RE: Pennsylvania Contract #4400016323 Price Update

Dear Thomas,

Zetron, Inc. requests the following revision to our current Two Way Radio Equipment and Services contract #4400016323 with the State of Pennsylvania: updating our pricing, products, and services offered under our contract.

The following is included with the cover letter:

1. Acom Price Sheet
2. Updated Price List Excel Document
3. U.S. Pricing (USD) Zetron Price Book

If the State needs any further information to revise this contract please contact Dayton Harris at [zusstatecontracts@zetron.com](mailto:zusstatecontracts@zetron.com).

Sincerely,

*Dayton Harris*

## ACOM - Advanced Communications System

Product Category: Miscellaneous

U.S. Pricing (USD)

ACOM represents the next generation in mission critical dispatch solutions. The ACOM Console System offers the reliability, feature capabilities, intuitive operation, and flexible configuration. Acom supports communications across a wide spectrum of radio and telephone equipment and other communications devices. These devices include Project 25 (TIA CSSI, DFSI, and AFSI), TaitNet P25, CORP25, OpenSky®, iDEN®, TETRA, DMR, NEXEDGE®, SMARTNET®, SmartZone®, TaitNet MPT, ISDN, and Session Initiated Protocol (SIP) telephony as well as numerous legacy systems.

Allowing telephone and radio communications to run on one platform eliminates the need for multiple systems. Diversity of interfacing means all resources are accessible no matter what technology communications systems are being used.

This price sheet should be used whenever additional features or upgrades are to be installed in 2000 Series Paging Terminals already in the field. Many features and options have a "System Requirements" section. This is intended to indicate to the sales person what hardware and software must be installed in the system for the feature to work correctly with an existing system. If these hardware and software requirements are not met, the customer must purchase those additional items needed. Note that when purchasing these additional items, there may be additional system requirements for those additional items. All these requirements must be met before a system can be guaranteed to work when it reaches the customer site.

NOTE: All ' \* ' items need to have a ZBASE update ordered.

ACOM represents the next generation in mission critical dispatch solutions. The ACOM Console System offers the reliability, feature capabilities, intuitive operation, and flexible configuration. Acom supports communications across a wide spectrum of radio and telephone equipment and other communications devices. These devices include Project 25 (TIA CSSI, DCSI, and ACSI), TaitNet P25, CORP25, OpenSky®, iDEN®, TETRA, DMR, NEXEDGE®, SMARTNET®, SmartZone®, TaitNet MPT, ISDN, and Session Initiated Protocol (SIP) telephony as well as numerous legacy systems.

Allowing telephone and radio communications to run on one platform eliminates the need for multiple systems. Diversity of interfacing means all resources are accessible no matter what technology communications systems are being used.

Zetron's IP Fire Station Alerting (IP FSA) system is ideal for any municipality that has IP network links between its central communications center and its fire stations. Using IP to send control commands between the central site and the fire station increases the alerting speed and broadens connectivity options. Voice announcements can be configured for VoIP or radio transmission. Existing Model 6/26 dispatch systems can be upgraded to IP FSA.

## M6300 RoIP GATEWAY

Price Sheet 001-0279 Rev. D

Zetron's RoIP Gateway allows legacy Tone Remote Control (TRC) or E&M wireline control equipment to operate over modern IP networks. It is suitable for use with all Zetron consoles for remoting radios from the console system over Ethernet IP. The RoIP Gateway can also be used with many other manufacturer's TRC/E&M wireline control equipment, as well as many non-radio, specialty voice applications (e.g. hoot-n-holler and intercom lines). By connecting radios at both ends, it can also be used to bridge two geographically diverse radio systems together. The RoIP Gateway transports 4-wire audio, COR/PTT, RS-232 serial data and one generic binary I/O signal over an IP network.

The Model 6304 IP Console Gateway is specially designed for connecting a remote console position (Integrator RD, 4018 or 4118) to a Series 4000 system over an IP network.

NOTE: IP networks must meet the network requirements found on the RoIP Gateway spec sheet (005-1400). Reliable transport of in-band tone signaling requires that audio compression not be used and requires that the IP network have no packet loss. Also, IP network latency may have an adverse affect on serial data protocols used by certain radios. Certain serial data-controlled radios may not support direct RS-232 connection and therefore may require additional serial data conversion devices.

### GATEWAYS

DC power cabling kit supplied. Order AC power converter option separately. Includes CD with manual. Gateways work in pairs; order 2 per remote console or radio.

The Model 600 Wireless Data Manager accepts TNPP input from up to three TNPP links, efficiently batches the pages with timing information from an attached GPS (not included), and delivers the pages across a link to multiple Model 620 Wireless Data Encoders. Powered by 12VDC (external power supply optional). The Model 620 Wireless Data Encoder receives batches of paging data from the Model 600, and encodes the data for POCSAG or FLEX. At the precise time indicated by an attached GPS (not included), the encoded message batch is sent to the transmitter, resulting in synchronous broadcast with other Model 620 controlled transmitters. Powered by 12VDC (external power supply optional). Each Model 600 and Model 620 requires a GPS. The GPS is not included. GPS equipment may be purchased from Zetron (call factory for pricing and availability). The GPS may be shared with other compatible devices. Software interface for Trimble GPS protocol (TSIP) included. Other GPS protocols available (call factory for details).

The Model 807 is a lower priced single site version of the Model 827 Trunking Controller. The Model 807 supports mobile dispatch service only. The unit cannot be fitted with telephone interconnect, but may be combined with the Model 827 and telephone interconnect option in single site systems requiring limited telephone access. The Model 807 supports a full range of MPT voice and data services for smaller single site systems. The Model 827 Trunking System Controller implements the MPT 1327 standard in a single controller package. Each repeater at the trunked radio site requires a model 827. All controllers are connected by a PCM bus cable (1 meter - included). Configuration software is included with the system. Only one management PC is required for interface to all channels at the site, and may be located on-site or remotely. The Model 844 4-Port Intersite Link is a control unit designed to provide an economical and efficient way to bring Intersite linking capability to your Zetron MPT 1327 trunking system. The Model 427 Peripheral Equipment Interface is a control unit designed to connect up to four MAP27 peripheral devices such as dispatcher consoles (like the Zetron Model 4217) to a Zetron MPT1327 Trunked Radio System.

## Pathway Product Family

Price Sheet 001-0299 Rev. C

The Pathway series of products have been designed to provide a connection between two conventional radios with four console systems through a single TIA P25 Digital Fixed Station Interface (DFSFI). Essentially acting as a proxy to a radio / base station, this device is ideal for situations that may require multiple agencies each with their own dispatch system, to access a common radio resource or for a single agency that may have a backup control center requiring connection to the same resource.

The Digital Pathway provides a connection between DFSFI radios and DFSFI consoles. The Analog Pathway provides a connection between 4-wire analog radios and DFSFI consoles. They are not recommended for new designs and should be used as a replacement for currently installed Digital or Analog Pathway units.

The Pathway+ gateway interfaces with two conventional radios through either a DFSFI, 4-wire analog, or V.24 interface. Pathway+ continues to provide a connection with up to 4 console systems via a single TIA P25 Digital Fixed Station Interface (DFSFI).

NOTE: IP networks must meet the network requirements found on the Pathway+ Spec Sheet (005-1426).

## Series 4000 Communications Control Systems

Price Sheet 001-0055 Rev. CG

U.S. Pricing (USD), 002-0001 Rev. 64

The Series 4000 is a central controller-based dispatch communications console that provides an effective means of controlling up to 48 radio channels from 1 to 16 operating positions. Designed to meet the needs of public safety, medical dispatch, utility, and industrial users alike, the Series 4000's modular construction and field programmability offer exceptional application flexibility.

A system consists of one or more operator positions plus a CCE (common control equipment) rack. Racks sold separately. Operator positions can be PC-based (IntegratorRD), button/LED-based (rack mount), or a combination of both.
