1. Q. Are the shotguns to be delivered with the “accessories” installed, or are the “accessories” to be provided uninstalled?

A: Yes. All accessories should be mounted and properly installed on all shotguns. The only accessory that needs to be mounted is the Mesa Tactical Shell Holder.

As I mentioned in the form, the shell holder must have the bottom rear notched out so it does not cover over the serial number of the shotgun. Furthermore the proper allen screws must be used to properly attach the shell holder to the frame of the weapon. These screws should be provided by Mesa Tactical.

2. Q. Does PSP have a specific model number that is their standard spec for the forend light modules on their 870P shotguns?

A: The specific model number for the Surefire forend is 618LF.

3. A. This shotgun with the Trijicon Sights is not a configuration that Remington Advertises on their LE Price Sheet. Do you know if they have created a specific product number for this configuration?

A: There is not a product # that includes the Trijicon sights on the Remington 870P shotguns
