

Due to some confusion with the asphalt material description, the Department would like to clarify the type of asphalt required for this project:

The asphalt will be utilized on low volume, low truck traffic roads, and therefore a **19 mm 15-30% RAP mix asphalt with a low ESAL, 50 gyration mix** will be necessary.

For example a 19mm 75 gyration mix would not meet the needs of this project.

In order to give each bidder the opportunity to update/adjust bids, the Department will be extending the IFB one week.

Thank you!
