User Interface

Introduction

The Commonwealth of Pennsylvania is deploying an Enterprise Portal to allow internal agencies the ability to share information publicly and securely. While agencies are building there public and private web sites using the portal technology, there will be Enterprise guidelines on designing navigation and branding portal sites. Adhering to these guidelines will produce agency web sites with a unified design. This document outlines the areas of the navigation that can be updated by the agencies.

Overview

As stated in the Enterprise Portal Governance Plan, agencies will be allowed to create public web sites along with secure web sites that require authentication into the portal. In order for each portal site to have a unique look and feel specific to the Agency theme and branding, agencies will be able to add style classes and portlets that comprise the Enterprise User Interface. Following the Enterprise Portal User Interface Guide, agencies will be creating portlets that will define their look and feel of their portal sites. The following style guide will look at where the agencies can utilize design firms to aid with the look and feel.

Header Portlet

The header portlet is the area of the portal where agencies will be able to bring in images and ideas that can cascade across their portal pages. Examples of some headers are:

There are common components of the header which cannot be altered and areas that can be altered by agencies. The blue bar, containing the "Pennsylvania" logo, in the bottom third and the grey navigation boxes in the upper right corner are elements

that cannot be changed. The logo, agency name and background images above the blue bar are the elements that can be customized by the agency, these areas are designated below in green. The agency is not limited to using any particular colors. Colors utilized by the header will be able to be used throughout the agency site.

Header – CSS Modifications

The header data entry template allows for the ability to have styles added that can cascade through all the pages that are using the header. When a new header is created a default set of styles will already be populated in this field for common changes that can be cascaded throughout an entire site. This is also a way to update specific styles that are built in to the portal that can control the look and feel of the site. Some useful styles that can be overridden are listed below.

Portlet Styles

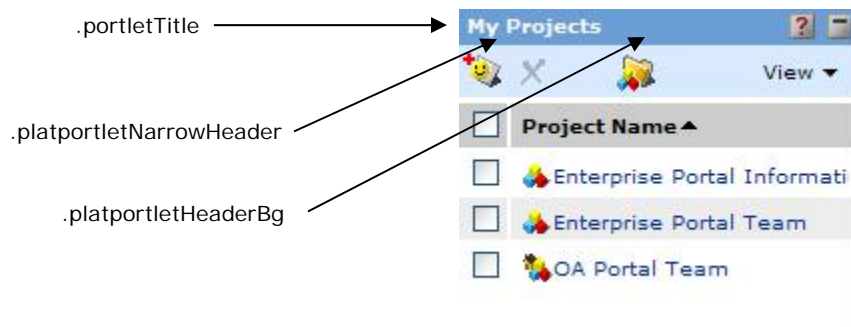

```
.portletTitle {height: 18px; padding-bottom: 2px; padding-top: 0px;}
.platportletNarrowHeader {color: #FFFFFF; font-weight: bold; font-size: x-small; font-
family: verdana,arial,helvetica; padding: 0px 0px 0px 5px; margin-top: 0px; margin-
bottom: 0px;}
.platportletHeaderBg {background-color: #6B9ED5;}
.portletBody {background-color: #FFFFFF;}
```
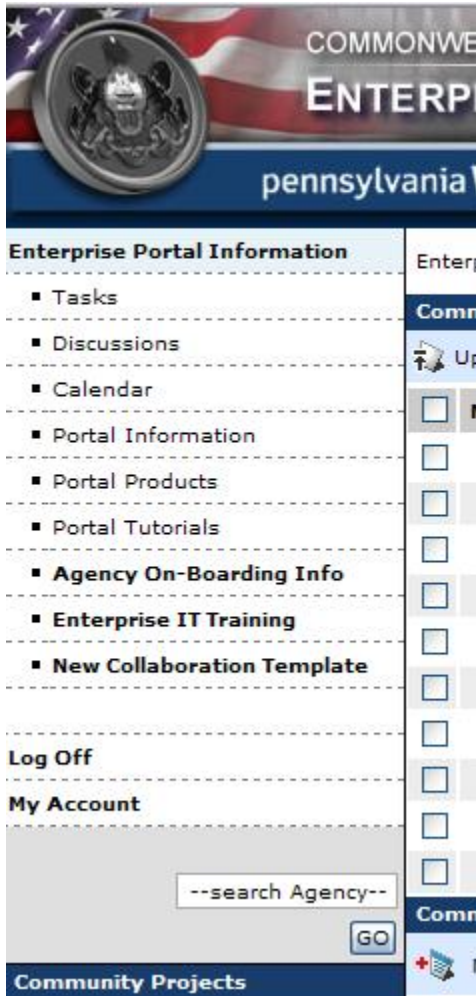

Style Name	Description
.portletTitle	Controls the height and padding of the portlet title. 'My Projects' in the above example.
.platportletNarrowHeader .platportletWideHeader	These two will control the font family, size and color of the portlet title. 'My Projects' in the above example.
.platportletHeaderBg	Controls the background color of the entire portlet header, the 'blue' in the above example.
.portletButtons	This can be used to hide the buttons in the upper right corner of the portlet. If the header was set to be a white background the buttons may need to be hidden. To hide the buttons use: .portletButtons { display: none; }
.portletBody	Controls the background color of the portlet under the title bar.

Styles for portlets can also be controlled on a portlet by portlet basis. The styles listed above would still be used but prefaced with the id of the portlet. To determine the id of the portlet, view the source of your page and locate the portlet in the code, make note of the id. There will be a table with the "id" property set to "pt-portlet-#". To update a portlet whose id is 771 the following would be used:
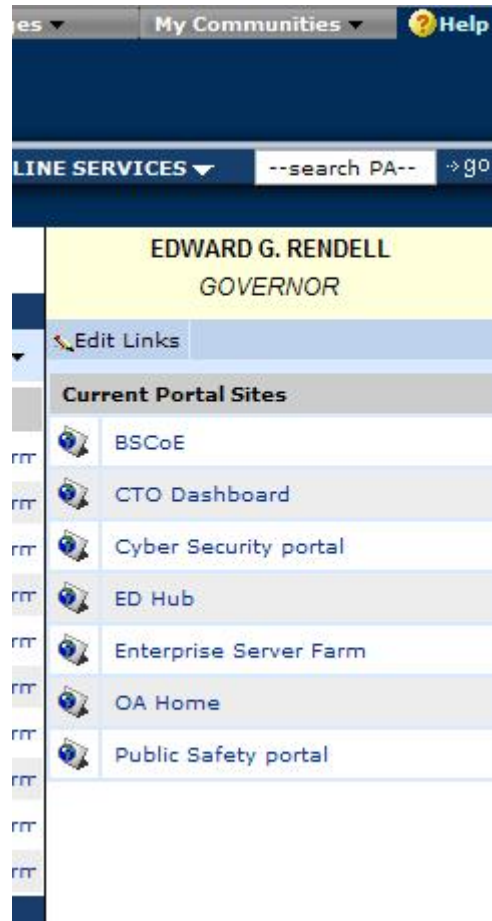

#pt-portlet-771 .portletButtons {display: none;}
#pt-portlet-771 .portletBody {background: #EFF6FF;}

Presentation Styles

.ptNarrowColumnWidth

.ptRightNarrowColumnWidthThreeColumn

Style Name	Description
.ptNarrowColumnWidth	Controls in pixels the width of the left column that holds the navigation. Default is 200px.
.ptRightNarrowColumnWidthThreeColumn	Controls in pixels the width of the right column in a three column page layout. Default is 225px.
.ptPortletPaddingVertical	Controls the vertical padding in pixels between portlets. Default is 0px.
.ptPortletPaddingHorizontal	Controls the horizontal padding in pixels between portlets. Default is 0px.
.PATableThreeWideColumnBorder	Supplies padding in between the columns of a three column layout to give the portlets spacing away from the black vertical bar.
.PATableTwoWideColumnBorder	Same as above just for two column layouts.

Vertical Navigation Portlet

The vertical navigation portlet will be able to be customized with hex color codes to tie in agency colors or other colors utilized by the header. In the data entry template for the vertical navigation fields exist to supply these hex codes.
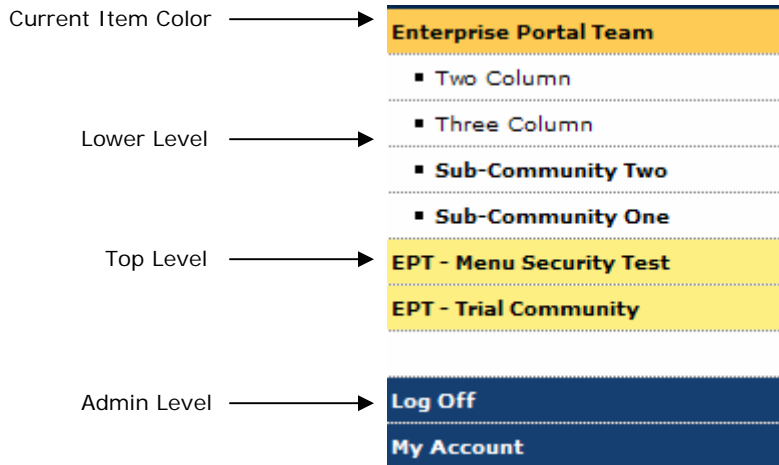

Form Field	Description
Top Level BG	The background color used for the menu items supplied in the Community Ids field that represent the first level of the menu.
Top Level Font	The font color used for the menu items supplied in the Community Ids field that represent the first level of the menu.
Lower Level BG	The background color used by all the other rows of the menu.
Lower Level Font	The font color used by all the other rows of the menu.
Rollover Color	If supplied, the color of the menu item when a mouseover occurs. If no value is supplied the menu will stay it's current color.
Current Item Color	The background color of the community and/or page that the user is currently on.
Show Log In/My Account?	T/F value to show the administration rows of the menu or not.
Admin BG	The row color for the admin rows of the menu, Log In/My Account.
Admin Font Color	The font color for the admin rows of the menu, Log In/My Account.

Agency Search Portlet

The background color and the word after 'search' in the text field are available for change in the Agency Search. The default color is the grey shown below and the text will default to '—search Agency—' if not updated.

Governor Portlet

The background color is available for change to a hex color that fits with the look feel of the site. The default color is the off yellow shown below.
