuration (includes building of new systems and modifying existing systems).
- Implemented standard backup and recovery routine using ARCSERVE 6.5 software and supporting the Storage Library Modules (9730, 9710), TL891 Mini Library System
- Administering and supporting different operating systems locally as well as remotely through PCAnywhere and rconsoling the Novell servers.
- Implemented Gigabit Networks and upgraded all the servers with Gigabit Adapters.
- Presently testing the migration of NT servers to Windows 2000 and Lotus notes to Exchange 2000.

Al-Khaleej Computers & Electronic Systems, Systems Engineer, Riyadh, Saudi Arabia, 1997 – 2000

As Rapid Deployment Program (RDP), studied the existing network and upgraded 250 desktops and 30 servers to 2000 platform. The project involved a systematic migration of desktops 9x to windows 2000 professional and Windows NT 4.0 to windows 2000 Advanced Server. Transferring skills on windows 2000 was also part of RDP

- Implementation, Installation, Upgradation & Configuration of Operating Systems (Windows 2000 Advanced server/Professional, Windows NT Server, Workstation, Sco-UNIX, Windows 9x).
- Designed and implemented physical and logical structure of Active Directory (Sites, Domains, OU's, Trees and forests).
- Implemented and delegated controls in Dynamic DNS.
- Implemented fault tolerance and disaster recovery techniques for Active Directory.

UNISYS

Resource 57

Microsoft Product Specialist

- Installed and Configured Active Directory Connector (ADC) for directory synchronization with Exchange Server 5.5 directory.
- Installation, Configuration and Disaster recovery of Exchange servers 5.5 in Exchange organization of 5000 users that includes 3 sites with 10 servers.
- Digital clustering 1.1 for Windows NT using RAID Array 310 Deskside subsystem. Single pedestal (SWXRA-Z1) server 3 1/2 SBB's to differential SCSI bus converter.
- Installation and configuring of Primary and Secondary SMS sites, Hardware Inventory, Software Inventory, Software distribution and remote control using SMS 2.0.
- Troubleshooting SMS through event viewer and System Status Messages.
- Installation, Configuration and troubleshooting of Plexus Imaging Software (Object Server /Storage Manager)
- Installation of Image Basic (DHS), imaging software on client machines.
- Installation of Oracle Developer/2000 and configuring and troubleshooting clients database connectivity issues.
- Configured Windows NT Servers as PDC and BDC in a Multi Master Domain Model.
- Implemented and Monitored trust relationships between Windows NT domains
- Setting up rights, permissions and implementing security for centralized administration.
- Installation of HP Jet Direct (NIC) printers and Network printers.
- Implemented DHCP, WINS and DNS Server for automatic IP addressing and name Resolution.
- Implemented a Small Business Server Network with 25 CAL (which includes modem sharing, fax sharing, internet sharing etc.

Integrated Data Systems, Customer Support Engineer, India, 1995 - 1997

Accomplished Server Installations, Client Installations both in NT and Novell NetWare; implemented messaging using Exchange server 4.0 for various clients. Created users, groups, and assigned rights to them.

- Installed Network, Remote printers and configured remote booting.
- Installation and configuration of various applications
- Installations, upgradations, configuring, performance tuning and support for various operating systems.
- Recovered Data from crashed hard disks by manually writing Boot sector Information and Partition Tables.
- Troubleshooting Modems, printers (Dot Matrix, Laser), Multimedia etc

MidEast Data Systems, Systems Administrator, Abu Dhabi, UAE, 1994 - 1995

Installed and administered Windows NT 4.0 in a Domain environment. Also installed Novell NetWare 4.1 and 3.12 servers and configured NT as Gateway for NT clients to access NetWare resources. Designed, Implemented and

administered NDS, Managed Partitions and replicas, solved NetWare volume related problems; migrated users, accounts, and data from Novell NetWare to Windows NT system.

- Installed Network Printers and implemented Remote Booting on both Windows NT and NetWare.
- Carried out Mirroring and Duplexing of partitions on NetWare servers.
- Provided Internet access to every desktop using Proxy server.
- Carried out tuning, and optimization of NT and NetWare Servers.
- Responsible for monitoring and regulating network traffic on NetWare and Windows NT networks

Frank Computer Services, Customer Support Engineer, 1993-1994
Installation, Administration, Fine-tuning and Maintenance of NT 3.51 Networks configured as PDC, BDC and member servers in a Domain environment.

- Carried out and supervised the layout of coaxial and UTP cabling for Ethernet Network.
- Installation & Maintenance of hardware, procuring and testing of new hardware and software

- SharePoint Server 2010
- SharePoint Server 2007 (MOSS 2007)
- SharePoint Designer 2007 and 2010
- CRM Consultant
- C# and .NET development skills

Professional Summary

More than five years of IT experience in analysis, design, development, management and implementation of various stand-alone, intranets, client-server and Web-based software applications using Microsoft technologies including SharePoint 2010, MOSS 2007, SPS 2003, WSS 2.0/3.0, .NET Framework 3.5/3.0/2.0/1.1,WWF and C#,AJAX,SQL Server 2008/2005, and XML.

Employment History and Related Experience

PLCB, Share point Developer and System Administrator PA, 2012 to Present

Supported application development for 600 plus retail outlets. Application support involves administration and development work in SharePoint, workflows, customization with Plugins, and JavaScript.

- Actively involved in activities among all four teams including requirement gathering with business users, training and mentoring of employees
- Selected Audience includes Store users, Approvers, IT Team
- Developed the CRUD methods in C# and .NET for all the plugins used in the application
- Created multiple external content types and external lists using SharePoint Designer 2010
- Created users/groups in active directory along with assigning permissions to them while accessing CRM
- Extensively used Workflows
- Created User Profiles for each department individually to each member
- Environment: MS Dynamics CRM 2011, SharePoint 2010, C#, ASP.NET 3.0 , ADO.NET, MS SQL Server 2005/2008, Visual Studio 2010 ultimate, .NET, XML, CSS, BIDS, J Query, JavaScript, Active Directory Service

Home Depot, Share point Developer/Administrator, GA, 2011 to 2012

Worked several projects addressing Task and Workflow Management(TWM) for SharePoint site and to migrate all the contents of the site from MOSS 2007 to SharePoint 2010.

- Actively involved in activities among all four teams including deployment, creation of sites, giving access permissions for selected Audience and development.
- Selected Audience includes Admin users, Super users, Corporate users, Executive Sponsors, Field users and Store users.
- Actively involved in the development of Admin service from writing the code to unit testing and deployment.
- Developed the CRUD methods in C# and .NET for all the Admin links used on the TWM site.

- Created multiple external content types and external lists using SharePoint Designer 2010.
- Created users/groups in active directory along with assigning permissions to them while accessing SharePoint Site
- Customization of Web parts, Tool Parts, Event handlers, Features, List definition, Site definition, Site Templates, Content types and Deploying Solution packages, Document libraries, Lists, Integrating InfoPath Forms and Workflows using CAML and Microsoft Visual Studio Windows Work Flow Foundation(WWF)
- Extensively used Workflows in MOSS 2007 and SharePoint 2010.
- Wrote custom JQuery scripts to allow users to collapse and expand sections of the TWM UI
- Created User Profiles/My Sites for each department individually to each member
- Developed Solution Deployment Packages(WSP) and deployed in to the Share Point as a Feature
- Developed a Feature in the SharePoint to copy the documents from all Document Library's to one central Document Library
- Utilized Microsoft Team Foundation Server to manage the team's software development lifecycle.
- Branded the SharePoint portal and Team sites using the CSS and SharePoint designer 2010 to have a consistent and uniform look throughout the portal.
- Developed Admin Web Services to retrieve data from the SQL Server Backend and to display the data in the current site Custom List
- Worked with the team to solve the share point open issues and actively involved in fixing the issues related to the UI, Data retrieval, and adding new functionality as per the business.
- Designed Site Column which retrieves the data from the SQL Server backend server.
- Environment: SharePoint 2010, WSS 3.0, C#, ASP.NET 3.0 , ADO.NET, MS SQL Server 2005/2008, Internet Information Services (IIS) 6.0,7.5, Visual Studio 2010 ultimate, .NET, XML, CSS, SharePoint Designer 2010, J Query, JavaScript, Active Directory Service.

Credit Union, Share point Developer/Administrator, GA, 2009 – 2011

Maintain and give support to the existing sites, migration of their site content from SharePoint Portal Server 2003 to Microsoft Office SharePoint Server 2007 and customization of personal sites by using features of MOSS 2007.

- Administrated activities including creation of sites, giving access permissions for selected Audience, backup/restore of Site Collection using STSADM Tool
- Upgraded existing Site Collections and transition of Document Content management from SPS 2003 to MOSS 2007/2010.

e&e IT Consulting Services, Inc.

Resource 59

Microsoft Product Specialist (SharePoint)

- Migrated from SharePoint Portal Server 2003 to Microsoft Office SharePoint Server 2007 by using migration tool AVEPOINT
- Created multiple external internet and internal intranet sites, Web Application, Site Collection, Site configuration, Site Template, Team Site, Wiki Site, Blog, Document Workspace and Meeting Workspace for managing Web portal information
- Created users/groups in active directory along with assigning permissions to them while accessing SharePoint Site
- Created a basic SharePoint survey page for the Customer Satisfaction in all the departments
- Managed sites and added the existing sites to the trusted locations to import Excel Services
- Developed Custom Site definitions for the HR Department team that is based on the existing Team Site definition
- Wrote custom JQuery scripts to allow users to collapse and expand sections of SharePoint Quick Launch menu
- Handled AAM, solution management, incoming e-mail, antivirus settings for deploying solutions packages and for accessing outlook mails to the list.
- Developed Solution Deployment Packages(WSP) and deployed in to the Share Point as a Feature
- Customized a sequential work flow engine and publishing forms in Form Library using MS InfoPath 2010 for archiving, reviewing the content using Microsoft Workflow Foundation(WWF).
- Created a Wiki Page library to capture all open issues from all the users and make a separate page for each issue with all steps and solutions
- Managed the Index & Search Engine to Extend the Default Search Functionality of SharePoint
- Created the CIO Status Report forms using InfoPath 2007 in SharePoint Sub sites for collecting user information and customized using InfoPath forms and stored the data in SharePoint list
- Branded the SharePoint portal and Team sites using the CSS and SharePoint designer 2007 to have a consistent and uniform look throughout the portal.
- Developed and Integrated SSRS 2005 BI reports with Share Point 2007
- Created a Wiki Page library to capture all open issues from all the users and make a separate page for each issue with all steps and solutions
- Managed the Index & Search Engine to Extend the Default Search Functionality of SharePoint
- Designed Master Pages and applied different Master Pages to the Sites and Sub sites
- Worked with Microsoft team to solve the share point open issues.
- Environment: Microsoft Windows 2003 Server, MOSS 2007, SharePoint 2010, WSS 3.0, C#, ASP.NET 3.0 , ADO.NET, MS SQL Server 2005/2008, Internet Information Services (IIS) 6.0 SSRS 2005, Visual Studio .NET

2008, XML, CSS, SharePoint Designer 2007, InfoPath 2007, Active Directory Service.

Humana, Share point Developer/Administrator, KY, 2009 – 2009
Support the customer purchase order process, migration of their site content from SharePoint Portal Server 2003 to Microsoft Office SharePoint Server 2007.

- Migrated from SharePoint Portal Server 2003 to Microsoft Office SharePoint Server 2007 by using migration tool AVEPOINT
- Upgraded existing Site Collections and transition of Document Content management from SPS 2003 to MOSS 2007
- Created multiple external internet and internal intranet sites, Web Application, Site Collection, Site configuration, Site Template, Team Site, Wiki Site, Blog, Document Workspace and Meeting Workspace for managing Web portal information
- Created users/groups in active directory along with assigning permissions to them while accessing SharePoint Site
- Expanded a server farm applying service packs and patches using STSADM utility
- Created a basic SharePoint survey page for the Customer Satisfaction in all the departments.
- Administrated activities including creation of sites, giving access permissions for selected Audience, backup/restore of Site Collection using STSADM Tool
- Managed sites and added the existing sites to the trusted locations to import Excel Services
- Developed Custom Site definitions for the HR Department team that is based on the existing Team Site definition
- Developed Solution Deployment Packages(WSP) and deployed in to the Share Point as a Feature
- Customized a sequential work flow engine and publishing forms in Form Library using MS InfoPath 2007 for archiving, reviewing the content using Microsoft Workflow Foundation(WWF).
- Created a Wiki Page library to capture all open issues from all the users and make a separate page for each issue with all steps and solutions
- Utilized Microsoft Team Foundation Server to manage the team's software development lifecycle.
- Developed Custom Event Handlers to create a report list based on the due dates and closing dates
- Configured search, index/query servers, Content Sources, handled and Managed crawled properties and search schedules
- Branded the SharePoint portal and Team sites using the CSS and SharePoint designer 2007 to have a consistent and uniform look throughout the portal.

- Developed Custom Web parts and deployed in the Web part gallery to display the Metadata fields of the document library which was created dynamically
- Configured Outlook 2007 with MOSS 2007 to synchronize Share Point Document Library and lists
- Developed Shared Cases Custom Lists which creates a Document library and display on Quick Launch on item added to the Custom list
- Designed Site Column which retrieves the data from the Oracle backend server
- Environment: Microsoft Windows 2003 Server, MOSS 2007, WSS 3.0, C#, ASP.NET 3.0 , ADO.NET, MS SQL Server 2005, Internet Information Services (IIS) 6.0 ,SSRS 2005, Visual Studio .NET 2008, XML, CSS, SharePoint Designer 2007, InfoPath 2007, Active Directory Service.

Potomac Bank Fairfax, Share point Developer/Administrator, VA,
2007 – 2009

Implement SharePoint and provide a single application platform to all the users of the organizations so work can be collaborated which would give good results to the organizations.

- Migrated from SharePoint Portal Server 2003 to Microsoft Office SharePoint Server 2007 by using 3rd party migration tool
- Created multiple external internet and internal intranet sites, Web Application, Site Collection, Site configuration, Site Template, Team Site, Wiki Site, Blog, Document Workspace and Meeting Workspace for managing Web portal information
- Experience with Live link EMC, with an emphasis on document and records management features that allow organizations to control document
- Conducted Training sessions for Site Administrators and business users
- Created User Profiles and allotted permission levels for secure SharePoint portal
- Created and maintained Document Libraries and Picture Libraries in team and sub sites
- Administrated activities including creation of sites, giving access permissions for selected Audience, backup/restore of Site Collection using STSADM Tool, and error logging and reporting Backed up and restored indexes created by Microsoft Office SharePoint Server 2007 using Data Protection Manager 2007
- Created a basic SharePoint survey page for the Customer Satisfaction in all the departments
- Managed sites and added the existing sites to the trusted locations to import Excel Services
- Worked on Active Directory for creating users and groups set the permissions and site collection administrator and modified permissions of an existing user or group.

Microsoft Product Specialist (Exchange & SharePoint)

Key Skills and Knowledge

- Key Microsoft technologies
- MS Exchange
- SQL
- SharePoint
- SCOM
- Active Directory

Professional Summary

Have had primary responsibility for architecture, design, and implementation of Active Directory migrations, Exchange server upgrades, SAN moves, data migration, and Citrix Server Farms. Performed as a SharePoint Administrator responsible for migrations and upgrades. Supported MS Exchange server environment operation with significant volume of mailboxes. Experienced in most product sets related to the key Microsoft technologies.

Employment History and Related Experience

Rollins, Senior Network LAN Architect (Messaging, Active Directory, SharePoint & Microsoft Dynamics), Atlanta, Georgia, 2010–2012

Windows Server 2008/2003 Active Directory Management and maintenance; Architecture, design, and implementation of Active Directory Migrations, Exchange Server upgrades, SAN moves, Data migration, Citrix Server Farms; Responsible for SharePoint 2007/2010 administration.

- Migrated SharePoint from 2007 to 2010.
- Microsoft SCOM 2012.
- Microsoft ILM 2007.
- Advanced Management and Configuration of Microsoft Dynamics.
- Management of Company intranet using SharePoint 2010.
- Microsoft Exchange Server 2007/2003 Administration.
- Supported Exchange Server 2007/2003 Management 5,000+ user mailboxes.
- Installed Exchange Server 2007.
- Upgraded Exchange 2003 to Exchange 2007.
- Configured Exchange 2007 for Proactive Management.
- Managed Exchange Server 2007 Security.
- Responsible for the implementation of Front-End and Back-End Servers.
- Microsoft Exchange Server Clustering
- Responsible for the management of Exchange 2007 Address Lists.
- Disaster Recovery Management of Exchange 2007/2003
- Backing Up Exchange 2007/2003
- Active Directory Setup and management
- DNS Setup and management
- Created Technical Design Documentation.
- Expertise in Active Directory Maintenance and Replication.

AT&T, WINTEL/Linux Network LAN Architect (Messaging & Active Directory) Alpharetta, Georgia, 2008–2010

Responsible for Windows Server 2003 Active Directory Management and maintenance. Responsible for the architecture, design, implementation of large

scale Exchange Server Migration from Lotus Notes to 10,000+ user mailboxes running in Exchange Server 2003.

- Served as Team Lead/Senior Engineer for Windows Infrastructure.
- Setup and manage the Active Directory.
- Responsible for administration of Microsoft Exchange Server 2003.
- Responsible for Exchange Server 2003 Management 5,000+ user mailboxes.
- Installed Exchange Server 2003.
- Configured Exchange 2003 for Proactive Management
- Managed Exchange Server 2003 Security
- Responsible for Disaster Recovery Management of Exchange 2003
- Responsible for Data center management and Production/Application Support

Colonial Bank, Network Planning Engineer/Architect, Montgomery, Alabama, 2006–2008

Windows Server 2003 Active Directory Management and maintenance; ITCS104 Security Methodologies for operating system Hardening; Management of major enterprise IT projects.

- Earned PMP Certification(member of PMI)-Member of PMI and Montgomery Chapter
- Responsible for project planning and phase management.
- Responsible for project scheduling and Implementation.
- Led enterprise project roll-outs.
- Responsible for Project Team scheduling.
- Created the Technical Design Documentation.
- Microsoft Exchange Server 2003 Administration
- Responsible for the Exchange Server 2010 Management 10,000+ user mailboxes.
- Responsible for the Windows Server 2003 Distributed File System.

Manheim-COX Enterprises, Network Architect/Engineer, Atlanta, Georgia, 2005–2006

Responsible for Windows Server 2003 Active Directory Management and maintenance. Responsible for the management and troubleshooting of network printers, Supported Microsoft Exchange Server 2003; and ITCS104 Security Methodologies for operating system Hardening. Responsible for Cisco Advanced Router and Switch Configuration.

- Expertise in the Active Directory maintenance and replication
- Macromedia Flex
- Citrix Metaframe Presentation Server 4.0
- Nortel Contivity Series VPN Concentrators
- Nortel Baystack Switches and Routers

IBM

Resource 61

Microsoft Product Specialist (Exchange & SharePoint)

- Managed the CheckPoint R60 Platform running in Provider-1 Interface
- Managed the CheckPoint IPSO running on Nokia IP380 Appliances
- Microsoft Operations Manager 2005 SP1 and 2000 for mainly monitoring and reporting
- Microsoft Exchange Server 2003 and 2000 and Active Server Directories in a vast enterprise environment
- Windows Server 2003 Distributed File System.
- BlackBerry Enterprise Server 3.6 for Microsoft Exchange Server-handling and accounts PIN generation and BlackBerry synchronizations issues resolution.
- Provided remote end user assistance via REAL VNC, DameWare, and Microsoft Remote Desktop and management of Server 2003 Terminal Servers.
- Microsoft Exchange Server 2003, SharePoint Portal Server 2003 config and management, File and Print Server management.

Verizon Enterprise Solutions, Senior Network Architect, Alpharetta, GA, 2001–2005

Served on Engineering team in troubleshooting internet circuit problems for wide range of customers with Frame Relay, T1, SMDS, ATM, HiBACK, ATM LANE circuits.

- Responsible for circuit provisioning/test-and-turn-up
- Supported the Microsoft Exchange Server 2003
- Supported the BlackBerry Enterprise Server for Exchange Server 2000
- Responsible for the imaging and testing of PCs prior to full-scale deployment
- Deployed PCs using SMS, GHOST Enterprise, and Altiris
- Responsible for the Windows Server 2003 Distributed File System
- Responsible for Microsoft Exchange 2003 Administration and Management (Well versed in Novell GroupWise)

QoS Networks, Inc, Senior Network Architect/Team Lead, Atlanta, GA, 2000–2001

Assistant Manager and Senior Network Architect over “Research and Development” dept. This department was responsible for deciding what networking equipment the company would implement in their strategic POP (Points of Presence) locations.

- Performed significant amount of lab testing of various LAN/WAN equipment in a large “Greenfield” environment
- Responsible for the maintenance and configuration of Cisco VPN Concentrators for secure remote access

Resource 61

Microsoft Product Specialist (Exchange & SharePoint)

Brasfield & Gorrie, LLC, IT Manager (LAN/WAN), Kennesaw, GA, 2000–2000

Replacement manager for company's IT Data Network Department. Managed company's entire dept (local and remote). IT Department consisted of 35+ employees, and a large data Center environment with Exchange, Citrix, and SharePoint server farm.

- Provided remote administration of servers in the farm
- Cisco Router 1005/2500/2505/2610/3600/4700/7000 Series setup, configuration, monitoring; RIP/IGRP/EIGRP/BGP-4/eBGP/iBGP/EGP; Network Addressing, IP Subnetting expert; TCP/IPTCP, UDP, DNS, IP, ARP, FTP, SMTP, POP3, ICMP, RIP,OSPF, HTTP, SPX; Network Security- IP ACCESS LISTS- Standard, Extended, SAP; FRAME RELAY monitoring-IP, DECnet, AppleTalk, XNS, Novell IPX, CLNS, ISO, Banyan Vines, Transparent Bridging; FECN/BECN ; X.25, LAPB, NRM, ARM, ABM; MPLS, IS-IS
- Microsoft Operations Manager 2000 for monitoring Exchange Server 200 events
- ISDN BRI/PRI Troubleshooting and monitoring; RAS implementation; Dial-On-Demand RoutingMicrosoft SNA Administrator, Citrix Metaframe XPe and Nfuse Configuration and Setup, IBM Tivoli for software deployment and hardware/software tracking across an enterprise
- Windows 2000 deployment and implementation, Microsoft Terminal Server, ProLog, Norton Anti-Virus Corporate Edition/2000/5.0, GHOST 5.1, AT&T Global Dialer, MS Office 2000/97, Microsoft
- SMS 2.0, Microsoft SQL Server 7.0 Enterprise Edition, CheckPoint VPN Configuration
- Red Hat Linux Network, FileSystem, and user Administration; Kernel Compiling, X Window System, Apache, Linux Routing, IPCHAINS, DHCP, SAMBA, NIS Client/Server, Squid Proxy Server, PAM and INETD Configuration; Versions 5.2, 6.0, 6.1

Computer Science Corp, Mobile, Windows NT Server 4.0 Network Administrator/Desktop Support Manager, First Major CSC Project- Brown & Root, Inc. /Fairmont merge project beg (Exterior Border Gateway Protocol), AL, 1997–2000

The purpose of this particular project was to create and roll-out an autonomous system for more efficient and centralized communication. Assisted the head Cisco Routing Engineer along with a Team of six other Cisco and Network Engineers in the rollout of two Cisco 7513Core Routers using the "eBGP" routing protocol to connect Brown & Root's autonomous system to Fairmont's autonomous system.

iBGP (Interior Border Gateway Protocol), J.B.E. & K, Inc. - Interdomain consolidation project, 1997

Served on same team of six Cisco and Network Engineers in rollout of one Cisco 7500 router using iBGP protocol to better manage company's existing interdomain and also give them faster access to the "cloud".

OSPF (Open Shortest Path First), Kimberly Clark, Inc-Simple WAN upgrade, AL, 1997

Rapid growth of main office in Mobile, Alabama called for a WAN connectivity upgrade from a regular Cisco 2610 access level router to a more robust Cisco 4700 router using OSPF routing protocol.

- Designed and setup OSPF internetwork for Mobile and neighboring offices in a hierarchy of areas.
- Designated the Mobile office LAN as area 0.0.0.0(The Backbone).
- Responsible for administering 300+ user Windows NT Single Master Domain Network.
- Installed and managed SAP R/3.
- Supported SAP R/3 Administration on Windows Server 2000 Platform for FICO, HR, MM, and SD.
- Responsible for the troubleshooting and configuration in RAID 5 fault tolerance, domain trust, DNS/WINS, NetWare to NT Migration, system registry repair, DHCP, browser services, ARC naming convention, RAS, computer/host name resolution, directory replication, Gateway Services for NetWare, profiles and policies, BDC to PDC upgrade, file-level security in NTFS, TCP/IP, NetBEUI, NWLink, IPX/SPX, NDIS, SMB, UNIX Print Server, Novell NetWare Administration, WAN monitoring, ATM, 3Com hubs, Switches, Cisco Routers, FDDI, FTP, Firewall.
- Responsible for Citrix Metaframe 1.8 Administration
- Responsible for the setup and administration of Microsoft Exchange 5.5, IIS v4.0, Proxy Server, SAP R3.
- Configured and maintained Microsoft SQL Server, Prism, and Oracle DBA, Microsoft SMS (Systems Management Server).
- Supported REMEDY Ticketing System for Trouble Requests.
- Responsible for Microstation and Silicon Graphics CAD Applications.
- Supported DOS, Windows 3.X, Windows95/98, Windows NT 3.X, 4.0, Windows 2000 Professional/Server Beta 3, Microsoft Backoffice.

Tek Systems, Inc, Desktop PC Technician/Junior Network Administrator , Birmingham, AL, 1995–1997

Duties were to maintain, troubleshoot, and repair all IBM-compatible and specialized Silicon Graphics UNIX PC, CAD NT Workstations, and Honeywell IGSE non-standard PCs.

Resource 61

Microsoft Product Specialist (Exchange & SharePoint)

- Assigned as a Junior Novell NetWare Systems Administrator
- Novell GroupWise Administration

Inchcape Shipping, PC Hardware Technician/Asst. Novell NetWare Administrator, Mobile, AL, 1994–1995

Assisted Chief Novell NetWare Engineer in the maintenance, upkeep, and configuration of 200+ user network. Responsible for GroupWise configuration and Administration. Performed technical writing

- Responsible for VPN/Remote Access setup and administration.

Office Productivity Tools

- MS Project, MS Visio, Ms Word, Excel, PowerPoint

Technical Documentation

- Created and responsible for multiple documents here at Commonwealth

- Assist with business continuity planning, which includes capacity planning, availability and disaster recovery.
- Review e-mail messaging systems hygiene process and assist with addressing complex security challenges related to spam, worms and viruses.
- Provide incident resolution focusing on root cause analysis, prevention, and knowledge transfer.
- Supervise various projects as well as delegate roles and responsibilities to the fellow team members.
- Planned, designed, deployed and migrated Exchange 2000 organization to Exchange 2007
- Successfully completed the transitioning Exchange 2000 to Exchange 2007 for 89,000 mailboxes
- Successfully completed the migration of User accounts from PennDot to Centralized Accounts forest
- Designed EMC SAN disk sub system for CLARiiON CX700 for migrating Exchange 2000 to SAN backend
- Implemented one of the best-consolidated Exchange architectures here at Commonwealth; he implementation was reviewed by Microsoft RAP team and was complemented as one of the best Exchange implementations
- Member of the Exchange 2000 design team in migrating from Exchange 5.5 to Exchange 2000
- Member of the Active Directory design team in implementing Windows 2000 and Windows 2003 Active Directory
- Designed, deployed and administering BlackBerry Enterprise Server for wireless e-mail for over 1500 users.
- Designed, deployed and administered NETIQ Appmanager to monitor mission critical applications at CWOPA
- Designed, deployed and administering NETIQ Appanalyzer for reporting and analysis.
- Designed, deployed and Managing Microsoft Operations Manager for monitoring Active Directory and Exchange infrastructure at the Commonwealth of Pennsylvania
- Member of the Windows 2003 Public Key Infrastructure design team to implement Certificate Authority for wireless and VPN access
- Managing SQL Server 2000 production servers
- Implemented Sybari's Antigen and Anti-Spam solution for Exchange
- Designed, deployed and administered Enterprise wide backup solution using Legato Networker and Smartmedia.
- Identify Pilot groups and deployment phases for deploying the changes to the Exchange environment.
- Member of Enterprise server farm Change management board

UNISYS

Resource 62

Microsoft Product Specialist

- Work with Team members on knowledge transfer and stabilizing all the products that Exchange team manages.
- Update management and the Team about the ongoing software or Hardware Releases.
- Manage escalations with Microsoft TAM and other vendors TAMs for a speedy and timely resolution of operational and design issues.
- Review and work with Team Members on day to day tasks to ensure 100% uptime.
- Ensure timely resolution of critical issues by delegating tasks to appropriate individuals in the team.
- Execute formal post-mortem process on closure of critical issues.

IBM Global Services Inc. Second Tier Exchange Admin, Princeton, NJ, 1998 - 1998

Maintained NT networks on Multiple Master Domain model, with over 500 Domain controllers and an Exchange network based on hub and spoke topology and which includes around 270 servers running on Exchange 5.5, SMS 1.2, SQL 6.5 and Seagate Backup Exec 7.2.

- Monitoring and troubleshooting Trust relationships between NT Master Domains.
- Monitoring and troubleshooting of Windows NT and Exchange servers using SMS.
- Carrying out Exchange backouts as well as site to site migration
- Troubleshooting Information store and Directory database related problems.
- Monitoring and troubleshooting Exchange MTA and IMC queues.
- Carrying out Remote tape backups for Exchange and SMS servers
- Restoring single mailboxes as well as complete servers as and when required.
- Troubleshooting WINS related problems.
- Working on user trouble tickets

ACS Technologies Ltd., Network Engineer, 1994-1997

- Supported several projects for ACS including Windows NT Administrator and Novel Administrator contract
- System Research Group India Ltd., Windows NT Administrator
- Installation, Optimization, Security & Maintenance of NT 4.0 network
- Carried out Windows NT Server installations with diverse Clients like Windows NT Workstation, Windows 95, Windows 3.11 and Network Client for MS-DOS
- Interconnected Windows NT Network with UNIX Networks and vice versa and

UNISYS

Resource 62

Microsoft Product Specialist

- Installed PC-NFS software on Windows NT to allow NT clients to access resources on UNIX and also installed Disk Share software on NT to allow UNIX clients to access resources on NT.
- Implemented and administered Messaging through MS Exchange Server for a single site.
- Installed and administered IIS as Web server and FTP server.
- Installed and administered System Management Server for remote troubleshooting of workstations.
- Carried out tuning and optimization of NT servers.
- Implemented RAID level 1, i.e. Mirroring for fault tolerance purpose. Also recovered the Data from the crashed hard disks by manually writing Partition Table and Boot sector information

Nagarjuna Finance Ltd, Novell Administrator

- Installation, configuring, optimizing and Maintenance of Windows NT and NetWare Networks
- Installed and administered Windows NT 4.0 in a Domain environment. Also installed Novell NetWare 4.1 and 3.12 servers and configured NT as Gateway for NT clients to access NetWare resources. Allowed NetWare clients to access NT resources by installing FPNW on Windows NT4.0
- Designed, Implemented and administered NDS, Managed Partitions and replicas, solved NetWare volume related problems. Migrated users, group accounts and data from Novell NetWare to Windows NT
- Installed Network Printers and implemented Remote Booting on both Windows NT and NetWare.
- Carried out Mirroring and Duplexing of partitions on NetWare servers
- Provided Internet access to every desktop using Proxy server
- Carried out tuning, and optimization of NT and NetWare Servers
- Responsible for monitoring and regulating network traffic on NetWare and Windows NT networks

Frank Computer Ltd., Network Engineer, 1992 to 1994

- Installation, Administration, Fine-tuning and Maintenance of NT 3.51 Network
- Carried out installation of Windows NT3.51 servers, configured as PDC, BDC and member servers in a Domain environment
- Supervised the layout of coaxial and UTP cabling for Ethernet Network.
- Installation & Maintenance of hardware, procuring and testing of new hardware and software
- Installation, Up-gradation & optimization of a NetWare 3.11 and 2.2 ARCnet Network
- Designed and Implemented Novell NetWare 3.11 ARCnet network for over 90 nodes

UNISYS

Resource 62

Microsoft Product Specialist

- Upgraded NetWare 2.2 servers to 3.11 servers
- Responsible for ARCnet cabling, installation of Passive hubs and Active hubs
- Troubleshooting volume, disk space and Memory related problems.
- Training users on the usage and maintenance of network resources
- Provided round the clock support and ensured zero downtime.
- Weekly monitoring of Server and volume logs and taking preventive measures

Education

- B.S. (Electronics and Communications Engg.) from Institute of Electronics and Telecommunications Engineers (IETE), New Delhi, India

Professional Certification

- Microsoft Certified IT Professional in Exchange 2007 Messagin
- Microsoft Certified Specialist in Exchange 2007 Messagin
- Microsoft Certified Systems Engineer (MCSE) – Windows 2003 trac
- Microsoft Certified Systems Engineer (MCSE) – Messaging
- Cisco Certified Network Associate (CCNA)
- Certified NetWare Administrator (CNA)
- Dell Certified Technician
- ITIL Certified.
- Legato Certified Networker Administrator

Resource 63

Microsoft Product Specialist

Key Skills and Knowledge

- SharePoint Developer/ Designer/ Architect
- Development: C#.NET, VB.NET, C++, VB 6, Java/J2EE, Pearl, COBOL
- Internet Technologies: ASP, JSP, CSS, JavaScript, ASP.Net 3.0/2.0, ADO.Net, HTML, XML, XSL, SOAP, Web Services, AJAX, WSDL
- Tools: Visual Studio 2008, Visual Studio 2005, Visual Studio .NET, BDC Metaman, Rational Rose, Jtest
- Database: SQL Server 2005, SQL Server 2000, MySQL
- Reporting: IBM Cognos, Crystal Reports 8.0,11
- Operating System: Linux, Windows NT, Windows 2000, Windows 2003
- Methodologies: Microsoft Solutions Framework, Unified Modeling Language (UML), Use Case design methodology, Object Oriented Design principals.

Professional Summary

Proven skills in Architecture, Design, Development, Implementation and Administration of SharePoint Technology based projects. He has 7 Years of IT experience working in different phases of SDLC wiht in depth hands-on experience in SharePoint Server, C#, ASP.NET, SQL/MYSQL, Visual Studio, XML, SOAP, Web Services. He is a highly motivated professional with proven ability to work with large teams; and extensive Object Oriented Design and Development experience.

- SharePoint: SharePoint 2010, MOSS 2007, SharePoint Designer 2007, Web Parts, Web Controls, SharePoint Portal Server 2003
- Microsoft InfoPath 2007/2005, Microsoft FrontPage 2003, Windows Workflow Foundation, Business Data Catalog, Form Services, CAML, KPI, Event Handlers, Records Management
- Development: C#.NET, VB.NET, C++, VB 6, Java/J2EE, Pearl, COBOL
- Internet Technologies: ASP, JSP, CSS, JavaScript, ASP.Net 3.0/2.0, ADO.Net, HTML, XML, XSL, SOAP, Web Services, AJAX, WSDL
- Tools: Visual Studio 2008, Visual Studio 2005, Visual Studio .NET, BDC Metaman, Rational Rose, Jtest
- Database: SQL Server 2005, SQL Server 2000, MySQL
- Reporting: IBM Cognos, Crystal Reports 8.0,11
- Operating System: Linux, Windows NT, Windows 2000, Windows 2003
- Methodologies: Microsoft Solutions Framework, Unified Modeling Language (UML), Use Case design methodology, Object Oriented Design principals

Employment History and Related Experience

PIMCO, SharePoint Architect, Newport Beach, CA, 2010 - Present
Designed, documented and implemented the SharePoint 2010 upgrade process on the internal MOSS 2007 portal; designing the new Enterprise taxonomy for the new implementation utilizing new SharePoint 2010 content management and information architecture features; and utilized SharePoint designer 2010 to implement custom workflows with custom user forms.

- Modifying custom Web parts built for MOSS 2007 and other solutions with references to 12 hive to work on the new 2010 implementation
- Utilizing BCS to build external lists surfacing tasks initiated from an external project management solution into SharePoint user oriented pages
- Connecting to an Oracle DB using BCS to utilize data in external lists, as well as within custom application pages
- Utilizing Google Maps GIS API to develop mapping information for employees within SharePoint

- Building custom dash boards with a collection of controls reflecting reports from different applications and site collections
- Implementing collaboration features including personal sites, discussion boards and wikis with custom site definitions
- Implementing Enterprise search with custom content sources, scopes and roles built on managed properties
- Creating a custom solution to manage and initiate custom alerts with flexible CAML queries on different list templates
- Maintaining daily backups, monitoring logs, installing hot fixes, configuring e-mail enabled lists and libraries, deploying custom InfoPath templates and utilizing scripting to automate deployments

Mattel, SharePoint Designer / Developer, El Segundo, CA, 2008 – 2010

Involved in the Architectural Design of MOSS 2007 implementation leading the various phases of the Project Lifecycle; Gathered business requirements from business representatives and analyzed and designed the Project Management System; Used MVC software design pattern to design the user interface and logic for the solution based on client requirements.

- Used template design pattern to build the skeleton of some parts of the solution according to requirements
- Created a complex security plan to incorporate custom User Roles and Permission Levels
- Followed the Agile SCRUM methodology to deliver the Project Management System
- Developed Web Services using SOAP integrating the SharePoint system with J2EE based applications for effective data usage
- Designed and developed the metrics tracking and automated testing by creating custom Document Libraries with custom metadata relevant for Project management Tasks
- Created forms utilizing InfoPath 2007, capturing points, tasks, estimated time, developer, tester, tasks and test cases
- Created C# based Web Parts for metrics, facilitating customers and managers to decide between features and release time
- Automated nightly product testing by deploying XML based custom jobs
- Created custom Web Parts to illustrate the status of various project tasks/phases by XML parsing and using ActiveX and JavaScript
- Designed and implemented the migration of the deliverables across the Staging and production environments
- Conducted training sessions for business users and involved in the administration of the system

VeraSun Energy, SharePoint Migration Specialist,Sioux Falls, SD, 2007 – 2008

With the goal to efficiently unify and streamline the company's Web-based assets, involved in the migration of legacy HTTP/HTTPS accessible sites,

portals and Web content into SharePoint; charted the migration path and documented the approach to handle various components mapping legacy artifacts to SharePoint elements and automating page link management.

- Conducted the Pre-Migration Scan to detect and if need be map any legacy elements for successful migration to SharePoint
- Created custom SharePoint items like files, calendar items, contacts, customers and images with custom metadata
- Designed and developed custom Web Service based application to migrate content files to SharePoint, filtering by file types, crating Folder Structure and managing Metadata
- Created custom Master Pages and Page Layouts embedded with custom navigation, user controls and Web Parts
- Implemented Single Sign On (SSO) using Oracle Access Manager
- Extensively utilized CSS, AJAX to implement the look and feel as required by the client
- Designed and developed Web Parts for Reports that were automatically created from the custom Search module for specific executive users
- Created custom Content Types for Document Libraries and Lists to maintain data for Sales and Contract files creating appropriate custom columns
- For efficient user Permission management developed a custom User Clustering Web Part using C# ASP. and NET

Walton EMC, SharePoint Developer, Snellville, GA, 2006 - 2007

Installed and Configured Microsoft Office SharePoint Server in a large server Farm environment including the Web Front End Servers, application servers, Database Server and indexing Server; designed the Web application implementation with foresight to future growth, maintenance and independence; documented the Functional Requirements and Technical Solutions Design by writing the respective documents.

- Created personalized SharePoint sites like blogs, wikis, meeting workspaces and document workspaces
- Implemented Business Data Catalog and created Application Definition Files utilizing BDC Metaman to extract Vendor details from the Documented based CMS
- Created custom document libraries that held resume items which were automatically routed through custom workflows to required personnel for further actions
- Programmed .NET connected Web Parts and used them for interactive exchange of data.
- Created custom Web Controls and utilizing in the customized Windows SharePoint Services site-level Search that returned the Portal Server search results
- Developed State Machine Workflows that utilized InfoPath Forms and were kicked off, upon creation of specific List Items

- Customized the Tool Pane enabling the users to view and modify custom properties
- Using Excel Web Services designed and developed the application to calculate, set and extract values from workbooks, automating the process
- Developed Web Parts and displayed process level of various workflow tasks using Key Performance Indicators (KPI)

Nash-Finch, SharePoint Developer / Administrator, Minneapolis, MN, 2005 - 2006

Installed and configured the SharePoint Server 2003 in a Clustered environment; analyzed the system requirements and created State chart, Activity and Component Diagrams using Rational Rose; Created custom menu action items where in the features were enabled depending on the current user logged in.

- Customized the My Calendar Web Part, the My Inbox Web Part, and the My Tasks Web Part for the Personal sites using VB.NET
- Created complex workflows that included custom reminders for task completion and notifications on completion of certain tasks
- Developed various custom functionalities for the Intranet Portal used by the Marketing team and deployed as Features
- Created custom Site Definitions and custom List definitions and deployed by creating solution Packages
- Using SharePoint Designer implemented branding and custom look and feel across the SharePoint sites
- Designed an auto metadata populating solution on creation of custom List Items and documents with a custom workflow kickoff
- Carried out various Administrative tasks using the 'STSADM' utility and created and maintained various Timer Jobs

HealthSouth, SharePoint Developer, Birmingham, AL, 2005 – 2005

Involved in the design, development and administration of the corporate intranet portal site; Integrated IBM Cognos with SharePoint by creating custom Web Parts for reporting; Utilizing C#.NET, created a breadcrumb site navigation Web part that displayed the hierarchical location on a site on a WSS 2003 site collection.

- Modified the Page viewer Web Part in Visual studio.NET to include the most frequently used custom lists, libraries and folders
- Designed custom workflows for the HR department where in Employee records were archived following the company records management policies
- Created C#.NET based Web Parts that extracted sales data from SQL Server 2000 and displayed in user selected custom views
- Extensively used CSS/HTML to customize the Content Editor Web part for the departmental Portal sites

- Performed various application management tasks using Central Administration and managed Ative Directory users
- Created custom ASP.NET controls to render in the custom Web Parts used to connect to SQL database and edit/delete data as per user permission level
- Involved in End user training and Troubleshoot user issues with the application

Hubbell, .Net Developer, Orange, CT, 2004 – 2004

Participated in the analysis, design and development of the Logistics application based on J2EE specification; Developed custom components using the Model-View-Controller architecture; Used Object Oriented Analysis and Design (OOAD) methodology in implementation of the application.

- Used Servlets as Front Controller gateway into the system and EJBs to talk to the database. The client view was implemented utilizing JSP, HTML and XML
- Developed an HTML Parser and built DOM tree that generated XML documents and extensively used XSL for presentation
- Installed and configured Web Logic application server and wrote various shell scripts for administration purpose
- Automated mail generation and sent based on due dates of certain activities
- Designed and developed Web interface using JSP, Servlets, JDBC and JavaScript for administering and managing end users
- Created complex SQL queries and Stored Procedures and used JDBC connectivity to access the database
- Conducted usability testing of the application using JUnit Test and also automated load testing

Professional Summary

16+ years professional experience including 6 years in Marine Corps and 14+ total years in IT; accomplished multiple projects / maintenance working with Exchange, Active Directory, PowerShell, ITIM; Master's Degree in Computer Information Systems and Bachelor's in Electrical Engineering.

- MCTS (Exchange 2007 and others) and MCSE
- Microsoft Certified Trainer - Exchange 2007, AD, SCCM 2007, Windows 2008 Server
- IBM Tivoli Identity Manger (ITIM) Systems Administration (Level III)
- PowerShell Automation to administer approx. 100,000 AD accounts and mailboxes

Employment History and Related Experience

Pinnacle/Unisys/Commonwealth, Exchange Administrator, Harrisburg PA, 2011-Present

Maintained Exchange 2007 / Active Directory environment with over 100K accounts; level III troubleshooting and support for all Exchange, Outlook, AD, and DNS issues; and provided Exchange / AD support for migration of approx. 100K accounts from end of life in-house user provisioning utility to IBM Tivoli Identity Manager (ITIM)

- Responsible for developing data scrubbing / integrity testing procedures to avoid significant "glitches" during migration of users to ITIM
- Responsible for PowerShell scripts to perform data culling, automation and scripting required by migration of users to ITIM
- Responsible for monthly Windows update / security patching of Exchange servers and Domain Controllers using SCCM and scripting
- Identified and referred network / firewall issues to network team for resolution

Exiis, Smart Source, Robert Half, and NetMedia Solutions, Independent Consultant, 2006-2011

Managed a variety of projects, including the designs for a migration of e-mail and communications to Exchange 2007; routine Maintenance /Troubleshooting / Disaster recovery of e-mail servers, domain controllers, Exchange and Active Directory issues; and assisted with migrations / installs for WaWa stations and for Wal-Mart

- Provided network troubleshooting support for connectivity, e-mail and printing issues
- Instructor of Microsoft Official Curriculum, inc. Security Design, Exchange 2007, Exchange 2003, Vista, Active Directory, 2003 Server, and XP average instructor rating of 93%
- Instructor of Comptia Official Curriculum, including Security+, A+ and Network+

UNISYS

Resource 64

Microsoft Product Specialist (AD/Exchange Administrator)

- Troubleshooting hardware / software issues of any possible nature before, during, and after class
- Set up Windows 2003/2000 servers with AD domains and up to 20 PC installs a week with Ghost and automatic scripting

Best Buy for Business, Business Technical Specialist, Tucker, GA, 2005 - 2006
Performed onsite consultation and evaluation of small business IT needs

- Participated in the preparation of business proposals for the owner / decision maker, incl. Windows Server and Cisco products

Solarcom, Hardware Engineer / Network Administrator, Norcross, GA, 2002 - 2005

Designed / implemented / maintained Windows 2003/2000 server / Cisco test environment; made server and networking equipment purchasing recommendations; and responsible for imaging /configuration / maintenance for 100s of servers and1000s of PCs

- Maintained DHCP, DNS, WINS, PXE, and user accounts
- Supervised configuration and use of Ghost in a PXE network boot environment for imaging

Brookhaven Christian School, Consultant, Greenville, NC, 2001 2002

Managed the design and implementation of Windows 2000 and Linux domains including the O.S. loading and configuration of the initial server, creation of backup policy and procedures, creation of 1st user accounts, creation of secure folders on server for individual users, and creation of shares and permissions

- Managed the design and implementation of TCP / IP network, security procedures and policies
- Managed installation, maintenance, upgrades, and troubleshooting of PC software and hardware

Cisco Systems, Level III Customer Support Engineer, Chelmsford, MA, 2000 - 2001

Installed, configured, and maintained software and hardware (XP /2000 / IOS / VCO /etc); Installed and configured various routers / gateways / terminal servers; and Reviewed and critiqued technical documents for publication on the Internet

- Performed troubleshooting of the most difficult problems, providing Level III support
- Configured switch for teleconferencing, voice prompts, touch tone, interface with TCP / IP
- Wrote batch programs to automate connection to various switches and routers

UNISYS

Resource 64

Microsoft Product Specialist (AD/Exchange Administrator)

U.S. Marine Corps, Network / Database Administrator, Jacksonville, NC, 1998 - 2000

Administered UNIX and NT domain (also 95 / 98) in fast-paced, Marine Corps unit with competing demands and critical decision requirements at headquarters level

- Officially recognized and decorated for design of personnel control database for deployment of combined arms detachment
- Managed Exchange / Outlook Servers and Clients for 1000 computer NT domain
- Wrote scripts for various tasks including batch files for boot processing and merging of multiple databases - Supervised, trained, counseled, inspected, and evaluated employees on a daily basis
- Responsible for IT department passing audit of maintenance procedures and inventory control for 1st time ever

US Marine Corps, Database / PC Maintenance, Jacksonville, NC, 1997 - 1998

Performed basic computer workstation and network troubleshooting and repair

- Supervised, taught, and performed database administration of barracks room inventory
- Made modifications of database to perform queries and produce reports as required

US Marine Corps, Crew Chief, Jacksonville, NC, 1994 - 1997

Supervised, taught, and performed in-flight troubleshooting and repair of major communications, radio, avionics, and electronics systems for Marine Corps helicopters

- Configured, maintained, and operated computerized testing systems for helicopters
- Performed final quality control checks on maintenance of helicopter to certify safety

Professional Summary

Highly proficient systems administrator with 25 years of experience in many phases of the information technology field, effective supervisor and trainer of technicians, managed more than 300 domain controllers in several different environments

- Project Lead for active directory forest level upgrade from Windows Server 2003 to Windows Server 2008 R2
  - Migrated many from physical to virtual servers
  - Administered over 100,000 mailboxes for 70,000 users on Microsoft Exchange 2007
- Managed BlackBerry Enterprise Servers (5.0) used by 4,000 users
- Consistently identified processes for automation – developed and implemented several scripts to save hundreds of man-hours vs. previously used processes.

Employment History and Related Experience

Unisys, Commonwealth of Pennsylvania, System Administrator Consultant, 2009 - Present

Responsible for security patch management for 400 domain controllers and exchange servers

- Migrated 15 Microsoft Exchange Servers to 2003 version; over 4,000 mailboxes migrated with 100% success rate
- Managed 4000 user accounts and 2500 Windows XP-based workstations on 15 isolated networks
- Oversaw the migration of five separate NT domains to Active Directory – project completed on time with zero user impact
- Led project to upgrade 8 domain controllers from windows 2000 server to Windows Server 2003 (64-bit)
- Upgraded remote installation services server to Windows Deployment Server in production and test environments– providing faster imaging of workstations and support for emerging technologies

Elite Systems, Microsoft Exchange Consultant, Harrisburg PA, 2008 - 2009

Responsible for hardware and software troubleshooting of 82 Windows-based servers; provided day-to-day support for wide range of standard applications including: MS Office suite, Form Filler, PureEdge ICS Viewer; and managed networking issues dealing with TCP/IP, DNS, SMTP, and DHCP.

Air Force Flight Test Center, Network Systems Administrator, Detachment 3, 2004 – 2008

UNISYS

Resource 65

Microsoft Product Specialist (Windows Server Systems Administrator)

Consistently provided users with support for peripheral devices, such as, printers, scanners, plotters and all-in-one devices; managed $500,000 budget for work section

- Managed BlackBerry Enterprise server for 2,500 users
- Translated specific needs into Computer systems requirements
- Directed various teams of technicians on many different projects

Network Control Center, Helpdesk Manager, Andersen AFB, GU, 2003 – 2004

Supervised up to 40 individuals, dealing with personal issues, scheduling work hours, assigning daily duties, and evaluating performance

- Authored several procedures pertaining to server and workstation setup, which were adopted as the standard for use by all Air Force personnel world-wide.
- Prepared performance reports and recommended decorations for subordinate individuals

Other Employment History

- Network Control Center, Workgroup Manager Trainer, 36th Communications Squadron, Andersen AFB, GU, 2002 – 2003
- Network Systems Administrator, Detachment 3, Air Force Flight Test Center, 1999 – 2002
- Data Systems Operator, Detachment 3, Air Force Flight Test Center, 1997 – 1999
- Information Systems Security Officer, 48th Intelligence Squadron, Beale AFB, CA, 1993 – 1997
- VAX System Administrator, Foreign Aerospace Science and Technology Division, Wright-Patterson AFB, OH, 1991 – 1993
- Teletype Operator, 609th Tactical Control Squadron, Hessisch-Oldendorf AS, GE, 1989-1991
- Information Systems Operator, 3026th Communications Squadron, Sheppard AFB, TX, 1987 – 1989

Professional Summary

Certified Infrastructure Architect for IBM Global Technology Services in the IT Strategy and Architecture Service Product Line, specializing in Cloud Computing and Services Oriented Architecture (SOA) Infrastructure. More than twenty years experience in Information Technology, specializing in Local-, Wide-, and Storage-Area Networking, WebSphere, Microsoft Windows, UNIX and server and storage hardware. Commands exceptional communication skills, refined through years of experience in customer service, project management and consulting. Received numerous professional awards from the IBM Corporation, including recognition for leadership, planning, and technical ability. Recognized as a 2-year consecutive member of the IBM Hundred Percent Club for outstanding achievement in customer satisfaction and value to the business.

Employment History and Related Experience

IBM, Certified I/T Architect & Cloud Focal Point, Gaithersburg, MD, 2001-To Date

Delivery architect, serving many of IBM's largest clients in public and private sectors; cloud computing focal point, providing thought leadership to clients and peers in the emerging field of cloud computing; member of the IBM SOA Acceleration Team.

- Presenter to the IBM Academy of Technology regarding SOA infrastructure and Cloud Computing.
- Author of several IBM Redbooks in the fields of storage and content management.

Nationwide Healthcare Provider, Engagement Manager / Lead Architect, 2011-To Date

Led a team of ten people to perform a readiness assessment for a new nationwide health care system.

- As a result of the assessment, we created a wholesale transformation program to fundamentally change the way IT operates, including creating high availability architecture, new processes and procedures, and a completely new organization.
- Works directly with C-level executives, application and infrastructure teams to develop the operating model and architecture for the new health care system.

Global Financial Services Company, Engagement Manager / Cloud Architect, 2010-2011

Led multiple teams of people to perform cloud readiness assessments for multiple lines of business.

- Assessed relationship between IT and the organization to determine optimal cloud delivery and consumption profiles.
- Analyzed computing workloads for applicability to a cloud delivery model.
- Conducted gap analysis of current and future state IT capabilities.
- Delivered analysis and recommendations to C-level executive and direct reports through presentation materials and briefing, including roadmaps.

Large Educational Medical Center, Engagement Manager / Cloud Architect, 2010-2010

Led a team of 3 people to perform a cloud readiness assessment for an educational medical center.

- Leveraged IBM tools to determine optimal cloud delivery and consumption profiles; analyze computing workloads for applicability to a cloud delivery model; and conduct a gap analysis of current and future state IT capabilities.
- Delivered analysis and recommendations to C-level executive and direct reports through presentation materials and briefing, including roadmaps.

Pharmaceutical Manufacturer, Engagement Manager / Cloud Architect, 2010-2010

Led a team of 3 people to perform a cloud readiness assessment for a global IT organization.

- Analyzed various aspects of applications and infrastructure.
- Provided industry data to compare current state with best practices.
- Provided metrics and methodology to demonstrate the business value of cloud computing.
- Assessed organizational alignment with business objectives.
- Delivered analysis and recommendations to executive management through presentation materials and briefing, including roadmaps.

US Federal Government Agency, Cloud Consultant, 2010-2010

Facilitated client workshops and provided thought leadership to develop a cloud computing strategy.

- Led a review of IT and agency goals, current state capabilities, and future state targets and conducted a gap analysis.
- Made recommendations regarding adoption of cloud delivery models and cloud workload affinities and defined roadmaps to close gaps.
- Provided analysis and recommendations to C-level executives and staff in the forms of presentation and white paper.

IBM

Resource 66

Midrange Infrastructure Architect/Engineer

Regional Transportation Services Provider, Cloud Consultant, 2010-2010

- Participated in client workshops and provided thought leadership to develop a cloud computing strategy. Assisted in a review of IT and business goals, current state capabilities, and future state targets and conducted a gap analysis.
- Recommended adopting cloud delivery models and defined cloud workload affinities and defined roadmaps to close gaps.
- Presented analysis and recommendations to C-level executives and staff.

Global Higher Education Provider, Infrastructure Architect / Lead Architect, 2009-2010

Developed desktop services, storage, and server architecture for a globally integrated enterprise.

- Led a review of application performance on a global scale and made recommendations for application deployment and remediation.
- Worked within a cross-LOB team to provide thought leadership and drive high quality deliverables.
- Provided analysis and recommendations to C-level executives and staff.

US Professional Sports League, Infrastructure Architect, 2009-2009

Performed an SOA infrastructure workshop for an IT organization transforming to a shared services model.

- Analyzed computing, storage, and facilities services and provided strategic and tactical recommendations to improve services maturity and resiliency.
- Helped create a data center strategy aligned with the enterprise shared services model.
- Provided analysis and recommendations to executive management in the form of presentation materials and briefing, including roadmaps with cost, resource, and timeline estimates. As a result, IBM was awarded significant follow-on work and public recognition.

Staffing Provider, Infrastructure Architect, 2009-2009

Performed an SOA infrastructure readiness assessment for a rapidly-maturing staffing provider.

- Provided strategic and tactical recommendations to help align IT with business drivers.
- Facilitated a High Availability (HA) solution workshop to select an appropriate HA solution based on business and technical requirements.

Resource 66

Midrange Infrastructure Architect/Engineer

- Demonstrated the business value of IT.
- Provided analysis and recommendations to management in the form of presentation materials and briefing, including roadmaps with cost, resource, and timeline estimates.

Telecommunications Provider, Lead Architect, 2008-2009

Responsible for assessing multiple data centers and associated infrastructure and creating recommendations for infrastructure optimization.

- Analyzed servers, storage, and network components as well as data center facilities.
- Worked with financial analyst to create cost models for future state scenarios.
- Provided analysis and recommendations to C-level executive in the form of presentation material and briefing.

State Government, Lead SOA Infrastructure Architect, 2006-2008

- Lead Infrastructure Architect for a Service-Oriented Architecture (SOA) application development project.
- Led a team of 12 people to architect, design, and implement a virtualized, multi-site infrastructure.
- Deployed a dual-purpose remote data center to support infrastructure and application testing, and disaster recovery.
- Responsible for over $15 Million in revenue. Received numerous awards for delivery excellence and outstanding customer satisfaction.

US Military, Infrastructure Architect, 2004-2004

Responsible for designing, implementing, and documenting an Enterprise Architecture for the newly expanded US Armed Forces interoperability testing center, including analysis of current and projected storage requirements and integration of emerging storage technologies. Received exceptional reviews from the client and IBM account and project teams.

Professional Summary

Technology Executive with the proven ability to analyze, develop, implement and lead application deployment initiatives cross platform with global teams following best practices, quality assurance policies, processes and methodologies. Operational and data center support as well as high availability management support. Remarkable career with a proven ability to build and lead multiple cross-functional teams.

Employment History and Related Experience

CTG/IBM – JCP, Systems Availability Manager, 2011–To Date

Manage through to the successful resolution of hardware and software availability issues (San Storage, VMX, San Switch, Mainframe, Mainframe hardware refresh activity, Mainframe upgrade and consolidations, UNIX operating system Patching, Server Consolidation from (P6 technology to P7).

- Act as a customer advocate and situation manager in support of client's IT environment as it relates to Availability Management working with IBM product and support organizations.
- Host IBM status overview meetings to review outstanding or overdue tasks/events, review Problem Management Records and their current status as well as discuss new initiatives and acquisitions to be incorporated into current activities.
- Assist with identifying trends and creating action plans through analysis and review of Problem Management Records (PMRs). Review and understand the service requests (PMRs) opened with the relevant IBM Support Center(s) over the previous quarter and offer technical advice and guidance with regard to those PMRs.
- Periodically review with client the PMRs they've placed with IBM to recognize and analyze trends and emerging issues.
- Provide advice and guidance on how to resolve hardware and software availability issues to prevent reoccurrence.
- Assist client with review and planning for IBM product deployment and maintenance to reduce the risk of potential exposure to client based on knowledge of client's IT technology strategy, current IT environment, knowledge of IBM's products, and industry best practices for systems and availability management.
- Assist in periodic review of client's systems deployment, change control and systems management processes.
- Assess client's current and ongoing readiness to achieve its IT availability objectives.

IBM

Resource 67

Midrange Infrastructure Architect/Engineer

Administration I, II Lotus Development I, SM7

- Review and recommend improvements on the current baseline for the availability of IBM Systems, establishing targets and dates for improving where necessary and appropriate.
- Ensure that all work being performed by IBM is planned, documented and reviewed with client prior to execution of work.
- Facilitate communication between client and IBM Product Specialists in the relevant and appropriate IBM development or support organizations.
- As informed and engaged by the client Project Manager, assist with communication to the appropriate IBM support teams all planned changes to IBM hardware and software products. Advise client of potential impact to planned changes.
- Work with key client leadership and technical decision makers to attain high levels of system availability and stability in the client's IT environment.
- Work globally with all team members.

Rose Int. – PepsiCo, Senior Project Manager – Infrastructure, 2007–2011

Managed multi types of projects (San Storage, VMX, San Switch, Refresh hardware, UNIX operating system Patching, Server Consolidation (SCON, SCONI, SCONII from P6 technology to P7) and upgrades, Oracle financials refresh, SAP Storage, DATA ITO Refresh, Corporate UNIX Refresh projects, Security remediation software implementation, Offshore coordinator and other projects as assigned.

- Led PMM Meeting to review outstanding or overdue tasks/events
- Coordinated the EPMO and the business units to adhere to PepsiCo milestone checkpoints and document quality assurance processes.
- Developed process flows for all current and future application development.
- Insured that all UNIX servers were SOX compliant.
- Maintained centralized oversight of project management documents including Project Schedule, Risks, Issues, and Change Management, Signoff documents and others as required. Work with the EPMO program management team, the functional and technical development leads to ensure that the issues, risk, and change management processes are executed efficiently, effectively, and to the appropriate standards.
- Managed the interface between the UNIX team and the offshore team.
- Managed iCare, offshore communications for daily turnover and all communications.
- Worked globally with all team members.

Red River Systems – 7-Eleven, Senior Project Manager – Wholesale Transition, 2007–2007

Managed multiple types of projects. Led PMM meeting to review outstanding or overdue tasks/events. Coordinated the EPMO and the business units to adhere to 7-Eleven milestone checkpoints and document quality assurance processes.

IBM

Resource 67

Midrange Infrastructure Architect/Engineer

Worked with the outside development team to keep project schedule properly updated and in sync.

- Developed process flows for all current and future application development.
- Coordinated the EPMO and SQA teams to ensure that the Wholesaler transition program adheres to 7-Eleven milestone checkpoints and document quality assurance processes.
- Maintained centralized oversight of project management documents including Project Schedule, Risks, Issues, and Change Management, Signoff documents and others as required. Work with the EPMO program management team, the functional and technical development leads to ensure that the issues, risk, and change management processes are executed efficiently, effectively, and to the appropriate standards.
- Worked globally with all team members.

Rose Int. – PepsiCo, Senior Project Manager – Infrastructure, 2006–2007

Managed multi refresh projects replacing or decupling servers or expanding capabilities. Worked with all DBA (Oracle, PeopleSoft, SAP, Informatica) verify and validate all database activities are complete and that the UNIX team has build the proper directories and give the correct access required to run each application. Coordinated with the all associated teams to verify status and resolve issues.

- Worked with the outside development team to keep project schedule properly updated and in sync.
- Maintained SOx Compliances
- Maintained centralized oversight of project management documents including Project Schedule, Risks, Issues, and Change Management, Signoff documents and others as required.
- Work with the EPMO program management team, the functional and technical development leads to ensure that the issues, risk, and change management processes are executed efficiently, effectively, and to the appropriate standards. Hold meeting as needed.
- Contributed to program status reports and program planning meetings.
- Worked globally with all team members.
- Worked with Vendors to acquire refresh hardware.

Computer Science Corporation – General Dynamics, Manager Global Transformation Solutions (Program Process Manager), 2005–2006

Created Process flow for all current and future application development for GDAISource. Maintained project schedule. Created SOx compliance process checkpoints to match SQA CheckPoints to eliminate double work. Validated SOx compliance.

- Maintained centralized oversight of project management documents including Risks, Issues, and Change Requests, Hanko documents and others as required.

IBM

Resource 67

Midrange Infrastructure Architect/Engineer

- Worked with the GD management team as well as the functional and technical lead to ensure that the issues, risk and change management processes are executed efficiently, effectively, and to the appropriate standards.
- Worked with the GD team to validate UAT testing scripts for GDAISource.
- Contributed to program status reports and program planning meetings.

Capstone – 7-Eleven, Program Process Manager/Schedule Project Manager, 2005 – 2006

Managed multi project schedule linked together. Hosted PMM Meeting to review outstanding or overdue tasks/events. Coordinated with the EPMO and SQA teams to ensure that the STEER program adhered to 7-Eleven milestone checkpoints and document quality assurance processes. Worked with the outside development team to keep project schedule properly updated and in sync.

- Developed process flows for all current and future application development.
- Coordinated with the EPMO and SQA teams to ensure that the GDS program adhered to 7-Eleven milestone checkpoints and document quality assurance processes.
- Administered SOx compliance process assessments to match SQA Checkpoints to eliminate double work.
- Validated SOx compliance for two major retail solutions, Programs Global Data Synchronization and Retail Initiated Invoice.
- Maintained centralized oversight of project management documents including Project Schedule, Risks, Issues, and Change Management, Signoff documents and others as required. Worked with the EPMO program management team, the functional and technical development leads to ensure that the issues, risk, and change management processes are executed efficiently, effectively, and to the appropriate standards.
- Administrator of the documentation development and signoff process.
- Contributed to program status reports and program planning meetings.
- Worked globally with all team members.

Legacy Solutions, Senior Project Manager, 2004 –2005

Responded to all RFP's. Technical Interviewer for all potential new hires. Created Project Plan for all projects.

TekSystems – Sprint, Senior Project Manager, 2004 – 2004

Developed and maintained relationships with key stakeholders (Internal and external). Presented key deliverables and milestones to stakeholders. Established scope of project objectives to address core business requirements. Facilitated project review meetings with stakeholder to validate scope.

IBM

Resource 67

Midrange Infrastructure Architect/Engineer

- Build and lead execution of project plans between multiple departments.
- Managed issues, change management, project risks and escalation with the executive management team.
- Resolved major issues between the stakeholders and outsource team.
- Administered and tracked all project schedules, issues, and document management through DOORS and Sprint Online.
- Established 2 teams for project development.
- Successfully managed over 51 people through several projects.
- Worked with global team members.
- Reviewed possibility of using the Agile PLM Solution, Sprint Management did not make decision before project was completed.

Compuware (PM Leadership at Multiple Clients), Project Director – T-Mobile, 2001–2004

Established and managed team for mission critical testing. Presented key deliverables and milestone to key stakeholders. Facilitated project issues with third party vendor. Developed and implemented release process and automation team. Created Process Improvement plan for releases and test case development.

- Gathered errors and status from team for reporting purposes.
- Managed multiple teams who were responsible for Load and stress automated tools (QA Load).
- Led Web security testing and created user review standards.
- Created each readiness assessment and worked with the architect to prepare viability assessment.
- Created and presented weekly reports for CIO and his direct reports to identify development and QA outstanding issues.
- Worked with team members from several countries.

UICI, Project Director, 2003-2004

Organized recruiting and hiring process for initial QA Team. Instituted testing process and reviewing plans. Evaluated, implemented, and managed test automation tools. Led team that utilized QA Run, QA Director, Track Record and created reports from QA Director that allowed the Executives of UICI to view status of the testing progress and issues.

- Trained and mentored team to gain information for a quality IT assessment and QA perspective.
- Created IT Client Server Assessment Deliverable and presented this assessment to the Executive team.
- Hands-on technical management of QA organization expanded.
- Authored IT Mainframe Assessment Deliverable and presented this assessment to the Executive team.
- Established team for Smart Screen Testing and the test plan to accomplish these tasks.

Resource 67

Midrange Infrastructure Architect/Engineer

- Successfully utilized Compuware Quality Point Methodology.
- Adhered to HIPPA Requirements.

Alliance Data Systems (ADS), Senior Project Manager, 2002-2003

Interviewed members of the IT department to understand work flow and their environment. Created documents that would allow IT department to properly resolve issues without leaving steps out that would cause additional problems or errors. Created Environmental Design Deliverable that allowed IT team to better understand the network, server, and data flow.

- Evaluated CA product against home grown in-house tracking system.
- Created project plan and project schedule as well as a working model that would allow the ADS team to quickly implement a tracking system that would be utilized across ADS.
- Presented deliverables to key stakeholders.

TXU/Oncor, Senior Project Manager, 2001-2002

Resolved issues of application coming on line on time to keep TXU from fines for not meeting Senate Bill Seven require start date for TEEM program. Proposed new rewrite for the TEEM application for better response and user friendly screens as well as utilizing more current technology.

- Established 2nd team to deliver proposed rewrite. Followed SDLC methodology and CMMI process documentation and requirement for TEEM project.
- First project TXU utilized CMMI process to move from CMMI level 2 to Level 3.
- Coordinated requirements between PUC and Senate Bill Seven requirements and changes.
- Created weekly reports to client as well as prototype demo.
- Reviewed QA output for completeness and functional coverage.
- Created test requirements for both functional and integration testing.
- Created requirements for the stress and memory lab testing.
- Utilized Mercury tools for automated testing.
- Created test scripts to validate client required results.
- Managed and monitored quality testing throughout the project life cycle.
- Created end user documentation.
- Delivered product one month early and $40,000 under budget ($400,000 total budget).

DMR, Director – eBusiness, 2000–2001

Created the eBusiness consulting and delivery organization within the Dallas marketplace. Grew the practice to a staff of 27 from conception and generated revenue of $1.3M in 7 months.

Resource 67

Midrange Infrastructure Architect/Engineer

- Developed several recommendations to help IBM implement a standard authentication, authorization and entitlement process across the multitude IBM intranet Web sites.
- Created quality assurance consulting and delivery team to assist Fortune 500 organization in developing proper QA testing methodologies and tracking processes.

The Harbor Group (THG), Vice President – Internet Technology Solutions, 1999–2000

Led implementation of sales force automation at Verizon, resulting in $12M annual savings. Created the Dallas practice for eBusiness consulting and delivery organization. Grew group to a staff of 42 from conception and generated revenue of $1.7M in 12 months. Managed vendor relationships with Sun Microsystems, Forte, IPlanet, E-Security Lotus, IBM and BMC. Initiated the sale, in conjunction with project management of an on-line candidate Web review site. Estimated savings to client of $500K annually.

EDS/MCI Systemhouse, Director - System Integration, 1993–1999

Created the Internet management consulting and delivery organization for the US marketplace. Grew the organization to a staff of 142 from conception and generated revenue of $57M in a 3-year timeframe.

- Year 1 generated $6M, with no revenue target in place. Year 2 generated $18M, exceeded revenue target by 120%. Year 3 generated $33M, exceeded revenue target by 132%.
- Managed vendor relationships with Sun Microsystems, Lotus, IBM, Tivoli, BMC, Mercury, Vision Jade, CommerceOne, Net.Commerce, FileNet and MSFDC.
- Managed international teams from several global locations.
- Successfully led the project management of the outsourcing of Oracle, network and messaging infrastructure resulting in a $1.2M annual savings.
- Managed the healthcare job posting Web implementation project that resulted in a $1M annual savings.
- Managed MCI Systemhouse's exhibition at the LotuSphere trade show and generated revenues of $2.1M.
- Utilized Lotus, Microsoft ASP, JAVA, HTML, Cold Fusion, Oracle, People soft, SQL, Access in most projects.
- Created QA Organization and or enhanced groups to meet the challenge of releasing Error free software.
- Utilized QA testing tools such as Mercury.
- Utilized methodologies such as SDLC, modified Six Sigma, EDS Methodology

GTE, Senior Systems Engineer - Lead (last position held), 1978–1993

Responsible for the design and implementation of a worldwide backbone network mainframe support organization. Established new and maintained the

existing network for five temporary locations.

- Assigned as the lead member of acquisition team to oversee the merger of GTE and Contel's backbone mainframe systems.
- Developed outside facility engineering plans (FAST) for GTE Southwest.
- As a Top Analyst, responsible for generating all outside plant reports (ASIST and RAMIS retrieval).

Professional Summary

Certified Senior-level Managing Consultant at IBM with over 13 years of diverse experience. Proven ability to lead, manage, design, plan, and implement IT solutions with the pSeries (AIX) servers with supported new applications, processes, and complete lines of business. In addition, using specific TSM skills have proven record of accomplishment, with Tivoli Storage Manager on large-scale implementations.

Gave advice and made contributions on a Redbook named SAP Applications on IBM PowerVM. This was published in January of 2009 (SG24-7564-00 ISBN 0738485004).

Employment History and Related Experience

IBM, Managing Consultant, pSeries (AIX), 2006-To Date

Level 2 IT Specialist Certification Expert Level in Technical Services and Infrastructure & Systems Management specializations. Implemented IBM Blade Center with XIV Storage for both x (RedHat) and p (AIX) Blades. Implementation of WebSphere on AIX and NT environments for a Global Cluster (Load Balanced) configuration using Network Deployment

- Implemented IBM AIX Virtual Server with shared Ethernet and storage (NPIV) for over 35 clients.
- Implemented and Designed HACMP clusters on HACMP Versions 5.4 and 6.1.
- Implemented IBM SAN Switches and DS/4000 product line with Flash Copy.
- Support clients with large and small scale SAP environments using Oracle.
- Built 4 p595 servers with VIO Server and over 25 VIO clients on each frame using NIM.
- Installed Tivoli Storage Manager 5.3/6.1 and over 6 years experience supporting large-scale TSM environments for major retailers.

Insurance Company, Senior AIX Admin. AIX p5 Series, 2005-2006

Implemented EMC Legato on AIX 5.3 with SRDF using Symmetric. Attached Storage using EMC PowerPath to AIX systems on both the Symmetric and Clarion. I also performed allocation of storage using the ECC Console to perform such tasks. Setup Fiber Zones with ECC console and directly with the MDS 9000 family switches.

- Setup IBM AIX Virtual Server with shared Ethernet and storage on 10 p570 Systems and 1 P595.
- Worked with SymCLI (Symmetrix Command Line Interface) on AIX Systems.

Retail Company, Senior AIX Admin. AIX RS/6000, 2001- 2005

During my career at Ahold, administered 300 RS/6000 F50 servers in a complete distributive environment. Responsible for IBM S70 running production software for a million square foot warehouse. In charge of Day-to-Day operations with fixing

operating system problems installations of new equipment including operating system build out, writing perform scripts and administrative tasks for all 300 servers in remote locations.

Retail Company , AIX Administrator and Project Manger, 1998-2001

Implemented AIX to be intergraded with the IBM 4690 operating system, for Electronic Fund Transactions with IBM 4693 and 4694's. Developed a storewide user manual, training program, and help desk support/procedures. Using Tivoli Management Enterprise was able to manage all aspects of the installation and maintenance over 300 stores. Created and altered computer programs to streamline departmental operations and improve efficiency.

Major Pharmaceutical, Power7 VIO Implementation and Design for 6 p795's running SAP Lead Technical Advisor , 2011-To Date

Implemented 6 p795's with four VIO Servers, NPIV, Live Partition Mobility, and design load balanced shared Ethernet adapters between VIO clients. Assist customer with transition from HP to IBM AIX and make sure customer uses best practices with the new IBM hardware and AIX 7.1 operating system. This project will also include starting next year designing and implementing PowerHA with SAP.

Medical Center in Newark New Jersey, Project/Engagement Manager and Technical Advisor PowerHA implementation, 2011

Provided a total solution from proposal to delivering a site to site PowerHA solution. Provided guidance and technical advice to the assigned resources to the project and oversaw the entire delivery.

Major Payroll Company, Technical Project Advisor to assist customer with migrations Engagement Manager and Technical Project Advisor, 2011-To Date

Worked as a liaison between the customers Project Manager and the System Administrators that were performing the logical partition migrations, to improve the migration times and reduce any risk in the process.

Major BC/BS insurance provider for the state of New Jersey, PowerHA GLVM Implementation, Engagement Manager and Lead Architect, 2011

This work was part of a larger project being lead by IBM Software group, which initially was using a clustering product that was lacking the required features to support the customer's requirements. Halfway into the project, it was determined that PowerHa should be used instead. The customer requested IBM to design and implement PowerHA to have an application fail over from one site to another in case of disaster with a fail over up time less than 5 minutes. My role was to architect and lead the implementation of a Cross-site IBM PowerHA (High Availability) with GLVM (Global Logical Volume Mirroring) for Disaster Recovery solution.

Resource 68

Midrange Infrastructure Architect/Engineer

University Hospital, BCRS TSM Specialist, 2010-2011

Customer had no DR stagey or plan to recover AIX systems via TSM. They were not performing a daily offsite tape pool copy. Wrote all of the recovery procedures for TSM and AIX system bare metal restores.

- Provided TSM Expert support at IBM BCRS during their first DR event which was very successful by following my procedures and changes I made to setup their TSM server to perform DR events such as sending tapes offsite.

Drug Company, Power7 P595 VIO Implementation and Design, VIO Design/HACMP Specialist, 2008-2010

Implemented 8 p595's with Dual VIO Servers, designed load balanced shared Ethernet adapters between VIO clients. Created over 50 VIO Client LPAR's for AIX and Linux Red Hat. Implemented IBM Blade Center and XIV Storage for AIX and x/p Blades.

- Helped migrate servers from older hardware to the newer power6 p595 servers.
- Implemented and designed a High Availability System for 14 HACMP clusters running AIX 6.1 with HACMP 5.4.1.

Manufacturing Company, Tru64 To AIX/pSeries SAP Migration- AIX v5.3 LPAR, 2007-2008

Install servers and help assist customer with Migration from Tru64 to AIX 5.3. Re-wrote all Tru64 Korn Shell scripts to AIX 5.3 system commands. Provide ongoing support and assistance as customer requests during key project milestones.

State Government, AIX 5.3 VIO Implementation, VIO Implementation Specialist, 2007

Implementation of VIO Server and assisted customer with Design.

Water Company, DR Assistance, DR Specialist, 2007

Assisted customer with full DR restore of AIX systems with TSM Server.

Energy Utilities Company, HACMP Scope and assistance with Implementation, 2007

HACMP Scope and assistance with Implementation.

Manufacturing Company, VIO Server Implementation, 2007

- Implemented DUAL VIO Servers to p570 server.
- Provided higher serviceability with multiple Virtual I/O Servers. Virtual SCSI redundancy and Shared Ethernet redundancy.

Resource 68

Midrange Infrastructure Architect/Engineer

City Government, HACMP Implementation 5.4, HACMP Specialist, 2007

HACMP Implementation 5.4 with DB2 failover. Wrote stop/start scripts and monitoring process for DB2 failover.

Candy Manufacturing Company, AIX Upgrade Assistance, AIX Server Specialist, 2007

Assisted customer with upgrade from 5.2 T/L 4 to 5.2 T/L 9.

Drug Company, P595 VIO Implementation and Design, VIO Design/HACMP Specialist, 2007

Implemented 2 p595's with Dual VIO Servers, designed load balanced shared Ethernet adapters between VIO clients.

- Created over 40 VIO Client LPAR's and helped migrate servers from older hardware to the newer p595 servers.
- Implemented 14 HACMP clusters running AIX 6.1 with HACMP 5.4.1.

Insurance Company, 2006
HACMP Upgrade from 5.1 to 5.4 and convert customer from serial heartbeats to disk heartbeats.

Water Company, TSM migration and pSeries Services, Tivoli Storage Manager Specialist, 2006-2007

Implemented AIX 5.3 Server and migration from older TSM Server. Wrote TSM scripts for automation of DR pool and daily processes.

City Government, Dual VIO Server Implementation. 2006

Provided higher serviceability with multiple Virtual I/O Servers. Virtual SCSI redundancy and Shared Ethernet redundancy.

Retail Company, Dual VIO Server Implementation, 2006

Provided higher serviceability with multiple Virtual I/O Servers. Customer needed to have VIO clients boot from SAN. Virtual SCSI redundancy and Shared Ethernet redundancy.

Water Company, AIX Performance Analysis, 2006

Performed health check on 2 p690 servers.

- Provided detailed documentation on areas of weakness.
- Recommended better practices.

Retail Company, Project Manager, 2006

Assisted customer with AIX 4.2 systems

Resource 68

Midrange Infrastructure Architect/Engineer

Manufacturing Company, Tru64 To AIX/pSeries SAP Migration - AIX v5.3 LPAR, 2006

Install Servers and help assist customer with Migration from Tru64 to AIX 5.3.

- Re-wrote all Tru64 Korn Shell scripts to AIX 5.3 system commands.
- Customized monitoring solution for the AIX pSeries servers, and develop solution for CUPS printing on AIX.
- Provided ongoing support and assistance as customer requests during key project milestones.

Retail Company, Full Time TSM Administrator, TSM Administrator/Project Manager, 2006

Implemented TSM 5.3 and perform project manager responsibilities for TSM migration from data center in Chicago to Troy Michigan.

Manufacturing Company, Tru64 To AIX/pSeries SAP Migration- AIX v5.3 LPAR, 2006

Installed Servers and assisted customer with Migration from Tru64 to AIX 5.3. Re-wrote all Tru64 Korn Shell scripts to AIX 5.3 system commands.

Warehouse/Distribution Company, Implementation of p570 and DS/4300, 2006

Implemented p570 and DS/4300.

- Assisted customer with hardware migration from older RS/6000 hardware.
- Wrote scripts for flash copy services.

Telecommunications Company, Implementation of pSeries LPAR, 2006

Implemented 2 p550q servers into 2 LPARs with connections to SAN and tape drives.

Local Government, Problem Determination/Problem Source Identification Technical Support Representative, 2006

Customer had p570 that was not booting up correctly. Was able to fix p570 with no data loss within 3 hours.

Local Government, AIX install of Software and hardware, Server Specialist, 2006

Installed pSeries p550 with D20 Expansion Draw. Also installed AIX 5.3 for client.

Insurance Company, AIX Advance Power Virtual (APV) assist, Technical Support Representative, 2006

Assisted customer with VIO Server best practices and fixed their NIM server to perform client installs.

Resource 68

Midrange Infrastructure Architect/Engineer

Energy Company, TSM Implementation Services, Tivoli Storage Manager Specialist, 2006 – 2006

Implemented TSM Server 5.3 in a SAP Environment using ERP.

Key Skills and Knowledge

Technical:

- Infrastructure Architect design
- Implementation of I T infrastructures and supporting processes
- Extensive experience on IBM's AIX operating system and Power Servers Linux and Solaris operating systems
- Korne shell programming
- Hardware and software problem determination
- PowerVM Virtualization, including Virtualization I/O (VIO Servers), partition mobility (LPM) and Active Memory Sharing (AMS), on IBM Power Servers
- Network communications for WAN/LAN using SNA and TCP/IP
- SAN network design and implementation on various platforms
- Storage implementation on various products, including IBM's DS8000, DS4000 and NetApp
- IBM Tivoli Storage Management
- IBM PowerHA (aka System Mirror)
- AIX Global Logical Volume Manager, GLVM
- IBM GPFS (General Parallel File System)
- Linux High Availability using Heartbeat
- Apache/Tomcat installation and administration

Professional:

- Technical Project Management Team Leadership
- Negotiations
- Conflict Resolution

Professional Summary

Consulting information technology (IT) expert with over 32 years of diverse experience in all aspects of selling and supporting numerous and diverse IT infrastructure solutions and supporting services to various industry sectors. Uses an extensive background in IT systems infrastructure architecture, from hardware and operating environment through the various applications supporting software, to work effectively in complex, technical environments using strong interpersonal communication and leadership skills. Proven ability to work individually or leading a team through the planning, design and implementation of resilient IT infrastructure solutions that support the applications and processes for various lines of business. Received numerous awards in recognition for leadership, planning, and technical ability.

Consistently recognized for outstanding management and service delivery performance, as well as the ability to resolve complex technical and customer satisfaction issues.

Employment History and Related Experience

IBM, Consulting IT Specialist, Syracuse, New York, United States of America, 1979-To Date

IBM Global Technology Services, Certified Consulting IT Specialist, 1996-To Date

Selling, implementing, managing and supporting over, approximately, $2 Million in I T infrastructure services solutions. Lead in developing the technical and professional skills of the I T Specialists in IBM's Information Technology Services, (I TS) across the United States. Continually recognized, internally and through customers, for creative resolution to complex I T problems and for consultation on support methodologies that increases IT system's availability and performance.

Assignment History

Various Clients, United States of America, 1997-To Date

Lead in the infrastructure architecture and services solution design for several large customers' server consolidations. Developed the infrastructure architectural design and services implementation project plan. Worked to staff the project with technical professionals through interviews and technical questioning. Developed the detailed implementation process plans and led the technical team through the implementation process. Made effect use of various communications and training methods to increase the skill level of the technical staff throughout the project. Worked through various scheduling problems, resource constraints and technical issues during the implementation process. Delivered significant cost savings through the consolidation of over 100 servers into a physically smaller, but more robust, resilient architecture using

virtualization technologies.

- Developed and instructed an AIX-Linux pSeries training class delivered around the country to ISV's (Independent Software Vendors). This class has been a key in helping ISV's technical personnel in transitioning their skills to IBM's pSeries platform.
- Assigned as an IT Architect on an Infrastructure Resiliency Assessment for a large utility company in upstate New York. The customer executive team was very impressed with the detail of information that was collected and presented in the relatively short period of time allocated for the assessment, (4 weeks). The result was implementation of the recommendations resulting in cost savings and improvement in system availability.
- Assigned as a technical and project manager on IBM Tivoli Storage Management contract that involved, AIX-HACMP servers, W2K-MS Clusters, ESS and L TO SAN configuration at a national defense contractor company. The end results and the education they received helped them more easily transition from a Sun environment to an AIX/Linux environment as well as establishing documented procedures for ensuring system currency.
- Provided configuration, installation and upgrade support from for a county-wide 911 server on AIX, running IBM TXSeries, SNA, Encina and DCE used to interface with IBM Mainframe CHAIRS program, as well as links to the 911 center and State DMV database. The support provided and recommendations implemented helped to ensure system availability on a critical link in the county's 911 system.
- Investigated the potential cause of an AIX server outage and made recommendations for future prevention at a worldwide consumer electronics company. The customer management team was extremely satisfied with the study and the deliverable material presented. A result of this study allowed the customer to implement the recommendations to improve system availability.
- Designed, installed, upgraded and consulted on IBM's GPFS (General Parallel File System) at several customers using 2 node and 4 node remote site clusters with a tiebreaker node at a 3rd site in the cluster.
- Improved the procedures and support processes for Disaster Recovery for a major insurance company client and supported them during their Disaster Recovery exercise. The result of these efforts is that the customer has experienced a dramatic reduction in Disaster Recovery test times from 3-4 days to 1-2 days.
- Designed and installed the infrastructure architecture for a high-available Linux 3- Tier Web service. Created the supporting documentation and training of the support staff for daily administration and ongoing support of the service.

Professional Summary

Senior Technical Team Leader, Senior Managing Consultant providing consulting, best practice architectural design and implementation services to IBM customers on leading edge IBM technologies in the US.

- Successful as a Technical advisor, Subject Matter Expert & Architect. Highly skilled in leading teams and in technology mentoring on Enterprise class UNIX servers, Enterprise class Storage solutions and in High Availability.
- In-depth experience in enterprise server virtualization, best practice architecture & design, implementation, consolidation, migration & operations. Proven leadership track record across a variety of industries, including telecommunications, defence, finance, government, entertainment and health care sectors.
- Possesses more than twenty years of high quality "operating system software experience" that encompasses systems management, best practice architecture, system design, installation, configuration, system integration, migration, system programming, performance tuning and troubleshooting experiences on a variety of Enterprise class and Highly Available UNIX based machines running databases and ERP software solutions.
- Consistent and proven track record in completing complex mission critical engagements while ensuring a high degree of client satisfaction.
- Pursues new challenges to stretch abilities, to expand knowledge. Recognized for service delivery performance as well as for unique and creative perspectives on problem resolution.

Employment History and Related Experience

IBM, Consulting IT Specialist, Irvine, California, United States of America, 2000 - To date

Technical team lead, Managing Consultant providing consulting and implementation services to customers on leading edge IBM technologies. Specialized in High Availability, Power7/Power6/Power5 Virtualization & Micropartitioning and Storage.

- IBM Power7, Power6, Power5+, Power5 and Power4 hardware architecture and in applying technologies.
- Power7, Power6, Power5+/5 Virtualization, LPAR, DLPAR
- AIX, NIM, SAN storage, UNIX, Korn shell scripting and automation, High availability
- SAN storage products and services - Flashcopy, SAN Volume Controller, TSM

- Consistently "a top performer" 2000-2011
- Received 3 "Thanks Award" for exceptional customer satisfaction on projects - 2009
- Delivery "Wall of Excellence", Customer Appreciation for technical services - 2007
- Received 3 "Thanks Award" for exceptional customer satisfaction on projects – 2007
- IBM Certified - IT Specialist Profession - Performance Management - 2003, Recertified in 2006
- Merit promotion in 2001
- Received an award for technical contributions in 2000

Sequent Computer Systems, Professional Services Consultant, Irvine, California, USA, 1996 - 2000

Technical team leader and implementation specialist for mission critical enterprise class UNIX projects at various Sequent customer locations in the United States.

- Installation, Configuration, Administration, Migration and Tuning of Enterprise class mission critical UNIX systems
- Technical support, Troubleshooting, Systems Management and operating system upgrades of complex UNIX installations
- Storage implementation and administration - SCSI and Fibre
- Technical Design of a UNIX system
- Documentation preparation & delivery — Technical and Configuration information
- Skills transfer to customer staff

Achievements:

- Received Western Region Q3 Consultant of the Quarter award in 1998
- One of twenty-five nominated from the American Operations for Employee Excellence Program in 1997

Business Systems Group, Lead Software Architect, Bombay, India, 1996 - 1996

Lead architect for designing and developing software solutions for the Computer Education and for the Telecommunications industry. Innovated new tools and solutions that were used and highly appreciated in the market.

- Designed and developed "On-line Grading Module" a suite of tools for conducting online tests in a multi-user UNIX environment. The software solution utilized UNIX ksh and "C Language".

- Innovated custom tools and procedures for the Telecommunications industry using "Data Structures in C Language"

Microwave Communications Limited, Senior Systems Executive, Bombay , India, 1994 - 1996

Technical team leader, Senior Systems Analyst for all technical requirements for the software infrastructure. Achieved systematic implementation of Paging software in Mumbai and assisted other Microwave locations in India with software setup and with best practices in Paging, Billing Software and UNIX system administration.

- Innovated custom tools and procedures utilizing "Data Structures in C Language".
- Designed and developed high performance custom utilities to achieve automation and to extract reporting information from the multi-vendor Paging and Billing software database. Implemented custom tool at various locations in India.

Kale Consultants, Programmer Analyst, Bombay, India. 1994-1994

Technical analyst for software implementation project.

Aptech Computer Education, Software Consultant, Bombay, India, 1993 - 1993

As an industry expert, provided advanced software training to the APTECH faculty and staff on UNIX and C Language.

TATA Engineering & Locomotive Company, Systems Trainee, Bombay , India, 1990 - 1994

Responsible for providing Systems Operations services, Systems Management, System Software and tools development in a multiuser UNIX environment. Provided unique perspectives on problem resolution and automation of tasks on a variety of enterprise class UNIX platforms. Performed and achieved over and above the stipulated job requirements.

- System administration of Enterprise class UNIX systems.
- Design and develop System administration and automation tools - UNIX ksh.
- Job scheduling and automation via UNIX tools - ksh.
- Backup and Recovery of user data.

National Institute of Information Technology, Business Development Executive, Jamshedpur, India, 1989 - 1990

Business development, including business plan & sales strategy development. Generated new business leads for NI IT software courses. Created and implemented an effective advertising strategy. Offered the job by Centre Management and selected for this position while doing Systems

Management course at NI IT - Jamshedpur.

Large financial institution, Level2 team skills assessment and support, Consulting IT Specialist, 2012 - To date

As a lead architect, worked with the customer L2 team handling daily operations and support, analyzed the support activities and provided recommendations for service improvement. The service focused recommendations encompassed virtualization best practices, AIX best practices, AIX upgrades, Firmware upgrades and PowerHA components in a Power7 environment. These service focused recommendations were presented to the customer management for implementation across the server enterprise. Created a LA B environment for IBM Systems Director and assisted with the planning and implementation activities for IBM Systems Director 6.3. The LAB environment for IBM Systems Director showcased the use cases that were of interest to the customer.

Retailer of home improvement and construction products and Services, pSeries Healthcheck and AIX Performance tuning, Lead design architect and implementation specialist, 2012 - 2012

Played a lead role for an AIX performance tuning requirement. As a pSeries and a storage specialist, conducted a comprehensive Health check of the p7 environment, AIX/pSeries and EMC storage disks at a leading home improvement retailer based out of Austin.

- Assisted the operations team with AIX performance tuning and with data gathering and analysis during the assessment phase.
- Assisted the technical team in adopting more efficient business processes on AIX and in creating a run-book for the operations team.
- The final best practices recommendations helped the customer tune the p7 LPAR & AIX environments.

Large financial institution, p770 and NetApp storage implementation, Lead design architect and implementation specialist, 2011 - 2012

Lead architect for a p770 implementation requirement around NetApp storage. As a sole perform resource from IBM, assisted the customer on Virtual IO Server network and storage design, on p770 implementation and on the best practices. Assisted the customer staff in hands on implementation steps. Highly successful implementation from the customer and from the IBM standpoint.

National leader in providing health care services & medical research, PowerHA implementation and testing around EPIC application, Consulting IT Specialist, 2011 - 2011

Lead architect for a PowerHA implementation and testing requirement on IBM p7 hardware. As a sole perform resource from IBM, assisted the customer in

Resource 70

Midrange Infrastructure Architect/Engineer

PowerHA implementation and in conducting PowerHA testing. Highly successful implementation from the customer and from the IBM standpoint.

World's largest publisher and distributor of children's books, HealthCheck and AIX Performance tuning, 2011 - 2011

Played a lead role for an AIX performance tuning requirement. As a pSeries and a storage specialist, conducted a comprehensive Health check of the p7/p5 environment, AIX and NetApp storage disks at a leading distributer of children's book based out of New York. Satisfied with the services provided in 2010, the customer requested for my services by name. The final best practices recommendations helped the customer tune the p7/p5 LPAR & AIX environments and meet the load requirements during the peak business season.

Leading provider of carrier-neutral data centers and internet exchange, IBM p750 implementation and migration, Lead design architect and implementation specialist, 2011 - 2011

Lead architect for a Virtual IO Server network and storage design on 5 p750 frames for an Oracle migration requirement. The design included all virtualized components and utilized PowerHA, PowerVM and LPM technologies. The design architecture followed industry level best practices and created a solid foundation for the LPAR build out and subsequent migration/implementation. As a sole perform resource from IBM, assisted the customer during the design phase, implementation phase and during the migration phase. Highly successful implementation from the customer and from the IBM standpoint.

Leading wholesale provider of technology products & supply chain svcs, Power7 p770 Migration – SAP, Lead design architect and implementation specialist, 2010 - 2011

Architected Virtual I0 Server network and storage designs on 3 p770 frames for a SAP migration requirement. The design included all virtualized components and utilized PowerHA, PowerVM and LPM technologies. The design architecture followed industry level best practices and created a solid foundation for the LPAR build out and subsequent migration/ implementation.

World's largest publisher and distributor of children's books, AIX Performance Tuning, 2010 - 2010

Played a lead role for an AIX performance tuning requirement. As a pSeries and a storage specialist, conducted a comprehensive Health check of the p5 environment, AIX and EMC storage disks at a leading distributer of children's book based out of New York. The final best practices recommendations helped the customer tune the p5 LPAR & AIX environments and meet the load requirements during the peak season.

Resource 70

Midrange Infrastructure Architect/Engineer

Multiple Bidding & Proposal assignments, Multiple assignments, 2010 - 2010

pSeries expert, provided assistance during the DC migration activity at a leading insurance company and at a leading department store. As an experienced practitioner I have been working with the sales team in providing the work breakdown structure for resources required for supporting the pSeries environment at a leading global financial services firm with investment, research, banking, finance, insurance, and other businesses.

- As a Technical Solutions Owner, I have been assisting the IBM sales team in creating RFP proposal and in scoping project timelines for a Power7 implementation requirement at a leading wholesale provider of technology products and supply chain services.

World leader in convenient snacks, foods and beverages, Virtual I0 Server Architecture Analysis, 2010 - 2010

As an expert in virtualization and PowerVM, conducted an architecture analysis of the Virtual I0 server configuration at a leading convenient snacks, foods and beverages company.

Fortune 500 electric and natural gas utility serving company, Migration and Best practice architecture on PowerHA, PowerVM and AIX, Consulting IT Specialist, 2010 - 2010

As a lead implementation Specialist provided best practice architecture on a p6 hardware for a PowerHA, PowerVM environment. My recommendations for migrating to a Power6 based environment assisted the customer in planning out the migration steps. Towards the end of the engagement, I provided the customer with various test cases for the system and for the server environment testing.

Leading defence company and an advanced technology company, Power6 PowerVM, PowerHA & BladeCenter implementation, Consulting IT Specialist, 2009 - 2010

As a sole member of the implementation team and as an implementation architect, provided BladeCenter based PowerVM, PowerHA and AIX implementation services centered around the NetApp filer storage. Successfully implemented the PowerHA clusters in a complex and mission critical customer environment.

Leading security software firm, PowerVM Best Practices on Power6, 2009 - 2009

Pprovided PowerVM best practices to a leading security software company based in the Bay area. Provided industry level best practices for virtualization, methodology documentation as well as knowledge transfer training to the customer staff.

Resource 70

Midrange Infrastructure Architect/Engineer

IBM internal B&P requirements, Multiple Bidding & Proposal assignments, 2009 - 2009

As a Technical Solutions Owner, assisting the IBM sales team in creating customer proposals for a Power6 and Bladecenter based implementation requirement at a leading defense company and for a Power6 based migration requirement at a leading aerospace company.

- As an experienced practitioner I have been working with the sales team on a critical performance tuning engagement on Power5 p595 hardware at a leading cellphone service providing company.

Utilities Company, Augmentation Staff, Lead Consulting IT Specialist - p5, AIX 5.3, HMC, Virtualization, HACMP & Storage, 2007 - 2009

As a Lead Technical resource provided best practice solutions on AIX, p5/p5+ implementation, AIX Performance Tuning, AIX HealthChecks, Server consolidation, LPAR migration, Virtualization, HACMP and on Enterprise Storage.

Semiconductor manufacturer, p5 Virtualization Implementation, Lead implementation specialist - p5 Virtualization, 2007 - 2007

As a p5 Virtualization expert, implemented a dual VIO server environment and provided Virtualization services to a leading semiconductor company based in the Bay area. Provided industry level best practices for virtualization, methodology documentation as well as knowledge transfer training to the customer staff.

Music Company, AIX LPAR, P5 and Storage Performance Tuning, Lead Consulting IT Specialist & SME - AIX LPAR, p5 and Storage, 2007 - 2007

As a pSeries and storage specialist, conducted a comprehensive Health check for the p5 environment, AIX and ESS 800 storage unit at a music company based out of Indiana. The final best practices recommendations report helped the customer tune the ESS 800 storage unit as well as the p5 LPAR & AIX environments.

Health Care Organization, Lead p5 Implementation, p5 Implementation Specialist, 2005 - 2006

As a pSeries implementation specialist, installed around 80 p5 frames, setup LPARS, led configuration of p5 hardware, installed and configured HACMP, installed and configured NIM server, installed WebSphere application server, WebSphere Portal Server, led multiple AIX upgrades, implemented Virtualization and above all provided innovative solutions during various phases of the project.

Resource 70

Midrange Infrastructure Architect/Engineer

Leading cosmetic company, p5 LPAR Implementation, Lead p5 Implementation Specialist, 2005 - 2005

As a pSeries expert, installed p590 frames, led the setup of LPARs and assisted with the EMC Storage connectivity at a leading cosmetic company based out of New Jersey.

Leading Retail Outlet, pSeries LPAR Implementation, Lead pSeries Implementation Specialist, 2004 - 2004

As a pSeries expert, installed LPARs, configured ESS storage and installed WebSphere at a leading retail outlet based out of New Jersey implementing Demand forecasting i2 tool.

Leading Credit Card Company, Korn shell scripting, Korn shell scripting expert, 2004 - 2004

As a storage and Korn shell scripting expert, analyzed customer requirements, designed and developed Korn Shell scripts for carving out Terabytes of DS4000 SAN storage at a leading credit card company based in the Bay area. The project required building Korn shell scripts to facilitate the AIX LVM buildout of a large D B2 database running on multiple AIX logical partitions. The final product increased the client productivity by over 200%.

Health Care Association, Nashville, Tennessee, United States of America, AIX sendmail configuration and tuning, Lead Sendmail Configuration and Tuning Specialist, 2004 - 2004

As a lead sendmail expert, provided best practices on sendmail, provided effective solution that successfully handled error recovery while working with HCA's Lawson ERP application and the Exchange server. The final solution addressed the customer needs completely and the customer was very satisfied.

Entertainment Organization, Korn shell scripting and pSeries Implementations, Senior Consulting IT Specialist - pSeries and Korn shell programming, 2003 - 2004

As a pSeries implementation and scripting expert assisted the customer with Korn shell scripting based automation and with pSeries implementation.

Education, Sendmail Consulting, Lead Technical Resource - AIX and UNIX Sendmail, 2001 - 2004

As a sendmail and systems management expert, provided technical leadership to the IBM technical team on an AIX operating system upgrade and AIX sendmail 8.9 configuration/performance tuning engagements on a highly utilized AIX/RS6000 server. Led the technical team towards successful completion of operating system upgrades on two Production servers and also on a sendmail ruleset configuration assignment on the e-mail server. While on the engagement I also provided performance analysis and best practice

recommendations to the customer IT staff and management. During the latter portion of the project I worked on the project as a sole perform resource.

Disk Drive Manufacturer, NUMA-Q Migration, Lead Consulting IT Specialist - NUMA-Q and AIX, 2001 - 2001

As Systems Management expert, provided RS/6000 (H80 and S85 with ESS Shark) and NU MA-Q 2000 systems management and administration services to a leading disk drive manufacturing company migrating Oracle Financials from an IBM NUMA-Q 2000 to a RS/6000 platform. I was instrumental in the proof-of-concept stage when the customer was proofing the environment in a 2-tier Citrix, NUMA-Q and 3-tier Citrix, NUMA-Q, RS/6000 architectures. I provided quality insights to the IBM Project Manager and to the customer on various migration planning and configuration issues.

Large Manufacturing Company, BaaN Implementation and DC Relocation, Lead Consulting IT Specialist - Dynix/ptx, Storage & Korn shell automation, 2000 - 2002

Subject Matter Expert for all technical tasks on the IBM NUMA-Q server. As a technical lead, I provided System installation, capacity planning, performance tuning and systems management support services during various phases of the BaaN V ERP implementation project.

This engagement was in a demanding fast paced environment and I won the customer's confidence with my skills. I automated routine jobs using UNIX shell scripts, expect, tcl/tk scripting tools, MKS Toolkit on NT which improved the team productivity by at least 50%. Owing to the extensive level of automation, the customer has been successful in handling UNIX system administration with minimum resources. In Oct 2001 I successfully assisted this customer in planning and moving their Data Center from CA to UT. While on the project I recommended and set up disaster recovery procedures and policies and also provided quality documentation for the work that was performed. In this role I enhanced my Oracle database technical knowledge and people skills.

Major online retailer, Disaster recovery & operating system Upgrade, Lead Professional Services Consultant - NUMA-Q Implementation & support, 1999 - 1999

Provided technical leadership on multiple Production class operating system upgrade requirements. As a Dynix/ptx expert I collaborated with other members of the team on DR assessment assignment. In 2000 & 2001 I was called again by the customer to perform operating system upgrades on the Production and Development systems.

IBM

Resource 70

Midrange Infrastructure Architect/Engineer

Direct Selling Promotional Company, Oracle Financials ERP Implementation, Lead Professional Services Consultant - NUMA-Q Implementation & support, 1999 - 1999

Technical Lead and the Subject Matter Expert for all technical tasks on the IBM NUMA-Q server. As a UNIX and NUMA-Q SME I provided System installation, performance tuning and systems management support of the IBM NUMA-Q systems during various phases of the ERP implementation project.

Refiner and marketer of petroleum products, Marketing Data center move and Insourcing, Project Lead Professional Services Consultant - NUMA-Q, Storage, Backup, 1998 - 1998

Technical Lead and the Subject Matter Expert for all technical tasks on the IBM NUMA-Q and on the Sequent Symmetry 5000 servers. While on the engagement I provided System installation, server consolidation and migration, capacity planning, performance tuning and systems management support services on the IBM NUMA-Q/Dynix systems during various phases of the Oracle Financials 11 implementation project.

Data storage pioneer and a longtime leader in the hard drive Industry, Oracle Financials ERP implementation, Professional Services Consultant - ptx/CLUSTER, NUMA-Q, Storage, Backup, 1996 - 1998

Provided systems management services on a Dynix/ptx based Sequent platform. Guided the customer during various phases of the project while providing quality technical solution and support.

Key Skills and Knowledge

- 22 years AIX experience
- 7 years Advanced POWER Virtualization, including VIO, Live Partition Mobility, and NPIV SAN virtualization
- 12 years high availability experience (HA/CMP & PowerHA)
- 17 years backup & recovery experience, including disaster recovery

Professional Summary

Career with IBM has principally been in systems engineering and architecture for mid-range solutions in State Government. Strengths include analyzing operations to develop solutions to fit unique business needs, developing and customizing implementation plans to meet client needs, coordinating system implementation for complex AIX installations, and providing continuing support for clients of IBM. Recognized leader in Tivoli Storage Management (TSM) and in Disaster Recovery testing. Extensive experience with High Availability solutions combined with AIX. Proven track record in successful AIX installations and is sought after by both her peers and her clients for her outstanding knowledge of the AIX environment.

Employment History and Related Experience

Commonwealth of Pennsylvania - Liquor Control Board, Team Lead for Architecture, Infrastructure, Implementation, and Support (PowerVM/AIX), 2009 – To Date

Responsible for the architecture, implementation, management, and documentation of the POWER (AIX) ERP servers.

- Led design and implementation of Advanced POWER Virtualization, including NPIV SAN virtualization, Live Partition Mobility, and advanced hardware virtualization.
- Led the standardized build processes for AIX LPAR's.
- Technical lead in creating AIX gold images for all AIX LPAR's.
- Led the successful completion of an AIX standardization and best practices project, resulting in increased efficiencies, security, and availability.

Corporation Fortune 400 International Engineering Corporation, Consulting Assignment for PowerVM/AIX & PowerHA in SAP Environment, 2012–Present

Brought in to help stabilize a troubled account. Implemented AIX and PowerHA standardization and best practices, resulting in increased efficiencies, security, and availability. There have been no subsequent system outages.

- Led the design and implemented a project to increase user security.
- Consulted account team on architecture and design for a hardware refresh for POWER (AIX) servers. Design enhanced performance, efficiencies, security, and availability using advanced virtualization.

Pennsylvania Department of Labor and Industry – UCMS Project, 2010–2011

- Developed technical requirements and was responsible for the

architecture, design, and sizing for a hardware refresh for the POWER (AIX) servers, including PowerHA.

- Managed the implementation, including developing detailed AIX and PowerHA build requirements. All project deadlines were completed on time and within budget.

Commonwealth of Pennsylvania - Integrated Enterprise System ERP Project, Team Lead for Architecture, Infrastructure, Implementation, and Support (PowerVM/AIX, HACMP, and TSM), 2001–2010

Responsible for the architecture, implementation, management, and documentation of the Power (AIX) SAP server landscapes and Tivoli Storage Manager (TSM) backup environment for both the initial implementation and subsequent hardware refresh.

- Led the standardized build processes for AIX servers while also providing support for AIX, PowerHA clusters, and Tivoli Storage Manager (TSM).
- Technical lead in creating AIX gold images for all AIX LPAR's.
- Developed customized processes, standards, and procedures for AIX server monitoring, change management, and problem management based on best practices.
- Responsible for the architecture and implementation of the TSM backup server supporting all AIX and Tivoli environments. Worked with IBM development and the SAP/Basis team to architect, develop, and implement customized backup solutions and worked with these groups to test recovery of SAP/Oracle databases.
- Responsible for creating, testing, and documenting disaster recovery procedures for the TSM backup server and all AIX servers. Worked with Windows administrators to implement backup/recovery solutions and perform testing for Intel servers. This resulted in 8 successful disaster recovery tests. Successfully recovered the TSM backup server and 40 AIX and Intel servers, restored over 10TB of data and met all primary and secondary recovery objectives.

Pennsylvania Department of Labor and Industry - Bureau of Workers' Compensation, Team Lead for Architecture, Infrastructure, Implementation, and Support (AIX and TSM),1996 2004
Initial build of the infrastructure and rollout.

- Led the initial architecture, design, implementation, and management of a complex client/server environment, involving over 50 AIX Servers, NT servers, and over 600 PC desktops, involving 24 remote locations.
- Created a sandbox lab and tested all components of this distributed application in a lab environment, including the development of a gold image process which allowed for rollout of servers to Field Offices to be executed remotely. This process saved the project money as remote travel could be avoided.

- Implemented the Tivoli Storage Manager (TSM) backup server, supporting over 50 clients with 1.5TB of data.

Migration of 50 AIX servers at Headquarters and 24 Field Offices.

- Led the efforts to develop migration and implementation plans for 50 servers.
- Successfully spearheaded the migration of these 50 installed servers upgrading AIX, CIMS application, Lotus Notes, Sybase, Visual Image, TSM, Netview, and Software Distribution software products. During the migration effort, was also responsible for documenting, implementing and successfully testing TSM disaster recovery.

Relocation and implementation of the BWC equipment to DLI Server Farm.

- Led and participated in a follow on project to plan for and relocate AIX servers to the DLI Server Farm. This project included migration and consolidation to new enterprise platforms within Labor and Industry, which helped Labor and Industry reduce overall operating costs.

Pennsylvania Department of Labor and Industry - Office of Information Technology, Team Lead for Architecture, Infrastructure, Implementation, and Support for Initial Build (AIX, HACMP, and TSM), 2003–2004

- Provided AIX infrastructure and technical consulting for the OIT Server Farm infrastructure to support mission-critical distributed applications including the Department of Labor & Industry's Bureau of Workers' Compensation imaging system. This allowed the department to provide uninterrupted service to the state wide locations across Pennsylvania while adding applications to improve service to unemployed workers.
- Provided OIT assistance in the creation of AIX gold images for all BWC AIX RS/6000 servers and the development of a standardized build process for other AIX environments.

PHEAA, Team Lead for Architecture, Infrastructure, Implementation, and Support (AIX, HACMP, and TSM), 1998-2001

- Architected, implemented, and managed a 20 AIX SP Node system involving a Loan Guarantee system supporting four states, Lotus Notes for 5,000 users and ERP for human resources.
- Was instrumental in the installation of the Tivoli Storage Manager (TSM) server at PHEAA.
- Created and implemented a disaster recovery test plan for PHEAA. Led the successful design, planning, documentation, and testing of PHEAA's first complete open systems disaster recovery test which was a complete success.

IBM

Resource 71

Midrange Infrastructure Architect/Engineer

Pennsylvania Department of Labor and Industry - Office of Vocational Rehabilitation (OVR), Team Lead for Architecture, Infrastructure, Implementation, and Support (AIX and ADSM), 1997-2000

- Architected, designed, and implemented a client/server solution, involving over 20 AIX Servers in 15 remote locations. Rollout to all locations was accomplished via remote access allowing flexibility and saving money on travel and expenses.
- Responsible for the overall backup strategy and testing of disaster recovery utilizing Tivoli Storage Manager.

UNISYS

IBM

Resource 72

Midrange Infrastruture Architect/Engineerg

Key Skills and Knowledge

- Systems management solution design
- Tivoli Monitoring Implementation
- Systems Automation and Design
- Network Management Implementation

Professional Summary

Designed and implemented servers, enterprise, and network management systems for over 33 years. Experience includes the design, project management, implementation and troubleshooting of systems and networking management software solutions from IBM, Tivoli, and Netcool. Strong technical knowledge in Tivoli distributed systems management software using it to monitor operating systems, databases, networks and applications. Experience with AIX, zLinux, and Windows operating systems, and UNIX shell and Perl scripting.

Supported customer environments with the design, project management, implementation and troubleshooting of systems, and networking management software solutions. Supported the software sales organization with technical assistance during sales and installation activities. Provided systems programming support to IBM in the areas of VM Systems programming and IMS Database Administration on VM and MVS mainframe systems.

Employment History and Related Experience

IBM Corporation, Commonwealth of Pennsylvania, Power House Project, 2007-To Date

Designed a Tivoli systems management solution to the support the customer environment which included Custom applications, Oracle databases, MQSeries integration, WebSphere Application Server, IBM Apache Web servers, zLinux servers on a TCP/IP network.

- Established linkage and monitoring support for z/operating system Omegamon agents supporting MQSeries, DB2, IMS, Storage and z/operating system.
- Implemented the Tivoli software to support the environment and configured based upon customer requirements. The Netcool Omnibus/Impact is the focal point of events as it is used by the Operations staff to manage the servers and network. This effort provided for early detection of problems, proactive management of the servers and network, and increased systems availability. Currently providing ongoing consultative and production support.

IBM Corporation, Commonwealth of Pennsylvania, Integrated Enterprise System ERP Project, 2001-2010

Designed a Tivoli systems management solution to the support the customer environment which included SAP applications, Oracle databases, MQSeries integration, AIX and Windows servers on a TCP/IP net-work.

- Implemented the Tivoli software to support the environment and configured based upon customer requirements. The Tivoli Enterprise Console was the focal point of events as it was used by the Operations staff to manage the servers and network. This effort provided for early detection of problems, proactive management of the servers and network, and increased systems

availability.

- Currently providing ongoing consultative and production support.

IBM Corporation, State of Delaware, Network Management Implementation, 2002-2002

Developed an overall integrated network management strategy.

- The SNMP-based network management system integrated with event correlation and reporting tools provided the client with a solution that performs root-cause analysis of the network failure, performs automated actions to resolve the problem and compiles management reports. The client was able to anticipate and prevent network outages as a result of the implementation, and to react more quickly to problems. This increased network availability and end user satisfaction.

IBM Corporation, Commonwealth of Pennsylvania, ESM Design and Implementation, 2001-2002

Successfully lead the Tivoli implementation based upon Event Management Design Workshops.

- The Tivoli solution gathered events from 30+ event sources including network devices, storage management, SAN devices, and AIX and Windows operating systems and forwarded them to the Tivoli Enterprise Console where selected events were then sent to the Remedy Problem Management system. Installed and customized Tivoli Enterprise Console to Remedy Integration module.

IBM Corporation, Pitney Bowes, Inc., System Management Implementation, 2000-2001

Implemented, customized, and delivered skills transfer on several Tivoli Event Management solutions.

- Customized the NetView network management system to monitor the network and send events to the Tivoli Enterprise Console for customer support notification.
- Implemented Tivoli Remote Control application then developed and delivered classes to Help Desk personnel.
- Installed and customized the ARS Plus module for Tivoli which enables Tivoli to Remedy problem ticket generation. Tivoli Enterprise Console was the focal point of events as it was used by the Operations staff to manage the servers and network. This effort provided for early detection of problems, proactive management of the servers and network, and increased systems availability.

Performance Specialist

Key Skills and Knowledge

- Performance test management
- Performance test planning & design
- Performance test process

Professional Summary

Thirty-four years experience in information technology including both corporate IT and professional services consulting. A Certified Managing Consultant in the IBM Performance Management & Testing Practice; having served the practice as both a Principal and Practitioner. Significant experience and expertise in leading and performing Performance, Load, & Stress Testing, as well as Full Lifecycle Test Consulting engagements. As one of the original members of the testing practice in the Northeast Region, played a major role in the development of much of the intellectual capital currently integrated into IBM's Performance Test Consulting Methodology.

Employment History and Related Experience

IBM Corporation, Certified Managing Consultant, Tampa, Florida, 1998-To Date

Served as Engagement Manager and Test Consultant on numerous performance, load & stress testing engagements.

- Exposed customers to a fundamental understanding of performance testing and the process employed by IBM.
- Led customers through the requirements gathering process in the areas of goals & objectives, environment, tools, workload, and reporting.
- Developed detailed test plans, facilitated the creation of test environments, architected simulated workloads, and led the execution of the test followed by the analysis and reporting of results.

Computer Horizons Corp., Engagement Manager, Mountain Lakes, New Jersey, 1994-1998

Served as a Client Engagement Manager and IT Management Consultant developing and delivering technology solutions, and providing IT Management expertise across a wide range of industries and technology platforms.

- Worked extensively developing new technology environments for businesses whose focus was shifting from "back-office" processing to front-line customer service.
- Specialized in the areas of document and content management, imaging, workflow, business process reengineering, and electronic data interchange.
- Led a consulting practice specializing in Y2K compliance for enterprise applications.

John Hancock Financial Services, Director, Boston, Massachusetts, 1978-1994

Fifteen years in corporate information technology. Progressed through

Professional Summary

Senior-level IT Specialist and Consultant with 30 years diverse experience in systems management, network management, and problem management. Proven expertise with systems and network problem isolation and resolution as well as performance analysis, design, and implementation. Specializing in application performance engineering, providing critical information required for data center relocations, server consolidations and virtualization. Consulting skills in troubleshooting techniques and tools, systems and network management processes, and team leadership. Expert in developing and implementing action and resolution plans that address and resolve problems in systems and network availability, reliability, and performance.

Employment History and Related Experience

IBM, Senior IT Consultant, Memphis, Tennessee, 1978-To Date

Application performance engineering in support of data center relocations/consolidations and application performance management. Capture, review, and analysis of network application performance. Network management consulting.

Assignment History

Larger Consulting Firm, Sr. IT Consultant, 2009-2010

Conducted workshops on major applications/services involved in data center relocation.

- Determined application/server dependencies.
- Worked with Data Center Relocation team in developing move groups.
- Performed latency impact analysis.
- Provided recommendations to insure a successful move.

Large Manufacturing Company, Sr. IT Consultant, 2009-2009

Responsible for Problem Determination and Problem Source Identification on applications running slow as result of data center move to Service Provider. Collected data including packet captures on application flows, reviewed with client personnel, and developed approach for improving performance.

- Conducted workshops to evaluate future application moves.
- Performed application performance engineering to insure successful transition.

Medical Supply Company, Sr. IT Consultant, 2009 -2009

Responsible for Problem Determination and Problem Source Identification on poor performing applications after relocating.

- Reviewed application flows and requirements with client in workshops

Resource 74

Performance Specialst

- Collected data on application flows.
- Analyzed data.

Leading Service Provider, 2008 -2009

Responsible for the discovery and review of impact on applications involved with data center relocation.

Large Global Security Company, Team lead, Data collection and analysis, 2006 - 2008

Developed a network assessment for support of Enterprise Transformation project to include consolidation of 7 data centers. Responsibilities included application performance impact study, application discovery, server impact analysis, and application testing.

Automotive Company, 2005 -2006

Developed a network management assessment and plan. Provided consulting services to review and develop strategic direction for a network management system for BMW North American Dealership Support Network.

Large Hotel Chain, 2004-2005

Developed model of new application being deployed to Marriott properties to determine network requirements.

Large Public School System, 1997-2003

Responsible to develop, build, and run the Network Operations System for 200+ site ATM network. Includes deployment of Tivoli Netview and DM, Solarwinds Orion and various network management tools.

Various, 1996-1997

Delivered nationwide software support including problem determination and problem resolution for mid-range systems.

Various, 1987-1996

Provided nationwide on-site support to field personnel for midrange systems. Delivered nationwide software problem determination/problem resolution for mid-range systems. Acted as "Top Gun" for mid-range systems hardware support.

Various, 1978-1987

Responsible for maintaining hardware for various mid-range system accounts.

- DNS scavenging WINS consolation
- DHCP standardization
- Researching, testing, and deploying SCOM updates
- Researched and designed SCOM Disaster Recovery environment
- Day-to-day alert monitoring;
- Implement custom monitoring of performance
- Develop and deploy availability metrics based on customer requirements.

Professional Summary

Over twenty four years of system management experience. Project lead for numerous activities with Six Sigma and Microsoft Project management experience; Subject Matter Expert for Microsoft Active Directory, DNS, DHCP, WINS, and Clustering technologies. Substantial experience installing Microsoft Windows NT, Server 2000, Server 2003, and Server 2008 Management tools. A 'go to' engineer for:

- Network storage systems – NAS & SAN installation and operation
- Experience with VMware and Citrix technologies
- Server Monitoring - Microsoft SCOM, Dell IT Assistant & HP Insight Manager
- HP & Dell and servers including HP C-Class blade environment
- Chief architect of Server Provisioning process
- Server Builds, Maintenance, & Upgrades
- Local and Wide Area Network Design and Implementation

Professional Experience

Unisys, SCOM Consultant, Harrisburg, PA 2012 to Present

Delivers substantial support to the Commonwealth server environment for multiple SCOM 2007 R2 Environments; currently supports 2700+ Windows (and Linux) servers, and 500+ Web sites. Provides:

- Researching, testing, and deploying SCOM updates.
- Researched and designed SCOM Disaster Recovery environment.
- Day-to-day alert monitoring; implement custom monitoring of performance and availability metrics based on customer requirements.
- Performance and Availability Monitoring and Reporting
- Support tickets management and troubleshooting Windows, IIS, SQL and application issues.

DLA Piper US LLP, Senior Systems Engineer, Baltimore, MD, 2007 to 2012

Project lead for SCOM implementation and upgrade to AD 2008 environment. Primary SCOM engineer for daily monitoring of 600+ production servers, alert tuning & overrides, creation of new monitors, and alert subscriptions. AD activities include initial contact for all AD related errors, server additions and removals, site link & subnet updates, and ADRAP review & corrections. Provides:

- SAN environment support for EMC Clarion, HP EVA, & Cisco MDS equipment
- Lights-out facility evaluation and setup of infrastructure including layout, rack setup, power, cabling, support equipment, and migrations of AD services
- Leadership for Symantec Enterprise Vault project; created initial project implementation plan and team creation
- APC StruxureWare Central installation and maintenance for over 200 devices
- DNS, DHCP, and WINS infrastructure maintenance; DNS scavenging WINS

UNISYS

consolation, DHCP standardization
- Documentation to standardize procedures for server and storage provisioning, Active Directory, SCOM, APC equipment
- Recent training on SCOM 2007 R2: Monitoring Optimizing and Troubleshooting

Becton Dickinson, Network Specialist/Administrator, Baltimore, MD, 1998 to 2007

Delivered support for Baltimore campus and 5 remote sites; maintained Microsoft Windows servers, IBM AS400 systems, Cisco & Nortel switches, Dell/EMC Network Attached Storage & Storage Area Network. Provided:
- VMware setup for development and disaster recovery.
- Installation of Citrix farm for applications and remote access.
- Monitor and manage APC InfraStruXure Manager. Covers all ups systems for servers and networking equipment including environmental systems.
- User & Group account, maintenance, and deletion as well as
- Share creation and maintenance.
- Configuration and maintenance for all Network Printers.
- Backups for Windows systems utilizing CA Brightstore ARCserve.
- Documentation on new and updated systems.
- Installation and support of Kronos time keeping system.

Other Employment includes:

- Prudential Health Care Plan, Sr. LAN Administrator, Baltimore, MD, 1992 to 1998
- Olin Corporation, System Manager/Programmer/Analyst, Red Lion, PA, 1988 to1992
- CACI Field Services, Systems Programmer, Mechanicsburg, PA, 1988 to 1988

Education

- Loyola College, Baltimore, MD, Masters of Engineering, Computer Science. 1997
- College Misericordia, Dallas, PA, B.S. Computer Science and Mathematics, 1988

- Server Performance Analysis and Tuning.
- Developing MOM/SCOM management Pack depends on agency requirement.
- Working with agency to plan and implement projects on schedule.
- Resolving trouble ticket using Remedy Ticketing System.
- Review and updating application testing document
- Review and updating management packs in SCOM.
- Developing custom management packs for agency managed third party applications.
- Supporting applications 365/24/7
- Custom dashboard development using SCOM operational database.
- Troubleshooting VMware Host and Guest performance issue.
- Review and update documents as per agency requirements.
- Using Change Management Process for all Changes.
- Configuring and managing clusters and troubleshooting cluster related issues.

WasteSaver Inc., Senior Developer, New York City, 2000 - 2001

Develop applications to match waste removal requirements received from brokers and customers with the haulers preferences.

- Accomplished system study and design of the project, designing database coding, testing and implementation and maintaining Web server.
- Tools Used: IIS 4.0 with ASP 2.0 SQL Server 7.0, COM+, visual Interdev, visual sourcesafe 6.0, visual basic,6.0, macromedia dream weaver 3.0, Microsoft transaction server 2.0, vbscript, Java script, Maptitude for the Web and cybercash.

Easton Inc., Senior Developer, Downers Grove, IL. 2000 - 2000

Developed and implemented sales forecast reports.

- IIS 4.0 with ASP 2.0 SQL Server 7.0, COM+
- visual Interdev, visual sourcesafe 6.0, visual basic,6.0
- vbscript, Java script

First Horizon Home Loan Corporation, Senior Developer, Irving, TX, 1999 - 2000

Responsible for day-today- tasks on the production and development systems

- Maintained application for 400 Web sites for loan officers.
- Administering IIS servers and SQL Database.

Professional Summary

z/operating system Analyst responsible for providing performance engineering, programming, analysis, and support for systems on which applications are developed and deployed. The role requires in depth knowledge of multiple aspects of software including operating system software, related subsystem software, and a multitude of various program products. In depth knowledge of multiple types of hardware is also required. Expert use of software tools used to analyze and report on software and hardware effectiveness and efficiency is required. This includes, but is not limited to: creation and modification of computer programs, evaluating planned hardware and software changes, comparing alternative technologies and configurations, recommending system and subsystem performance enhancements, testing changes, and ensuring performance service levels are continually attained,. The role is key in ensuring mainframe computing dependent business goals are achieved. The role has responsibility for independently interpreting complex customer requirements, implementing solutions, and providing leadership and direction within and across competencies, sectors, and customers.

Employment History and Related Experience

OAOT/POMEROY CONTRACTOR, Performance and Measurements Analyst on contract to IBM, Harrisburg, Pennsylvania, 1999-To Date

As a Performance and Measurements Analyst, was responsible to:

- Collect of daily measurement and performance data and maintaining required retentions for existing LPARS.
- Provide Service Level reporting.
- Ensure Performance tool selection and usage provides optimum functionality with minimum resource consumption. Analyze product specifications, relevant standards, dependencies and business impact.
- Perform thorough research and analysis to identify trends for the purpose of predicting and avoiding negative performance impact.
- Perform analytical studies identifying deficiencies and developing solutions which enhance effectiveness.
- Provide input for hardware / software changes.
- Develop baselines for new SLA components.
- Perform production workload and resource analysis for the purpose of forecasting.
- Analyze and implement configuration parameters to optimize system usage.
- Create and support ad-hoc reporting.
- Provide z/operating system Workload Manager support.
- Provide SAS70 Audit support.

Resource 77

Performance Specialst

- Analyze Linux Performance Statistics
- Install and support of Omegamon z/operating system.
- Install and support Sub-capacity reporting (SCRT) and submission thru LMDS.

VENATOR GROUP INC., Data Center Manager, Camp Hill, Pennsylvania, 1987-1998

Responsible for maintaining enterprise wide Computer Operations, Job Scheduling, Report Distribution, Telecommunications, and Contingency Planning.

VENATOR GROUP INC., Resource Management Technician, Camp Hill, Pennsylvania, 1978-1987

Establish and provide a comprehensive management reporting system. Capacity planning and forecasting, performance and workload analysis Impact analysis of new applications on system resources. Support Chargeback. Perform modeling and simulations for hardware / software acquisitions.

Education

Performance Specialst

Key Skills and Knowledge

- Application delivery optimization and tuning; i.e. understanding how the application interacts with and impacts the network, and how the network interacts and impacts the application, especially how it relates to data center optimization projects such as data center and / or server consolidation or application migration.
- Strong leadership skills, solution design based on overall customer requirements, and building customer relationships.

Professional Summary

An experienced Senior Consultant with concentration in network application performance, simulation, modeling, and capacity planning. Thirty-one years in the network communications industry, twenty-six with the IBM Corporation with roles ranging from network Sales Engineer post and pre-sales technical support, network consulting, application performance optimization consulting to service offering development. Consulted in network design and implementation with an emphasis on end-to-end application performance, optimization, and scalability, systems and network management. This includes client/server, multi-tier, Web (Internet/Intranet) and Web Services.

Solves customer's complex network application performance, testing, and scalability issues using proven methodologies, effective leadership and analysis skills, modeling and profiling tools. Focus is on application delivery optimization using issue based consulting as a foundation and mathematical and discrete simulation tools to identify network and application impacts, network bottlenecks and other network application performance inhibitors. Acquired in-depth knowledge of key customer initiatives, such as Data Center / Server consolidation and application migration by working closely with IBM customers, and through the development and support of various IBM services offerings.

Employment History and Related Experience

IBM, Global Services ITS / Certified IT Specialist, Raleigh, North Carolina, 1994-To Date

As a Senior Consultant, I work in the currently named Application Performance Optimization Consulting (APOC) ICS practice.

- Provide team leadership through engagement management.
- Responsible for solution development, design and delivery.

IBM, Marketing Branch Office Communications Specialist, San Diego, California, 1989-1994

Provided pre and post-sales support of all IBM hardware and software networking products such as the 3174 and 3745 controllers, VTAM and NCP, with emphasis on emerging SNA and IP based LAN and WAN technologies.

IBM, Data Communications Systems Engineer, Rolm Company, New York, New York, 1986-1989

As a Marketing Branch Office Data Communications Systems Engineer, provided both pre and post-sales support for all Rolm Company voice and data communications products.

Professional Summary

Experienced IT specialist with concentration in performance and scalability testing of complex mainframe and distributed systems. Over twenty years of professional experience with roles ranging from project lead for benchmarking of mainframe and distributed systems to integration lead of large scale distributed systems integration projects. Experienced in benchmarking and performance testing solutions of z/operating system based mainframe and e-business applications and infrastructure. Strong technical and leadership experience in a wide range of technologies and platforms. Extensive consulting experience with IBM enterprise customers in the finance industry and expertise in systems integration and testing of mainframe and Web-based applications. Worked with IBM development and field organizations as well as business partners and sub-contractors and has a good understanding of IBM's business management systems and practices.

Employment History and Related Experience

IBM, Certified IT Specialist, Gaithersburg, Maryland, 1996-To Date

Led several mainframe and e-business performance benchmarking engagements as a performance test lead and architect.

Lockheed Martin, Advisory Programmer, Rockville, Maryland, 1994-1996

Worked as an advisory programmer in Lockheed Martin's Federal Systems Division.

IBM, Senior Associate Programmer, Endicott, New York, 1984-1994

Worked as a senior associate programmer in IBM's National Service Division and a staff programmer in IBM's Federal Systems Division.

Assignment History

Capital One Financial, Project Lead, Richmond, 2009-2010

Assigned as the project lead in conducting a scalability benchmark of CSC's credit card processing application CAMS II and assisting Capital One Financial in evaluating the scalability of the on-line and batch components of CAMS II. The benchmark was part of Capital One's initiative to replace some or all portions of the existing card-holder systems - Billing, Authorizations, Account Management, Customer Information, Account Information and Terms Management.

- Assisted Capital One with gathering customization requirements for Hardware: Processors, channels, storage, I/O subsystem, coupling facilities; LPAR configuration: Number, processor definitions, weighting; CICS configuration: Number of regions, system initialization parameters; DB2 data sharing: Buffer pool tuning, thread management; Workload management and priorities and Multi-streamed batch.

IBM

- System Analysis and Recording (SAR).

- Involved with the planning and configuring of a test infrastructure and providing technical consulting and systems support for workload development, test execution and performance analysis and reporting for assessing the scalability of the base CAMS II application for supporting Capital One's projected growth of the card business.

Continuous Link Settlement, Project Lead, London, United Kingdom, 2002-

Assisted with the planning and configuring of a distributed systems infrastructure and conducted performance and fail-over testing for IBM UK's CLS integration contract for modernizing the currency settlement and clearing system that was funded by a group of major regional and reserve banks from the US, UK, Japan, Germany, France, etc.

- Led a planning session with IBM UK architects and developers to gather requirements related to building of the infrastructure and workloads, SLAs, load drivers, etc. for conducting the performance and fail-over testing.
- Assisted with the planning and building of primary and secondary sites to mirror the IBM UK CLS production system. Provided technical leadership and assistance with supporting the infrastructure, including setting up the load drivers, stubbing out-of scope interfaces and executing the performance and fail-over tests.

Global Straight Through Processing, Project Lead, Zurich, Switzerland, 2001-2002

Involved in conducting performance, scalability and fail-over validation testing of the equities settlement and clearing system for GSTP AG, which was a consortium of full service brokerages such as, Merrill Lynch, Solomon Smith Barney, CSFB, Prudential, etc.

- Assisted GSTP with identifying performance and capacity requirements and fail-over support required for redundancy and continuous operation of a mission critical system. He provided insight into the performance characteristics and architectural constraints of the system, which enabled GSTP AG to make critical decisions related to system acceptance.
- Led a planning workshop for gathering requirements, defining objectives, scope, physical/logical configurations, workload analysis, driver development, and testing strategy. He also developed and reviewed with GSTP a detailed test strategy plan and obtained customer concurrence on key issues.
- Assisted with the performance testing of mainframe and distributed systems consisting of an IBM S/390 Parallel Sysplex (GDPS) running MQ Series, CICS, DB2 and front-end Sun E4500 processors running Solaris and MQ Series. He provided support for the development, execution and performance monitoring and reporting of the workloads.

IBM

Resource 79

Performance Specialist

Goldman Sachs, Project Lead, New York, New York, 1999-2000

Assisted Goldman Sachs with the planning and execution of a performance test of their Order Book Java application using Orbix proprietary protocol for supporting connectivity and end-user interface between the Java Virtual Machines (JVMs) and the Order Book application running on a Sun E4500.

- Assisted with the execution of Order Book workloads to determine the number of users and transaction rates that can be supported with acceptable response times, number of concurrent sessions and orders that can be processed and the resource consumption from scaling the workloads and evaluated the performance and capacity of the supporting infrastructure.
- Involved in collecting system and application performance metrics to determine performance in terms of CPU busy, I/O rates, run queues, memory utilization, transaction processing time and end-to-end response times.

National City Bank, Project Lead, 1999

Involved in planning and executing a performance test of the Teller, ATM, CIMS, VRU, Call Center, DDA and SVN on-line and batch workloads to verify if the UFAM VSAM/RLS architecture would work with expanded sizes and larger volume of data for a $166 billion bank and if the hardware/software infrastructure would handle peak production transaction volumes.

- Assisted with the development of 3270 LU0 and LU2 based ATM and CI MS workloads. Extracted the message traffic from FEPI logs and captured formatted 3270 data streams for the ATM and CIMS workloads.
- Assisted with the execution of on-line workloads in a VSAM RLS parallel sysplex data sharing environment at the projected peak transaction rates along with critical path batch schedules to identify problems related to I/O bottlenecks and elongated run times.

VISA, VISA Integrated Payment Performance Benchmark Project Lead, San Mateo, California, 1998 – 1998

Assisted VISA with planning the benchmark, building a complex VM, MVS and TPF large systems environment and executing performance tests of the VIP system to evaluate new processor and storage technologies from IBM, EMC and STK and to ensure their projected growth in transaction volumes could be handled by the available resources.

- Planned switchable physical configurations of front and back end processors consisting of IBM XZ7, ZZ7 and z900 processors along with EMC DASD and STK tape systems to mirror VISA's production systems and provide variations of front and back end systems for a variety of performance/capacity configurations.

Resource 79

Performance Specialist

- Involved in implementing a solution for capturing and replaying production transactional messages and developed/maintained Acquirer and Responder scripts to simulate the Acquirer and Issuer by sending requests to the VIP system and generating matching responses.
- Assisted VISA with collecting performance measurements and testing tuning changes for improving performance. In this benchmark, there was a simulation of a high volume of SNA and TCP/IP transaction workloads running on the XZ7 and ZZ7 processors using a TPNS/MVS driver running on a z900 processor and connected to the target systems with CTCs and gigabit OSA adapters. .

United Kingdom Civil Aviation Authority, Technical Lead, Portsmouth, United Kingdom, 1993-1996

Responsible for the planning and integration testing of a complex large scale air traffic control system involving hardware and software from IBM and other vendors as an advisory programmer and systems integration technical lead of the Control and Monitoring (CMS) and Flight Data Processing (FDP) subsystems on assignment at IBM, UK.

- Assigned to a team that delivered, to the UK CAA's specifications, an integrated mainframe and distributed client/server system to provide ATC functionality for flight and radar processing and controller display support for Euro Control.
- Integrated the FDP subsystem containing enhancements to the existing National Airspace System (NAS) mainframe application and a new distributed FDP client/server implementation in which flight data was stored and processed to allow correlation with radar data and posting of electronic flight strips at controller workstations.
- Integrated the CMS subsystem to control and monitor all local and remote hardware and software components within the ATC system using hierarchical rules for propagating system status to the operator. Worked with the development and integration teams to track and manage configuration and change (code and new releases) management requests using CMVC.
- Planned and managed the production and inspection of the system acceptance test (SAT) scripts. Conducted the final system acceptance (SAT) tests to demonstrate to the customer that program specifications and requirements were met. He also supported the planning and development of operational training courses for CAA personnel.

Federal Aviation Administration, Staff Programmer/System Integration Technical Lead, Rockville, Maryland, 1988-1993

Assigned as a Staff programmer and system integration technical lead for the Federal Aviation Administration's multi-billion air traffic control (ATC) contract to design, develop, integrate and implement the next generation of air traffic control

system for the United States.

- Performed as a key member of the software integration and test (SWIT) group and technical lead of the ATC integration team. Made significant contributions towards integrating ATC functionality - flight, radar and controller display support across multiple platforms and application components and identifying and resolving system problems in the mainframe and AIX environments.
- Hands-on experience with the NAS mainframe application and supporting utilities running in native and guest modes. Gained experience with UNIX externals, commands, shell programming, file system, tools and compilers, such as ADA and 'C'. RS6000 applications included CXSS - Common Support Services providing LAN services and distributed processing support for mission critical ATC flight and radar applications.
- Documented testable system functions and interfaces. Developed tools, ATC scenarios and simulation techniques and identified areas of the system that were operationally unacceptable and made recommendations to improve functionality and performance. Provided technical guidance to team members on requirements and assisted with problem determination and resolution.

Level 2/Change Team, Senior Associate Programmer, Endicott, New York, 1984-1988

Worked on IBM VM/370 systems and provided world-wide L2/L3 software support for the VM/SP and VM/SP HPO control program and the VM/SP CMS operating system on the IBM 3090, 3081, 3083, 4381 and 9370 series of processors as a senior associate programmer on the L2 and Change team member for VM large systems support, NSD central programming services.

- Extensive knowledge and familiarity with the large systems architecture, assembler and the internal structure and function of the VM control program and CMS operating system. Worked closely with the internals of VM operating system - Installation and Migration, Directory Maintenance, Guest Operating Systems, Real and Virtual IPL, Paging, Spooling, I/O Subsystem, Interrupt Handling and Uni/Multi processor configurations.
- Developed code and documentation alterations through APARS for correcting reported failures without changing program specifications. Built and maintained second level test systems and developed test cases for recreation and testing of the original problems and verified that the alterations had preserved the program interfaces with no regression. Participated in code reviews and APAR certification processes involving new/modified development code and PTFs.

Master of Science in Computer Science

Fairleigh Dickinson University, United States of America, 1983

UNISYS

Security Administrator

This page intentionally left blank.

UNISYS

Resource 80

Security Administrator

Key Skills and Knowledge

- Certified Information Systems Manager (CISM)
- Certified Information Systems Auditor (CISA)
- Certified Business Continuity Professional (CBCP)
- ITIL v3 Foundations Certified
- Experience with COBIT, ITIL, FISMA, FBI, CJIS, NIST, IRS, SSAE16, PCI, HIPAA, ISO 27000 & 20000 Audit Standards

Hardware Experience

- Intel and RISC-based servers, IBM z-Series, i-Series, p-Series and x-Series; EMC, XIV, Avamar and Data Domain storage platforms, Cisco routers/switches; CheckPoint & Cisco Firewalls

Software Experience

- LDRPS and BIA Professional planning software, Microsoft operating system, VMware, Retina, Qualys, RSA enVision and AA, SCOM, Cisco MARS & IDSM, BladeLogic and various PC forensic tools

Professional Summary

15 years of engineering and technology leadership for global enterprises, regional consulting firms, and state governments. Strong advocate of ISO 27001 & 20000 certification processes. Always ensures IT security and business continuity contractual obligations are met, leads all internal and external audits related to various state, federal & industry standards (SSAE16/SAS70, CJIS, IRS & FISMA), and consulting with cross-functional Unisys and Commonwealth of Pennsylvania agencies on how to properly apply risk mitigation techniques in support of protecting IT assets.

- Managed up to twelve direct reports at one time as well as directed cross-functional teams on multiple, simultaneous security and continuity projects
- Trusted advisor to CIO, VP and other upper management roles in support of high priority initiatives affecting organizational reputation as well as the confidentiality, integrity and availability of valued IT assets

Employment History and Related Experience

Unisys, Project Security & Continuity Manager– Commonwealth of Pennsylvania DPH, Harrisburg, PA, 2009 to Present

Delivers proper audit and compliance methods are applied to the infrastructure managed by Unisys for the Commonwealth of Pennsylvania (Commonwealth of Pennsylvania) Data PowerHouse contract.

- Leading the ISO 27001 & 20000 certification processes, ensuring IT security and business continuity contractual obligations are met
- Leads all internal and oversees external audits related to various state, federal & industry standards including SSAE16/SAS70, CJIS, IRS & FISMA
- Consults with cross-functional Unisys and Commonwealth of Pennsylvania agencies on how to properly apply risk mitigation techniques in support of protecting IT assets.
- Managed end to end disaster recovery tests for Bureau of Integrated Enterprise Systems (IES) and Department of Revenue (DOR) AIX/SAP platforms as well as other Wintel/VMware platforms for various agencies (DOH, PSP, DPW) in the Commonwealth of Pennsylvania Data PowerHouse.

AOPC, IT Systems Security Officer, Mechanicsburg, PA, 2008 to 2009

Responsible for the design, development, oversight and coordination of information security and business continuity related activities for the Administrative Office of the Pennsylvania Courts.

- Creation of information security policies, development of risk assessments for executive review

UNISYS

Resource 80

Security Administrator

- Generation of application security reviews, firewall and network change management reviews
- Assurance of proper risk mitigation methods in support of the protection of data stored in the Unified Judicial System for the Commonwealth of Pennsylvania

Penn National Gaming, Inc. Corporate, IT Risk Manager., Wyomissing, PA, 2006 to 2008

Delivered design, development, oversight and coordination of information security and business continuity related activities for a 17-property, $3B casino gaming firm.

- Created of security policies, standards, architecture and risk assessments ensuring the security and integrity of the company's networks and databases
- Business continuity and IT recovery strategy amongst all properties and applications
- Coordination of IT compliance associated with PCI, Sarbanes-Oxley and HIPPA (self-insured employer) standards and regulations in conjunction with senior management and internal audit staff.

Other Employment History

- Principal Consultant/Owner for Ethix Consulting, LLC, Harrisburg, PA, 2005 to 2006
- Practice Director for Anexinet Corporation, Philadelphia, PA, 2000 to 2004
- Senior Consultant for Actium (now Idea Integration), Conshohocken, PA, 1996 to 2000
- Systems Administrator for Lehigh Press, Cherry Hill, NJ, 1995 to 1996
- Technology Specialist for Good Samaritan Hospital, Lebanon, PA, 994 to1995
- IT Manager for GemChem, Inc., Lancaster, PA, 1993 to 1994
- Systems Analyst (Intern) for Medical College of Pennsylvania, Philadelphia, PA, 1992 to 1993

Education

- BS, Management Information Systems: Saint Joseph's University, Philadelphia, PA, 1993

Certifications

- CISM, CISA, CBCP, ITIL, currently pursuing CISS

- CompTIA Network + Certification
- Microsoft Certified Professional (NT 4 & 2000)

Platforms: Windows 9x/NT, 2000/2003, 2008, XP/7, VM Ware, Mac operating system

Networking:
- TCP/IP, TLS, VPN, SSH, PKI
- CheckPoint Firewall,
- Proventia IPS/IDS

Tools and Software:
- CheckPoint,
- ISS RealSecure
- Trend Micro OfficeScan and Intrusion Defense Firewall, IWSVA,
- Anti-spam software,
- EMC EmailXtender
- Tumbleweed, Lotus Notes, Encase
- VPN Software, Nessus
- Network Solutions
- Active Identity
- Proxy Servers
- IBM Content Collector
- VB scripting.

Professional Summary

Security Analyst with 10 years' of experience delivering information security, CISSP certification, detailed knowledge of security tools, technologies and best practices.

- Experienced in the creation and deployment of solutions protecting networks, systems and information assets
- Utilize Internet Security Systems (ISS) RealSecure Server Sensor, RealSecure Desktop Sensor and Proventia Desktop sensor to support customers
- Update CheckPoint firewall rules as needed
- Perform computer forensics using Encase when security incidents warrant.
- Develop and test disaster recovery procedures.
- Evaluate new security technology as needed and present findings to management.

Employment History and Related Experience

PHEAA, Information Security Analyst, Harrisburg, Pa., 2002 - Present

Utilize Internet Security Systems (ISS) RealSecure Server Sensor, RealSecure Desktop Sensor and Proventia Desktop sensor to monitor IDS alerts. Create Proventia polices to protect workstations as needed.

- Deployed and maintain Trend Micro' Anti-Virus software on over 3000 workstations and 200 servers.
- Responds to security related incidents and taking appropriate action.
- Implemented and administer an appliance based Anti-Spam/Anti-Virus solution for all inbound e-mail.
- Administer EMC EmailExtender e-mail archiving solution and EMC CLARiiON.
- Resolve security related trouble tickets.
- Responsible for patching security servers, also ensure all other agency servers are patched.
- Administer enterprise patching software WSUS, to ensure all 3000 workstations are patched.
- Maintained Verizon Business (Cybertrust) certification.
- Update CheckPoint firewall rules, Perform computer forensics using Encase
- Develop and test disaster recovery procedures.
- Evaluate new security technology as needed and present findings to management.
- Configured and manage software that monitors user Internet activity.
- Deploy and administer two-factor smartcard authentication system.

Resource 81

Security Administrator

Perfect Order, Senior Consultant, Mechanicsburg, Pa., 2000 - 2002

Provided support to over 200 nodes in multiple remote locations, end-user telephone support in a 50+ client, multi-platform corporate environment, and provided onsite Desktop support for new installs and established clients.

- Provided onsite support for new Proprietary application rollouts
- Diagnose and resolve advanced software and operating system issues

Square D Company, Systems Analyst, Mechanicsburg, Pa., 1992 - 2000

Analyzed data to determine if products were missing from a shipment, provided data that customer shipments were received, and worked closely with management to find ways of improving processes.

- Utilized SAS to analyze data and run reports and a daily basis.
- Maintained database records and developed reports used to convey project metrics and analysis.
- Created an Access database to record and track returned parts lost during shipping.

Contel/GTE, Computer Operator Hershey, Pa., 1991 - 1992

Maintained computer systems, performed nightly backups, ran pay roll processing.

- Assisted users in troubleshooting PC and communication problems.
- Installed/Maintained hardware and software.
- Preformed full and incremental backups on a VAX system nightly.
- On-call during weekends to handle any system outages.

Education

Computer Learning Network Camp Hill, Pa.

Computer Systems Technology 400 Certificate January 1991

Harrisburg Area Community College Harrisburg, Pa.

Completed all courses for MCSE NT 4.0 April 2000

Certifications

- Certified Information Systems Security Professional (CISSP) (May 2012)
- Citrix Certified Enterprise Administrator (CCEA)

- Cisco Firewalls: ASA, PIX
- Juniper Routers: M-Series
- Stingray Load Balancer
- CiscoWorks, InfiniStream Sniffer

Professional Summary

Strong technical leader with 12 years of experience supporting DLA J6N networks in support of the DIACAP and vulnerability assessment as required. Participate in the development, testing, and implementation of an effective Incident Response plan. Respond to incidents as directed in the IR plans and provide investigative and forensic assistance as required. Participate in the development and implementation of INFOCON plans and guidance

- Maintain all current applicable firewall policies to include DOD, DISA, DLA, DDC, etc.
- Respond appropriately to reported or discovered incidents in accordance with the DLA J6N Incident response plan
- Prepare quotes and documents required to renew licenses and equipment maintenance for firewall
- Notify appropriate DLA J6N personnel of possible threats or systems vulnerabilities
- Develop and deliver briefings to the upper level management as required on a variety of subjects relating to Enclave Boundary Defense
- Ensure users are aware of and adhere to systems security policies and procedures
- Conduct systems security assessments, audits and reviews

Employment History and Related Experience

e&e IT Consulting / DoD, Network Security Engineer, New Cumberland, PA, 2012 – Present

Plan and deploy Enclave Boundary Defense systems and programs including FW, IDS, VPN devices and applications to all DLA Distribution activities. Provide daily maintenance and support for all DLA J6N Enclave Boundary Defense systems including monitoring system and log files.

- Review and resolve firewall log issues as to threats or possible compromises. Plan and deploy DMZs for each DLA J6N Firewall as required
- Provide assistance to DLA J6N personnel in maintaining the FW rule sets and provide advice on impact of requested changes to the FW rules on the network and compliance with applicable DOD, DLA and DDC policy
- Participate in the development, testing, and implementation of an effective Incident Response plan. Respond to incidents as directed in the IR plans and provide investigative and forensic assistance as required. Participate in the development and implementation of INFOCON plans and guidance

e&e IT Consulting Services, Inc.

Resource 82

Security Administrator

- Participate in the development and deployment of a comprehensive INFOCON test plan. Participate in the development and implementation of a secure and effective means of remote access for DLA/DDC employees who are working offsite
- Maintain all current applicable firewall policies to include DOD, DISA, DLA, DDC, etc. Respond appropriately to reported or discovered incidents in accordance with the DLA J6N Incident response plan. Prepare quotes and documents required to renew licenses and equipment maintenance for firewall
- Notify appropriate DLA J6N personnel of possible threats or systems vulnerabilities
- Develop and deliver briefings to the upper level management as required on a variety of subjects relating to Enclave Boundary Defense
- Ensure users are aware of and adhere to systems security policies and procedures. Conduct systems security assessments, audits and reviews
- Provide SIPRNet firewall and network support; perform information technology project management duties Advise the Branch Chief on new network developments and technology
- Recommend long range designs to the Branch Chief for planning and implementing network resources.

General Dynamics Information Technology, Network Engineer, Hagerstown, MD, 2010 - 2012

Plan and perform new installations and upgrades to applications and networks within DISA ESD as a new business team member. Engineer networking solutions and provide analysis of communications networks for Department of Defense customers. Work with the customer to translate requirements into a technical solution.

- Gathering technical information from clients and researching solutions, creating preplanning guides for customer review, presenting solutions to customers, creating communication documentation, creating appropriate networking additions and changes, troubleshooting issues and ensuring customer satisfaction
- Ensure standards compliance and network security while providing configuration changes for Cisco and Juniper routers, multi-vendor content switches, Blue Coat proxies and Cisco firewalls
- Worked closely with the Information Assurance group to make sure all changes were approved through DoD IA
- Create configuration paste files and submitted them to the government networking group. Plan network layouts, configure systems to user environments, and provide technical support and troubleshooting
- Regularly create COOP documentation and assist in COOP exercises. Create network drawings, reserve IP space and coordinate all efforts with

CCC network support. Act as a team lead and provide advice to meet customer requirements

- Configure and STIG equipment. Perform information technology project management duties and assist with DISA cost estimates
- Ensure that technical components are well integrated and proposals meet the needs of the customer
- Attend meetings and conferences to exchange information and advice on engineering, implementation, and sustainment of customer IT systems; prepare and present briefings.

Summit Health, Network Specialist, Chambersburg, PA, 2004 - 2010

Provide LAN and WLAN technical support for two hospitals and approximately 40 remote facilities. Check Point firewall administrator performing upgrades to R65 and R70, troubleshooting network connectivity issues and adding firewall rules. Blue Coat Proxy administrator in charge of proxy rule updates, device installations and upgrades.

- Performed proxy upgrade from a SG800 to a SG810 appliance
- Tracked company-wide Internet usage as a Blue Coat Proxy Reporter administrator
- Managed a five server Citrix Server Farm running Citrix Metaframe XP
- Configured, installed and supported Cisco wireless access points and controllers in both autonomous and LWAPP configurations
- Performed wireless site surveys for new installations and additional coverage. Support thin clients, laptops, tablets, VoIP phones, and handheld scanners
- Provided support for switches, routers, hubs, and other network hardware. Install and support the Neoteris remote access SSL VPN
- Performed server administration for over 100 servers on Windows Server operating systems
- Supported DHCP, Active Directory and GroupWise e-mail, VMware maintenance
- Administered file servers, the latest Microsoft Windows operating systems and electronic mail software. Assisting in preparation for the incorporation of the several architectures into an open system distributed network

Summit Health , PC/Desktop Support Technician, Chambersburg, PA, 1998 –2004

Troubleshoot end user connectivity issues. Configure, install, maintain, modify and troubleshoot personal computers, laptops, printers, wireless devices, various peripherals and software applications. Troubleshoot and resolve technical problems identified in trouble tickets.

e&e IT Consulting Services, Inc.

Resource 82

Security Administrator

- Provide initial setup of personal computers, high level Helpdesk phone support to end users, physicians and vendors
- Lead projects for the Windows desktop deployment for 1500 client computers
- Became a Certified HP Printer Technician and provided hands-on training to other technicians
- Developed and coordinated life cycle replacement and preventive maintenance plans for personal computers and printers
- Provided excellent support and communication to end users.

Education

- Hagerstown Community College, Hagerstown, MD, Cisco Network Academy, 2010
- York Technical Institute, York, PA, Associate, Computer Systems, 1998

Certifications

- ITIL Foundation v3, A+, Security+,
- CCENT, CCSPA, CISSP
- DoD Top Secret Clearance

UNISYS

e&e IT Consulting Services, Inc.

Resource 83

Security Administrator

Key Skills and Knowledge

- Top Secret / SCI security clearance
- CISSP
- RHCSA
- CEH
- Security +
- CheckPoint firewalls
- PfSense firewalls
- IBM WebSphere
- Apachchessl, Mysql, and Mod_Perl.
- contributed tools to the Nagios Exchange community (user knobbysideup) Senior Associate

Professional Summary

12 years of systems experience, primary analyst responsible for our high availability checkpoint clusters world-wide. Developed VPN appliance based on Linux, Iptables, and Freeswan to form tunnels and segregate internal untrusted networks. Developed cost saving solutions for hardware, licensing, and support. Generated deployable and manageable systems for entry level administrators freeing higher level security analysts to focus on other tasks.

- Create and maintain several virtual machine environments for development and production using VMware ESX server and VirtualBox
- Systems Monitoriing. used Nagios, contributed tools to the Nagios Exchange community (user knobbysideup) Senior Associate
- Develop and maintain Internet-accessible event and membership database; Created this using Apachchessl, Mysql, and Mod_Perl

Employment History and Related Experience

SAGE Dining Services, Linux System Administrator, 2010 – Present

Lead systems administrator in charge of all development and production servers, high availability clusters, networking infrastructure, and firewalls in 3 data centers located throughout the country.

- Developed systems management and development tool sets and processes, migrating from a complicated mess of systems and configurations to one that can be easily managed by a single administrator.
- Developed and deployed anti-spam relaying solution around Sendmail, MimeDefang, and SpamAssassin.
- Create and maintain several virtual machine environments for development and production using VMware ESX server and VirtualBox.
- Systems Monitoriing. used Nagios, contributed tools to the Nagios Exchange community (user knobbysideup) Senior Associate.

ICF Jacob & Sundstrom, Network Administrator, Sep 2007 - Dec 2010

Administer Linux systems used for analysis in a custom Network Intrusion Detection system. Travel for on-site NIDS Sensor deployments

- Cyber Defense research with the Army Research Laboratory's Center for Intrusion Monitoring and Protection (ARL CIMP).
- .Technical and Project Management lead in effort to automate packaging, deployment, configuration, hardening, and updates to remote IDS sensors, as well as automation of IDS sensor builds using kickstart, autoyast, rpmbuild, and yum.

- Developed SOPs for IDS Sensor development and maintenance.
- Research and Development of Systems Engineering and maintenance around Intrusion Detection Systems.
- Maintain infrastructure for vulnerability assessment team's scanning.

Yellow Breeches Racing, Developer / Systems Administrator Consultant, 2000 – 2007

Develop and maintain Internet-accessible event and membership database; Created this using Apachchessl, Mysql, and Mod_Perl. It uses Apache::DBI for persistent database connections, and uses Apache::Session for authentication and user preferences.

- Maintain Linux servers and network.
- Maintain team mailing lists. normal spam-fighting techniques are included, support list security and appending of a disclosure through some custom Mimedefang routines. Support mailing lists for some other groups.

Armstrong World Industries, Inc, Infrastructure Security Analyst, . 2002 – 2007

Delivers global infrastructure security, security systems management, reporting, incident response, risk management, and policy creation and enforcement to include HIPAA and SOX compliance. Delivers networking and security consulting with business units and technical staff to create solutions to meet the business's needs.

- Team lead and project management around security-focused projects. For example, the design and deployment of a system to detect wireless (802.11) policy violations.
- SSL certificate and reverse-proxy management
- Mail server and anti-spam management. created a mail quarantine system which is used by Armstrong to thwart '0-day' attacks, while also providing a method to detach large incoming attachments and multimedia files and provide a download area for the same. In addition, managed Armstrong's corporate SMTP gateways using a combination of sendmail, spamassassin, a custom mimedefang filter, NAI virus scanning, clamd virus scanning, and milter greylist
- Global Firewall and IPSec VPN management. Created standards to be used for forming network to network IPSec VPNs with business partner networks and branch offices.
- Developed a VPN appliance based on Linux, Iptables, and Freeswan to form tunnels with smaller branch offices, and also to segregate internal untrusted networks (like wireless barcode scanners at plant locations). This solution saved significant costs in hardware, licensing, and support. It was also deployable and manageable by network operations groups, freeing higher level security analysts to focus on other tasks.

e&e IT Consulting Services, Inc.

Resource 83

Security Administrator

- Client VPN management with strong authentication via RSA securid.
- Created online chat system for periodic interactive Q&A sessions with the CEO. This was based on a purchased Java applet, an ircd backend, and a Perl script for question moderation.
- Led transition of security operations and reporting tasks to outsourcing company.

ICSA Labs /TruSecure Corporation, Network Security Analyst, 1998 - 2001

Delivered Process, procedure, certification criteria, and report format development for both remote vulnerability assessment scanning and commercial firewall/VPN certification. Support remote network vulnerability scanning, analysis, assessment, and reporting.

- Database, vulnerability probing, and filtering software development to help automate the previous bullet.
- Commercial firewall and VPN testing and certification using a variety of tools to analyze all aspects of the products, often byte-by-byte using TCP/IP packet sniffers or product verbose logging facilities.
- Tool and filter development to aid in the previous bullet.
- Design, implementation, and administration of a Web-based database to track firewall and vpn product testing status. This database is still in use by ICSA Labs, and makes use of linux, apache, embedded perl, mod_perl, apache_session, and mysql.

Education

- BS Aerospace Engineering, Pennsylvania State University, 1993

Training

- Perl classes at Usenix LISA conference, 1998.
- CheckPoint firewall basic and advanced courses, 2002.
- Toorcon security conference 2002.
- Keane Project Management Methodology, 2003.
- Black Hat / Defcon security training: 2006, 2008, 2009.

Certifications

- Brainbench certifications: Internet Security Specialist, Perl Programmer, 2000.
- Red Hat Certified Technician (RHCT): 2008
- CompTIA Security+: 2008
- CISSP: 2009
- Certified Ethical Hacker (CEH): 2010
- Certified Penetration Tester (CPT): 2010

Security Analyst

Key Skills and Knowledge

- Top Secret Clearance
- CISSP, MCSE+1
- CheckPoint firewall design, configuration and implementations
- Enterprise level architecture
- Change and Risk management
- Multitier network configuration and deployment
- Network system security and monitoring
- Vulnerability and security support
- Security integrity and application of DoD security policies and procedures
- Automated security assessment tools and benchmarks (using OVAL code)
- Test and evaluate security configuration requirements
- United States General Services Administration (GSA) and Homeland Security Presidential Directive 12 (HSPD-12).
- Level 1 and 2 Security Assertion Markup Language (SAML) assertions.
- Computer Emergency Response Team (CERT)

Professional Summary

Technically astute IT professional; proficient at the strategic planning and deployment of innovative, comprehensive and scalable infrastructure solutions aligned with organizational core goals and strategies. Qualifications include MCSE+I, CISSP, and 21+ years of experience on numerous operating systems, network protocols and administration tools.

- Network and Infrastructure – Involved in Project Planning Management (PPM) and Life Cycle process to enable the effective integration of projects and their outputs.
- Vulnerability Assessments – Identify, quantify and prioritize vulnerabilities; Develop written discussion as to why vulnerabilities exists
- Systems Security – Cultivate security guidance for multiple operating system platforms and applications; Develop Information Assurance (IA) system architecture, policies and implementation guidance in accordance with Federal and DoD AIS security regulations and effectiveness of existing IA best practices and policies
- Technical Liaison – Develop and present PowerPoint presentations dealing with classified vulnerability briefings to DoD high level commanders of different branches of the armed forces including the National Security Agency (NSA)

Employment History and Related Experience

Hewlett Packard (acquired EDS), Letterkenny Army Depot, Senior Systems Engineer, Chambersburg, PA, 2009 – Present

Technical lead supporting the Defense Information Systems Agency (DISA) Field Security Operations (FSO) division in providing Information Assurance/Information Security Services to the Department of Defense (DoD). Provide expert security vulnerability analysis, guidance, recommendations and deficiency resolution support to customer locations.

- Security Technical Implementation Guides (STIGS) – Gather requirements, develop and publish assessments and configuration checklists for Multiple Operating Systems, Networking Components, Application Servers and Administration Policies
- Utilize the 8500 for existing STIG updates and the 800-53 for new STIG development.
- Participate in pre DIACAP assessments; Work closely with security team in coordination of project timelines.
- Research/devise methodology for examination of the system for vulnerability; Collaborate with customer for concurrence before development and deployment of corrective action

- Provide vulnerability and security support to global DoD sites.
- Ensure security integrity and application of DoD security policies and procedures throughout the project life cycle of proposed system changes; Develop automated security assessment tools and benchmarks (using OVAL code)
- Build, test and evaluate security configuration requirements ensuring compliance with existing guidance or documented test requirements
- Create evaluation scripts with Security Content Automation Protocol; Develop; Cultivate security guidance for multiple operating system platforms and applications
- Incident Response – Deliver Incident response and 2nd level STIG support.

EDS/HP, County of San Diego, Project Lead, 2007 – 2009
Project Lead for the County of San Diego Active Directory (AD) redesign and migration to multiple remote facilities for 45,000 users across 8 remote sites at Tulsa, OK and Plano, TX

- Analyzed business processes by interviewing department leads.
- Re-designed the Network Architecture to improve response times.
- Technical Liaison between the Chief Information Officer of San Diego and the host remote sites of Tulsa, OK and Plano, TX.
- Technical Lead for the AD migration to all remote sites.

EDS/HP, FedTraveler.com E-Gov Travel Service (ETS), Technical Lead, 2005 – 2007
Technical Lead for the integration of a single "sign-on" solution for the Federal Travel portal.
Technical support provided through 2009.

- Engineered Identity Management (IdM) Integration for E-Authentication.
- Incorporate IdM for front end user authentication using RSA Federated Identity and Access Management software.
- Evaluate and verify compatibility with 6 other IdM vendors for United States General Services Administration (GSA) and Homeland Security Presidential Directive 12 (HSPD-12).
- Performed Level 1 and 2 Security Assertion Markup Language (SAML) assertions.

EDS/HP, Commonwealth of Pennsylvania, Security Consultant, 1999 – 2005
Assigned by the Deputy Director to work with the following state agencies: Attorney General's Office, Department of Health, Department of Labor and Industry, Department of Education, Department of the Interior and the Commonwealth Technology Center.

- Install Cisco switches and routers and configure initial routes and Access Control Lists (ACL's) for several agencies

e&e IT Consulting Services, Inc.

Resource 84

Security Analyst

- Worked with Intrusion Detection System (IDS) vendor on compatibility issues between Host Based Intrusion Detection Systems (HIDS) and Microsoft Data center Edition software
- Design and implement Clustered Firewalls solutions
- Participate in the design, installation and maintenance of the Enterprise Intrusion Detection System (IDS) and Intrusion prevention system (IPS); configuration of central log monitoring which included firewall, server and IDS logs and the automation of the Host Based Intrusion Detector Sensors (HIDS).
- Develop system security policies and procedures in compliance with the Commonwealth of Pennsylvania security regulations
- Participate in security network architecture for the enterprise
- Perform Web scans and penetration testing on the enterprise server farm and provide agency specific reports on vulnerabilities and how to mitigate
- Implement a Certificate Authority/Public Key Infrastructure (CA/PKI) solution
- Member of Computer Emergency Response Team (CERT), Provided the Department of Education with pre-notification of a Hacker intrusion (when and how) by profiling said Hacker
- Responded to a CERT call for the Sequel Server "slammer" worm that had infected Commonwealth mission critical systems
- Demonstrated ability to trace and identify the overseas hacker, and provided documented to the Pennsylvania State Police for prosecution

EDS/HP Internal Support Services, System Analyst, 1997 - 1999
Executed Domain administration including Windows NT 4.0 through Windows 2008R2 AD migration. Provided desktop support. Provided administration and migration of Exchange 5.5 thru Exchange 2010.

- CheckPoint Firewall support and network DMZ configurations
- Performed network design and security analysis
- Configure multiple DMZ's using Nokia Network appliances and CheckPoint firewall software for EDS internal use.

Department of Defense Financial and Accounting Services (DFAS), Technical Lead, 1995 – 1997
Perform network analysis and monitoring, system sizing, and performance tuning of the client/server configurations.

- Design and implement new imaging technologies
- Automate client application installation procedures and supporting documentation using multiple package configurations (VB install, Rapid Install, SMS, and scripts)
- Develop and maintain Daily Operation Guides (DOG) and Continuity of Operations Plan (COOP).

e&e IT Consulting Services, Inc.

Resource 84

Security Analyst

- Defense Distribution – Susquehanna, PA (DDSP) Initial and configure initial Server farm consisting of 12 servers.

ACCO Chain and Lifting Products, UNIX System/Network Administrator, 1994 – 1995
Design and implement a class B TCP/IP network using LAN Manager 2.2 and Microsoft Windows 3.x/95 accessing HP 9000 servers.

- Oversee the acquisition and installation of the hardware; perform system administration backup, and recovery procedures
- Manage 17 remote locations accessed via T-1 throughout the US and Canada
- Design and test duplicate network infrastructures, installation of new communications equipment, and software at each of the new sites
- Evaluate the network and system performance requirements

Administrative Office of Pennsylvania Courts, Technical Services Network Manager, 989 – 1994
Supported the Common Pleas Courts Automation Project. Design client/server network prototype utilizing Ethernet topology over T1 communication links. responsible for the day to day operations and networking performance.

- Managed an operations and networking staff of 10 employees at the Central Site location
- Employed high speed routers for 67 counties on 180 servers and 2200 clients
- Implement statewide networking of 34 AS/400's supporting 534 District Justice Offices

Education

Harrisburg Area Community College - Computer Science
Certified Ethical Hacker & Countermeasure Department of Defense training
Hewlett Packard - HP-UX System & Network Administration
CheckPoint Firewall configuration and implementation

Professional Summary

12 years of experience delivering network engineering, desktop support, systems analysis, and data recovery. Skillful with HP OpenView, Remedy Administration and development, Veritas NetBackup, EMML for Fujitsu 9600 Phone Systems, Orion, Retina, CheckPoint, Cisco Mars, Cisco Security Manager, IDS/IPS, ASA, Omnipeek, WireShark, FWSM, ACE, Cisco 2600 routers, Cisco 2900/3500/3700/6500 switches, Cisco Nexus 7000/5000/2000

Employment History and Related Experience

Unisys Corporation, Network Design Engineer Harrisburg, PA, 2009 –Present

Integral team member providing 24x7 end-user and infrastructure (network and routing) support to state customer base on LAN

- Proactive monitoring and management of routers, switches, and infrastructure connectivity
- Cable, rack and configure Cisco devices using technologies such as HSRP, VSS, VRF, and VPC
- Responsible for incident management and problem resolution of client related issues
- Implement IOS upgrades
- Independently responsible for managing retina vulnerability scanning and reporting
- Make administrative changes to the phone system including: re-route numbers, change names, add features, connect/disconnect, etc.

Unisys Corporation, Desktop Support, Harrisburg PA, 2007-2009

Provided Computer Desktop Support for equipment assigned to employees located at local Unisys Sites

- Responsible for purchasing all technology related equipment to support the project.
- Migrated network and telephone systems for an office move

Unisys Corporation, Systems Analyst, Harrisburg PA, 2006 – 2007

Served as first point of contact for all server and mainframe issues, resolving issues on first call

- Managed nightly backups for all agencies
- Implemented patch updates and minor system upgrades locally and via BigFix
- Created performance reports and reviewed vulnerability scans

UNISYS

Security Analyst

Plexus Scientific, Network Engineer, Columbia, MD, 2005 - 2006

Installing equipment needed for research and development

R and R Networks, Inc., Tier 1 Technical Support, Dillsburg, PA, 2005 - 2005

On location repair of computers, servers, and network equipment

- Assist coworkers with server and network installations and Migrations
- Remote support via Netmeeting, Remote Desktop, and Terminal Services
- Recommend software and hardware to suit the customer's needs

Unisys Corporation, Computer Operator 2, Harrisburg, PA, 2001 – 2005

Supported 24/7/365 environment as essential personnel for the Pennsylvania Data PowerHouse Project monitoring mission-critical mainframes and servers

- Operate and monitor Unisys 2200, Unisys A Series, Unisys CS7800, HP OpenView, and Dell Servers for CPU Utilization, hung services, and failed jobs
- Remedy Ticket entry, status updates, procedure implementation, testing of Disaster recovery procedures, repair, troubleshoot, or assist with repair of desktop computers

American Personnel, Data Recovery Engineer, Camp Hill, PA, 2000 – 2001

Supported 24/7/365 environment as essential personnel for the Pennsylvania Data PowerHouse.

- Pulling, mounting, and filing of data cartridges.
- Logging, tracking, recording, and researching data coming and going.
- Working with Unisys 2200 and Unisys A series hardware and media
- Authored written procedures for several departmental functions and unique processes.

- Configure and troubleshooting SolarWinds Orion Network Performance Monitor and eEye Retina products
- Deliver product recommendation and parts specification to upper management and customers
- Configured Cisco wireless access points for office user connectivity

Professional Summary

Cisco Certified Network/Design Professional with five years of experience designing, configuring, and troubleshooting both Cisco and CheckPoint solutions. Able to perform as a key contributor in a team oriented environment through diverse technical background. Well-spoken with expertise to effectively communicate ideas and recommendations to facilitate positive change.

Employment History and Related Experience

Unisys, Network Design Engineer, 2007 – Present

Provided network engineering for Commonwealth systems. Implemented Cisco VSS to maximize overall network uptime to 99.999% Utilized VRFs to leverage common infrastructure for multiple customers with stringent security requirements. Experience implementing and managing firewall rule bases on CheckPoint and Cisco platforms as well as building checkpoint SPLAT/IPSO boxes from scratch

- Able to manage and support Cisco Application Control Engine appliances
- Enterprise class devices include Cisco's Nexus, 6500, 4500 series switches and 3800 series routers
- Utilize 10Gbps technologies to reduce port density and overall solution costs
- Designed and managed structured cabling project to update site to data center compliancy standards
- Experience managing and configuring IBM Proventia as well as McAfee Network Security Platform Intrusion Prevention systems
- Proficient with Cisco's CSM, ANM and MARS management tools
- Contributed towards data center redesign to reduce footprint and leverage virtualization technologies
- Experience configuring and troubleshooting SolarWinds Orion Network Performance Monitor and eEye Retina products
- Key contributor to providing product recommendation and parts specification to upper management and customers
- Experienced using Cisco's Pricing Tool and Dynamic Configuration Tool
- Configured Cisco wireless access points for office user connectivity

Rite Aid Corporation, Merchandise Coordinator, 2004-2007

Support business operations creating store distributions for seasonal item process so that each store has the appropriate inventory levels to maximize sales at the beginning of each event

- Review individual store allocations for seasonal item process to ensure the accuracy of information

UNISYS

Resource 22

Security Analyst

- Create exception reports for management's review; make changes to report items as a result of management's review
- Coordinate and monitor the distribution of seasonal item merchandise from the warehouse to the stores to ensure timely receipt of product prior to the start of each event
- Prepare preliminary reviews of item allocation for use by department Managers
- Interact with store personnel regarding inventory discrepancy issues; correct errors that occur

Circuit City, Network Advisor, 2002 – 2004

Responsible for designing and installing computer systems, networking components and related products

- Went to customers residences and installed/configured networking components for proper connectivity
- Sold and installed hardware devices, peripherals and Software
- Consistently exceeded sales quotas for product and service upgrades
- Lead staff associate in technical knowledge of hardware devices, networking, peripherals, and software

NetComm Solutions, Inc., Lead Support Technician, 2000 – 2002

Delivered troubleshooting, installing, and configuring equipment for government contracts; performed as a group leader for the state-wide thin client rollout for the Administration of PA Courts

- Installed Cisco 1720 Routers with U.S. Robotics 56K dial backup modems and Cisco 2900XL switches in each District Justice Court House
- Extensive work troubleshooting Compaq's complete line of desktop and server products
- Responsible for providing technical support to the PA State House of Representatives, Democratic Caucus
- Experience installing, configuring, and administering Microsoft Terminal Services and Citrix MetaFrame XP
- Responsible for instructing new technicians on configuring and implementing thin clients, desktops and servers
- Help desk work involved with interacting and supporting users from large accounts such as the PA State House of Representatives, Democratic Caucus and the Administration of PA Courts

Education

McAfee Network Security Platform Administration Training – McAfee Education (June 2012)

- Deploy McAfee NSP
- Building Policy
- Manage and Administer NSP to defend against attacks

CCSA Training – Fishnet Security (January 2012)

- Secure communications across the internet
- Defend against network threats
- Configure security policies
- Protect e-mail and messaging content
- Manage user access to corporate LANs

Cisco ACE Bootcamp – Firefly (November 2011)

- Installing, Configuring and Troubleshooting Cisco Application Control Engine
- Design and configure integration of the ACE into the network topology
- Design and configure multiple ACE contexts to virtualize network services
- Manage allocation of resources to virtual contexts
- Use the Cisco Modular Policy CLI to configure ACE features
- Configure IP application-based security
- Configure Layer 4-7 load balancing
- Configure health monitoring
- Configure Layer 7 protocol processing options
- Configure SSL protocol processing
- Configure the Web application acceleration features on the ACE appliance
- Configure the ACE module or appliance for high availability

Cisco Certified Security Professional – CCBOOTCAMP (September 2010)

- 642-504 Securing Networks with Cisco Routers and Switches (SNRS)
- 642-524 Securing Networks with ASA Foundation (SNAF)
- 642-515 Securing Networks with ASA Advanced (SNAA)
- 642-533 Implementing Cisco Intrusion Prevention System (IPS)

Cisco Certified Network Professional – CCBOOTCAMP (January 2009)

- 652-901 Building Scalable Cisco Internetworks (BSCI)

Professional Summary

15 years of engineering and technology leadership for global enterprises, regional consulting firms, and state governments. Strong advocate of ISO 27001 & 20000 certification processes. Alwasy ensures IT security and business continuity contractual obligations are met, leads all internal and external audits related to various state, federal & industry standards (SSAE16/SAS70, CJIS, IRS & FISMA), and consulting with cross-functional Unisys and Commonwealth of Pennsylvania agencies on how to properly apply risk mitigation techniques in support of protecting IT assets.

- Managed up to twelve direct reports at one time as well as directed cross-functional teams on multiple, simultaneous security and continuity projects
- Trusted advisor to CIO, VP and other upper management roles in support of high priority initiatives affecting organizational reputation as well as the confidentiality, integrity and availability of valued IT assets

Employment History and Related Experience

Unisys, Project Security & Continuity Manager– Commonwealth of Pennsylvania DPH, Harrisburg, PA, 2009 to Present

Delivers proper audit and compliance methods are applied to the infrastructure managed by Unisys for the Commonwealth of Pennsylvania (Commonwealth of Pennsylvania) Data PowerHouse contract.

- Leading the ISO 27001 & 20000 certification processes, ensuring IT security and business continuity contractual obligations are met
- Leads all internal and oversees external audits related to various state, federal & industry standards including SSAE16/SAS70, CJIS, IRS & FISMA
- Consults with cross-functional Unisys and Commonwealth of Pennsylvania agencies on how to properly apply risk mitigation techniques in support of protecting IT assets.
- Managed end to end disaster recovery tests for Bureau of Integrated Enterprise Systems (IES) and Department of Revenue (DOR) AIX/SAP platforms as well as other Wintel/VMware platforms for various agencies (DOH, PSP, DPW) in the Commonwealth of Pennsylvania Data PowerHouse.

AOPC, IT Systems Security Officer, Mechanicsburg, PA, 2008 to 2009

Responsible for the design, development, oversight and coordination of information security and business continuity related activities for the Administrative Office of the Pennsylvania Courts.

- Creation of information security policies, development of risk assessments for executive review

UNISYS

Resource 80

Security Architect

various PC forensic tools

- Generation of application security reviews, firewall and network change management reviews
- Assurance of proper risk mitigation methods in support of the protection of data stored in the Unified Judicial System for the Commonwealth of Pennsylvania

Penn National Gaming, Inc Corporate, IT Risk Manager., Wyomissing, PA, 2006 to 2008

Delivered design, development, oversight and coordination of information security and business continuity related activities for a 17-property, $3B casino gaming firm.

- Created of security policies, standards, architecture and risk assessments ensuring the security and integrity of the company's networks and databases
- Business continuity and IT recovery strategy amongst all properties and applications
- Coordination of IT compliance associated with PCI, Sarbanes-Oxley and HIPPA (self-insured employer) standards and regulations in conjunction with senior management and internal audit staff.

Other Employment History

- Principal Consultant/Owner for Ethix Consulting, LLC, Harrisburg, PA, 2005 to 2006
- Practice Director for Anexinet Corporation, Philadelphia, PA, 2000 to 2004
- Senior Consultant for Actium (now Idea Integration), Conshohocken, PA, 1996 to 2000
- Systems Administrator for Lehigh Press, Cherry Hill, NJ, 1995 to 1996
- Technology Specialist for Good Samaritan Hospital, Lebanon, PA, 994 to1995
- IT Manager for GemChem, Inc., Lancaster, PA, 1993 to 1994

- Security Consultant
- Security Architect
- Project Management
- Cisco Networking
- Data Loss Protection
- Network Access Control
- Virtual Private Networking

Professional Summary

Currently serves as an IBM Certified Consultant in the Centralized Security Practice of IBM Global Services. Has 26 years of experience at IBM US and IBM France, working in various positions as Network Consultant, Security Consultant, System Test Lead, Project Manager, Software and Hardware Developer. Has a proven track record in IT Security that can be attributed to his very broad technical skills in networking and security, his project management experience, and also to his ability to handle architecture, design, implementation as well as troubleshooting work.

Has recently focused on two critical domains in the security spectrum: Network Access Control, and Data Loss Prevention. They are fundamental security components to properly address the current and future threats.

Holds a Cisco CCNP and a CISSP certification. He also holds a Nortel Network Optical Design certification, and a Cisco VPN certification.

Employment History and Related Experience

IBM Security Practice - ISS, Consultant, Raleigh, North Carolina, 2004–To Date

Assignment History

Credit Report Company, ISS Consultant, 2011–To Date

The engagement consisted in assessing the maturity level of data security, identifying gaps and recommending tactical and strategic security initiatives.

- The engagement included a detailed evaluation of sensitive data in motion and at rest using data loss protection solutions.
- The final presentation to the executive committee proposed short term and far reaching strategic decisions that were very positively received by the executives and VPs.

Beverage company, ISS Consultant, 2011–To Date

Data Security Assessment of the worldwide server infrastructure (Over 600 servers) of the company. The results of the assessment lead to recommend the implementing a Data Loss Protection program to address tactically and strategically to the excessive exposure of sensitive data.

Major Hospital Group, Trusted Advisor - Security Architect and Lead deployment Engineer, 2009–To Date

With HIPAA getting more teeth in 2010, this large hospital decided to deploy and enforce encryption on all mobile workstations. Was the lead architect for a Data Loss Protection initiative at Duke.

Products used include PGP Universal Server, Lumension End Point Media control, Fidelis extrusion protection solution.

State Government, ISS Consultant, 2009

This State Government outsourced its entire IT infrastructure to IBM in 2008. One of the numerous challenges was the understanding of the traffic flows from 12 different agencies over 1000 firewalls.

- Researched, recommended and used the best technology available to perform the security mapping of the infrastructure.
- Ensured the project, completed on schedule and within budget provided additional side benefits specifically the detection of vulnerabilities and misconfigurations.

Large Northeastern University, ISS Consultant, 2009

Interviewed over 40 people at the University to assess security in the administrative and academic units in the following areas:

- Security policy
- Organization of information security

- Asset management
- Human resources security
- Physical and environmental security
- Communications and operations management
- Access control
- Information systems acquisition, development and maintenance
- Information security incident management
- Business continuity management
- Compliance with PCI, FERPA, and HIPAA

A detailed report describing the issues found, recommendations and a multi-year roadmap was delivered to the CIO. The university started implementing the suggested remediation described in the report to raise their level of security.

Mid-Size Insurance Company, Trusted Advisor, 2007–2008

Tasked to assess the Internet security and to provide recommendations for a NAC solution at a mid-size insurance company. After presenting the assessment results, the Senior Executive for IT and operations extended Mr. Henrion for 10 months and asked him to define the security and infrastructure priorities, to recommend resources and to lead the execution of over twenty initiatives. Some initiatives lead to:

- cost saving (Telco cost trimming, deferred or cancellation of questionable investments)
- increased productivity, (defining and enforcing IT policies such as Internet access)
- security improvement through a company-wide deployment of a NAC (Network Access Control) solution.
- drastic reduction for potential exposure of Personally Identifiable Information.
- improved quality (Implementation of additional formal processes).

These projects accomplished the goal of closing very significant security gaps. (At the beginning of the engagement, only 2 out of 12 PCI criteria were met, a performance lower than the retail company who suffered the largest break-in in history).

Office Management Company, Security Subject Matter Expert, 2007

Architected and implemented the US security policy for the voip/data converged network. It involved hundreds of IOS routers, Cisco ASA or Check Point firewalls, as well as centralized access control.

UNISYS

IBM

Resource 86

Security Architect

Fortune 10 company in Health Care, Security Subject Matter Expert , 2006–2006

The focus of the engagement was on Network Access Control and on defining a worldwide strategy for the 220 sites and 5 main divisions. Participated in the development of security requirements, product pre-selection, and lab evaluation of several NAC approaches at this large pharmaceutical company. Some of challenges pertained to the unique requirements of bio-medical devices, or nontraditional Microsoft workstations such as mobile devices, voice over IP phones or security systems.

An in-depth analysis of the Vernier Network, Symantec and McAfee solutions in the customer network was performed.

County Government, Security Expert, 2005

Digital Video Surveillance originating from devices mounted on vehicles is transferred to a central location. Responsible for securing the whole infrastructure.

Contracting for Center of Medicaid and Medicare, PM, Security Expert, 2004–To Date

Architected, deployed and maintained a distributed firewall solution for one of the largest federal government agency spanning over the 50 American states and serving over 200,000 users. Had also project management responsibilities, handled contractors including a group that provided 24 x 7 network monitoring. This has been a very successful engagement from a customer satisfaction and financial performance perspective.

Mid Size Financial Institution, Consultant, 2002–2003

In another project for a mid-size financial institution, recommended network security and remote access and has allowed this company to decrease its telecommunication costs and retain its largest own customer after they had expressed concerns about the potential vulnerability of their network.

Major Contract Manufacturing Company, Technical Lead, 2001–2002

Architected, designed and implemented VPN and network solutions for various customers in the manufacturing, insurance, automotive and life science segments. For this large project, was the technical lead of a complex remote access project spanning over 4 continents for 60,000 end users.

State Insurance Company, Technical Lead, 2001–2002

A large insurance company accepted IBM's recommendations to move their remote access to the Internet and asked IBM to lead the project. It ended up saving the company over $5 million yearly in telecommunication costs for a ROI of about 3 months. Assumed the role of the technical leader in this project which was delivered on schedule.

UNISYS

IBM

Resource 86

Security Architect

Biomedical Equipment Manufacturer, Team Lead, 2000

This manufacturer of biomedical equipment was concerned about the remote access costs and security to its network.

- Proposed a couple of options to address these issues. The client chose to go with the more secure certificate based VPN solution and still ended up saving tens of thousands of dollars every year.

- Penetration Testing (physical, network, application, wireless)
- Application Assessments
- Ethical Hacking
- Social Engineering
- Vulnerability Assessments
- Security Remediation
- Network Architecture Reviews
- Payment Card Industry Payment Application Assessments
- Payment Card Industry Assessments

Professional Summary

Currently a Senior Security Consultant for IBM Security Services (East Region). Perform penetration testing and vulnerability assessments for internal and external customers, including wireless, host and vendor applications, Web, and custom application testing. Provide security consulting services including network architecture reviews, security policies/controls reviews, and social engineering. Perform PCI audits, including final audits, gap analyses, and payment application assessments as a PCI Qualified Security Assessor (PCI-QSA) and PCI Payment Application Qualified Security Assessor (PA-QSA). Has 12 years experience in Information Technology at IBM, including 9 years as an Ethical Hacker and Security Consultant. Expertise is in penetration testing (wireless, network, and Web application), vulnerability assessments and recommendations, and intrusion detection and analysis. Discovered several "zero-day" vulnerabilities during the course of various assessments.

Employment History and Related Experience

IBM Security Services, Senior Security Consultant, Florence, Alabama, 2004–To Date

Conducted physical security assessments for both physical and logical security locations/devices and developed remediation plans based on findings. Performed numerous internal, external, and wireless penetration tests and prepared detailed reports of results, including recommendations based on findings. Discovered several "zero-day" vulnerabilities across multiple penetration tests and application assessments.

- Provided security consulting and recommendations on internal and external intrusion attempts.
- Conducted detailed network and security architecture reviews with recommendations based on industry accepted best practices.
- Performed numerous Web application tests for internal and external facing Web applications.
- Prepared detailed reports of vulnerability assessments and Web application test results.
- Discovered and provided recommendations for several serious vulnerabilities in customer Web applications.
- Performed incident response/analysis for approximately 60 worldwide Windows domain controller servers.
- Provided customers with PCI audit consulting to help customers better understand the requirements of the Payment Card Industry Data Security Standards.
- Conducted numerous PCI audits, to include final audits and gap analyses.

Resource 87

Senior Security Consultant

- Provided security advice and expertise on any new technologies that are being considered for customer environments.
- Worked with all levels of the management team to ensure everyone is kept abreast of the latest security information.

IBM Global Services, Distributed Operations Team Lead, Boulder, Colorado, 2002–2004

Provided leadership and direction to a 30 person team, which provides a varied set of services in support of multi-vendor, multi-protocol complex, network/systems environments including NT, Windows, UNIX, MVS, and MVS production control.

- Interfaced with customer, vendor, and/or internal senior management and possess discernment and judgment necessary to make mission critical decisions relative to network/systems support, problem resolution, and escalation.
- Participated in defining best practices, recommend process improvements, and set direction based on customer requirements.
- Assessed and analyzed complex customer or service requirements including planning, designing, and implementing support solutions with high visibility and direct impact to customer satisfaction.

IBM Global Services, Global Situation Manager, Boulder, Colorado, 2001–2002

Managed problem determination/troubleshooting procedures, problem/outage coordination, and escalation procedures for approximately 5,000 devices located worldwide, including Windows 2000, NT, UNIX, and Microsoft Exchange servers and various Cisco LAN/WAN equipment to include switches, routers, and hubs.

- Monitored and evaluated service call volumes/requirements, set priorities, and made decisions regarding the deployment of available resources and the initiation of emergency callouts of service personnel to meet service delivery requirements.
- Managed alerts, critical situations, and escalations and took action as required to ensure application of appropriate IBM resources, resolution/escalation of parts procurement issues, communication with customer management, and notification of management.
- Provided management support, assistance, and work direction to Systems Services Representatives and Customer Engineers as necessary to coordinate service delivery for entitled customer service requests.

UNISYS

IBM

Resource 87

Senior Security Consultant

IBM Global Services, Systems Management Professional, Boulder, Colorado, 2000–2001

Provided services to install, operate, and maintain complex centralized and/or distributed computer systems in a multi-vendor operating environment, including designing, implementing, and coordinating solutions to ensure acceptable performance levels with proven and advanced systems technologies.

- Performed problem determination and monitoring for IBM Global Services systems on various platforms including AIX, UNIX, and NT.
- Provided Level 1 and Level 2 problem determination and support for internal server systems and applications.
- Maintained a high level of accountability for quick determination of outages.
- Interacted daily with various levels of management, project managers, and support personnel.

Professional Summary

Summary of Experience and Qualifications

Shobha is Manager for over 14 years of Systems Engineering and Networking experience with the last 7+ years in assessment and implementation of Applications, Servers and Security infrastructure. Microsoft Certified Systems Engineer in windows NT/2000/2003. Over 3 years experience in managing the team and client interaction In depth knowledge and hands of Experience on TCP/IP Networking, DNS and Name Services, Active Directory-Joining Domains COM+ Applications, IIS as Web server and its configuration, administration and troubleshooting. Wide Experience in Implementing high availability solutions using CSS (Cisco Content Switches), Microsoft Windows Clustering, NLB, and Application Center. Hands on experience in designing and implementing Web publishing solutions using MS ISA Server. Ensured network security corporate policies and "best practices" standards were followed during design, installation, and configuration of ISA firewall, NAT server, and Intranet, Extranet, and Internet connections. Project Management experience in gathering the requirements, analyzing and document the application requirements, design and prototyping the applications in an enterprise environment.

Professional Experience Include most recent first

Unisys/Office of Administration, State-PA 2004-Present

- Working as deployment manager/architect for the data center. Routine job responsibilities include- Design and provide solutions for integrating applications securely within the data center. Leading team of experts who are responsible for implementing application on the enterprise infrastructure. embers as per their expertise and provide technical as well as non technical assistance as and when required by the team members. Coordination and meeting with clients to discuss the application/infrastructure requirements for deploying applications at the hosting facility. Work with Clients and provides them solution to a problem and built positive client relationship
- Project - Disaster Recovery/Secondary Site for Data Center (BCDRP) – Shobha is working with team of experts and Management executives for establishing the secondary site for the enterprise data center. Her role is to provide suggestions relates to application designs for secondary site in conjunction with primary site.
- Project Single Sign On for Commonwealth Portal 2006 (Access Control) – Designed and implemented the SSO for commonwealth Portal be leveraging CA SiteMinder. Designed the solution to implement SSO among various implementations of SiteMinder at various agency locations. Leading team of experts for ongoing support like upgrade of the products throughout the enterprise.

UNISYS

Resource 88

Security Architect

- Project – User Provisioning for commonwealth of Pennsylvania (Access Control)– Shobha was the technical lead during the requirement, design and implementation phases for user provisioning project. IBM Tivoli manager product is leveraged to provide account management and user registration capabilities.
- Project – PSP CLEAN (Access Control) – Shobha assisted the project lead during the design phase of security component for CLEAN project. CLEAN is the system that is leveraged by many crime and justice related agencies. Leading the team of experts to provide ongoing support for the CLEAN security components like single sign on and virtual directory services
- Project – Penndot NDES (Cryptography) – Shobha was the lead and helped in designing the solution for certificate enrollment by network and handheld devices. The solution was designed using Public Key infrastructure components like network device enrollment services(NDES) and OCSP (online certificate status protocol)
- Project – VPN for Mobile users (Telecommunications and Network Security) – Shobha along with other experts helped in designing the VPN solution for Commonwealth mobile users to access internal applications. The solution leveraged Netmotion mobility servers and Radius servers for VPN services, PKI and Active directory for dual authentication.
- Other responsibilities – Shobha leads team of experts and work with many other groups and is involved in all security related projects and addresses various security concerns like data at rest and in transit, user registration, access management, network and infrastructure security.

CitiBank New York, Consultant 2003-2003

Responsible for installing, configuring and managing the windows 2000 Servers. Co-ordinate with application and business groups, implementation and performance tuning of the applications Including IIS based application. Implement backup servers and create/implement backup plans for servers .Install SQL servers and help DBAs troubleshooting System related problems. Create/Execute backup of SQL databases using SQL server backup. Troubleshooting tier-3/tier-4 windows 2000/nt server environment Implement Web Trends server for logging. Routine troubleshooting and system administration involving application teams, business groups and network group

Unisys/Department of Public Welfare Consultant 2001-2003

- Project – DPW Extranet (Network Security) - Responsible for installing, configuring and maintaining the Department's Extranet by leveraging ISA/Microsoft Proxy Services. Designed and implemented solution to publish secure applications to Internet using MS Internet Security and Acceleration Server/Proxy 2.0 and SSL. Implemented the solution for

UNISYS

Resource 88

Security Architect

publishing applications with confidential data using secure socket layer protocol involving co-ordination with application teams, network infrastructure people and with other offices to fully understand the architecture. Troubleshooting and managing tier-3 servers problems, LAN, WAN support management in a complex environment including co-ordination with outside vendors and application vendors like Verizon

- Other Responsibilities: Monitoring, optimization, administration and support and configuring security for all enterprise Web servers. Support for WINS and DNS servers. Administer Exchange 5.5 environment, troubleshooting e-mail flow problems in an enterprise environment including escalation of problems with other organizations and departments within the same organization. Help and assist co-workers understand the e-mail flow and hardware/software involved in the whole process. Assisted in design and plan for migration from exchange 5.5 to exchange 2000. Helped in troubleshooting issues involving application availability, Network inconsistencies, routine issues with user/account management and policies. Provided support for network infrastructure, publishing applications and their availability, troubleshooting procedures for network, e-mail, Web servers and Internet facing Firewall servers (ISA and proxy servers)
- Project -Active Directory Implementation (Access Control)- Designed and implemented Active Directory in an enterprise environment, including security policies, delegate administration to user as per their role User and group accounts management. Created the support document and trained the administrators to manage the active directory as per their role. Troubleshooting the issues related to active directory policies and authentication problems involving co-ordination with different departments.
- Developed and implemented NETIQ performance-monitoring procedures on windows 2000 enterprise servers. Performance monitoring procedures details the process of monitoring each individual server's health and send alerts in case one of the monitored resources become a bottleneck, modified the scripts as per the organization requirement, created reports for resource consumption as and when required. The servers monitored with NetIQ were windows 2000 servers serving the role of Web servers, application servers and database servers
- Application Center Implementation (Access Control) - Designed and executed the phased implementation of application center clusters to load balance the applications running on windows 2000 enterprise Web servers. Created the procedures for application deployment and trained the developers to help them understand the new environment. Troubleshooting the problems related to application deployment, network inconsistencies and application synchronization. Maintenance of the cluster by taking the node offline alternatively without affecting the end users

UNISYS

Resource 88

Security Architect

- Implemented unified security solution includes deployment and configuration of SiteMinder components on enterprise servers. Integrating Netegrity with Active directory for authentication and authorization of resources, configuring policy servers to for multiple active directories for authentication and for authorization of resources. Troubleshooting the problems with the slow response or unsuccessful authorizations for the application using the Netegrity for single sign on, DNS problems and network issues in an enterprise environment, escalating the problems with third party software/application vendors whenever required and worked as coordinator.
- Implementing a Windows NT/ 2000-based VPN solution to provide administrator's access to public Web servers for upgrades, monitoring and maintenance. Analyze complex network environment and resolve any security issues. Co-ordination with multiple offices and third party hardware/software vendors

NT Administrator / IBM, Arkansas 20000-2000

Designed and Implemented the NT Enterprise Network which comprised of NT4.0 Enterprise Version, Server, Cisco Routers, 3Com Switches, RAID5 Disk Arrays, and IBM Netfinity Server. Implemented the Backup Policy using DLT4000 Tape Drives and Backup Exec. NT administration and troubleshooting on Netfinity servers. Troubleshooting disk related problems and tape drive problems. Working with utilities to flash BIOS settings and change BIOS settings. Configuring the hardware RAID. Configuring Load Balancing on Network cards. Worked with Disaster recovery NT resource kit tools to modify with NT registry

Network Administrator, Northfield Savings Bank, NY
(Short Term) 2000-2000

Project Firewall Implementation (Network Security) - Studied Network Design to foresee the problems before configuring/implementing security policies. Analyzed, designed, implemented and configured various elements of the network right from switches, Cisco Routers to servers and application Software. Installed and configured NT Servers. Installed and Configured CheckPoint 4.1 (Firewall) on NT 4.0 servers. Configuration and integration of E-Safe content scanning server to work with CheckPoint 4.1. Created policies and rules to define security for the organization.

NT Administrator/Architect, Interactive
Communications Inc., 1999-2000

- Designed and reconfigured the network having multiple subnets for different departments of the company. Installed and Configured CheckPoint 4.1 (Firewall) on NT 4.0. Configuration and integration of E-

UNISYS

Resource 88

Security Architect

Safe content scanning server to scan for viruses with CheckPoint 4.1

- Creating policies and rules to define security for the organization. Implemented Internet Security using MS Proxy Server 2.0. Configured Exchange Server 5.0 including IMS. Implemented VPN using MS PPTP (Point to Point Tunneling Protocol) technology and RAS server technology. The data transfer is secured by enabling the MS CHAP Protocol and Data encryption at the server level and client level.
- Evaluated the Windows 2000 server (Beta) compatibility with existing devices and testing the product services and new features in testing environment. Created customized packages using custom installation tools and distributing those using Windows 2000 group policies. Upgrading from Windows NT server to Windows 2000. Configuring RIS (Remote Installation Server) to remotely install Windows 2000. Configured Terminal Servers in Windows 2000. Configured networking services like DHCP, DNS, etc.

NIIT Limited, India 1995-1999

Network administration for network. Comprises of Windows NT Servers, Novell NetWare 3.12 and SCO-UNIX. Administration of users & group accounts, security policies, print servers, Implement, administer and troubleshoot Exchange environment, configure mail clients, Performance tuning. Implemented migration from Novell to NT Support DNS/Wins/DHCP Study and design network Conducted training on Windows NT 3.51/4.0, Windows 95, UNIX, TCP/IP, SQL Server, MS Exchange Server, PowerBuilder for corporate clients, Unicenter TNG (Computer Associates).

Professional Summary

An Infrastructure Architect in IBM Security Services. Responsible for delivering a full security product and service portfolio as well as supporting sales, business development and internal projects. Joined IBM Global Services in 1998, working in Strategic Outsourcing. Led transition teams, global Network Security teams, projects and consulting engagements.

Employment History and Related Experience

IBM Security Services, Advisory IT Architect, US, 2006–To Date

Delivered engagements, developed best practices for delivery and supported sales and internal work.

IBM Global Services, IT Specialist, US, 2001–2006

Was in the technical delivery on the Firewall Team of the Network Security Services organization of IBM Global Services, Strategic Outsourcing. Initially took part in the Universal Server Farm team supporting Web Hosting customers, but eventually began supporting Strategic Outsourcing and Managed Security Services customer. This position proved to be valuable in learning the strategic value of technical leadership, delivery and operational excellence and innovation to improve overall performance and growth in existing accounts.

IBM Global Services, IT Specialist, US, 1998–2001

Joined IBM Global Services, working in Strategic Outsourcing, providing Help Desk and End User Support for large clients. Responsibilities eventually included leading teams to transition and consolidate Help Desks using IBM best practices and tools. This position proved to be valuable in learning the strategic value of metrics, intellectual capital and technology investments to improve customer service and deliver IBM's unique value to customers making IT investments.

Washington University School of Medicine, Research Assistant, US, 1994–1998

Technical experience providing statistical data collection using PC and Client-Server platforms. Technologies included Windows 95, Windows NT, Windows 2000, SAS and DOS.

Assignment History

Large School District, Network and Security Architect, 2011–2011

The customer needed to reduce IT security risks in their existing network environment. This required an assessment of their Security Environment, LAN, WAN and Wireless

- RedSeal

network environments. The customer also required high level conceptual design of their network.

As the Network and Security Architect, I identified issues in the existing environments and provided high level Network and Security designs.

Global Bank, Advisory IT Architect, 2010–2011

The customer required a cross discipline review and assessment of the physical and logical elements of the technology and process infrastructures supporting their online Banking environment.

- Identified issues in the environment that had the potential to impact the delivery of services through the infrastructure.
- Provided recommendations to correct identified issues and enhance the performance and availability of the large systems delivery infrastructure.

Global Bank, Advisory IT Architect, 2010

The customer required the IBM project team to review and assess their Secure Data Management (SDM) architecture that relates to the personally identifiable or sensitive information within their non-production environment. The assessment covered personally identifiable or sensitive information used within non-production environments where applications are developed. The environment included over 1000 applications in multiple data centers, covering 6 business lines, with approximately 350,000 customer profiles, using multiple platforms including UNIX, Wintel, and Mainframe.

- Documented personally identifiable or sensitive information in the non-production environment, existing data management practices including an analysis of data flows into and out of the non-production environment.
- Provided recommendations for appropriate methodologies to perform data obfuscation, mitigating security controls, and suggestions on the “Best Practices” use of the recommended tools.

Regional Insurance Company, Advisory IT Architect, 2010

The customer required an Information Security Assessment to evaluate their security posture. The assessment included an analysis of the architecture and risks in the existing environment and networks, analysis of the network and security device configurations and an analysis of the technical security controls.

- Provided an analysis of in place threat mitigation technologies and made recommendations to strengthen the current state.
- Recommended changes to the existing technologies and platforms to realize immediate value.

UNISYS

IBM

Resource 89

Security Architect

State Healthcare Agency, Advisory IT Architect, 2010

The large government agency customer required a data center migration of their existing processing environment.

- Assisted the customer by reviewing the customer's network design to verify that it was complete in terms of scope, requirements, and technical details.
- Provided initial gap analysis of the current environment and subsequently provided the network security conceptual, specified and detailed designs.
- Provided an implementation plan and led the deployment of the network security solution. The solution was based on Cisco and Juniper Security appliances and Cisco switches.

Global Automobile Manufacturer, Advisory IT Architect, 2009–2011

The customer required an automated and centralized compliance management service to audit their global firewall infrastructure.

- Architected the process and technical solution for pilot and deployment. The service analyzes, reports, and tracks firewall configurations and policies for compliance to customer firewall standards. This service integrates into the customer's existing Security Operations Center service provided by IBM.

Global Defense Contractor, Advisory IT Architect, 2009

The customer required a global IDS solution for worldwide infrastructure.

- Assisted the customer by configuring and deploying ISS Proventia devices.

Regional Power Company, IT Specialist, 2009

The customer required a complete network refresh, upgrade and support of an office move. The customer's environment and topology included a Primary Data Center, Disaster Recovery site and a new office building.

- Assisted the customer by reviewing the customer's network design to verify that it was complete in terms of scope, requirements, and technical details.
- Provided gap analysis and recommendations for the conceptual, specified and detailed design.
- Provided an implementation plan and assisted with deploying the network solution. The Cisco solution at the core included 6500 platform with FWSM, WAAS Acceleration, GSS, 3500 switches and ASA firewalls. The solution at the access and distribution included 6500 and 3500 switches.

IBM

Resource 89

Security Architect

International Travel and Tourism Customer, IT Specialist, 2009

The customer required a secure hosting environment. IBM provided a hosting solution based at an IBM data center.

- Deployed network security equipment including Cisco ASA Firewalls and Proventia IPS devices.

Large University, IT Specialist, 2009

A large university required a network refresh with a Medical Grade component for an affiliated research hospital.

- Provided Network Security reference architecture consulting and design for a large University and affiliated research hospital. The technologies included Cisco Clean Access Manager, Cisco Clean Access Server, Cisco ACS, Cisco Security Monitoring Analysis and Response System, Cisco Security Manager, Network Admission Control Framework, and Cisco IDS/IPS Architecture.

Large Retailer, IT Specialist, 2008

- Led an assessment of the organization's firewall architecture. This assessment of the current firewall architecture provided best practices-based recommendations for improving the current design, configuration(s) and performance of their firewall architecture.
- Delivered findings ranked by risk and operational, tactical and strategic recommendations in order to help the organization understand the security risks involved.

Large Healthcare Management Company, IT Specialist, 2008

- Supported BCRS application assessment of a large health care insurer.
- Provided data mining of the applications and systems in order to help the team understand the synchronization points of the environment.

National Bank, IT Specialist, 2008

Providing testing environment security assessment for a large bank, focusing on Security Management and network segmentation in a regulatory environment.

- Developed findings and recommendations for Security Management and network segmentation.

Large Regional Bank, IT Specialist, 2008–2009

Provided Network Security design review for large bank. Technologies include Cisco ASA Firewalls, Cisco CS-MARS and Cisco NAC.

Resource 89

Security Architect

- Developed Network Security strategy and recommendation for NAC Appliance deployment.
- Performed Design Review for Cisco NAC Deployment and provided workshop to discuss findings.

Large Federal Government Department, IT Specialist, 2008

Provided hardware and software upgrade and Security Consulting for Federal Agency. Technologies included Check Point and Check Point Secure Platform.

- Upgraded from Nortel Switch based firewall to HP hardware.
- Upgraded from Check Point version R55 to NGX R62.

Large City Agency, IT Specialist, 2008

Provided Security and encryption consulting for large city Public Safety Agency. Technologies include Microsoft Windows CE, Global Bay handhelds Check Point and Check Point Secure Platform.

- Provided encryption strategy and recommendation for handheld device secure login, encryption of data at rest and encryption of data in transit.
- Provided approach and strategy to meet business and functional requirements and to achieve compliance with electronic signature requirement.

National Retailer, IT Specialist, 2008

Provided Security Consulting and secure network segmentation reference architecture for a large retailer. Technologies included Check Point, Cisco Switches, Active Directory, Check Point Firewall and Cisco PIX Firewall.

- Responsible for Security Lead and Network design. Deliverables included secure Network Design to support strategic growth of company and supporting Security Process Guide based on ISO/IEC 27002:2005.

National Retailer, IT Specialist, 2007

Provided PCI remediation and Network Security consulting for a large retailer. Technologies included Active Directory, Check Point Firewall, Cisco PIX

- Provided consulting and support for Network Security team for PCI remediation. Activities included Cisco VPN Client Deployment for use with Two Factor (RSA) authentication, Check Point Management Server rebuilds and Deployment, Remote Site Firewall Infrastructure Deployment, Remote Site Firewall Infrastructure Deployment, and Mainframe and Teradata Segmentation.
- Developed a remote site deployment strategy.

- Developed a Network Security Devices Password Management Strategy and developed a Network Security Devices Inventory Management Strategy.

National Retailer, IT Specialist, 2007

Provided PCI remediation and Security consulting for a large retailer. Technologies included Active Directory, Check Point Firewall, Cisco PIX, and Cisco FWSM.

- Updated the company's security policy to comply with Payment Card Industry (PCI) Data Security Standard (DSS) requirements.
- Created Quarterly Rule Review Process of firewall and router rule sets is required to validate compliance with Payment Card Industry (PCI) Data Security Standard (DSS) requirements.
- Performed PCI rule identification and cleanup for customer firewalls. Created Firewall Standards document.

Global Hospitality Company, IT Specialist, 2007–2009

- Provided Network Security reference architecture consulting and design for a global hospitality company. Technologies included Active Directory, Cisco Clean Access Manager, Cisco Clean Access Server, Cisco ACS, ISS IDS/IPS Architecture, ISS Log Aggregator, Nomadix Access Gateway and Cisco ASA.

Global Advertising Agency, IT Specialist, 2006–2007

- Provided Network Security consulting, design, assessment and deployment for an advertising company. Technologies included Cisco Network Assessment Module, Cisco Clean Access Manager, Cisco Clean Access Server, Cisco ACS, Cisco Security Monitoring Analysis and Response System, Cisco Security Manager, Network Admission Control Framework, and Cisco IDS/IPS Architecture.

Global Shipping Company, IT Specialist, 2006

A global shipping company was required to separate and secured the wireless inventory device network from the production wireless and wired networks.

- Developed the reference architecture, project plans, deployment strategy and led the deployment.
- Managed both the project management and technical delivery for the North America rollout of 26 sites. Technologies included Cisco firewalls, Cisco switches, multiple wireless devices and Symbol handheld wireless devices.

IBM

Resource 89

Security Architect

Other job-related activities

- Provided support for RFP responses, B&P, business development, scoping and/or QA for the following opportunities:

  ACE Hardware, Atlanta Public Schools, Citigroup, Coca Cola, Diageo, Flint Group, GAP, Keybank, Manpower, Nationwide Insurance, Regence, Schneider, Telmex and US Cellular.

INFO-MATRIX CORPORATION

Resource 90

Security Specialist

Key Skills and Knowledge

- Extensive knowledge of information security, including physical security and identity and access management concepts
- Assisted in implementation and administration of the Living Disaster Recovery Planning System (LDRPS) and the enterprisewide policy software tool called VPC.
- Assist in administering a security awareness program using e-mail alerts, training sessions, and the Enterprise Security Web page.
- Facilitated risk assessments by interviewing key business and technical staff, documenting the process, and following up with audit recommendations.
- Created and implemented an annual access review process using Microsoft Access to pull in multiple applications and generate a management report to validate access.
- Project manager for an implementation of SecurID implementation.

Professional Summary

15 years of security management primarily in a RACF environment. Skilled professional with extensive knowledge of information security, including physical security and identity and access management concepts. Manage the execution and use of security controls to protect data and for supervising the conduct of personnel in the protection of data. Build working relationships with internal staff and external clients to achieve results through others. Develop and implement information systems security policy, standards, and procedures for information processing systems. Evaluate security and analyze information systems to identify requirements, information workflows, and sound structures based on regulations and business needs.

- Develop and implement information security awareness programs
- Monitor security systems and analyze logs for violations, patterns, or incidents that require further investigation; provide the root cause and a plan of action documentation
- Provide technical advice to staff and management on information security issues
- Oversee the enterprisewide business continuity plan for the Pennsylvania Higher Education Assistance Agency; facilitated the annual exercise for 3 years
- Evaluate software, tools, and equipment for automating compliance and security administration
- Facilitated and administered a risk analysis program for Allfirst Bank
- Acquired extensive experience with PC applications such as Microsoft Word, Excel, Access, PowerPoint, Visio, and Adobe Acrobat Professional.

Employment History and Related Experience

Pennsylvania Higher Education Assistance Agency (PHEAA),
Identity & Access Manager, Harrisburg, PA 2004 – Present

Manage security for multiple systems, including RACF, Linux on zSeries, PeopleSoft, SalesLogix, SQL Server, and other application security systems. Develop and implement security policies based on NIST 800-53 Standards. Evaluate information security systems to assess effectiveness, monitor security performance and adequacy, and resolve security problems. Define and test new security monitoring processes, including audit requirements, exception reporting, and automatic incident notification.

- Administered and coordinated PHEAA's business continuity plan, risk assessments, and management of vendors and equipment at the hot site.
- Coordinated the annual exercise for PHEAA, which involved 75 business units and 10 IT departments, testing at 5 different sites, and working with 4 business recovery vendors.

- Assisted in implementation and administration of the Living Disaster Recovery Planning System (LDRPS) and the enterprisewide policy software tool called VPC.
- Assist in administering a security awareness program using e-mail alerts, training sessions, and the Enterprise Security Web page.
- Work with associates and external clients to assess their security needs, provide solutions, and resolve their problem, while striving for excellent customer service.

M&T Bank, Senior Security Analyst, Vice President,
Buffalo, NY 2003 – 2004

Defined and developed new security monitoring processes for the LAN and the mainframe, including audit requirements, exception reporting, and automatic incident notification. Researched the technical environment and worked with vendors to identify tools that can be used for monitoring. Worked with security administrators in defining and implementing security requirements.

- Administered the quarterly access and remote user activity review process, including the report creation, distribution, and tracking.
- Prepared metrics for management to track based trends (access request volumes).
- Configured the System Access Request system, which included automatic management, system administrator approvals, tracking requests, and management reports.

Allfist Bank, Senior Data Security Analyst, Vice President,
Baltimore, MD 1998 – 2003

- Created a Security Awareness Program for more than 5,000 employees, including quarterly newsletters, designing a Web-based training program, Web publishing, semiannual security administrator meetings, and an annual computer security week to evaluate the program's effectiveness.
- Managed security administration for the IBM mainframe (RACF), Tandem (SafeGuard), and remote access (SecurID) systems. Acquired experience with NT and UNIX/AIX security administration.
- Evaluated the security of application systems based on the data owner's business requirements and regulatory controls and implemented the proper controls.
- Designed and implemented an online access request form to address multiple platforms and systems, automating the manager/security administrator approval process and a tracking method.
- Managed all access control requests, including problem resolution, monitoring outstanding requests, table changes, documentation, end user training, and communications.

Security Specialist

- Facilitated risk assessments by interviewing key business and technical staff, documenting the process, and following up with audit recommendations.
- Created and implemented an annual access review process in Microsoft Access to pull in multiple applications and generate a management report to validate access.
- Project manager for an implementation of SecurID.
- Assisted in implementing policies and procedures, ensuring compliance with federal banking regulations such as the Gramm-Leach-Bliley Act.

Dauphin Deposit Bank (DDB), Data Security Manager,
Vice President, Harrisburg, PA 1988 – 1998

Oversaw the administration of data security for all platforms (RACF, NT, AIX, and operating system/2) and applications (CICS, SHAW, OFCS, and Genesys). Developed and implemented an access request system that included data ownership approvals. Implemented RACF security administrative and reporting tools, increasing productivity by 50 percent.

- Implemented and administered a SDLC tool (Librarian/CCF).
- Developed and presented information security training and awareness seminars.
- Assisted in installing, monitoring, and user training of McAfee antivirus software.
- Implemented, administered, and tested the contingency plan for the bank.

Farmers Bank & Trust Co., Data Processing Manager,
Hummelstown, PA 1883 – 1988

Managed all data processing functions to ensure production jobs were completed accurately and promptly. Managed various departments; Document Processing, Data Entry, Data Security, Computer Operations, and Technical Services.

Education and Training

- Computer Operations Certificate, Computer Learning Center, Camp Hill, PA (1983)
- B1000 Computer Operations Cert, Burroughs Education Center, King of Prussia, PA (1984)
- Intro to COBOL Programming, Penn State Capital Campus, Middletown, PA (1987)
- Effective RACF Administration Certificate, The Henderson Group, NJ (1989)
- MVS/ESA Security Topics, IBM Education Center, Chicago, IL (1992)
- NetWare System Administration, ADT (Knowledge Soft), Mechanicsburg, PA (1996)

Resource 90

Security Specialist

- Mastering Windows NT Security, The Henderson Group, Harrisburg, PA (1997)
- NOTES Domino Designer Fundamentals, Application Security and Workflow, Attronica, Gaithersburg, MD (2001)
- Advanced z/operating system Security, Raleigh, NC (2011)
- Other Software/Management Courses: Microsoft Office products, Managing/Leading for Success, Counsel and Develop Employees, Diversity Training, and LDRPS Administration training

Storage Management Administrator

Key Skills and Knowledge

- SAP
- Oracle for DMX
- Symmetrix
- CLARiiON and HDS storage arrays
- Design, administration, and management of enterprise systems
- Storage systems and network infrastructure
- Documentation of management systems

Professional Summary

Specialize in EMC SAN, Hitachi SAN, HP SAN, IBM SAN, TSM, NetBackup, and CommVault technologies. Certified in EMC Technology Foundations (EMCPA). Deliver professional services and EMC integrated solutions for enterprise applications such as SAP and databases such as Oracle for DMX, Symmetrix, CLARiiON, and HDS storage arrays. 10 years of experience in the design, administration, and management of enterprise systems. Extensive experience with supporting storage systems, network infrastructure, and detailed documentation of management systems.

- Expertise in administration of information technology with a very specific emphasis on storage management and virtualization, network and system operations, system administration, and project management
- A results-oriented professional experienced in the analysis, design, implementation, and management of multifaceted projects, integrating varied technologies for maximum effect
- Worked with an EMC consulting team as an implementation specialist
- Worked with a Hitachi consulting team as an implementation specialist; acquired extensive knowledge of Hitachi SAN
- Worked with a IBM consulting team as an implementation specialist; acquired extensive knowledge of IBM SAN
- Strong management and leadership skills with the ability to motivate and maximize productivity
- Excellent communicator with an emphasis on building strong client relationships
- Experienced in information technology, operations management, account management, client services, organizational development, rollouts of new products, networking, process improvement, training, mentoring, international technology liaison, sales, marketing, and e-commerce initiatives
- An accomplished consultant with a deep understanding of technical implementations and business functions in Fortune 1000 companies across North America, Europe, the Middle East, Africa, and Asia Pacific regions.

Employment History and Related Experience

Unisys Corporation, SAN Administrator, Harrisburg, PA 2011 – Present

SAN administrator on the American Red Cross project as a member of the NAEC storage SAN team.

- As a backup SAN Administrator for the Commonwealth of Pennsylvania, assisted in upgrading Brocade switch code.
- Completed ITSM 7.6 change requests for storage allocation on EMC and IBM arrays.

EMC Residency Consultant, Dana, Maumee, OH 2011 – 2011

Supported change requests for storage allocation and reclaim requests for EMC

UNISYS

Resource 91

Storage Management Administrator

arrays. Participated on projects for migration from DMX-3 to VNX5300 arrays.

- Involved in VMAX for open systems and mainframes.
- Performed regular status check of SAN (EMC arrays and Cisco switches) and backups (Avamar, Datadomain,and Networker) environments in primary and disaster recovery sites
- Created and updated EMC documentation for primary and disaster recovery.

Other Employment and Consulting Experience

• Henry Ford Health System, Sr. SAN Engineer	2011 – 2011
• AdvizeX Technologies, LLC/EMC Services Practice	2011 – 2011

Professional Summary

Vast experience in Information Technology with skills ranging from a Systems Programmer to a Storage Management Specialist. Currently supporting the Commonwealth of Pennsylvania contract as a Systems Administrator: Mainframe Storage Manager. Significant experience in a zOS environment.

Employment History and Related Experience

IBM Corporation, Technical Services Professional, Harrisburg, Pennsylvania, 2001-To Date

As part of the IBM supporting the Commonwealth of Pennsylvania, I provide day to day support by performing maintenance and administrative duties for the SMS control data sets, allocation rules, and constructs. I provide evaluations, make recommendations, and control implementation of enhanced SMS features including, but not limited to hardware compression, stripping and extended addressability.

- Support hardware migrations and implementations DS8300, ATL/VTS.
- Provide evaluations, make recommendations, and control implementation of enhanced DFSMS features including, but not limited to hardware compression, stripping and extended addressability. Managed 16 Tbyte DASD environment, supporting hardware installation, replacement and removal.
- Provide required DASD capacity based on business forecasts and historical growth. Also established and maintained standards for appropriate allocation of DASD and tape storage media.
- Monitor and maintain volume pool utilization, and volume/data performance in accordance with Business Service Level agreements.
- Create and update user catalogs/aliases.
- Provide backup and support for offsite business resumption.
- Provide recommendations for VSAM tuning and optimizing.
- Review and approve application changes to ensure conformity to standards and availability of required resources.
- Coordinate and/or perform verification and testing of software upgrades and maintenance of the following products: DFSMS, DF HSM, DFRMM, DSF, and TSM/ADSM.

IBM Corporation, Storage Management Specialist, Martinsburg, West Virginia , 1999-2000

As part of an IRS Data Center Consolidation, evaluated and configured the Database Management System (DBMS) products to match user requirements with system capabilities. Determined the file organization, indexing methods, and security procedures for system databases.

Resource 92

Storage Management Administrator

- Participated in the Service Center (SC) site survey.
- Assisted the Lead Analyst with storage assessment of the IAP/ACS/PRINT (IAP) system, and with the SC data captures and restoration process.
- Provided support for the systems environments and works with the storage lead and assists System Software Development (SSD) through systems monitoring, tuning, analysis, and problem resolution as required.

Citigroup, Senior Resource Manager, Wilmington, Delaware, 1993-1999

Performed maintenance and administrative duties for the SMS control data sets, allocation rules, and constructs. Provided evaluations, recommendations, and control implementation of enhanced SMS features including, but not limited to hardware compression, stripping and extended addressability.

- Managed the 3.25 Tbyte DASD environment, supporting hardware installation, replacement and removal.
- Provided required DASD capacity based on business forecasts and historical growth. Also established and maintained standards for appropriate allocation of DASD and tape storage media.
- Monitored and maintained volume pool utilization, and volume/data performance in accordance with Business Service Level agreements.
- Created and updated user catalogs/aliases.
- Provided backup and support for offsite business resumption.
- Provided recommendations for VSAM tuning and optimizing.
- Reviewed and approved application changes to ensure conformity to standards and availability of required resources.
- Coordinated and/or performed verification and testing of software upgrades and maintenance of the following products: Catalog Solutions, DSF, and DFSMS.

User's Incorporated, Systems Programmer, Malvern, Pennsylvania, 1989-1993

Planned and implemented VM operating system upgrade to VM/ESA 1.1 from VM/SP Release 5, and the migration of product applications to the new operation system.

- Upgraded VM execs to conform to the new release, and trained operations, programmers and the user staff in the operation of the new system.
- Planned and implemented VSE operating system upgrade to VSE/SP 3.2.1 under VM/SP Release 5.
- Migrated online network to VTAM, NCP, performed network maintenance and upgrade, and provided technical support to the user community.

UNISYS

Qualifications

- >170 SMS Conversions
- IBM Business Partner
- Educator to over 5,000 students in z/operating system & MVS topics
- Extensive knowledge of several OEM vendors software
- Handled several projects with savings > $1million

Professional Summary

Have over 36 years within the IT mainframe environment experiencing on different installations, processes and procedures while employed as an employee or consultant. Started as entry level computer operator and advanced into more challenging positions within operations and then into technical support with experience in database, DASD and tape support. installed and supported IBM and OEM vendor software. Have successfully handled many projects, some with millions of dollars in savings.

Employment History and Related Experience

IBM/RBS Citizens Application Resiliency Project, Storage Specialist / Architect, Global Technology Solutions Group, Evansville, Indiana, 2011–To Date

Provided application and infrastructure services in support of an end--to-end resiliency assessment performed on critical customer facing banking systems. Additionally, contributed to and worked on the overall team deliverable with the IBM EM.

IBM/WellPoint Data Center Consolidation Project, Storage Specialist / Architect, Global Technology Solutions Group, Evansville, Indiana, 2011–Current

Provided Mainframe Storage Technical direction and Architect services for the Wellpoint project, relocating the Staten Island data center to St. Louis for integration in a Sysplex. Responsible for assisting in the architect design & layout of the DSS8700 in St. Louis. A DSS8300 & DS87700 in Staten Island was to be merged into it. Responsible for the configuration of the DS87000 in St. Louis, and setting up PPRC-XD from the DS88300 & DS87000 in Staten Island to the DDS8700 in St. Louis.

- Performed several data replications and data syncs throughout the project (excess of 400TTB and 5, 0000 volumes) and also provided Storage Management functions to the testing (Bubble) environments in St. Louis du ring 3 testing cycles, a dry run cycle and the fin al cutover. These functions included VTS/Tape support, DFHSSM, DFSMS support, FTP of any required/missing data to the Test environments. Cleaned up the environments after each testing cycle and prepped them for the next replication process.
- Assisted with overall system customization and support utilizing my wide range knowledge.

- Hardware: DASD (IBM, HDS, EMC) TAPE (IBM, HDS, EMC, Sun)
- Mainframes: IBM, Amdahl

References

- Provided on Request

Ford Motor Company, Storage COE Technical Advisor & Architect, Dearborn, Michigan, 2002–2008

Provided Technical direction and Technology strategies for the mainframe computing platforms at Ford Motor Company (domestic and international) locations. Helped develop and implement the Center of Excellence strategy for Enterprise Storage Management. Determined, evaluated and decided Hardware and Software solutions for the Mainframe offered by vendors.

- Served as Technical Advisor & Design Architect for a staff of 15 Storage Administrators who managed just shy of 1PPB of disk storage in addition to 5PB of tape storage.
- Provided Day to Day support in DFFHSM, DFSMMS, Tape, and Disaster Recovery Services. Process re-engineered all phases of storage manage and implement automation too reduce headcounts, on-calls, and optimize the storage environment.
- Created a Technical Services Taskforce to set direction for Ford data centers worldwide to implement bleeding edge technologies and to standardize processes & procedures enterprise -wide. Headed consolidation of several Ford subsidiaries data centers into the Dearborn mega centers.
- Chaired several key projects within IT that saved Ford in excess of $30+ million during my tenure, while providing excellent customer service.

Developed and implemented processes to change Disaster Recovery/Business Continuity from a batch ABARS process to a PPPRC Metro Mirroring process between the Dearborn mega centers. Headed multiple Storage refreshes that included replacing a vendor or upgrading technology. Storage vendor s during my tenure with Ford included (HDS, EMCC, and IBM). We were an IBM DS87700 & DS83000 environment when I departed Ford. Also headed Tape technology refreshes from (EMMC to IBM VTTS), and a IBMM VTS upgrade to the IBMM TS7700/TSAA3500 VTS solution looking to implement a Quad configuration, this DR standard was implemented at all worldwide data centers. Our mirroring was accomplished using PPRCC Metro Mirror, controlled by an IBM developed package at Ford, called PPRC Migration Manager.

- Developed and was Implemented the Global Standard Storage Management Environment at Ford across all data centers that would allow for any job to run on an y system, this meant implementing Parallel Sysplex and eventually going GGDPS, rewriting thousands of lines of code for standards for DDFSMS, DFHSSM, DFRMM, and RACF security.
- Migrated hundreds of PetaBytes of DASSD using TDMMF for Technology refreshes and migrations of data centers to the US. Also implemented an internal data transferring mechanism using TDMF to move vast amounts of data nightly among Ford's data centers.

Resource 93

Storage Management Administrator

- Was instrumental in getting the LDMF product developed and under IBM control. Handled Project Orange and Project Blue which was the separation of Visteon a Ford subsidiary that was sold and Project Blue was the integration of additional companies Ford purchased and wanted integrated.
- Handled the migration of data of Jaguar to its new owners, and the migration of the Mazda corporate data center from Irvine CCA, to Dearborn MI, utilizing PPRC Global Mirroring and TDMF Extended Distance over IP.

Enterprise Systems Consulting, Inc., President, CEO, Senior IT Consultant, Kendallville, Indiana, 1996–2002

Serving primarily as a Senior IT Consultant, provided Storage Management, Resource Management, Disaster Recovery, Security, and Automation in the Mainframe (MVS) arena. Provided solutions to many different client situations and also assisted with staff augmentation requirements. Partnered with several OEM Hardware/Software vendors (BMC Software, Mainstar Software, Innovation Data Processing, Softek, and IBM) and used their products in our solutions.

- Worked on a large project which was a DAASD Technology change, Disaster Recovery, and SMS implementation ((including HSSM, DSS, and RMM) for Bank Central Asia, (largest Bank in Asia headquartered in Jakarta, Indonesia). The BCA project lasted 2 years.
- Handled hundreds of smaller projects for Fortune 500 companies, including DFSSMS implementation, DDFHSM implementations & Health checks, DASD technology refreshes that encompassed configuration of the hardware and migration off data to it utilizing TDMF and data center consolidations and Disaster Recovery & Testing.
- Developed a 2-week Storage Management Boot camp class taught to over 2,800 students at TechKnowledge Corporation and is still being taught today.
- Developed/taught several courses and hands-on labs that covered topics in the MVS & z/OOS platform including, JESS, Catalogs, DASD, Performance & Tuning, Hardware, & Computer Operations for IBM Education Services, HDS Education, and TechKnowledge Corporation and other leading education suppliers.

Verizon Data Services, Senior Advisor y Systems Engineer, Temple Terrace, Florida, 1978–1996

Provided technical direction for Storage Management/Security at GGTE. Served as project lead for a Resource Management team with 28 direct reports.

- Managed a DASD environment in excess of 800TTB, 38 MVS images, 15 million tapes, within 4 mega data centers. Provided services for Mainframe and Open systems including Disaster Recovery.
- Served as consolidation manager, developed the data movement plans,

and performed the tasks to dump the data, fly via jet then restore the data.

- Responsible for consolidating 24 data centers into 4 mega centers, additionally successfully integrated CONNTEL and CITIZENS telephone company acquisitions. Developed a plan to integrate CONTEL and CITIZENS data into GTTE applications.
- Completed first successful SMS implementation in South America working at CANTV in Venezuela (a GTE subsidiary) and was featured in Computer World Magazine.

Retegeano Associates, Senior Technical Programmer, Erie, Pennsylvania, 1977-1978

Analyzed, designed, and coded COBOL and RPG programs to handle varied requirements for business applications as requested by clients. Worked on applications such as Order Entry, Accounts Payable, Accounts Receivable, Inventory, Credit Processing, Payroll and Taxes.

Greenleaf Corporation, Lead Programmer, Saegertown, Pennsylvania, 1977–1978

Analyzed, designed, and coded COBOL, RPPG, and Fort ran program s to handle office systems and manufacturing applications. Wrote Work In Progress, Taxes and Depreciation, Expediting, and Engineering applications. Served as Lead Computer Opera tor and trainer for Computer Operations' personal and was primary contact for any problems with computer systems.

Education

Computer Science, Associates of Science, ICM School of Business (Institute of Computer Management), Pittsburgh, Pennsylvania

Data Processing, Technical Certificate, Venango County Vocational-Technical Campus, Oil City, Pennsylvania

Computer Based Training, Certificate of Completion,1978 –2008

Certifications

- Presented several times at SHAARE, GUIDE(UUS and South America), and CMG
- Member, IBM East Coast Storage Consortium
- Member, National Computer Association Board Member – SHARE (2005 – 2008)
- Member, NaSPA
- Board Member – Indiana 4-H Foundation (11992 – 2004)
- Received (4) GTE Presidents Awards, (1) Personal Best Group Award,, (28) Quest for Quality Awards, (1) Power of One Award, (16) Once of Quality Awards, (11) International President Leadership Award Received (10) For d IT One Awards, (6) Ford IT Team Awards

Resource 94

Storage Management Administrator

Key Skills and Knowledge

- Storage Area Network engineer
- 25 years of experience in the state government and public safety market sectors

Certifications

- Microsoft NT Workstation
- Microsoft NT 4.0 Server
- Microsoft Networking
- Microsoft Windows 2000 Active Directory
- CommVault Administration
- VMware (VCP)
- VMware Capacity Planner
- EMCSE – EMC SE Accreditation: Strategies & Solutions
- EMCPA – EMC Proven Professional in Information Storage and Management
- EMCPP – SE Operational Practices
- EMCTA – EMC Technology Architect Specialty Credentials

Skills used:

- EMC DMX2000, DMX3, & DMX4
- CLARiiON CX300, 400, 500, 600, & 700
- Brocade Director switches and Cisco switches,
- EMC Control Center 6.1
- PowerPath, Emulex, and Qlogic HBAs
- Windows 2008, 2003, and 2000 Server
- CommVault
- VMware, Equalogic, Isilon, and NEXSAN

Professional Summary

Quality-driven, service-oriented Storage Area Network engineer with more than 25 years of experience in the state government and public safety market sectors. A skilled Microsoft system administrator and EMC proven professional who maintains a customer-centric focus while providing precise problem solving, decision-making, and administrative expertise.

Employment History and Related Experience

SANpulse, Storage Manager — 2012 – Present

Planned migrations of multiple EMC storage arrays across several data centers to a EMC VMAX storage array and Hitachi storage arrays to Hitachi AMS 2500; migrated more than 500 hosts.

- Create scripts for migrating data from DMX to VMAX for host-based migrations and the array base.
- Create volumes and map them to fiber adapter ports with EMC Solutions Enabler.
- Create zones for hosts to see storage ports at the command line.
- Set up SRDF Adaptive Copy between DMX arrays to the VMAX.
- Set up Cascade SRDF for migrating production hosts to disaster recovery hosts.
- Create SRDF scripts to migrate data between the DMX arrays to the VMAX.
- Migrated DMX thick devices to VMAX thin devices.
- Create masking view, storage, port, and initiator groups for hosts connecting to the VMAX.
- Gather data to design migration methods from various storage vendors to a single storage vendor, depending on the storage tier required.

KForce Contractor, Build Engineer — 2010 – 2011

Set up and configured 64 Cisco Director SAN switches; migrated Brocade DCX SAN switches to Cisco Director SAN switches. Migrated more than 10,000 SAN ports – one of the largest SAN migrations done, according to Cisco. Created scripts for migrating Brocade switches to Cisco.

- Prepared migration workbooks for the different data centers for migrating fabric.
- Planned the migration of 13 EMC storage arrays to one EMC VMAX storage array and our Hitachi storage arrays to one Hitachi AMS 2500. More than 500 hosts were migrated.
- Created scripts for migrating data from DMX to VMAX for host-based

migrations and the array base.

- Created volumes and mapped them to fiber adapter ports with EMC Solutions Enabler.
- Created zones for hosts to see storage ports on the command line.
- Set up SRDF Adaptive Copy between DMX arrays to VMAX.
- Created SRDF scripts to migrate data between the DMX arrays to the VMAX.
- Migrated DMX thick devices to VMAX thin devices.
- Created masking view, storage, port, and initiator groups for hosts connecting to the VMAX.
- Migrated CLARiiON arrays to IBM XIV using IBM XIV migration tools.
- Gathered data to design migration methods from various storage vendors to a single storage vendor, depending on the storage tier required.

IP Datasystems, Inc., Senior Technical Consultant 2008 – 2010

Installed EMC Control Center, Resource View, Symm Optimizer, Timefinder, SRDF, CommVault, EMC PowerPath, and EMC SMC software. Performed a host-based migration from DMX3 to DMX4 for a client in Newark, Delaware; worked closely with business managers and project managers; and assisted sales representatives on sales calls.

- Worked with clients on root cause analysis of issues with backups, storage, and Windows 2003 issues.
- Attended planning meeting with customers to discuss best practices on implementing software and hardware.
- Set up iSCSI on various storage arrays including Isilon, Dell Equalogic, EMC CLARiiON, EMC NX Series, Celerra installation and configuration
- Installed and configured Cisco 9513 and 9134 and Brocade 12000 SAN switches
- Zoned of new hosts to SAN environment and LUN masking to give volume access to new/existing hosts
- Installed and configured host bus adapters.
- Created basic Timefinder and SRDF scripts for use with BCV and SRDF devices.
- Set up and configured EMC CLARiiON hardware and software.
- Set up and configured NX hardware and software.
- Installed and configured Windows 2003, including WINS, DNS, DHCP, and TCP/IP.

MTM Technologies, Senior Storage Consultant 2008 – 2008

Set up and configured EMC CLARiiON hardware and software, including EMC Control Center, Resource View, Symm Optimizer, Timefinder, SRDF, and

CommVault.

- Worked closely with business managers, project managers, and technical architects.
- Assisted sales representatives on sales calls.
- Attended planning meeting with customers to discuss best practices on implementing EMC software and hardware.
- Zoned new hosts to the SAN environment and granted volume access to new hosts.

Unisys Corporation, SAN Manager, Harrisburg, PA 2004 – 2008

Managed 8 SANs consisting of Brocade fabric; designed and implemented Core/Edge using Brocade 12000 switches; and managed and oversaw configuration of EMC Clariions, Symmetrix, and DMX. Architected new SAN and storage solutions; installed EMC software upgrades; and installed EMC agents on servers to monitor errors on servers, SAN switches, and storage arrays.

- Zoned new hosts to the SAN environment; granted volume access to new hosts.
- Worked closely with business managers and project managers.
- Attended meetings with customers to discuss best practices, new projects, and current issues.
- Managed a $4.3 million project that included data migration from DMX2000 to DMX-3.
- Migrated data from DMX2000 to DMX-3 consisting of 57 Windows servers.
- Migrated data from Symmetrix 8830 to DMX-3 consisting of 14 Windows servers.
- Developed project plans; managed data migrations to the DMX-3.
- Architected a solution for migrating data from the Symmetrix 8830 to the DMX-3.
- Worked with EMC on configuring SRDF from the DMX-3 to the remote location in Philadelphia to a DMX2000.
- Installed and configured of Windows 2003, including WINS, DNS, DHCP, and TCP/IP for more than 400 servers.

Professional Summary

Expert Capacity Planner, accomplished performance assessment across storage tiers (one-time analysis, quarterly or monthly analysis & trending); accomplished Application Performance Profiling for Tiering recommendations (RAID Level); and delivers skillful Bandwidth Analysis for EMC SRDF/A, MirrorView, SANCopy etc. Subject Matter Expert for:

- SAN Consolidation Analysis for EMC, IBM and Hitachi Storage Arrays
- Technical SAN and Storage Assessments
- Disaster Recovery Planning
- Performance based Data Center Migration Planning with source to target device level plan
- Performance Analysis for Storage Platforms supported: EMC Symmetrix/VMAX, CLARiiON, IBM
- DS8300, IBM SVC, Hitachi Tagmastore, USP, USP-V/VM
- Performance Analysis for Operating Systems. Support for: Solaris, Linux, AIX & Windows

Employment History and Related Experience

STATE OF TEXAS, SAN Assessment & Application Profiling, Austin, Texas, 2011

Worked proactively with state of Texas to provide a detailed SAN Assessment based on IBM recommended best practices. SAN comprises of Cisco 9513 switches, IBM Storage Volume Controller (SVC) and IBM DS8300.

- Provided detailed performance profiles using the internally developed Perfonics™ tool that can analyze data from various SAN components and performance data from Tivoli Productivity Center (TPC).
- Analyzed critical Food Stamps application used state wide from performance and best practices perspective. Conducted end to end performance analysis for AIX and Windows hosts with DR replication profiles.

EMC PROFESSIONAL SERVICES (Partner), Independent Consultant (Founder) – Interscape Technologies Inc., Performance Engineer, Storage Architect and Disaster Recovery, New York, New York, 2002-2011

Credit Suisse: Instrumental with Tech Refresh project, providing services for performance and capacity based migration planning using Open Replicator. Over 100 arrays and 500 hosts.

- Performed Capacity Planning and Storage Architecture for new data center in Princeton & Clifton, NJ. (EMC VMAX, CLARiiONs, Netapp, 3PAR).

- ITIL implementation for storage infrastructure. Custom SRM Tool implementation with integration with external infrastructure related systems (SANscreen, Tideway, and Data Warehouse).
- Consolidation and Migration Planning for three data centers for 50 storage arrays (CLARiiON, DMX).

Goldman Sachs: Very Large Infrastructure base of VMAX, DMX-4/3, DMX-2000, and DMX-3000.

Over 150 CLARiiONs (CX3-80, CX-700, CX-600), using RAID 1+0 RAID 1 and RAID 5 on Cisco SANs (9513, 9509, McData ED-140M).

- Responsible for Storage and SAN Capacity Planning for over 10 PetaByte storage and 10000 Ports across 5 Data Centers. Instrumental in planning for every SAN attached host. Created Performance and Capacity Planning team and processes for North America operations.
- Lead the CLARiiON Consolidation Modeling project for target Mixed Tier VMAX arrays using FASTVP and Thin Provisioning. Over 120 arrays and 2000 hosts.
- Helped design storage architecture for 4 Data Centers with synchronous replication and multiple tiers of storage.
- Planned storage consolidation for complete storage environment from EMC DMX-2000, DMX-3000 to DMX-3 and DMX-4. Consolidated 36 SRDF replicated storage arrays into fewer DMX arrays using performance centric planning.
- Served as Performance Engineer, Analyzing System Performance for Solaris, Linux, AIX and Windows using iostat, sar and perfmon data.
- Conducted Storage Performance Analysis using Symstat, WLA, SymmMerge, and Perfonics. All storage arrays replicated over Wide Area Network, using SRDF and SANCopy.
- Developed Technical Migration Plans and Design for storage migration of over 5000 Solaris, Windows and Linux servers and over 1.2 PetaByte using SRDF and SANCopy Replication. Migrations to DMX-4 and CX4-80 arrays.
- Assisted architect EMC Storage Area Networks for migration of 140 Symmetrix Units to 30 8830 Symmetrix and Connectrix ED-64 & ED-140M switches.
- Provided documents with detailed Visio diagrams, and Implementation and Migration Plans. Using ECC 6.x, EMC Control Center.

Verizon Business & Verizon Telecom: Performed SAN Assessment for Verizon Business clients, such as JetBlue Airlines which included multiple DMX-2500. Celerra Performance Assessment. Analyzed CPU utilizations, Memory, Network Bandwidth, CIFS Fileshares, Cache hits, and Fileserver operations.

- TimeFinder implementation with scripting on Windows server using clones and TimeFinder Integration.
- Module (TEIM) and SRDF.

- MS Access

- VMAX resident expert, helped with VMAX solutions design with FAST and Thin Provisioning features.

Bank of New York: Executed multiple projects during 2006-2008. Post Migration Performance Analysis for DMX Arrays attached to Open Systems and IBM Mainframes. Identify bottlenecks and establish baseline IO Profiles

- Engaged to provide the following scope for the BNY and Mellon Bank Merger:
  - Baseline Performance analysis for 17 DMX arrays
  - RAID-5 application recommendations based on array level IO performance profiling for over 650 Servers
  - Application Tiering recommendations
  - RDF/A bandwidth analysis across data centers for Disaster Recovery
- Conducted Performance analysis on over 10 DMX Arrays for Migration planning at Array level, Device level and Disk level to select best RAID Level strategies for SRDF replicated arrays.
- Performed Host and Array level performance planning for MVS Mainframes using Work Load Analyzer and RMF Data. Two Mainframes Complex with two DMX Arrays on each site.

CitiGroup: Performance Analysis and troubleshooting for the RBNAW application running on IBM AIX LPAR servers on multiple DMX Arrays. Conducted performance assessment of 30 Mainframe Symmetrix setup in STAR configuration as part of ITIL project.

- Assisted in providing application assessment and documentation for the current environment.
- Coordinated presentation of final analysis and recommendations.

ADP: Engaged for performing Bandwidth Analysis study for the Magellan application for MirrorView implementation. Worked on a project to do performance analysis and recommendations for scaling the recommendations for file system layout for SQL DB Planning.

NYSE: Performance Analysis for Symmetrix 8830 and DMX arrays and present recommendations. Symmetrix connected to UNIX, Windows and MVS Hosts.

Medco Healthcare Solutions: Provided Performance Analysis for DMX arrays and present recommendations.

CREDIT SUISSE FIRST BOSTON, Independent Consultant – Storage Architecture/Disaster Recovery, New York, New York, 2001-2002

Designed Total Architecture for Storage Area Network and Disaster Recovery using EMC SRDF. Implemented over 200 TB of EMC Symmetrix Storage with a 400 port SAN using EMC/McData Connectrix switches.

IBM

Resource 95

Storage Management Administrator

- Over 100 mid to large Sun Solaris and HP Servers. Exchange Microsoft Clusters on SAN with SRDF based DR implementation. Used ESN Manager, Volume Logix, SDDR and other EMC tools.
- Celerra NAS implementation with Active/Passive redundant design using 12 Data Movers on each side and over 6TB of EMC BCV/TimeFinder storage.
- Disaster Recovery over Dark Fibre using DWDMs with a completely redundant multiple Fabric design, using EMC SRDF.
- Wrote extensive shell scripts to automate various trouble-shooting procedures and DR failover. recovery.
- Provided critical documentation to manage the total project with detailed Visio diagrams, Implementation Plans and checklists.

Education

- M.S. Computer Science, New Jersey Institute of Technology, Newark, NJ
- B.S. Computer Science (Program Distinction), Stockton State College, Pomona, NJ
- B.S. Physics (Honors), University of Calcutta, Calcutta, India

Certifications

Trainings and Certifications:

EMC Proven Professional - Master Operator+ Certified | Legato Certified Engineer | Sun System Administrator Certified | VMware 3.5 Infrastructure Trained | Netapp SANscreen Training | Principle Centered Leadership | Project Management | Effective Technical Presentations | Managing People and Performance | Extensive internal technical training | Product Management Concepts | Diversity Workshops

Professional Summary

Over 20 years experience in Storage Management, Disaster Recovery, and Computer Operations. Establish and maintain Storage Management: standards, policies, retention, backup/restore, scheduling, conversion, fall back, disaster recovery, and performance. Develop Information Management Policies - performance, space and availability requirements

- Manage data; moving, copying and manipulating files using DFDS and other utilities.
- Track and report Storage growth, usage, free space, etc.
- Perform backup and recovery: Full volume, incremental, disaster recovery, mirroring, slit/establish, etc.
- Migrate to new equipment (i.e. EMC, 3390s, VTS, etc.), software, etc.
- Provide SMS education to developers, analysts, operators, production control, systems programmers, managers, etc.
- Identify requirements such as data, user, hardware, and software.
- Perform storage, system and application troubleshooting.
- Identify and document Recovery Time Objective (RTO) and Recovery Point Objective
- (RPO).
- Conduct Business Impact Analysis (BIA).
- Monitor DFSMShsm activities including migrations, recalls, backups and data set recovery.
- Monitor DFSMShsm and DFSMS logs and control data sets like the MCDS, BCDS, OCDS, and Journals.
- Monitor DASD volumes and storage pools; ensuring sufficient free space, minimal fragmentation, etc.
- Monitor DFSMShsm primary and secondary automatic space management activities
- Monitor DFSMShsm Recycle of ML2 and Backup tapes.
- Monitor DFSMShsm Control Data Set and Log backup
- Monitor SRDF links and replication processes
- Monitor files exceeding 16 extents, VSAM files exceeding 240 extents and/or 4gb in size

Storage Administration

Participated in the outsourcing of Mainframe Storage Operations. Documented the processes and procedures used by the Storage Administration team. Assisted in the Identification, collection and documentation of the storage equipment, maintenance agreements and I/O configurations. Identified storage related software and license keys and agreements. Obtained necessary system, software and security access for off-shore team. Oversaw education, training and "shadowing" of the offshore team. Participated and Coordinated disaster recovery tests.

Softek Replicator (TDMF)

- Monitored DFSMShsm activities including migrations, recalls, backups and data set recovery.
- Monitored DFSMShsm and DFSMS logs and control data sets like the MCDS, BCDS, OCDS, Journals.
- Monitored DASD volumes and storage pools; ensuring sufficient free space, minimal fragmentation, etc.
- Monitored DFSMShsm primary and secondary automatic space management activities.
- Monitored DFSMShsm Recycle of ML2 and Backup tapes.
- Monitored of DFSMShsm Control Data Set and Log backup. Monitored SRDF links and replication processes. Storage Administrator.
- Established and maintained Storage Management: standards, policies, retention, backup/restore, scheduling, conversion, fall back, disaster recovery, and performance.
- Developed Information Management Policies - performance, space and availability requirements. Managing Data; moving, copying and manipulating files using DFDSS and other utilities.
- Tracked and reported Storage growth, usage, free space, etc. Backup and recovery: Full volume, incremental, disaster recovery, mirroring, split/establish, etc.
- Migrated to new equipment (i.e. EMC, 3390s, VTS, etc.), software, etc.
- Provided SMS education to developers, analysts, operators, production control, systems programmers, managers, etc.
- Assigned as the lead storage administrator for disaster recovery tests.
- Worked with user groups to identify recovery requirements, including Recovery Time Objective (RTO) and Recovery Point Objective (RPO).
- Assisted in conducting Business Impact Analysis (BIA).
- Analyzed, implemented and maintained Disaster Recovery processes.

Data Center

Consolidated two (2) Data Centers. Activities included:

- Worked with application groups to identify and document files to be moved.
- Developed procedures and processes for the movement/transportation of data. Tested and verified these process and procedures.
- Worked with Applications, Scheduling and Operations to schedule and monitor data movement. Verified the data moved as expected.
- Researched problems as required.

Employment History and Related Experience

- WellPoint Storage Data Center Consolidation (2010-2011)

UNISYS

Resource 97

Storage Management Administrator

Key Skills and Knowledge

- SAN and Storage expertise and solutions
- Hardware: IBMDS8300, Cisco directors9513, IBM SVC, IBM XIV
- Brocade Fibre Channel switches
- IBM pSeries and xSeries servers
- Operating systems: Microsoft Windows 2000, 2003, and 2008; RHEL; and IBM AIX
- Software/system architecture
- IBM Storage Manager
- IBM TPC
- Cisco Fabric Manager
- On-command Core
- Data Fabric Manager
- MSCS clustering
- SVC
- DS8300 – 2107 - 922 and DS8100 2107 - 921
- IBM SVC 2145 4F2, 8F2, CF8, and D4800
- Cisco MDS 9509 and 9513
- SAN Director and switches
- Windows 2000, 2003, and 2008 Server Cluster environment
- Linux RHEL
- ESX hosts 4.1 and 5.0

Professional Summary

16 years of total IT experience of systems implementation, configuration, and troubleshooting with expertise on IBM storage DS 8100/DS 8300, ESS800/DS4000 series Storage in IBM AIX, Sun Solaris, Linux, Windows environment. Practical expertise in SAN design, deployment, and management Cisco MDS 9509/9513 Directors SAN switches. End-to-end Storage provisioning expertise with DS8100. DS8300 and DS4000 Series, IBM SAN Volume controller SVC, IBM XIV 2810/2812.

- Worked as Storage Architect in to design/configure and implement the IBM DS8300 storage to provide the best performance. Completed storage upgrade from DS8100 model 921 to DS8300 model 922; used IBM SVC for Data migration storage side, Used LVM and VMware cold migration to migrate data
- Implemented Metro mirror/Global mirror DR solutions using IBM SVC and IBM XIV.
- Expertise on DSCLI command line to do the storage configuration/provisioning and Storage administration
- Worked with Large VMware ESX 3.5/4.1/4.2 hosts cluster environment for configuring SAN on ESX hosts and creating Data stores; worked with high-end AIX/UNIX servers and Storage as a senior level UNIX System Administrator, Systems Support Engineer or back line Support Engineer. Programming: UNIX shell programming, PERL scripting
- A fast, resourceful troubleshooter with a strong attention to detail, who likes to get the job done, Ability to work in a team environment, good communication skills
- Experienced with working with and management of teams, clients, and vendors.

Professional Experience

Unisys Corporation, Commonwealth of Pennsylvania,
SAN Administrator,
Harrisburg, PA 2007 – Present

Maintain and support IBM DS8100 and 8300 and IBM XIV, DS4500, and DS4800 with about 750 TB of finished space with Cisco SAN MDS-9509 and 9513. Upgraded storage DS8100-921 to DS8300-922, which involved data migration from the old model to a temporary/swing DS8100 box and back to the upgraded DS8300-922 model.

- Configure and Implement DS8300 with two 92E expansion frames.
- Design and configure the complete logical configuration of DS8300 to promote the best performance.
- Install and configure IBM XIV 2810/2812 storage; create and assign LUNs to the ESX clusters.

UNISYS

Resource 97

Storage Management Administrator

- Implement storage metro mirroring storage replication to the disaster recovery site.
- Install and upgrade SDD/SDDDSM and RDAC drivers in Windows and Linux RHEL 3.0 servers.
- Implement and configure Flash copy to backup the database servers' LUN.
- Collect storage requirements from customers and provide them with a best solution.
- Attach and configure the DS4500 storage controller behind the IBM SVC.
- Create the image mode.
- Manage disk to migrate the LUNs from the DS4500 to the DS8100/D8300.
- Upgrade SVC code and MDS 9509 and MDS9513 code.
- Upgrade DS4000 controller firmware disk firmware and ESM firmware.
- Install, configure, and manage Netapp and NSeries FAS 6240 storage.
- Install and configure storage performance monitoring software IBM TPC and on-command core.
- Collect performance data and create performance line graphs.
- Create design zones for the new host attachment requirements or for a new storage controller.
- Plan, forecast, and review capacity with customers.
- Tune the performance of storage of LUNs RAID types and controllable settings in a storage controller.

IBM Global Service, AIX Administration and Storage Specialist, Boulder, CO 2004 – 2007

Maintained DS4500, DS8100, 8300, and DS4000 series in a Cisco Fabric environment; installed, configured, and administered SANs for large external and international IBM customers; designed SAN consisting of core/edge technology with dual Cisco fabrics for redundancy and to allow "no downtime" maintenance windows; each SAN consisted of a primary and a failover site.

- Created LUNs and mapped them to AIX servers.
- Created file systems.
- Worked extensively with Cisco, McData, and IBM Enterprise class storage devices.
- Helped design and implement various backup solutions like Backup & Restoration/Recovery from snapshot to disk, tape to disk, and disk to disk on the production and test application, reporting, database servers.
- Migrated storage from Shark F20 to DS8000.

Environment: Cisco, McData, IBM DS8300, ESS 800, DS4500 and DS4800 SAN volume controllers, Power4 and Power5 AIX servers, and TSM (Tivoli Storage Manager).

UNISYS

Resource 97

Storage Management Administrator

IBM Global service, Storage Technician, India 2003 – 2004

Designed a SAN and implemented IBM FastT Storage 500/700 and Shark F20; configured storage in the SAN and assigned them to hosts running AIX, Linux, and Windows operating systems.

- Designed the LUNs of RAID 0, RAID 0+1, and RAID 5 RAID groups and storage groups according to an application's size and performance requirements.
- Implemented and configured a storage manager client and ESS specialist Flash copy.
- Configured EMC SnapView snapshots and snap clones (BCVs) together with Mirror view and SAN copy for advanced data protection, created replicas locally and remotely.
- Installed and configured HBA driver firmware. Updated HBA firmware and multipath drivers on IBM AIX, Solaris, Linux, and Windows servers. Performed end-to-end storage provisioning for Sun, AIX, HP, Novell, Linux, and Windows hosts using ESS specialist and Fabric Manager on SAN switches.

Environment: FatsT500 and 700; Shark F20; SP frames; p630, p650, and S58 servers running AIX 5.x; Solaris 8 and 9, Linux 7.x, 3, and 4; TSM; and Sun SPARC Enterprise Server workstations.

DCM Data Systems, Sr. Systems Administrator, ltd.
India 2001 – 2003

Planned, installed, and configured servers and HMC. Created and customized LPAR profiles. Installed AIX 5.1 on each LPAR server profile. Created mirror at oslevel for rootvg. Configured FastT700 arrays and logical drives; assigned them to the AIX host. Installed, configured, and split a 2104 du3 storage disk array for access by the AIX host simultaneously. Configured RAID5 on all AIX servers using du3 storage.

- Created and managed file system sizes.
- Set up the complete environment for installation of SAP r/3 on AIX 5.1.
- Installed a configuring performance meter to take and exact view of system performance.
- Planned and configured storage using LVM.
- Set up and deployed security standards, openssh, SSL, TCB, and so forth.

Environment: FastT200, 300, and 900 ESS shark SP tall frame; 7026 B50 servers; and SCSI disk array

Professional Summary

Strong experience in systems administration and network management with a facility for learning and implementing unfamiliar technologies to attain customer-required outcomes.

- 12 years of implementing Web applications using Microsoft IIS as the Web and application server
- 12 years of deploying Microsoft Windows on authentication, file, and application servers
- 5 years installating, configuring, and deploying applications using of IBM WebSphere Application Server (WAS)
- 5 years of installing and configuring of Linux users and services, including Samaba, SSH, and BIND
- 4 years of installing and configuring VMware and ESC; as well as hosting of virtual infrastructure for a lab environment
- 2 years of installing and configuring of WebSphere MQ Server to support application communication across multiple platforms and architectures.

Professional Experience

Elite Systems, Commonwealth of Pennsylvania
Office of Administration, Integration Consultant, 2010 – Present

Supported application deployments for the Commonwealth of Pennsylvania; coordinated and implemented the upgrade of WebSphere MQ from version 5 to version 7 for multiple Commonwealth agencies to access an enterprise SAP environment.

- Review, create, and update documentation used to deploy and support agency applications hosted at the Commonwealth's Enterprise Data Center.
- Evaluate agency requested changes against industry best practices and Commonwealth security standards.
- Coordinate change management processes among multiple Commonwealth enterprise teams to complete application deployments for Commonwealth agencies.
- Manage DNS servers hosting Microsoft Windows DNS and associated DNS records.
- Patch and troubleshoot Linux servers running SuSE and Red Hat distributions.

UNISYS

Resource 28

Third Party Software Specialist

TEKSystems/MindTeck, Pennsylvania Department of Transportation (PennDOT), Network Engineer, 2004 – 2009

Provided 24/7 support of numerous applications hosted at the PennDOT server farm for various bureaus in the department; monitored, and maintained APC UPS infrastructure.

- Deployed WebSphere Application Server infrastructure to support migration of PennDOT applications from Lotus Domino-based architecture to Java architecture.
- Deployed IBM DB2 Connect server and DB2 client software upgrades to support access to IBM mainframe-hosted DB2 database instances hosted on z/operating system.

Professional Summary

Progressive experience in implementing and administering new technologies to the existing networks in Windows 2008, 2003, 2000, Vista, XP, NT-based client/server environment, which also includes managing projects.

- Enterprise-level experience working with fortune 100 companies and Government Agency like Hewlett-Packard, IBM, Merrill Lynch, Unilever North America and Commonwealth of Pennsylvania
- Expertise in deployment, migration, and administration of Windows Server 2008, 2003, and 2000
- Expertise in administration and deployment of CA SiteMinder
- Installing and configuring VMware Server, VMware Player, and VMware Converter
- Expertise in administration and deployment of Radiant Logic VDS
- Installing and configuring Microsoft TMG 2010 Enterprise Servers
- Expertise in network administration; database administration; TCP/IP network implementation; system integration, management, and troubleshooting
- Expertise in installing and maintaining Microsoft Web Server clusters
- Configuring and administering ESRI GIS (Geographic Information Systems)
- Installing, configuring, and troubleshooting IBM Tivoli Monitoring and IBM Director
- Testing and integrating-various third party applications on Windows 2003 and 2000
- Extensive experience in testing, evaluation, and implementation of Windows 2003 and 2008
- Used PowerShell and VB Script for modifying and administering object properties in Active Directory
- Disaster recovery planning
- Experience with installation, configuration, and administration NetScaler Access Gateway and Citrix XenServer
- Configuration and administration of UNIX and Linux
- Excellent creation and editing of technical documentation; fast learner
- Excellent leadership and communication skills and strong analytical skills.

Employment History and Related Experience

Commonwealth Technology Center, Senior Integration Consultant, Harrisburg, PA — 2007 – Present

Configure and maintain SiteMinder Cluster Server for authentication, authorization and Single Sign-On on the Commonwealth network. Install, configure, and maintain Radiant Logic Virtual Directory Server for the Commonwealth Technology Center. Provide Level 3 support (regular and on-call) for the servers at the hardware, operating system, IIS, Microsoft .NET application, and multiapplication

UNISYS

levels.

- Support is 365/24/7 in an environment with application availability of 99.99 percent.
- Ongoing deployment of Windows 2003, 2008, IIS, and Database Server for the Commonwealth of Pennsylvania and its agencies.
- Troubleshoot and configure VMware hosts.
- Administer Windows 2003 and 2008 Active Directory and support more than 10,000 users.
- Configure, support, and troubleshoot Microsoft Clustered Server.
- Troubleshoot DNS and network issues.
- Support the entire environment (development to production) comprising more than 250 IBM xSeries servers.
- Resolve trouble tickets Using Remedy Ticketing System.
- Use the Change Management process for all changes; review change management requests.
- Install, configure, and administer NetScaler Access Gateway and Citrix XenServer.
- Install, configure, and manage Microsoft TMG 2010 Enterprise Proxy Server.
- Review and update documents according to agency requirements.
- Work with agencies to plan and implement projects on schedule.

Deloitte, Active Directory Engineer, Harrisburg, PA 2007 – 2007

Level 3 support (regular and on-call) for the servers at the hardware, operating system, and IIS levels. The project involved deployment of Window 2003 IIS and Database Server for the Commonwealth of Pennsylvania. Project was to develop a solution for the Commonwealth's Department of Labor.

- Configured and administered Windows 2000 and 2003 Active Directory and supported more than 10,000 users.
- Configured, supported, and troubleshot Microsoft Clustered Server.
- Configured and troubleshot DNS and network issues.
- Installed and troubleshot IBM Tivoli Storage Manager Client.
- Installed and troubleshot IBM Tivoli Monitoring.
- Installed and configured VMware for testing regular patches and other software before installing them in production servers.
- Supported the entire environment (development to production) comprising 110 IBM xSeries Servers.

IBM, Wintel Systems Administrator, Poughkeepsie, NY 2005 – 2007

This project involved deployment and maintenance of Windows 2000 and 2003 Server Standalone in an Active Directory domain. Supported IBM internal and external clients, which included more that 500 IBM servers. Led the knowledge transfer and transition of work to teams in India, Brazil, and China (training and

cutover).

- Level 3 support for IBM servers at the hardware, operating system, and application levels.
- Configured and administered Windows 2000 and 2003 Active Directory.
- Configuring and troubleshot DNS and network issues.
- Installed and troubleshot IBM Tivoli Storage Manager Client.
- Installed and troubleshot IBM Tivoli Monitoring.
- Installed and configuring VMware for testing regular patches and other software before Installed them on production servers.
- Supported IIS on the production servers. Troubleshot and supported internal clients on requirements for Web hosting.
- Installed and supported two-node cluster with Microsoft SQL and shared resources on Shark.
- Installed and maintained IBM servers in the Poughkeepsie and Fishkill Data Centers.
- Provided 24/7 on-call Level 3 support for servers.
- Decided on technical and hardware details for clients.
- Performed extensive work on OpenSSH and Cygwin for communication between Windows and AIX servers.
- Performed change and problem management with IBM Manage-now (ITIL process).
- Configured and maintained Symantec System Center Console.
- Implemented and supported new business clients on the servers and the transition.
- Maintained up-to-date documentation on the process and procedure.

Hewlett-Packard/Unilever, Project Lead 2003 – 2005

Created Active Directory sites. configured and scheduled site replication for these sites. Created and managed user accounts and groups. Migrated users from the NT4 domain to Windows 2003 domain using Aelita.

- Configured network services, including DC, GC, DFS, FRS, DHCP, and DNS.
- Migrated DHCP scope.
- Installed and configured Tivoli, Enterprise Security Manager, and Legato.
- Generated ESM reports on the new servers after deployment to make sure they all met security requirements.
- Restricted space allocated to each user using Disk Quota Management.
- Configured RAID on HP ProLiant DL380 servers.
- Turned over servers to production after the total quality check.
- Assessed the site and ordered required components to make the site ready for server deployment. Coordinated with the network team on network issues and to get the server up and running in time to meet the SLA.

UNISYS

Resource 99

Third Party Software Specialist

- Defined and refined a process for building and configuring Windows 2003 servers.
- Troubleshot problems that arose during server deployment and configuration.
- Installed and managed Exchange Server in the enterprise.
- Migrated the servers from Exchange 5.5 to Exchange 2000.

Hewlett-Packard/Unilever, Project Lead 2003 – 2003

Led an eight-member team and led the deployment and migration to Unilever. Migrated users from the NT domain to Active Directory. Synchronized home shares using Aelita. The project involved building the new laptops according to Unilever standards.

- Created and assigned entrust certificates.
- Migrated user profiles for desktops and favorites using Altiris.
- Met deadlines and supported users for 7 days after the migration.
- Configured and created printers on Windows 2000 and 2003 servers.
- Performed group migration using Aelita.

Hewlett-Packard/Merrill Lynch, Senior Systems Engineer 2003 – 2003

Implemented Active Directory Services. Configured and scheduled site replication over these sites. Created and managed user accounts and groups. Configured network services, including DHCP and DNS.

- Automated client PC installation using Remote Installation Services (RIS).
- Implemented security using Domain Security Policy, Group Policy, and file permissions of NTFS5.
- Restricted the space allocated to each user using Disk Quota Management.
- Migrated mail for users from the Windows NT4 environment to Windows 2000 Exchange Servers.
- Configured and tested the mail migration process using Aelita mail migration tool in a test lab before going to live migration.
- After successful mail migration of the users, provided users with daily support.
- Maintained problem and solution documentation from day to day.
- Coordinated team members for 24/7 operation to meet deadlines.

Hewlett-Packard/Unilever, Senior Systems Engineer 2001 – 2003

Built and configured NT servers for different locations across North America. Once the servers were in production, configured, and tested the backup device for the server. Migrated and consolidated users' data from Novell and NT servers to the centralized server. Configured and created printers on the new servers.

UNISYS

Resource 99

Third Party Software Specialist

- Created group shares for common groups and granting appropriate permissions.
- Configured and tested the IBM backup device for the server using Legato.
- Built and deployed desktops and laptops for users on the Unilever build standard (Aztec)
- Created new NT IDs, Sprint IDs, and entrust certificates for users.
- Performed quality checks before delivering desktops and laptops to users.
- Performed user support on the client and server sides.

Additional Employment History

Ramco Systems Limited, Network Engineer	1999 – 2000
CIDER, Systems Executive	1995 – 1999
Horizon Computers, Software Executive	1994 – 1995

Education

- B.S., Physics, University of Madras, Chennai, India, 1993
- Master's degree in Software Engineering, APTECH Computer Education, Mumbai, India, 1996

Professional Development Training

- PowerShell v2 Essentials – Basic PowerShell commands for administrators - April 2011
- CA SiteMinder r12 Core 200 – February 2010

Certifications

- Microsoft Certified Solutions Associate – Windows Server 2008
- MCITP: Server & Enterprise Administrator Windows Server 2008
- Microsoft Certified Systems Engineer MCSE (NT 4.0, 2000, and 2003)
- Microsoft Certified Database Administrator (MCDBA)
- Microsoft Certified Systems Administrator (MCSA): Messaging
- Certified CA SiteMinder r12 Administrator
- Certified CA SiteMinder r12 Professional
- Certified in ITIL V3 Foundation
- Nortel Networks Certified Account Specialist, Enterprise Solutions – Data

- Sun Microsystems, Inc. and its affiliates

Professional Summary

Numerous years of professional experience with advanced expertise in the areas of systems administration and integration, and security consultation with skills that include extensive technical writing and documentation. Experienced professional with excellent communication skills, capable of independent work as well as team-based and cooperative ventures; delivers required technical writing of customized user guides and briefs for in-house and third-party applications, documentation to record research and results of systemic issues that included root cause, warning signs, and proactive measures.

- General Systems and Network Administration
- Detailed Technical Writing and Documentation
- CheckPoint FireWall-1, FloodGate-1, WebSense
- Development of Training Classes and Seminars
- Sun/Veritas Volume Managers and ZFS
- Solaris Zones, LDAP, Veritas NetBackup

Employment History and Related Experience

The Vanguard Group, Tech Ops: WAS and UNIX Administrator Services, 2008 - Present

UNIX Technical Services (UTS) Tier-3 support. Duties included daily systems administrative projects and mid- to large-scale enterprise-wide projects. Provided additional support to Tier-2 personnel. Documented new projects such as the seven-month enterprise-wide upgrade of NetBackup. Prepared and maintained system-run books.

Specific work included:

- Solaris Zones, ZFS, Veritas and Sun Volume Managers, Flash Archives, installation of new software, software upgrades, patch installations, general maintenance, JumpStart, LDAP, NetBackup Administration, and general troubleshooting.

Perfect Order, Inc., Comcast Interactive Media Group, Senior Consultant, 2006 – 2007

Systems administration including LDAP/Samba support, Solaris Zones, ZFS, major projects included: Ziddio, Game Invasion, Xanadu, and Milhouse that depended on Apache, Tomcat, JBoss, and Java. Installation and maintenance of software packages, installation of hardware components, troubleshooting and monitoring of services, research of new technologies. Documented all projects, prepared and maintained system run books.

UNIX Administrator

- USENIX, SAGE, SANS, CERT, AUCERT

Comcast Interactive Media Group, System Admin, University of Rochester, 2005 – 2006

Installation and configuration of a dual-server Cisco CNR configuration, planning and deployment, and prepared technical documentation to support the administrators, staff, and students. Prepared run books for each system. Ongoing support of the CNR system for the calendar year.

Comcast Interactive Media Group, System Admin, 2006 to 2006

Systems administration and assistance with LDAP server user population, and research of methodologies supporting NAS authentication mechanism, deployment of systems at Inflow. Documented research results.

Comcast Interactive Media Group, Urban Outfitters, Network Administrator, 2006 to 2006

Configured new IP addresses, netmasks, and default gateways on four V440 systems. Installed a dual HBA on the database server and connected a StorEdge C2 Autoloader. Installed, configured, and tested NetBackup 6.0 on the database server, configured initial full and incremental backup schedules. Prepared a Technical Brief for System Administrators.

Comcast Interactive Media Group, Certanteed, Philadelphia, 2006 to 2006

Worked with personnel in planning a Disaster Recovery test for Certainteed scheduled at Sun Guard, documented all procedures and prepared a project summary to the project leads. Provided support for disk space problems on production database servers.

Comcast Interactive Media Group, Philhaven, 2006 to 2006

Installed, configured, and tested NetBackup 6.0 and the Oracle Agent on the production database server. Prepared initial run book and wrote technical briefs to assist administrators in daily operations.

Comcast Interactive Media Group, Case New Holland, 2006 to 2006

Configured and deployed secure host-based SSH file transfers between UNIX systems and developed and documented a plan for extending the same technology to PC-based systems.

Comcast Interactive Media Group, 2006 to 2006

Performed systems administration duties and documented the development infrastructure.

CNR/BACC Training Development, September 2005 –- March 2006

Collaborated with CNR Team to develop a three-day course for Cisco Systems. Built a test laboratory to support The University of Rochester's CNR server pair. ocumented progress of project.

Resource 100

UNIX Administrator

School District of Philadelphia, June 1999 – August 2005

Systems administration, installation, configuration, management, and maintenance of over seventy Solaris systems on a variety of platforms

- Sunfire 6800/Hitachi 9960, V880, V240, V120, Netra, E450, E250, E420, E220, assisted SDP staff with projects, supplied user support for SDP Community.
- ISC BIND DNS Services, ISC and NetID DHCP Services, Check Point Firewall-1, WebSense Enterprise Server, IP Telephony Services deployment at SDP Headquarters
- Enterprise-wide NetBackup, Sun Java Enterprise Systems LDAP Services, Sendmail, Annex ERPCD Authentication Services for Dial-Up Modem Pool, Jumpstart.
- Wrote customized Perl and Shell scripts required to accomplish repeated tasks.

Temple University, Senior IT Technical Staff, 1998 to 1999

November 1989 – May 1998

Performed daily System Administrative tasks that included software installations and maintenance, operating system installation, patching and maintenance, system and network troubleshooting, security services that included intrusion detection, auditing, technical documentation, and the development of proactive methods to mitigate illicit intrusions targeting the University's systems and networks.

Education

- BA in Computer Information Sciences, Minor in Mathematics, Temple University, 1989

Certifications

- Sun Certified Systems Engineer
- WebSense Certified Engineer
- RSA Certified Engineer
- Veritas NetBackup Certified Engineer

Resource 101

UNIX Administrator

Key Skills and Knowledge

- Data center planning and administration. Space, power, cooling.
- Data center infrastructure management (DCIM) tools and administration. Facilities management and monitoring tools.
- Disaster recovery planning and administration.
- UNIX / Linux administration and scripting
- UNIX / Linux monitoring – Nagios
- UNIX / Linux security – User ID management, sudo, Access Control
- Apache and IIS administration
- Windows administration
- Website analytics deployment and analysis – includes WebTrends, Google Analytics, Omniture, Urchin. Incudes both raw log file analysis and javascript based code tracking
- Website monitoring
- NetBackup / Veritas monitoring and administration

Professional Summary

A leader with 7+ years of experience in the modernization of business processes and reporting through the use of technology. A self-motivated individual with a strong talent for understanding complex information relationships and with an ability to communicate to business partners in both technical and business terms. An extensive record of successfully leading cross-functional projects by drawing upon emotional intelligence, problem-solving and interpersonal skills.

Employment History and Related Experience

John Wiley & Sons, Inc., Lead Systems Hosting Resource Analyst, 2003 to Present

Lead technical resource for data center operations, expansions, maintenance, and planning. Project Lead on integrating Foreseer power management monitoring to pro-actively manages company-wide mission-critical infrastructure equipment, including power, environmental, and life/safety devices.

- Implementation of modern data center power and management systems; reduced hosting costs by phasing out legacy equipment and connections
- Responsible for Data Center work flow migration and management. This includes coordination of all maintenance work: dealing with UPS, PDU, AC units (CRAC, RTU, etc.), and integrating the services of electricians and other outside contractors.
- Implementation and management of DCIM tools for strategic data center consolidation and off site hosting
- Hosting Resource duties include day-to-day operations of the Data Center, power management for all devices, cooling needs, and the layout and planning of the room.
- Key Member of the UNIX Security Team controlling access to all Wiley UNIX and Linux systems; This includes monitoring UNIX hardware; Standardized setup across all UNIX systems.
- Apache webserver configuration in the UNIX and Linux environments.
- Responsible for ServerVantage reporting and analysis on all Wiley UNIX and Linux hardware; Project Lead for migrations and upgrades.
- Veritas Backup Reporter for determining that our backups were timely, accurate and complete Driver in the IBM audit on all UNIX servers
- Team Lead analyzing and presenting Wiley traffic statistics and patterns for all Wiley Web sites worldwide; incorporated Webtrends, SmartSource, Keynote Systems and Akamai software, processes and

protocols to create a complete picture of Wiley's Web presence, bandwidth usage, and next generation Web site tracking. Introduced smart tagging of Web sites, e.g., Google Analytics

- Responsibilities for Sarbanes-Oxley compliance

Johnson & Johnson, Network Technician, Raritan, NJ, 2001 – 2002

PRD Raritan campus PC technical support team responsible for software troubleshooting and upgrades; included both standard software such as Microsoft Office and Windows along with industry specific pharmaceutical programs.

- Internal portal Web site development and handoff to permanent staff
- Technical writing for SOP documentation for business departments
- Coordination and implementation of software to gain compliance with FDA regulations; included proof of concept testing, final deployment, and user training

Education

Rutgers University, New Brunswick, NJ – Bachelor of Science
(Simultaneous Majors)

- 1st Major: Computer Science
- 2nd Major: Economics

Professional Summary

Certified system administrator with over 10 years of IT administration experience. Experienced with DoD Security standards as well as a certified Linux Administrator.

Employment History and Related Experience

Fleet Numerical Meteorology and Oceanography Center, *System Administrator,* Monterey, CA, 2012 -2012

Systems Administrator supporting Red Hat, SUSE, Solaris 10, CFengine Nova.

Tecport Solutions, *UNIX Administrator (Contractor)* Harrisburg, PA, 2011 – 2012

Perform routine tasks including file editing using UNIX commands/utilities. Assisted in the Development of a Forensic Data Recovery Lab. Training on Department of Defense Standards

- Process security functions including user creation and password setting
- Fedora (15, 16), SUSE 12, Solaris 11 open source training
- Environment: UNIX, Fedora, Solaris, SUSE

Department of Defense*, Solaris / RHEL Administrator (Contractor),* Mechanicsburg, PA, 2011 – 2011

Shadowed the "BladeLogic" system to administer Naval Servers. Enforced DOD security standards, i.e.: secure user account creation and password management. Extensive use of VPN connections to classified data. Provided SPARC systems support.

- Provided Solaris system administration, operational support and problem resolution
- Environment: Linux/UNIX, Solaris, LDAP, NIS, Backups/Recovery, VPN

UPS Supply Chain Solutions, *Computer Operator/System Administrator,* Lititz, PA, 2000 – 2010

Managed computer room on second shift. Offered cloud computing and administration to our pharmaceutical client base in a Linux and Windows environment. Operated and maintained AIX, Microsoft Server 2003 and AS/400, 620 operating systems

- Responsible for: Brocades, Telnet, SSH, VMware, Cisco routers, VPN concentrators, Fiber, Ethernet, and cable connections; Maintained each server's availability and backup

Resource 102

UNIX Administrator

- Monitored logistics management system, including order management and warehouse management
- Updated log books of operating records for equipment and recorded all malfunctions and errors
- Analyzed console instructions, queries, error messages, machine malfunctions, stops, schedules, programs, and control language information to determine proper operating procedures
- Installed software, patches, upgrades, applications, and hardware
- Environment: Linux/UNIX, AIX, Windows, VMware, VPN, Servers, Cisco Routers

Livingston Health Care, IT Operator, Lititz, PA, 1999 – 2000

Managed 2nd shift of a 24/7 technical support operations for health care clients

United States Army, *Mechanized Infantry,* 1997 - 1999

Driver of M2A2 Bradley Fighting Vehicle. Maintained a safe and operationally functioning vehicle to support mechanical infantry mission One-year deployment in Kuwait.

Education

Harrisburg Area Community College, Lancaster, PA, Criminal Justice, 27 credits

Certifications

- DoD TS Security Clearance with SSBI
- CompTIA Linux +, CompTIA Security + . DODD 8570 Certified
- LPIC-1 from the Linux Professional Institute
- Novell Certified Linux Administrator

UNISYS

e&e IT Consulting Services, Inc.

Resource 103

UNIX Administrator

Key Skills and Knowledge

- Developed a multi-threaded Java application to move data from Oracle to DB2 utilizing JDBC, JMX, LOG4J, JDOM and Java Mail technologies
- Performed z/operating system UNIX System Services administration
- Provided support for security related aspects of z/operating system UNIX Systems Services and TCP/IP
- Maintained DB2, Java and WebSphere z/operating system products with SMP/E
- Developed software using VS COBOL II, MVS/Assembler, COOL:Enterprize, Borland C/C++, Smalltalk/V, Micro Focus COBOL and SQL
- Developed tools that interact with COOL:Enterprize and COOL:Gen Development products

Professional Summary

14 years of experience delivering database management, systems administration, and network engineering. Installed and configured DB2 on Linux, UNIX, Windows and z/operating system, configured and deployed SQLJ Java Stored Procedures, conducted DB2 Performance tuning at system and application levels. Developed, implemented and successfully executed DB2 disaster recovery plan.

- Supported development team with hardware/software technology
- Generated utilities, training and standards to aid development staff
- Provided recommendations for application design and problem resolution.
- Reviewed applications for technical feasibility, performance and standards adherence
- Analyzed and documented business applications

Employment History and Related Experience

First Data Merchant Services, Systems DBA, Web Administrator, Hagerstown, MD, 1999 – Present

Installed and configured DB2 on Linux, UNIX, Windows and z/operating system, configured and deployed SQLJ Java Stored Procedures, conducted DB2 Performance tuning. Maintained Unicode Service for z/operating system to support DB2 V8 functionality, developed, implemented and successfully executed DB2 disaster recovery plan.

- Installed IBM WebSphere on Linux, UNIX, Windows and z/operating system
- Supported HTML, XML, JSP and Java development
- Installed and maintained Java for Linux, UNIX, Windows and z/operating system
- Conducted performance tuning and problem analysis of stand-alone Java applications, WebSphere and JRun utilizing Wily Introscope and IBM JVM dumps/traces
- Developed Java application for UNIX, Windows and z/operating system platforms
- Developed a multi-threaded Java application to move data from Oracle to DB2 utilizing JDBC, JMX, LOG4J, JDOM and Java Mail technologies, performed z/operating system UNIX System Services administration
- Provided support for security related aspects of z/operating system UNIX Systems Services and TCP/IP
- Maintained DB2, Java and WebSphere z/operating system products with SMP/E
- Developed a working knowledge of security implementation on Linux, UNIX, Windows and z/operating system

e&e IT Consulting Services, Inc.

Resource 103

UNIX Administrator

ObjectWare, Inc, Systems Developer, San Francisco, CA 1997 to 1999

Configured and maintained Windows, operating system/2 and Linux and operating system/390 Web, FTP and Networking configurations. Configured and administered database for DB2 V5, DB2 UDB, Oracle 8 and SQLServer Configured communications using ORACLE SQLNet, DDF using SNA/VTAM, ODBC and TCP/IP

- Programmed systems for IBM P/390 system running operating system/390
- Developed tools that interact with COOL:Enterprize and COOL:Gen Development products
- Acted as project leader and developer for Reverse Engineering products
- Developed applications in Smalltalk and C/C++ that utilize data from DB2, Oracle

PHEAA, System Analyst, Harrisburg, PA, 1989 to 1997

Assisted development team with hardware/software technology, developed utilities, training and standards to aid development staff, and provided recommendations for application design and problem resolution.

- Reviewed applications for technical feasibility, performance and standards adherence
- Analyzed and documented business applications
- Developed software using VS COBOL II, MVS/Assembler, COOL:Enterprize, Borland C/C++, Smalltalk/V, Micro Focus COBOL and SQL

Accounting Services, Consultant, York, PA, 1994 – Present

Self Employed, Installed hardware and software installation & Configured networks, provide client support.

Education and Training

- IBM Certified Solutions Expert – DB2 UDB V7.1 Database Administration, 2004
- IBM Learning Services Administration of WebSphere 5.0 for AIX Training, 2004
- IBM Professional Services - DB2 Net.Data and WebSphere Application Server, 2000
- IBM Professional Services Education - DB2 Fundamentals and SQL workshop, 1991
- School of Computer Technology, Certificate of Computer Information Systems, 1988

UNISYS

IBM

Resource 104

UNIX Administrator

Key Skills and Knowledge

- AIX/UNIX/VIO System Administration & Security Management
- Enterprise Storage and SAN Administration
- Scripting… task automation, data gathering, status monitoring, process efficiencies

Professional Summary

An IT Specialist with IBM Global Technology Services and integral member of the IT Infrastructure Management team serving the Commonwealth of Pennsylvania's Liquor Control Board (PLCB) environment. Over sixteen years of UNIX system administration experience in realms ranging from task automation to filesystem management to operating system support to implementing and optimizing virtualization. A proven track record of successful project deliveries, savvy problem-solving, creative script solutions, leadership in storage planning/utilization/management. Expertise in maintaining, deploying, and monitoring the enterprise storage system and it's fault-tolerant, highly-customizable SAN connectivity to UNIX servers.

Employment History and Related Experience

Commonwealth of Pennsylvania – MSP/LCB, IT Specialist, Harrisburg, Pennsylvania, 2003-To Date

Designed and automated a DS8300 FlashCopy® monitoring scheme with various scripts and command files that report daily backup copying status. In addition to validating logged results, a summary note is sent to storage admins and Site Operators every night. I duplicated the process for XIV snapshots after the customer moved some production LPARs to XIV storage.

- Supported the EBS Environment Oracle Upgrade, migrated all the Oracle Application directories to a mounted file system. Wrote scripts that collected the sub-directory names and sizes across the servers, ported that info into a spreadsheet and calculated required LUNs (quantities & sizes) to accommodate space requirements.
- Performing the role of AIX security focal, led our team through numerous IBM audits and assessments - passing all; and most with times with 0 defects.
- Developed a script solution to accurately and quickly capture/rebuild AIX file system "containers". One script captures all the current values, settings, & options related to the AIX file systems; the other script uses that info to generate the AIX commands to recreate the same file system with all the same characteristics vastly improving the efficiency of the procedure.

Education

- Watson School of Engineering, Applied Science, and Technology
  - In conjunction with State University of New York - Binghamton, New York
  - IBM Homestead Programmer Retraining Certificate (completed 9 undergraduate courses)
- University of Vermont, Continuing Education (Non-Degree)
- Electronics Institute of Harrisburg - Harrisburg, Pennsylvania
- Associates Degree in Electronics & Computer Technology

This page intentionally left blank.

UNISYS

UNIX Administrator

Key Skills and Knowledge

- Hardware Upgrade and Repair
- Linux - RHEL, SLES, OEL
- RHEL 5.X Server Builds from Scratch
- RHEL 6 Support
- RHEL 6 Server Builds from Scratch
- RHN Satellite Implementation
- AIX – 4,5,6,7
- PowerVM – Power5, Power6, Power7
- PowerHA – 5,6,7
- Project and Program Management
- Communication and Networking
- Databases
- Hardware
- Operating Systems
- Software/System Architecture
- Technical Documentation
- Systems Development Life Cycle
- ITIL/ITSM
- Korn/Bash Shell Scripting
- UCMS – Unemployment Compensation Management System
- SWIF – State Workers Insurance Fund
- BWC – Bureau of Workers Compensation
- Avamar
- NetBackup
- BladeLogic

Professional Summary

Manages operations of AIX and Linux systems in the Data PowerHouse data center for the Commonwealth. This included server deployments through various processes, PowerHA configuration, user requests, operating system level migrations and patching. This also includes management of VIO servers, HMCs and VMware Virtual Center as it pertains to VM Linux systems.

- Managed BladeLogic repository for Linux patching across various Linux platforms including RHEL, SLES, and OEL
- Developed scripts as needed to maintain a consistent environment across the entire data center.
- Participate in all Disaster Recovery planning and testing.
- Gathering customer requirements for recovery of various application and database servers
- Developing the best recovery method of rootvg and non-rootvg as well as customer data
- Execute recovery exercises and ensured consistent support to the customer as they proceed with their testing of the recovered systems.

Employment History and Related Experience

UNISYS, Commonwealth of Pennsylvania Data PowerHouse Project, 2011 – current

- UNIX Administrator responsible for the management and maintenance of all AIX and Linux servers. Active ITIL v3 certification, Participant in successful disaster recovery testing.

Department of Labor and Industry – DLI project

- UCMS – Unemployment Compensation Management System – Integral part of the System Administration refresh team for AIX support. Built the new operating system image on the updated platforms, worked with IBM experts on performance tuning, ground up installation of all IBM Power hardware including SAN and Network cable installation (Ethernet and fiber), frame mapping of physical devices to ensure redundancy, stability, and performance, of the systems. Worked with IBM experts on installing the most advanced VIO servers built for solid redundancy (tested and confirmed) as well as PowerHA clusters that would ensure the application and files were available with the least amount of downtime for a smooth transition. Worked with the various business partners: DBAs, Application Developers, Network, SAN/TSM, Windows Administrators for performance testing, process flow, etc.
- Tivoli Monitoring/Network Support – These two particular groups of business partners wanted to dive into RedHat Enterprise Linux servers

UNISYS

UNIX Administrator

as the hosting operating system for their applications. Worked exclusively on building a solid RHEL 5.X image that would meet/exceed the application requirements for virtualization, security, and stability. The systems were primarily Virtual Machines (VM) however there were a few that ran on Intel X86 physical servers.

- RedHat Network Satellite (RHN Satellite) – As part of a growing RHEL environment it was critical to develop and maintain a central management point. An investment was made in the RHN Satellite product for patching and maintaining a base line platform for any RHEL system. As part of the install team, I set up the central satellite server, setup the database and register/connected all clients to their appropriate patching cycle. Working with the owners of the various RHEL clients, we established the most effective patching cycle for their systems and ensured all systems were current and met the standards needed as set forth by OA.
- BWC – Bureau of Workers Compensation – Directly involved in upgrade field office servers from AIX 5.3 to AIX 6.1, PowerHA to the most current supported levels in PowerHA 6.1, and worked with the extended AIX support team to execute the disaster recovery plan when an upgrade did not go as planned. This involved restoring the server image from a sysback image on tape.
- SWIF – State Workers Insurance Fund – Deeply involved in supporting their PowerHA systems were solid and the customer had a level of confidence in the failover of the clusters. Solely supported the installation and upgrade maintenance of Dollar Universe application. Although there was an application team dedicated to the day to day work of Dollar U, the team did not have the AIX experience and administrator access needed to perform much of their work.

Integrated Enterprise System – IES Project

- AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer. Alt-disk install was the method chosen. I was responsible for scheduling all of the systems in various maintenance windows to ensure accurate time for testing and meeting the requirement for a phased approach of implementation.
- Device Driver upgrade – to ensure accurate connections to Avamar, the backup solution for IES, worked with the application team to upgrade the driver packages.
- Streamlined mksysb implementation – The system mksysb process was antiquated at best. Based on past experience and the need for an extra layer of protection, a new mksysb creation/storage process was created to ensure redundancy of the backup images and to further enhance the availability of these images for Disaster Recovery.

UNISYS

UNIX Administrator

- Disaster Recovery Testing – Yearly disaster recovery testing is done to ensure the application's availability should a disaster occur. As part of the DR team, I worked extreme hours to build, restore and configure 30+ AIX LPARs to meet the current production environment as well as worked with the customer to correct minor issues during their database restores and testing process.

Department of Revenue – DOR Project

- AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer. Alt-disk install was the method chosen. I was responsible for scheduling all of the systems in various maintenance windows to ensure accurate time for testing and meeting the requirement for a phased approach of implementation.
- Device Driver upgrade – to ensure accurate connections to Avamar, the backup solution for IES, worked with the application team to upgrade the driver packages.
- Streamlined mksysb implementation – The system mksysb process was antiquated at best. Based on past experience and the need for an extra layer of protection, a new mksysb creation/storage process was created to ensure redundancy of the backup images and to further enhance the availability of these images for Disaster Recovery.
- Disaster Recovery Testing – Yearly disaster recovery testing is done to ensure the application's availability should a disaster occur. As part of the DR team, I worked extreme hours to build, restore and configure 30+ AIX LPARs to meet the current production environment as well as worked with the customer to correct minor issues during their database restores and testing process.

Pennsylvania Liquor Control Board – PLCB Project

- Integrated Business Management System (IBMS) Project – The agency was refreshing their application and took the opportunity to change operating systems in the process. RedHat Enterprise Linux (RHEL) was chosen as the platform. My role in the project has been to develop a stable 5.X RHEL operating system image and deploy servers to the agency as needed based on the given build requirements. These systems are all Virtual Machines (VM) and maintain the required level of security, with room to grow as the environment changes.
- BladeLogic - The current patching option for the RHEL systems is BladeLogic. I have developed the needed channels to connect the servers to the appropriate patches based on operating system level. Patch cycles are being established based on environment level (UAT, PRD) to ensure testing between cycles and make sure production stability.

UNISYS

UNIX Administrator

Department of Environmental Projection – DEP Project

- Oracle Enterprise Linux – OEL – This environment is comprised of approximately five Oracle Enterprise Linux (OEL) systems with the opportunity for expansion. The environment was a migration from Solaris to Linux and we continue to support this environment on a day to day business as they work through the growing pains of supporting their application(s) on a new operating system. Day to day work includes file system expansion, security monitoring and tuning, and storage and performance monitoring.

- JCL, HTML, J2EE, XML
- CA (eTrust Access Control, Wily Introscope, SiteMinder Web Access Manager)
- Vertias (Volume Manager 6.1, NetBackup)

Professional Summary

Mr. Reesman possess eight + years of IT experience with special emphasis on UNIX systems administration over the past 6 years.

- Created usage metrics and breakdown reports for management of the SFG application
- Created new file transfers for various government entities utilizing Perl and the Bash Shell scripting languages
- Managed user security, public/private keys, and security of the SFG and Control-M applications
- Received 'Passion Award' on August 20, 2012 from Craig Technologies for implementation of SSH capabilities on a server which allowed for secure transmission of file transfers for a high profile client
- Utilized Veritas Volume Manager and Sun Volume Manager for administration of server storage
- Point of contact for Veritas NetBackup application troubleshooting and file system restores
- Conducted disaster recovery tests twice a year with various application teams for testing of various internal and external served client applications
- Utilized UNIX shell scripting along with PERL to gather server and application information
- Performed Server maintenance including software upgrades, patch maintenance, hardware replacements
- Supported IBM WebSphere Application Server and Sun One Web Server on a 24x7 basis

Employment History and Related Experience

Craig Technologies, Defense Information Services Agency, Application Support/UNIX Systems Administrator, 2011 – Present

Responsible for the administration and development for the Secure File Gateway custom application which handles close to 25,000 file transfers daily between various Federal Government Agencies and other business entities. Responsible for the administration of the BMC Control-M job control and scheduling application

- Created usage metrics and breakdown reports for management of the SFG application
- Created new file transfers for various government entities utilizing Perl and the Bash Shell scripting languages
- Managed user security, public/private keys, and security of the SFG and Control-M applications

- Sun Solaris (Cluster 3.1, Volume Manager),
- IBM (WebSphere 5, WebSphere 6.0, WebSphere 6.1, WebSphere Portal 6.1
- Tivoli Enterprise Console, MQ Series Messaging
- Tivoli Enterprise Console)
- Peregrine ServiceCenter,
- Sun One WebServer 6, BMC (Control-M batch scheduling, Performance Manager)
- Kerberos, Samba, Postini Mail Filter,
- TeamQuest IT Service Analyzer, HP SiteScope, HP OpenView ITO, Sendmail Mail Transfer Agent, Oracle (9, 10), Sybase, DB2, IBM Tivoli Workload Scheduler,
- TCP/IP, MQ/Series, DNS, DHCP, FTP, SFTP, SSH

- Received 'Passion Award' on August 20, 2012 from Craig Technologies for implementation of SSH capabilities on a server which allowed for secure transmission of file transfers for a high profile client

TE Connectivity, Application Deployment/UNIX Systems Administrator, Harrisburg, PA, 2008 – 2011

Responsible for the deployment of 36 applications and their updates to the Solaris 10 Operating System in the development, quality assurance, and production environments. Created project plans for weekend deployment and maintenance activities. Monitored various systems management consoles to recognize problem events, and reacting appropriately

- Created automated schedules for shutting down and starting up applications and components
- Created shell scripts to start up tomcat application and apache Web servers
- Managed all of the general infrastructure information relating to 10 enterprise level applications
- Managed user security, security of various Solaris servers, and implementing audit security policies

The Vanguard Group, UNIX/Linux Systems Administrator Valley Forge, PA 2006 – 2008

Single point of contact for all Sun Solaris UNIX, Red Hat Linux, Sybase, Oracle, and net-centric related problems. Monitored various systems management consoles to recognize problem events, and reacting appropriately. Performed various Oracle and Sybase database administration including troubleshooting and adding storage

- Utilized Veritas Volume Manager and Sun Volume Manager for administration of server storage
- Point of contact for Veritas NetBackup application troubleshooting and filesystem restores
- Conduct disaster recovery tests twice a year with various application teams for testing of various internal and external served client applications
- Utilized UNIX shell scripting along with PERL to gather server and application information
- Performed Server maintenance including software upgrades, patch maintenance, hardware replacements
- Supported IBM WebSphere Application Server and Sun One Web Server on a 24x7 basis

The Vanguard Group, Voice Telecommunications Analyst, Valley Forge, PA, 2006 – 2006

Performed backups and restores of call recordings using the NICE call

recording system; managed truck groups using the Avaya site administrator software; added call groups for recording using the NICE call recording software

The Vanguard Group, Electronic Data Interchange Analyst, Valley Forge, PA, 2005- 2006

Responsible for the development, implementation, maintenance, and 24x7 production support of data transmissions between vanguard and external clients. Managed file transmissions through FTP or RemoteWare dial-up.

- Analyzed problems with incoming files and corrected errors to ensure proper transmission
- Managed project of transitioning over 10000 processes to a new software system to handle transmissions more efficiently

Pennsylvania Army National Guard, Database and Network Administrator Annville, PA, 2000-2006

Performed various database administration duties served in Operation Enduring Freedom, received 'Soldier of the cycle award' on August 10, 2001 for 'demonstrated leadership among your peers during advanced individual training

Select Medical Corporation, Intranet and Web Design, Mechanicsburg, PA, 2004- 2004

Designed an Intranet for the outpatient IT department, developed a way for standard documents to be served to various outpatient offices, and created a database for patients in Lotus Notes that let patients schedule appointments with their doctor in a seamless manner

Education

- Drexel University, Philadelphia, PA, M.S. Information Systems, in progress, graduation 2016
- The Pennsylvania State University, B.S. Information Sciences and Technology, 2005

UNIX Administrator

Key Skills and Knowledge

- Linux on z/Series system administrator
- z/VM systems programming
- z/VSE systems programming

Professional Summary

Experienced system administrator for Linux on System z. Provided z/VM and z/VSE systems programming support.

Employment History and Related Experience

IBM Global Technology Services, Commonwealth of Pennsylvania DPH, Technical Services Professional, 2007-To Date

Provide Linux on z/Series system administrator support on over 80 Linux guests running under z/VM for PA Department of Transportation. Significant accomplishments during this time include SLES 9 to SLES 10 upgrade and a subsequent SLES 10 to SLES 11 Upgrade, a processor upgrade, and a DASD migration.

IBM Global Technology Services, Commonwealth of Pennsylvania DPH, Technical Services Professional, 2000-2007

Provided z/VM and z/VSE systems programming support to the PA Department of Corrections and PA Liquor Control Board. Major accomplishments included several z/VM and z/VSE operating system upgrades and various processor and DASD migrations.

IBM Global Services, Commonwealth of Pennsylvania, Information Technology Specialist, 1992-2000

Provided z/VM and z/VSE systems programming support to various commonwealth agencies including the PA Department of Corrections, PA Liquor Control Board, PA Department of Health, PA Turnpike Commission, and PA Treasury, as well as several legislative caucuses. Major accomplishments included z/VM and z/VSE operating system upgrades and various processor and DASD migrations as well as business as usual system programmer activities.

IBM Professional Services, Commonwealth of Pennsylvania, 1989-1992

Provided VSE/VTAM telecommunications support during the PLCB Point of Sale application roll-out to the state liquor stores.

UNIX Administrator

Key Skills and Knowledge

- AIX 4,5,6,7
- Power Systems
- VIO
- HMC
- Red Hat Enterprise Linux
- Oracle Enterprise Linux
- SuSE Linux
- Windows
- Scripting
- Networking
- Supervision
- Project Management

Professional Summary

Skillful system administrator with a wide range of experience with Commonwealth projects. He has a total of 13 years system analysis experience with 7 years of Commonwealth experience. He is skilled in data recovery, migrations, implementations, maintenance, and network management.

- Operating Systems: AIX4, 5, 6, 7. Red Hat Enterprise Linux. Oracle Enterprise Linux. SuSE Linux. Windows NT/2000/2003/2008. All Windows Desktop Operating Systems.
- Hardware: IBM stand-alone and IBM P-series servers. IBM Hardware Management Consoles.
- Software: Apache, Samba, VMware, Perl, VBscript, PowerShell, UNIX/Linux Shell Scripting, Oracle RAC clustering. PowerHA clustering.

Employment History and Related Experience

Unisys, Senior UNIX Administrator, Harrisburg, PA, 2005 – Current

Responsible for the day to day management of all AIX and Linux systems in the Data PowerHouse data center for various Commonwealth agencies. This included server deployments through various processes, PowerHA configuration, user requests, operating system level migrations and patching.

- Managed BladeLogic repository for Linux patching across various Linux platforms including RHEL, SLES, and OEL.
- Developed scripts as needed to maintain a consistent environment across the entire data center.
- Participate in all Disaster Recovery planning and testing. This included gathering customer requirements for recovery of various application and database servers, developing the best recovery method of rootvg and non-rootvg as well as customer data, execute recovery exercises and ensured consistent support to the customer as they proceed with their testing of the recovered systems.
- Unemployment Compensation Management System – Built the new operating system image on the updated platforms, worked with IBM experts on performance tuning, ground up installation of all IBM Power hardware including SAN and Network cable installation (Ethernet and fiber), frame mapping of physical devices to ensure redundancy, stability, and performance, of the systems
- Collaborated with IBM experts to install VIO servers and PowerHA clusters ensuring the application and files were available with the least amount of downtime for a smooth transition
- Supported various business partners: DBAs, Application Developers, Network, SAN/TSM, Windows Administrators for performance testing, process flow, etc.

UNISYS

Resource 35

UNIX Administrator

- Tivoli Monitoring/Network Support –Built a RHEL 5.X image to support application requirements for virtualization, security, and stability from Virtual Machines (VM) and Intel X86 physical servers
- RedHat Network Satellite (RHN Satellite) – Developed RHN Satellite product for patching and maintaining a base line platform for any RHEL system.
- Configured the central satellite server, setup the database and register/connected all clients to their appropriate patching cycle. Working with the owners of the various RHEL clients
- Established the most effective patching cycle for their systems and ensured all systems were current and met the standards needed as set forth by OA
- Bureau of Workers Compensation – Upgraded field office servers from AIX 5.3 to AIX 6.1, PowerHA to the most current supported levels in PowerHA 6.1
- State Workers Insurance Fund – Supported the installation and upgrade maintenance of Dollar Universe application
- Integrated Enterprise System AIX 5.3 to AIX 7.1 migration – Developed and executed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer.
- Streamlined mksysb implementation – Generated a new mksysb creation/storage process to ensure redundancy of the backup images and to further enhance the availability of these images for Disaster Recovery.
- Department of Revenue AIX 5.3 to AIX 7.1 migration – Developed the migration plan needed to move from AIX 5.3 to AIX 7.1 to ensure the least amount of down time possible for the customer; scheduled all of the systems in various maintenance windows to ensure accurate time for testing and meeting the requirement for a phased approach of implementation.
- Disaster Recovery Testing – Accomplished annual disaster recovery testing to ensure the application's availability should a disaster occur; built, restored and configured 30+ AIX LPARs to meet the current production environment
- Maintenance Window Management – This agency has monthly maintenance outage windows. I am responsible for coordinating all of the events in the maintenance window, including communications between other departments within Unisys as well as DOR agency staff
- Pennsylvania Liquor Control Board Integrated Business Management System (IBMS) Project –Develop a stable 5.X RHEL operating system image and deploy servers to the agency as needed based on the given build requirements using Virtual Machines (VM) with the required level of security; accomplished day-to-day maintenance of systems, processing of change requests related to systems, and responding to incidents.
- Department of Environmental Projection Oracle Enterprise Linux – Accomplished day to day work includes file system expansion, security

UNISYS

Resource 35

UNIX Administrator

monitoring and tuning, and storage and performance monitoring.

- Department of Public Welfare Oracle Enterprise Linux – Built and maintained repository, maintenance of other OEL servers and creating new OEL servers as the agency seeks to expand its environment.

Other Work Experience

- Earthlink, UNIX Web Hosting Administrator, 2000 – 2004

Windows Server Administrator

Key Skills and Knowledge

- Secret Clearance
- CCNA
- MCSE
- Security +
- Server and workstation migrations
- SCCM installs

Professional Summary

Provided LAN/WAN support in a broad spectrum of technologies from main frame to PC, and satellites to building Ethernet wiring closets. Fanatical attitude for customer service and technical knowledge. As a technical service engineer for Sun Solaris, kept work backload down and provided prompt responsive solutions for system administrators at numerous government agencies and large businesses.

- Resolved connectivity issues for a 3,500-node national corporation network, making sure to provide network availability of 99.999 percent for continued business operations
- Reduced the downtime of remote and virtual sites by 50 percent, transforming legacy dumb terminal operations to modern Ethernet/PC locations overnight
- Subject matter expert in Microsoft technologies extends from enterprise servers to end users and Microsoft Office applications.

Employment History and Related Experience

U.S. Army Corps of Engineers/Lockheed Martin,
System Administrator 2009 – Present

Verify installations and performance of SCCM clients. Maintain Active Directory user and computer accounts. Monitor log records for intrusion detection and system services functionality. Install, repair, configure, image drives, and perform preventive maintenance of personal computers and network equipment. Answer internal inquiries and troubleshoot software and hardware failures on site or remotely.

- Oversee configurations of switches and routers as well as installation of cable.
- Support IAVA and STIG maintenance Microsoft security updates.
- Maintain server health, security, updates, and service packs; Symantec Backup Exec, data backups, and file restoration.
- Acquired experience with RAS, Support Soft, Bomgar, Microsoft Office, Outlook, Cisco VPN, Remedy, and Oracle.
- Management projects.
- Migrate Secure Copy files.

Milton S. Hershey Medical Center, Field Service
Engineer 2008 – 2008

Completed a project ahead of schedule and budget because of effective implementation. Updated hardware on medical equipment using proprietary software. Performed electrical, safety, and functional tests on medical equipment. Interacted with medical staff and other field service technical support personnel.

e&e IT Consulting Services, Inc.

Resoruce 108

Windows Server Administrator

NOVA Corporation (short-term contract), Solaris Systems Administrator 2008 – 2008

Initiated effective reduction of the system footprint by using Solaris 10 Zones — virtual servers. Installed software and hardware fixes, updates, and enhancements.

- Installed and configured applications, software, and hardware.
- Developed and implemented system diagnostic and maintenance tools to ensure the availability and functionality of systems, including Veritas NetBackup.
- Distributed software across network and Solaris zones.

EDS (Electronic Data Systems), Technical Support Engineer 2008 – 2008

Troubleshot and analyzed Sun Solaris operating system, storage, (Veritas, VX, and Solaris Volume Manager, and Disk Suite) and networking issues. Assisted UNIX and Sun system administrators with diagnosis and troubleshooting of systems and servers. Acquired command line experience.

Craig Technologies, Lead Senior Administrator 2007 – 2008

Microsoft 2003 engineering, network support, and development of deployable video conferencing system. Troubleshot LANs (wired and wireless) and WANs (satellite). Created server images for disaster recovery preparations. Nurtured backup and restore functions with Symantec Ghost. Developed, tested, and hardened HP server configurations for DIACAP requirements through application of Army Gold Master, security IAVM, and STIG requirements as directed by CERDEC for information assurance.

- Supported Cisco routers, switches, VoIP telephones, and satellite.
- Tested software applications testing (Symantec Backup Exec and RadVision Click to Meet).
- Documented system configurations, especially exceptions to policy.
- Tracked the project and reported weekly on development issues.
- Performed and documented Retina scans.
- Created procedural documentation and SOPs for the military and government.
- Served as liaison for the contractor to coordinate government and on-site personnel.

e&e IT Consulting Services, Inc.

Resoruce 108

Windows Server Administrator

EDS (Electronic Data Systems), Technical Ambassador 2005 – 2007

Assisted customers with the installation and configuration of software and hardware products. Assisted customers with implementing system diagnostic and maintenance tools. Analyze and troubleshot operating system, hardware, storage, and networking issues.

- Recommended remediation processes through system diagnostics and patch updates.
- Provided outstanding customer service to keep the caseload low with quick resolutions.
- Identified system-related issues and trends; recommended remedial action.
- Managed software and hardware fixes, updates, and enhancements.
- Supported installation and configuration of applications, and software, and hardware.
- Supported the development and implementation of system diagnostic and maintenance tools.

Manheim Auction, Condition Report Analyst 2004 – 2005

Oversaw inventory condition reports of vehicles using handheld computers and a wireless LAN. Assisted technicians with applying RFID research in the work environment.

Datatec Systems Inc., Network Deployment Consultant 2003 – 2003

Installed more than 50 Microsoft Windows 2000 servers. Migrated workstation and server data from Windows NT to XP and Windows 20000 Server. Configured organizational units, Active Directory, user accounts, permissions, and groups.

- Troubleshoot fiber and Ethernet (CAT 5) network connections.
- Deployed Cisco and Nortel routers, concentrators, and switch hardware.
- Installed and built wiring closets (IDF).
- Tested, troubleshot, and repaired wireless devices, and router T1 circuit backups; received a commendation for high-quality service from a customer district representative.

Rite Aid Corporation, Network Operations Technician 2000 – 2003

Monitored and maintained the 3,500-node communications network, including VSAT. Managed a Frame Relay Network and a leased line network. Acquired experience with Space Net and Hughes VSAT systems.

- Assisted remote field technicians in diagnosing and repairing connectivity issues usually caused by environment or normal wear and tear.

e&e IT Consulting Services, Inc.

Resoruce 108

Windows Server Administrator

- Used network monitoring tools such as MAINVIEW, VSAT Network Management Systems, HP OpenView, and ADTRAN NMS to identify and troubleshoot issues in the network.
- Migrated the WAN to a new satellite vendor; migrated and troubleshot the.
- Troubleshot DS-1, ISDN, and Frame Relay circuits with telco, LECs, circuit vendors, field technicians, and satellite (VSAT) providers to ensure high network availability and functionality of system connectivity 24/7/365.
- Worked with UNIX, TCP/IP, FTP, VPN, remote logon, and EMC storage. Monitored, troubleshot, and resolved issues with distribution center connectivity.
- Tracked network congestion issues with software and a protocol analyzer.
- Created and updated network documentation SOPs, Visio maps, and procedural documents.
- Acquired experience with NetView, Novell NetWare (Zen), Rumba, and What's up Gold.

Education

Associate's Degree in Computer Networking, Harrisburg Area Community College

Bachelor's Degree in Computer Science, University of Phoenix

SCO UNIX, Rite Aid University

Certifications

- Microsoft Certified System Engineer (MCSE certification)
- CCNA Cisco Certified Network Associate, 2012
- CompTIA Security+, 2010
- DoD Secret Clearance
- SSBI Interim Clearance

Professional Summary

17 years of experience with network administration, implementation, maintenance, and system upgrades. Strong team player and skillful technician with experience in migration, transition, design, and testing.

- Hardware troubleshooting and repair experience: Windows servers, Windows desktops, Windows laptops, Apple servers, Apple desktops, Apple laptops, Android smart phones, Apple smart phones, printers, Cisco routers and switches, Viewsonic projectors, APC Enterprise UPS, and Netgear Enterprise NAS
- Operating systems experience: Windows Server 2008, Windows Server 2003, Windows 7, Windows Vista, Windows XP, Windows versions earlier than XP, VMware ESXi 4, various versions of Linux, Apple operating system X Server 10.4-10.7, Apple operating system X 10.4 through 10.7, Apple iOS, Cisco iOS, and the Android operating system
- Server experience: Active Directory, Group Policy, LDAP, SSL Certification Authority, Server 2008 Cluster, Windows Print Server, iSCSI, RAID, DNS, DHCP, operating system X Open Directory, operating system X Workgroup Manager, NTFS Permissions, IIS, Windows Backup, WMI, PowerShell scripting, and Server 2008 WDS
- Network experience: TCP/IP, Cisco network equipment configuration, firewall configuration, SNMP, CIFS, SMB, AFP, NFS, network cabling
- Enterprise Application Experience: Equitrac Express, Symantec Endpoint Protection, Sophos Endpoint Protection, Ipswitch What's Up Gold, HP Web Jetadmin, Kayako Help Desk, Moodle, Google Apps, Exchange 2010, VMware Server, Spiceworks, and Extron GlobalViewer Enterprise
- Commonwealth of Pennsylvania DPW, PSP, and ESM experience: Building and configuring servers, supporting servers, applying server security patches, and administering VMware infrastructure.

Employment History and Related Experience

Unisys Corporation, Enterprise Support Systems
Analyst I 2012 – Present

Troubleshoot and repair server and operating system issues. Install and configure server operating systems. Administer VMware hosts and clusters.

- Patch server operating systems with monthly security updates.
- Developed and deployed a centralized server imaging and provisioning system.
- Configure and administer server backups using Symantec NetBackup and Data Domain.

UNISYS

Resource 109

Windows Server Administrator

Central Dauphin School District, IT Technician 2004 – 2012

Administered Windows Server 2008 and 2003 Active Directory and Group Policy. Backed up critical student record archives. Administered system monitoring applications, including Equitrac Express, Ipswitch What's Up Gold, and Spiceworks.

- Troubleshot and repaired all district IT hardware, including desktops, PCs, servers, printers, routers, laptops, UPS, and projectors.
- Administered district clustered print servers.
- Oversaw IT monitoring system and on-call alerts.
- Configured and supported applications.
- Worked directly with hardware vendors for ordering and replacement.
- Provided top-level support for district IT technicians.
- Facilitated training and documentation for technicians and end users.
- Deployed and configured of district smart phones and tablets.
- Controlled classroom projection systems and Extron server.
- Administered district IT Help Desk ticketing application.
- Managed network equipment including routers, switches.
- Controlled IT parts ordering and inventory.

Halifax Corporation, Field Service Technician 2001 – 2004

Field service support, field technician at a help desk, webmaster, and depot repair technician.

Scantron Service Group, Field Service Representative 1995 – 2001

Troubleshot and repaired networks and various hardware.

Education

Associate's degree, Specialized Technology For Electronics, York Technical Institute, 1995

Certificate of Completion in Microcomputer Repair, Cumberland-Perry Vocational School, 1993

Certifications

- ITIL v3 Foundations Certification

UNISYS

Domino Technologies Inc.

Resource 110

Windows Server Administrator

Key Skills and Knowledge

- Perform daily PennDOT server farm CheckPoint backups by batch script
- Create and update the PennDOT build procedure documentation for loading Microsoft Server 2003 and 2008
- Assist with PM Network Engineer Remedy tickets; complete the tickets, including printer issues and server hardware issues
- Follow PennDOT build procedure for loading Microsoft Server 2003 and 2008 Standard and Enterprise editions on servers, including BIOS updates, and RAID setups

Professional Summary

Network and system administrator support for 9 years. Experience encompasses the support of a wide range of applications and operating systems. Certified Microsoft Professional. Have served PennDOT since 2006.

- Delete PennDOT server farm terminal server profiles on the Exchange 2003 terminal servers
- Prepare weekly Cat-Tools switch reports for the PennDOT weekly server farm; import text data files to Excel and save them on the server in Excel format
- Perform weekly McAfee.DAT file checks on all PennDOT DMZ servers; fix issues, making sure they have the latest .DAT file updates from McAfee: reinstalling McAfee, fix batch scripts, or run the update manual
- Check trouble lights on the IBM servers on PennDOT's server farm; diagnose, troubleshoot, and resolve issues such as bad hard drives, server error logs, processors, memory, RAID cards, network cards, power supplies. Create support tickets with Pomeroy or IBM as needed
- Troubleshoot servers that become unresponsive and fix the issue: make service calls to vendors for service or parts if needed, reboot servers, fix software and server hardware issues, and notify the on-call supervisor if an appropriate team must be notified for support
- Maintain documents on the PM Engineer SharePoint Web site: update templates for upcoming weekly report logs and archive old reports.

Employment History and Related Experience

Domino Technologies, PennDOT – Consultant Engineer 2007 – Present

Perform daily PennDOT server farm checkpoint backups by batch script. Prepare weekly SMS reports on PennDOT enterprise server disk. Fix issues, including paging file disk space and moving it to another partition, moving files, compressing files or e-mailing the appropriate team or person if unable to find space. Prepare weekly uptime reports for PennDOT servers and fix issues, including setting up scheduled reboots and troubleshooting script errors.

- Perform PennDOT server farm daily terminal sever profile deletions on the 2003 terminal servers.
- Prepare weekly Cat-Tools switch reports on the PennDOT weekly server farm, including importing text data files to Excel and saving them on the server in Excel format.
- Perform weekly McAfee .DAT file checks on all PennDOT DMZ servers, and make sure they all have the latest .DAT file updates from McAfee, reinstalling McAfee, fix batch scripts, and run the update manual.

Domino Technologies Inc.

Resource 110

Windows Server Administrator

- Check trouble lights on the IBM servers on PennDOT's server farm, diagnose, troubleshoot, and resolve issues. Replace bad hard drives, clear server error logs and hardware issues, including processors, memory, RAID cards, network cards, and power supplies. Create support tickets with Pomeroy or IBM as needed.
- Assist Preventive Maintenance Network Engineers with Remedy tickets and complete tickets including printer issues, and server hardware issues.
- Use PennDOT's SRS request system to complete assigned tasks, including building new servers, racking servers, and setting up new printers.
- Create and update PennDOT's build procedure for loading Microsoft Server 2003 and 2008 Server.
- Follow PennDOT's build procedure for loading Microsoft Server 2003 and 2008 Standard and Enterprise Editions on servers, including BIOS updates; RAID setups; hard drive partitions; installing operating systems, security patches, updates, approved applications; defragging hard drives; and creating patch requests for network connectivity.
- Set up IBM RSA carda setup over a laptop connection to the RSA LAN port, setting up the IP address, subnet mask, gateway DNS servers, user name, and password.
- Use Microsoft SCCM for remote control of desktops to help solve off-hour customer issues, to application support, desktop errors, and hardware errors. If unable to resolve and issue, forward it to the appropriate team.
- Use Microsoft SMS queries when needed to gather data for assigned reports from supervisors.
- Use Avocent DSView for remote control of all servers and VMware Virtual Infrastructure Client on VMware servers.
- Use an IBM RSA card or Remote Desktop for remote control of off-site servers.
- Troubleshoot servers that become unresponsive; fix the issue, including working service calls to vendors for service or parts if needed. Troubleshooting includes rebooting servers, fixing issues with software and server hardware, and notifing the on-call supervisor if an appropriate team needs to be notified for support.
- Maintain documents on the preventive maintenance engineer SharePoint Web site. This would include updating templates for upcoming weekly report logs, and archive old reports.
- Degauss defunct hard drives on the degauss machine and placing drive to appropriate location for destruction.
- Replace APC batteries as needed in the server farm APC units. This includes un-boxing and taking out the old battery and replacing with new battery replacing it back in the box. Accepting the alerts on the APC control unit.
- Perform monthly Critical System Recovery Plan backups. This includes taking all the data from the different teams and creating zip files and then burning them to DVDs.

Domino Technologies Inc.

Resource 110

Windows Server Administrator

- Perform inventory procedure on anything that would come into stock to by tagging and scanning into the RFID tag system using Symbol hand held scanner.
- Help in the Microsoft security patch deployment on the PennDOT DMZ servers. This includes getting the patches from the SMS team or downloading from Microsoft Web site, logging on to the server, applying the patches, and rebooting the servers.
- Follow PennDOT's emergency call procedure for power outages occur, including calling the on-call supervisor, notifying the PennDOT staff, monitoring server temperatures and battery power reserve for the generator, and powering servers down as directed by PennDOT staff.

Domino Technologies, PennDOT, Workstation Specialist 2006 – 2007

Provided customer support on PennDOT workstations and laptops statewide. Troubleshot workstation and laptop errors, including system problems, customer inquiries, profile issues, printer setup and problems, network, and software errors. Provided support to PennDOT for loading Windows XP Profesional on statewide workstations and laptops, including imaging and maintaining those images.

- Developed Vista Enterprise workstation and laptop images.
- Documented all trouble tickets in Remedy.
- Installed IBM, Microsoft, Adobe, and other software as needed.

3T Security, Network/Telecommunication Technician 2006 – 2006

Monitored, maintained, set up, and troubleshot Microsoft Server 2003. Maintained, set up, and troubleshot Windows 2000 Professional and Windows XP Professional workstations and laptops. Installed, troubleshot, repaired, terminated, and ran cables for network and telecom including CAT3, CAT5E, CAT6, and fiber optics.

- Installed, troubleshot, and repaired network patch panels and telecom punchdown blocks.
- Set up, maintained, and troubleshot digital DVRs.

Realty Select, Network Administrator 2006 – 2006

Monitored, maintained, set up, and troubleshot Windows 2000 and 2003 Servers, ISA 2004, Cisco 515E pix, and Cisco 1700-3550 switches. Maintained, set up, and troubleshot Windows 2000 Professional and Windows XP Professional workstations and laptops, including Dell and HP. Maintained, set up, and

troubleshot printers and copiers.

- Documented how to instructions for staff.
- Maintained and troubleshot Exchange 2003 e-mail environment.
- Installed applications and software patches.
- Monitored, maintained, set up, and troubleshot a Cisco ICS telephone system and Cisco VoIP 7940 telephones.
- Maintained the current network cabling closet.
- Maintained, troubleshot, set up, and administered all Active Directory users and computers.
- Maintained, troubleshot, and restored company backup tapes using a DLT tape drive with Symantec Veritas 10.

TEK Systems, Systems Engineer 2005 – 2006

Installed and set up a HP ProLiant ML310 server on a contract with D&E Communications. Installed and configured hardware, which included SCSI hard drives, memory, s DAT72 tape drive, and a RAID controller card. Installed Small Business Server 2000; applied all Microsoft patches and Norton AntiVirus Corporation Edition 10, including the System Center console, and Veritas Backup Exec 8.6 on the server.

- Troubleshot, set up, configured, and maintained workstations and laptops running Windows NT 4, 2000, and XP made by HP, Compaq, and Dell.
- Troubleshot, set up, configured, and maintained servers running Windows NT 4, 2000, and 2003 made by HP, Compaq, and Dell.
- Offered support for clients, including Internet services, network, desktop, server, system design, software installations, and user setup.
- Installed and set up network equipment, to including HP and Cisco switches and routers.
- Configured Small Business Server 2000, including Active Directory, DNS, DHCP, data shares, login scripts for mapping drive shares, and folder security. Joined five workstations to the domain. Installed and set up sharing for printers. Configured user and computer accounts.
- Configured Norton AntiVirus Corporate Edition 10 on the server, applying updates, pushing the client software out to the domain's Windows XP clients, and pushing the updates out to those clients daily.
- Configured Veritas Backup Exec 8.6 to back up Small Business Server 2000 along with the system state and the server's data partitions of to a HP DAT72 tape drive, which included building the media set for a five-tape rotation.

Domino Technologies Inc.

Resource 110

Windows Server Administrator

Lancaster General Hospital, System Administrator 2005 – 2005

Supported the radiology department's efforts with Power Scribe for dictation of studies. Provided our initial point of contact for various problems, including microphone defects, computer configuration, and system problems. Installed, troubleshot, and supported 25 USB Dictaphone microphones and computers throughout the department.

- Designed and developed Power Scribe reports using Crystal Reports against a Microsoft SQL database.
- Reset user passwords when needed.
- Installed various software, including Microsoft Word Viewer, Siemens Novius Radiology, and Dictaphone Power Scribe Radiology.
- Diagnosed, troubleshot, repaired, and maintained Dell workstations with Windows XP Professional.

The Milton S. Hershey Medical Center, MMIS Analyst 2001 – 2004

Supported materials management efforts in the Lawson system for inventory control, requisition, and warehouse operations. Served as the initial point of contact for various problems, including coordination of products, stock locations, troubleshooting of error messages, and coordination of Lawson support. Troubleshot and supported five Symbol handheld units, the E-Fax agent, and error messages before escalation.

- Installed, troubleshot, and repaired desktops and laptops, including Dell and Gateway products.
- Designed and developed Lawson system reports using Crystal Reports against an Oracle database.
- Maintained Web-based applications using Crystal Enterprise for the Department of Materials Management.
- Maintained internal and external Web site presence using FrontPage for the Department of Materials Management.
- Trained various users on medical center applications training to various users including Lawson and GroupWise in a Windows 2000 environment.
- Provided preliminary help desk support for departmental workstations.
- Converted supply and distribution from a paper catalog to a Web catalog, saving $3,000 a year on printing costs.
- Converted the printed monthly billing statements for supply & distribution.
- Installed, configured, and maintained Crystal Enterprise for the Department of Materials Management, providing a self-service report system.
- Named Employee of the Month for October 2001.

Professional Summary

16 years of experience as systems engineer and administrator, Web developer, and IT consultant for organizations in the education, manufacturing, real estate, medical, legal, and defense industries.

- Reported C&A issues to Designated Approving Authority (DAA) and C&A staff. Recommended additional protection mechanisms to the project manager
- Excellent oral and written skills; comfortable with briefing senior leadership and command staff
- Information Security Analyst; identified vulnerabilities in network and system architecture
- Acquired experience as SRR reviewer and remediator of STIGs for DoD systems
- Enthusiastic about implementing industry best practices as well as prudent security policies and procedures as required for mission success to ensure the confidentiality, integrity and availability of systems
- Fast learner: motivated to master technologies, languages, and system platforms
- Served as storage manager of a variety of storage area networks (SANs) used for Windows and UNIX environments using leading industry protocols
- Managed a network and servers containing more than $7 million in data running in a Windows Server environment
- Engineered site-to-site VPN WAN solutions for multiple medical practices
- Developed a database Web management tool that allowed nontechnical staff to update real estate listings
- Earned the Ke'Aki Mission Impact Award for exemplary performancein December 2010 and November 2011.

Employment History and Related Experience

E&E IT Consulting, Defense Logistics Agency,
System Administrator, New Cumberland, PA 2012 – Present

Maintain configurations, analyze performance, and provide technical support for more than 30 sites worldwide. Technologies include VMware vSphere virtualization, Windows Server 2003 and Windows Server 2008 R2, Microsoft System Center Configuration Manager (SCCM), Exchange 2003, Office Communicator, and Remedy.

- Deploy and configure virtual machines to remote enterprise sites to support project specifications.
- Provide server and client-side support of issues with Exchange, Outlook, and Office Communicator account.
- Configure user accounts in Active Directory and Group Policy.

e&e IT Consulting Services, Inc.

Resource 111

Windows Server Administrator

- Publish PKI certificates for identification and authentication.
- Obtain proper IA authorization for use of IA tools and technical resources.
- Configure and analyze performance of VMware ESXi 4.1 hypervisors and virtual machines; assess the potential performance for optimizing.

Ke'aki Technologies, System Administrator,
US Army, Ft. Detrick, MD 2010 – 2012

Identified, isolated, and reported security violations and incidents to the security officer and senior USAMRMC leadership. Reported C&A issues to DAA and C&A staff. Recommended additional protection mechanisms to the project manager. Followed the Army/MEDCOM-approved procedures for destruction of failed mass storage devices. Reviewed and updated a IA C&A support documentation package to ensure accuracy, completeness, and compliance with minimal risk acceptance standards.

- Maintained a repository for systems C&A documentation and modifications with version control.
- Identified information systems within the scope of my responsibility that were not properly certified and accredited in accordance with DIACAP policies.
- Researched the requirements for submitting Certificate of Networthiness documentation.
- Began to implement required IA guidance, policies, procedures, and regulations as directed and as resources permitted.
- Assisted, supported, and reported to USAMRMC CIO/DCSIM (Deputy Chief of Staff of Information Management) as required for AR 15-6 investigation.
- Helped enforce IA policy and guidance in accordance with regulations and identified best business practices.
- Conducted security inspections, assessments, tests, and reviews.
- Reviewed and audited log files; researched log correlation tools for acquisition of log management.
- Reviewed and evaluated the effects on security of system changes, including interfaces to public-facing Web sites and compliance with DMZ configuration.
- Served as storage manager of four storage arrays for Windows and UNIX environments using NFS, SMB, SAS, and iSCSI. Took array and system-level snapshots.
- Wrote backup and recovery policy documentation.
- Remediated Windows environment STIGs; helped spearhead the DIACAP process.
- Reviewed a SRR checklist of the SQL Server 2008 database, identified misconfigurations.
- Implemented an Active Directory child domain and Exchange 2003 Server.
- Maintained the Windows 2003 Active Directory NTDS database and schema.
- Installed and configured Windows 2003 and 2008 servers.

e&e IT Consulting Services, Inc.

Resource 111

Windows Server Administrator

- Installed and configured ESXi 4.1 hypervisors, vCenter and storage.
- Installed and maintained Windows Server Update Services (WSUS).
- Installed and maintained Windows Deployment Server (WDS/PXE).
- Implemented Acronis 10 Management server and clients as well as backup policies.
- Implemented management policies and procedures for maintenance of the CM library.
- Served as team Lead for the relocation of the AHLTA test environment from Ft. Gordon to Ft. Detrick.
- Identified, isolated, and reported security vulnerabilities in the computing environment.

Walkersville Christian Family Schools, Systems Administrator & Web Developer 1995 – 2010

Managed workstations as well as Windows 2000 and 2003 servers. Trained and mentored student interns in Web development with PHP. Implemented Windows 2000 domain controller and migrated it later to Windows 2003. Planned disaster recovery with successful disaster recovery of servers from backup tapes. Implemented policy for strong passwords, backup and tape rotation, file share access, firewall and routing, and remote access.

- Implemented SSL for school Web services.
- Audited network traffic with Wireshark.
- Monitored Web access logs in IIS, ISA, SurfWatch, and the Exchange e-mail system.
- Developed a student record system Web front end using PHP, FileMaker Server, and SSL.
- Implemented input validation, preventing XSS and injection attacks.
- Spearheaded the development and integration of the school's Web site in 1996, with subsequent redevelopments in 2001, 2005, and 2008. Migrated the Web site from static HTML to DotNetNuke 4 and PHP Web applications.
- Upgraded and maintained database systems in FileMaker Pro and Server.
- Implemented MS SQL Server 2005 and MySQL for enterprise and Web applications.

Environment: Active Directory, Exchange, Outlook Web Access, DNS, DHCP, IIS, ISA, FileMaker Server, MySQL, and WireShark.

Keysville Enterprises, LLC, IT Consultant, Web Developer, Systems Architect 2002 – 2010

Developed a FileMaker and PHP Web application for the Congressional Award Foundation. Implemented site-to-site VPN WANs for multiple medical practices

in the greater Washington area, saving each client nearly $5,000 a month.

- Provided remote and on-site IT support services to more than 50 real estate clients in the Baltimore/Washington region.
- Designated by Llewellyn Realtors as its approved on-site IT support technician for LLE real estate agents.
- Developed a database-based Web management tool that allowed nontechnical staff to update real estate listings and PDFs on agent's Web site, saving the client $2,500 a year.

Wright Manufacturing, Inc, IT Manager & Systems Administrator 2000 – 2005

Managed network servers with more than $7 million in data, running Exchange, IIS, ISA, and Outlook Web Access in a small business server environment. Planned disaster recovery with successful disaster recovery of servers from backup tape.

- Migrated a domain from Windows NT 4 to Windows 2000.
- Relocated company information systems to the Frederick facility.
- Implemented policy for strong passwords, backup and tape rotation, file share access, firewall and routing, and remote access.
- Implemented encryption technologies (SSL and IPSec) for company Web and e-mail services.
- Negotiated telephone service contract in 2001 and Internet service in 2005, saving the company about 25 percent annually.

Resource 112

Windows Server Administrator

Key Skills and Knowledge

- Microsoft Windows XP, 7, 2003, 2008; Visio; and Office & Active Directory administration
- Exposure to Linux and Fix, DameWare, WhatsUp, and various other monitoring tools

Professional Summary

Deep experience with hardware, wiring, network security and wireless networks, 24x7x365 on-call support and maintenance; well-rounded utility player with experience delivering user training, technical writing, and asset procurement. Adds additional value through process analysis, re-engineering workflows, and implementing industry best practices.

- Self-motivated as a team lead, individual contributor, or both – does what it takes to get the job done in a professional way and motivate or mentor others as needed
- Exposure to full-life cycle project management.

Employment History and Related Experience

Born Capital LLC, Level Two Support Engineer, Chicago, IL 2010 – 2012

Managed 250 servers in the firm Chicago, NY/NJ, London, Toronto, and FFT data centers. Acquired experience in remote support and platform virtualization (RDP, DameWare, VMware, and ESX). Installed and supported server and network hardware and software (100M, 1G, and 10G)

- Performed server imaging and rapid deployment (Altiris, Insight, and Ghost).
- Administered Microsoft Active Directory (new users, permissions, and minor group policies).
- Participated on a global infrastructure team and in its initiatives; traveled as needed.
- Built, installed, and configured client sites.
- Managed a data center (installation, space, power, cooling, cabling, planning, and disaster recovery).
- Performed general desktop troubleshooting, networking, device management, and support.
- Installed and supported TT, PATS, and Eurex MISS systems from the front to back ends.
- Provided application support as a secondary focus for trading applications.

Actant Inc, Support Services Specialist, Chicago, IL 2008 – 2010

Installed and configured hardware and software. Trained users on the software. Resolved problem tickets. Configured, set up connectivity, and modified. Installed, configured, and monitored the status of Citrix connectivity. Analyzed and mapped Fix logs for market or trading system investigations.

- Performed daily monitoring, system analysis, and troubleshooting of mission-critical systems.

Resource 112

Windows Server Administrator

Fimat USA, E-Trading Support Specialist, Chicago, IL 2007 – 2008

Set up new accounts (Pats, TT, Web-ICE,and CQG). Set up, configured, and trained users.

- Provided VPN and Level 1 technical support.
- Set up trade routing and configuration.

KidTalk, Inc, Technical Consultant, New Lenox, IL 2005 – 2007

Installed and maintained a hybrid LAN/wireless network (static and dynamic IPs, DNS, and DHCP). Installed software and hardware; trained users.

- Daily and weekly secure file backup.
- Administered e-mail and the Web site (set up TCP/IP for Telnet and remote access tools).

Cargill Investor Services, Chicago, Foreign Exchange
Senior Desk Broker & Head of Electronic Trading 1997 – 2005

Brokered cash, swaps, options, and EFPs on foreign exchanges. Provided Level 1 and 2 support as well as project management for a 100-user international trading system. Managed sales relationships. Served as an assistant desk manager.

- Set up computer workstations (hardware, software, and user administration).
- Acquired hands-on experience in trading (tools used: Project A, Globex, Reuters 2000, TT, and Bloomberg).
- Managed disaster recovery (file backups, cloning and imaging of drives, and testing).

Education

- B.S., Network and Communications Management, DeVry University, in progress
- GPA of 3.91 – 109 of 122 credits (88 percent complete)

- Analyzed software and hardware performance
- Developed a strategy for encryption and implementation of laptops

Professional Summary

Results-oriented, enthusiastic, and dedicated IT and sales professional seeking a challenging new position. More than 11 years of experience as an IT administrator; 15 years of sales experience. Detail-oriented employee adept at multitasking in high-pressure environments to accomplish stated company objectives and meet deadlines.

- Proven ability to increase efficiencies and streamline operations
- Skilled at adapting quickly to changing needs and priorities.

Employment History and Related Experience

Walz, Deihm, Geisenberger, Bucklen & Tennis, PC, IT Administrator, Lancaster, PA 2001 – 2012

Oversaw all IT functions for a large CPA firm. Maintained and administered the firm's computer network and related computing environments, including computer hardware, systems software, applications software, and all configurations. Diagnosed, troubleshot, and resolved hardware, software, and other network and system issues. Replaced defective components as needed.

- Performed data backups and developed a full disaster recovery plan and additional policies to create a more secure and stable network environment.
- Standardized all desktop installations to increase efficiency.
- Planned, coordinated, and implemented network security measures to protect data, software, and hardware.
- Developed new computer clients; recommended and purchased their hardware.
- Monitored and maintained Exchange 2010 Server, Vipre spam filter, and Symantec antivirus protection software.
- Analyzed software and hardware performance as well as researched and recommended improvements to systems and the network.
- Administered all third-party applications and configurations used by employees.
- Developed a strategy for encryption and implementation of laptops.
- Gathered client-specific data to identify, predict, interpret, and evaluate system and network requirements.
- Served as a liaison between the firm and vendors to resolve issues and facilitate purchases.
- Migrated an existing Watch Guard firewall to a new Watch Guard firewall and reconfigured it.
- Maintained logs of network functions as well as maintenance and repair records.
- Developed tutorials to train employees on computer system use.
- Conferred with network users to solve problems and increase employee

efficiency.

- Performed routine network startup and shutdown procedures and maintained control records.

Ralph A. Davis Inc./Davis Insurance Agency,
Consultant, Lampeter, PA 2001 –2001

Maintained all computer hardware and software applications. Built the client database. Created and designed marketing materials. Assisted with the overall marketing strategy.

Waypoint Bank, Investment Representative,
Harrisburg, PA 1999 – 2001

Introduced bank customers to alternate investment products using Web-based sites and software for seven Waypoint branches in Lancaster and Lebanon Counties. Trained bank employees on lead in techniques for generating leads.

The Copeland Companies, Financial Advisor,
Mechanicsburg, PA 1997 – 1999

Oversaw on-site administration of York Hospital's 403(b) retirement program.

- Provided employees with consulting services for available financial products using Windows-based sales software.
- Developed new accounts and services for 1,400 existing accounts.
- Named top overall producer for the Harrisburg office in 1998.

Busy Barn Inc., Owner, Lancaster, PA 1993 – 1997

Owned and operated a supervised indoor playground business.

- Developed and updated a strategic business plan.
- Performed all aspects of running the business, including marketing and public relations, human resources, and accounts payable and receivable.

Prudential Insurance Company, Sales Manager,
Lancaster, PA 1985 – 1993

Oversaw policyholder service and public relations for a staff of eight.

- Recruited and trained new sales representatives.
- Supervised and continued training for veteran representatives using Prudential software.
- Developed personalized financial portfolios for new accounts using Prudential software for financial products and services.

Professional Summary

More than 15 years of experience implementing and supporting Windows NT, 2000, 2003, and 2008 R2; Novell; and UNIX networking environments. Excellent understanding and troubleshooting skills in a large-scale enterprise network infrastructure.

- Experienced in the design and implementation od LANS and WANs, including leased lines, Frame Relay, ISDN and switched Ethernet (fast and gigabit), and FibreChannel switches
- Experienced in network, routing, and switching protocols, including TCP/IP (4.0 and 6.0), IPX/SPX, RIP, EIGRP, OSPF, IGRP, BGP, ISDN, and Frame Relay, and integrating IP networks with VoIP-based voice networks
- Solid knowledge of Microsoft Cluster Services, information security, risk management principles, Citrix MetaFrame Presentation Server, Microsoft SharePoint Portal Services, HP OpenView, and other similar tools
- Designed and implemented SAN solutions for clients using SAN hardware (FibreChannel switches and HP storage servers) and software components (Windows 2003 Storage Server and iSCSI).
- Experienced in technical presentations using Microsoft Visio and PowerPoint
- Experienced in DNS; DHCP; WINS; SNMP; NIS; LDAP; SMTP; POP3; IMAP; NTP; NAT; VPN; BIND; Terminal Services; Exchange Server 5.5, 2000, and 2003; Citrix Presentation Server, Xen desktop, SiteMinder; Microsoft Cluster Services, and RAID 10 and 5
- Implemented Linux Networks successfully — Linux as E-mail server, Web server, and Samba server for Windows network connectivity
- Handle large Enterprise networks for more than 50,000 users.

Professional Experience

Patch Management Consultant, Commonwealth of Pennsylvania, Sr. Infrastructure Engineer, Harrisburg, PA 2012 – Present

Testing, Supporting, and Deploying Microsoft and third-Party Security patches, including Service Packs in different enterprise environments like Development, Stage, and Production using System Center Configuration Manager (SCCM 2007 R2). Process service tickets (in Remedy) in a 5,000-server environment; perform change management, problem management, and configuration management. Provide 24x7x365 application user support. Assign on-call rotation schedules to team members. Monitor the perfomance of servers (application clusters, database, BizTalk, and Web), and event logs. Track various issues and problems using Microsoft Terminal Services and the Windows PerfMon tool.

UNISYS

Resource 114

Windows Server Administrator

- Create and manage system center deployments using SCCM 2007; consolidate and clean up collections periodically.
- Design, plan, and architect large-enterprise Windows environments with experience in managing and implementing large-scale servers in a production data center environment.
- Use experience with Infrastructure design, Active Directory implementation, system builds, performance monitoring and tuning, application and server high availability, and strong knowledge of disaster recovery.
- Underwent training programs in BMC BladeLogic Server Automation and ADDM (Asset Discovery and Deployment Manager). Created patch deployment packages in BladeLogic for deployment in the lab environment.
- Develop and manage patch release strategies and production delivery schedules for software applications.
- Troubleshoot performance-related issue in the IIS application.
- Verify security logs on different region servers for tracking user logins and logouts to the system, including unsuccessful login attempts. Load balanced and performance tune Web Server farms using SiteMinder 6.

Bank of New York Mellon, Sr. Infrastructure Consultant, King of Prussia, PA 2010 – 2011

Tested and supported banking applications (ASP.NET) in different enterprise environments like development, QA, mirror, stage, and production, including trade floor support. Processed service tickets (in Seapine Test Track) in a 5,000-server environment. Implemented change management, problem management, and configuration management. Provided 24x7x365 application user support. Assigned on-call rotation schedules to team members. Maintained the perfomance of servers (application clusters, database, BizTalk, and Web) and event logs. Tracked various issues and problems with Microsoft Terminal Services and the Windows PerfMon tool. Applied service packs, hot fixes, and patches monthly through SMS 2007 to application and Web servers in all the testing and production environments.

- Designed, planned, and architected large enterprise Windows environments, managed and implemented large-scale servers in a production data center environment.
- Acquired experience with Infrastructure design, Active Directory implementation, system builds, performance monitoring and tuning, and application and server high availability. Acquired strong knowledge of disaster recovery.
- Created, ran, and maintained thousands of batch job schedules using ADVSYSCON Active Batch software on Web and SQL servers in all regions. Escalated issues and problems to various Global Operational

UNISYS

Resource 114

Windows Server Administrator

Services teams in King of Prussia or Pittsburgh.

- Actively participated in data center migration and relocation, including application and business process discovery, scheduling, physical move execution and vendor certification. Also participated in migrating applications from Windows 2003 and 2008 as well as IIS 6 and 7 platforms.
- Scheduled, configured, and maintained transmission jobs on Axway/Sterling Connect Direct software for clients like SunTrust, Genworth, ETrade, and FiServ. Set up NDM/FTP and subscriptions to leased lines from Verizon and AT&T.
- Created packages in BladeLogic for deployments and upgrades of various .NET applications.
- Troubleshot performance-related issues in the IIS application.
- Rolled SiteMinder out on the IIS server; troubleshot connectivity issues with these master server.
- Performed weekly and monthly application migrations (code moves as well as database fixes and updates) in production environments. Maintained Web sites quarterly. Monitored Web site traffic periodically with Truesight Coradiant.
- Backed up servers using NetBackup software, including monitoring backup logs and troubleshooting backup and restore errors. Created and executed disaster recovery preventive maintenance procedures at the Philadelphia site.
- Verified security logs on different region servers for tracking user logins and logouts to the system, including unsuccessful login attempts. Load balanced and performance tuned Web server farms using SiteMinder v 6. Installing and configuring policy servers.
- Performed complete Active Directory administration, network conversions, remote access and system security using HP OpenView and IPsec.
- Installed and configured certificates on Windows production and test boxes for SSL connectivity to the portal sites (http://www.advisorport.com).
- Installed, configured, and administered SQL Server 2000 and 2005 and processes, including process monitoring using the Idera SQL tool and database core administration. Worked extensively with SQL Enterprise Manager; created databases, tables, views, and stored procedures. Backing up and restoring databases using Litespeed for SQL software was an integral part of the job.
- Created and administered virtual machines using VMware ESX Server 3.5. Worked extensively with VMware Infrastructure Client and administered Virtual Center 2.5.

Credit Suisse, Application Support Specialist,
New York, NY 2009 – 2010

UNISYS

Windows Server Administrator

Tested, deployed, and supported security management products in different enterprise environments such as QA, staging, and production using the Repliweb tool. Processed service tickets (ith Remedy 6.0 and 7.0) in a 5,000-server environment; implemented change management, problem and configuration management. Provided 24x7x365 application user support in the Americas, Europe, and Asia. Gathered functional requirements for the security product (Lumension). Prepared technical documentation for release to the various support teams, including branch support. Identified users for user acceptance testing of the product.

- Installed, configured, and maintained application servers using Windows 2008 Virtual Workstations application servers on HP DL 580s as well as SharePoint team Web sites. Load balanced the IIS 6.0 and 7.0 Web farm.
- Deployed content, both IIS Metabase and .NET assemblies, using Repliweb 4.1.1. Configured distribution and replication jobs.
- Assisted with and developed a process flow for automating content deployments across various environments such as QA, staging, and production.
- Created and modified vbscripts and batch scripts for automating the Windows environment.
- Deployed Lumension successfully in Altiris pushes to 25,000 clients, including laptops, workstations, and virtual desktops in the Americas region.
- Installed and configured SQL Server 2000 and 2005 clusters and processes, including process monitoring and database administration.
- Extensively used the Active Directory CSFB tool for issuing group memberships to aid users in application access. Remotely accessed user machines with Carbon Copy and fixed problems.
- Thoroughly tested Lumension on various USB devices such as memory sticks, BlackBerry SD cards, smart phones, and hard drives. Sought users' acceptance for the product from the support teams.
- Identified and whitelisted about 50 BlackBerry device models including 8800s, 9000s, 9500s, and 9700s. Used Lumension Security Management Console to generate reports executing queries from SQL 2000 and 2005 databases. Administered and troubleshot Lumension application server problems.

Ernst & Young LLC, Systems Administrator,
Secaucus, NJ 2007 – 2009

Tested and supported gT&E (global time and expense) and eRooms SharePoint sites and applications in different enterprise environments like development, QA, and production. Processed service tickets (with Remedy 6.0 and 7.0) in a 5,000-server environment; implemented change management, problem management, and configuration management. Performed 24x7x365 application user support in the Americas (Region 1),

Resource 114

Windows Server Administrator

Europe (Region 2), and Asia (Region 3). Assigned 2-week on-call rotation schedules to team members.

- Monitored performance of servers (application, database, BizTalk and Web), and event logs. Tracked various issues and problems using Microsoft Terminal Services and the Windows PerfMon tool. Applied service packs, hot fixes, and patches monthly through SMS 2007 to the gT&E and eRooms servers in all the testing and production environments.
- Tested and monitored simple Web transaction response time and availability with BMC Patrol 7.1. Monitored applications, storage, and system devices.
- Created, ran, and maintained thousands of batch job schedules with Control-M agent 6.2 software on Web and SQL servers in all regions (1, 2, and 3). Escalated issues and problems to various Global Operational Services teams in Secaucus or worldwide.
- Changed application, SQL, and cluster services' passwords quarterly for all IIS 6.0, application, and database cluster servers enterprise-wide information security policy.
- Connected to Oracle database servers using Oracle Enterprise Manager or SQLPlus on Oracle client software for performing application server tasks.
- Performed weekly gT&E migrations (code moves as well as database fixes and updates) in production environments. Performed monthly eRooms code moves (deployed extensions) in production environments in all three regions.
- Backed up servers using NetBackup software, including monitoring backup logs and troubleshooting backup and restore errors. Created and executed disaster recovery preventive maintenance procedures in gT&E regions 1, 2, and 3.
- Verified security logs on different region servers for tracking user logins (SSO) and logouts to the system, including unsuccessful login attempts. Load balanced and performance tuned Web servers with SiteMinder 6.
- Performed complete Active Directory administration, network conversions, remote access, and system security with HP OpenView and IPsec.
- Installed and configured certificates on Windows and UNIX boxes for SSL connectivity to the portal sites.
- Implemented and maintained DNS services on Linux servers.
- Created and modified cleanup DOS scripts to VB scripts for automating the Windows environment.
- Created and maintained documentation for various operating environments in Microsoft Visio 2003, Microsoft Project 2003, and Wintel.
- Installed, configured, and administered SQL Server 2000 and 2005 and processes, including process monitoring and database core administration. Worked extensively with SQL Enterprise Manager.

UNISYS

Resource 114

Windows Server Administrator

Created databases, tables, views, and stored procedures. Backingup and restoring databases was an integral part of the job.

- Configured SAN HBA cards on servers, including resolving any connectivity issues. Allocated SAN drive space of up to 500 gigs depending on requirements.
- Created and administered virtual machines using VMware ESX Server 3.5. Worked extensively with VMware Infrastructure Client; administered Virtual Center 2.5.

Maine Center for Disease Control, Server Administrator, Augusta, ME 2007 – 2007

Supported IPHIS (Integrated Patient Health Information Systems) in different testing environments like development, staging, standby, and production. Processed service tickets (using Footprints) in a 200-server environment. Implemented change management, problem management, and configuration management. Provided desktop support with LANdesk and in person for all local and remote end users.

- Monitored servers (application, database, integration, and IIS 6.0) and event logs, tracked various problems. Applied service packs and hot fixes to IPHIS in all the testing environments. Started and stopped the WebLogic Server instances on the server.
- Ran scheduled tasks daily like Msgin, Msgout, MasterETL, and Drop_create_tables. Traced the log files. Escalated issues and problems to Office of Information Technology, State of Maine.
- Changed database schema owner passwords, Web servers, Sun One Directory Server Manager passwords, and batch process login accounts.
- Connected to Oracle database servers using Oracle Enterprise Manager or SQLPlus on Oracle client software for performing application server tasks.
- Installed and configured Terminal Services (Application Server mode) and SSL VPNs on Windows 2003 servers.
- Installed and configured BIND 7 DNS server for providing a naming service on the IPv6 network and the Internet.
- Installed and configured Rhapsody licenses on the integration server.
- Configured and monitored WSUS on Windows 2003 Server for patch management.
- Monitored and fixed synchronizing issues between the application server and the integration server.
- Backed up servers with Veritas Enterprise BackExec client software, including monitoring backup logs and troubleshooting backup and restore errors.
- Verified security logs on different servers for tracking user logins and logouts to the system, including unsuccessful login attempts.
- Extensively used RSA Database Administration for issuing security tokens to facility users for application access.

UNISYS

Resource 114

Windows Server Administrator

- Installed and configured certificates on Windows and UNIX boxes for SSL connectivity to the Maine's iphis portal.
- Created and modifying vbscripts, wscripts for automating Windows environment.

New York State/Office of Mental Health, Network Administrator, Manhattan, NY 2006 – 2007

Processed service tickets in a 500-server environment; implemented change management, problem management, and configuration management. Provided desktop support with LANdesk and in person for all local and remote end users. Assisted a group of four to five members in Windows 2000 Professional, 98, and Me rollouts to Windows XP Professional. Configured and administered Windows 2000 and 2003 and Solaris 8 and 9 Servers.

- Configured Novell NetWare Cluster Services on a two-node Dell PowerEdge 2600 server for file and print services.
- Worked with Windows Active Directory and Novell e-Directory services to maintain facility users and resources. Also worked with iManager to install and configure Novell NetWare printers.
- Monitored and fixed synchronization issues between Active Directory and e-Directory using IDM.
- Monitored the perfomance of servers (application, database, and Web) and event logs. Tracked various issues and problems via MS Terminal Services and BMC Patrol 7.0.
- Worked extensively with Novell GroupWise 7.0.1 for messaging services in the facility.
- Configured and maintained Microsoft Exchange 2000 and 2003 in the facility. Worked extensively with Microsoft Exchange Service Manager (ESM). Worked with storage groups, mailbox, and public folder store administration.
- Performed complete Active Directory administration, network conversions, remote access, and system security with HP OpenView and IPsec.
- Implemented VLANs and Spanning Tree protocol on the LAN using VLSMs. Maintained network cabling for Ethernet connectivity to workstations using CAT3 and 5e cables.
- Maintained GroupWise, including post office rebuilds, DST remediations, and day-to-day administration.
- Supported OMH applications like CAIRS, CONCERTS, Meds Manager, and RAS.
- Installed, configured, and administered SQL Server 2000 and 2005 and processes, including process monitoring and database core administration. Worked extensively with SQL Service Manager and Enterprise Manager.

UNISYS

Resource 114

Windows Server Administrator

- Extensively used RSA database administration for issuing security tokens to facility users for application access.
- Configured and maintained BlackBerrys and Palm Treo desktops for users in the facility.
- Wrote vbscripts and wscripts for automating the Windows environment.
- Configured and maintained SharePoint team Web sites and load balanced the IIS 6.0 and 7.0 Web farm.
- Monitored and implemented video teleconferencing service for the facility, including troubleshooting over ISDN lines.
- Configured Toshiba telephones for users, including backups of AMANDA voicemail.
- Installed and configured WSUS on Windows 2003 Server for patch management.
- Managed patches, Microsoft and Microsoft Office updates, Novell service updates, and hot fixes on servers including Firmware updates.
- Configured desktops for remote connectivity of applications using secure gateway.
- Administered the Novell servers through AdRemote console software.
- Backed up Novell servers using Veritas Enterprise BackExec client software, including monitoring backup logs and troubleshooting backup and restore errors.

Hanover Insurance Group, Server Administrator,
Worcester, MA 2006 – 2006

Processed service tickets in a 500-server environment, change management, problem management, and configuration management. Provided desktop support over the phone and in person for all local and remote end users. Configured and administered Solaris 9 as well as SunFire V480R and V440R servers.

- Configured Microsoft Windows 2003 Cluster Services on a two-node HP DL360 server for file services. Designed Microsoft Print Cluster Services on HP DL360 servers.
- Installed and configured Microsoft SharePoint services with MSDE on the primary domain controller. Organized corporate documentation, including contacts and meetings, using SharePoint Services.
- Added groups and resources under Veritas Cluster Server 4.0.
- Installed and configured BIND 7 DNS Server for providing a naming service on the IPv4 network and the Internet.
- Created and administered virtual servers using VMware ESX Server and load balancing. Moved GSX servers to the ESX farm.
- Developed Shell scripts, Perl scripts for automating, reported, and scheduled jobs using CRON and AT.

UNISYS

Resource 114

Windows Server Administrator

- Installed and configured WebSphere AS 5.1 on Windows 2000 Advanced Server SP3, including Web and SOAP Services.
- Deployed Web components (servlets and JSP files) on the application server.
- Managed patches, Microsoft and Microsoft Office updates, and hot fixes on servers; updated Firmware.
- Configured and administered Terminal Services (Application Server mode) and Citrix Metaframe presentation services on Microsoft XP Professional desktops for remote connectivity of applications using Secure Gateway.
- Installed, configured, and administered SQL Server 2000 and processes, including process monitoring.
- Installed and configured SAMBA services on Linux servers for connecting to Windows machines.
- Backed up servers using Tivoli Storage Manager Client software on IBM 800 and 8300 storage systems.
- Maintained DHCP, DNS, and WINS servers.
- Configured DFS for sharing folders and files over the enterprise network.
- Gathered and prepared technical documentation in Microsoft Visio software.

Varsitybooks Inc, Network/System Administrator,
Washington, DC 2005 – 2006

Configured and administered Windows 2000 and 2003, Wintel servers on HP DL blade servers, and Windows XP Professional workstations, including Dell and IBM ThinkPads. Installed and configured Microsoft SharePoint services on the Primary domain controller. Installing and configuring Solaris 9 on SunFire servers, including patching.

- Administered and configured the volumes using Veritas volume managers according to the customer's requirements.
- Performed complete Active Directory administration, network conversions, remote access, and system security using HP Insight Manager and IPsec.
- Worked with a system monitor to tune performance, thereby identifying potential bottlenecks.
- Configured and administered Terminal Services (Application Server mode) and VPN on Windows 2003 servers.
- Load balanced and performance tuned Web servers using a Big-IP F5 load balancer.
- Configured and administered .NET Framework Application Server on IIS 6.0 Server. Worked in XML to validate the configuration files.
- Administered and monitored the Big-IP load balancers for dynamic load balancing of the varsitybooks Web site.

UNISYS

Resource 114

Windows Server Administrator

- Installed, configured, and administered SQL Server 2000 and processes, including process monitoring.
- Backed up servers using BrightStor ARCserve backup software.
- Installed and configured DNS, NIS, and NFS servers.
- Installed and configured WebSphere AS 5.1 on Windows 2000 Advanced Server 5.1.
- Installed and configured Web and SOAP Services on application servers.
- Assisted in deploying applications on application servers.
- Gathered and prepared technical documentation for a simple disk-to-disk, disk-to-tape HP SAN solution for the production environment.
- Provided desktop support over the phone and in person for all local and remote end users.

American Florists Inc, Network/System Administrator, Boston, MA 2005 – 2005

Upgraded a Windows NT network to Windows 2003. Migrated data server using the Aelita migration suite, including building trusts. Worked with 1,000 to1,500 users. Configured and administered Windows 2003 servers and Windows XP, 2000 Professional, NT, XP, 98, and 95 workstations.

- Worked with a system monitor in .NET application performance tuning.
- Wrote vbscripts and wscripts for automating the Windows environment.
- Performed complete Active Directory administration, network conversions, remote access, and system security using HP OpenView and IPsec.
- Installed and configured Terminal Services (Application Server mode), VPN, Web Server, and a Watchguard firewall on Windows 2003 servers.
- Backed up, restored, load balanced, performance tuned Web and app servers.
- Migrated Micrsoft Exchange Server 5.5 to version 2000 and eventually to Exchange Server 2003.
- Installed and configured RPC over HTTP for Exchange 2003 Server Services.
- Worked with Windows 2003 Cluster Server Administrator to administer clusters. Created nodes and resources as part of cluster server management.
- Configured and administered Ecommerce 2002 and BizTalk servers for Web and SOAP Services.
- Configured RAID volumes with Veritas Volume Manager.
- Maintained DHCP, DNS, and WINS servers.
- Developed Shell scripts and Perl scripts for automating, reporting, and scheduling jobs using CRON and AT.

UNISYS

Resource 114

Windows Server Administrator

Adelphi Academy, Network/System Administrator,
New York, NY 2001 – 2005

Upgraded a Windows NT network to Windows 2003. Migrated data from Windows NT to Windows 2003 Server using the NetIQ migration suite, including building trusts. Configured and administered Windows 2000 cluster servers and Windows XP, 2000 Professional, NT, XP, 98, and 95 workstations. Worked with more than 2,000 users and workstations.

- Executed vbscripts and wscripts using WMI.
- Configured send mail, fetch mail, and a virtual user and aliases table for enabling e-mail for users from multiple domains with SMTP, IMAP, and POP3 protocol support.
- Implemented and maintained IGRP between the head office and branches on Cisco 1700 through 2500 series routers using leased lines for WAN connectivity and Catalyst switches for LAN connectivity.
- Installed and configured a Sun StorEdge 3310 and 3510 storage area network.
- Installed and configured Terminal Services (Application Server mode), VPN, Web server, and a firewall on Windows 2003 servers.
- Installed, configured, and administered WebSphere Application Server, HTTP Web Server, and Secure Way Directory (LDAP) for e-product development.
- Resolved Windows and UNIX connectivity issues using SAMBA.
- Monitored jobs on SQL server 2000 databases.
- Performed backups, restores, load balancing, and performance tuning of Web and app servers.

Professional Summary

Providing Windows operating system technical support for the Pennsylvania Department of Public Welfare (DPW). Install and configure operating system and apply security patches using BladeLogic. Continually support a large 24x7 server farm running Windows Server 2008 R2, Windows Server 2008, and Windows 2003 Server. Many Unisys ES7000 (/one, /G1, /G2 and /G3) servers running Windows and VMware comprise this environment. Experience with installing, configuring, and supporting the Unisys OpenTi product. Supporting and troubleshoot several OpenTi/OLTP projects.

- IIS, .NET, COM+, DNS, WINS, and performance monitoring.
- Install, configure, and troubleshoot third-party software.
- Review and install Microsoft security patches and hot fixes.
- Provided technical support for the Data Base Division of the DPW. Maintained database integrity, consistency, recovery, and support. Provided system generation, installation, and support of the network and relational database management system software (IRU, UDSC, RDMS, DMS, and UREP). Installed and supported client/server database software. Experience in database design, reorganization, maintenance, and COBOL batch/transaction programming.
- Assist DPW programmers with resolving their problems with batch and transaction programming of databases in COBOL.
- Coordinated a major DPW project to implement the first installation in the USA of the Unisys Extended Transaction Capacity (XTC) system that allowed multiple mainframes concurrent access to the DPW database. Conducted two training sessions for six new DPW employees.

Employment History and Related Experience

Unisys Corporation, Global Managed Services,
System Analyst 1, Harrisburg, PA 2006 – Present

Provide technical support for Windows operating system at DPW. Installed and configured operating system . Applied security patches using BladeLogic. Provided ongoing support for a large 24x7 server farm running Windows Server 2008 R2, Windows Server 2008 and Windows 2003 Server. Many Unisys ES7000 (/one, /G1, /G2, and /G3) servers running Windows and VMware comprise this environment.

- Install, configure, and support the Unisys OpenTi product.
- Support and troubleshoot several OpenTi/OLTP projects.
- Acquired experience with IIS, COM+, DNS, WINS, and performance monitoring.
- Install, configure, and troubleshoot third-party software.

UNISYS

Resource 115

Windows Server Administrator

Unisys Corporation, Systems & Technology,
Consultant 1, Harrisburg, PA 2005 – 2005

Provided technical support for the Network Operating Systems group at DPW. Installed and configured operating systems; provided ongoing support for a large server farm running Windows NT 4 Server and Windows 2000 Server as well as four Unisys ES7000 servers (18 partitions) running Windows 2000 Data center.

- Installed, configured, and supported the Unisys OpenTi product.
- Supported and troubleshot several OpenTi/OLTP projects.
- Acquired experience with IIS, COM+, DNS, WINS, and performance monitoring.
- Installed and configured, and troubleshot third-party software.
- Reviewed and installed Microsoft security patches and hot fixes.
- Exposed to and trained in a Dell SAN environment, with limited exposure to working with EMC Symmetrix storage.
- Successfully worked on a 9-month project coordinating activities among Microsoft, Oracle, and the Unisys Joint Support Queue to resolve major application problems with one of DPW's key Internet-facing applications. Played a key role in providing ES7000 support during the project—supported requests from all three companies.

Unisys Corporation, Systems & Technology,
Architectural Specialist, Harrisburg, PA 1993 – 2000

Provided daily on-site software technical support for the Data Base Division of DPW. Maintained database integrity, consistency, recovery, and support. Responsible for system generation, installation, and support of network and relational database management system software. Installed and supported client/server database software.

- Acquired experience in database design, reorganization, maintenance, and COBOL batch and transaction programming.
- Assisted DPW programmers in resolving their database and COBOL batch and transaction programming problems.
- Coordinated a major DPW project to implement the first installation in the USA of the Unisys XTC system that allowed multiple mainframes concurrent access to the DPW database.
- Conducted two training sessions for six new DPW employees.

Pennsylvania Power and Light Co, Developer,
Allentown, PA 1992 –1992

Learned and used the SAS language in writing performance analysis programs to analyze the use of IBM mainframes.

UNISYS

Domino Technologies Inc.

Resource 116

Windows Server Administrator

Key Skills and Knowledge

- On-site consulting services for Microsoft and various network
- Create architectural documentation for delivery of network and server requirements
- Support and resolve Microsoft Active Directory, IIS, SQL, Server 2008 R2, and Web applications
- MCSE, MCP+I, CCNA (recertifying), and MSS certifications

Professional Summary

Qualifications include 12 years of nationwide government and healthcare IT consulting and many years of mid-level management experience. Thorough understanding of all Microsoft server, network, and SQL database technologies. Hold MCSE, MCP+I, and MSS certifications. Recertifying for CCNA.

- Have an extensive background in LAN and WAN environments
- Served as a CDMS director of professional services and senior systems engineer on the Commonwealth of Pennsylvania Comptroller's Office consulting project, including seven Commonwealth agencies
- Provided network services for many large and medium-sized companies throughout the United States
- Certified in Kodak and several other ECM technologies.

Employment History and Related Experience

Unisys Corporation, Deployment Consultant, Commonwealth of Pennsylvania Enterprise Data Center — 2011 – 2012

Provide on-site consulting services for Microsoft and various network technologies to Commonwealth agencies as part of a multiyear project to move all off-site server and application operations to one central data center leveraging VM technologies.

- Create architectural documentation for delivery of network and server requirements to a Data Center engineering team facilitating relocation deployments of field network operations.
- Support and resolve Microsoft Active Directory, IIS, SQL, Server 2008 R2, and Web applications.

Computer Document Management Systems, Senior Systems Engineer — 1999 – 2011

Provided management-level support for large services engagements. Served as systems engineer and project manager for Microsoft network and Cisco WAN consulting activities. Configured and supported all Microsoft ,Cisco, SQL, and VM server technologies (SQL and Exchange certified).

- Provided strong network troubleshooting skills (always sought by others for resolutions when all others failed).
- Installed and supported document management, ECM, OCR, workflow, and storage technologies.
- Provided enterprise-level hardware planning and installation services.

Resource 116

Windows Server Administrator

- Solved server and network performance issues through performance monitoring and baselining.

NetVision, Technical Consultant 1999 – 1999

Designed, laid out, and implemented computer networks.

Fleming Foods, Regional Manager 1990 – 1998

Managed about 120 locations (400 associates) covering three states.

Education

Harrisburg Area Community College, DCTS (degree in Electronic Technology)
JFC IT Training Center, Camp Hill, PA (MCSE, MCP+I, and Advanced DOS)
SCG Senior Management Training Program, Training Center, Woodbridge, NJ

Effective Writing, Cornell University

Certifications

- Microsoft Certified Systems Engineer

UNISYS

e&e IT Consulting Services, Inc.

Resource 117

Windows Server Administrator

Key Skills and Knowledge

- Top secret clearance
- Security +
- Network +
- SCCM

Professional Summary

9 years of solid technical experience with supporting Windows networks and server farms. Performed remote customer support from SCCM, imaged PCs, administered user accounts in Microsoft Active Directory, wiped hard drives to comply with DoD security, recommended and implemented solutions for hardware and software problems, and used Remedy for tracking incident tickets.

Developed network boot CDs, slipstreamed Windows XP Server Pack 2, and customized a Bart PE disk for a department. Completed physical network drop installations and all relevant IP addressing information for efficient administration of network.

Employment History and Related Experience

e&e IT Consulting Services, DLA, RFID Administration Technical Support, New Cumberland, PA 2012 – Present

Maintain radiofrequency (RF) Windows 2003 and 2008 servers and RFID portal health metrics. Report downed equipment; configure handheld RF scanners; tracking assets.

e&e IT Consulting Services, End User Support Technician, DLA, New Cumberland, PA 2011 – 2012

Performed remote customer support from SCCM, imaged PCs, administered user accounts in Active Directory, wiped hard drives to company with DoD security, recommended and implemented solutions for hardware and software problems, and used Remedy for tracking incident tickets.

Qinetiq-NA, System Administator, NASA Goddard Space Flight Center, Greenbelt, MD 2007 – 2011

Redesigned and upgraded an isolated Active Directory, implemented a backup database, and designed a VMware workstation and server for software development. Designed and installed an upgrade to network infrastructure, upgraded server hardware, and maintained custom images for specialized systems.

- Responded to virus alerts.
- Customized PE disk for security compliance.
- Built and maintained custom images for specialized systems.
- Developed a digital signage system.

e&e IT Consulting Services, Inc.

Resource 117

Windows Server Administrator

- Configured partial counters for a clean room.
- Attended training for managing and maintaining Microsoft Windows Server 2003.

Harrisburg Area Community College, Instructional Support Technician, Harrisburg, PA 2005 – 2007

Distributed and set up instructional equipment. Troubleshot PCs, LCD projectors, and audiovisual equipment. Provided temporary network access in classrooms. Assisted users in accessing data over the campus network.

- Performed transportation assembly and permanent installation of computer and audiovisual equipment.
- Installed, troubleshot, and supported SmartTechnology.
- Set up and troubleshot audio-conferencing equipment.
- Processed user requests for instructional equipment.

Harrisburg Area Community College, End User Support Technician, Harrisburg, PA 2003 – 2005

Developed network boot CDs, slipstreamed Windows XP Server Pack 2, and customized a Bart PE disk for a department. Completed physical network drop installations and all relevant IP addressing information for efficient administration of the network.

- Made CAT 5e patch cables, installed plenum cabling for network and telephone drops around campus, and transported computers to all branch campuses.
- Troubleshot PCs, repaired laser printers, troubleshot hardware on existing computers, and was instrumental in the rollout of more than 2,000 PCs.
- Inspected unboxed hardware and entered serial numbers into a database.
- Conducted a campus-wide inventory of all hardware components, including identification of leased PC components for return to vendors.

Professional Summary

Apply specialized knowledge of systems and server farm infrastructures that include conceptualizing, designing, constructing, testing, implementing, and optimizing systems. Enable and support business, manufacturing, and engineering functions. Interact with customers, clients, and team members daily to gain an understanding of the business environment, technical context, and the organization's strategic direction.

- Operating Systems – Experience with supporting, installing, and configuring Microsoft Windows platforms, including Windows Server 2003, 2000, NT, XP Professional, Vista, and Microsoft Exchange
- Software – Experience with supporting, installing, and configuring Active Directory, Microsoft Office, Norton AntiVirus Corporate Edition, Symantec Ghost, Tivoli, Remedy Action Request System, BlackBerry Desktop, Netscreen Remote, and PC Firewalls
- Hardware – Dell servers; HP servers; Dell desktops and laptops (Optiplex and Latitude series); HP notebooks; Panasonic notebooks; Micron desktops and notebooks; IBM ThinkPad notebooks; BlackBerry 957, 6510, 7280, 7780, and 7790 wireless devices; and Palm Pilots
- Experience with upgrading and repairing IBM and PC computers.

Employment History and Related Experience

HP Enterprise Services, Navy Marine Corps Intranet Server Farm Operations, Consultant, Mechanicsburg, PA 2005 – Present

Provide on-site server farm operation support and troubleshooting of various Windows 2000 Server and Windows Server 2003 and data storage systems in coordination with a regional network operations center.

- Conceptualize, construct, test, and implement, integrated network, hardware, and software solutions; distributed computing solutions; and physical and logical communication networks for the client. Manage quality and records for the team.
- Create Remedy change, task, and help desk requests for server farm projects and maintenance scheduling. Administer the tickets from approval through completion. Perform the following duties according to documented procedures: project management, asset management. backups and restores, parts replacement, incident management, server farm monitoring, case management, and server farm management and administration. Repair systems and coordinate recoveries around the clock.
- Install operating system base builds in accordance with approved configuration documentation as required. Coordinate all testing and

maintenance of server farm power and environmental systems.

- Provide Tier 3 access to the NMCI Active Directory when ACTRs require assistance with resetting passwords, and verifying that user accounts are enabled or disabled and allowing access to shared databases.
- Provide technical advice and on-site assistance with issues dealing with data access and the required rights for a customer to access his or her data.

TSR, Inc., Navy Marine Corps Intranet Operations,
Consultant, Mechanicsburg, PA 2003 – 2005

Resolved issues with user accounts, roaming profiles, and passwords using Active Directory. Researched user and computer associations with applicable software. Provided on-site end user assistance as well as support for and orientation to new computer systems.

- Maintained and updated computer software and hardware. Provided on-call/off-hours support for a server farm. Provided support for Black Berry Wireless devices and for client remote access using Netscreen client. Used Remedy ARS to open, work, and resolve trouble tickets. Used Tivoli Remote Management Agent to remotely resolve software issues.
- Provided support for the classified side of the NMCI network. Planned, installed, implemented, modified, and operated all end user computing equipment, including all PCs and peripheral configurations, hardware, and software.
- Assisted end users with complex access and usage problems. Troubleshot problem calls. Assisted with the preparation and installation of new equipment. Developed operating procedures.
- Served as the principal technical expert on BlackBerrys, software, and hardware. Because comfortable working routinely with little or no supervision.

TSR, Inc., Naval Supply Systems Command Help
Desk/Computer Specialist, Mechanicsburg, PA 1999 – 2003

Provided notebook and desktop support for more than 500 clients on a Novell/NT network with Windows 2000, Windows NT Workstation, and Windows 95 and 98 machines using Lotus Notes R5 for e-mail.

- Developed and updated images for new notebooks using Symantec Ghost Imaging software.
- Provided support and training for users of BlackBerry wireless and Palm Pilot handheld devices.
- Provided support and training for Lotus Notes remote clients. Configured notebooks for remote use. Answered telephone calls for support.
- Covered the help desk as needed to answer incoming support calls; determined the priority of each call and assigned it to appropriate support staff.

e&e IT Consulting Services, Inc.

Resource 118

Windows Server Administrator

- Created documentation and procedures for use by clients and the information center.

Laurel Bank, Electronic Banking Product Specialist,
Johnstown, PA 1996 – 1999

Provided support to customers using the bank's electronic banking products: PC Banking, Business PC Banking, and the IVR telephone system. Upgraded software and hardware for the electronic banking systems. Created and produced monthly statistical reports tracking the usage of the three electronic banking products. Wrote daily work procedures to be used by customers, branch offices, and the electronic banking department.

- EMC Symmetrix class Storage
- EMC CLARiiON Class Storage
- FC, FCoIP. FcoE
- SAN Storage and Recovery

Professional Summary

Contract for a Pennsylvania government agency to deliver a centralized application to view hundreds of video cameras located across the commonwealth over the internet utilizing existing and new infrastructure. Utilized visual networks data probes to ascertain utilization and performance data. Analyzed the existing network infrastructure and make recommendations to upgrade, replace or modify the infrastructure as necessary to facilitate the new application

- Certifications: Microsoft Certified Professional- MCP, CheckPoint Firewall, SANS Windows Server Security, Project Management, RADIA, ITIL
- Provide Disaster Recovery solution that was not practical at the time of applications distribution.
- Reduce new application provisioning times and costs.
- Designed, tested and delivered a solution to centralized applications that were distributed throughout the United States. By utilizing VMware Technologies I was able to reduce costs and improve service levels.
- Provide senior-level technical leadership to application development and implementation teams.
- Provide designs for complex solutions in conjunction with vendor specialists
- Preparing and delivering design and solution presentations to the business.
- Worked with delivery teams to ensure that all solutions could be delivered within the customer time line, budget as well as support after deployment.

Employment History and Related Experience

Solution Architect, 2011 – 2012

Contract for a military institution in the greater Harrisburg Area, creating the technical design and business case for application centralization design and implemented solutions based on those recommendations.

- Designed, tested and delivered a solution to centralized applications that were distributed throughout the United States. By utilizing VMware Technologies was able to reduce costs and improve service levels.
- Presented a power point outlining business justification for centralizing distributed applications
- Utilized VMware allowing the customer to better utilize existing and future hardware
- Provide Disaster Recovery solution that was not practical at the time of applications distribution.
- Reduce new application provisioning times and costs.

Domino Technologies Inc.

Resource 119

X86 Infrastructure Architect/Engineer

- Brocade SAN Directors and switches
- WAN/LAN Networks
- Cisco Catalyst 6500 series router
- Cisco 2900 series edge routers
- Cisco IOS firewall
- F5 BigIP, and GTM
- Check Point Firewalls,
- IDS's

Technical skills

- Microsoft Desktop operating system's, XP, Vista MS-SQL; System infrastructure and Clustering.
- Microsoft Server operating system's 2003 Oracle and Oracle RAC (System infrastructure)
- EMC DMX, CLARiiON, Clarai Centera SRDF Commvault backup/restore SAN – Brocade switches and Directors HP OpenView - Node manager, Operations manager
- Cisco IOS - Switches, Routers and PIX Firewalls EDI.– Mercator, MQSI, Cyclone, IBM -MQ Series TCP/IP and routing protocols EGIRP, OSPF, BGP etc... CheckPoint Firewalls Clustering –MS Clusters, HP-ServiceGuard AIX-HACMP Citrix Application hosting
- F5 –Bip IP and GMT VMware server virtualization;

- Presented costs and timelines for the initial centralized infrastructure build out.
- Produced cost saving and service improvement estimates capable of being delivered by the new centralized application hosting environment.
- Utilizing existing technical staff in building the initial testing and development environment utilizing Blade server hardware
- Capacity planning and management was achieved using VMware's DSR with clustered groups. Vsphere servers were automatically load balanced within a cluster group
- Fault tolerance and disaster Recovery was achieved using Vmotion
- After initial testing was successfully completed in the development environment the production environment was built

Commonwealth, Solution Architect, 2009-2010

Contract for a Pennsylvania government agency to deliver a centralized application to view hundreds of video cameras located across the commonwealth over the internet utilizing existing and new infrastructure.

- During the data gathering phase the Wide Area Network provider was able to provide circuit utilization and performance reports for most of the WAN circuits
- Utilized visual networks data probes to ascertain utilization and performance data
- Analyzed the existing network infrastructure and make recommendations to upgrade, replace or modify the infrastructure as necessary to facilitate the new application
- Microsoft performance monitor was used for Wintel systems. Tivoli was used for the UNIX and Linux systems
- Presented embedded Visio diagrams out lining analysis and recommendations to project stakeholders. Conducted meetings with the project team to address concerns and revisions until a workable set of recommendations were achieved

Bise LLC, Software Development, Systems Hosting, 2008 to Present

Deliver custom software to automatically trade electronic financial markets in a black box configuration, maintain all systems, applications and networks to host customer broker accounts on the systems.

- The hosting application is Meta trader 4.0 running on Windows Server 2003. VMware ESX is used to host each customer on their own operating system.

Domino Technologies Inc.

Resource 119

X86 Infrastructure Architect/Engineer

DHL Logistics IT Infrastructure Architect, 1999 -2008

Provide senior-level technical leadership to application development and implementation teams. Champion new solutions and approaches and guide successful technical adoption through mentoring, instruction, and by actively participating in system implementation projects.

- Provide designs for complex solutions in conjunction with vendor specialists
- Liaise closely with Service Delivery Managers and their technicians to ensure correct scoping and pricing of solutions.
- Preparing and delivering design and solution presentations to the business.
- Work closely with vendors and external customers as well as Services Delivery Managers and the business to design and package together solution offerings.
- Worked with delivery teams to ensure that all solutions could be delivered within the customer time line, budget as well as support after deployment.
- Maintain up-to-date knowledge of present and future technological trends, processes and methodologies and maintain a strong understanding of all IT technologies.

Solution Technologies Incorporated, Systems Consultant, 1997 – 199

Design and build LAN's, File and Print systems, E-mail systems, Database servers and desktops for various customers. Provide ongoing system support to customers.

- Create and maintain system architecture models and designs.
- Conduct technical research and prototyping of technical solutions.
- Create detailed requirements specifications to fulfill product requirements

Exxon, Systems Consultant, 1995 – 1997

Two year project for Exxon Corporation; Designed and implemented WAN/LAN's, File and Print systems, E-mail systems, Database servers and desktops. Provide ongoing system support to customers.

Enviro-Test, Systems Consultant, 1994-1995

Lead in the development of a 57 node WAN and 57 new LAN's for a Pennsylvania State contract for emissions testing; provided Level 3 support and maintenance for statewide computing systems.

Domino Technologies Inc.

Resource 119

X86 Infrastructure Architect/Engineer

Scantron, Regional Service Manager1986- 1994

Responsible for one quarter of the companies services revenue with complete P/L and budgetary responsibility. Work closely with sales teams to increase profitability through new sales and new service products. I developed and managed service delivery teams in 10 branch offices.

Skills Summary

Highly-accomplished, results-driven senior IT Infrastructure Engineer/Architect with vast background of skills and expertise devising innovative, cost-effective solutions that increase technical capabilities, boost productivity and contribute to business growth. More than 17 years of enterprise-level infrastructure experience with demonstrated achievements impacting superior performance in areas of systems analysis/engineering, technology development/ deployment, process redesign, virtualization and cloud computing. Dedicated problem-solver with outstanding communication, relationship-building and customer satisfaction attributes.

Employment History and Related Experience

HENDALPHER CONSULTING /MOREDIRECT, Consulting Systems Analyst, Buckeye, Arizona, 2011-To Date

Satisfied business requirements through strategic systems analysis and planning success for client, Catholic Healthcare West (CHW), adeptly identifying/resolving critical IT issues that affect business performance.

- Valued as knowledgeable technical advisor building trust and keeping systems running and problem free by assessing needs and conceptualizing cost-effective solutions, processes and procedures for best results.
- Expanded technical capabilities as Systems Engineer/Liaison for CHW overseeing server refresh, consolidation and migration of applications and resources from older unsupported hardware to new virtual or actual systems.
- Reduced impact of migration and transition to new systems through implementation of strict change controls in collaboration with CHW engineering teams, Dell outsourcing partners, resource teams and application owners.
- Improved application and systems reliability by expertly performing complex change and OS platform build outs according to customer specifications. Conducted server/application inventory audits on 200+ systems.
- Delivered OS level support and guided application teams before, during and after migration to resolve outlying issues and OS level problems.

CVS / CAREMARK, Systems Analyst (PBM), Scottsdale, Arizona, 2004-2010

Devised effective virtualization strategy to fulfill user needs as VMWare Infrastructure and Systems Lead of vSphere/HP Chassis design and implementation team for private cloud computing.

- Performed expert operational transformation and employed latest technology in redesign of data center as Engineering Team Infrastructure Liaison with architecture, application, vendor and data/storage teams.
- Increased operational efficiency by developing innovative, enterprise-wide virtualization and data center reduction initiatives. Engineered effective network

and storage requirements.

- Optimized achievement of organizational objectives, increased quality and mitigated risk by developing ESX Farm to host mandated application lifecycle, including infrastructure development, QA and disaster recovery.
- Developed Web content and facilitated workplace collaborations through SharePoint 2007 farm-wide administration in instrumental role on SharePoint design and implementation team. Directed farm migrations.
- Elevated operational performance through infrastructure and core application rollout, design and builds for SME. Delivered infrastructure support for 2100 WINTEL/VMWare systems in 53 locations across the US.
- Supported 10+ enterprise-scale application deployments as Project Engineer/Wintel Systems Engineer for core and high profile application rollouts on VMWare and Wintel OS platforms, including 30+ Web-based projects.

NATURAL DATA, INTEL CORP, Consulting Systems Engineer, Phoenix, Arizona, 2004

Enhanced productivity and operational effectiveness in support of Intel SPEC control and document management development teams. Cataloged/documented greater than 10 systems and virtual servers.

- Utilized advanced analytical skills to conduct requirements analysis, capacity planning and feasibility testing to compare MS Virtual Server 2005 with existing VMWare solutions.
- Updated systems and improved performance through hardware reallocation, host deployment, server imaging, load balancing, reporting and documentation of findings for deployment and maintenance.

TEK SYSTEMS, IBM for AMERICAN EXPRESS, Delivery Systems Administrator, Phoenix, AZ, 2003

- Served in key supporting role as Wintel Systems Administrator delivering 2nd and 3rd level support for more than 250 3-tier Web applications on 1000+ American Express data complex servers for IBM Global Services. Drove business/technical success by creating WMI/SQL Server/Web tool for mapping app to server for billing and server management. Performed code changes, security patches, problem resolution, and break/fix analysis.

VOLT TECHNICAL SYSTEMS, Performance Systems Engineer, Redmond, Washington, 2001-2002

Achieved exemplary performance in systems design, implementation and administration of Windows Server 2003 builds as MS Windows Core Development Team Member, performing stress and performance analyses for Windows Server

Resource 120

Midrange Infrastructure Architect / Engineer

2003 release with TPC-c, TPC-h and SAP benchmarking.

STAMPS.COM, Systems Engineer, Bellevue, Washington, 2000-2001

Facilitated major application releases as Systems Engineer for development, test, QA and stress teams. Redesigned/administered Web, SQL and Domain servers. Restored production database.

- Supported corporate and production initiatives by managing rollout of SNMP, SNTP, load-balancing and reporting servers. Served as build engineer for Visual SourceSafe code libraries for development teams.

SALTMINE LLC, Systems Engineer, Seattle, Washington, 1998-2000

Successfully executed project with MSN and MCP design and application Web teams, as well as Nordstrom in-house design group. Provided expert oversight of server/network architecture. Administered 75+ servers.

BOEING COMMERCIAL AIRPLANE GROUP, Systems Analyst 3, Renton, Washington, 1996-1998

Performed systems administration/requirements analysis for 737-757 final assembly and wing responsibility center (WRC) initiatives. Technical Lead for WRC executive and airplane-on-ground engineering teams.

Key Skills and Knowledge

- VMware vSphere 4/5 & ESX/ESXi
- Windows
- Active Directory
- EMC Avamar
- Symantec NetBackup
- Disaster Recovery Planning
- PowerShell Scripting

Professional Summary

Knowledge in the following: VMware vSphere ESX/ESXi 3.x, & 4.x, & 5.x, Windows 2003/2008, PowerShell & VB Script, Active Directory, Security Policies, IIS, DHCP, DNS, FTP, IBM Blade Center Servers, Dell Commodity Servers, EMC Data Domain, EMC Avamar, Microsoft Failover Clustering, Network Load Balancing, Microsoft DFS & DFS-R.

Capable in the following Server software: BMC BladeLogic, MS Exchange 2000, 2003, 2007, Microsoft SQL 2005/2008 management, Symantec NetBackup 6.x, & 7.x, Backup Exec System Recovery, Symantec AV, McAfee w/EPO, Symantec Ghost, WSUS, IBM Tivoli Endpoint Manager, Microsoft System Center Ops Manager 2007 & 2012.

Employment History and Related Experience

Unisys Corporation, Systems Analyst, Harrisburg, PA, 2008 – Present

Responsible for multiple government agencies at central PA Data Center. Responsible for troubleshooting systems, Active Directory, Patch Management, AntiVirus. Windows/VMware Team Lead responsible for maintaining ~800 Servers in the data center. Roles include:

- VMware Administrator of 350+ VMs (approx 50 ESX/ESXi hosts in 5 virtual centers, including Disaster Recovery site)
- Two site Active Directory & DNS Administrator
- Backup Administration including NetBackup, DataDomain, Avamar
- Scripting for server automation using mostly PowerShell, VBScript, & PowerCLI (VMware).
- Disaster Recovery testing multiple times annually
- Maintain Large 2 Instance SQL 2008 Cluster used for Multiple application management
- Maintain 3 DFS deployments
- Incident & Change Management control
- Technical Documentation using tools like Word & Visio
- BladeLogic Patch Management
- Systems Builds/Deploys
- Basic Linux administration support (SUSE & Redhat)
- Migrate, Update & maintain Windows 2000 Active Directory migration to Active Directory 2008 R2. Migrate COPA file share from single node 2003 file server to 2 node 2008 Distributed File Server with Replication (DFS & DFSR).
- Build Terminal Services & RemoteApp for central application control & updating for DPH Operations Staff.

UNISYS

Resource 26

X86 Infrastructure Architect/Engineer

- Migrate the DPH management infrastructure from hosts file management to fully integrated DNS including multi-site Active Directory replication & implement GLOBALNAMES zone as a replacement to WINS
- Established a one-way trust with CWOPA domain and internal management domain (ESM) to allow State employees single sign-on to DPH resources managed by Unisys such as performance metrics, or backup reporting, etc.
- Built/assist with managing DPH Shared VMware virtual Infrastructure (8 host cluster & virtual center)
- Built/manage IES Virtual VMware Infrastructure (28 host 2 Blade Center cluster, and 4 hosts in 2 other clusters & Virtual Center)
- Migrate 70+ Physical servers from IES data center to DPH data center as Virtual using Avamar backup & restore
- VM Convert many physical servers to virtual once servers come end of life
- Installed or assisted installs and upgrade EMC Avamar 5.x & 6.x & EMC DataDomain systems
- Built or upgraded multiple Symantec NetBackup systems versions 5.1, 6.0, 6.5, 7.0, 7.1 & 7.5.
- Consolidate & upgrade DPH NetBackup infrastructure from 6 isolated backup environments to a large dynamic redundant Backup infrastructure allowing for faster backup & restore times, higher reliability & resiliency, and save costs by utilizing fewer tapes and backup servers, and network equipment.
- Perform multiple disaster recovery tests for PSP, DPW-CAPS, IES including
  - Physical Server to Virtual server restore
  - Bare Metal restore from NetBackup Tape & Avamar
  - VMware restores
  - Avamar restores
  - NetBackup Tape restores
  - DataDomain Oracle restores
  - MS SQL 2000, 2005, & 2008 restores
  - Windows 2003, & 2008 Cluster restores to a single nodes
- Written many VB & PowerShell scripts for use in Backup & restores, Server subnet IP changes, regular scheduled tasks, VMware tasks with PowerCLI, and software installations/tweaks

Business Information Group, Network Engineer, York, PA, 2008 – 2008

Installed numerous servers including Windows 2003 & 2008, SBS 2003, SQL Server, VMware, and Terminal Server. Installed servers from HP, IBM, and Dell.

- Partially or Fully administered almost 30 AD domains during the contract (Users counts ranging from 10-200+)
- Multiple Small Office Setups & relocation.

Professional Summary

Providing Windows operating system technical support for the Pennsylvania Department of Public Welfare (DPW). Install and configure operating system and apply security patches using BladeLogic. Continually support a large 24x7 server farm running Windows Server 2008 R2, Windows Server 2008, and Windows 2003 Server. Many Unisys ES7000 (/one, /G1, /G2 and /G3) servers running Windows and VMware comprise this environment. Experience with installing, configuring, and supporting the Unisys OpenTi product. Supporting and troubleshoot several OpenTi/OLTP projects.

- IIS, .NET, COM+, DNS, WINS, and performance monitoring.
- Install, configure, and troubleshoot third-party software.
- Review and install Microsoft security patches and hot fixes.
- Provided technical support for the Data Base Division of the DPW. Maintained database integrity, consistency, recovery, and support. Provided system generation, installation, and support of the network and relational database management system software (IRU, UDSC, RDMS, DMS, and UREP). Installed and supported client/server database software. Experience in database design, reorganization, maintenance, and COBOL batch/transaction programming.
- Assist DPW programmers with resolving their problems with batch and transaction programming of databases in COBOL.
- Coordinated a major DPW project to implement the first installation in the USA of the Unisys Extended Transaction Capacity (XTC) system that allowed multiple mainframes concurrent access to the DPW database. Conducted two training sessions for six new DPW employees.

Employment History and Related Experience

Unisys Corporation, Global Managed Services, System Analyst 1, Harrisburg, PA, 2006 – Present

Provide technical support for Windows operating system at DPW. Installed and configured operating system . Applied security patches using BladeLogic. Provided ongoing support for a large 24x7 server farm running Windows Server 2008 R2, Windows Server 2008 and Windows 2003 Server. Many Unisys ES7000 (/one, /G1, /G2, and /G3) servers running Windows and VMware comprise this environment.

- Install, configure, and support the Unisys OpenTi product.
- Support and troubleshoot several OpenTi/OLTP projects.
- Acquired experience with IIS, COM+, DNS, WINS, and performance monitoring.

UNISYS

Resource 115

X86 Infrastructure Architect/Engineer

- Install, configure, and troubleshoot third-party software.

Unisys Corporation, Systems & Technology, Consultant 1, Harrisburg, PA, 2005 – 2005

Provided technical support for the Network Operating Systems group at DPW. Installed and configured operating systems; provided ongoing support for a large server farm running Windows NT 4 Server and Windows 2000 Server as well as four Unisys ES7000 servers (18 partitions) running Windows 2000 Data center.

- Installed, configured, and supported the Unisys OpenTi product.
- Supported and troubleshot several OpenTi/OLTP projects.
- Acquired experience with IIS, COM+, DNS, WINS, and performance monitoring.
- Installed and configured, and troubleshot third-party software.
- Reviewed and installed Microsoft security patches and hot fixes.
- Exposed to and trained in a Dell SAN environment, with limited exposure to working with EMC Symmetrix storage.
- Successfully worked on a 9-month project coordinating activities among Microsoft, Oracle, and the Unisys Joint Support Queue to resolve major application problems with one of DPW's key Internet-facing applications. Played a key role in providing ES7000 support during the project—supported requests from all three companies.

Unisys Corporation, Systems & Technology, Architectural Specialist, Harrisburg, PA, 1993 – 2000

Provided daily on-site software technical support for the Data Base Division of DPW. Maintained database integrity, consistency, recovery, and support. Responsible for system generation, installation, and support of network and relational database management system software. Installed and supported client/server database software.

- Acquired experience in database design, reorganization, maintenance, and COBOL batch and transaction programming.
- Assisted DPW programmers in resolving their database and COBOL batch and transaction programming problems.
- Coordinated a major DPW project to implement the first installation in the USA of the Unisys XTC system that allowed multiple mainframes concurrent access to the DPW database.
- Conducted two training sessions for six new DPW employees.

Pennsylvania Power and Light Co, Developer, Allentown, PA, 1992 –1992

Learned and used the SAS language in writing performance analysis programs to analyze the use of IBM mainframes.

Professional Summary

Infrastructure Architect with extensive experience across a variety of verticals. Wide range of hands on technical skills and enterprise project experience. Excellent communication, presentation and documentation skills. Proven ability to deliver effective, scalable solutions drawing on both existing and emerging technologies.

Employment History and Related Experience

TJX Companies inc., Solutions Architect Wintel Infrastructure Services, 2011–To Present

Document and define the Business and Technical Requirements for the data center migration. Document and present a Full Architecture design document to the advisory board for technology approval. Performed capacity study of existing infrastructure to justify the required footprint within the new data facility.

- Worked closely with Enterprise Architecture to the define wintel computing platform standards.
- Lead the technical discussion on a vSphere 5 and HP blade architecture within the new data facility.
- Managed on-site resources during the phase 1 roll out within the new data facility.
- Define and document the migration of physical workloads from existing data facility to new remote location.
- Provide technical guidance on new technology within the TJX Companies, Inc. infrastructure.
- Lead the Cisco UCS PoC and Hybrid cloud effort+.

Novartis biomedical research, Solutions Architect Virtual Services, 2010 to 2010

Architected and deployed a virtualized Citrix XenApp 5.0 infrastructure for NIBR to accommodate their globalization efforts. Document and Define the Business and Technical Requirements to meet the team's charter. Documented network monitoring best practices for the remote computing environment hardware and middleware based on Citrix Edge Sight.

- Designed a GPO to allow for consistency across machines, applications and users.
- Documented application solution sets for NIBR internal support staff.
- Designed a highly scalable Citrix system by utilizing XenApp provisioning server (operating system Streaming), profile manager, and APP-V to allow for rapid expansion of the system to accommodate increased demand.

IBM

Resource 122

X86 Infrastructure Architect/Engineer

- Provide best practices – Windows operating system, Citrix configuration, security settings.
- Created a framework for design, performance testing, and support of the current and future Citrix environments.
- Worked closely with deskside engineering on a PoC effort for VDI deployment using XenDesktop, Pano Logic, and Unidesk provisioning servers.
- XenDesktop PoC use case was to design a solution for 400 test users from various areas of the Novarits research business unit.
- Lead the technical discussion on the Vsphere 4 implementation and dell blade design.

Biogen Idec, Solutions Architect/Team Lead Virtual Services, 2008-2010

Evaluate the existing VMware and Citrix infrastructure & document recommendations to accommodate biogen idec globalization efforts. Managed day to day operations and provided team leadership. Meet weekly with management in order to provide status reports on the health of the environment.

- Participated in companywide initiatives and provide virtualization and remote computing guidance.
- Documented and Defined the business and technical requirements to meet the team's charter.
- Stabilized the current Citrix environment XPe environment and document the migration path to MetaFrame Presentation Server 4.5.
- Assisted on new application rollouts and provided guidance on best practices on the Citrix systems.
- Lead and managed the global migration of the VMware 3.x infrastructure ESX 3.5 U4Wrote a custom upgrade tool to silently push and perform a hot install of the vm tools to all Windows guest VMs.
- Lead the discussions and technology direction toward the HP blade platform for biogen idec.
- Documented the logical and physical designs for the ESX platform.
- Managed the deployment VM team and documented processes regarding VM deployments and image management.
- Worked closely with all lines of business and provided guidance on implementing products into the virtual environment.
- Utilized VMware lab manager to deploy development systems for the scientific community.
- Designed custom health/environmental reports which provided forecasting and growth metrics for IT management.
- Familiar with FDA regulatory policies and procedures (GxP Compliance).

UNISYS

IBM

Resource 122

X86 Infrastructure Architect/Engineer

Robeco Investment Management, Solutions Architect, 2007-2008

Evaluate the existing Citrix Presentation server 4.0 infrastructures for Robeco and documented recommendations to accommodate their globalization efforts. Evaluated best of breed SSL VPN hardware to determine the best overall fit for Robeco. Document and Define the Business and Technical Requirements to meet the team's charter.

- Incorporate development requirements in order to provide a remote computing environment for the near shore/off shore development teams.
- Assist with the build out of VMware ESX 3.x environment (HA, DRS, VMotion, Backup)
- Leverage VMware for Citrix DEV, TEST, and CERT environments.
- Implement a Citrix DR strategy that leverages VMware in remote sites for server redundancy.
- Assist Robeco Investments with its global strategy as it relates to remote office computing.
- Designed a GPO to allow for consistency across machines, applications and users.
- Documented application solution sets for Robeco Investments internal support staff.
- Provide best practices – Windows operating system, Citrix configuration, security settings.
- Created a framework for design, performance testing, and support of the current and future Citrix environments.

Staples, Inc., Solutions Architect, 2007-2008

Architected a Citrix Presentation server 4.5 infrastructure for Staples Inc. to accommodate their globalization efforts. Implement Citrix Access Gateways to accommodate offshore partners and 3rd party vendor access. Coordinate efforts between Performance, engineering, & application QA, to qualify applications for the Citrix environment.

- Document and Define the Business and Technical Requirements to meet the team's charter.
- Incorporate development requirements in order to provide a remote computing environment for the near shore/off shore development teams and work from home initiative.
- Assisted with firewall configuration to accommodate the Citrix Access gateway infrastructure in addition to access from Citrix to the Staples restricted systems.
- Documented network monitoring best practices for the remote computing environment hardware and middleware based on the HP Open View platform.

Resource 122

X86 Infrastructure Architect/Engineer

- Assist Staples Inc. with its global strategy as it relates to off shoring, remote office computing.
- Hardened Windows operating system to meet security requirement for offshore associates.
- Designed a GPO to allow for consistency across machines, applications and users.
- Documented application solution sets for Staples Inc. internal support staff.
- Provide best practices – Windows operating system, Citrix configuration, security settings.
- Created a framework for design, performance testing, and support of the current and future Citrix environments.

Wellington Management, Solutions Architect, 2005-2007

Architected a Citrix Presentation server 4.0 infrastructure for Wellington Management LLP to accommodate their globalization efforts and Disaster recovery strategy. Coordinate efforts between Performance, engineering, & application QA, to qualify applications for the Citrix environment. Document and Define the Business and Technical Requirements to meet the team's charter.

- Incorporate additional Investments systems development requirements in order to provide a remote computing environment for the near shore/off shore development teams.
- Assist Wellington Management LLP with its global strategy as it relates to off shoring, remote office computing, and all global trading efforts.
- Designed and wrote a custom Web browser and provided guidance on application layer security as it related to Citrix application hosting for the IMS Recon partnership with State Street Bank.
- Stabilize the current Citrix environment XPe environment and document the migration path to MetaFrame Presentation Server 4.0.
- Managed the migration of all Citrix servers from end of life platforms and built new Citrix infrastructure.
- Implemented VMware solution for the following Citrix environments Dev, Test, Cert, Stage/Prod Mirror Designed a GPO to allow for consistency across machines, applications and users.
- Provided performance reports for application sizing to the internal development teams.
- Documented application solution sets for Wellington internal support staff.
- Provide best practices – Windows operating system, Citrix configuration, security settings.
- Created a framework for design, performance testing, and support of the current and future Citrix environment.
- Collaborate with users and development teams to coordinate system

maintenance policies and participated in development of comprehensive system documentation.

Fidelity Investments, Solutions Architect, 2003-2005

Managed the relationship for the Trusted Partner program (Ford, Bank of America, And Fleet Bank) to allow for seamless Citrix integration with the client native environment. Developed and managed the migration to MetaFrame Presentation Server 3.0. Evaluated and consulted with FCAT (R&D) on the 64bit operating system and Citrix Presentation server 4.0.

- Worked closely with Performance Engineering to determine best mix of physical to virtual servers per ESX host.
- Architect a Citrix MetaFrame 3.0 infrastructure utilizing Citrix Web interface, Windows Server 2003 & Active Directory authentication for over 6000 plus remote users.
- Built and currently support a Citrix Secure Gateway environment in order to allow trusted partners to manage their mutual and other employee funds. Estimated value of transacted business in excess of 25 billion.
- Manage the migration from Windows NT 4.0 TSE to Windows 2003 server infrastructure.
- Designed the Citrix GPO to facilitate the migration of local user and machine policies to active directory.
- Consulted with & Directed the Active Directory team on industry best practices for system security and infrastructure stability.
- Customized the Web interface for our internal clients – branded the Web portal to mirror Fidelity Web standards.
- Developed an H/A multi-site failover procedure for the MetaFrame environment.
- Document a standard build process for Citrix MetaFrame FR3 on Windows Sever 2003.
- Utilized Hybrid profiles in order to facilitate a standard remote user environment.
- Primary contact in the design and deployment of a Active Directory domain containing over 10,000 users which provided authentication services to central MetaFrame application servers, data stores and client server applications.
- Managed the migration of 3000 plus Citrix 1.8 users to the MetaFrame XPe & Nfuse environment.

Resource 122

X86 Infrastructure Architect/Engineer

Harvard Vanguard Medical Associates, Senior Security Consultant, 2003-2003

Architect a secure Web infrastructure for Harvard Vanguard Medical Associates. Document the principles used in a minimal trust system for Harvard Vanguard Medical Associates technical staff. Implemented a highly available and load balanced IIS cluster.

- Performed penetration and load testing of Web cluster systems.
- Review findings with HVMA information security officer.
- Built Windows 2000 DHCP servers and migrated Windows NT 4.0 scopes to new environment.

Greenwich Technology Partners, Senior Security Consultant (Fleet Boston Financial), 2003-2003

Documented the encryption policy on the RSA encryption suite for Fleet Boston Financial. Developed internal strategy for high level solution set presentation and documentation.

- Designed and implemented a VMware GSX server proof of concept environment for server consolidation & QA (Windows 2000 Advanced Server, IIS 5/6.x, & Active Directory, RedHat 8.0, Windows Server 2003, NetWare 6.0.).
- Documented the installation and configuration on each virtual environment for Fleet Boston Financial.

Fidelity Investments FISC, Senior Control-SA Security Consultant, 2001-2002

Organize, schedule and facilitate meetings with business units to establish role based profiles that include access for current and future roles.

- Coordinate with other Information Security business units to ensure correct enforcement of policies and procedures.
- Revise and document application specifications during validation in the certification environment.
- Technical architect for the implementation of the BMC Software Control-SA role based system.
- Provided business unit support for STARS program within Fidelity Investments.
- Developed Control-SA disaster recovery architecture for Fidelity Investments.
- Managed the integration of Control-SA with Active Directory for centralized access administration and reporting.
- Assisted internal customers with Control-SA agent installation and problem resolution.

IBM

Resource 122

X86 Infrastructure Architect/Engineer

- Performed the installation and configuration of Control-SA (3.01, 3.10, 3.2) and maintenance releases on Solaris 2.6 & 8.
- Managed production support of Sun servers and windows 2000 infrastructure environment.
- Integrated the following security systems within the Control-SA infrastructure – NT, Active Directory, Novell, UNIX (Solaris, VMS, and AIX), TopSecret, LDAP, IIS, and WebSphere.
- Senior technical resource for Control-SA links, Passport beta site testing.
- Utilized VMware for rapid testing of Control-SA agents in a development environment.
- Worked closely with the development team in Israel on the enhancement of the agent architecture.
- Conducted internal Control SA training for Fidelity Investments development groups.
- Provided daily operations support of Sun Solaris systems.

State Street Global Advisors, Systems Security Project Leader, 2000-2001

Integrated MS office, UNIX X Windows, and other 3rd party applications into the MetaFrame farm for remote traders and client access. Implanted Citrix resource manager in order to better monitor and load balance the Citrix systems.

- Consulted with State Street Bank on NT security policy and procedures for use within SSGA.
- Utilized Axent ESM 5.01 on NT to perform automated server audits and QA policy checks.
- Implemented Clustered Windows NT terminal for Global client access.
- Managed the implementation of a Citrix MetaFrame application server farm for SSGA.
- Managed the roll out of security profiles for all NT server builds.
- Documented all aspects of the installation and configuration process for the NT server support staff.
- Planned and Implemented Axent ESM 5.x for SSGA's NT infrastructure.
- Coordinated with the NT server team to run nightly batch jobs on NT to collect security logs.
- Managed the installation and configuration of new server hardware and Network Operating Systems.

Manulife Financial, Systems Security E-Commerce Project Leader, 2000-2000

Managed the implementation of secure NT Web servers for Manulife's Web applications. Developed Secure NT IIS 5.0 Web server configuration for

IBM

Resource 122

X86 Infrastructure Architect/Engineer

Manulife's Web infrastructure. Leveraged Windows network load balancing & windows cluster server technologies in order to provide a fault tolerant Web site.

- Integrated Web accelerators in order to offload the SSL transaction processing.
- Integrated Citrix Metaframe system for remote access and network management of Manulife systems.
- Responsible for the implementation of a Highly Available Autosys environment.
- Installed and configured Autosys batch jobs for data collection and nightly feeds to SQL databases.
- Documented the data flow within Autosys for the help desk.
- Installed and configured the Web interface to Autosys for monitoring of job status, edit, and submit new jobs.
- Managed the conversion of the NetWare 4.x to 5.x server environment.
- Coordinated with the development team to ensure full application functionality on the Secure NT Web server.
- Automated Software installs using custom INF and NT shell scripts.
- Evaluated host based security products for Web-based systems (Axent, Tripwire, etc.).
- Developed and implemented migration plan to move application data to EMC disk arrays.
- Installed and configured Microsoft IIS Web servers for E-Commerce application testing.
- Documented all aspects of the installation and configuration process for the production support staff.
- Configured nightly batch jobs on NT to collect application and security logs.
- Resolved session loss issues with the existing Microsoft SNA server environment.
- Instructed existing personal on the installation and configuration of secure NT Web servers.
- Performed the installation and configuration of new server hardware and Network Operating Systems.

Fidelity Investments, Systems Security Project Leader LAN Technical Services, 1999-2000

Managed the implementation of Fidelity Power Street NT servers and system upgrades. Consulted with @Stake inc. to develop a secure build evaluation and release process for NT. Developed Secure NT Web server configuration for Fidelity Investments Power Street Web applications.

- Leveraged Windows network load balancing & windows cluster server technologies in order to provide a geographically fault tolerant Web site.

IBM

Resource 122

X86 Infrastructure Architect/Engineer

- Integrated Web accelerators in order to offload the SSL transaction processing.
- Managed the rollout of NetWare 5.x infrastructure servers for the core file and print environment.
- Coordinated with the development team to ensure full application functionality on the Secure NT Web server.
- Consulted with Exodus Communications on other Web application projects (My Lycos, EIS, and On-line Statements).
- Implemented end to end monitoring infrastructure for NT Web servers utilizing TNG 2.1.
- Developed the future release of the secure NT Web server using Windows 2000 advanced server and IIS 5.0.
- Installed and configured NSH on both Solaris and NT platforms, utilized 3DES encryption for secure communication (ssh like peer to peer protocol).
- Leveraged VMware technology for the development of Web server security and application testing.
- Automated Software installs using custom INF and NT shell scripts.
- Implemented Axent ESM 4.x and 5.x on both NT and NetWare.
- Documented all aspects of the installation and configuration process for the integration and support teams.
- Installed and configured Sun servers for use as security log repository.
- Built Solaris servers for use NT log rotation and NTSMF data collection.
- Installed and configured Solaris systems for penetration testing of NT systems.
- Supported 50 plus Citrix systems for internal Fidelity business units.
- Performed system penetration tests using a wide variety of tools (ISS, Cybercop, etc.).
- Developed custom NSH UNIX shell scripts to perform various security log rotation and backup,
- Configured nightly batch jobs on NT and Solaris to collect Web, application and security logs,
- Consulted with Network Planning & Management to resolve network issues for Fidelity E-Business.
- Performed the installation and configuration of new server hardware and Network Operating Systems.

State Street Bank, Project Manager Enterprise Server Consolidation FMG, 1998-1999

Managed the consolidation of 50 NetWare servers into the core FMG Novell 4.11 infrastructure. Responsible for the desktop migration from windows 95 to NT 4.0 for FMG internal customers. Evaluated Windows NT high availability solutions utilizing Veritas FirstWatch and Vinca Co-standby server Using EMC & Storagetek disk arrays.

Resource 122

X86 Infrastructure Architect/Engineer

- Managed and implemented the SEI Investment trust application running on Windows NT server and MSSQL6.5.
- Designed and Evaluated Citrix metaframe environment for thin client workstation deployment within the FMG LAN.
- Evaluated Enterprise backup solution using Veritas NetBackup for Windows NT and NetWare.
- Developed custom NT shell scripts to perform various database backups and data replication.
- Managed several server consolidations of legacy systems within the FMG Technology division.
- Consulted with Network Planning & Management to resolve WAN/LAN issues for FMG.
- Performed the installation and configuration of new server hardware and Network Operating System.

Brown Brothers Harriman & Co., Tivoli Enterprise Software Distribution, 1997-1998

Primary responsibilities included managing Tivoli software distribution server's (operating system/2/, NT 4.0, AIX). Assisted with ESD policy and procedures development for BBH & Co. Recommended solutions for software distribution under IBM Tivoli TME 10.

- Evaluated third party software solutions for the operating system/2 to Windows 95/NT conversion.
- Created automated processes for the installation of client software via Tivoli Scripting, Shell Script.
- Modified Windows 95/NT registry files for custom workstation configuration using Tivoli and custom written INF files.
- Assisted with the Windows NT Enterprise Edition evaluation of server clustering technology.
- Performed various administrative functions within the AIX operating system.

Metropolitan Insurance, FileNet Imaging and Workflow Project Leader, 1997 to 1997

Project Leader for the roll out of FileNet document imaging software. Managed the rollout of the Windows NT application servers for the FileNet application. Managed and Implemented client conversation of 2000 IBM operating system/2 PCs to Windows NT workstation 4.0.

- Researched and recommended software and hardware configurations for the FileNet image platform.
- Designed networked solutions for software distribution using SMS.
- Evaluated Single sign-on environment for MetLife NT, Novell, and FileNet imaging environment.

- Responsible for the Rollout and managing the implementation of Windows NT applications servers.
- Managed the HP UX cache server for FileNet imaging software.

AT&T Solutions, Network Project Manager, 1997 to 1997

Architect on the Global enterprise network solutions team for Textron's Manufacturing and financial divisions (Bell Helicopter/T.E.T/Cessna, Textron Fuel systems, Avco). Managed the rollout/upgrade of WAN/LAN Solutions for various Domestic and International Textron divisions.

- Configured wide area network hardware for Textron manufacturing divisions.
- Managed data center migrations for various Textron divisions.
- Designed & Managed the integration of Citrix Solutions for remote access to subsidiary network systems.
- Managed the migration from O.C.C (other common carriers) to AT&T Interspan Frame Relay network.
- Coordinated weekly with all Textron Divisions to discuss network solutions and upgrades.
- Managed all stages on network implementations and configurations.
- Consulted with Textron's Network Security Team to discuss various security system standards.

Putnam Investments Inc., Network Project Manager PFTC, 1996 to 1996

Managed a Novell 3.11/3.12 NetWare environment. Managed both NT and NetWare server installations utilizing industry standard configurations. Designed/Implemented Norman enterprise Anti-Virus Strategy for Novell Servers.

- Managed the rollout of a site wide Novell backup solution of Cheyenne Arcserve 5.01g.
- Maintained Multiple Lotus cc: Mail Post Offices and operating system/2 mail connectors.
- Managed Lotus cc: Mail/Mobile installation team (Franklin).
- Senior Architect for the implementation of Ca-Unicenter on the Novell 3.1x platform.
- Responsible for the installation/upgrade of Novell SAA gateways from 1.x to 2.0.
- Responsible for server security.
- Managed Intel Video Conferencing rollout (PFTC).
- Developed Standards for Novell Servers and Windows 3.11 Desktops.
- Advised Installation team on standard configurations for new installation of Windows NT workstation 3.51.
- Coordinated with business units to review current operations and advise on future projects...

Resource 122

X86 Infrastructure Architect/Engineer

- Member of Enterprise LAN committee for Putnam Investments (Advisory board for System standards).

First Winthrop Corp. , MIS Consultant LAN Manager, 1995-1996

Managed Novell NetWare servers in a multi-server environment. Implemented Palindrome Network Archivist Novell backup Solution. Designed and Implemented Lotus cc: Mail e-mail system for local and Internet messaging. Responsible for Remote Access to Lotus cc: Mail Server.

- Integrated Citrix WinFrame server for remote access to corporate LAN.
- Migrated from DOS/windows to Windows 95 and Windows NT 3.51 clients.
- Maintained Multiple AS400 WAN links for the reservation system.
- Managed Workstation to Host (AS/400) connectivity Rollout of over 200 clients.
- Maintained remote access to AS/400(5250 emulation via dial in).
- Responsible for Token-Ring to Ethernet infrastructure conversion.
- Coordinate with business units to review current operations and advise on future upgrades.

Professional Summary

Summary of Experience and Qualifications

Shobha is Manager for over 14 years of Systems Engineering and Networking experience with the last 7+ years in assessment and implementation of Applications, Servers and Security infrastructure. Microsoft Certified Systems Engineer in windows NT/2000/2003. Over 3 years experience in managing the team and client interaction In depth knowledge and hands of Experience on TCP/IP Networking, DNS and Name Services, Active Directory-Joining Domains COM+ Applications, IIS as Web server and its configuration, administration and troubleshooting. Wide Experience in Implementing high availability solutions using CSS (Cisco Content Switches), Microsoft Windows Clustering, NLB, and Application Center. Hands on experience in designing and implementing Web publishing solutions using MS ISA Server. Ensured network security corporate policies and "best practices" standards were followed during design, installation, and configuration of ISA firewall, NAT server, and Intranet, Extranet, and Internet connections. Project Management experience in gathering the requirements, analyzing and document the application requirements, design and prototyping the applications in an enterprise environment.

Professional Experience Include most recent first

Unisys/ Office of Administration, State-PA, 03/2004-Present

- Working as deployment manager/architect for the data center. Routine job responsibilities include- Design and provide solutions for integrating applications securely within the data center. Leading team of experts who are responsible for implementing application on the enterprise infrastructure. embers as per their expertise and provide technical as well as non technical assistance as and when required by the team members. Coordination and meeting with clients to discuss the application/infrastructure requirements for deploying applications at the hosting facility. Work with Clients and provides them solution to a problem and built positive client relationship
- Project - Disaster Recovery/Secondary Site for Data Center (BCDRP) – Shobha is working with team of experts and Management executives for establishing the secondary site for the enterprise data center. Her role is to provide suggestions relates to application designs for secondary site in conjunction with primary site.
- Project Single Sign On for Commonwealth Portal 2006 (Access Control) – Designed and implemented the SSO for commonwealth Portal be leveraging CA SiteMinder. Designed the solution to implement SSO among various implementations of SiteMinder at various agency locations. Leading team of experts for ongoing support like upgrade of the products throughout the enterprise.

UNISYS

[redacted]

X86 Infrastructure Architect/Engineer

- Project – User Provisioning for commonwealth of Pennsylvania (Access Control)– Shobha was the technical lead during the requirement, design and implementation phases for user provisioning project. IBM Tivoli manager product is leveraged to provide account management and user registration capabilities.
- Project – PSP CLEAN (Access Control) – Shobha assisted the project lead during the design phase of security component for CLEAN project. CLEAN is the system that is leveraged by many crime and justice related agencies. Leading the team of experts to provide ongoing support for the CLEAN security components like single sign on and virtual directory services
- Project – Penndot NDES (Cryptography) – Shobha was the lead and helped in designing the solution for certificate enrollment by network and handheld devices. The solution was designed using Public Key infrastructure components like network device enrollment services(NDES) and OCSP (online certificate status protocol)
- Project – VPN for Mobile users (Telecommunications and Network Security) – Shobha along with other experts helped in designing the VPN solution for Commonwealth mobile users to access internal applications. The solution leveraged Netmotion mobility servers and Radius servers for VPN services, PKI and Active directory for dual authentication.
- Other responsibilities – Shobha leads team of experts and work with many other groups and is involved in all security related projects and addresses various security concerns like data at rest and in transit, user registration, access management, network and infrastructure security.

CitiBank New York, Consultant, 09/2003-12/2003

Responsible for installing, configuring and managing the windows 2000 Servers. Co-ordinate with application and business groups, implementation and performance tuning of the applications Including IIS based application. Implement backup servers and create/implement backup plans for servers .Install SQL servers and help DBAs troubleshooting System related problems. Create/Execute backup of SQL databases using SQL server backup. Troubleshooting tier-3/tier-4 windows 2000/nt server environment Implement Web Trends server for logging. Routine troubleshooting and system administration involving application teams, business groups and network group

Unisys/Department of Public Welfare Consultant, 04/2001-07/2003

- Project – DPW Extranet (Network Security) - Responsible for installing, configuring and maintaining the Department's Extranet by leveraging ISA/Microsoft Proxy Services. Designed and implemented solution to publish secure applications to Internet using MS Internet Security and Acceleration Server/Proxy 2.0 and SSL. Implemented the solution for

UNISYS

[redacted]

X86 Infrastructure Architect/Engineer

publishing applications with confidential data using secure socket layer protocol involving co-ordination with application teams, network infrastructure people and with other offices to fully understand the architecture. Troubleshooting and managing tier-3 servers problems, LAN, WAN support management in a complex environment including co-ordination with outside vendors and application vendors like Verizon

- Other Responsibilities: Monitoring, optimization, administration and support and configuring security for all enterprise Web servers. Support for WINS and DNS servers. Administer Exchange 5.5 environment, troubleshooting e-mail flow problems in an enterprise environment including escalation of problems with other organizations and departments within the same organization. Help and assist co-workers understand the e-mail flow and hardware/software involved in the whole process. Assisted in design and plan for migration from exchange 5.5 to exchange 2000. Helped in troubleshooting issues involving application availability, Network inconsistencies, routine issues with user/account management and policies. Provided support for network infrastructure, publishing applications and their availability, troubleshooting procedures for network, e-mail, Web servers and Internet facing Firewall servers (ISA and proxy servers)
- Project -Active Directory Implementation (Access Control)- Designed and implemented Active Directory in an enterprise environment, including security policies, delegate administration to user as per their role User and group accounts management. Created the support document and trained the administrators to manage the active directory as per their role. Troubleshooting the issues related to active directory policies and authentication problems involving co-ordination with different departments.
- Developed and implemented NETIQ performance-monitoring procedures on windows 2000 enterprise servers. Performance monitoring procedures details the process of monitoring each individual server's health and send alerts in case one of the monitored resources become a bottleneck, modified the scripts as per the organization requirement, created reports for resource consumption as and when required. The servers monitored with NetIQ were windows 2000 servers serving the role of Web servers, application servers and database servers
- Application Center Implementation (Access Control) - Designed and executed the phased implementation of application center clusters to load balance the applications running on windows 2000 enterprise Web servers. Created the procedures for application deployment and trained the developers to help them understand the new environment. Troubleshooting the problems related to application deployment, network inconsistencies and application synchronization. Maintenance of the cluster by taking the node offline alternatively without affecting the end users

UNISYS

[redacted]

X86 Infrastructure Architect/Engineer

- Implemented unified security solution includes deployment and configuration of SiteMinder components on enterprise servers. Integrating Netegrity with Active directory for authentication and authorization of resources, configuring policy servers to for multiple active directories for authentication and for authorization of resources. Troubleshooting the problems with the slow response or unsuccessful authorizations for the application using the Netegrity for single sign on, DNS problems and network issues in an enterprise environment, escalating the problems with third party software/application vendors whenever required and worked as coordinator.
- Implementing a Windows NT/ 2000-based VPN solution to provide administrator's access to public Web servers for upgrades, monitoring and maintenance. Analyze complex network environment and resolve any security issues. Co-ordination with multiple offices and third party hardware/software vendors

NT Administrator / IBM, Arkansas, 06/00-08/00

Designed and Implemented the NT Enterprise Network which comprised of NT4.0 Enterprise Version, Server, Cisco Routers, 3Com Switches, RAID5 Disk Arrays, and IBM Netfinity Server. Implemented the Backup Policy using DLT4000 Tape Drives and Backup Exec. NT administration and troubleshooting on Netfinity servers. Troubleshooting disk related problems and tape drive problems. Working with utilities to flash BIOS settings and change BIOS settings. Configuring the hardware RAID. Configuring Load Balancing on Network cards. Worked with Disaster recovery NT resource kit tools to modify with NT registry

Network Administrator, Northfield Savings Bank, NY(Short Term), 02/00-05/00

Project Firewall Implementation (Network Security) - Studied Network Design to foresee the problems before configuring/implementing security policies. Analyzed, designed, implemented and configured various elements of the network right from switches, Cisco Routers to servers and application Software. Installed and configured NT Servers. Installed and Configured CheckPoint 4.1 (Firewall) on NT 4.0 servers. Configuration and integration of E-Safe content scanning server to work with CheckPoint 4.1. Created policies and rules to define security for the organization.

NT Administrator/Architect, Interactive Communications Inc., 05/1999-01/00

- Designed and reconfigured the network having multiple subnets for different departments of the company. Installed and Configured CheckPoint 4.1 (Firewall) on NT 4.0. Configuration and integration of E-Safe content scanning server to scan for viruses with CheckPoint 4.1
- Creating policies and rules to define security for the organization. Implemented Internet Security using MS Proxy Server 2.0. Configured

UNISYS

[redacted]

X86 Infrastructure Architect/Engineer

Exchange Server 5.0 including IMS. Implemented VPN using MS PPTP (Point to Point Tunneling Protocol) technology and RAS server technology. The data transfer is secured by enabling the MS CHAP Protocol and Data encryption at the server level and client level.

- Evaluated the Windows 2000 server (Beta) compatibility with existing devices and testing the product services and new features in testing environment. Created customized packages using custom installation tools and distributing those using Windows 2000 group policies. Upgrading from Windows NT server to Windows 2000. Configuring RIS (Remote Installation Server) to remotely install Windows 2000. Configured Terminal Servers in Windows 2000. Configured networking services like DHCP, DNS, etc.

NIIT Limited, India, 07/95-01/99

Network administration for network. Comprises of Windows NT Servers, Novell NetWare 3.12 and SCO-UNIX. Administration of users & group accounts, security policies, print servers, Implement, administer and troubleshoot Exchange environment, configure mail clients, Performance tuning. Implemented migration from Novell to NT Support DNS/Wins/DHCP Study and design network Conducted training on Windows NT 3.51/4.0, Windows 95, UNIX, TCP/IP, SQL Server, MS Exchange Server, PowerBuilder for corporate clients, Unicenter TNG (Computer Associates).

Professional Summary

10 years of experience with managing IT systems in medium to enterprise environments; 7 years of experience with Microsoft Active Directory; and 5 years of experience with supporting Exchange servers. 2 years of experience with supporting Web-based load balanced Internet applications in a large data center environment.

- Extensive experience in supporting Windows 2003 and 2008 servers
- 7 years of working with small to large clients while providing on-site IT services
- 2 years of experience with coordinating a Change Management process in an enterprise environment
- Certified in MCSE, MCT, MCITP, and ITIL 2011.

Professional Experience

Unisys Corporation, Commonwealth of Pennsylvania, Harrisburg, PA

Perform IT operations for the Enterprise Data Center (EDC) hosting more than 1,000 load and non-load balanced Web-based applications.

- Perform operational support for Enterprise Windows Servers 2003 and 2008 in physical and VMware environments.
- Support multi-tier load balanced Web applications residing on Windows Web Servers.
- Manage multi-domain Active Directory projects.
- Support Windows 2003 and 2008 clusters.
- Support application availability using SCOM 2007 and performance tuning for Windows Servers.
- Complete Active Directory, SAN, SCOM 2007 monitoring, and disk space remediation projects.
- Coordinate Change Management process tasks with stakeholders.
- Configure servers for requested changes.

Innotion Enterprises, Inc, Bordentown, NJ

Effectively managed day- to-day IT operations for a U.S. Department of Housing and Urban Development (HUD) contractor. Supported LAN/WAN network infrastructure to securely connect with HUD network applications and maintain corporate data, e-mail, and Voice over IP (VoIP) communication systems.

- Performed technical and operational support on enterprise Windows Server 2003 and 2008 infrastructure systems and application software.
- Installed, configured, and managed Active Directory, Microsoft Exchange Server 2003and 2007, BlackBerry Enterprise Server, DHCP, WSUS, DNS, Cisco firewalls, Cisco routers, and Norton AntiVirus Server in a corporate environment.

UNISYS

Resource 123

Active Directory

- Defined and implemented improved corporate policies for the location, safety, and security of computer equipment.
- Performed routine maintenance and upgrades as required on servers, network devices, and related peripherals—improved reliability and 24/7 availability of mission-critical IT systems.
- Researched and developed network systems and related technologies; recommended products to meet future business and technological challenges.
- Developed and implemented disaster recovery strategies and procedures for network resources to ensure continuity of business and IT operations.
- Conducted internal Information Security Audits (ISAs) and implemented system security measures to improve the security and reliability of IT assets.

A&Y IT Solutions, Ontario, Canada

Consulted with clients for network performance, system administration, and user requirements.

- Analyzed networks to identify bottlenecks; proposed network design solutions to improve network performance and worker productivity.
- Proposed, designed, and built networks for small businesses with up to 50 workstations.
- Successfully installed and configured Windows Server 2003 Active Directory, Exchange Servers, and printers for up to 100 users.

Wintronics Computers Plus, Ontario, Canada

Consulted medium-sized business to analyze its IT infrastructures to improve business operations and propose solutions.

- Installed, configured, and supported Windows Server 2000 and 2003 for small and medium sized clients to improve security, productivity, and performance.
- Provided on-site support for end users and resolved the issues promptly to minimize production downtime.
- Performed routine monitoring of network and infrastructure for optimal performance and information security.
- Built customized Intel-based servers and workstations for businesses.

Education

Professional Summary

10 years of IT experience. Administer enterprise systems with a special focus on security infrastructure. Support more than 3,000 servers at the Enterprise Data Center for the Commonwealth of Pennsylvania. Broad range of professional experience: Microsoft Active Directory environments, hardware support, backups and restores, VoIP phone systems, network communication, Windows, Linux, and Mac OS.

- Design and support Microsoft Active Directory services, including AD and Certificate Services
- Experience in IT project management and solution deployments in an enterprise environment
- Exceptional retention of knowledge
- Organized, logical troubleshooting skills.

Professional Experience

Unisys Corporation, Commonwealth of Pennsylvania, Operations/Integration Consultant, Harrisburg, PA, 2011 – Present

Designed and deployed Microsoft's Network Device Enrollment Service and Online Responder Service, features of Microsoft Active Directory Certificate Services. This solution is an enterprise service offering for Commonwealth agencies that require certificates for network devices and a location on the Internet for checking internal certificate revocation lists.

- Implemented a scripted solution to monitor use of the Microsoft Active Directory Certificate Services infrastructure. The script exports a report of provisioned certificates for a specific certificate template on a scheduled so Commonwealth clients can monitor user certificate enrollment activity.
- Manage patches for Commonwealth of Pennsylvania Linux servers as required to maintain current patch levels in the Enterprise Data Center.
- Resolved a longstanding delayed login problem for a public-facing Commonwealth of Pennsylvania Web Service. Captured traffic with Wireshark and identified a failure in NetBIOS name resolution due to a discrepancy between a client's query and the NetBIOS record type. Recommended and implemented a successful solution g DNS.
- Identified and resolved a chronic problem in which an authentication function intermittently would not work in a public-facing enterprise application. Captured failed traffic with Wireshark and determined that not all Active Directory servers in the LDAP query string were accessible across the firewalls. Modified firewall rules to resolve the issue.
- Completed Active Directory Health Check remediation steps to maintain a secure and optimized network recommended by Microsoft Premier Support.
- Completed Active Directory Certificate Services remediation steps to maintain an optimized PKI infrastructure recommended by Microsoft.

UNISYS

Resource 124

Active Directory

TCW Computer Systems, Inc., Multiple Consultant Contracts,
Network Engineer, 2007 – 2011

Performed an in-depth migration from Windows Server 2000, Microsoft Exchange 2000, and Citrix Metaframe Server to Windows Server 2008, Exchange 2007, and Microsoft Terminal Services. Other migration processes included moving line-of-business applications, data, printers, user accounts, and security groups.

- Maintained HIPAA and PCI-compliant networks. Implemented compliance scanning, monitored reports, and provided ongoing remediation so networks remained compliant.
- Managed a patch management system and centrally deployed patches for all managed services customer networks.
- Designed and deployed a campuswide wireless network. Performed a wireless site survey to determine infrastructure requirements for the desired coverage. Performed a network site survey to determine necessary network device upgrades. Deployed a wireless controller, managed switches, and implemented the necessary VLAN infrastructure to allow secure private communication and publicly accessible Wi-Fi access.
- Designed and implemented a new VoIP telephony solution to replace a client's aging phone system. The solution included integrated desktop software for call control and voicemail to e-mail functionality among other network integrated services.

Professional Summary

Highly proficient systems administrator with 25 years of experience in many phases of the information technology and effective supervisor and trainer of technicians, managed more than 300 domain controllers in several different environments.

- Project lead for a forest-level upgrade of Microsoft active directory from Windows Server 2003 to Windows Server 2008 R2
  - Migrated many physical servers to virtual servers
  - Administered more than 100,000 mailboxes for 70,000 users on Microsoft Exchange 2007
- Managed BlackBerry Enterprise 5.0 Servers used by 4,000 users
- Consistently identified processes for automation — developed and implemented several scripts to save hundreds of staff hours versus previously used processes.

Professional Experience

Unisys Corporation, Commonwealth of Pennsylvania, System Administrator Consultant, Harrisburg, PA, 2009 – Present

Managed security patches for 400 domain controllers and Exchange servers.

- Migrated 15 Microsoft Exchange servers to version 2003; more than 4,000 mailboxes migrated with a success rate of 100 percent.
- Managed 4,000 user accounts and 2,500 Windows XP-based workstations on 15 isolated networks.
- Oversaw the migration of five separate NT domains to Active Directory—completed the project on time with zero impact on users.
- Led a project to upgrade ight domain controllers from Windows 2000 server to 64-bitWindows Server 2003.
- Upgraded a remote installation services server to Windows Deployment Server in production and test environments — enabled faster imaging of workstations and support for emerging technologies.

Elite Systems, Microsoft Exchange Consultant, Harrisburg, PA, 2008 – 2009

- Troubleshot hardware and software on 82 Windows-based servers.
- Provided day-to-day support for a wide range of standard applications. including the Microsoft Office suite, Form Filler, and PureEdge ICS Viewer.
- Managed networking issues dealing with TCP/IP, DNS, SMTP, and DHCP.

Air Force Flight Test Center, Network Systems Administrator, Detachment 3, 2004 – 2008

Consistently provided users with support for peripheral devices, such as printers,

UNISYS

Explore Information Services, Business Systems Analyst, Marshall, MN, 2005 – 2009

Lead analyst on various projects for an insurance information provider with 80 employees and $65 million in revenue.

- Liaised with the business during the entire development process. Determined user and business functional requirements; and translated them to specifications used for enhancements to a system or for new development.
- Created documents and diagrams for test cases, use cases, and data process flows.
- Gathered project estimates of development hours, software, and hardware costs.
- Built logical models; provided high-quality of documentation for system design and development.
- Main focus was a successful product deployment while meeting standards, budget requirements, and deadlines.

Unisys Corporation, The Schwan Food Company, Senior Systems Engineer, Marshall, MN, 2003 – 2005

Administered, upgraded, deployed, and maintained corporate BizTalk 2002 and 2004 and MEI and CRM environments.

- Worked closely with teams of developers from various business units to facilitate the upgrade and implementation of enterprise-wide applications. Assisted in securing, streamlining, and integrating the underlying business logic, message processing, and middle tier/backend communications for the deployed applications.
- Acquired knowledge of application interdependencies, including MSMQ 1.0 and 3.0, IIS 5 and 6, SQL Server 2000, and COM+.

Unisys Corporation, Commonwealth of Pennsylvania, Senior Consultant, Harrisburg, PA, 2002 – 2003

Member of an applications management team fully responsible for the Internet presence of all departments and agencies housing their sites and applications on the Pennsylvania Enterprise Server Farm.

- Supported a three-tier environment of more than 250 servers and 150 Web sites.
- Worked extensively with Microsoft Application Center Server, Microsoft SQL Server 2000, Microsoft SharePoint Portal Server 2001, Microsoft Operations Manager, and PPT Dynamic Site Framework (DSF) for Web sites along with other Web-integrated technologies for presence, format, and presentation.
- Configured and administered IIS 5.0 and SQL 2000 servers to facilitate maximum uptime and performance.
- Functioned as a SharePoint Portal server administrator. Created and administered workspaces and the Commonwealth Technology Center servers'

presence. Rolled out new workspaces; ensured that the server and workspace user/administrator interface and experience were at optimal levels.

Corporate Network Solutions, Network Engineer II, Phoenix, AZ, 2001 – 2002

Managed, maintained, upgraded, and administered client networks ranging from small business to mid-sized corporations.

- Functioned as project manager on various assignments, including the setup, testing, and integration of EDI at Fortune 500 and nationwide air freight companies. Lead engineer on a corporate infrastructure upgrade to Windows 2000 Active Directory platform including Exchange and SQL 2000.

Cunningham Technology Group, Systems Engineer, Phoenix, AZ, 2001 – 2001

- Designed and implemented the infrastructure and system components necessary to support local and enterprise-wide business needs and solutions for clients.
- Assessed network needs. Wrote proposals for suggested improvements in architectural design, system implementation and deployment, application configuration, and performance enhancements.

ProNet Solutions, Senior Consulting Engineer, Phoenix, AZ, 2000 – 2001

Ensured the highest level of technical expertise and customer service was provided and maintained while functioning in a Tier 2 support position.

- Improved the efficiency and effectiveness of clients by proactively administering and supporting their PC and networking needs.
- Functioned as team lead on assigned projects; acted as escalation point for technical and customer service issues.

Integrated Information Systems, Senior Consultant, Phoenix, AZ, 2000 – 2000

System and security architect for a multiple international domain network.

- Administered rules and security policies on local and remote CheckPoint firewall modules to supply safe and secure internetwork and intranetwork communication and data integrity.

Raymond James Consulting, Sr. Network Administrator, Denver, CO, 1998 – 2000

Lead administrator for a Microsoft NT multiple-domain network. Supported 20 servers and 250 client computers, including desktop and laptop computers.

- Configured, supported, and upgraded, as needed, the following network services: File/Print, WINS, DHCP, RAS, Exchange 5.5 Server, IIS 4.0, Microsoft SQL 6.5 Server running intranet applications, and SQL Server running custom production applications.

- Installing and configuring Microsoft TMG 2010 Enterprise Servers
- Expertise in network administration; database administration; TCP/IP network implementation; system integration, management, and troubleshooting
- Expertise in installing and maintaining Microsoft Web Server clusters
- Configuring and administering ESRI GIS (Geographic Information Systems)
- Installing, configuring, and troubleshooting IBM Tivoli Monitoring and IBM Director
- Testing and integrating-various third party applications on Windows 2003 and 2000
- Extensive experience in testing, evaluation, and implementation of Windows 2003 and 2008
- Used PowerShell and VB Script for modifying and administering object properties in Active Directory
- Disaster recovery planning
- Experience with installation, configuration, and administration NetScaler Access Gateway and Citrix XenServer
- Configuration and administration of UNIX and Linux
- Excellent creation and editing of technical documentation; fast learner
- Excellent leadership and communication skills and strong analytical skills.

Employment History and Related Experience

Commonwealth Technology Center, Senior Integration Consultant, Harrisburg, PA, 2007 – Present

Configure and maintain SiteMinder Cluster Server for authentication, authorization and Single Sign-On on the Commonwealth network. Install, configure, and maintain Radiant Logic Virtual Directory Server for the Commonwealth Technology

UNISYS

Resource 99

Application Support

- Aelita Domain Migration Tool, Altiris 5.5
- Microsoft TMG 2010
- Radiant Logic (Virtual Directory
- Services)
- Microsoft SCOM Console
- CA SiteMinder R12.5

Web Technologies

- Microsoft IIS 6.0 and 7.5
- JBoSS

Center. Provide Level 3 support (regular and on-call) for the servers at the hardware, operating system, IIS, Microsoft .NET application, and multi-application levels.

- Support is 365/24/7 in an environment with application availability of 99.99 percent.
- Ongoing deployment of Windows 2003, 2008, IIS, and Database Server for the Commonwealth of Pennsylvania and its agencies.
- Troubleshoot and configure VMware hosts.
- Administer Windows 2003 and 2008 Active Directory and support more than 10,000 users.
- Configure, support, and troubleshoot Microsoft Clustered Server.
- Troubleshoot DNS and network issues.
- Support the entire environment (development to production) comprising more than 250 IBM xSeries servers.
- Resolve trouble tickets Using Remedy Ticketing System.
- Use the Change Management process for all changes; review change management requests.
- Install, configure, and administer NetScaler Access Gateway and Citrix XenServer.
- Install, configure, and manage Microsoft TMG 2010 Enterprise Proxy Server.
- Review and update documents according to agency requirements.
- Work with agencies to plan and implement projects on schedule.

Deloitte, Active Directory Engineer, Harrisburg, PA, 2007 – 2007

Level 3 support (regular and on-call) for the servers at the hardware, operating system, and IIS levels. The project involved deployment of Window 2003 IIS and Database Server for the Commonwealth of Pennsylvania. Project was to develop a solution for the Commonwealth's Department of Labor.

- Configured and administered Windows 2000 and 2003 Active Directory and supported more than 10,000 users.
- Configured, supported, and troubleshot Microsoft Clustered Server.
- Configured and troubleshot DNS and network issues.
- Installed and troubleshot IBM Tivoli Storage Manager Client.
- Installed and troubleshot IBM Tivoli Monitoring.
- Installed and configured VMware for testing regular patches and other software before installing them in production servers.
- Supported the entire environment (development to production) comprising 110 IBM xSeries Servers.

IBM, Wintel Systems Administrator, Poughkeepsie, NY, 2005 – 2007

This project involved deployment and maintenance of Windows 2000 and 2003 Server Standalone in an Active Directory domain. Supported IBM internal and

UNISYS

Resource 99

Application Support

external clients, which included more that 500 IBM servers. Led the knowledge transfer and transition of work to teams in India, Brazil, and China (training and cutover).

- Level 3 support for IBM servers at the hardware, operating system, and application levels.
- Configured and administered Windows 2000 and 2003 Active Directory.
- Configuring and troubleshot DNS and network issues.
- Installed and troubleshot IBM Tivoli Storage Manager Client.
- Installed and troubleshot IBM Tivoli Monitoring.
- Installed and configuring VMware for testing regular patches and other software before Installed them on production servers.
- Supported IIS on the production servers. Troubleshot and supported internal clients on requirements for Web hosting.
- Installed and supported two-node cluster with Microsoft SQL and shared resources on Shark.
- Installed and maintained IBM servers in the Poughkeepsie and Fishkill Data Centers.
- Provided 24/7 on-call Level 3 support for servers.
- Decided on technical and hardware details for clients.
- Performed extensive work on OpenSSH and Cygwin for communication between Windows and AIX servers.
- Performed change and problem management with IBM Manage-now (ITIL process).
- Configured and maintained Symantec System Center Console.
- Implemented and supported new business clients on the servers and the transition.
- Maintained up-to-date documentation on the process and procedure.

Hewlett-Packard/Unilever, Project Lead, 2003 – 2005

Created Active Directory sites. configured and scheduled site replication for these sites. Created and managed user accounts and groups. Migrated users from the NT4 domain to Windows 2003 domain using Aelita.

- Configured network services, including DC, GC, DFS, FRS, DHCP, and DNS.
- Migrated DHCP scope.
- Installed and configured Tivoli, Enterprise Security Manager, and Legato.
- Generated ESM reports on the new servers after deployment to make sure they all met security requirements.
- Restricted space allocated to each user using Disk Quota Management.
- Configured RAID on HP ProLiant DL380 servers.
- Turned over servers to production after the total quality check.
- Assessed the site and ordered required components to make the site ready for server deployment. Coordinated with the network team on network issues and

to get the server up and running in time to meet the SLA.

- Defined and refined a process for building and configuring Windows 2003 servers.
- Troubleshot problems that arose during server deployment and configuration.
- Installed and managed Exchange Server in the enterprise.
- Migrated the servers from Exchange 5.5 to Exchange 2000.

Hewlett-Packard/Unilever, Project Lead, 2003 – 2003

Led an eight-member team and led the deployment and migration to Unilever. Migrated users from the NT domain to Active Directory. Sychronized home shares using Aelita. The project involved building the new laptops according to Unilever standards.

- Created and assigned entrust certificates.
- Migrated user profiles for desktops and favorites using Altiris.
- Met deadlines and supported users for 7 days after the migration.
- Configured and created printers on Windows 2000 and 2003 servers.
- Performed group migration using Aelita.

Hewlett-Packard/Merrill Lynch, Senior Systems Engineer, 2003 – 2003

Implemented Active Directory Services. Configured and scheduled site replication over these sites. Created and managed user accounts and groups. Configured network services, including DHCP and DNS.

- Automated client PC installation using Remote Installation Services (RIS).
- Implemented security using Domain Security Policy, Group Policy, and file permissions of NTFS5.
- Restricted the space allocated to each user using Disk Quota Management.
- Migrated mail for users from the Windows NT4 environment to Windows 2000 Exchange Servers.
- Configured and tested the mail migration process using Aelita mail migration tool in a test lab before going to live migration.
- After successful mail migration of the users, provided users with daily support.
- Maintained problem and solution documentation from day to day.
- Coordinated team members for 24/7 operation to meet deadlines.

Hewlett-Packard/Unilever, Senior Systems Engineer, 2001 – 2003

Built and configured NT servers for different locations across North America. Once the servers were in production, configured, and tested the backup device for the server. Migrated and consolidated users' data from Novell and NT servers to the centralized server. Configured and created printers on the new servers.

- Created group shares for common groups and granting appropriate permissions.

UNISYS

Resource 99

Application Support

- Configured and tested the IBM backup device for the server using Legato.
- Built and deployed desktops and laptops for users on the Unilever build standard (Aztec)
- Created new NT IDs, Sprint IDs, and entrust certificates for users.
- Performed quality checks before delivering desktops and laptops to users.
- Performed user support on the client and server sides.

Application Support

Key Skills and Knowledge

- VMware ESX
- Execute server virtualization initiative resulting in nearly 90% virtualization of PennDOT server resources
- Manage shared enterprise IIS .NET application server platforms
- Manage shared enterprise IBM WebSphere MQ server platforms
- Install and manage IIS .NET based 511PA Web service application servers
- Assist in management and operations of IBM Host on Demand application servers

Professional Summary

System engineer with eight years of technical experience, primarily in server operations management.; Experienced with VMware ESX, Windows server, Intelligent Transportation Systems, Microsoft SQL, and Microsoft IIS.

Employment History and Related Experience

Domino Technologies, Inc., Pennsylvania Department of Transportation, Systems Engineer, Harrisburg PA, 2006 to Present

Design, implement and manage mission-critical VMware ESX environment. Execute server virtualization initiative resulting in nearly 90% virtualization of PennDOT server resources. Install and manage Advanced Traffic Management System servers and software. Install and manage HIS Platinum Highway Advisory Radio servers and software

- Design, implement and manage fully redundant IIS based solution to provide real-time traffic camera images to Web. Manage and troubleshoot file and print servers. Plan, coordinate and execute upgrade and refresh of district office file and print servers
- Perform on-site installation and troubleshooting of servers, routers, switches, KVMs and UPSs
- Assist in management and operations of PennDOT eGovernment WebSphere application servers
- Assist in installation and management of Axis CCTV traffic camera encoders
- Manage shared enterprise IIS .NET application server platforms, Manage shared enterprise Microsoft SQL server platforms, Assist in management and operations of PennDOT Right of Way application servers, Manage shared enterprise IBM WebSphere MQ server platforms
- Install and manage IIS .NET based 511PA Web service application servers
- Assist in management and operations of IBM Host on Demand application servers

Domino Technologies, Inc., Pennsylvania Department of Transportation, Technologist, Harrisburg PA, 2002-2006

Support user base of over 10,000, Troubleshoot hardware and software issues on workstations and servers running Windows NT/2000/XP/2003, Install and manage IBM Host on Demand mainframe terminal emulator, Use and support productivity suites including Microsoft Office 2000/XP/2003 and WordPerfect

- Create, deploy and maintain images for various workstations, laptops and tablet PCs

Resource 128

Application Support

- Install and support network and desktop printers, Install and support handhelds, including BlackBerry, Palm and Pocket PC devices, Manage systems using Microsoft SMS 2.0 and 2003
- Perform maintenance tasks within Microsoft SMS 2.0 and 2003
- Manage McAfee ePolicy Orchestrator and AntiVirus clients
- Test and deploy Microsoft patches using SMS and scripted CD, Support QMatic systems at remote sites. Assign and complete tickets with Remedy ARS

Education

Professional Summary

Senior Microsoft technology consultant, skilled in both systems architecture design and software development; 20 years of experience, Extensive background in construction of software-based automated frameworks; Specializing in Microsoft technologies

Professional Experience

Unisys Corporation

Enterprise Workflow and Automation Development, 03/02-Present

Supporting Commonwealth of Pennsylvania Enterprise Data Center (ISP). Authored, designed, developed, and implemented the following enterprise solutions:

- ISP Workflow/Inventory System to keep register of servers, network hardware, Web applications, and their complex relationships, featuring security/audit trail, DPAPI encryption, performance superior to traditional ASP.NET, modular presentation layer, on-demand client code delivery, asynchronous processing (AJAX), integration with BMC Software's Remedy,
- Routed ISP Change Management center, ISP Maintenance Notifications module, outage log, work log, custom reporting. VB.NET 4.0, ASP.NET, Crystal Reports.NET, MS SQL 2008 R2
- Comprehensive Basebuild Automation (Base software deployment) for MS Windows-based servers (Dell / IBM / VMware Guest), featuring Web-based monitoring and management of basebuild settings/progress, hardware configuration
- Deployment and customization of Windows 2003/2008 operating system, security settings, various system management applications.
- Simultaneous deployments are supported. Flexible modular design. Integrated with the above-mentioned Inventory; solution is currently in production supporting over 2700 enterprise class servers. Designed for remote unattended execution. .NET Framework 4.0, VBScript, WinPE 3.1
- ISP Ad-hoc Automation Framework - integrated with the above-mentioned solutions to cover various post-basebuild activities, such as data collection, configuration changes, patch management, or application deployment; solution is designed for low connectivity (cross-firewall) requirements and low residual contamination of automation targets.

UNISYS

Resource 129

Automation Engineer

Merrill Lynch, Ajilon Services, Inc., Senior Systems Artchitect, New York, USA, 2000 - 2001

Performed code and data flow analysis, application design and integration, advanced troubleshooting, systems engineering, automation development, and upper-level production support. Provided expert knowledge of Internet application systems in investment banking/trading environment to ensure effective functionality, security, and performance of solution.

- Developed a distributed application management system that provides for monitoring, system configuration, automated application deployment and validation on MS Win2K based servers. The system is highly scalable and contains approx. 4000 lines of code.
- Technologies: MS Win2K Advanced Server, IIS 5.0, ASP, DHTML, Jscript, VBScript, VB 6.0 SP5, MS XML 3.0/XSL, SOAP 2.0 SP2, COM+, MS Site Server(LDAP, CRS), MS SQL 7.0, IBM MQ Series, MS Installer, Bridge MD Systems, Cisco LD/DD.

Other Employment

- Consulting Merrill Lynch & Co., Inc., New York, USA, 1999 - 2000
- Consulting Credit Suisse Asset Management, New York, USA, 1998 to 1999
- Assistant EDP Manager at Societe Generale Bank, Riga, LATVIA, 1995 1998

Education

- B.Sc. Riga Technical University, Latvia

Professional Certification

- ITIL v.3
- MCSE(Win2K/XP/NT), MCDBA(SQL2K), MCNE.

Professional Summary

17 years of experience as a system administrator, Experience with backups of large and small systems in complex environments, and Familiarity with backup products and procedures in use by Commonwealth of Pennsylvania.

Professional Experience

Unisys, LanceSoft, Inc, Commonwealth Backup Administrator, Herndon VA, 2011 - Present

Deliver backups of approximately 3000 physical and virtual servers in the Commonwealth Technology Center. Set up new clients for back up; ensuring backups occur properly, troubleshooting backups when problems occur, documenting backup configuration, and performing backups and restores as needed.

- Install and configure backup software for servers and clients, and create and run reports to verify proper operation of backups.
- On Call as part of a rotation to troubleshoot backup-related problems that occur, as well as performing system- and file-level restorations that are required after hours.

US Air Force, Integral Systems, Inc, Systems Administrator, Lanham MD, 2008 - 2011

Maintain servers and workstations, provided desktop support, performed regular backups, performed scheduled and unscheduled maintenance, performed software upgrades, assisted other members of the Sysadmin team, and other duties as necessary.

- Installed, documented, and performed integration testing on software install packages.
- Performed various troubleshooting to support customers locally and in remote locations. In addition,
- Worked in secured areas as needed, maintaining systems to DISA standards, and assisting cleared personnel with installing and testing software.
- Set up networks, using Cisco switches, routers, and firewalls. I installed servers using Linux, Solaris, and Windows, as well as Linux and Windows workstations.
- Assisted with company's move, secured all the servers and workstations for transport, performed hardware troubleshooting, repairing or replacing parts that failed, or were near failure.

UNISYS

Resource 131

Backup Administrator

- Assisted with the tech refresh process, to obtain and set up new servers and workstations. I set up new physical and virtual servers, and virtualized existing servers to better utilize existing hardware

Applied Security, Inc. Systems Engineering Consultant, Reston, 2007 - 2008

Supported the IT department for Linux administration and networking; maintained physical and virtual servers, added software, and configuring systems.

- Maintained the Asterisk VoIP phone system for internal and external phone calls, kept our servers up to date, configured VPNs (IPSec and OpenVPN) and VLANs as required
- Configured and maintained a variety of switches and routers. I also was responsible for purchasing equipment for our IT infrastructure.

US Post Office, Nortel Govt. Solutions, Systems Technician, Fairfax, VA, 2003 - 2007

Performed setup, installation, testing and evaluation of systems, including workstation and server computers and networks, both in our office and at postal facilities around the country

- Accomplished software analysis and testing, including failure analysis.
- Performed various system administration (including Debian and Fedora Linux administration) and networking tasks as assigned.

Computing Edge, Inc. Systems Technician, Springfield, MO, 2001 - 2003

I performed a wide variety of technical duties in the office and in the field. These included solving networking, software, and hardware problems for our company and for our customers. I also wrote software and analyzed the IT needs of customers using Windows 95, 98, 2000, linux, php, apache, and PostgreSQL

Education

- High School: Hillcrest High School, Springfield MO. High School Diploma. Specialized in Physics, Computer Science, and Media. Graduated 1994
- College: Southwest Missouri State University (now called Missouri State University), Springfield MO. Bachelor's of Science in Computer Science. Minors in Mathematics and Physics. Graduated 2001

UNISYS

Resource 18

Network Engineer

Key Skills and Knowledge

- Cisco routing
- Cisco switching
- CheckPoint
- Large enterprise Internet connectivity
- Highly redundant networking
- Large enterprise 802.11a, b, g, and n wireless networking
- Resolution of complex problems

Professional Summary

Architect, implement, and support global highly available Cisco-based WAN, LAN, and wireless network solutions for converged voice, video, and data using the following technologies:

- MPLS, DMVPN, BGP, EIGRP, IOS Zone firewall, QoS (queuing, WRED, DSCP, shaping, and policing)
- Cisco 6500 (Supervisor 720-3C), VSS 1440, 4910R+E (Supervisor 7E), 3750, 3750E, 3750X, 3560, 2960, 2960S, 2950, and 2900
- Cisco ISR and ISR2 router series 3900, 2900, and 2800 routers; ASR 1000 routers
- Cisco ASA firewall and VPN appliances
- Cisco 6500 ACE load-balancing modules
- Cisco 5508 wireless LAN controllers, Cisco Aironet 3500 and 1260 series lightweight access points, and autonomous Cisco 1200 series wireless access points
- CiscoWorks LMS 3.2, Cisco ACS 4.2, RADIUS, and TACACS+
- Upgrade CheckPoint Provider-1 firewall.
- Support R65 through R75.40 SecurePlatform, IPSO, and GAIA
- Strong Level 2 and Level 3 switching skills, including MST spanning tree, LACP Etherchannel, VTP, VLAN, DHCP snooping, frame storm control, port security, port-level ACLs, and switching QoS (various models)
- Effective, in-depth troubleshooting and resolution of complex routing and switching problems
- Excellent development and support of QoS LAN, WAN, and Wireless edge-to-edge using the DIFFSERV model
- Particularly adept at engineering issues out of network systems to avoid problem
- Use tools such as Perl, regular expressions (REGEX), script development, EEM, and C programming language to broaden ability to solve problems and provide solutions.

Employment History and Related Experience

Unisys Corporation, Data PowerHouse Project, Network Design Engineer 1 – Team Lead, 2011 – Present

Engineer network designs; support, optimize, and monitor redundant Data PowerHouse network infrastructure.

- Provide ongoing support for the DPW Managed Security Services contract, including CheckPoint firewalls, high availability Provider-1 firewalls, and Proventia IPS.
- Resolve complex multiagency problems.
- Coordinate resources and set priorities as necessary.

UNISYS

Resource 18

Network Engineer

The Hershey Company, Hershey, PA, 2001 – 2011

Senior Network Specialist, Network Architect, 2007 –2011

Senior Network Analyst, 2005 – 2007

Network Contractor, 2001 – 2005

Designed, configured, deployed, and maintained a raised floor switching environment with Cisco VSS 1440 at the core and 3750E stacks at the server edge.

- Provided complete redundancy throughout the environment, using LACP Etherchannel to the Solaris and Windows servers and LACP cross-stack Etherchannel trunks from the VSS to the 3750E switch stacks.
- Improved performance and reliability and made deployments simpler, faster, and less error prone by introducing a more methodical switching design.
- Designed, configured, and maintained a redundant gigabit campus internetwork connecting 10 campus buildings spread across several square miles, providing a seamless voice, video, and data network experience for approximately 4,000 users.
- Developed a proven conceptual WAN model, the Hershey WAN Cloud, consisting of a set of rules by which the WAN was scaled and upgraded over time without jeopardizing its reliability or key features such as full mesh, dynamic recovery, and redundant connectivity.
- Migrated a WAN from hub-and-spoke Frame Relay and a dial backup topology to Sprint MPLS with Internet DMVPN-based redundant paths. Changing the topology to full mesh, stabilizing and reducing routes with BGP in place of EIGRP, introducing QoS, and adding DMVPN path redundancy nearly eliminated WAN-related network trouble calls by eliminating known and predicted problems.
- Upgraded a Sprint MPLS to an AT&T MPLS, providing a fully converged and properly scaled voice, video, and data network with QoS LAN and WAN policy that enabled voice and video deployments throughout the enterprise.
- Designed, configured, and managed 802.11b, g, and n wireless networks on Cisco autonomous Aironet 1200 access points and Cisco 5508 controller platforms using 1260/3500 series lightweight access points for 14 plants, 3 warehouses, and various offices and campus environments.
- Introduced VLANs, MST, access port policies, and Layer 3 switching to Hershey network deployments, improving performance, stability, and security throughout the enterprise.
- Installed and maintained CiscoWorks for more than 9 years to manage more than 1,500 Cisco devices, including routers, switches, and wireless access points.

Tyco Electronics MA/COM, Senior Network Engineer, Harrisburg, PA, 2000 – 2001

Troubleshot and configured Cisco routers on 3640s and 3620s. Provided specifications for LAN/WAN performance improvements using Cisco equipment

UNISYS

Resource 18

Network Engineer

and Compaq servers.

- Developed software to initiate a dialup-networking connection between a wireless radio and a PC in Microsoft Visual C++ for the Windows platform.
- Installed and configured a demonstration wide area radio system consisting of three Sun Ultra 10s running Solaris.
- Developed test plans for factory acceptance testing of wireless radio products in a WAN environment.
- Configured proprietary radio equipment.
- Conducted beta tests and error reporting on radio, base station, and Sun Solaris-based proprietary software.

Harsco Gas & Fluid Control Group, Network Manager, 1998 – 2000

Managed the implementation and maintenance of a Cisco router-based WAN for the entire division. Supported a mixed protocol network using RIP (IPX), OSPF, and NLSP routing protocols on Cisco 2600 and Cisco 2500 routers.

- Worked with SNA tunneling, bridging, and APPN on a Cisco-based WAN with AS/400s.
- Transitioned a Cisco multiprotocol WAN from an IP/IPX network to an all-IP network.
- Provided technical specifications and implementation guidelines for a Cisco PIX, router, and switch-based Internet connection to Harsco corporate headquarters.
- Managed a Cisco-based dial backup for factory sites to provide failover ISDN/PRI dial-on-demand connection when the Frame Relay circuit fails.
- Managed Cisco-based ISDN PPP dialup networking for analog and ISDN callers.
- Used a Cisco IOS firewall in house behind Harsco's primary firewall to refine control over traffic to Harsco's Web sites, AS400s, e-mail, and other systems.
- Completed VoIP pilot project using Cisco 3640 and 2610 routers connected to Lucent phone switches between two locations.
- Hired two highly qualified network technicians.
- Hired a telecommunications coordinator.
- Conducted formal annual reviews of employees.
- Trained employees to be high-quality support personnel.

Morgan Distribution, Systems/Analyst, 1993 –1998

Fulfilled a need for and expandable flexible multiprotocol WAN supporting TCP/IP (OSPF), IPX, APPN, SNA, and bridging over Frame Relay, dialup, and point-to-point networks using Cisco 4700s, Cisco 2521s, and a 2512 16-port Token Ring serial router for dialup. Migrated the enterprise to IP only from IPX, APPN, SNA, and bridging.

- He has more than 15 years of experience in all aspects of enterprise IT disciplines.

Professional Summary

He has more than 15 years of experience in all aspects of enterprise IT disciplines. Knowledge and experience with PennDOT and Commonwealth of Pennsylvania infrastructure. Information Technology professional with experience in designing and managing entire technology infrastructure

- Experience providing subject matter expertise in the areas of enterprise architecture, software development, system integration, IT infrastructure, IT operation, IT security, and development process modernization.
- Certified as Network Engineer, Experienced in Windows Server setup and administration
- Experienced as Information Technology manager
- Experienced in architecting infrastructure design for large complex applications in various platforms – Windows, UNIX, Linux, operating system X
- Worked as Voice and data communications technical lead for a large company's distribution centers and 6 corporate offices

Employment History and Related Experience

Domino Technologies, Inc, PennDOT, Network Engineer, Harrisburg, PA, 2011 - Current

Core Network Engineer and part of the Core Network Services Team, responsible for support for the PennDOT Keystone Building as well as all Drivers License Centers and Photo License Centers; Primary responsibility for PennDOT Keystone building and handled multi-agency support.

- Worked with carriers on network outages, ticket resolution and improving response time for our internal customers
- Planned and implemented CiscoWorks Prime, LMS solution for automating configured backup(s) and large scale config changes
- Responsible for network infrastructure in all District and County offices. I have provided on call support for all District and County Offices.

Standex ADP, I.T. Manager/Network Manager, Philadelphia, PA, 2010 – 2011

Responsible for architecting infrastructure design for enterprise solutions and applications. Voice and data communications technical lead for the company's distribution centers and 6 corporate offices. Involvement in a number of initiatives related to improve centralized and automated network management systems to meet corporate goals with minimum capital expenditure.

Domino Technologies Inc.

Resource 132

Network Engineer

- Lead for the network re-architecture efforts to facilitate better product delivery to customers. Team of 5
- Member of the final technical escalation team for all data centers network events and post sales customer support.
- Member of the customer incident review team.
- Team lead for the Exchange Server upgrade (moved from 2007 to 2010). Extensive technical experience with Exchange Server, including Internet Mail Service, OWA (Outlook anywhere), SMTP, SendMail, X.400 connectors, RAS connectors and gateways to disparate messaging systems.
- Team lead for a number of formal training exercises for the Engineering, NOC and Customer Care organizations.

PASSHE, Help Desk Manager, Harrisburg, PA., 2009 – 2010

I was a member of the Office of the Chancellor Technical Services Team. Managed a team of up to 15 Help Desk personnel, serving the entire Pennsylvania State System of Higher Education organization.

- Fielded incoming support requests via a central help desk phone line and e-mail box.
- Responsible for troubleshooting and resolving application and hardware issues for the end users.
- Provided one-on-one guidance and knowledge transfer to end users related to the various applications in use in the environment.
- Performed help desk duties in person whenever possible so as to produce the highest levels of customer satisfaction when performing such duties.
- Assisted with the support of the telephony system including on site telephony servers

Structure Interactive, I.T. Project Manager, Grand Rapids, MI. 2000 - 2009

Acted as technical liaison between Structure Interactive and various Dow Chemical division stakeholders, communicating technical issues and challenges in everyday language.

- Provided technical expertise for the seamless transfer of the dow.com property from being internally hosted by Dow Chemical to being managed by the IBM Web Services group.
- Implemented, installed and configured Windows SBS Server 2003.
- Provided critical path scheduling for all programming related tasks for the dow.com redesign.
- Created the 'Socrates' Web portal to provide information to disparate groups with centralized documentation on the various architectures and subsequent integration projects (Exchange/Active Directory related).

Domino Technologies Inc.

Resource 132

Network Engineer

- Implemented Check-Point Security for all VPN and remote user access by employees needing access to the internal network.
- Architected application solutions for several groups within Dow chemicals. Responsible for gathering their business and technical requirements and converting it in to optimal infrastructure solution.

John Deere, NOC Analyst, Moline, IL, 1996 - 2000

Managed a team of up to 15 engineers, 100+ Cisco 6509 layer 3 switches / routers serving over 600 internal customers and 3,000 Web servers. Hands on familiarity with products from Cisco, Nortel / Altheon, Juniper, Netscreen, IBM/AS400, F5, Blue Coat, Foundry and Avaya.

- Team lead for the network equipment rationalization project for the West Coast data centers.
- Networking team lead in the migration and integration of all customers from the Scott's Valley, Avasta, Progress Software and Conxion data centers to Navisite's San Jose data center. This involved moving over 750 servers.
- Lead for the "Architecture Desk" which has responsibility for the research, evaluation, approval and implementation of all equipment additions to our customer topologies with an eye to long-term supportability.

Education

- Northland Bible College, Dunbar, WI. Study, Major: Bible

Additional Training

- Windows Server 2003
- Windows Server 2008
- Windows Desktop
- Cisco Lan Switch Configuration
- Cisco Pix Firewall Boot Camp - 3 Day Bootcamp Training
- Cisco Internetwork Troubleshooting
- Linux
- Unix (Free BSD)
- Operating system X – 10.0 – 10.6 Client/Server

UNISYS

Network Engineer

Key Skills and Knowledge

- Project and Program Management
- Communication and networking
- Hardware
- Operating systems
- Software/system architecture
- Office productivity tools
- Technical documentation
- Facilities management
- Cisco infrastructure
- 76xx border routers, 65xx series Core Layer 3 switching
- BGP peering to 3 upstream providers
- OSPF as local routing protocol
- Configuration, migration, documentation, and support requirements
- Content switching, high availability switching , routing, and firewall zone management
- Drafted a Quality of Service (QoS) standard to support VoIP, videoconferencing, and ERP
- Produced capital budgets for key business revenue – generating services in 7 separate facilities
- Developed operation figures to maintain and support the capital investments
- Managed multiple successful business acquisitions
- Convert networks

Professional Summary

More than 20 years of building highly resilient secured networks to meet business capacity needs and availability. Ability to lead during changes and maintain sustained performance.

- Detailed problem analysis ability to analyze detailed problems
- Multitasking of time-sensitive projects
- Security structured by the Common Body of Knowledge
- Proficiency with administering with firewall security policy
- Orientation to customer service and results
- Development of integrated organization structure.

Employment History and Related Experience

Unisys Corporation, Commonwealth of Pennsylvania, Network Security Engineer, Harrisburg, PA, 2007 – Present

Responsible for Commonwealth of Pennsylvania server farm network & hardware operations, security access & firewall configuration, performance & high availability designs and development

- Configuration, migration, documentation and support requirements maintaining content switching, high available switching, routing and firewall zone management.
- Detailed technical reviews of all network and security changes proposed to support agency business requirements.
- Detail packet analysis supporting application, network, and security operations.

Harsco Security, Network Engineer, 2006 – 2007

Consultant for a local business as a networking WAN engineer. Reviewed core infrastructure, implemented HSRP, and configured Multi Home BGP access. Diverse MPLS connections interconnected the enterprise campus core hardware.

- Drafted the corporation's Quality of Service (QoS) standard to support VoIP, videoconferencing, ERP, and other critical business applications.

Susquehanna Communications, Director of Network Engineering, 2003 – 2006

Developed, designed, structured, and managed an organizational strategy for voice, video, and high-speed data, providing support and security over a geographically diverse multiple cable service operation.

UNISYS

Network Engineer

- Implemented a Cisco infrastructure using 76xx border routers, 65xx series Core Layer 3 switching, BGP peering to three upstream providers, and OSPF as the local routing protocol.
- Directed the overall operations of seven large public network infrastructures providing high bandwidth and availability.
- Managed the conversion of a high-speed data product and infrastructure at a newly acquired cable market supporting more than 14,500 HSD subscribers under complex conditions and a tight timeline.
- Supported interactive video data network operations for this conversion.
- Produced capital budgets for key business revenue-generating services in seven separate facilities along with operation figures to maintain and support capital investments.

BlazeNet (Subsidiary of Susquehanna Media Corporation) Team Lead Network Engineer, 1997 – 2003

Designed networking business product offerings that provided a competitive edge over the competition, driving record sales, using Frame Relay, ATM, point-to-point T1 or fraction T1, DSL, cable modems, wireless, and SONET technology. Designed, implemented, and managed a large Web hosting server farm network using Foundry load balancers and a 802.1Q strategy.

- Maximized business sales opportunity by interacting with commercial customers and finding designs and partnerships that generated their highest ROI, which positioned BlazeNet as the preferred vendor.
- Implemented diverse Internet access points for small business by using EIGRP, which provided dynamic bandwidth failover.
- Managed multiple successful business acquisitions for the network conversion, which secured a stronger local community presence and increased revenue potential on capital investments.
- Influenced early adoption of virtual private networking, leveraging the technology in the commercial product offering and providing businesses with an opportunity to reduce or eliminate dedicated telecommunication lines.
- Led the business in network security for internal application access, commercial resale, and product development, which increased uptime and reduced repairs, providing higher efficiency.

Key Skills and Knowledge

Databases

- Microsoft SQL 2000, 2005, $ 2008
- Oracle 8i & 9i

Hardware

- Cisco routers and Catalyst switches, HP ProLiant GL360 & 380, Dell Power Edge servers, Compaq ProLiant servers, Dell workstations, IBM Thinkpads. IBM 3650s & 3850s, Quantum DLT Libraries, Big-IP (F5), Dell Dimension & Optiplex workstations, Dell & Gateway laptops, BlackBerry 8700 & 8800 series, Palm Tungsten & Treos, video teleconferencing equipment (VSX7000)

Operating Systems

- Windows NT, 9x, XP, 2000, 2003, & 2008 R2, Sun Solaris 7, 8, & 9, Red Hat Linux, Fedora, Novell NetWare 5.x & 6.x.

Software/System Architecture

- HP Insight Manager, HP OpenView, Veritas Backup Exec & NetBackup, J2EE 1.3, Microsoft Office, Microsoft Visual Studio .NET, SharePoint Portal Services, BMC Patrol 7.0, Connect Direct, Axway, SCCM 2007, & SCOM 2007

Programming Languages & Tools

- Treesizepro, BeyondCompare, Httpwatchpro, Idera, Litespeed, C, C++, & Java

Office Productivity Tools

- Microsoft Word, Excel, Access, FrontPage, & Notepad+

Professional Summary

More than 15 years of experience implementing and supporting Windows NT, 2000, 2003, and 2008 R2; Novell; and UNIX networking environments. Excellent understanding and troubleshooting skills in a large-scale enterprise network infrastructure.

- Experienced in the design and implementation od LANS and WANs, including leased lines, Frame Relay, ISDN and switched Ethernet (fast and gigabit), and FibreChannel switches
- Experienced in network, routing, and switching protocols, including TCP/IP (4.0 and 6.0), IPX/SPX, RIP, EIGRP, OSPF, IGRP, BGP, ISDN, and Frame Relay, and integrating IP networks with VoIP-based voice networks
- Solid knowledge of Microsoft Cluster Services, information security, risk management principles, Citrix MetaFrame Presentation Server, Microsoft SharePoint Portal Services, HP OpenView, and other similar tools
- Designed and implemented SAN solutions for clients using SAN hardware (FibreChannel switches and HP storage servers) and software components (Windows 2003 Storage Server and iSCSI).
- Experienced in technical presentations using Microsoft Visio and PowerPoint
- Experienced in DNS; DHCP; WINS; SNMP; NIS; LDAP; SMTP; POP3; IMAP; NTP; NAT; VPN; BIND; Terminal Services; Exchange Server 5.5, 2000, and 2003; Citrix Presentation Server, Xen desktop, SiteMinder; Microsoft Cluster Services, and RAID 10 and 5
- Implemented Linux Networks successfully — Linux as E-mail server, Web server, and Samba server for Windows network connectivity
- Handle large Enterprise networks for more than 50,000 users.

Professional Experience

Patch Management Consultant, Commonwealth of Pennsylvania, Sr. Infrastructure Engineer, Harrisburg, PA, 2012 – Present

Testing, Supporting, and Deploying Microsoft and third-Party Security patches, including Service Packs in different enterprise environments like Development, Stage, and Production using System Center Configuration Manager (SCCM 2007 R2). Process service tickets (in Remedy) in a 5,000-server environment; perform change management, problem management, and configuration management. Provide 24x7x365 application user support. Assign on-call rotation schedules to team members. Monitor the performance of servers (application clusters, database, BizTalk, and Web), and event logs. Track various issues and problems using Microsoft Terminal

Services and the Windows PerfMon tool.

- Create and manage system center deployments using SCCM 2007; consolidate and clean up collections periodically.
- Design, plan, and architect large-enterprise Windows environments with experience in managing and implementing large-scale servers in a production data center environment.
- Use experience with Infrastructure design, Active Directory implementation, system builds, performance monitoring and tuning, application and server high availability, and strong knowledge of disaster recovery.
- Underwent training programs in BMC BladeLogic Server Automation and ADDM (Asset Discovery and Deployment Manager). Created patch deployment packages in BladeLogic for deployment in the lab environment.
- Develop and manage patch release strategies and production delivery schedules for software applications.
- Troubleshoot performance-related issue in the IIS application.
- Verify security logs on different region servers for tracking user logins and logouts to the system, including unsuccessful login attempts. Load balanced and performance tune Web Server farms using SiteMinder 6.

Bank of New York Mellon, Sr. Infrastructure Consultant, King of Prussia, PA, 2010 – 2011

Tested and supported banking applications (ASP.NET) in different enterprise environments like development, QA, mirror, stage, and production, including trade floor support. Processed service tickets (in Seapine Test Track) in a 5,000-server environment. Implemented change management, problem management, and configuration management. Provided 24x7x365 application user support. Assigned on-call rotation schedules to team members. Maintained the performance of servers (application clusters, database, BizTalk, and Web) and event logs. Tracked various issues and problems with Microsoft Terminal Services and the Windows PerfMon tool. Applied service packs, hot fixes, and patches monthly through SMS 2007 to application and Web servers in all the testing and production environments.

- Designed, planned, and architected large enterprise Windows environments, managed and implemented large-scale servers in a production data center environment.
- Acquired experience with Infrastructure design, Active Directory implementation, system builds, performance monitoring and tuning, and application and server high availability. Acquired strong knowledge of disaster recovery.
- Created, ran, and maintained thousands of batch job schedules using ADVSYSCON Active Batch software on Web and SQL servers in all regions. Escalated issues and problems to various Global Operational

UNISYS

Resource 114

Patch Management

Services teams in King of Prussia or Pittsburgh.

- Actively participated in data center migration and relocation, including application and business process discovery, scheduling, physical move execution and vendor certification. Also participated in migrating applications from Windows 2003 and 2008 as well as IIS 6 and 7 platforms.
- Scheduled, configured, and maintained transmission jobs on Axway/Sterling Connect Direct software for clients like SunTrust, Genworth, ETrade, and FiServ. Set up NDM/FTP and subscriptions to leased lines from Verizon and AT&T.
- Created packages in BladeLogic for deployments and upgrades of various .NET applications.
- Troubleshot performance-related issues in the IIS application.
- Rolled SiteMinder out on the IIS server; troubleshot connectivity issues with these master server.
- Performed weekly and monthly application migrations (code moves as well as database fixes and updates) in production environments. Maintained Web sites quarterly. Monitored Web site traffic periodically with Truesight Coradiant.
- Backed up servers using NetBackup software, including monitoring backup logs and troubleshooting backup and restore errors. Created and executed disaster recovery preventive maintenance procedures at the Philadelphia site.
- Verifed security logs on different region servers for tracking user logins and logouts to the system, including unsuccessful login attempts. Load balanced and performance tuned Web server farms using SiteMinder v 6. Installing and configuring policy servers.
- Performed complete Active Directory administration, network conversions, remote access and system security using HP OpenView and IPsec.
- Installed and configured certificates on Windows production and test boxes for SSL connectivity to the portal sites (http://www.advisorport.com).
- Installed, configured, and administered SQL Server 2000 and 2005 and processes, including process monitoring using the Idera SQL tool and database core administration. Worked extensively with SQL Enterprise Manager; created databases, tables, views, and stored procedures. Backing up and restoring databases using Litespeed for SQL software was an integral part of the job.
- Created and administered virtual machines using VMware ESX Server 3.5. Worked extensively with VMware Infrastructure Client and administered Virtual Center 2.5.

Credit Suisse, Application Support Specialist, New York, NY, 2009 – 2010

UNISYS

Resource 114

Patch Management

Tested, deployed, and supported security management products in different enterprise environments such as QA, staging, and production using the Repliweb tool. Processed service tickets (ith Remedy 6.0 and 7.0) in a 5,000-server environment; implemented change management, problem and configuration management. Provided 24x7x365 application user support in the Americas, Europe, and Asia. Gathered functional requirements for the security product (Lumension). Prepared technical documentation for release to the various support teams, including branch support. Identified users for user acceptance testing of the product.

- Installed, configured, and maintained application servers using Windows 2008 Virtual Workstations application servers on HP DL 580s as well as SharePoint team Web sites. Load balanced the IIS 6.0 and 7.0 Web farm.
- Deployed content, both IIS Metabase and .NET assemblies, using Repliweb 4.1.1. Configured distribution and replication jobs.
- Assisted with and developed a process flow for automating content deployments across various environments such as QA, staging, and production.
- Created and modified vbscripts and batch scripts for automating the Windows environment.
- Deployed Lumension successfully in Altiris pushes to 25,000 clients, including laptops, workstations, and virtual desktops in the Americas region.
- Installed and configured SQL Server 2000 and 2005 clusters and processes, including process monitoring and database administration.
- Extensively used the Active Directory CSFB tool for issuing group memberships to aid users in application access. Remotely accessed user machines with Carbon Copy and fixed problems.
- Thoroughly tested Lumension on various USB devices like memory sticks, BlackBerry SD cards, smart phones, and hard drives. Sought users' acceptance for the product from the support teams.
- Identified and whitelisted about 50 BlackBerry device models including 8800s, 9000s, 9500s, and 9700s. Used Lumension Security Management Console to generate reports executing queries from SQL 2000 and 2005 databases. Administered and troubleshot Lumension application server problems.

Ernst & Young LLC, Systems Administrator, Secaucus, NJ, 2007 – 2009

Tested and supported gT&E (global time and expense) and eRooms SharePoint sites and applications in different enterprise environments like development, QA, and production. Processed service tickets (with Remedy 6.0 and 7.0) in a 5,000-server environment; implemented change management, problem management, and configuration management. Performed 24x7x365 application user support in the Americas (Region 1),

UNISYS

Resource 114

Patch Management

Europe (Region 2), and Asia (Region 3). Assigned 2-week on-call rotation schedules to team members.

- Monitored performance of servers (application, database, BizTalk and Web), and event logs. Tracked various issues and problems using Microsoft Terminal Services and the Windows PerfMon tool. Applied service packs, hot fixes, and patches monthly through SMS 2007 to the gT&E and eRooms servers in all the testing and production environments.
- Tested and monitored simple Web transaction response time and availability with BMC Patrol 7.1. Monitored applications, storage, and system devices.
- Created, ran, and maintained thousands of batch job schedules with Control-M agent 6.2 software on Web and SQL servers in all regions (1, 2, and 3). Escalated issues and problems to various Global Operational Services teams in Secaucus or worldwide.
- Changed application, SQL, and cluster services passwords quarterly for all IIS 6.0, application, and database cluster servers enterprise-wide information security policy.
- Connected to Oracle database servers using Oracle Enterprise Manager or SQLPlus on Oracle client software for performing application server tasks.
- Performed weekly gT&E migrations (code moves as well as database fixes and updates) in production environments. Performed monthly eRooms code moves (deployed extensions) in production environments in all three regions.
- Backed up servers using NetBackup software, including monitoring backup logs and troubleshooting backup and restore errors. Created and executed disaster recovery preventive maintenance procedures in gT&E regions 1, 2, and 3.
- Verified security logs on different region servers for tracking user logins (SSO) and logouts to the system, including unsuccessful login attempts. Load balanced and performance tuned Web servers with SiteMinder 6.
- Performed complete Active Directory administration, network conversions, remote access, and system security with HP OpenView and IPsec.
- Installed and configured certificates on Windows and UNIX boxes for SSL connectivity to the portal sites.
- Implemented and maintained DNS services on Linux servers.
- Created and modified cleanup DOS scripts to VB scripts for automating the Windows environment.
- Created and maintained documentation for various operating environments in Microsoft Visio 2003, Microsoft Project 2003, and Wintel.
- Installed, configured, and administered SQL Server 2000 and 2005 and processes, including process monitoring and database core administration. Worked extensively with SQL Enterprise Manager.

Created databases, tables, views, and stored procedures. Backingup and restoring databases was an integral part of the job.

- Configured SAN HBA cards on servers, including resolving any connectivity issues. Allocated SAN drive space of up to 500 gigs depending on requirements.
- Created and administered virtual machines using VMware ESX Server 3.5. Worked extensively with VMware Infrastructure Client; administered Virtual Center 2.5.

Maine Center for Disease Control, Server Administrator, Augusta, ME, 2007 – 2007

Supported IPHIS (Integrated Patient Health Information Systems) in different testing environments like development, staging, standby, and production. Processed service tickets (using Footprints) in a 200-server environment. Implemented change management, problem management, and configuration management. Provided desktop support with LANdesk and in person for all local and remote end users.

- Monitored servers (application, database, integration, and IIS 6.0) and event logs, tracked various problems. Applied service packs and hot fixes to IPHIS in all the testing environments. Started and stopped the WebLogic Server instances on the server.
- Ran scheduled tasks daily like Msgin, Msgout, MasterETL, and Drop_create_tables. Traced the log files. Escalated issues and problems to Office of Information Technology, State of Maine.
- Changed database schema owner passwords, Web servers, Sun One Directory Server Manager passwords, and batch process login accounts.
- Connected to Oracle database servers using Oracle Enterprise Manager or SQLPlus on Oracle client software for performing application server tasks.
- Installed and configured Terminal Services (Application Server mode) and SSL VPNs on Windows 2003 servers.
- Installed and configured BIND 7 DNS server for providing a naming service on the IPv6 network and the Internet.
- Installed and configured Rhapsody licenses on the integration server.
- Configured and monitored WSUS on Windows 2003 Server for patch management.
- Monitored and fixed synchronizing issues between the application server and the integration server.
- Backed up servers with Veritas Enterprise BackExec client software, including monitoring backup logs and troubleshooting backup and restore errors.
- Verified security logs on different servers for tracking user logins and logouts to the system, including unsuccessful login attempts.

UNISYS

Resource 114

Patch Management

- Extensively used RSA Database Administration for issuing security tokens to facility users for application access.
- Installed and configured certificates on Windows and UNIX boxes for SSL connectivity to the Maine's iphis portal.
- Created and modifying vbscripts, wscripts for automating Windows environment.

New York State/Office of Mental Health, Network Administrator
Manhattan, NY, 2006 – 2007

Processed service tickets in a 500-server environment; implemented change management, problem management, and configuration management. Provided desktop support with LANdesk and in person for all local and remote end users. Assisted a group of four to five members in Windows 2000 Professional, 98, and Me rollouts to Windows XP Professional. Configured and administered Windows 2000 and 2003 and Solaris 8 and 9 Servers.

- Configured Novell NetWare Cluster Services on a two-node Dell PowerEdge 2600 server for file and print services.
- Worked with Windows Active Directory and Novell e-Directory services to maintain facility users and resources. Also worked with iManager to install and configure Novell NetWare printers.
- Monitored and fixed synchronization issues between Active Directory and e-Directory using IDM.
- Monitored the performance of servers (application, database, and Web) and event logs. Tracked various issues and problems via MS Terminal Services and BMC Patrol 7.0.
- Worked extensively with Novell GroupWise 7.0.1 for messaging services in the facility.
- Configured and maintained Microsoft Exchange 2000 and 2003 in the facility. Worked extensively with Microsoft Exchange Service Manager (ESM). Worked with storage groups, mailbox, and public folder store administration.
- Performed complete Active Directory administration, network conversions, remote access, and system security with HP OpenView and IPsec.
- Implemented VLANs and Spanning Tree protocol on the LAN using VLSMs. Maintained network cabling for Ethernet connectivity to workstations using CAT3 and 5e cables.
- Maintained GroupWise, including post office rebuilds, DST remediations, and day-to-day administration.
- Supported OMH applications like CAIRS, CONCERTS, Meds Manager, and RAS.
- Installed, configured, and administered SQL Server 2000 and 2005 and processes, including process monitoring and database core

administration. Worked extensively with SQL Service Manager and Enterprise Manager.

- Extensively used RSA database administration for issuing security tokens to facility users for application access.
- Configured and maintained BlackBerrys and Palm Treo desktops for users in the facility.
- Wrote vbscripts and wscripts for automating the Windows environment.
- Configured and maintained SharePoint team Web sites and load balanced the IIS 6.0 and 7.0 Web farm.
- Monitored and implemented video teleconferencing service for the facility, including troubleshooting over ISDN lines.
- Configured Toshiba telephones for users, including backups of AMANDA voicemail.
- Installed and configured WSUS on Windows 2003 Server for patch management.
- Managed patches, Microsoft and Microsoft Office updates, Novell service updates, and hot fixes on servers including Firmware updates.
- Configured desktops for remote connectivity of applications using secure gateway.
- Administered the Novell servers through AdRemote console software.
- Backed up Novell servers using Veritas Enterprise BackExec client software, including monitoring backup logs and troubleshooting backup and restore errors.

Hanover Insurance Group, Server Administrator, Worcester, MA, 2006 – 2006

Processed service tickets in a 500-server environment, change management, problem management, and configuration management. Provided desktop support over the phone and in person for all local and remote end users. Configured and administered Solaris 9 as well as SunFire V480R and V440R servers.

- Configured Microsoft Windows 2003 Cluster Services on a two-node HP DL360 server for file services. Designed Microsoft Print Cluster Services on HP DL360 servers.
- Installed and configured Microsoft SharePoint services with MSDE on the primary domain controller. Organized corporate documentation, including contacts and meetings, using SharePoint Services.
- Added groups and resources under Veritas Cluster Server 4.0.
- Installed and configured BIND 7 DNS Server for providing a naming service on the IPv4 network and the Internet.
- Created and administered virtual servers using VMware ESX Server and load balancing. Moved GSX servers to the ESX farm.

UNISYS

Resource 114

Patch Management

- Developed Shell scripts, Perl scripts for automating, reported, and scheduled jobs using CRON and AT.
- Installed and configured WebSphere AS 5.1 on Windows 2000 Advanced Server SP3, including Web and SOAP Services.
- Deployed Web components (servlets and JSP files) on the application server.
- Managed patches, Microsoft and Microsoft Office updates, and hot fixes on servers; updated Firmware.
- Configured and administered Terminal Services (Application Server mode) and Citrix Metaframe presentation services on Microsoft XP Professional desktops for remote connectivity of applications using Secure Gateway.
- Installed, configured, and administered SQL Server 2000 and processes, including process monitoring.
- Installed and configured SAMBA services on Linux servers for connecting to Windows machines.
- Backed up servers using Tivoli Storage Manager Client software on IBM 800 and 8300 storage systems.
- Maintained DHCP, DNS, and WINS servers.
- Configured DFS for sharing folders and files over the enterprise network.
- Gathered and prepared technical documentation in Microsoft Visio software.

Varsitybooks Inc, Network/System Administrator, Washington, DC, 2005 – 2006

Configured and administered Windows 2000 and 2003, Wintel servers on HP DL blade servers, and Windows XP Professional workstations, including Dell and IBM ThinkPads. Installed and configured Microsoft SharePoint services on the Primary domain controller. Installing and configuring Solaris 9 on SunFire servers, including patching.

- Administered and configured the volumes using Veritas volume managers according to the customer's requirements.
- Performed complete Active Directory administration, network conversions, remote access, and system security using HP Insight Manager and IPsec.
- Worked with a system monitor to tune performance, thereby identifying potential bottlenecks.
- Configured and administered Terminal Services (Application Server mode) and VPN on Windows 2003 servers.
- Load balanced and performance tuned Web servers using a Big-IP F5 load balancer.
- Configured and administered .NET Framework Application Server on IIS 6.0 Server. Worked in XML to validate the configuration files.

UNISYS

Resource 114

Patch Management

- Administered and monitored the Big-IP load balancers for dynamic load balancing of the varsitybooks Web site.
- Installed, configured, and administered SQL Server 2000 and processes, including process monitoring.
- Backed up servers using BrightStor ARCserve backup software.
- Installed and configured DNS, NIS, and NFS servers.
- Installed and configured WebSphere AS 5.1 on Windows 2000 Advanced Server 5.1.
- Installed and configured Web and SOAP Services on application servers.
- Assisted in deploying applications on application servers.
- Gathered and prepared technical documentation for a simple disk-to-disk, disk-to-tape HP SAN solution for the production environment.
- Provided desktop support over the phone and in person for all local and remote end users.

American Florists Inc, Network/System Administrator, Boston, MA, 2005 – 2005

Upgraded a Windows NT network to Windows 2003. Migrated data server using the Aelita migration suite, including building trusts. Worked with 1,000 to1,500 users. Configured and administered Windows 2003 servers and Windows XP, 2000 Professional, NT, XP, 98, and 95 workstations.

- Worked with a system monitor in .NET application performance tuning.
- Wrote vbscripts and wscripts for automating the Windows environment.
- Performed complete Active Directory administration, network conversions, remote access, and system security using HP OpenView and IPsec.
- Installed and configured Terminal Services (Application Server mode), VPN, Web Server, and a Watchguard firewall on Windows 2003 servers.
- Backed up, restored, load balanced, performance tuned Web and app servers.
- Migrated Micrsoft Exchange Server 5.5 to version 2000 and eventually to Exchange Server 2003.
- Installed and configured RPC over HTTP for Exchange 2003 Server Services.
- Worked with Windows 2003 Cluster Server Administrator to administer clusters. Created nodes and resources as part of cluster server management.
- Configured and administered Ecommerce 2002 and BizTalk servers for Web and SOAP Services.
- Configured RAID volumes with Veritas Volume Manager.
- Maintained DHCP, DNS, and WINS servers.

UNISYS

Resource 114

Patch Management

- Developed Shell scripts and Perl scripts for automating, reporting, and scheduling jobs using CRON and AT.

Adelphi Academy, Network/System Administrator, New York, NY, 2001 – 2005

Upgraded a Windows NT network to Windows 2003. Migrated data from Windows NT to Windows 2003 Server using the NetIQ migration suite, including building trusts. Configured and administered Windows 2000 cluster servers and Windows XP, 2000 Professional, NT, XP, 98, and 95 workstations. Worked with more than 2,000 users and workstations.

- Executed vbscripts and wscripts using WMI.
- Configured send mail, fetch mail, and a virtual user and aliases table for enabling e-mail for users from multiple domains with SMTP, IMAP, and POP3 protocol support.
- Implemented and maintained IGRP between the head office and branches on Cisco 1700 through 2500 series routers using leased lines for WAN connectivity and Catalyst switches for LAN connectivity.
- Installed and configured a Sun StorEdge 3310 and 3510 storage area network.
- Installed and configured Terminal Services (Application Server mode), VPN, Web server, and a firewall on Windows 2003 servers.
- Installed, configured, and administered WebSphere Application Server, HTTP Web Server, and Secure Way Directory (LDAP) for e-product development.
- Resolved Windows and UNIX connectivity issues using SAMBA.
- Monitored jobs on SQL server 2000 databases.
- Performed backups, restores, load balancing, and performance tuning of Web and app servers.

Professional Summary

More than 20 years with Unisys in departmental management, project management, business development, sales and marketing.

Project Experience

Unisys, Commonwealth Technology Center, Project Manager, Harrisburg PA, 2012 – Present

A member of the Commonwealth's PMO, responsibilities include management of projects for the Web hosting environment and coordination and stakeholder communications for operational and project activity for select state agencies.

Unisys, Commonwealth Technology Center Web Hosting, Client Service Manager, 2008 – 2012

Project responsibilities include management of the client service management program, service management for assigned state agencies, management of assigned projects, and development of monthly reports for the Commonwealth's CTO.

Unisys, Pennsylvania State Police, CLEAN, Project Coordinator, Harrisburg PA, 2008 -2008

Project responsibilities were focused primarily on project initiation and execution. Activities included setting up team room and related processes, drafting many of the project documents, including the project management plan and subsidiary plans, and coordinating schedules and resources for testing.

Unisys, Office of Administration, Showcase, Project Manager, Harrisburg PA, 2008 -- 2009

Project management responsibilities included project initiating, planning, executing, monitoring and controlling, and closing. Project scope included setting up and executing a media relations program to increase awareness of the Commonwealth's IT initiatives and successes to create a positive public image.

Unisys, Department of Revenue, Customer Service, Project Manager, Harrisburg PA, 2008 - 2008

Project management responsibilities included project initiating, planning, executing, monitoring and controlling, and closing. Project scope included the analysis of DOR's customer interaction points with the objective of identifying issues and recommending ways to improve customer service.

Unisys, DLI UCMS Portal Implementation, Project Manager, Harrisburg PA, 2007-2008

Project management responsibilities included monitoring and controlling project work, managing communications, documenting issues, and coordinating

UNISYS

Resource 133

Project Manager (Client Service Manager)

activities between the Office of Administration and OA and Department of Labor & Industry. Project scope included the implementation of a portal (staging and production environments) in OA's Enterprise Server Farm for DLI's new application for unemployment compensation.

Unisys, Microsoft Exchange 2007 Migration, Project Manager, Harrisburg PA, 2008 - 2008

Project management responsibilities included monitoring and controlling project work, administering the project plan, and managing stakeholder communications for IT managers at 47 state agencies. Project scope included migration of 80,000 mailboxes to a new MS Exchange 2007 messaging infrastructure, the largest such migration in North America at the time.

Unisys, Web Application Hosting and Messaging, Project Manager, Harrisburg PA, 2002 - 2007

Project management responsibilities included cost, scope, human resource, and procurement management for 26 full-time resources. The Enterprise Server Farm had more than 600 servers and 200 Web-facing applications.

Unisys, Infrastructure Management, Performance Manager, Harrisburg PA, 2004 - 2007

Project management responsibilities included project initiating, planning, executing, and monitoring and controlling, with emphasis on integration, scope, cost, quality, human resource, communications and procurement management. The infrastructure included Nortel switches, Cisco routers, CheckPoint/Nokia firewalls and servers from several manufacturers.

Unisys, Security Assessment, State Police, Project Manager, Harrisburg PA, 2005 - 2005

Project management responsibilities included project initiating, planning, executing, and monitoring and controlling, and closing, with emphasis on integration, scope, time, cost, quality, risk, and communications management. Unisys used manual methods and automated tools to identify known vulnerabilities in the State Police's networked environment and recommended strategies to transfer, minimize, accept, and eliminate risk associated with those vulnerabilities.

Unisys, Telcove, PA Office of Administration, Project Manager, Harrisburg PA, 2005 - 2005

Project management responsibilities included project initiating, planning, executing and monitoring and controlling, with emphasis on integration, scope, time, cost, quality, risk, and communications management. Working as a subcontractor to Telcove, the Commonwealth's primary telecommunications supplier, Unisys led a project to develop a Certificate Policy (CP) and Certification Practice Statement (CPS) for the issuance of Verisign Certificates

UNISYS

Resource 133

Project Manager (Client Service Manager)

supporting an enterprise VPN solution for Commonwealth employees and contractors.

Unisys, Managed Voting Services for PA, Program Developer, Harrisburg PA, 2005 - 2005

Unisys developed a services program to assist Pa. counties with compliance to the U.S. Help America Vote Act. Unisys' program included consulting, deployment, outreach and training services, as well as new voting technology solutions from AccuPoll Systems. Responsibilities included the definition of communications and training requirements and development of related solutions, pricing and proposals.

Unisys, Telcove VPN Pilot for Office of Administration, Project Manager, Harrisburg PA, 2005 - 2005

Project management responsibilities included project initiating, planning, executing, and monitoring and controlling, and closing, with emphasis on integration, scope, time, cost, quality, risk, and communications management. Working as a subcontractor to Telcove, the Commonwealth's primary telecommunications supplier, Unisys provided a suite of services for the implementation of a VPN pilot using Verisign certificates for Pa.'s Office of Administration and State Police. The project entailed the configuration and installation of Cisco VPN technology and integration with Commonwealth and Verisign systems for the issuance of certificates for the Pa. State Police VPN users.

Unisys Commercial Sales, Portfolio Sales Executive, Harrisburg PA, 1989 - 2002

Responsibilities included identification, qualification and winning of new business in the corporate network and desktop services marketplace. Exceed annual quotas for revenue, margin and customer satisfaction.

- 1998 North American Salesman of the Year
- Achieved quota for four consecutive years
- Exceeded 200 percent of quota in 2000
- Managed U.S. public relations efforts for $2 billion customer services division, supporting new product offerings, customer meetings and executive communications
- Develop communications plans and create brochures and other marketing materials for Unisys customer services division. Create, edit and publish Unisys NewsNet, a daily internal employee newsletter

- Microsoft Windows Server 2003 and 2008 R2 Enterprise
- Microsoft Internet Information Services 6.0, 7.5 (IIS)
- VMware/VSphere

Professional Experience

Unisys, Commonwealth of Pennsylvania Office of Administration, Operations Manager, Harrisburg, PA, 2007-Present

Responsible for the day-to-day operational support and project management of over 3000 servers hosted at the Commonwealth of Pennsylvania's Enterprise Data Center.

- Microsoft Active Directory Domain Services (AD DS)
- Microsoft Public Key Infrastructure (PKI)
- Microsoft System Center Operations Manager (SCOM)
- Microsoft Windows server 2003 and 2008 R2
- Microsoft Internet Information Services (IIS)
- Payment Card Industry (PCI) vulnerability remediation

JP Morgan Chase & Company, Infrastructure Director, Columbus, Ohio, 2001–2007

Responsible for the day to day operational support and availability of JP Morgan Chase's national centralized file and print server environment, encompassing

UNISYS

Resource 135

Project Manager

over 1000 infrastructure servers. Responsible for establishing organizational goals, translating organizational goals to individual employee goals, achieving goals, motivating employees, employee performance reviews and hiring and termination decisions. Participated in daily production meetings with each major JP Morgan Chase line of business to discuss priority one service issues and service improvement programs.

- Achieved an 81.1% reduction of priority one incident volumes, and a 90.9% reduction in customer outage minutes January 2006 versus January 2007.
- Change Management success rate exceeded 99.5%.
- Consistently exceeded customer service level agreements for server availability, client impact outage minutes and average time to repair.
- Participated in the design and implementation of the global active directory infrastructure
- Implemented and supported IIS Web servers for Web hosting functions
- Implemented and provided ongoing support for Microsoft Operations Manager (MOM) infrastructure for server monitoring.
- Implemented and provided on-going support for Microsoft Systems Management Server (SMS) infrastructure for application distribution.
- Implemented and provided ongoing support for Microsoft high availability clusters.
- Implemented and provided ongoing support for disaster recovery configurations.
- Developed and implemented server patch management systems to quickly and efficiently patch servers for CSIRT vulnerabilities within tight service level agreements, mitigating risk to the firm.
- Developed internal applications to monitor server configuration management and server backup success.
- Developed and implemented weekly and monthly reporting metrics for server key performance indicators. This data was used to proactively develop internal service improvement programs.
- Developed process documentation for standard operating procedures.
- Successfully passed all IT Risk audits driven by SOX requirements.

DAT Enterprises, Inc., President, Clayton, NJ, 2000–2001

Successfully implemented a secure information systems architecture between FirstUSA (A Bank One / JPMorgan Chase credit card company) and their First Values marketing partners for the secure transfer of card holder information. This high profile contract was in response to pending government legislation. The project was implemented ahead of time, under budget and with zero defects.

- Represented Lockheed Martin in new business proposal development.
- Developed proposals that required end-to-end documented IT support processes and procedures.

UNISYS

Resource 135

Project Manager

- Developed plans to implement automated systems monitoring solutions, escalated support teams and a help desk to provide front line support.

Computer Methods Corporation, Consultant, Mount Laurel, NJ, 1997– 2000

Represented Computer Sciences Corporation (CSC) as a Project Manager and technical lead under their contracted outsourcing agreement with E.I. DuPont. Responsible for the successful implementation of over 50 technology projects.

- Led a team that successfully implemented an SAP R3 infrastructure for DuPont Automotive at 12 North American locations.
- Led a team that successfully performed a technology refresh of 500 laptops for the DuPont-Merck pharmaceuticals sales force. The laptop standard build was designed to support the Siebol CRM solution. In conjunction with the laptop refresh, migrated the sales force from Microsoft Exchange to Lotus Notes. The migrations occurred over two one-week periods at remote locations (Chicago & Las Vegas). The result of this project resulted in an outsourcing agreement between CSC and E. I. DuPont Merck.

Lockheed Martin Technology Services, Engineer, Cherry Hill, NJ, 1987–1997

Engineer responsible for the deployment of complex Digital Equipment Corporation (DEC) VAX based computing systems at various locations around the globe. Accountable for all phases of the deployment including implementation, user acceptance testing and final site acceptance testing..

United States Navy, Cryptologic Maintenance Technician, 1981– 1987

Work center supervisor for a team of nine cryptologic maintenance technicians. Responsible for the day to day operational support of complex VAX based computing systems that utilized one of the government's first secure global TCP/IP networks. Maintained a Top Secret/SCI security clearance.

Professional Summary

20+ years of experience managing and solving business problems with technology solutions such as databases, Web sites, and SharePoint sites. Gifted Technical writer; Subject Matter Expert for the creation and maintenance of Management and Procedures Manual, Disaster Recovery Manual, Remedy Help Desk Support User Guide, Communications Management Plan, Pennsylvania Pharmaceutical Rebate Information Management System User Manual, and the Operator Reference Manuals for the Data PowerHouse at Willow Oak.

- Create PowerPoint presentations for prospective clients.
- Format and clean up presentations for Unisys Teams.
- Create graphics and .pdf files for Unisys Teams.
- Manage access and maintain the SharePoint Intranet Web site for the Unisys Harrisburg Data Center.

Manage access and maintain the extranet Web site where all our reports are located and allow access to Commonwealth employees and IBM employees.

Employment History and Related Experience

Unisys, Data PowerHouse, Technical Writer / Web Designer, Harrisburg PA, 2001 - Present

Create and maintain technical documentation for the Data PowerHouse at the Harrisburg Data Center. Responsible for the following manuals:

- Management and Procedures Manual. This manual reflects the procedures for the Outsourcing Program between Unisys and the Commonwealth of Pennsylvania. I improved the process for updating this manual by working closely with Unisys and IBM staff members. I created a timeline and enforced the need to have the manual updated in a timely manner to meet audit deadlines.
- Disaster Recovery Manual for all State Agencies. This manual is for documenting the strategies, personnel, procedures, and resources for the continuation of data processing services in the event of total destruction or temporary disablement of the Commonwealth Data PowerHouse at the Willow Oak Service Center located in Harrisburg, Pa.
- Remedy Help Desk Support User Guide. This manual is for a formal tracking system used by the Commonwealth of Pennsylvania Data Center Project and Unisys Corporation. This system was used for tracking system records, reviews, monitors and reports hardware, software procedural and documentation problems.
- Communications Management Plan: This manual defines the management interfaces that would be utilized to exchange relevant contract information between Unisys and IBM.

UNISYS

Resource 136

Technical Writer

- Operator Reference Manuals for the Data PowerHouse at Willow Oak: These manuals are used to help the Operators in the Data Center perform their job functions for the Data PowerHouse. I maintain manuals for each State Agency.
- Pennsylvania Pharmaceutical Rebate Information Management System User Manual: This training manual is used by Unisys to administer the PA PROMISe™ Drug Rebate System.
- Operator Reference Manuals for the Data PowerHouse at Willow Oak: These manuals are used to help the Operators in the Data Center perform their job functions for the Data PowerHouse. I maintain manuals for each State Agency.
- Create PowerPoint presentations for prospective clients.
- Format and clean up presentations for Unisys Teams.
- Create graphics and .pdf files for Unisys Teams.
- Manage access and maintain the SharePoint Intranet Web site for the Unisys Harrisburg Data Center.
- Manage access and maintain the extranet Web site where all our reports are located and allow access to Commonwealth employees and IBM employees.

NorSoft, Inc, Web Designer, Camp Hill, PA, 1999-2000

Create and maintain Web sites for NorSoft clients: Create and maintain client server Web-based help files for Auntie Anne's franchising application. Created Web-based application screens for ScriptFast and Clark Worldwide Transportation

AMP, Inc., Systems and Procedures Analyst, II, Harrisburg, PA, 1992 - 1999

Designed and maintained multiple Web sites for corporate Intranet. Technical writer for corporate standards and procedures. Developed and implemented Web sites for various departments. Redesigning these sites allowed the users to find information more efficiently.

- Redesigned client server methodology into .pdf format for the corporate Intranet. This provided the users a more efficient way to print out all or part of the document.
- Created GUI standards for client server applications. Researched various GUI standards resources and developed a quick reference guide.
- Developed a manual for corporate server standards. Converted this manual from word format to .pdf format and incorporated it into our Web site. This allowed for quick and easy access and the most current version was always on the Web for analysts to use when configuring a new server.
- Designed and maintained multiple Web sites for corporate Intranet. Created help systems for Windows95 applications. Supported mainframe printer assignment system.
- Created windows help using Robo-Help software, critiqued GUI designs for Client Server applications, Client server application testing, created training materials for Client Server applications.
- Developed manual and on-line help for Migration Request Express system.

UNISYS

Resource 136

Technical Writer

MR/X is a tool that provides migration control capability for IBM/MVS application systems developers and support staff. Received a certificate of commendation for this team effort.

- Designed a printer assignment manual and on-line help which decreased user problem calls by 50%; Provided technical support for mainframe help system. Submitted a series of JCL jobs to migrate the on-line help for corporate CICS applications, maintained CICS Programmers Analyst manual.
- Created a windows help file using Robo-Help for corporate mainframe methodology. Provided technical support for Printer Assignment System and technical documentation using MS/Word.

6. TRAINING 6-3

TRAINING DESCRIPTIONS 6-9

This page intentionally left blank.

6. Training

RFP	*Requirement*
II-6	*Training. If appropriate, indicate recommended training of Commonwealth personnel. Include the Commonwealth personnel to be trained, the number to be trained, duration of the program, place of training, curricula, training materials to be used, number and frequency of sessions, and number and level of instructors.*

Unisys is committed to a high-quality training program customized to meet the needs of Commonwealth staff. We believe strongly it is an investment in your most important resource, Human Capital, and provides a strong foundation to meet the high expectations outlined in the RFP.

This section includes a foldout that clearly describes the training to be offered by Unisys, including the Commonwealth personnel to be trained, the number to be trained, duration of the program, place of training, curricula, training materials to be used, number and frequency of sessions, and number and level of instructors.

Our objectives for training are centered on People, Process, and Technology.

People: Develop the necessary staff skills to transform to the new ITIL-based operating model.

Process: Teach the new processes and procedures necessary to correctly implement the contract provisions.

Technology: Provide an understanding of the technology that will be used for the service catalogue, reporting, and other features of our proposal.

Our training strategy is to build staff capability so the Commonwealth can become self-sufficient as quickly as possible. We also recognize there is an ongoing need for refresher training for new employees as well as training for new processes and technologies, especially during the periods of continual improvement.

Unisys Training Experience: Unisys has a rich history of providing training for many decades, including significant experience with educating staff from many state governments and federal agencies. Therefore, we draw on this experience and the expertise of those whose entire mission is education and training. The roles of each of our training team partners are defined below.

Harrisburg University of Science and Technology (HU): Unisys has teamed with HU to bring tremendous value to the Commonwealth. As an educational institution that emphasizes adult learners and collaboration with business as part of its core mission, HU not only brings specific expertise in education and lifelong learning for professionals in science and technology fields, it also has a refreshing ability to be

nimble, entrepreneurial, and innovative in how it works with its partners. Unisys will leverage HU's expertise in principles and techniques for adult learning and the effective use of learning and emerging technologies, its modern educational facilities, and convenient location in downtown Harrisburg

""Harrisburg University is extremely proud to work with the Unisys team on this transformative initiative. Unisys has brought thought-leadership to our university and we look forward to working with them and our state government leaders to make this initiative successful."

—Eric D. Darr, Ph.D.
President of Harrisburg University of Science and Technology

The overall training approach will be managed by a Harrisburg University Training Specialist under the direction of the Unisys Program Management Office (TPMO) staff. Also, the training specialist will gather the evaluations from each class and evaluate them for quality improvement opportunities. The Unisys Team will use HU's course registration, tracking processes, and tools as well as take advantage of HU's expertise to develop and deliver select courseware. Wherever possible, the Unisys Team will use the best commercially available courseware and delivery methods. The Training Specialist will be the primary liaison between our local team and HU.

HU will coordinate training registration for all programs taught by HU or on behalf of HU. This includes providing for online registration, sending confirmation details to participants, providing customer service for training participants, and maintaining a roster of registered and completed participants. Several of our training events will be held at the HU campus, providing an environment that is conveniently accessed and conducive to learning for Commonwealth attendees. Selected training events will be recorded and made available on the Unisys Knowledge Management Portal for future Commonwealth access.

Government Technology Institute: Hosted by HU, the Government Technology Institute (GTI) provides executive training for IT leaders in state government and a venue for public sector innovation. Many Commonwealth employees are becoming increasingly familiar with HU through positive firsthand experience in the educational programs, as participants in professional development, graduate programs, or educational programs of the GTI. GTI co-directors and HU staff continue to work closely with Commonwealth government leaders to develop programs in response to needs presented by executives in CoPA agencies and the Office of Administration. These connections have led to successful new programs such as the Certified Government CIO (CGCIO) program, the Government IT Manager (GITM) certificate program, and Innovate PA, a developing series of seminars and workshops on applying the process of innovation to state government. About 50 senior IT leaders from state government participate in the CGCIO and GITM programs. Many more attend the innovation workshops.

The perspectives and experience of the GTI co-directors, gained from successful careers in state and federal government and now as educators, are an advantage for HU in understanding the needs of the CoPA IT workforce. Under the leadership of Charles Gerhards and Barbara Shelton, the GTI has produced programs that are becoming well known among the Commonwealth IT community and highly regarded as high-quality educational experiences. In fact, members of the Governor's administration are frequent guest presenters in the programs.

We also see value supporting other HU programs that can directly or indirectly build skills such as project management. One such program is the Project Manager Partners Forum known as PM Partners. HU provides Unisys and the Commonwealth with a no-cost partnership between the local Project Management Institute chapter, the Office of Administration, Office of Information Technology, and HU. This Project Manager Development Forum occurs at HU each quarter and allows Commonwealth project managers to work collaboratively with peers, HU faculty, and project management professionals in the PMI chapter to discuss and develop advanced project management skills. This too has generated many positive experiences among Commonwealth IT professionals at all levels of state government.

The training program described in this section will be broken out with a focus solely on **Commonwealth Training.** The Commonwealth Training program was designed with the following goals:

- Deliver detailed information on key deliverables to confirm the Commonwealth's understanding of our technology, plans, and procedures to best take advantage of services provided on the engagement
- Verify that Commonwealth stakeholders at all levels have a thorough understanding of the engagement's change procedures and fee structures
- Provide the Commonwealth with demonstrations of tools and portals that contain information germane to the operation of its business
- Facilitate a common understanding of the flow of ITIL process requests and approvals, and the leveraging of our ITSM tools to promote process discipline and compliance
- Provide transparency of Data Center Services procedures and pricing of services and educate Commonwealth stakeholders on how to access the information.

Table 6-1 provides a high-level view of the training topics for Commonwealth personnel that are detailed in the foldout.

Table 6-1. Training Topics for Commonwealth Personnel

Commonwealth Training Topic	High-level Curriculum Content
EDC Assessment Review	Assessment results and recommendations
Technology and Architecture Overview	Review of all aspects of data center and technology architecture overview and roadmap
Co-location Service Offering	Review of service offering and how to leverage
Commonwealth Computing Procedures Manual Training	Overview of the manual's structure; how to access and use the manual
Security Management Plan	Service offering overview
Security Risk and Vulnerability Assessment Report	Process overview, assessment results, roadmap, and remediation plan
Contract Management Training	Review of contract terms and the change control process
Financial Management Training	Fee structure, consumptive model, and invoicing process
Data Center Services Reporting	Review of reports available and portal usage procedures
Knowledge Management Portal	Review of portal usage and content available
Security Training	Security tools, functions, reports, and escalation process
Performance Monitoring Training	Review of performance management tools, reporting, and support
Continuous Service Improvement & Innovation Program (CSIIP)	Program overview, CoPA and Unisys roles, governance, and critical success factors
Disaster Recovery Planning Process and Tools	Overview of Disaster Recovery scope, declaration, plan development, and testing
Service Catalog Training	Review of services available, request process, and tool usage
Transition Executive Briefing	Program overview, key program activities, roles, responsibilities, schedule, and deliverable acceptance process
IT Service Management Workshops	In-depth review of change and release, incident, problem, asset and configuration database management; capacity; and service level and availability management process training

Experience Delivering Training

The Unisys philosophy is that effective training and knowledge transfer is key to a successful engagement of this magnitude. The Unisys Team, through Unisys University and our association with Harrisburg University, possesses extensive experience in delivering various training programs to many Commonwealth of Pennsylvania agencies. Over our 50-year relationship with the Commonwealth, we have provided a variety of training to support a number of agencies and engagements, including:

- Pennsylvania State Police—Computerized Criminal History Records Information system
- Pennsylvania State Police—Commonwealth Law Enforcement
- Pennsylvania Department of Revenue—Enterprise Communications System
